a moving body is a continuum, the motion is a continuum also, and therefore also the time occupied in the transit. A fuller, but logically unsatisfactory, account is given in the *Physics*. The Eleatics had held that the continuous is indivisible (a theory which meets us again in Spinoza). Aristotle points out that, on the contrary, only the continuous is infinitely divisible (185^b, 10). So we are told in bk. I that 'motion' (the fundamental category of a science of 'Nature') is generally held (*δοκεῖ*) to be one of the continua, and it is in the continuous that the 'infinite' first makes itself noticeable. Hence, those who give definitions of continuity commonly presuppose the concept of the infinite, on the ground that 'what is divisible *ad infinitum* is continuous' (200^b, 18). The point that the one primary continuum is spatial recurs in bk. Δ, ch. xi. Time is relative to change (*μεταβολή*), since it is only where we perceive change that we are conscious of duration. If the 'seven sleepers' woke up, they would not be aware that time had elapsed during their sleep. They would 'connect the former *now* with the subsequent *now*, and make one of them.' To know what time is, we have to ask in what way it is related to motion (*τι τῆς κινήσεως ἔστω*). But what moves, moves *from* somewhere to somewhere. The character of motion depends on that of the path it traverses. Motion is thus continuous because its path is so, and time is continuous because motion is. Time is 'the number of motion in respect of before and after' (220^a, 24). The use of the word 'number' is unhappy, since Aristotle is never tired of insisting that there are no numbers but the *μοναδικὰς ἀριθμούς*, the whole numbers made by addition of *units*; and the definition, taken strictly, is thus inconsistent with the view that there is no minimum of duration. The Platonic account (see *Timæus*, 37 D, and the Academic collection of *δρος*) that time is the *measure* (*μέτρον*) of motion, which Aristotle sometimes repeats, is thus much more accurate.

We finally reach Aristotle's own formal definition of *ὁ συνεχές* in *Physics* E 227^a, where it is given as the last resultant of a whole series of previous definitions. Things are 'together' (*ἅμα*) when they are in 'one and the same primary place' (*ἐν ἐνὶ τόπῳ πρώτῳ*), i.e. enclosed in the same circumambient surface. Two things of which the extremities are 'together' are 'in contact,' or 'touch' each other. A thing is 'between' (*μεταξὺ*) two others, when something which is continuously changing arrives at it 'before it reaches the end of the process of change' (i.e. C is between A and B, if, in moving continuously from A to B, you pass C before reaching B. Thus the 'derivative' notion of continuous movement is illogically employed to define the 'primary' continuum of extension!). We now define 'next after,' and 'immediately adherent.' A term in an ordered series is 'next after' (*ἐπέξῃς*) another when there is no term of the same kind between them. The phrase 'adherent to' (*ἐχόμενον*) means both 'next after' a given term and 'in contact' with it (*ὃ ἀν' ἐπέξῃς ὁ ἀπτηται*). Finally, continuity is a special case of immediate adherence, which arises when the two 'ends' (*πέρας*) of things which immediately adhere become one and identical (*λέγω δ' εἶναι συνεχές ὅταν ταῦτὸ γένηται καὶ ἐν τῷ ἑκατέρῳ πέρας οἱς ἀπτηνται*). Alexander of Aphrodisias, as we learn from Simplicius, found this passage hard to interpret, and with good reason. Apart from the logical *hysteron proteron* already noted, there is a further difficulty involved in the definitions of 'together' and 'contact.' What is meant by 'the same primary place'? Simplicius escapes from Alexander's uncertainty as to whether the notion of continuity is not tacitly presupposed by such a phrase only by giving

it a purely relative sense; it may mean at will 'in the same town,' 'the same house,' 'the same room,' etc. In fact, it has no definite meaning at all. The same defect attaches to the subsequent definitions, which depend on that of 'together.' Two things are 'in contact' when their extremities are 'together.' And such contact may exist without continuity. The extremities, as in the case of things which are merely 'adherent,' may be 'together' and yet remain distinct. Such a definition does not satisfy our geometrical notion of 'contact.' However small we take the 'primary place' of the two extremities to be, so long as the extremities remain distinct, there is no contact. However small the distance between a straight line and a circle may be, so long as it remains finite at all, the straight line is not a tangent; it becomes a tangent only when there is one point, and only one, which lies both on the circle and on the straight line. Thus, surfaces which 'adhere' must be absolutely identical. Aristotle is, in fact, assuming (with an eye to his astronomical theories) that we can have a set of concentric spheres enclosed within one another so that no space is left between the convexity of one and the concavity of the next outermost, and yet that the convexity and the concavity remain distinct surfaces. But this is geometrically impossible.

The one point of real interest which emerges from the discussion is the hint of a connexion between the notion of continuity and that of series. As Aristotle states the connexion, it is open to unanswerable criticism, since the very impossibility of dividing the continuous into 'units' shows that a continuum, as given, cannot consist of members each having a 'next following term,' but the main idea has borne remarkable fruit in our own days in Cantor's 'ordinal' definition of the continuum, and a striking attempt has been made by Zermelo (in *Mathematische Annalen*, LIX. iv. 514 ff.) to show that any continuous series (e.g. that of the points on a terminated straight line) permits of an arrangement of its members such that every one has a 'next following' member. That no member of such a series as given in experience has a 'next' member is, with laudable inconsistency, insisted on by Aristotle himself. 'Nothing continuous can be made out of indivisibles, e.g. a line cannot be made out of points' (*Phys.* Z 231^a, 24). For, by definition, the extremities (*ἐσχατα*) of things which are continuous coalesce, but an indivisible point or moment has *no* extremities. The consequence is that the line cannot 'consist of' points, since even by infinitely repeated division we can only break it up into lesser lines, which are, again, divisible. *συνεχῇ* can be divided only into *συνεχῇ*, or, as Bradley has put it, space (and time) are 'lengths of lengths of—nothing that we can find' (*Appearance and Reality*², London, 1897, p. 37). On the straight line, e.g., we can find nothing but points, yet it is not a series or class of points, but something more, though what that something is we cannot say. This leads Aristotle to break with the Platonic view that Arithmetic, Geometry, and Kinematics form a single science with a single body of postulates. 'Physics,' so he unhappily concludes, is distinct from Mathematics, and Mathematics itself falls into two distinct doctrines, each with its own peculiar postulates—the theory of the *διαρισμένον πᾶσον*, or number, Arithmetic; and Geometry, the theory of the *συνεχές πᾶσον*—and it is a logical fallacy to attempt to prove a conclusion which belongs to the one science from the postulates of the other (*οὐκ ἄρα ἔστιν ἐξ ἄλλου γένους μεταβάττα δεῖξαι, ὅσον τὸ γεωμετρικὸν ἀριθμητικῇ*, *Anal. Post.* A 75^b, 38). Zeno has at last come by his rights, in spite of Aristotle's personal failure to appreciate his historical significance.

To consider the way in which Aristotle goes on to develop the view that the regular and continuous development from potentiality to actuality which makes up the life of Nature, as we see it in the evolution of the adult organism from the germ, and of the germ, in turn, from the adult organism, or even in any steady qualitative change from one 'opposite' (e.g. white, hot, dry) to its contrary (black, cold, moist), depends upon the domination of Nature by the unending 'uniform' and continuous circular revolutions of the celestial spheres—would take us too far from our immediate subject. We may merely note that it is an indispensable feature of this view that these revolutions are 'irreversible,' and always take place not only with uniform velocity, but in the same sense, since a sudden reversal would be equivalent to a momentary breach of continuity. The moving body would, Aristotle thinks, have to be twice at the same point X, if X is to be both the goal of the movement in one direction and the starting-point for the movement in the other. Motion in a straight line without reversal is excluded by the assumed finitude of the universe, and thus, according to Aristotle, only the circle remains, since it is the only curve of which 'every part is congruent with every other,' i.e. the only curve of constant curvature. (For all this, see *Physics* ②, *de Caelo*, and *de Generat.*, *passim*; *Metaph.* A, chs. vi.-viii.)

From the special tract against Xenocrates and his assumption of infinitesimal lines which are indivisible (*de Lineis Insecabilibus*, a work of some early Peripatetic, apparently not Aristotle himself) nothing can be drawn for our purpose, though it is historically interesting, as showing that the study of at least some of the irrationals examined in Euclid x. goes back to Plato and his immediate followers, as does also the notion of the 'infinitesimal.' Some interesting notices are preserved to us by Sextus Empiricus, in bk. x. of his attack on Dogmatic Philosophers, which reveal the fact that the polemic of the Megarian formal logicians against Aristotle's whole conception of the gradual development of potentiality into actuality, of which we read, e.g., in *Metaphysics* ② 1046b, 29-32, was connected with a revival of Zeno's arguments against motion. Diodorus Cronus (*Sextus, contra Mathematicos*, x. 86) specially attacked the notion of a 'state' of motion, i.e. a time at which one cannot say of a moving material point (an *ἀκίνητος σῶμα*, i.e. a 'material point,' not an 'atom' in the sense of Democritus or Epicurus, since the atom was *not* *ἀκίνητος*) that it is at any position, but only that it is moving from one position to another, though one can, Diodorus admits, say that such a body must have moved, when it is seen first at A and afterwards at B. The view of the reality of a 'state of movement' here attacked is, in fact, one of the chief difficulties inherent in Aristotle's whole treatment of continuity.

Nothing would be gained by following the history of the notion of continuity in Greek philosophy beyond the time of Aristotle. The Stoics, to be sure, influenced later thought considerably by their vigorous insistence on the idea of the absolute continuity of *matter*, but neither they nor the Neo-Platonists, whose doctrines may be called the final outcome of Greek speculation, added anything to what Aristotle had laid down as to the logical analysis of the concept of the continuous itself. The sharp division between the two kinds of *μέτρα*, those which are divisible into ultimate 'units' (the 'discrete' *quantia*) and those which are not (the *συνεχές*, or continuous *μέτρα*), the adoption of infinite divisibility as the criterion of continuity, and the consequent view that incommensurables belong to Geometry and have no place in Arithmetic—were the permanent legacy from the ancient to the modern philosophy of the continuous.

3. Modern attitude.—The general acquiescence in Aristotle's distinctions makes it unnecessary to treat at any great length of the views of most modern philosophers on the nature of a continuum. For the most part these views have been determined by the conception of infinite divisibility as the sufficient and necessary condition of continuity. Even Descartes seems to have been blinded to the real difficulties of the subject by his familiarity with the practice of employing the symbols of Algebra indifferently to denote rational and irrational magnitudes. He appears never to have asked himself what conception must be formed of number, if we are to recognize such expressions as $\sqrt{2}$, $\sqrt[3]{2}$, and the like as numbers, and thus his *Geometrie*, with all its historical importance, can scarcely be called a contribution to the philosophy of Mathematics. Nor does it appear that the continuity which he claims for matter amounts to more than infinite divisibility,

the absence of real 'atoms' or 'units' of extension. Hobbes explicitly accepts the Aristotelian definition, 'Continua inter se tum spatia tum tempora duo dicuntur, quorum est aliqua pars communis' (*de Corpore*, vii. 10); 'Corpora etiam duo . . . continua dicuntur eadem ratione qua duo spatia' (*ib.* viii. 9). Spinoza even reverts to the Eleatic position, according to which extension, because continuous, is not really divisible at all, and is supposed to have parts or elements only by an illusion: 'Substantia absolute infinita est indivisibilis' (*Ethica*, i. 13); 'ex his sequitur . . . nullam substantiam corpoream, quatenus substantia est, esse divisibilem' (*ib.* corollarium). Hence he infers that *quantitas* is divisible only so long as we merely *imagine* it—i.e. think inaccurately about it; when we form the *concept* of it, we see it to be 'infinita, unica, et indivisibilis' (*Ethica*, i. 15, schol.). It should follow that we can form no *concept* of a plane, a straight line, or a point—a conclusion which would be the *reductio ad absurdum* of Spinozism. Similarly Kant's critical philosophy throws no real light on the nature of a continuum. Indeed, if we take seriously the *Asthetik*, with its account of the way in which the mathematical concepts of space and time are generated, we shall clearly be led to think of both as composed of minima, and therefore not continuous, though, to be sure, this account conflicts with the repeated assertion that both are 'infinite given wholes.' (The 'synthetic unity of apperception' cannot help us here, since it is just as much manifested in the counting of the units of a group of 'discrete' *quantia* as in that 'drawing' of a line of which Kant has so much to say.) So, when we are told in the account of the 'Schematism of the pure Concepts of the Understanding' that if we think of any number, e.g. 5 or 500, this thought is 'the representation of a method for representing in an image an assemblage conformably to a certain concept,' we see at once that Kant is thinking exclusively of the natural integers, which do *not* form a continuum. How it can be true that 'the pure image of all magnitudes (*quantorum*) of the outer sense is space, and that of all objects of the senses in general is time,' and that 'the pure *schema* of magnitude (*quantitatis*) as a concept is number, which is a representation which comprehends in one the successive addition of one to one,' remains an unsolved mystery, unless space and time are to be non-continuous; and the difficulty is only increased when Kant goes on to say that both space and time are '*quantia continua* because no part of them can be given, . . . except in such a way that the part is once more a space or a time.' Nothing can conceal the fact that Kant is trying to combine Aristotle's denial that a *συνεχές* can consist of minima with a theory which requires the construction of space and time out of such minima. He even repeats in this very connexion the old criterion of continuity, that it is 'that property of magnitudes in virtue of which no part of them is the minimum (no part simple).' It is, therefore, not to be wondered at that the 'antinomies' of the *Transcendental Dialectic* have really nothing to do with the problems of continuity. What their *theses* presuppose is merely the summation of infinite series, and the difficulties Kant professes to find in such a summation exist just as much where every term of the series has a next term as where it has not; e.g. the difficulty, if there is one, about the completion of the synthesis exists just as much when we consider 2 as the sum of the series $1 + \frac{1}{2} + \frac{1}{2^2} + \dots + \frac{1}{2^n} + \dots$ as when we ask whether the 'world had a beginning in time,' as Hegel correctly saw. In principle, Ka t,

like Aristotle, identifies the infinitely divisible with the continuous.

Hegel's own account is so largely coloured by metaphor, and so distorted by his determination to prove that every concept is precisely what it is not (that, *e.g.*, perfect continuity and absolute discreteness are the same thing), that it is far from easy to say what his real meaning is. Since, however, he supposes Kant's second antinomy (everything must be, and yet cannot be, composed of simple elements) to be concerned with continuity (*Werke*, iii. 216), he, too, presumably means by continuity no more than divisibility *ad infinitum*. His enthusiastic praise of Zeno, and of Aristotle's treatment of the problems of space, time, and motion, points to the same conclusion (*ib.* p. 227). The vagueness of Hegel's notions may be seen from the fact that he actually regards the *Anzahl*, or cardinal number, of a group as itself a group of 'units,' and asserts that it is at once 'continuous' (because it is one group among others) and 'discrete' (because it is a group of units (*ib.* p. 233 f.)).

Leibniz may fairly demand separate consideration, in virtue of the peculiar stress which he lays on the Principle of Continuity as fundamental, not only for Mathematics, but for Metaphysics. This principle, as stated by him, is much more than an assertion of the continuity of space, time, and motion. Since his philosophy requires a denial of the validity of a vacuum, he is led further to maintain the continuity of matter against all forms of the atomic theory. Further, the conception is regarded as holding not merely of *phenomena*, but of the substances or 'monads,' whose interrelations and internal self-development are the reality of which the extended and temporal world is symbolical. Real substances form a continuous hierarchy, in which each member differs from some other by a purely infinitesimal difference. Or, as Leibniz himself states the principle in a letter to Malebranche, dated 8th Dec. 1692, 'datis ordinatis etiam quæsitæ sunt ordinata et consentanea.' Hence the absolute continuity of the series of monads has the continuity of the various *μετέθω* as an immediate consequence (Couturat, *Logique de Leibniz*, p. 233 ff.). A special case of this principle is the correspondence between soul and body, which Leibniz describes as follows Couturat, *Opusc. et frag.* p. 621): 'God has from the beginning constructed soul and body with such skill that . . . omnia quæ in uno fiunt per se perfecte respondeant omnibus quæ in altero fiunt.' As to the nature of the continuity thus asserted, we learn much from the dialogue on motion composed by Leibniz on his journey of 1676 to visit Spinoza (*op. cit.* pp. 594-627). The question there raised is whether the moment at which a man dies may be regarded as at once the last moment at which he is alive and the first at which he is dead (as it must be, according to the Aristotelian account of *τὸ συνεχές*). To say that Aristotle's view is correct seems to violate the law of contradiction; to reject it seems to imply that two moments—the last of life and the first of death—are immediately adjacent, and, if moments can be immediately adjacent, why not points? (*ib.* p. 601). But we are thus led to conceive of extension and time as made up of series of indivisible points and moments (*ib.* p. 608), and find ourselves involved in the 'labyrinth of the continuum.' For we are forced to say that the number of points in the side of a square is infinite, and, since we can draw one and only one parallel from any point in the diagonal to a given side, and since this parallel cuts two of the sides of the square in determinate points, the diagonal will contain the same number of points as the side,

and will therefore be equal to it. This Leibniz regards as a proof that the line cannot be an aggregate of points (*ib.* p. 611). The number of points in each will, in fact, he argues, be identical with the 'number of all numbers,' since in both cases it is infinite. Leibniz's way out of the difficulty is to deny that there is a 'number of all numbers,' since, as he holds, such a number, if there were one, would be the greatest possible integer, but there is no greatest possible integer. Hence there is no such thing as a *ratio* of one infinite to another (*ib.* p. 612 f.), and no assignable number of points on a line. There are as many as we choose to take, but we never take all there are to take. It is, indeed, true that every portion of extended matter is actually infinitely divided, but it is divided into portions which are themselves continua, not into points, and no portion is actually divided into all the minor parts possible. Thus, in the end, Leibniz adheres to the position that the continuous cannot be composed of simple elements, and it is for this very reason that space and time and motion are regarded by him as merely phenomenal, since the real, as we read at the beginning of the *Monadology*, must be composed of simple elements. How these views are to be reconciled with the further positions that there is at least one continuum, that of the monads themselves, which does consist of simple elements, and that order in space is phenomenal of the order of real monads, it is not very easy to see.

4. The number-continuum in modern Mathematics.—Under this head it is impossible to say more than a few words in the present article. The reader who wishes for more information may be referred to the works mentioned in the annexed bibliography, especially to the brief and luminous chapter on the continuum in Couturat's work, *Les Principes des mathématiques*. As we have seen, the first discovery of the continuum was due to the discovery of incommensurable magnitudes in Geometry, which led to the age-long severance of the originally united studies of Arithmetic and Geometry. It has been the great achievement of the modern Theory of Assemblages to show that the number-system is so far from being inadequate to cope with the continuity of the points of the straight line (the so-called 'linear continuum') that the only precise definition of continuity we can obtain is one which can be stated in terms involving nothing but the properties of ordered numerical series, and that the only certainly known linear continuum is that of the 'real' numbers. In other words, it is no immediate datum of intuition that the straight line is absolutely continuous. Its continuity is postulated, not intuited, and means no more than the assumption that there are on every terminated straight line as many distinct points as there are distinct real numbers in a given segment of the number-series, such as that composed of all the 'real numbers' $>0 < 1$. To begin with, we have to see that none of the old familiar criteria of continuity is really adequate to express the property which we have in mind when we speak of the continuousness of this number-series. It is clear that infinite divisibility is no such criterion, since it gives us only a series corresponding to that of the rational fractions. By no process of infinite division of a unit length could we ever arrive at such quotients as $\frac{1}{\sqrt{2}}$, $\frac{1}{\sqrt{3}}$. This corresponds to the arithmetical consideration that the complete assemblage of rational fractions between 0 and 1 does not form a continuous series, since it omits all the fractions which have surds for their numerator or denominator or both. Even the inclusion in the series of all fractions having algebraical

surd in their numerator or denominator would not make it completely continuous, since we should still have no place left for the infinitely numerous fractions involving 'transcendental' numbers in their numerator or denominator. In fact, it is possible to make such an arrangement of the series of rational fractions, and even of algebraic fractions, that each term of the series has an immediately next term. In other words, both series can be so arranged that each member corresponds in order to one and only one member of the series of natural integers, 1, 2, 3, . . . Their ordinal number, or 'type of order,' is thus the same as that of the series of integers itself. Nor, again, is the number-continuum adequately defined by the property that no term of the series as taken in ascending order has an immediately adjacent term. For this would obviously be true of the assemblage of rational numbers, and again of that of all algebraic numbers, though neither of these exhausts the whole of the number-series. The task of the modern theorist is thus a twofold one. He has first to formulate a satisfactory definition of the concept 'real' number, showing not only how the assemblage of 'real' numbers is logically related to that of integers or 'natural' numbers, but also how the existence of the 'real' numbers follows from that of 'natural' numbers. Secondly, he has to identify the peculiar characteristics which distinguish the whole assemblage of 'real numbers' from those of 'natural' or 'rational' or 'algebraic' numbers; that is, he has to point out the criterion of the continuity of a series.

It is the achievement of Cantor to have first stated this criterion exactly, and afterwards to have re-cast it in terms involving nothing but the notion of serial order, and entirely independent of any appeal to our intuition of space. We can here do no more than give Cantor's two definitions of the linear continuum with such brief explanation as is necessary for their comprehension. To understand his original definition we have first to make clear the meaning of the terms 'point manifold,' 'limiting point,' and 'derivative.' By a 'point manifold' is meant any aggregate of numerical values whatsoever. Any 'point' X is said to be a 'limiting point' of such a manifold M , if, given a finite number ϵ , however small, there is always at least one 'point' of the manifold M which is at a finite 'distance' less than ϵ from X . (Such a limiting point may, or again may not, be itself a 'point' of M .) The 'derivative' of M is the assemblage formed by all the limiting points of M . When every 'point' of M is one of the limiting points of M , and every limiting point of M also a 'point' of M , that is, when the manifold M is identical with its own 'derivative,' M is said to be *perfect*. Further, M is said to be *zusammenhängend*, or 'cohesive,' when, if any two points of M , p_0, p_1 , be given, it is always possible to find in M any finite number of points $p_1, p_2, \dots, p_n \dots$ intermediate between p_0 and p_1 such that the distances $p_0 p_1, p_1 p_2, \dots, p_{n-1} p_n$ are each less than a given finite number ϵ , however small ϵ may be. The definition of the linear, or one-dimensional, continuum is, then, that it is a 'point manifold' which is both perfect and cohesive. It is manifest that the series of 'real' numbers between 0 and 1 satisfies these conditions, and that the removal of even a single term from it would prevent this realization. The series of 'rational fractions,' on the other hand, would satisfy the demand for cohesiveness, but would not be 'perfect,' since the surd fractions are obviously limiting points of the series of rational fractions. With the postulate that to every real number from 0 to 1 we can assign one and only one corresponding distance on the straight line, the straight line is also obvi-

ously a linear continuum satisfying the definition (Couturat, *Principes*, p. 91 f.). It still, however, remains the fact that Cantor's first definition retains the appearance of an appeal to geometrical intuition. The notion of 'distance,' in however metaphorical a sense, is employed in explaining both cohesion and perfectness. And this means, as Couturat says, that the definition is essentially relative. 'It defines a continuous manifold only by reference to another manifold (metaphorically called space), which is already continuous, in which it may have limiting points not contained in itself' (*op. cit.* p. 92). Hence it is only in Cantor's second definition, where no notions but those of serial order are presupposed, that we get 'an absolute definition of a continuum by means of its intrinsic properties.' To obtain the definition, we start again with certain auxiliary conceptions. We consider the type of order exhibited by the rational numbers which are >0 and <1 . This series has three peculiarities: (1) it is *denumerable*, that is, we can rearrange its terms so that they correspond one to one with the successive integers; (2) it has neither a first nor a last term; (3) between any two terms there is always a third; and these three characteristics are proved sufficient for the complete determination of the type of order exhibited by the series. Any series possessing them may then be called a series of the type of order η . Next we have to introduce the notion of what Cantor calls a 'fundamental series.' We may confine our attention to the case of an ascending fundamental series. By this is meant a series in which the terms have the type of order η just defined. Such a series S is said to have a limit in η , if there is a term in η which is the first after all the terms of S . We then call any manifold *perfect* if all the 'fundamental series' contained in it have a limit in it, and if all its terms are limits of 'fundamental series' contained in it. With these presuppositions, the type of order θ , belonging to a one-dimensional continuum, is defined as follows: 'The manifold θ (1) is perfect, and (2) contains within itself a denumerable manifold E , such that there is always at least one term of E between any two terms of θ .' The definition is manifestly satisfied by the series of 'real' numbers, since it can readily be shown that the series is 'perfect' in the sense defined, and that, moreover, there is always at least one term of the series of the 'rational' numbers between any two 'real' numbers (Couturat, *op. cit.* p. 93 f.; B. Russell, *Principles of Mathematics*, London, 1903, vol. i. ch. 36).

The two definitions are not exactly equivalent, since we can construct series which satisfy the second without satisfying the first (e.g., to take an example from Couturat, the manifold composed of the real numbers <1 , together with those from 2 to 3 inclusive, satisfies the requirements of the 'ordinal' definition, but not those of the other, since there is always a finite interval >1 between the number 2 and any of those which precede it). But every assemblage which satisfies the first, or 'relative,' definition clearly also satisfies the second, or 'absolute.' This might be regarded as a ground for doubting whether Cantor's final result is quite the same thing as an analysis of what is implicitly contained in the simple pre-scientific notion of continuity as unbrokenness. But it remains true that his analysis succeeds in defining for us, by means of purely intrinsic properties, the continuity of the 'real' numbers, and that we have no reason to think that Geometry requires us to ascribe any different kind of continuity to the straight line. We are thus finally enabled to remove the apparently insuperable barrier established by the Eleatic criticism be-

tween Geometry and the theory of number. Every geometrical proposition can once more be stated in terms which involve only the notions with which the study of number has already made us familiar. 'This fact,' as Couturat says (*op. cit.* p. 97), 'finally refutes all the doctrines which regard the notion of the continuous as arising from sensuous intuition and refractory to the understanding.'

LITERATURE.—I. FOR ANCIENT PHILOSOPHY AND MATHEMATICS: *Euclid's Opera*, edited et *Latine interpretatus est* J. L. Heiberg, Leipzig [the *Elements* and the scholia on them form vols. i.-v. of this, the only critical edition, 1883-1888]; *Procli Diadochi in primum Euclidis Elementorum Librum Commentarii ex recogn.* G. Friedlein, Leipzig, 1873; H. Diels, *Fragmente der Vorsokratiker*², 2 vols., Berlin, 1906-1910; Aristotle, *de Lineis Inseparabilibus*, tr. H. H. Joachim (pt. 2 of *The Works of Aristotle*, Eng. tr., Oxford, Clarendon Press, 1908); J. Burnet, *Early Greek Philosophy*³, London and Edinburgh, 1908; G. Milhaud, *Les Philosophes-géomètres de la Grèce: Platon et ses prédécesseurs*, Paris, 1900; O. Aepelt, 'Die Widersacher der Mathematik im Altertum' (in *Beiträge zur Gesch. der gr. Philosophie*, pp. 253-287), Leipzig, 1891; H. G. Zeuthen, *Hist. des mathématiques dans l'antiquité et le moyen âge*, Paris, 1902 (original in Danish, Copenhagen, 1893). Reference may also be made to the various standard works on the history of Mathematics generally, or on Greek Mathematics in particular, especially to the great work of Moritz Cantor, *Vorlesungen über Geschichte der Mathematik*, Leipzig, 1880 (new ed. vol. i. 1909).

ii. FOR MODERN PHILOSOPHY: Besides the collected editions of the works of philosophers, special mention may be made of L. Couturat, *Opusculs et fragments inédits de Leibniz*, Paris, 1903, also *La Logique de Leibniz d'après des documents inédits*, Paris, 1903; B. Russell, *Critical Exposition of the Philosophy of Leibniz*, Cambridge, 1900, also 'Recent Work on the Philosophy of Leibniz' (in *Mind*, new series, no. 46, April 1903).

iii. MODERN DEVELOPMENTS: G. Cantor, 'Grundlagen einer allgemeinen Mannichfaltigkeitslehre' (*Mathematische Annalen*, xxi. (1883)), also 'Beiträge zur Begründung der transfiniten Mengenlehre' (ib. xli. xlii. 1895, 1897; French tr. by Marotte, *Sur les fondements de la théorie des ensembles transfinites*, Paris, 1890); R. Dedekind, *Stetigkeit und irrationale Zahlen*², Brunswick, 1892; P. du Bois-Reymond, *Die allgemeine Funktionentheorie*, Tübingen, 1893; L. Couturat, *De l'Infinité mathématique*, Paris, 1896 (see esp. Appendix 4, on Cantor), also *Les Principes des mathématiques*, Paris, 1905 (with especially valuable Appendix on Kant's Philosophy of Mathematics); A. Schönflies, 'Die Entwicklung der Lehre von den Punktmannichfaltigkeiten' (*Jahresber. der deutschen Mathematiker-Vereinigung*, viii. 2, Leipzig, 1900); B. Russell, *The Principles of Mathematics*, i. Cambridge, 1903; G. Vivanti, *Teoria delle funzioni analitiche*, Milan, 1901 (pt. i. contains a very simple and lucid exposition of the main principles of the Theory of Assemblages); E. W. Hobson, *Theory of Functions of a Real Variable*, Cambridge, 1907. The progress actually made in the re-arithmeticizing of pure mathematics, due partly to modern research into the notions of infinity and continuity, and partly to the development of symbolic logic, can be traced in the successive volumes of G. Peano, *Formulario de Matematiche*, Turin, 1901. The latest edition, reckoned as vol. v. of the complete work, appeared in 1908 with the title *Formulario Matematico*, the necessary verbal explanations and annotations to the logical symbols in which the propositions are written being now given in what the author calls an 'uninflected Latin,' and not in French, as was the case in the earliest editions.

A. E. TAYLOR.

CONTRACT.—i. DEFINITION.—If one makes an engagement to go to dinner at a friend's house, no contract arises, because the purpose of the engagement is not such that the law will deal with it; or again, if one buys an article in a shop for ready money, that is not usually termed a contract, because there the whole transaction is terminated, as it were, on the instant; but, if one undertakes to pay for the article afterwards, a continuing contract emerges, because, in this case, the agreement gives rise to an undertaking which can be appropriately enforced by law. From these examples we see that contract is really the combination of two legal ideas—that of agreement and that of obligation. In the case of the invitation to dinner there is agreement, but no legal obligation connected with it; in the case of the sale of goods for ready money, the obligation fades away as soon as it arises. But, according to the Indian Contract Act, for example, 'an agreement enforceable by law is a contract' (Sect. 2 (h)); and, where we find such an agreement, we find a legal

tie, an obligation, something for the law to take hold of, directly affecting the contracting parties. In other words, the agreement, as it has been put, 'contemplates something to be done or forborne by one or more of the parties for use of the others or other,' to which the law can attach itself; and it is generally said that it must be the intention, or implied intention, of the parties that the relation should have a legally binding effect. Sir Frederick Pollock, writing with reference to the English law, adds to the word 'agreement' the word 'promise' (*Principles of Contract*¹, 1902, pp. 2, 3, 5). But that is a minor subtlety. Theoretically, at least, we can fix our attention on an agreement as the starting-point in which there must be, as it is frequently stated, the meeting of two minds in one and the same intention. And thus the more technical treatment of contract fits into those statements of the doctrine in which it is regarded as a phase of the legal will, constantly to be found in the works of philosophical jurists—especially German jurists. The relation represents the meeting of individual wills in one intention, as opposed to the individual's endeavours to realize his will by means of the materials found in the world around him, which gives rise, logically, to the conception of property. In the former case, the individual meets his fellows; in the latter, the external, material world.

It has, however, been suggested that it is not necessary, in order that a contract should be entered into, that the wills of the parties should be really at one (Holland, *Jurisprudence*¹⁰, 1906, ch. xii.). Should we not say, it is argued, that here emphatically the law regards not the will in itself, but the will as manifested voluntarily? There are well-founded expectations which the law endeavours to protect by its enforcement of contract, and these do not always arise from expressions which truly represent the intention. What of the case in which a party enters into a contract, resolved all the time not to perform his part, yet inducing another party to enter into it on the contrary supposition? Surely the contract will hold good. Is it not the will, as expressed, and nothing more, that the law regards, leaving the question of a true *consensus* on one side, as beyond its province altogether? The language of positive systems of law, it is said, moreover, is ambiguous on the point; for the question is practically a new one, and it has not till recently been seriously considered how far a true *consensus*, in the significance explained above, is needed. In answer to this doctrine, it may be maintained that, although the inner agreement is a fact to be proved, and in some cases is not allowed to be disproved, the agreement itself is vital to the theory of contract. The inference drawn is that there was an agreement; and such inferences depend for their reasonableness and usefulness on the fact that in the vast majority of cases they are sound. Without reference to the will—to the inner intention, if one chooses—the expression of agreement would be meaningless. It must in the last resort be connected with the man, with the personality; and not merely attach itself to outward forms of expression. Unless this is done, we obtain a view of contract which is too scholastic to be satisfactory.

The two main aspects of the agreement by which the tie is created find their typical form in the ideas of offer and acceptance, which give rise to a large body of law in a developed system. On the other hand, such facts as error, fraud, misrepresentation, undue influence, and force operate on the consent embodied in the agreement, and may vitiate it wholly, or create a flaw which renders it reducible from one side. These are most usefully studied in relation to some definite legal

¹ The ordinary collected texts of ancient and modern philosophers have been omitted from this list.

system. Again, the State itself places certain legal restraints upon contract generally, with regard to its subject-matter; these are more important from the standpoint of the general reader. In Pollock's work on *Contract*, agreements are said in English law to be unlawful and void (1) if the matter or purpose with which they deal is contrary to positive law; (2) if it is contrary to positive morality recognized as such by law; (3) if it is contrary to the common welfare, as tending to prejudice the State in its external relations, or in its internal relations, or as tending to improper or excessive interference with the lawful actions of individual citizens (*op. cit.* 275). And we may say generally that the State will refuse to recognize a contract not only when it is simply illegal (without further explanation being offered), but also when the object is *contra bonos mores*, or when it is against 'public policy' and cannot be allowed free scope in the State's own organization. In the case of public policy, the disputable points which arise are numerous, and the dividing lines between what the State should, and what it should not, do are extremely difficult to find. Then we may couple with such restraints the complicated subject of *form*. The modern tendency is towards simplicity of form. Complexity is undoubtedly repugnant to the spirit of our own days, when the bustle of commercial enterprise demands essentials and nothing but essentials. A complicated form, however, prevents a bargain from being rashly made, and it renders it easier to prove afterwards what has taken place. The tendency to reduce the 'solemn form' can have free scope only so far as is possible with a due regard to the exigencies of proof.

ii. **CLASSIFICATION.**—Contracts have very frequently been divided into *principal* and *accessory*; and this division is a good one. It is not so clear that the division of the first class into *onerous* and *gratuitous*, often made, is equally useful (although Kant declared that it was the rational one); for principal contracts seem rather to fall into several distinct groups. The following list will afford the reader a bird's-eye view of the field of modern contract. It follows mainly the arrangement given by Holland in his *Jurisprudence*.

i. **Principal contracts.**—Principal contracts are those which are entered into, so to speak, for their own sake, as opposed to accessory contracts.

(1) *Contracts of alienation.*—These may be gratuitous, when they are contracts to give, but are not generally so. In fact, a contract to give is generally enforceable by law only in certain limited cases. But gifts made in view of marriage are not considered as mere gifts, for marriage is an onerous consideration. Then under this head fall barter and exchange, when regarded as contracts; and, more important, sale. A distinct line should be drawn between barter and sale; the essence of sale seems to be, in the simplest words, the giving of something for *money*. Specific formalities are generally imposed upon contracts for sale of certain important classes of property, such as the *res mancipi* of the Roman Law, 'real property,' immovables. Apart from these, perhaps the most important variation in the views taken of the contract by different legal systems is connected with the transfer of the property sold. Sometimes a contract of sale, in the usual case, *per se*, transfers the property—it has the power of transference by itself. Sometimes it has no such legal consequence; it remains an agreement to transfer merely. The parties to the contract, again, may have various duties, but two of them are generally recognized. The duty of the seller is to deliver the goods, and the duty of the purchaser is to accept and pay for them. These duties, regarded from the point of

view of rights, yield the main rights of purchaser and seller.

(2) *Contracts dealing with hiring, loan, etc.*—Hiring has largely superseded gratuitous loan; and the law of hiring has been extended in many directions. Two important branches of it in the commercial world are contracts for carriage and agency. Both in commercial and in domestic life we find contracts for the hire of servants engaging much attention. As regards immovables, hiring is generally guarded by specific restrictions. In a loan for consumption, we find money or certain kinds of things given to the opposite party on the undertaking that he shall on a future day return, not necessarily the things themselves, but their equivalent in kind. It is in connexion with this branch of the law that the interesting problems of how to treat usury from the legal point of view arise. In a loan for use, again, which is in essence gratuitous, the identical thing lent is returned. In deposit, one gives a thing to another in order that the latter may keep it for him gratuitously and restore it upon demand.

It will be observed that this group of contracts is very miscellaneous. Holland has attempted to minimize the confusion by making the two principal divisions of (a) contracts for permissive use, and (b) contracts for service. In the first class (a) he places (1) loan for consumption; (2) loan for use; and (3) 'letting for hire.' In the second (b) he places contracts (1) for care-taking; (2) for doing work on materials; (3) for carriage; (4) for professional or domestic services; (5) for agency; (6) for partnership. Then, under a separate head (c) he places contracts for negative services, in which one party undertakes to abstain from certain acts—a mode of contract somewhat grudgingly recognized by law. This procedure helps to introduce some order into the mass of almost intractable material; although, for example, it places contracts for partnership under contracts for service—a doubtful arrangement. The reader, however, may certainly begin by taking the whole of the large class of contracts with which we are dealing as capable of being split up into three divisions—permissive use, service, negative service—although he may afterwards come to consider the principles of grouping somewhat strained. Partnership, which is thus disposed of under 'service,' is said to be the relation which subsists between persons carrying on a business in common, with a view of profit (Partnership Act, 1890); and the law of partnership widens out into the whole law of Joint Stock Companies.

Agency deserves special notice. It is itself a contract, as has been pointed out; but it is also an important instrument in extending the power of contract. It enables us, as it were, to move objects at a distance. Through it, the contractor can work at the other side of the world. In the ordinary use of the term, agency is constituted where one person is employed to act for another—to represent him in dealings with third persons. A distinction between a general and a special agent is often made; but it is of doubtful value logically; it seems to be most consistently drawn between an agent whose business has a defined scope and character, apart from the terms of his agreement with his principal, and one who is merely empowered to do certain specific acts. The main logical point to be noticed in the law of agency is that, when the agent contracts as an agent with third parties, he binds his principal, and then, so to speak, drops out of the transaction. If he binds himself, he is something more than a mere agent; and any exceptions are modifications of the general principle. On the other hand, it must be noticed that the agent does not really act

as the blind instrument of his principal, as the pen or the hand acts. His real usefulness arises from his being an intelligent instrument, and without the help of such intelligent instruments many of the tasks of modern commerce would be quite impossible.

(3) *Contracts of marriage.*—But marriage is only technically and in a somewhat strained sense a contract. No doubt it cannot be entered into without the consent of at least two parties. But the relationship stands by itself; and even in a system of law, like that of Scotland, which favours the contractual construction, there are grave difficulties in regarding it as a contract in anything more than a very technical sense. In contract, the tendency is to allow the contracting parties to attach what conditions they please to their bargain, provided these are not against 'good morals' or 'public policy'; it may be conditional in its origin, and its duration is dependent on the will of the parties. In marriage these features are not present. When it is entered into, it is not governed by private contract in its most important particulars, but by the fixed rules of the law of husband and wife. It cannot be entered into on condition that a certain event shall happen, or that it shall be dissolvable at pleasure, or that it shall last for a certain fixed period of time. The relation between the two persons, also, extends an influence to their relatives and maintains that influence even after death ends the marriage. The husband and wife create not only their own *status*, but the *status* of their children; and that *status* can never be taken away or infringed by the acts of the parties (Fraser, *Husband and Wife*², 1876, ch. ii.). Such considerations, primarily applicable to Scots Law, show us how marriage must be differentiated from an ordinary contract. Of course, it may be said that all these restrictions are made merely with the object of maintaining 'good morals' and furthering 'public policy.' But the whole tendency of contract is to leave the parties as far as possible to shape their own bargain; and, where we have a relation so governed in its essentials by the law—so restricted to meet the needs, as the law conceives them, of family life—as marriage is, it is only in a very peculiar and, as we have said, technical sense that it can be called contractual. It derives its type not from the contracting parties, but from moral and social considerations, which are held to be superior to their wishes; and these considerations not only *restrict* it, but *shape* it.

A distinction must, of course, be drawn between an engagement to marry in the future—an 'engagement' in popular language—and an engagement which actually amounts to a marriage. The former more nearly approaches a contract of the ordinary type than the latter, provided it is recognized by the system of law which governs it as a fit subject for legal interference. When that is the case, we find unfulfilled engagements frequently giving rise to actions for breach of promise of marriage. On the whole, such actions seem to be discouraged by the systems of law in vogue on the Continent; and many jurists are of opinion that they ought to be abolished in our own country. But this opinion, it should be noted, does not imply that actions for *seduction* should be discontinued.

(4) *Wagering contracts.*—This is an unfortunate name for an important group. In these contracts, one of the effects of the contract, as regards profit and loss, either for all the parties, or for some of them, depends upon an uncertain event. But it is almost impossible to define them satisfactorily; and that statement must be taken as merely explanatory. Broadly, bets and stakes are not enforceable in modern law. And the most im-

portant group under the general head is formed by contracts of insurance—mar ne, fire, and life insurance, and less important types. Of course, these are not logically gambling transactions, but are rather attempts to eliminate the risks of the unforeseen.

2. *Accessory contracts.*—There is a large number of contracts which may be entered into as accessory to the main transaction; and these form, as previously stated, a second main branch of the subject. It may suffice to name a few of them—indemnity, suretyship, warranty, ratification. A promissory note forms such a contract. Suretyship is in many systems a formal contract; and the guarantee may sometimes support an obligation which is merely natural, *i.e.*, which itself cannot be enforced—a curious point.

3. There are certain legal relations placed on the borders, as it were, of contract proper, which must not be forgotten. Thus the Indian Contract Act speaks of certain relations resembling those created by contract. Broadly speaking, they correspond to the Roman division of obligations which arise not *ex contractu*, but *quasi ex contractu*. They may, therefore, be described as *quasi-contracts*; they have also been called 'implied contracts'; but it is perhaps better to reserve this name for those cases where the implication is most clearly seen. They are, at any rate, analogous to contract; for it is necessary, in following out the ramifications of a legal system, to hold that a *nexus* analogous to that of contract is sometimes created from force of circumstances, though not by express agreement. Often the person bound may reasonably be held to have agreed to the formation of the tie, but that is not perhaps essential in all circumstances. Thus the doctrine of *negotiorum gestio* consists, in principle, in the management of the affairs of an absent person (or sometimes of a person merely unable to attend to his affairs himself) by one who undertakes that task without the knowledge of the other; and, it is not infrequently stated, on the presumption that the other, had he known the circumstances, would have approved. There does not seem to be any peculiar difficulty in treating of such relations, except that they do not yield very readily to analytic classification.

iii. *EXTINCTION OF CONTRACTS.*—Contracts may be extinguished in various ways—by performance, by such legal facts as events which excuse performance, or by release of performance. Or there may be a substitute for performance interjected; or it may simply happen that the non-performance of the contract alters the whole aspect of affairs and gives rise to a new set of rights. Performance is the natural, and undoubtedly also the usual, mode of closing the transaction.

iv. *SOCIAL BEARING OF CONTRACTS.*—Contract, standing as it does at the centre of the great department of Private Law, has many important bearings on the general problems of society. It forms an endeavour made by the State to set up a sanction for expectations of good faith which have grown up through the dealings of the averagely fair-minded man. True, it has been suggested that contract is merely the taking of a risk, since the only universal consequence of a contract is to make the defaulter pay damages; but, as already pointed out, it is the observance of contract that is usually contemplated; it is performance, and not payment of damages, that makes the social wheels go round. And the State, having brought its sanction to bear on this enormous mass of relations, finds itself compelled to interpose certain restrictions—to lay down those limitations of which we have spoken before. What precisely these ought to be, and how they ought to operate, depends on

many different social considerations. Is the exploitation of the individual by his fellows—the driving of a hard bargain wrung from a man's necessity, when his poverty, but not his will, consents, or the over-reaching of one not worldly-wise—a fit matter for State interference? Are combinations of 'labour' to be recognized wholly or partially, or altogether condemned? Are contracts for service to be regulated, when the claims which arise under them bid fair to reduce one party to the position of existing merely as an instrument for the realization of another's personality instead of being an end in himself? Slavery, it is certain, cannot now be tolerated; but how far will the law, if it attempts to abolish various forms of so-called practical slavery, accomplish good, or how far will it merely afford encouragement to laziness and fraud? These questions and many others are among the implications of contract, though doubtless they lead us far beyond the subject of contract itself. Probably most of them must be answered, not abstractly, but in relation to the particular community with which we have for the time being to deal. What is one man's freedom is another man's ruin. The character and state of social advancement of the community must always be taken into consideration. But, however that may be, the importance of the great branch of law which deals with the right to another man's conduct can never be safely ignored.

LITERATURE.—In addition to the works mentioned in the text, the following may be consulted: W. R. Anson, *Principles of the English Law of Contract* 11, 1906; G. J. Bell, *Principles of the Law of Scotland* 10, 1899, for the Scots Law; F. Pollock, *First Book of Jurisprudence*, 1896, pt. i. ch. 8; Kant, *Philosophy of Law*, Eng. tr. 1837, sect. 31; W. A. Watt, *Theory of Contract in its Social Light*, 1897. W. A. WATT.

CONTROVERSY.—1. The term 'controversy' is not exclusively applied to the weapon with which battles have been fought in the field of theology and philosophy, and skill in disputation has not been valued by professed dialecticians alone. Professor Edward Caird tells us that the philosopher Kant was keenly alive to the uses of controversial methods as a mental training, and that in the year 1758 he announced to his class on metaphysics that on two days in the week he would treat polemically the doctrines expounded on previous days, this being 'one of the most excellent means to attain to profound views of any question' (*Critical Philosophy of Kant*, i. 162). This polemical method consisted in first proving a proposition and then trying to prove its opposite—an exercise of the intellect to which attention has often been devoted in schools of learning, with a view to cultivating a high standard of controversial ability. To Kant it did not so much bring dialectic skill as rivet into the attitude of criticism a mind already critical, even sceptical. The essential thing for him, as for Socrates, was the problem of knowledge, the limitations of our knowing, the question how far we can know anything at all. So throughout life he practised earnestly the polemical method which he recommended to his students, using it as a touchstone to test what is knowable and expose the illusions of the understanding. To this attitude of mind, this deep-seated love of inquiry and discussion, we owe what is considered the greatest system of philosophy of modern times—a philosophy critical alike in spirit and in name.

2. The Kantian 'dialectic,' however, is not a new phenomenon in the history of philosophical thought. In the connotation which it bears for him, that of an arguing for and against, Kant inherited the term from the Stoics and Aristotle. But the practice of dialectic is to be connected with the name of Socrates. As friendly discussion

in the market-place about the ethical problems which alone were of interest or moment to him, Socrates held it to be the ideal method of philosophizing. He thought that there were answers, more or less definite, to these questions, and that this was the way in which the answers were to be got. This earnest conviction, this seeking after truth in the belief that it is to be found, is one of the essential respects in which Socrates is to be distinguished from the class of professional Sophists to which, in the eye of the ordinary Athenian, he undoubtedly belonged. These men were in the first place teachers of argument and rhetoric, and regarded disputation of this kind as an end in itself. They argued in order to show their pupils how arguing should be done; they talked for victory. But they did not stop here. They were from some points of view extremists in philosophy, and they often took up a concept or idea with the deliberate purpose of showing it to be full of contradictions, and hence unthinkable. The Sophist did not hesitate to tackle any question, or, as Aristotle would say, to 'talk persuasively' on any subject. As the exponents and popularizers of an esoteric philosophy—they were not for the most part originators of new doctrine—they raised problems in the spheres of ethics, politics, and religion, debating freely, in a spirit of tolerant scepticism, questions the mere discussion of which in the eyes of the old-fashioned was not only new, but impious and depraving. Like Abelard, who has been called the mediæval counterpart of such a teacher as Protagoras, the Sophist at his best, they thought that every question could be argued for and against, or in Abelard's phrase, *sic et non*. To them none was sacred. At the first glance, criticism of this kind seemed wholly destructive; many of its immediate effects were undeniably pernicious. But this beating about, this disputing and overturning, was of supreme value, not only in the interests of education, but also in the narrower field of dialectic. It was owing to the Sophists mainly that Aristotle was able to draw attention to a clearly marked difference in the matter of our thought. He saw that relatively few problems belong, like those of mathematics, to the sphere of what is strictly demonstrable, and that beyond this, on the vast mass of questions which puzzle and interest mankind, we can have discussion, but can never have certainty.

3. It was, however, in the Middle Ages that dialectic or discussion in the Platonic and Aristotelian sense became professedly the vehicle of philosophical inquiry. Bound as they were at every step by tradition and authority, the methods of the Schoolmen were formal and pedantic; in this respect they were less fortunate than the thinkers of antiquity. At the same time the mediæval method of exposition, in so far as it was a method of argument, was that of Hellas. To write dialogues in the Platonic manner was no longer the fashion, nor was it, perhaps, within the powers of men of that age; but, though the written word was untouched by the finer graces of poetry and imagination, yet never in the history of philosophy and theology—a sphere of learning at that time co-extensive with literature—have skill in controversy and dialectical ability brought wider fame to their possessors; never were these talents enthroned higher among the objects of intellectual ambition than in the time of Abelard and his rivals. These wandering teachers of the Middle Ages, whose mission it was, after the manner of the ancient Sophists, to popularize the learning of the schools, were also in the most literal sense gladiators in the arena of philosophical controversy.

4. Turning from the sphere of history and

speculative thought to that of everyday life, we find that here the uses of controversy are less obvious, but not less real. In the ordinary sense of the word it may be nothing more than negative criticism, the mere raising of objections to a doctrine or theory brought forward. But, even so, it is of practical value in sharpening the faculties and clearing up confusion in the mind. For contradiction, whether it proceeds from conviction or not, is always stimulating, and even a superficial discussion of most questions is enlightening. When, however, controversy is fairly carried on, that is, with candour and moderation, in a spirit of honest inquiry, it is of great ethical and educative value. The prejudices of the fair-minded rarely withstand the presentation of fact or the persuasion of sincere conviction. We start, most of us, knowing but one side of controverted questions; an argument with an intelligent opponent will show us the other side, and expose the weaknesses of both positions. If our conclusions are sound, we shall realize their value; if they are faulty, light will be thrown on the premisses on which they are based. John Stuart Mill, in his eloquent defence of liberty of thought and discussion, says that every one ought to make a habit of seeking this experience, and that outside the sphere of mathematics no man's opinions deserve the name of knowledge except in so far as he has gone through the mental process which would have been required of him in carrying on an active controversy with opponents (*On Liberty*, ch. 2).

5. The benefit to the individual of such a knowledge of most subjects no open-minded person is likely to deny. But there is a deeper aspect of the question. It has often, and rightly, been said that controversy is the battlefield upon which truth comes into collision with error, and that by means of it alone we can acquire new truth. The progress of the race is thus best served by unlimited freedom of discussion, by such a right 'to argue freely according to conscience' as Milton held to be among the first of human liberties. Mill lays stress upon another point. It is a matter of history that the ethical and religious doctrines of the world owed their preservation and development to the fact that they were vigorously defended against attack in the earlier stages of their existence. What is true of sects and nations applies equally to the spiritual life of individuals. It is the convictions for which we must fight that we are in least danger of losing. It is beliefs which are most universally accepted, most rarely questioned, that are apt to become least full of meaning to us, even to be accepted by us mechanically. It would be easy to multiply instances of this. Can the precepts of Christianity, for example, be said to bear the same literal meaning for us as they did for the Founder and the persecuted of the early Church? Or, to take the case of religion in Scotland, is there in Scotsmen of to-day the fire, the blind devout faith, the love of the Church, which animated their forefathers? Most people, even allowing for change of circumstances and conditions, are inclined to answer these questions in the negative. Certainly creeds and opinions do seem to draw the breath of life from the heat of battle, to grow faint and languid when the struggle is over. This is one sense in which peace and harmony do not make for progress.

6. Every theory, however sound, has its limitations. All doctrines may be, in the main, erroneous; at the best they can contain only a part of the truth, for the truth lies always somewhere between the extreme positions on which man takes his stand. While the progress of knowledge, in spite of apparent disheartening

retrogressions, bears always onward and upward, its course is, as Hegel says, a zigzag movement, tending now in the direction of one of these opposite poles of thought, now in the direction of another. Dogmatism (to use Kant's expression for these extremes), criticism, and scepticism follow one another, and are succeeded by dogmatism—a new dogmatism—again. But in this struggle of theory with theory, of half truth with half truth, the way is gradually becoming clearer, the fresh starting-point is always a little higher, and, human intelligence being limited and fallible, all this can come about only in this way.

LITERATURE.—The reader will find the source of most of the ideas suggested above in such works as: E. Caird, *Critical Philosophy of Kant*, 1889; Hegel, *History of Philosophy*, Eng. tr. 1892-98; and J. S. Mill, *On Liberty*, 1859, pt. II. See also well-known Histories of Greek Philosophy, such as that of Zeller, of Ueberweg, of Erdmann, and of Schwieger. On the significance of the work of the Sophists, the student may be referred to G. Grote, *History of Greece*, new ed., 1870, pt. II.

M. CAMPBELL SMITH.

CONVENTICLE.—The word is derived from Lat. *conventiculum*, dim. of *conventus*. According to Bingham (*Orig. Eccles.*), it originally signified no more than an assembly, and was frequently used by ancient writers for a church. It came to be applied specifically to meetings of religious associations, particularly private and secret gatherings for worship. Later it became a term of depreciation or reproach, implying that those of whom it was used were in opposition to the ruling ecclesiastical authorities; for example, it was applied to a cabal of mutinous monks in a convent or monastery. Ultimately it came to mean religious meetings of dissenters from an Established Church, held in places that were not recognized as specially intended for public worship or for the exercise of religious functions. It implied that a condition of affairs obtained in which the State made a distinction between a form or forms of religion whose practice and propagation were authorized by statute, and such as were expressly prohibited by enactment. This usage has received legal sanction in Britain.

In this sense the term 'conventicle' may be, and has been, widely applied. Harnack (*Mission and Expansion of Christianity*, 1905, II. 313) uses it of the meetings of the adherents of Mithraism in the Eastern parts of the Roman Empire throughout the domain of Hellenism (Greece, Asia, Syria, Egypt, etc.), in which regions it was a banned cult, while those who professed it were regarded as belonging to a barbarous and illicit sect (F. Cumont, *Mystères de Mithra*, Brussels, 1908). To attend 'conventicles' was the hall-mark of fanaticism, according to Celsus, who represented the contemporary opinion which cherished a lively contempt for all who attached themselves to religions competing with the Imperial cultus.

In accordance with the accepted usage of the word, Church historians properly assert that Christianity took its rise ecclesiastically from a conventicle. Such was the meeting in the Upper Room of the first disciples of Christ after the Ascension (Ac 1¹⁸). This gathering was the type of those which soon began to meet for prayer, mutual edification, and memorial observances, in private houses such as that of Mary, the mother of John (Ac 12¹²). Within a short time they drew upon themselves the suspicions of the Jewish ecclesiastical authorities, who branded the new faith as impermissibly heretical, and instituted a persecution directed to the harrying and suppression of these conventicles, one of their most zealous agents being he who became the Apostle Paul.

When Christianity became a world-religion and spread in all directions throughout the Roman Empire, it was at first tolerated, and enjoyed Government protection, along with many other cults in vogue. Religions had to receive licence from the State, which was jealous to secure itself against the danger of conspiracies maturing under the guise of religious confraternities. Largely through the influence of political considerations

(see Gwatkin, Harnack, Dill, Weinel, etc.) Christianity soon became suspect, and a *religio illicita*. Its meetings thus became strictly conventicles. Harnack applies the term to characterize such house-meetings as that mentioned in Col 4¹⁵, and Schaff uses it in his account of the primitive period as descriptive of the 'ecclesiolae in ecclesia,' the independent separate units of the Church as they existed in the various centres in which it had found footing—Rome, Corinth, etc. (*Kirchengesch.*, 1851, i. 454). In the succeeding century the catacombs (*q.v.*) were the scene of Christian conventicles (Withrow, *The Catacombs of Rome*, new ed., London, 1895, p. 104).

With the establishment of Christianity by Constantine as the State religion, all its meetings were legitimized, and the term of odium could no longer be rightly applied. In the 4th and 5th centuries the description again became applicable to the meetings of such Christian nonconformists as the Montanists and the Donatists, which were prohibited by the State under penalty of proscription and death. This policy was rigorously encouraged by the leaders of the Churches enjoying State recognition and support.

When the corruptions of the Church of Rome aroused a growing hostility in the 13th and 14th centuries, those who were united in the attitude of protest began to abandon the churches and to associate themselves in private or secret meeting-places. Against these the machinery of suppression was quickly put into operation, and once more conventicles entered into history. In England the word was early applied to the meetings of the followers of Wyclif, who, recognizing the incompetence and neglect of the regular clergy, sent out peripatetic preachers to meet the spiritual needs of the people. Both the practice and the word were carried by the Lollards (as the most determined supporters of Wyclif were called) to Scotland, where they did much to initiate or strengthen the movement of revolt from the ecclesiastical domination of Rome.

It was not, however, till after the Reformation that 'conventicle' became a term with a legal connotation, according to which it was descriptive of the meeting-place or assemblage for worship or consultation of those who departed from the Established Church of England. Queen Elizabeth, in her contest with Puritanism, strenuously asserted the royal supremacy in matters religious and ecclesiastical, and insisted upon the rigorous application of the Act of Uniformity, which demanded that all subjects of the realm must conform to the usages and tenets of the Church established by law. Clerical nonconformity was punished by deposition. As the result of the inquisition that followed, so many ministers were deprived of their livings that their places either could not be filled at all or were filled by incompetent and unpopular substitutes. Large numbers of the people refused to accept the ministrations of these substitutes, and gathered together for worship in private houses or other suitable places. These conventicles were, under that name, expressly declared illegal. The 11th Article of the Book of Canons (drawn up in 1603) censures 'the maintainers of conventicles'; the 12th, 'the maintainers of constitutions made in conventicles,' and the 73rd runs thus:

'Forasmuch as all conventicles and secret meetings of priests and ministers have ever been justly accounted very hateful to the state of the Church wherein they live, we do ordain that no priests or ministers of the Word of God, nor any other persons, shall meet together in any private house or elsewhere to consult upon any matter or course to be taken by them, or upon their motion or direction by any other, which may any tend to the impeaching or depraving of the doctrine of the Church of England, or the Book of Common Prayer, or any part of the government or discipline now established in the Church of England, under pain of excommunication *ipso facto*.'

Under these enactments the adherents of Anabaptism (*q.v.*), which had been propagated in England by refugees from the Continent, were ordered to leave the Kingdom. Even during the subsequent reign of Puritanism, the meetings of this particular body were regarded and treated after the same fashion by the Protector Cromwell, who was incensed by their aggressive fanaticism. For other persecuted sects, with only one or two exceptions, there was a breathing-space of toleration and freedom.

After the Restoration of the Stuart dynasty, established Episcopacy once more became intolerant under the aegis of Charles II. An Act of Uniformity was promulgated in 1662, which ordained the expulsion from his charge of any clergyman who refused to subscribe to everything contained in the Book of Common Prayer and to the doctrine of the King's supremacy in matters ecclesiastical, and held by the Solemn League and Covenant of 1643, prohibiting such from exercising his religious functions in private houses. 2000 clergymen were ejected from their livings in one day for declining to comply with these tests. This enactment was reinforced in 1664 by a statute called 'the Conventicle Act,' which rendered illegal any gathering in a private house for religious worship attended by a number exceeding by five the regular members of the household, under penalty of fine, imprisonment, or transportation. A second version of this Act deprived these outed ministers of the right of trial by jury, and empowered any justice of the peace to convict them on the oath of a single informer, who was to be rewarded with a third of all fines levied (D. Neal, *Hist. of the Puritans*, new ed., Lond. 1822, iv. chs. 7, 8). Large numbers of nonconformists were put in jail. Pepys, in his diary of August 7, 1664, observes: 'I saw several poor creatures carried by, by constables, for being at conventicles . . . I would to God they would conform.' He refers to Quakers, who were amongst the worst sufferers during the persecution consequent on the passing of the Acts. Bishop Burnet, in his *History of his own Time*, 1724-34, i. 471, admirably describes how they resolutely declined to obey the law, and openly and fearlessly continued their prohibited meetings. They would hold them in the street before the closed doors of their meeting-houses, when these were shut by order. The children, who might not be arrested because of their youth, would also hold conventicles in the street in the absence of their parents in jail, suffering patiently the jeers and cuffs of magistrates and unsympathetic onlookers (F. S. Turner, *Quakers*, London, 1889, p. 164).

Identical measures were taken during the same reign to secure the suppression of Presbyterianism in Scotland, where it had been the popular and dominant form of religion since the Reformation. From 1662 to 1678 various Acts were passed by the Privy Council and the Court of High Commission, prohibiting conventicles and imposing penalties of increasing severity upon those who attended them, masters being made responsible for their servants, landlords for their tenants, magistrates for the citizens of the burghs over which they presided. It was forbidden to supply denounced persons with meat or drink, or to harbour or have intercourse of any kind with them. These measures proving unavailing to effect their purpose, it was ultimately enacted that attendance should incur the penalty of death. Those in command of the military, and even the common soldiers themselves, were given authority to inflict it immediately on the spot of capture, without the formality of a legal trial—an authority which was used without scruple or mercy in numerous instances by such as

Claverhouse. This policy proved, however, quite abortive. The bulk of the religious population in the south and south-west districts continued to attend the conventicles, which were arranged and conducted by the outed ministers. Where the congregation was too large for any suitable private house, resort was had to barns, granaries, or such like commodious buildings. Frequently, however, the number of those who flocked to these illegal gatherings amounted to thousands, and the result was the institution of field-conventicles—meetings held, sometimes under cover of night, in the open air, on moors or hills, or in glens and ravines, or wherever safety and suitability could be combined. These frequently lasted for hours, the preaching taking up a large portion of the time. At such conventicles, the ordinances of the Church according to Presbyterianism were faithfully observed. Baptism was administered, and Communion was dispensed, often to hundreds together, and even thousands, the rite taking days to celebrate, several ministers officiating in turn. When repressive measures became more severe and attendance at these gatherings was enacted to be a capital offence, the men came armed with such rude weapons as were obtainable—scythes, flails, etc. Sentinels were posted at look-out points; for the royalist soldiery, aided by spies and informers, often succeeded in surprising these meetings. It was the attack upon such a conventicle that precipitated the battle of Drumclog, 11th June 1679, which issued in the only victory gained by the Covenanters (as the upholders of Presbyterianism were called), and the only defeat sustained by Claverhouse (known in song as 'Bonnie Dundee'), the most zealous and efficient of the military persecutors. During the years of persecution culminating in the 'Killing Times,' it is calculated that some 18,000 people suffered in one way or another for attending these conventicles. Yet they kept alive and deepened an intense religious faith in the land, while greatly raising the moral tone of many districts in which they were held, as, e.g., at places on the borders where pillagers and moss-troopers became peaceful and honest. Their impressive solemnity, intensified by the conditions under which they were held, frequently turned the hearts even of enemies present in disguise (A. Smellie, *Men of the Covenant*, 1904; R. Simpson, *Gleanings among the Mountains*, 1846; W. H. Carlsaw, *Heroes of the Covenant*, 1900).

After the Revolution of 1688 and the accession of William of Orange to the British throne, an Act of Toleration was passed, relating to England, which exempted from the penalties of the laws against conventicles those who took the oath of allegiance and subscribed to the doctrinal sections of the Thirty-nine Articles. Meeting-houses were required to be registered, and then came under protection of the law. In Scotland all the repressive Acts were abrogated; Presbyterianism was restored by the State to its ecclesiastical supremacy.

Similar measures of suppression in Continental countries resulted in the resort of the persecuted to similar kinds of meeting. During the merciless and prolonged attempt of Philip II. of Spain in the Netherlands to compel conformity to the Roman Catholic Church, the Protestant party headed by *Les Gueux* ('The Beggars') were forbidden free exercise of their worship, and immediately field-preachings were organized all over the country, of the same character as those in Scotland—conducted by the excommunicated ministers and surrounded by armed guards and sentinels (Lindsay, *History of the Reformation*, Edinburgh, 1906-7, vol. ii. bk. iii. ch. v.). The same scenes were enacted in the southern districts of France during the heroic

struggle of the Huguenot Camisards ('les Enfants de Dieu,' as they called themselves [see CAMISARDS]) to assert religious freedom against the suppressive measures of Louis XIV., inspired by Cardinal Richelieu's vision of a unified France, spurred by the incitements of Madame de Maintenon (herself once a Huguenot), and encouraged by the eloquence of the great preacher Bossuet. Their field-conventicles were called desert-preachings—the name 'desert' being borrowed from the Bible as descriptive of the solitary places, in wild mountain-regions, in which the meetings were commonly held. A peculiarity of these Camisard gatherings was the large part played by the 'prophets'—men and women, and occasionally children, generally quite uneducated and often normally of small capacity for speech or thought—who spoke or were accepted as speaking under the direct inspiration of the Holy Spirit, after the manner of the prophets in the primitive Church (Peyrat, *Hist. des pasteurs du désert*, Paris, 1842; C. Tylor, *The Camisards*, London, 1893).

In the history of German Protestantism the conventicle played a part in Pietism (*q.v.*). The *collegia pietatis*, established by Spener and his followers, provoked the opposition of the strictly orthodox Lutherans, and considerable disturbance was the result, as at Frankfurt, where the police interfered. All sorts of scandal were rife about these conventicles, and the over-enthusiastic manner in which some of them were conducted lent colour to the charges. In Württemberg a wise middle course was adopted. Those conventicles in which the great principles of Lutheranism were respected received legal sanction, while the more radical assemblages were banned (cf. *PRE*³ xv. 790, xviii. 612). In Sweden, Pietism roused similar opposition, and a law of 1726 forbade all conventicles conducted by laymen, though private devotional meetings under the direction of the clergy were permitted, this law not being repealed until 1858 (*PRE*³ xviii. 33, 36).

At the present time, it is perhaps only in Russia, with the Greek Church in a position of ecclesiastical supremacy recognized by the State, that conventicles in the strict sense can still be said to continue. Measures of repression are from time to time directed by the Government against dissenting sects which have incurred its suspicion and hostility, such as the Stundists (*q.v.*) and the Doukhobors (*q.v.*), who were denied the liberty of private meetings for worship. The spirit of tolerance seems, however, to be rapidly gaining ground, and nonconformists of any kind, on giving satisfactory assurances to the police, are generally permitted liberty of worship according to their accepted mode. The signs of the times point to the spirit of religious toleration soon becoming universal, with the consequent cessation of that hostile and repressive attitude of State or Established Church to any form of religion which resulted in conventicles.

LITERATURE.—This is sufficiently indicated in the article.

A. MITCHELL HUNTER.

CONVERSION.—1. **Ethnic Conversion.**—Conversion, the greatest of moral events, is not the monopoly of one religion. It is a human as well as a Christian fact. As there is one blood in the veins of all nations, and one breath in all nostrils, so there is one Divine Spirit brooding over and striving within all souls. God has made all men with a capacity for conversion, with possibilities of response to the highest call (Ac 17²⁷). And in every age and race there have been minds that have turned to the light, hearts that have felt the 'expulsive power of a new affection,' wills that have striven, and not all in vain, to attain the ideal. We need not grudge the name or the idea

of conversion to many experiences recorded in non-Christian literature. 'Faciasne quod olim mutatus Polemon?'¹ (Hor. Sat. II. iii. 253 f.).

The movement which was initiated by the religious teachers of Greece led to many conversions from polytheism to monotheism, and it had its saints and martyrs. Dill has shown that, towards the beginning of the Christian era, Græco-Roman philosophy became evangelical; it sent out an array of preachers to convert men to a higher and purer ideal (*Rom. Society from Nero to M. Aurelius*, London, 1904, bk. iii. ch. ii.). 'Some of the schools even developed a true pastoral activity, exercising an oversight of their members, and seeking to mould their moral life and habits according to the dictates of true wisdom' (Menzies, *Hist. of Religion*, London, 1895, p. 301). 'I regard myself,' said Seneca, 'not so much as a reformed, but as a transfigured man' (*Ep.* 6). The science of Comparative Religion is proving the truth of the intuition that there is 'a light which lighteth every man' (Jn 1⁹). The conversion of Gautama, afterwards known as the Buddha, is as real a fact as that of Saul of Tarsus, Francis of Assisi, or any other spirit that has ever obeyed the heavenly vision. This pampered child of fortune turned from his pleasures and palaces as illusion and vanity; he sought and found, as he believed, the cause of sorrow and the way to subdue it; and he drew a vast stream of mankind after him to the religion of renunciation. It was the best they could do; they followed the gleam; they loved the highest when they saw it. Similar phenomena are found in Confucianism, Islām, and all other great religions. God has not left Himself without witness in any nation, and the same choice between good and evil, between self-seeking and self-sacrifice, presents itself in some form or other to every human being. The spiritual ascent of man has been accomplished by a long series of conversions, from the lowest fetishism to the highest theism. To Christian philosophy, every upward movement of the human mind suggests that 'Christ, in His universal relation to humanity, may be able to pour His new life into open hearts, even when there is complete ignorance concerning the facts of His history and work' (Clarke, *Outline of Christian Theology*, Edinburgh, 1898, p. 398). And yet, so great is the difference between all such movements and the experience which is called Christian conversion, that one cannot but acclaim the essential truth of a well-known passage in Carlyle's *Sartor Resartus*:

'Blame not the word [conversion]; rejoice rather that such a word, signifying such a thing, has come to light in our modern Era, though hidden from the wisest Ancients. The Old World knew nothing of Conversion; instead of an *Ecoe Homo*, they had only some *Chocoe of Hercules*. It was a new-stained progress in the Moral Development of man: hereby has the Highest come home to the bosoms of the most Limited; what to Plato was but a hallucination, and to Socrates a chimera, is now clear and certain to your Zinzendorfs, your Wesleys, and the poorest of their Pietists and Methodists' (bk. II. ch. 10).

2. Conversion in the Bible.—The term 'conversion' (ἐπιστροφή) occurs but once in the Bible (Ac 15¹). At the close of his first great mission, St. Paul went to Jerusalem to take counsel with the Apostles and elders, and he and Barnabas passed through Phœnicia and Samaria, 'telling the whole tale (ἐκδηγοῦμενοι) of the conversion of the Gentiles, to the great joy of all the brethren.' It was a momentous event, pregnant with the mightiest issues, marking an epoch in the history of the

¹ Polemon was a youth of Athens, the son of Philostratus, who spent the greater part of his life in riot and drunkenness. He once, when intoxicated, entered the school of Xenocrates, and was so struck with the eloquence of the academician, and the force of his arguments, that from that moment he renounced the dissipated life he had led, and applied himself totally to the study of philosophy. After the death of Xenocrates he succeeded in the school where his reformation had been effected' (Lemprière, *Class. Diet.*, ed. 1839, s.v. 'Polemon').

world. In the LXX the verb ἐπιστρέφω stands for נָשָׁב, נָשָׁב, and נָשָׁב, and times without number for שָׁב and שָׁב. In AV of the OT 'convert' occurs five times—in Ps 19⁷ (Vulg. *convertens animas*), where RV uses 'restoring'; in Ps 51¹², where RV retains 'sinners shall be converted,' while the margin has 'shall return'; in Is 1²⁷, where RVm changes 'her converts' into 'they that return of her'; in Is 6¹⁰, where RV has 'turn again'; and in Is 60⁶, where 'converted' becomes in the RV 'turned.' In the NT ἐπιστρέφω appears very frequently, and in AV it is nine times rendered 'convert'; but this word appears only twice in RV (Ja 5^{19,20}), being everywhere else changed into 'turn' or 'turn again.' But, wherever the Gr. word is followed by ἐπὶ τὸν κύριον, ἐπὶ τὸν θεόν, or the like, it undoubtedly connotes all that is commonly signified by 'convert,' e.g. in Ac 9³⁵ 11²¹ 14¹⁵ 26³⁰, 1 P 2²⁵.

The Bible is the drama of the conversion of the world, of the turning, or rather the return, of man to God. The sacred writings must, in the last resort, always determine and control our conception of the origin, growth, and nature of the spiritual life. Without them there would be no Christian conversion, for there could be no adequate knowledge of God as revealed by Christ Jesus. If we are able to trace the lineaments of the soul of a Christian, it is because we have in the Bible the gradually perfected norm of the new life.

i. THE OT.—The OT is a mine of gold for the inductive study of the facts of conversion, but the prospector has to encounter certain initial difficulties. The subject of conversion is often the nation as a whole, and the part played by the individual is usually left to be inferred instead of being directly expressed. Again, the Oriental mind is not analytic; it reasons *a priori*; it is noumenal rather than phenomenal. Where the West says, 'Felix qui potuit rerum cognoscere causas,' the East is content with '*causam*.' To search for secondary causes, to pry too curiously into the subjective conditions of spiritual experience, seems to it not only superfluous, but even a little profane. 'This is Jahweh's doing' (Ps 118²³), 'The king's heart is in the hand of the Lord as the watercourses; he turneth it whithersoever he will' (Pr 21¹), 'None can stay his hand' (Dn 4³⁵), are characteristic Eastern utterances. Once more, the Hebrew habit of thinking in pictures—due in great measure to the absence of abstract terms from the language—causes many spiritual experiences to be clothed in a figurative or symbolical garb. The psychologist must be a very skilful as well as reverent exegete who would re-tell in modern scientific phraseology the story of the conversion of Jacob at Bethel, of Moses in Arabia, of Solomon at Gibeon, of Isaiah in Jerusalem. The last of these experiences, enshrined in an incomparably vivid and illuminating page of autobiography (Is 6¹⁻⁸), presents a type of conversion in Israel which is no doubt, in some respects, unique and incommunicable, but in its broad outlines may be regarded as normative. Four distinct moments are enumerated in the thrilling and transforming experience. There is a *vision*, flashed upon the young Hebrew's inner eye, of the King, Jahweh of hosts, whose glory fills the earth. There is a *conviction* of sin, personal and national, concentrating itself like a subtle poison in unclean lips. There is the unutterable comfort of *absolution*, which comes in the hand of a Divine messenger, by the way of the altar, to a heart wrung with anguish. And there is a *mission*, Divinely offered and humbly accepted, to live in the service of God for the welfare of men.

Just because Israel's moral and spiritual ideal—

their conception both of God and of man—was so much higher and purer than that of any other nation of antiquity, conversion was to them a more real and radical experience than elsewhere. Theologically construed, conversion was, in their eyes, always a reversion, not to a low but to a high type, not to an animal but to a Divine pattern. This was not a movement contrary to nature; it was man finding himself, realizing his own true nature. But the general point of view was intensely ethical rather than speculative. Historically, the one aim of the spiritual leaders of Israel was to constrain the backsliding nation to 'return,' to 'be converted,' unto Jahweh. 'Let the wicked return unto Jahweh,' 'Return ye, and turn yourselves from all your transgressions,' 'Turn yourselves, and live,' 'Take with you words, and return unto Jahweh' (Is 55⁷, Ezk 18³⁰⁻³², Hos 14²). The Prophetic literature rings with the clear call to a definite change of spiritual attitude. Conversion is always equivalent to repentance and faith. But the same Hebrew word (שׁוּב) expresses both the turning to and the turning again from Jahweh, conversion and perversion, and the two movements form the perpetual systole and diastole of the heart of Israel. The possibility of conversion is based upon the consciousness of Divine redemption in the past and the hope of Divine co-operation in the present. 'Return unto me; for I have redeemed thee,' 'Turn thou me, and I shall be [or, that I may be] turned' (Is 44²², Jer 31¹³). God alone can replace the old antagonism by a new disposition, can change the stony heart into one of flesh. The command, 'Make you a new heart and a new spirit' (Ezk 18³¹), would be a mockery if it were not accompanied by the promise, 'A new heart also will I give you, and a new spirit will I put within you' (36²⁶), and unless there were a Divine response to the prayer, 'Create in me a clean heart, O God, and renew a right spirit within me' (Ps 51¹⁰).

The Book of Psalms gives lyrical expression to the joy of conversion, to the triumph of the soul's return unto its rest in God. The Psalms have many authors, and it matters little whether any singer describes his first or a subsequent spiritual experience, or whether 'the I Psalms' are intended to mirror the heart of the nation as well as the individual. Be that as it may, no human document has greater value for the psychologist of conversion. Here (especially in the Penitential Psalms, 6, 32, 38, 51, 102, 130, 143) he finds 'the sick soul' sighing, groaning, despairing, sure that God has hidden His face, spending nights in sleepless agony, tossing wearily to and fro, watering the couch with tears. Here is the tortured conscience, whose sins are exposed in the light of God's countenance, gnawed with remorse, seized with the pains of Sheol. Here is the sense of inward uncleanness, of hereditary sin, the horrible feeling of being sunk in the miry clay of a deep pit from which there is no deliverance. Here is the piercing cry out of abyssal depths, the prayer for Divine mercy and forgiveness. And here is the glimmering light in the darkness, the blaze of spiritual illumination, the clear vision of God, the sense of His redeeming love; and, lastly, the rapture of deliverance, the gratitude that words can never utter, the desire to tell to others what Jahweh hath done for the soul, that sinners may be converted unto him.

At an early period the Hebrew nation began to devote much care to the training of the young. There was an enthusiasm for education (see EDUCATION [Jewish]), and the discipline was never merely intellectual, but always primarily ethical and spiritual. 'The fear of Jahweh is the beginning [or, it may be, 'the chief part'] of wisdom' (Pr 1⁷). Here 'wisdom' is almost equivalent to

'religion.' It was often personified by its lovers, and praised as a mother or a bride (Pr 2, 3), and even as the eternal companion of Jahweh (Pr 8). The great aim of Hebrew parents—no mention is made of schools—was so to 'train up a child' in the service of God and in the atmosphere of healthy piety, that in his manhood he should need no sudden, violent, convulsive return unto Jahweh from a life of sin and shame. How entirely such pedagogy corresponds with our latest ideals of education, we shall see later. That the end was often realized, we cannot doubt. Some of the noblest servants of God knew that they were sanctified from their mother's womb (Jer 1⁸, Lk 1¹⁵). There was no time when they did not reverence and love Jahweh, no time when they played the fool, no time when they needed to hear the arresting trumpet-voice, 'Turn ye, turn ye . . . why will ye die?' (Ezk 33¹¹). But there are incalculable elements in human nature as well as defects in the best education, and the sons of many servants of Jahweh—such as Eli, David, Josiah—showed that it is always in man's power to abuse the mystery of his freedom and defeat the grace of God.

Conversion in the OT was often a profound and radical change. The desire for God—the hunger, the thirst, the panting, the fainting—was pathetic as it was passionate, and the response to the human cry was the outstretching of a strong arm that not only wrought deliverance from evil, but drew men into close and satisfying fellowship with God. Yet the joy of conversion was never quite full. It was for a long period troubled by the idea that spiritual restoration must necessarily be followed and attested by material prosperity. To the end it awaited a fuller revelation of the Fatherhood of God, the atonement of sin, and the hope of immortality. There was to be a final answer to the oft-repeated prayer, 'Turn us again, O God, and cause thy face to shine, and we shall be saved' (Ps 80^{8, 7, 19}).

ii. THE NT.—In the NT, conversion is the chief end of all teaching and preaching. It has rightly been called (*Ecce Homo*¹¹, London, 1873, p. 243) 'the true articulus stantis aut cadentis ecclesiae.' Jesus began His ministry by preaching repentance and faith (Mk 1¹⁵), which are together equivalent to Christian conversion. The call of the early Church was, 'Repent ye, therefore, and be converted, that your sins may be blotted out' (Ac 3¹⁹). The language in which conversion is described varies greatly, as do the subjective experiences of individuals; but the root or core of the change is always the same. It is figured as a translation out of darkness into marvellous light (1 P 2⁹), as a being born again, or 'from above' (Jn 3³), as a redemption from all iniquity (Tit 2¹⁴), as a passing out of death into life (Jn 5²⁴), as a turning from the power of Satan unto God (Ac 26¹⁸), as a new creation (2 Co 5¹⁷), as putting off an old and putting on a new man (Col 3⁹), as becoming children of God (Ro 8¹⁶), as having Christ dwelling in the heart by faith (Eph 3¹⁷), as a dying and rising again (Ro 6⁷⁻⁸). Practically, it is a new life which turns all the forces of one's being into a new channel. All the energies that formerly made a man a sinner are now employed to make him a saint. His carefulness, indignation, zeal, and revenge are directed against his sin (2 Co 7¹⁴). The converting power is never the mere force of truth, or the beauty of holiness, but always the fascination of a Person. The whole life of the convert organizes itself anew around Christ living, dying, rising, and reigning; He is the power of God unto salvation (Ro 1¹⁶). The NT tells of multitudes who have been reclaimed from vice, and never gone back. Science regards all facts with reverence, and the NT abounds in such transfigured realism as the fol-

lowing: 'Neither fornicators, nor idolaters, nor adulterers, nor effeminate, nor abusers of themselves with mankind, nor thieves, nor covetous, nor drunkards, nor revilers, nor extortioners, shall inherit the kingdom of God. And such were some of you: but ye were washed, but ye were sanctified, but ye were justified in the name of the Lord Jesus Christ, and in the Spirit of our God' (1 Co 6⁹⁻¹¹). NT conversions have been classified as moral, spiritual, intellectual, and practical (John Watson, *Inspiration of our Faith*, p. 79 ff.); and such groupings are useful, if not logically perfect. There are conversions from sin to holiness, from doubt to faith, from legality to grace, from selfishness to service. But we must beware of analyzing the indivisible self into so many faculties, and ascribing conversion to the exercise of one of them, to the exclusion of the others. Conversion is the response of the whole personality—whether regarded as mind, or heart, or will—to the personal Christ. It is man's meeting with Christ, believing in Christ, gaining new life in Christ. Intelligence, emotion, volition are all mastered by the Author and Finisher of Christian faith. The harmonious functioning of every energy of the mind is the perfect spiritual life.

Jowett, in a fine essay on 'Conversion and Changes of Character,' calls attention to the fact that 'with the first believers the influence of Christianity was almost always sudden.' He finds that this lay in the nature of things. The earliest converts had no Christian training in childhood and youth. When they heard the gospel, they were pricked with the sense of sin, they were melted with the love of Christ, and they needed no time of probation. But their conversion, however sudden, and however wonderful the attending circumstances, was none the less sincere and lasting. They became the very opposite of their former selves; their spiritual nature came again like the flesh of a little child (Jowett, *Theological Essays*, p. 40). Sometimes the change was violent and dramatic, as in the case of St. Paul, whose conversion is the most momentous in history; sometimes it was quiet and unsensational, as in the instances of Zachæus, Matthew, Lydia, Timothy. But, whether the type was explosive or gentle, the change was radical and complete. And it is important to note that it was always the opposite of a gradual and laborious reformation.

'Easier to change many things than one is the common saying. Easier, we may add, in religion or morality, to change the whole than the part. Easier, because more natural, more agreeable to the voice of conscience and the promises of Scripture. . . . Take care of the little things of life, and the great ones will take care of themselves, is the maxim of the trader. But more true is it in religion that we should take care of the great things, and the trifles of life will take care of themselves. Christianity is not an art acquired by long practice; it does not carve and polish human nature with a graving tool; it makes the whole man; first pouring out his soul before God, and then casting him in a mould' (Jowett, *op. cit.* 55).

For certain purposes, theology distinguishes conversion from regeneration. They are the human and the Divine side of the same experience. Regeneration is the gift of God's grace, the power or principle of the new life implanted by His Spirit; conversion is the act of human freedom, the voluntary turning of the heart to God. The one is a necessity—'ye must be born again' (Jn 3⁷); the other, a duty—'repent and be converted' (Ac 3¹⁹). Regeneration occurs but once, conversion may have to be repeated. 'Convert your conversion' is the keen counsel of Adolphe Monod (*Saint Paul*, Paris, 1859, p. 114). St. Peter's faith never failed, for his Master prayed for him, and his love never grew cold; but in a moment of temptation he denied his Lord, and his need to be re-converted was painfully evident (Lk 22³²). And if there is any truth in the *Domine, quo vadis?* legend, he had yet another con-

version at the very end of his life, and it was again a look on the face of Christ that wrought the change. 'And Peter turned, and rushed on Rome, and died.' Conversion plays too important a part to be exhausted in a single decision.

'The whole life of a man,' says Fraser of Brea, 'is a continued conversion to God, in which he is perpetually humbled under sense of sin, and draws nearer and nearer to God, with more fervent faith and love, and daily walks closer with the Lord, endeavouring at perfection. And God doth, as it were, act over and over again His work in the heart, forming His people more exactly than before: and therefore no wonder they meet with something like a second, yea, and a third and fourth conversion, especially where there are backslidings' (*Memoirs*, Edinburgh, 1738, ch. v. 3).

St. Paul describes his own conversion objectively in the Acts, and subjectively in his Epistle to the Romans. Ro 7 is the most searching analysis ever given of the divided self, the *homo duplex*. Whether it mirrors a first or second or still later spiritual conflict is immaterial, for each crisis is in many respects the same. How forcibly the Apostle's self-dissection illustrates the teaching of the modern psychologist!

'The . . . basis of the twice-born character seems to be a certain discordancy or heterogeneity in the native temperament of the subject, an incompletely unified moral and intellectual constitution. "Homo duplex, homo duplex!" writes Alphonse Daudet. . . . Heterogeneity may make havoc of the subject's life. There are persons whose existence is little more than a series of zigzags, as now one tendency and now another gets the upper hand. Their spirit wars with their flesh, they wish for incompatibles, wayward impulses interrupt their most deliberate plans, and their lives are one long drama of repentance and of effort to repair misdeeds and mistakes. . . . The higher and the lower feelings, the useful and the erring impulses, begin by being a comparative chaos within us—they must end by forming a stable system of functions in right subordination' (James, *Varieties of Religious Experience*, London, 1902, lect. viii. p. 167 ff.).

While the battle rages in the Apostle's soul, while his heart is a kingdom divided against itself, and in all the chambers of his being his moral ideal is torn between friends and foes, his anguish is pitiful. 'O wretched man that I am,' he cries, 'who shall deliver me?' (Ro 7²⁴). But in the end, by the power of Christ, his higher self triumphs over his lower; his divided spirit is healed; peace and harmony take the place of civil war and turmoil; and the most tragic lament in the Bible is followed by the finest psalm-song.

3. Conversion in Church history.—The supreme task of the Church is the conversion of the world—the making disciples of all nations (Mt 28¹⁹). The apostolic and evangelic continuity of spiritual life is to be maintained, the Christian faith is to be propagated, the Kingdom of God is to come, through an unbroken succession of conversions. All the preachers who have profoundly moved the heart of mankind—master-spirits like Chrysostom, Savonarola, Luther, Wesley—have made conversion their theme. And, from a scientific point of view, the evidential value of conversions is the highest.

'St. Augustine,' says Romanes, 'after thirty years of age, and other Fathers, bear testimony to a sudden, enduring, and extraordinary change in themselves, called *conversion*. Now this experience has been repeated and testified to by countless millions of civilized men and women in all nations and all degrees of culture. It signifies not whether the conversion be sudden or gradual, though, as a psychological phenomenon, it is more remarkable when sudden and there is no symptom of mental aberration otherwise. But, even as a gradual growth in mature age, its evidential value is not less' (*Thoughts on Religion*, p. 162).

The theology of the Church was early caught in the meshes of the problem of the relation of Divine grace to human freedom in the experience of conversion. Thought has moved between two extremes. On the one hand, the sovereignty of God is emphasized, grace is irresistible, the number of the elect is certain and must be made up, the Divine good pleasure is certain to take effect. Under such conditions, man, impotent in the grip of original sin, is converted almost against his will. He is scarcely more than an automaton; his salvation appears to be due to his mere good

fortune; he chances to be a vessel unto honour. On the other hand, human liberty is accentuated; conversion is viewed as the outcome of forces resident in man himself; he has a native power to repent and believe, and the new life is from first to last a hard-earned, self-obtained, personal possession. The age-long controversy between Augustinian and Pelagian, Calvinist and Arminian, regarding the fact of conversion has now spent much of its force. With the help of a better psychology we can do justice to both the Divine and the human initiative. God is all-operative love, and man's whole equipment is His gift. All the conditions of human life are Divinely ordered, and man has an intense consciousness of dependence. He has nothing that he has not received. But part of his equipment is his freedom. He is above the mechanical order of nature. He has a real and not an illusive sovereignty. He is conscious of acting of his own accord, and of using the causal order for ends which he himself chooses. He is a free, self-determining personality, and his conversion can only mean that under the impulse of love he voluntarily and joyfully surrenders himself to God. A German theologian illustrates the interaction of Divine sovereignty and human freedom in conversion by the familiar process of persuading and being persuaded—*Anregung und Ueberzeugung* (Seeberg, art. 'Bekehrung,' in *PRE*). Every man is constrained by the love of Christ; but every man is fully persuaded in his own mind. If the convert calls the grace or fascination of Christ 'irresistible,' he speaks with the enthusiasm of a lover; but it is bad theology to change the warm logic of the heart into a cold dogma of the intellect. Man may after all use the Divine gift of freedom to oppose—it may be to thwart—the will of God. The wise use of individuality is to make Divine ends personal ends, and to pour forth all the energy of one's being in the service which is perfect liberty.

Conversion meant in the Middle Ages, as it still does in Roman Catholicism, the adoption of a creed and submission to the authority of the Church. In Protestant theology it always means the re-birth of the soul, but in the Anglican Church there is a strong tendency to regard regeneration and conversion as independent experiences, separable in time, and different in important aspects. Certainly, if regeneration is mediated by baptism, the subject of which is usually unconscious of the rite, while conversion is the deliberate turning of the will to God, the personal acceptance of Christ by faith, then the second process is often separated from the first by a long interval; and it is possible to contend, as Anglican theology sometimes does, that 'a regenerated man is not necessarily a converted man.' If the effect of baptism is that 'it remits all sin, original and actual; that it bestows sanctifying grace, and endues the soul with the heavenly virtues of faith, hope, and charity; that it makes the recipient a member of Christ, the child of God, and an inheritor of the kingdom of heaven' (V. Staley, *The Catholic Religion*, London, 1893, p. 243), there can be little need for another religious phase called conversion. But this view appears to lose all touch with the central truth and vital experience of the NT, to empty the Christian religion of its moral and spiritual contents, and to reduce it to the level of a magical formula.

4. Conversion in the light of science.—Professor Henry Drummond was an eye-witness of the facts of conversion, as the youthful comrade of Mr. Moody in a great revival of religion. From that time he never ceased to advocate a scientific treatment of the phenomena of the spiritual life, which he happily called 'the contemporary activities of

the Holy Ghost.' There can be nothing presumptuous in the endeavour to classify the facts and discover the laws of the new life. To the man of science all facts are sacred, and before the fact of conversion, as before any other, he will sit down 'as a little child.' Far too scanty attention has been given to the human side of soteriology. In order to understand the Saviour better, we must look more to the saved. Christ asked that He might be believed 'for the very works' sake' (Jn 14¹¹), and He worketh hitherto (5²⁴). The serious study of the facts of conversion may be the best present-day mode of handling the Word of life. The Christ of history may be reached through the Christ of experience. Christianity, as Harnack reiterates, is 'eternal life here and now in the power of God and in His presence.' Its best evidence is the logic of life. *Solvitur ambulando*, it is proved by its present spiritual movements and triumphs. In the realm of experimental theology, the twentieth century may join hands with the first.

During the last dozen years there has been a remarkable response to the plea for a science of conversion, for an empirical study of 'the soul of a Christian.' It has fittingly come from the psychologist rather than the theologian; and the new quest has characteristically been urged with special keenness in America. The publication of Starbuck's *Psychology of Religion* in the 'Contemporary Science Series' (1899) marked an epoch in the modern Church. In this book and its numerous successors the whole spiritual realm has been annexed by science. Religious experiences without number have been collected, classified, and described. 'That cruel reticence,' whereof Ruskin complained, 'in the breasts of wise men which makes them always hide their deeper thoughts,' has to a great extent been overcome. Law and order have been introduced into an apparent chaos. Theology, which has been too long metaphysical, has become experimental; it has been brought into line with the whole scientific movement; it has found a concrete basis in the facts of the spiritual life. Dynamics have taken the place of statics. Conversion is no longer regarded as a mere mystery or portent, before which we must stand in silent amazement. It abides our question and becomes articulate. It expresses itself in the language of the modern mind. It welcomes the application of the canons of science, and yields up many of its secrets to patient and reverent research. It has a rationale. It is seen to have discoverable relations to other known psychological facts. And, in the spiritual as in the natural world, God is a God of order. He arranges everything upon definite principles. The law of cause and effect controls the spiritual life. Arbitrariness must once for all be eliminated from the fortunes of the soul. God's action is always causal, never casual. His sovereignty is as different from the 'mere good pleasure' of an Eastern despot as day is from night. The science of conversion is still in its infancy, but certain conclusions seem to have been securely won.

(1) *There is a conversion period.*—The re-birth does not take place with the same frequency in all the seven ages of human life, though a man may be born again when he is old. Conversion is in general a fact of adolescence. It is closely related to those great physical and mental changes which mark the transition from childhood to youth and manhood. It is the time of storm and stress, in which Nature calls for readjustment all along the line. As reason, feeling, and moral sense mature, they precipitate a spiritual crisis. The soul awakes and aspires. The spiritual development proceeds, as a rule, *pari passu* with the physiological and

psychological development, and a wide induction proves that

'among females there are two tidal waves of religious awakening, at about 13 and 16, followed by a less significant period at 18; while among males the great wave is at about 16, preceded by a wavelet at 12, and followed by a surging up at 18 or 19' (Starbuck, *op. cit.* p. 34). 'Feeling plays a larger part in the religious life of females, while males are controlled more by intellect and volition' (*ib.* 66). 'Conversion for males is a more violent incident than for females, and more sudden' (*ib.* 95). And 'one may say that if conversion has not occurred before 20, the chances are small that it will ever be experienced' (*ib.* 28).

(2) *Conversion is often sudden.*—This statement is sometimes received with incredulity and even contempt, but psychology completely justifies it by bringing it into relation with other well-known mental processes. There are moments, as Browning says in his *Cristina*,

'When the spirit's true endowments
Stand out plainly from its false ones.'

Our best thoughts are often startling intuitions, 'flashes struck from midnight.' The seeker after truth utters his sudden 'Eureka,' and so does the seeker after a Saviour (Jn 14⁴⁵). Love, both natural and spiritual, is often love at first sight; when two souls, like two dewdrops, rush into one, the time element counts for nothing; the psychological moment has in it the quality of eternity. Our wills and our hearts are ours to make them God's, and life's most momentous decisions may be swiftly over.

'The world and its laws,' to quote Jowett again (*op. cit.* p. 53), 'have nothing to do with our free determinations. At any moment we can begin a new life.' R. L. Stevenson prays the Celestial Surgeon to stab his spirit broad awake (*Underwoods*, p. 46). 'A word did it,' said Savonarola of his own conversion.

Even those who have never avoided God, never dishonoured Christ, often become suddenly and profoundly conscious of their need of conversion; and there are creative periods of the mind when the repulsion from evil and the attraction to good are tremendously strong. While, however, the actual change is frequently swift, there is almost invariably a season of preparation for it. Conversion is the climax of a gradation, the crisis of a process more or less drawn out. The evidence on this point is all but unanimous. We may even accept Vinet's strong statement: 'Rome might more easily be built, than a man converted, in a day. Such a prodigy is possible with God; but in a thousand, in ten thousand cases to one, we may safely predict that He will not perform it' (*Outlines of Theology*³, 1870, p. 84). Vinet is here perhaps misusing language, confounding the means with the end, the way with the goal. He does not for a moment deny that the final *coup* is often instantaneous. In such cases conversion is the firing of a slowly-laid train, the bursting of a silently-maturing bud, the transformation scene in the life-long drama of the soul. It is evident that much is lost by the deliberate postponement of decision.

'Convert me, but not yet,' was Augustine's prayer. 'Men are quick to feel, and keen to know; but they are not only slow, they are averse to decide. Yet it is for decision that Christianity calls, it is for decision that the energetic universe calls, far more than for a mere impression in response. A crisis has from time to time to be forced, a crisis of the will' (P. T. Forsyth, *Preaching and the Modern Mind*, 1907, p. 181).

(3) *Conversion may be unconscious.*—There is a happy class of Christians who cannot tell when or how they began to believe; who have 'no bitter regrets, no broken lives, no ugly memories.' Theirs is the *anima naturaliter Christiana*, the *schöne Seele* that has always been on the side of the angels. It was the teaching of Bushnell that, under the pervasive influence of the Christian family, the child should grow up a Christian, and never know himself to be otherwise. The Christian life, being natural to man, should begin with the beginnings of conscious experience; and a great wrong is done to a child when he is led to imagine that he must wait till he comes to years of discretion and

then have an experience which will make him a Christian. If God's will for him is realized, there will be no rude break, but a beautiful continuity, in his spiritual life. 'Of such is the kingdom of God' (Mk 10¹⁴), said Jesus of the children of Galilee, and the prevention of a fall from the grace vouchsafed to childhood should be the aim of all education.

'That is the ideal type of conversion in a Christian land; and it is the scandalous neglect of duty by Christian parents and by the Church which has made it less frequent than it should be' (D. W. Forrest, *The Christ of History and of Experience*, 355).

The child is father of the man;
And I could wish my days to be
Bound each to each by natural piety.'

Some, indeed, deny that in this experience there is any conversion at all. Francis Newman distinguished the 'once-born' from the 'twice-born' Christian, and this idea—legitimate enough as a protest against an exclusively revivalistic type of conversion—has been taken seriously by some psychologists and greatly overworked. It is not a Christian idea. Jesus assumes in many indirect ways the natural finfulness of the human heart and its need of regeneration. Even the child who is 'sanctified from his mother's womb' is twice-born. The most 'sky-blue' and 'healthy-minded' Christian is regenerated. Science is here rendering a valuable service to theology. It has proved that every man has a sub-conscious as well as a conscious self, and that changes both small and great occur in the subliminal region of the mind.

'Consciousness is a very poor witness to what takes place in the abysses of soul life. The remembered experiences of individuals are pitifully fragmentary and puerile, and often absurdly mistaken as to cause, process, issue, and object' (Hall, *Adolescence*, p. 341).

We are largely the creatures of instinct and unconscious imitation, and, if many things are wrought into the fabric of our being without our knowledge, why not the grace of God?

'Think you, 'mid all this mighty sum
Of things for ever speaking,
That nothing of itself will come,
But we must still be seeking?'

God 'giveth his beloved in sleep' (Ps 127³), and His beneficence is as wonderful in an unconscious as in a conscious regeneration. But see, on this whole subject, art. CONSCIOUSNESS, p. 53.

(4) *Conversion must not be stereotyped.*—The phenomena of the spiritual life are marvellously complex, and psychology teaches us to resist every attempt to standardize, normalize, conventionalize it. Every individual has his own ancestry, his own history, his own idiosyncrasy, and therefore his own spiritual experience. The variety of grace is like the variety of nature. God does not repeat Himself; He loves originals more than duplicates. The conversion on the way to Damascus cannot be a pattern for all men. There need not always be the same tragic intensity, the same high lights, the same deep shadows. The diversities of operations of the selfsame Spirit must all be orthodox. But every man is tempted to make his own experience a kind of law for other people. Schleiermacher thinks that the religious life is, in its inception and growth, the product of feeling; Herrmann believes that 'greater and higher than all the emotions within the Christian, there rises and towers religious thought.' The type of religious experience that seems native to a cultured community is calm and restrained; but the fervours of the Salvation Army and the Methodist meeting are to the psychologist no less natural.

Théodore Monod tells of a French friend who thus described his conversion: 'I cannot say that I had a very strong sense of sin. I just felt happy in the love of God. God did to me as a mother will sometimes do to her child who has overslept himself: he woke me with a kiss' (Moody, *Sovereign Grace*, Lond. 1899, p. 113). The Christian of the unconscious type, who has never felt a single reaction or upheaval, may join hands with the convert who knows himself to be a brand plucked from the burning, to whom conversion is a thing volcanic or cataclysmic, in whom 'habits of years' standing are overthrown in as many

moments,' and whose 'very organic impulses and desires are so utterly transformed that he can scarcely recognize himself' (Pratt, *Psychology of Religious Belief*, p. 251).

(5) *Conversion is still a mystery.*—In being studied scientifically, spiritual phenomena lose none of their Divine significance. Psychology has done much and will yet do more; it even asserts that, 'if we know the person psychologically, we can prophesy quite correctly the type of his conversion, whether sudden or gradual, quiet or excited' (Cutten, *Psych. Phen. of Christianity*, p. 255). But, after all, psychology can see only the under side of conversion. Spiritual life, like natural life, is in its final cause and real nature inscrutable. Nothing can be more crude than the notion that to discover the reign of law is to eliminate God and mystery. Law is only God's uniform method of working, and 'He is in the field when He is most invisible.' We have not to deal with a God remote from the world and manifested only through occasional interferences with the order of Nature, but with a God whose dwelling and working are in the lives of men. Just as the correlation of brain states with mental states does not prove the case of the materialist, so the correlation of conversion with certain mental and physical forces is far from proving that the inception and growth of the spiritual life is not a Divine act.

'That it [conversion] may all be due to so-called natural causes,' says Romanes, 'is no evidence against its so-called supernatural source, unless we beg the whole question of the Divine in Nature' (*op. cit.* p. 163). Even Ritschl, with all his dislike for mysticism, never denies that God Himself is present and operative in regeneration, using the religious community as His medium, not His substitute. 'This wonderful change,' says Pfeiderer, 'is not arbitrarily brought about by man himself, but experienced as a thing that has happened to him; it appears to him as the operation of a higher power, as the gift of undeserved divine favour or grace. And is not this in truth the case? Careful thought, in fact, can do nothing but confirm what the believer holds as a truth requiring no proof' (*Philosophy of Religion*, Eng. tr. iv. [1888] 128).

Proude complains that conversion, like other Christian doctrines, has been 'pawed and fingered by unctuous hands for now near two hundred years. The bloom is gone from the flower. The plumage, once shining with hues direct from heaven, is soiled and bedraggled. The most solemn of all realities have been degraded into the passwords of technical theology' (*Life of Bunyan*, London, 1880, p. 34). But all that is needed to bring back the bloom to the flower and the plumage to the wing is a new springtime. Human errors and caricatures do not alter Divine facts, any more than the mists extinguish the stars. A wide survey of the data of the spiritual life leads to the conclusion that the majority of conversions have little of the picturesque or dramatic in them; that some take place beneath the threshold of consciousness; that others are but dumb yearnings of penitence and faith towards God; that the memorabilia of soul-life are usually very brief, the convert sometimes limiting himself to the wondering exclamation, 'Whereas I was blind, now I see' (Jn 9²⁵). Yet every conversion enfolds in itself a Divine secret—the mystery of life—whose power and beauty will gradually be unfolded to the eye, but whose inner significance no mind can penetrate. The psychological study of the New Life will probably do more than anything else to convince the twentieth century of the immanence and the transcendence of God.

JAMES STRACHAN.

CONVICTION.—1. *Conviction in relation to belief.*—Conviction that certain doctrines of religion are true is seldom or never the result of a rational process; it rather springs from a feeling in the mind that the doctrines suit a mental and emotional condition and bring peace to the soul. As Schopenhauer has well said:

'Man has, as a rule, no faculty for weighing reasons and discriminating between what is false and what is true; and, besides, the labour which nature and the needs of nature impose upon him leaves him no time for such inquiries, or for the education which they presuppose. In his case, therefore, it is no use talking of a reasoned conviction; he has to fall back on belief and authority' (*Religion: a Dialogue*, tr. by T. B. Saunders, 1889, p. 19).

Conviction implies active acceptance of propositions as indubitably true. It is not in itself any proof of truth, because different people may have diametrically opposite convictions, and some convictions have led to most lamentable results in persecutions, and in denial of equality in human rights and liberties. Bagehot remarks, in discussing 'The Emotion of Conviction':

'Nor is this intensity a sign of truth, for it is precisely strongest on those points in which men differ most from each other. John Knox felt it in his anti-Catholicism; Ignatius Loyola in his anti-Protestantism; and both, I suppose, felt it as much as it is possible to feel it' (*Lit. Studies*, 1879, ii. 414).

All experience shows that the personal equation, idiosyncrasy, or state of development of each ego is a prominent factor in the determination of convictions. The convictions of the two clever men, Cardinal Newman and his brother F. W. Newman, were widely apart, although their heredity was the same, and their upbringing was under identical general circumstances. In the case of these two thinkers, the divergence, of course, could only have been due to their different emotional and mental natures in different stages of development, for the same subject-matter of conviction was before the mind of each of them.

Conviction, then, as a feeling of reality indicating truth, is not fully trustworthy in respect of propositions as a whole, yet we may be assured that when the feelings are stirred, there are elements in the doctrines believed which are true relatively both to some universal principles and to the corresponding principles in man. For man is potentially, though not actually, the measure of the universe. The outer form of beliefs is often false, while the inner life—that which awakens emotional response—is true either for higher or for lower stimulation to development. Convictions suitable and useful to low stages of human evolution are eventually outgrown and seen to be erroneous. They are then replaced by others more true to outer and inner conditions, and more efficacious in promoting the growth of the soul.

There is also what may be called a coercive element in belief and conviction. This proceeds from pressure of environment, eventuating in the imposing of the customary opinion of those around on the unresisting and undiscriminating mind. G. F. Stout has said:

'There must . . . in the framing of a belief be always some endeavour to conform to conditions other than, and independent of, our own subjective tendencies. Our inability to attain ends otherwise than through certain means constitutes a restriction of mental activity within more or less definite channels' (*Manual of Psychology*, 2, 1901, p. 567 f.).

It is only the thinker who can stand alone; most people do not think, but readily come under the

personal influence of those who confidently and plausibly proffer doctrines and statements for the acceptance of ill-equipped minds.

Respecting conviction as the result of a mental process, and determined by evidence, there is usually a change of belief and of mind-content. Here we have the force of evidence driving out old belief and substituting new; conviction then leaves old opinion and clings to new. In this case the feeling of reality comes as a response to the force of evidence applied by comparison and judgment.

'What is believed to be real (and so said to be known) is indeed mainly a matter of intellection; but it is also a matter of both feeling and will. In respect of all the higher intellectual, æsthetic, ethical, and religious realities, feeling and choice largely determine knowledge through the dependence of this belief on them. Yet we have spoken of this belief as feeling, not because it is a special form of affective phenomena, but because as conviction—having that warmth of colouring which the word implies—it may be regarded as a sort of universal affective accompaniment of the intellectual and voluntary aspects of all knowledge' (G. T. Ladd, *Psychology*, 1894, p. 514).

Convictions are beliefs accepted and vitalized by the emotions of those convinced that realities are indicated by them. The acceptance of beliefs is partly determined by the absence of contradictory beliefs in the mind when the new propositions are tendered. This fact Buckle long ago pointed out.

'The sense that anything we think of is unreal can only come when that thing is contradicted by some other thing of which we think. Any object which remains uncontradicted is *ipso facto* believed and posited as absolute reality' (W. James, *The Principles of Psychology*, 1906, vol. ii, p. 238 f.).

The absence of antagonistic ideas in the mind permits indiscriminately the acceptance of true and of false forms of belief. Children may be brought up to believe almost anything religious. In the same way the presence of beliefs antagonistic to proffered ideas may as often keep out the true as the false. Bias towards false forms, and erroneous prejudice, make impossible the advent of certain truths to the soul. Hence it is that new general truths are seldom acquired after mental maturity. Minds usually become hopelessly biased long before middle age. While credulity may sometimes permit the truth to enter, constant incredulity resists the truth and hugs old errors.

The test of actuality we find in our own consciousness and life. 'Whatever things have intimate and continuous connexion with my life are things of whose reality I cannot doubt' (James, *op. cit.* p. 298). Doctrines strongly stirring the higher emotions, and not conflicting with prejudice, appeal with a force which carries conviction with it, though the doctrines may vary with all the religions of the world. Truth hides under many forms. We may be sure that, in all these varying doctrines as applied to the human heart, there is a living element of eternal truth. God does not forsake the beings that have emanated from Himself. Each soul has the conditions and the knowledge it can bear and make use of under the religion it is born to or adopts.

2. *Conviction of sin* is usually present in the state of consciousness known as conversion (*q.v.*), or change of heart. It is a 'sense of sin,' a feeling of unworthiness and general wretchedness, accompanied by a strong desire to lead a better life. It is shown by a more or less sudden distaste for accustomed thought, language, and conduct, and by a new-found yearning within for an improved state of being. Conviction may last for days, months, or years before the crisis, or conversion, supervenes, and this is followed by restfulness of mind and lightness of heart. Conversion is described by Starbuck as a sudden forsaking of the lower for the higher self:

'A process of struggling away from sin, rather than of striving toward righteousness; . . . it seems to be a step in growth which calls into activity the deeper instincts. . . . The feelings,

which are the primal elements in consciousness, function so strongly. In the tendency to resist conviction we see, also, an indication that the new life is forcing its way even against the person's will' (*The Psychology of Religion*, 1899, p. 64).

Though the proximate cause of conviction of sin is often fear of torments to come, yet we may be sure that behind this fear there are certain emotional and mental conditions ripe for a change to a higher state.

Viewing the phenomena observable at great religious revivals, such as the movement among the Welsh people in the years 1904-1905, we may recognize, despite certain objectionable features and mistaken views and conduct, the action of the Holy Spirit in meeting the aspirations of those who are struggling amid the difficulties and illusions of the lower planes of emotion. It is through the power of the Spirit, which is the life-force of the universe, that the transmutation of the emotions is effected, and this must be at the bidding of the lower nature. The raising of the emotions to higher levels is part of the process of evolution, and, when accomplished, is a sign of the soul's development, or growth in grace.

CONVOCATION.—This is the name given to the general assembly of the clergy of the Church of England. The older name was 'synod,' of which 'convocation' became the equivalent when English began to take the place of Latin in the official documents of the Church. We read of the 'Synode of London' in 1553, but of the 'convocation holden in London' in 1562. The synodal activity of the Christian Church is coeval with her life. It gradually took form in diocesan, provincial, and national synods, and these different forms of synods were held wherever Christianity was established. The British Church, in common with the rest of Christendom, was familiar with conciliar action—witness the Council of Verulam in A.D. 446. In Anglo-Saxon times, Church Councils were assembled 'acourse with our Parliaments' as national synods, while the bishops and clergy in addition were constituent members of the 'great council' of the nation.

In Norman times the conciliar activity of the Church became still greater. Bishops, abbots, priors, archdeacons, and deans were summoned; but the first known instance of the representative element occurs in 1225 under Langton. Later in this century, however, we have proof of direct representation in a provincial synod, for in 1273 we find Archbishop Kilwarby issuing his mandate to the Bishop of London in these terms:

'You are to direct on our part each of the suffragan bishops of our Church to call and bring with him to the aforesaid synod three or four of the greater, more discreet, and prudent persons of his Church and diocese, that by the assistance of their common counsel such important affairs of the Church of God by His aiding mercy may be brought to a happy conclusion.'

Four years later 'proctors of all clergy of each diocese' were specifically named in a similar mandate. In 1283, Archbishop Peckham ordered the attendance of two proctors for the clergy of each diocese as well as one for each cathedral and collegiate church, and this seems to have become the rule for the Province of Canterbury. In the Province of York, the rule, dating from 1279, was that two proctors for the clergy should attend from each archdeaconry. Side by side with provincial synods were diocesan synods, which were held under their several bishops to enforce the decrees of the provincial synods. National synods fell into disuse through the jealousy felt by the two Archbishops of their respective claims.

It is to be noted that this synodal action of the Church preceded the attempt made by Edward I. in 1295 to incorporate the clergy into his newly

devised parliamentary system. The king hoped that the clergy would not only meet, as heretofore, as the spiritual councillors of the Archbishops, but that they would also add to their spiritual duties the further duty of sitting in Parliament as his council, especially to make it easier for him to raise money by taxation. The king's attempt, however, failed through the refusal of the clergy to obey the royal summons addressed to them, through the Archbishops, in the famous *præmunientes* clause. The Crown acquiesced, after 1340, in the rule that the clergy should tax themselves in their Convocation, and in consequence the attendance of proctors in Parliament did not outlive the following century. The writ with the *præmunientes* clause is still issued at the summoning of every Parliament, but is never obeyed. Convocation, however, is still summoned in both Provinces whenever Parliament is summoned, though it would seem that there is nothing to hinder its meeting at other times 'if the existence of affairs shall so require.'

Convocation, in common with the Church of England as a whole, lost much of its independence, and at the same time much of its power and influence, at the Reformation. The Act of Submission (25 Henry VIII. c. 19) embodies in its preamble an Act of Convocation abjuring all power to make or act on any canons without the king's consent; and it affirms that Convocation always had been, and ought always to be, assembled only by the king's writ. Accordingly, Convocation was reduced to an instrument of the 'Supreme Head' or 'Supreme Governor' for ecclesiastical purposes, and was given the duties of considering forms of public worship, articles of religion, and canons, though not as possessing any independent effective authority. Indeed, it is now an established rule of law that canons made by the clergy in Convocation are of no binding power over the laity.

After the Restoration, Convocation prepared in 1661 the Act of Uniformity, revised the Prayer-Book, and re-modelled the canons. The same Convocation is remarkable as being the last to grant a clerical subsidy—acting, it is said, in dropping the custom, upon a verbal agreement made between the Lord Chancellor Clarendon and Archbishop Sheldon. This has been declared to be 'the greatest alteration in the constitution ever made without an express law.' Since this change Convocation has ceased to enjoy any political importance.

After the Revolution, the history of Convocation is a story of bitter conflicts between the two Houses, in which Atterbury, Wake, and Burnet played leading parts. This conflict culminated in 1717, when the Lower House was about to censure the writings of Bishop Hoadley, whereupon Convocation was prorogued by royal writ, and met no more (except formally till 1741) until it was again summoned for business in 1852, through the efforts of Bishop Wilberforce and others.

Convocation now assembles concurrently with Parliament, being summoned by a royal writ addressed to the Archbishops. In Canterbury the Upper House consists of 23 members, the Lower of 154. In the Province of York the corresponding numbers are 9 and 69. The custom of separating into Upper and Lower houses dates from the end of the 14th cent., when the inferior clergy began to withdraw into a lower room, viz. one under the chapter-house of St. Paul's Cathedral, or a school-room in the crypt.

Though Convocation is described in Canon 139 of 1604 as 'the true Church of England by representation,' it remains an unreformed body. The official element is preponderant, and the large

body of stipendiary curates is without any voice in the election of clergy-proctors. It is not surprising, therefore, that Convocation exercises but little influence over the minds of the majority of the members of the Church of England, though it affords an excellent opportunity for the more highly-placed clergy to discuss affairs as they affect the Church, and though its debates and reports are of a uniformly high order, and are frequently of permanent value. See also art. CHURCH OF ENGLAND.

CO-OPERATION.—Co-operation (*i.e.* literally 'working together') might express any combined action of two or more persons for any purpose. It is used in general, and will be employed here, to denote the combinations of working men for production or distribution of commodities, including incidentally some other forms of mutual help. In 1794, Dr. Shute Barrington, bishop of Durham, established a co-operative store at Mongewell, in the county of Oxford, for the benefit of the poor of that and three small adjoining parishes. A quantity of bacon, cheese, and other articles was procured from wholesale dealers to be subdivided and sold at prime cost for ready money. The salesman was an infirm old man who could not read or write, but his honesty was unimpeached, and he was allowed a shilling a week as well as the benefit of the shop. The transactions of 1798 amounted to £223. The net saving to the poor in the cost of their supplies was 21 per cent. In 1800, the Rev. Dr. Glassey opened a similar village shop at Greenford in Middlesex. The receipts for six months exceeded £150, and the margin of saving was from 15 to 25 per cent according to the nature of the article sold. A third was established about the same time at Hanwell, by the Rev. G. Glassey, vicar of that parish, with like success. In all three cases, great good was done by avoiding the burden of debt.

In 1795, a co-operative saw-mill was established at Hull, and it continued in operation for a hundred years. In 1796 a parish windmill was erected by subscription on Barham Downs in the county of Kent, and in 1797 one at Chislehurst. A co-operative society at Nottingham has existed for more than 100 years.

In 1844, a few workmen of Rochdale joined in establishing a society called the 'Equitable Pioneers,' and that Society was so successful that their example was followed in many parts of the country. It now has more than 16,000 members holding £300,000 in shares, and its sales amount to £340,000 a year. A portion of its profits is yearly applied to educational purposes. The paid up capital consists largely of accumulation of past profits. No credit is given. By its means the workmen of Rochdale have been enabled to supply themselves with necessaries of life, genuine in quality and at a cheap price, and to accumulate out of their savings and the profits of their trade a capital sum averaging nearly £20 for each shareholder. This Society was registered as a Friendly Society under the Act of 1846.

In 1850, the Rev. F. D. Maurice, the Rev. Chas. Kingsley, Mr. J. M. Ludlow, Mr. T. Hughes, Mr. E. Vansittart Neale, and others, joined in the formation of a Society for promoting Workmen's Associations, and commenced a Working Tailors' Association. The excellent motives and aspirations

by which they were actuated had been eloquently set forth in a series of tracts by those accomplished men; and, if they could have found a body of members and officers capable of carrying out their ideas in a business-like manner, the associations which they formed might have done lasting good. As it was, their enterprise greatly impressed the public mind and rendered it familiar with the idea of co-operation. Though their initiative as patrons of co-operation was a failure, they remained the true friends, and in some sense the apostles, of the co-operative movement, and to their advice and counsel is due much of the success that has attended that movement under the direct management of the working men themselves.

The undertakings which experienced this early check were productive; those which followed the lines laid down by the Rochdale pioneers were distributive, though, in the long run, it has not been unusual for a distributive store to find it worth while to undertake productive business as well. It is obvious that a productive enterprise has elements of difficulty that are absent from a mere distributive store. The essential principle of co-operation seems to be that the man who contributes his labour to the production of the commodity is entitled to share in the produce after a sufficient sinking fund to replace the capital expended in the plant has been set aside, and hence a system of profit-sharing has been introduced, upon which, of late, attempts have been made to establish productive businesses. There is reason to think, however, that the distributive element in co-operation will remain its more prominent feature.

The sharing of profit implies logically the sharing of loss; and this is the rock upon which some productive enterprises have split. Yet it is evident that the social reforms which were in the minds of the early promoters of co-operation are to be realized rather by the productive element of it than by mere distribution, useful as that is in many respects.

A further development of co-operation has arisen in the union of a number of stores to form a wholesale society; and the wholesale societies of Manchester and Glasgow are striking examples of the power of associations of working men to carry on gigantic undertakings by means of small savings. The Manchester society (to which more than 1000 societies contribute) effected sales of goods for nearly £25,000,000 and earned profits exceeding £600,000 in the last year recorded. It acts as the banker of the smaller stores, and transacts a vast business in that capacity. It owns a fleet of ships, and has warehouses both at home and abroad in which a variety of industries are carried on. The total number of societies registered under the Industrial and Provident Societies Act in the United Kingdom is 2800; the number of members exceeds 2,500,000; the amount of funds, £58,000,000. It will be readily inferred from these figures how great has been the influence of these societies upon the welfare of the industrial population. The same inference may be drawn from the fact that, according to a previous return, 344 societies had built or aided in building 37,000 houses for their members, while more than £8,000,000 had been expended in building those houses or been advanced to the members to enable them to do so.

Another branch of co-operative enterprise has had more success abroad than in this country. People's Banks and agricultural credit societies flourish in Italy and in Germany, and are now being actively promoted here. In Ireland, Sir Horace Plunkett has established a number of co-operative creameries with excellent results.

COPTIC CHURCH.—*Introductory.*—When Christianity was first introduced into Egypt, it found itself confronted not only by the religious environment common to all Hellenistic provinces of the Roman Empire, but also by the influence of the old native religion. The latter, although beginning to show signs of the rapid decay which was soon to overtake it, was still immensely powerful, especially in the towns and villages situated at some distance up the Nile, away from Alexandria. In certain ways it had scarcely been touched by Hellenic influence, and had, indeed, rather itself influenced Hellenic thought. It had certainly impressed itself strongly on the imagination of the Platonic idealists of Alexandria, as is evidenced by Plutarch's treatise *de Iside et Osiride* and by bk. xi. of the *Metamorphoses* of Apuleius. But, although at the beginning of the Roman period the native priests still kept alight the sacred lamp of religious knowledge, the general mass of the people had become ignorant of a great number of the lesser-known deities, and of the meaning of much of the ceremonial. Nevertheless, the main doctrines of the old religion were as firmly rooted as ever. The worship of the gods of the dead was still paramount, and especially there remained unshaken the belief in the dead man-god Osiris, who had been slain by the power of Evil, but who lived again as king of the dead. The people still believed in the so-called 'resurrection,' that is to say, they thought it was possible that the dead might live for ever if the same ceremonies were carried out which enabled Osiris to escape corruption. Also, if we may rely on such papyri as that containing the tale of Setne Khaemwas and Si-Osiri, not only was the weighing of the dead man's good and evil deeds still thought to be necessary before the soul could pass the judgment-hall of Osiris, but very elevated notions of morality and justice played an important part in the hopes pertaining to eternal felicity. On the other hand, the Greek syncretists of Alexandria had adopted the cult of Osiris and Isis, and had transcendentalized it out of all knowledge, to suit the current Platonic doctrines of the day; according to them, the *mysteries* of the Egyptian religion were to be understood only by the esoteric, after long study and strict asceticism. Platonism had also involved the large Jewish community in Alexandria, and demanded from its devotees, as we know from Therapeutic ideals, the practice of asceticism and contemplation. There can be little doubt that these two things—(1) the belief in a future life to be obtained through a god who had himself overcome death, and (2) the transcendentalized form of Osiris- and Isis-worship adopted by the Greeks, which demanded asceticism and abstinence from the desires of the flesh—largely influenced the early Christian communities in Egypt.

1. *Introduction of Christianity into Egypt.*—The tradition that St. Mark was the earliest to preach the gospel of Christ in Alexandria is first related by Eusebius, but prefaced by the word *φάσι*. In spite of the tradition being firmly rooted to this day, it has little historical value. When and by whom the gospel was introduced into Egypt is unknown, and, indeed, the whole history of the Alexandrian Church is enveloped in obscurity until the episcopate of Demetrius (A.D. 189-231), when it appears as a flourishing institution, with a school of philosophic learning attached to it which must already have made its influence felt far beyond the city itself. Eusebius (*HE* vi. 11-13) states that 'thousands' were martyred from Egypt and all the

Thebaid during the persecution of Septimius Severus in 202; and Clement (*Strom.* vi. 18), writing at about this date, tells us that Christianity had spread to 'every nation, village, and town,' so that, even allowing for exaggeration, there can be no doubt that the new faith had made great progress during the first two centuries of our era. Harnack (*Expansion of Christianity*², 1908, ii. 166 ff.) has collected a list of districts where we have definite evidence of Christian communities prior to the persecution under Diocletian in 303. Archaeological research has borne out the literary evidence in several of the localities. They are as follows: the districts of Prosopitis, Athribis, Sais and Arsinoë, Antinoë, Thmues, Philadelphia in the Arsinoite nome, Alexander Insula in the Fayyum, Hermopolis Magna, Nilopolis, Ptolemais in Pentapolis, Berenice in Cyrenaica, Oxyrhynchus, the oasis of Khargeh, and Esneh (Latopolis). As to the form of Church government during the earliest period little is known. It is possible, though by no means certain, that the *Didache*, or *Teaching of the Twelve Apostles*, was compiled in Egypt, and may represent the primitive form of Church government in that country. From this work, generally assigned to the earliest age of the Church, the order of bishops and deacons would appear at first to have been entirely subordinate to that of the 'apostles' and 'prophets,' and to have been, at the time of the writer, a comparatively recent organization. The 'apostles' were itinerant missionaries and evangelists, while the 'prophet' alone was allowed to have a fixed abode in any locality. The latter commanded extraordinary reverence, and the first-fruits of the community were his by right. He spoke in ecstasy, and presided at the *Agape*. Nevertheless, both from the warnings uttered in the *Didache* against false prophets, and from the *Shepherd of Hermas*, we know that the office of prophet was frequently abused by fraudulent persons, and it gradually lost prestige until the more thorough organization of bishops and deacons eventually supplanted it. By the time of the episcopate of Demetrius the form of government represented by the *Didache* would have disappeared (if it ever had been in force in Egypt), and we know that Demetrius himself was the first to appoint other bishops (three in number) outside Alexandria, thus probably bringing the scattered communities for the first time under his central jurisdiction. Hitherto they had probably been under the direction of deacons and presbyters.

It is probable that the earliest Gospels in circulation in Egypt were not the canonical ones. In Clement's day, besides the four canonical sources for the life and teaching of Christ, there were still in general use two other Gospels known as the *Gospel according to the Hebrews*, and the *Gospel according to the Egyptians*. There is every reason to suppose that these two documents preceded the four Apostolic Gospels in Egypt, and were in all probability the ones used by the earliest Christian community there, for it is not likely that they would have forced themselves into popularity if the four sources bearing more authoritative names had been in the field from the first. Clement, however, sharply distinguishes between these two Gospels and the four canonical ones; and, although they were apparently used side by side, it is evident that the two earlier were beginning to be dropped by the more orthodox at the commencement of the 3rd century. The *Gospel according to the Hebrews* was read chiefly by Jewish converts, either in Aramaic or in a Greek translation. It appears to have had Ebionite tendencies, in spite of its close parallelism with canonical sources. The *Gospel according to the Egyptians* implies by its title that it was intended for use either by the native

Egyptians, as distinct from the Alexandrians, or else by the Gentile converts in distinction from the Jewish. The latter inference is the more probable, as there seems to have been little attempt at first to reach the masses of the native Egyptians, the appeal of the new faith being made almost entirely to those of Hellenic birth or education. Here again we find that, in spite of the close parallel between the known fragments and the canonical sources, there is not only a tendency to Modalism, but also a strong tinge of Encratism. The latter was the doctrine of the Encratites (*q.v.*), a very early sect within the Church, which set up extreme asceticism and abstinence from sexual intercourse as the Christian ideal. There can be little doubt that the asceticism affected by the devotees of Isis and the Jewish Therapeutae had become thus introduced in very early times into the Christian communities of Alexandria. Clement, however, defends the *Gospel according to the Egyptians* from the charge of extreme Encratism.

It was hoped that the finding of the now famous 'Sayings of Jesus' at Oxyrhynchus by Grenfell and Hunt would have thrown some light on these early uncanonical versions; not only have they not done so, but their own origin is extremely uncertain.

The first series of these 'Sayings' (eight in number) was found in 1897 with a host of other valuable literary fragments, and their date, on palaeographical grounds, is to be assigned to about the year 200 or shortly after. Each saying is prefaced by the words 'Jesus saith'; four have their equivalent in the canonical sources; one is too fragmentary to be made out; and three are new, with a tendency to mysticism and a harsh and severe judgment of mankind. Harnack saw in them excerpts from the lost *Gospel according to the Egyptians* (*Expositor*, Nov., Dec. 1897), but other theologians and the finders themselves were not by any means unanimously in agreement with him. The second series, found in 1903 on the same site, written on the back of a land-survey list, is attributed to Thomas and another disciple whose name is missing. This, however, may only be a bold claim on the part of the writer. They agree in form and in date with the first series, but differ in being less akin to canonical sources. One of the sayings is almost exactly parallel with a quotation of Clement's from the *Gospel according to the Hebrews*, and can therefore be assigned to that work without hesitation. But whether each series is a selection of sayings from any one Gospel or from different Gospels is a matter of considerable doubt; Grenfell and Hunt themselves came to the conclusion that the find was a collection of 'sayings' as such, and that the theory of extracts was unjustifiable.

There was also found at Oxyrhynchus a fragment of an uncanonical Gospel, which unfortunately breaks off just where it appears to be closely parallel with the known passage from the *Gospel according to the Egyptians*, in which Jesus is represented as advocating extreme asceticism as the Christian ideal. Altogether it must be admitted that the Oxyrhynchus finds have served to puzzle rather than to enlighten us with regard to the early Christian documents of Egypt.

But we are at least able to surmise that there was considerable uncanonical competition with the canonical sources, and that the uncanonical Gospels were strongly tinged with the ascetic ideals prevalent at the time in Alexandria; also, incidentally, that a Christian community flourished as far south as Oxyrhynchus in A.D. 200, if not earlier.

Archæology also helps to throw light on this early period of Christianity in Egypt, although here again the evidence is scattered and obscure. It was the custom at this time to ferry the mummies of the dead down the river, with wooden tickets, or *tesserae*, tied round the neck, bearing the name of the deceased and of the cemetery to which the body was to be consigned. A large number of these *tesserae* exist in museums to-day. One at least (in the Berlin museum) from Akhmim was that of a Christian; and, although the symbol ☩ on it has caused it to be considered post-Constantinian in date, there are good reasons for assigning it to an earlier period. There are also other tickets couched in phraseology known to be Christian, but which cannot be absolutely identified as such. They at least prove that in this neighbourhood Christians were mummified and buried in the same

cemeteries as their pagan brethren—from which we may presume that these early Egyptian Christians still believed in the necessity of preserving the body in order that the existence of the soul might be assured (see DEATH, etc. [Coptic]). From the same site there came the fine collection of tapestry, some of which dates from the earliest times of the Roman empire. The symbols of the fish and the cross occur as patterns, and these have been thought to have come from very early Christian burials. If this be so, it points to a Christian community existing in Akhmim early in the 2nd century. We also have as evidence the *libelli*, several of which have been preserved to us. These were certificates issued, during the persecution of Decius (A.D. 250), to those who had recanted by sacrificing publicly to the gods. Those to whom they were issued were known as *libellatici*; and, although it is not always certain that it was a Christian to whom the *libellus* was granted, the probability that it was so is very strong. Mention must be made of the *Epistle of Psenosiris* (a presbyter who had fled to the oasis of Khargeh, probably during the Decian persecutions), in which he commends a female exile Politike to a fellow-presbyter. It is also probable that one at least of the mummies found at Antinoë is the remains of a Christian burial that may be dated as early as the close of the 2nd century.

The name of the deceased, according to Gayet, was Euphemian, a devotee of some Gnostic sect. The evidence for the latter supposition is, however, slender. The cords which bound the shroud were sealed with a curious mixture of pagan and Christian sealings, including the ✕; but, if the contention that this symbol is evidence of a post-Constantinian age be correct, the early date assigned must be abandoned. Another remarkable object from the same site is a shroud, with the figure of a handsome woman painted on the exterior, in the manner of the beginning of the 2nd century. The hand is represented as clasping a peculiar form of gilt 'crux ansata,' or symbol of life. Whether this is Christian there must be considerable doubt.

2. **Gnosticism and Arianism.**—Although our knowledge of the early Christian communities in the upper country is so remarkably slight, when once the Church became well established in Alexandria the Christians began to form an important part of the community of that city, while the works of Clement and Origen prove that the intellectual stimulus of the pagan Hellenic schools was not lost upon the Christians. The famous 'catechetical' school, founded, according to Eusebius (*HE* v. 10), in the earliest days of the community, and presided over in turn by Pantænus, Clement, and Origen, was designed not only to teach catechumens, but also to appeal, by a system of philosophy, to cultivated pagans. In an age of apologists its influence was very considerable, but confined entirely to those of Hellenic education. Such a propaganda was useless to the natives of the upper country. The power, too, of Demetrius, as sovereign bishop of all Egypt, was very great; and he must have occupied a position similar to that of the pagan 'Chief Priest of Alexandria and all Egypt,' and the Jewish Ethnarch. This powerful position was retained by his successors until it reached its highest point under Athanasius, and lasted, indeed, until the Council of Chalcedon. On the whole, too, at first the Alexandrian Church had good opportunity of developing itself free from interference; for, with the exception of the persecutions of Severus in 202 and of Decius in 250, there was little or no external pressure brought to bear on the Christians. The real enemy at this time lay within the Church itself in the shape of the Gnostic sects. The earliest record of the conflict between those who professed a higher *gnosis* and the preachers of the simple gospel is the dispute between St. Peter and Simon Magnus, the latter of whom appears to have been the first to associate Christianity with Gnostic mysteries. From Pales-

tine the esoteric cult quickly spread to Egypt by what was called a 'counter-Apostolic succession' of famous Gnostic teachers, and perhaps reached its height in the systems promulgated by Basilides and Valentinus, both of whom laboured in Egypt (Epiphanius, *Hæc.* xxiv. 1, xxxi. 7). See BASILIDES, GNOSTICISM, PISTIS SOPHIA, VALENTINUS.

We know from the Christian writers and apologists, chiefly from Hippolytus and Epiphanius, how wide-spread Gnosticism became in Egypt, and how it threatened to become a menace to the Church in the early part of the 3rd century. Perhaps the so-called letter of Hadrian to Servian (in reality a 3rd cent. document) may be interpreted in this light when it speaks of

'people who worship Serapis being Christians, while those who call themselves bishops of Christ are adherents of Serapis. . . . No Christian presbyter but is an astrologer, a soothsayer, a vile wretch. When the Patriarch himself visits Egypt, he is forced by some to worship Serapis, by others to worship Christ.'

In spite of the venom which characterizes this attack on the Alexandrians, it points to the fact that the syncretism rife at the period had attacked the Christian religion also. This is borne out to a considerable extent by archaeological discoveries in Upper Egypt. The excavations at Antinoë conducted by Gayet have revealed Christian burials of a very peculiar type. Some of the rock-cut tombs had chapels built before the entrance, stuccoed inside and covered with frescoes, most of which have unfortunately perished, but what fragments have been discovered are typical of the earliest forms of Christian symbolism. Two of the bodies at least in this cemetery were equipped with wine-jars and baskets for bread, perhaps intended for a mystic Eucharist for the dead, while another burial contained a model in terra-cotta of several persons seated at a table, the whole forming a group, supposed to represent the *Agape*. Many peculiar objects were found, including a kind of primitive rosary, or board for counting prayers, surmounted by a cross. It is possible that the old Egyptian idea that the welfare of the soul depended upon the nourishing of the body by magical food still survived. The bodies of Christians at this time were always mummified, and in some cases the remains of martyrs were preserved in the houses, for the gaze of the faithful, in accordance with the pagan custom of the time (Athanasius, *Vita Antonii* [PG xxvi. 967]). The chapels and provisions of food may therefore be a continuation of the old pagan custom whereby the soul of the deceased was nourished by the mystic food of the Eucharist. This is borne out not only by one of the Acts of the Council of Hippo (393), which forbade the burial of the holy elements with the dead, but also by the fact that in the oasis of Khargeh a number of Christian tombs were provided with a chapel containing a niche for food-offerings after the pagan manner (Myres, *Man*, 1901, No. 91). On the other hand, we may perhaps see in these peculiar customs traces of some Gnostic rite, such as the mystic sacrament mentioned in *Pistis Sophia*, performed for the remission of sins. Syncretism can go no further than the mummy of the so-called Christian priest from Dêr el-Bahari. It is probably of very early date—possibly the beginning of the 3rd century. On the shroud the deceased is represented holding in one hand a cup, in the other corn-ears—according to Naville (*Deir el Bahari*, 1898-1901, ii. 5), emblems of the Eucharist. On his left shoulder is the *swastika* emblem, and below is the barque of Socharis adored by the gods Anubis and Aput.

Although, during the persecution of Decius in 250, large numbers of Christians appear to have recanted, the persecution of Diocletian in 303 found the Church stronger and resistance much more stubborn. Many were martyred, and the

Copts reckoned their dates from this stormy period — 'the era of martyrs.' In the succeeding reign, numbers languished in the dye factories of the Thebaid, and in the porphyry mines of the desert ('Mart. Pal.' in *TU* xiv. 4); but with the accession of Constantine to sole power, Christianity was adopted as the State religion, and thus placed in a stronger position than ever before. But, although, within the Church, Gnosticism was fast waning, and the more fantastic sects had become objects of ridicule, a new trouble broke out in 319, owing to the preaching of Arius, a presbyter of the Church of Saint Baucalis in Alexandria, on the relationship of Christ to the Father.

This is not the place to go into the full details concerning the doctrinal struggle which shook the Church to its foundations. It is sufficient to say here that Arius implied that the Son was inferior to the Father. He argued that, as the Son was begotten of the Father, there must have been a time when the Son did not exist. Therefore the Son was not co-eternal with the Father, and not of the same nature, but of like nature. The Son was not God, or eternal, or omniscient, but a creature (*κτίσμα*), although, as such, beyond all mortal comparison. The opposition to this doctrine was headed by a young deacon in the household of the patriarch Alexander, named Athanasius. The quarrel proceeded with unprecedented bitterness and intriguing on both sides. The Emperor was appealed to, but, rather than give a decision, he summoned a council of bishops at Nicæa to formulate a creed. Their decision led to the formulation of the famous creed of the orthodox party and to the excommunication and banishment of Arius; but, on his offering a written explanation, the Emperor directed that he should be received back into the Church. Athanasius, who had meanwhile (328) succeeded Alexander as bishop of Alexandria, refused to obey the Emperor's order, and, at a council of bishops held at Tyre, he in his turn was deposed and banished. On the death of Constantine in 337, Athanasius returned to Alexandria with the support of Constantine II. and Constans; but, on the death of the former in 340, Constantine III., partner in the Empire and an Arian, succeeded in deposing him, and had Gregory elected as patriarch by a council of bishops held at Antioch. Athanasius withdrew only when an armed escort and threats of violence on the part of its commander, who conducted the Arian patriarch to the city, compelled him to retire. In the absence of Athanasius his supporters kept up constant rioting, and burnt the metropolitan church. A temporary peace was later patched up, and Athanasius returned as bishop; but the death of Constans enabled Constantius again to depose him—not without violence, for the Athanasians resisted vigorously. The bishop escaped into hiding with his friends, and George of Cappadocia was chosen as Arian patriarch. The succession, however, of the pagan emperor, Julian, led to more rioting, and George was murdered. Athanasius returned again, in spite of opposition at first on the Emperor's part, and succeeded in holding his office through this and the following reigns of Jovian and Valens (although the latter was an Arian) until his death in 373. See, further, *ARIANISM, ATHANASIUS*.

But the seeds of discord had already been sown in the Egyptian Church before the Arian controversy broke out. During the persecution of Diocletian, Peter, who was then bishop of Alexandria, and was in the end martyred, fled from Alexandria. During his absence, Meletius, bishop of the important see of Lycopolis, ordained and intruded priests into other dioceses, and assumed the character of primate. He has also been charged by Athanasius and Socrates, but without good reason, with having denied the faith under persecution. When affairs had settled down somewhat under Alexander, Meletius's case was brought before the Council of Nicæa, and that assembly severely censured him. During the life of Alexander, Meletius acquiesced quietly, but on the accession of Athanasius he flung himself into the ranks of the opposing party, seemingly not so much because he sympathized with the Arian doctrines as out of dislike to Athanasius, and, as he possessed a considerable following, the quarrel was thereby embittered and intensified.

3. Eremitic movement.—The foregoing tends to show that, as soon as Christianity began to get the upper hand in Egypt, the Church itself was rent with violent factions, which led to the disorder and turbulence which characterized the 4th and 5th centuries. Meanwhile a new factor had appeared on the scene—a new movement which was to have world-wide influence throughout the whole

of Christendom. We have seen how, even in the early days of the Church, when Christianity was confined mainly to those of Hellenic birth or education, there was a tendency to asceticism or mysticism. In their extreme forms these two movements led to fantastic Gnostic systems, but the more sober and quiet side manifested itself among those Christians who carried out their ascetic ideals, not by withdrawing from the world, but by living in the midst of their own households, observing fasts, abstaining from marriage, and devoting themselves to prayer and the care of the sick and the poor. But, although these ascetic ideals, which affected the Egyptian Church to such a remarkable degree, and, through it, in later times the Church throughout the world, seem to have had their origin in Egypt, it is curious to note that the native Egyptian character in the past had exhibited little or no tendency either to asceticism or to mysticism. Magic in pagan Egypt was, and had always been, of an eminently practical kind, and, so far as we can judge, never included philosophic mysticism of any sort; indeed, the native mind was incapable of any of the higher subtleties of thought. It seems, therefore, that these two potent forces were introduced into Egypt by the Greeks, through the medium of Platonic and Pythagorean philosophers, and associated with the native Egyptian religion by the Platonizing of the Osiris and Isis cult. We know that the Jewish community in Egypt was subject to an identical process. The fragments of lost Gospels, as well as the works of Clement and Origen, prove how these ideals, prevalent in the pagan and Jewish communities of Alexandria, exercised their influence on the early Christian Church. During the 3rd cent., however, Christianity began to make many converts among the native worshippers of Osiris and Isis, among those of the population who were little influenced by Hellenic ideas, had little or no Greek blood in their veins, and were quite as incapable of understanding Clement's or Origen's conception of Christianity as Plutarch's theories about Osiris and Isis. Nevertheless, the ascetic side of the new faith seems to have appealed strongly to them, although the mystic and philosophic ideas interwoven with asceticism were not in the least comprehended. The literal practice of asceticism became at once a thing of paramount importance, and its wide-spread influence was due in the first place to the example of one man—Anthony, the first to cut himself off from intercourse with the world, and to perform those extraordinary feats of endurance which appealed so strongly to the Egyptians, and produced countless hosts of imitators.

Our chief authorities for the history of this movement are *The Life of Anthony* (a work attributed to Athanasius), Cassian, and especially the *Lausiac History*. The arguments of the school of Weingarten, that these are monastic works of the 6th cent., may be said to have been finally disposed of by Dom Cuthbert Butler in his admirable edition of the *Lausiac History*. From these sources we draw a wealth of material concerning the ascetic movement, which is supplemented by the later Coptic documents. The first man who actually led the ascetic life, cut off from his fellow-men, was one Paul, who was driven into the desert during the Decian persecutions in 250, and there may well have been others who were forced to lead solitary lives owing to the same circumstances; but it is to Anthony that the world looks as the founder of eremitic solitude.

Born probably about the year 250, of *fellaḥ* parents, Anthony was converted to Christianity as a boy by hearing the Gospels read in a church. (As he is said to have known no Greek, this presupposes the existence of a Coptic version at this early date.) For fifteen years he lived with ascetics, who at that time practised the ascetic life in huts built outside the town:

but, deeming this insufficient, he withdrew to the desert, and endured a life of strict solitude in a cave for upwards of twenty years. During this period large numbers were fired with his enthusiasm, and the burning deserts of Lower Egypt, especially those of Scete and Nitria, swarmed with solitary who were following his example. About the year 305 he was induced to quit his cave and organize these bands of monks, and, later, he was even persuaded by Athanasius to come to Alexandria to preach against Arianism. He died at an advanced age, and left special directions that his body should not be preserved by mummification, as he had expressed his detestation of the Christians continuing this pagan custom. The ideals of monachism that he left as a heritage are remarkable for the fact that they possess little system. There was no particular Rule of Life in the Antonian communities, although the elder and more leading ascetics were looked to for advice, and sought as arbiters in disputes. The monks would visit one another frequently, and discourse on the Scriptures and the life of the Spirit, but there were also those who dwelt in the further desert of 'cells,' who were hermits indeed, living out of sight and hearing of their fellow-men and one another, enduring the most extraordinary physical deprivations, and warding off absolute intellectual stagnation by repeating long passages from the Psalms and other Scriptures learnt by heart. Although the monks assembled on Saturdays and Sundays in the great church, the other days of the week were spent mostly in solitude. The whole system was individualistic, each working for his personal advance in virtue, contending against his fellows in severities and mortification of the flesh, and striving, as Dom Butler says, 'to make a record' in austerities, and to outdo the others in the length of his fasts, and his general observance of the ascetic life.

About the same time that Anthony left his desert cavern to organize his followers, Pachomius, another Egyptian, founded a more cohesive system of monachism in the south, at Tabennisi. Pachomius also was born of pagan parents, and, according to the Coptic 'Life,' was for some time a member of one of the communities of Serapis at Shenest (Chenoboscium). These communities, although hardly ascetic in the stricter sense of the word, were priestly organizations bound by definite rules; and it is quite possible that Pachomius may have utilized some points in their system when, after he had been converted to Christianity, he founded his cenobitic monastery of monks. Briefly, the Pachomian organization was as follows. In place of the friendly and almost family relation of the monks to one another in the Antonian communities, he substituted a much more definite system. The monastery was divided into houses presided over by a superior and steward, in each of which the monks carried on a particular trade—gardening, husbandry, carpentry, iron-work, dyeing, tanning, and so forth; and these trades were carried on, not as penances, but as a useful occupation in life. It would appear that the austerities of the northern monks were not attempted, although any one monk could practise especial severities if he pleased. Food was to be eaten in sufficient quantities for a man's daily need, and meals were to be taken in common, although the cowl was to be drawn over the head so that each should be invisible to his fellow while eating. They learnt the Scriptures by heart, and assembled in the great church only on the more solemn festivals. So rapid was the extension of Pachomius's system, that at his death (c. 345) it included eight monasteries and many hundreds of monks, while his sister had founded a similar institution for women.

It is difficult to give a just estimate of this movement, which is the most outstanding, not only in Egypt, but in the entire Church of the time. That the monks offered in many cases examples of great patience, self-denial, and singleness of heart and spirit is not to be denied. On the other hand, few of his followers seem to have been possessed with the kindness and shrewdness that are generally attributed to Anthony. Many of them outdid one another in the severity of their ascetic self-discipline, but it would appear in many cases that the general result was a stunting of the intellect and a narrowing of the outlook on life. Amélineau, whose acquaintance with the documents of this period is very extensive, has said that it has been customary to hold up the monks of the pre-Chalcedon days as a pattern of virtue, and the Jacobite as a picture of vice, whereas, as a matter of fact, there is little to distinguish between the two; that the Egyptian monk, although given to asceticism, was at times a very ordinary mortal, 'mangent net, buvant sec,' and prone to irregularities of life. Certainly even the most admiring chroniclers relate with perfect frankness sad lapses from virtue on the part of individual ascetics. This, however, does not imply that all were bad, and there is no doubt that at first the ascetics were, on the whole, animated by a high ideal. They threw themselves passionately on the

side of Athanasius during the Arian controversy, and sheltered him in their desert communities while he was in exile. It is highly improbable that they understood the complicated doctrinal point involved; it was sufficient for them that Arius seemed to desire to dethrone the Son from His equality with the Father. But, as time went on, they became fiercer, more bigoted, and a prey to the inherent superstitions of their race. Childish miracles and belief in innumerable devils took the place of the old magic and demonology which had fascinated the Egyptians in pagan times, while in the following century the fact that hordes of fierce monks could be summoned to Alexandria by the patriarch led to the increase of religious turbulence and sectarian strife.

There is no doubt that the adoption of Christianity as the State religion and the rise of monasticism were the immediate forerunners of a period of steady deterioration throughout the Egyptian Church. The death-knell of paganism was already rung, and with it that of the culture and freedom of philosophic thought that had made Alexandria the intellectual centre of the Hellenistic world. In 379 the Emperor Theodosius attempted to force the Christian faith on the entire population of the Roman Empire, and this was followed in 385 by the sack of the temple of Serapis and the conversion of other pagan temples into churches. Meanwhile the character of the illiterate monks began to assert itself, and their child-like faith in angels and demons led to the communities of Scete being accused by the patriarch Theophilus of Origenism, while the unscrupulousness of the latter's methods, as revealed in the incident of the Tall Brothers, led to recriminations and unedifying quarrels. In fact, the power of the patriarch had risen to such a pitch that he did not hesitate to consider that those who were his theological opponents were rebels against the Emperor, and, acting in accordance with this idea, he took some troops and destroyed several of the Nitrian monasteries. During the reign of his successor, Cyril, turbulence and disorder increased rather than diminished. The Christians organized a wholesale plundering of the Jews in Alexandria, whose quarters were sacked by hordes of monks and fanatics, and the richest element of the community was driven into exile. This was followed by the murder of Hypatia, a young and beautiful woman, who strove to keep alive the lamp of pagan culture by lectures on Neo-Platonic philosophy. The bigotry and turbulence of the Christian mob at this period seem to have known no bounds. But, as the Patriarchs grew more powerful, and the Christians more fanatical, the relations between the Egyptian Church and Constantinople became more and more strained, until open rupture took place on a question of doctrine, which was decided at a Council held at Chalcedon in 451.

4. Monophysitism.—The controversy which had been the cause of the Council of Nicæa was concerned with the relationship of the Son to the Father. The fresh divisions that were taking place in the Church were now due to disputes on the nature of the Son—whether that nature was human or Divine, or both. Cyril, who had already been on bad terms with the See of Constantinople when it was occupied by John Chrysostom, had later taken a violent part in opposing the doctrines of Nestorius, which implied that the Divine nature was not incarnate in Christ, but subsidiary to the human nature. The chief opponent of the doctrine of Nestorius was a young priest named Eutyches, who, in his zeal to assert the Divine nature of Christ, went further than the Alexandrian school and Cyril were prepared to go, by asserting that, after the Incarnation, Christ had

only one nature—the Divine. Meanwhile, Cyril had died in 444, and Dioscorus, his successor, warmly supported the cause of Eutyches, backed by the majority of the Egyptian monks. Eutyches was finally declared excommunicate and banished, at the Council of Chalcedon, but he counted among his adherents the majority of the Egyptian Christians. Added to the ever-increasing friction between Constantinople and the Alexandrian See, due to the turbulence and fierce independence of the Christians of Egypt, was the peculiar bent of the Egyptian mind, unable to appreciate the subtleties of argument indulged in by the Greeks and Levantines. The attempts of the Arians to dethrone Christ from His equality with the Father they could understand, but two natures which were yet one nature—this was beyond their comprehension. Henceforward the cry was 'One Nature,' and it has remained so to this day. Egypt at this time might be described almost as one vast monastery, and the fierce ascetics of the desert stoutly maintained the doctrine of the single nature of Christ. The power of the monastic institutions was now almost paramount, and the authority exercised by such monks as Shnoute and Bgoul was enormous. The tendency was to unite the systems of Pachomius and Anthony by combining the cenobitic or true monastic organization with the strict asceticism of the Antonian eremites, and the network of monasteries was fast extending all over the country.

5. During the 6th century.—The century following the separation of the greater part of the Egyptian Church from the orthodox at the Council of Chalcedon is remarkable in Alexandria only for the unifying disputes between the Monophysite patriarchs and the orthodox, or *Melkites*, as they were called because of their adherence to the Imperial influence of Constantinople, and, in the upper country, to the growing power of the monastic system. The land was held largely by the monasteries, whose ruins now are not the least remarkable feature all over Egypt. The cultivation was chiefly in the hands of the monks. It is stated in the Life of Shnoute that his monastery fed the prisoners captured from a raid of the Blemmyes for three months at a cost of 265,000 drachmæ, with 85,000 *artabai* of wheat and 200 *artabai* of olives. The numerous inscribed *ostraka*, and the commencement of a vast Coptic literature, consisting chiefly of Lives and Sayings of holy men and monks, show the commercial and literary activity of the monks. They were strong enough to prevent Imperial pressure for the over-exaction of taxes, and in this way maintained to a certain extent the dwindling prosperity of the country, although the minority who were not connected with the monastic institutions were crushed by cruel burdens. But religious life was gradually sinking to a low ebb, and was distinguished by little spirituality. While the Alexandrians were occupied with the opposing factions of Melkites and Monophysites, the monks of Upper Egypt were engrossed in petty squabbles between monastery and monastery, or the enumeration of absurd miracles wrought by the foremost ascetics. Religious life, like political, was fast losing all dignity and depth.

6. The Persian and the Arab domination.—In the year 616 the break-up of the Imperial power in Egypt began with the occupation of the country by the Persians on behalf of the Sasanian king Chosroës. For ten years they held sway in Egypt. Whether the Copts welcomed their new masters is a matter of some doubt. That they hated the Byzantine domination is certain. Ever since Justinian had given the Melkite Patriarch the military authority of a prefect, in the futile hope of coercing

the Monophysites into orthodoxy, the Copts had been harried and oppressed by the Imperial power. The whole nation now looked to their own elected Patriarch, not so much as the champion of the Monophysite doctrine, but as the leader of the nationalists against the minions of Imperial bigotry and corruption. The wonderful victories of Heraclius, who drove out the Persians and re-conquered Jerusalem and the Holy Sepulchre, were a cause of rejoicing to orthodox and Monophysite alike throughout the Eastern Empire, and it is possible that a wiser statesman than the Emperor might, amid the universal rejoicings of Christendom, have secured some kind of reconciliation. But Heraclius would extend no tolerance to heretics, with the result that a few years later, when a sterner and more implacable enemy was at the gate, the Copts of Egypt were ready to welcome him. In 642, Egypt was ceded to 'Amr ibn al-'Asi, who had conquered it in the name of Islâm.

The Arab tradition is that the conquest was aided by the treachery of one called Mukaukis (probably the Byzantine honorific title *μυκαυκίς*), who is generally supposed to have been the Coptic Patriarch. It must be mentioned, however, that it has been ably argued by A. J. Butler in *The Arab Conquest of Egypt* (1902), that the Copts were intensely hostile to the Arabs, and that the treacherous 'Mukaukis' was none other than Cyrus, the Melkite Patriarch. It is probable that the Copts, after years of oppression on the part of the orthodox and Imperial party, welcomed their new masters as a change which, as they thought, could not in any case be for the worse.

From the doctrinal and ethical point of view, the Coptic Church has little history of interest during its long subjection to the rule of Islâm. The Arab invaders imposed a poll-tax on all infidels, and it is probable that from the first many were converted to the faith of Muhammad in order to avoid payment. For the first three centuries or more, it is true, considerable activity is evinced by Coptic literature, which is represented during this period by countless MSS, chiefly of a homiletic character, or containing Lives of holy men, although such important historical works as the *Chronicles* of John of Nikiou must not be overlooked. Such art as was still possessed by the Christian workman was either suppressed or forced into the service of his masters. The Copts, as they gradually became a smaller and smaller section of the population, were ostracized by the Muhammadans and cut off from all intellectual stimulus and growth. They do not seem to have shared in any way in the artistic and intellectual triumphs characteristic of certain periods among the Muslims. It is true that under some rulers individual Christians rose to high office, but their position was usually even more precarious than that of their Muhammadan colleagues. Frequently they were subjected to severe persecution, and were forced to wear dark cloaks; and under Hakim, since Muslim and Christian were much alike when naked in the public baths, they were compelled to have a cross branded on their bodies in order that none of the faithful might wittingly be polluted by contact with the infidel. Such a system was bound in time to crush the Christians almost out of existence. The monasteries dwindled, and finally, in the 17th cent., the Coptic language itself ceased to be spoken, although certain portions of the Scriptures are still read in the churches to this day in the ancient language. The Copts seem to have been little influenced by the victories of the Crusaders, and, indeed, as Crusaders and Copts looked on each other as heretics, little co-operation would have been possible. It is interesting to note that the surrender of Constantinople to the Turks seems to have reacted badly on them even in their then wretched state of ignorance; for in the correspondence, so long after that event as 1617, addressed by Cyril, then Coptic Patriarch, to George Abbot, archbishop of Canterbury, we

read: 'On account of our sins we are become the most contemptible of all nations; and with the overthrow of the Empire have lost the liberal arts' (Neale, *Hist. of the Eastern Church*, ii. [1850] 385). From the 16th cent. onwards the Roman Church has made intermittent efforts to convert the Copts to Roman Catholicism, but with little success. They have clung to their own Monophysite doctrine, and to their ritual of St. Mark, with the same doggedness with which they have resisted Islam.

7. The Coptic Church of to-day.—After centuries of oppression and ostracism, the Copts to-day are naturally a people apart. The males having intermarried little with the Arabs, they are supposed to represent more faithfully the old Egyptian type; but this is doubtful. Several of their fine churches, some of them dating from Byzantine times, are still in use, although stripped for the most part of their woodwork and pictures. The liturgy and ritual of St. Mark are in use. The Eucharist is in one kind, only the priests taking the wine; the bread is given to the communicants in wooden spoons, and confession is obligatory before receiving the Eucharist. Women are not allowed into the body of the church, but confined to the narthex. There are five great fasts: (1) the Fast of Nineveh, for three days and three nights before Lent; (2) the Great Fast (Lent), occupying 55 days; (3) the Fast of the Nativity, during the 28 days before Christmas; (4) the Fast of the Apostles, following the Festival of the Ascension; (5) the Fast of the Virgin, for 15 days prior to the Feast of the Assumption. The Festivals are those of the Nativity, *el Ghits*, or Baptism of Jesus, the Annunciation, Palm Sunday, Easter (the Great Festival), Ascension, and Whitsunday. Baptism is universal, and, though attempts have been made by the Patriarchs in the past to enforce its early application, boys, as a rule, are not baptized till they are 40, and girls till they are 80, days old. Circumcision is general. The hierarchy to-day consists of the Patriarch, 12 bishops, and priests and deacons. The Patriarch is always elected from among the monks of the Monastery of St. Anthony. In recent years the Copts have acquired considerable wealth, and in some districts have become important members of the community. Their willingness to be educated is shown by the fact that, though they are only 6 per cent of the population of Egypt, 17 per cent of the children at school are Copts. This education is enhanced by the schools of the foreign missionaries, which supply teaching of a sort that enables the Copts to become clerks and book-keepers—occupations to which their talents are admirably adapted; but attempts to turn them into Protestants or Roman Catholics are of doubtful wisdom. The monastic system is still in force, and some of the ancient monasteries are inhabited by a few monks; but the monks themselves are narrow and ignorant, while in a few cases they have not a very good reputation for an orderly life. With regard to marriage, and more especially death, the Copts have adopted many of the customs of their Muslim neighbours.

This article cannot be closed without some mention of the Copts as missionaries. During the 6th and 7th centuries the whole of Nubia was Christianized, and for many years the Arabs were opposed by the Christian kingdoms which had their centres at Dongola, Alwa, and Soba. But the missionary efforts of the Copts did not stop here, for Christianity was afterwards introduced into Abyssinia. In connexion with this, mention may be made of the recently found gravestone of a Coptic bishop of the island of Set, beyond the second cataract, probably dating from the 9th cent.; the ruins of churches between Kasr Ibrahim and Wadi Halfa, the subject of a recent monograph by Mileham (*Churches in Lower Nubia*, Univ. of Pennsylvania, 1910); and also the newly discovered Nubian version of the Life of St. Menas, published (1909) by Budge for the Trustees of the British Museum. The Christian communities of Nubia, which at one time extended from Assuan to the Blue Nile, gradually crumbled away, from pressure exerted either by the neighbouring heathen

tribes, or by the Muslims, until they were finally exterminated by the powerful Fung dynasty of negro kings at the end of the 15th century. Abyssinia, however, remained Christian and Monophysite, and its Metropolitan is still a Coptic bishop appointed by the Patriarch of Alexandria.

CORN, CORN-SPIRIT.—See HARVEST.

CORNERS.—Among the Semitic peoples, as among others also, an especial sacredness or significance was supposed to pertain to the corners of structures, fields, and other objects. The evidence for this conception can be most widely traced among the Semitic peoples in connexion with buildings.

1. Bab.-Assyrian.—Among the Babylonians and Assyrians it took the form of making a deposit of inscriptions and images under the corner or corners of a temple, palace, or tower. The inscriptions were, in the Assyrian and Neo-Babylonian periods, usually in the form of hexagonal, octagonal, or decagonal cylinders, or cylinders in the form of barrels. Such deposits, placed under the corners or built into them, were found by Taylor at Mugheir, Loftus at Senkereh, Rawlinson at Birs Nimroud, Botta and Oppert at Khorsabad,¹ and Rassam at Kouyunjik. The great cylinder of Ashurbanipal was found at the corner of a room, not at the corner of a building. Many of the chronicles of the Bab. and Assyrian kings were prepared and deposited in little receptacles of masonry at the corners of walls. At Tellah, de Sarzec found similar receptacles which contained bronze statuettes of human figures,² both male and female, and of animals.³ The making of these deposits was probably, as in Egypt, accompanied by sacrifice. Thus Sargon of Assyria (722-705 B.C.) says (Cylinder Inscription, l. 60): 'To the brick-god, the lord of brick foundations, and to the chief architect, Bel, I offered a sacrificial lamb, I poured a libation, I raised the lifting up of hands.'

In emphasizing the importance of this custom, Perrot and Chézy are led into one slight error. They state that king Nabu-na'id (555-538 B.C.) says that he sought for the corner-stones of Hammurabi and of one of the Kassite kings, digging until he found them. The impression is that he identified the corner-stones of the respective kings by reading the inscriptions deposited in connexion with them—an idea which is gained from a translation of an inscription of Nabu-na'id made by Oppert when the science of Assyriology was young. We now

know that a *temenu* was not a corner-stone, but a paved court or terrace. Since such pavements were usually made of bricks, each one of which was stamped with the name of the builder, they were easily identified.

2. **Egyptian.**—In Egypt, foundation deposits have been found at several places. One made by Thothmes IV. of the XVIIIth dynasty is reported from Memphis;¹ another set was found at each of the corners of a temple at Nebesheh built by Aahmes II. of the XXVth dynasty;² another, under a XXVth dynasty building at Defenneh founded by Psametik I.;³ a complete set belonging to a building of Hophrah, at Naukratis;⁴ and at three corners of a temple of the Ptolemaic period, at Gemaïyemi.⁵ At Thebes, foundation deposits showed that a temple built by Queen Tausert of the XIXth dynasty once stood on a spot south of the Ramesseum, although the temple itself had entirely disappeared.⁶ At Abydos, foundation deposits, or the receptacles for them, were found from Thothmes III. and Amenophis III. of the XVIIIth dynasty,⁷ Sesostris III. of the XIIth dynasty,⁸ and Pepi of the Vth dynasty.⁹ At Koptos, a box (though robbed of its contents) was found under a threshold;¹⁰ at Kahun, a receptacle (still full) under the middle of a building of Sesostris II. of the XIIth dynasty;¹¹ and, at Illahun, deposits at the corners of a temple also by the last-mentioned monarch.¹² At Gizeh no such deposits were found under the temples belonging to the IVth dynasty.¹³ These deposits in Egypt consisted of plaques of copper or stone on which the name of the builder was inscribed, together with models of the tools and materials which were used in the construction. At Defenneh, however, the bones of birds and animals offered in sacrifice were also found, together with the ashes of sacrifices which had been consumed. These showed that the sacrifice was the important feature connected with the deposits, and that the other objects were incidental to it. A similar deposit has recently been found under the corner of the castle of a Nubian chieftain of the time of the XVIIIth dynasty in Egyptianized Nubia. This differed, however, from the Egyptian deposits in that it consisted of ten mud-sealings. These represent a conqueror wearing the Nubian ostrich feather, who holds a crouching captive by a cord. On a level with the chief's shoulder is the figure of an animal like a dog.¹⁴

3. **Canaanite.**—The evidence for the sacredness of corners and for foundation sacrifices in ancient Palestine is of a more grim nature. At Gezer the skeleton of a woman was found built into the wall of a house at the corner.¹⁵ More numerous, however, were the skeletons of children found under the corners, children having been used for such sacrifices oftener than adults.¹⁶ The sacrifices at Gezer, like the Egyptian deposits, were not always placed at the corners. The skeleton of a man, and sometimes those of children, were found buried under the middle of a house or a room.¹⁷ With these sacrifices, vessels to contain food for the victims were also buried, as sometimes were lamps. Later, the sacrifices themselves were omitted, but the bowl and lamp were still used as foundation deposits.¹⁸ At Megiddo and Taanach,

foundations were apparently consecrated by human sacrifices, but those reported were not found at the corners, but in the centre of the houses or rooms.¹

4. **Hebrew.**—From the sacred nature and importance of corner-stones, which in the earlier time led to such ceremonies as have been described, certain literary uses have survived in the Old Testament. Thus Jer 51²⁸ and Job 38⁶ use 'corners' and 'corner-stones' as synonyms for 'foundations.' In Jg 20³ and 1 S 14³⁸ 'corners' is used figuratively for 'chiefs'; in Zec 10⁴ 'corner-stone' is apparently a synonym for 'ruler.' In Is 23¹⁶ it occurs in an enigmatic passage, where, whether the 'corner-stone' is a figure for a king or a kingdom, or for trust in Jahweh or the relation of Jahweh to His people, the result is righteousness. Such figurative uses of 'corner' led in two late passages to the thought that it was the crowning stone of a corner, not the foundation stone, which was important (see Ps 118²², Zec 4⁷).

In Zec 9¹⁸ the 'corners of the altar' are mentioned as being 'filled.' These were projections which were sometimes called 'horns' (see ALTAR [Semitic], § 17). Possibly, like the corners of buildings, the corners of the altar were thought to be specially sacred.

The sacredness which attached to corners was applied by the Hebrews to the hair. Lv 19²⁷ reads, 'Ye shall not round the corners of your heads, neither shalt thou mar the corners of thy beard.' As under certain circumstances hair was regarded by the Semites as sacred to Jahweh (see W. R. Smith, pp. 323-331), possibly the corners were all considered to be sacred to Him. One might infer from the statement of Herodotus (iii. 8) about the hair of the Arabs that they sacrificed the 'corners' of their hair to their god. Whatever the motive of the Levitical regulation, —whether to differentiate their custom from that of the heathen Arabs, or simply to keep locks sacred to Jahweh untouched,—it has produced among the Jews of modern Palestine and elsewhere in the Orient and in Eastern Europe, as well as among the strictly orthodox Jews of Russia and Poland, the curious custom of permitting the lock at each side of the forehead to grow long. These locks are curled and permitted to hang down in front of the ears, presenting a peculiar appearance, and distinguishing the Jew from all other religionists in that land (cf. Mannheimer, in JE ix. 595).

Another Hebrew regulation, arising from the sacredness of corners, was the law which forbade a man in harvest to reap the corners of his field (Lv 19⁹ 23²²). Because the corner of the field was sacred to Jahweh, the grain which grew in it must be left, that the poor might come and gather it. This regulation was generally observed in OT times, as the Book of Ruth shows. Since the law was indefinite, however, just what this law demanded of a farmer became a matter of debate when the oral law developed. The results of these discussions were afterwards embodied in the Mishnic tract *Pe'ah*, or 'Corner.' Perhaps because the Bab. Jews were nearly all engaged in commerce, this tract is copied in the Bab. Talmud without additions. But in Palestine, where the Jews were still agriculturists, the law of the 'corner' was still vital and developing, so that the Jerusalem Talmud contains a Gemara upon the Mishnic text.

The first problem to which the Rabbis addressed themselves was how much the owner of a field must leave for the poor in order to satisfy the law. It was agreed that a just man would leave one-

¹ See Schumacher, *Tell el-Mutesellim*, Leipzig, 1906, pp. 45, 54; Sellin, *Tell Ta'annek*, Vienna, 1904, p. 61.

sixtieth of the field as a 'corner,' though the amount might vary with the size of the field, the number of the poor, and the richness of the yield. If a man left one stalk standing, he could not be held to have broken the law, for the sacred text did not define the size of a corner. Seemingly all possible questions were raised and decided by the Rabbis. For example, they decided that a man fulfilled the law if he left the proper amount in the middle of the field instead of in a corner; that the law applied to leguminous plants as well as to grain; that it applied to the following trees: tanners' sumac, the carob tree, nut trees, almond trees, vineyards, pomegranates, olive trees, and the date palm. They had to decide when the 'corner' should be estimated before the tithes were paid, and when after; when two men shared a field, whether they must both leave a 'corner'; if a man raised two kinds of grain in his field, whether he must leave a corner for each; if a man left a 'corner' for the poor and they did not take it, how long he must wait before he could take it himself; whether, if something more than what was intended were left in the field through forgetfulness, the owner could return for it, or whether it must be counted as a 'corner'; whether a rich man, who, when on a journey, had been compelled to avail himself of *pe'ah*, was obliged to restore it; and many other points such as arose in administering the law.

GEORGE A. BARTH.

CORRUPTION AND BRIBERY.—I. Ancient Rome.—For first-hand information on bribery in ancient Rome we naturally turn to the speeches of Cicero, *pro Cn. Plancio* and *pro L. Murena*. As we study these, we feel inclined to subscribe to the dictum of Montesquieu upon the condition of Rome and her provinces under the Republic: 'La liberté était dans le centre, et la tyrannie aux extrémités.' The provinces were the farm of the Roman people, and the provincials were the live stock to be fleeced by the governor. Whether a Cæcilius or a Cornelius obtained a province, it is at once clear that the main aim of the governor, during the year of his provincial life, was to acquire enough money to purchase that supreme object of his ambition—the consulship. In order to ingratiate himself with the people, he therefore supplied the citizens of Rome with large quantities of corn below cost price, the deficiency being made up by the province. When the rivalry for the consulship grew acute, it became usual for a candidate, anxious to secure his election, to give the people a *munus*, or 'treat,' in the way of a gladiatorial show. A *munus*, it may be remarked, sometimes cost the candidate a matter of seven thousand pounds. All this expense came out of the amount accumulated during the year of provincial life, and an ample margin had likewise to be provided to bribe the jury who should try the successful candidate for bribing the tribes. This indirect bribery of the people dated from the beginning of the 6th cent. of Rome.

'For five hundred years,' writes Mommsen (*Hist.* iii. 40), 'the community had been content with one festival in the year, and with one circus. The first Roman demagogue by profession, Gaius Flaminius, added a second festival and a second circus [in the year 220 B.C.]; and by these institutions—the tendency of which is sufficiently indicated by the very name of the new festival, "the plebeian games"—he probably purchased the permission to give battle at the Trasimene lake.'

In 159 B.C. the *lex Cornelia* punished with exile those found guilty of bribing the electors with money; it is, therefore, evident that the direct purchase of the votes of the electors must have existed a considerable time before the passing of that law. Indeed, as early as the year 432 B.C., we meet with the first law against *ambitus*, forbidding persons to add white to their dress to signify that they were candidates. 'Ne cui album,' Livy informs us (IV. xxv. 13), 'investimentum addere petitionis liceret causa.' This measure reminds us of the (English) Corrupt Practices Act of 1854, prohibiting the giving of cockades to voters. The *lex Poetelia* (358 B.C.) forbade candidates to carry on their canvass anywhere save in the Forum and Campus Martius. 'De ambitu,' writes Livy (VII. xv. 12), 'ab C. Poetelio tribuno plebis auctoribus patribus tum primum ad populum latum est; eaque rogatione novorum maxime hominum ambitionem, qui mundinas et conciliabula obire soliti erant, compressam credebant.' The laws against *ambitus* increased in number, but decreased in value. In 181 B.C. the *lex Cornelia Baebia* was passed (LIV. XL. xix. 11). Attempts were made to remedy the corrupt practices of the day by the *lex Gabinia*, or Ballot Act (139 B.C.), and the *lex Maria*. In the former it was enacted that in elections voting should be by ballot, i.e. by writing the name of the candidate on a ticket or tablet (*tabella*). By the latter, C. Marius, in his second consulate (104 B.C.), established the *pontes*, or narrow passages to the voting-booths, by which he designed the protection of the voters against the evil influence of the astute electioneering agents. Regular agents (*interpretes*) were employed to arrange the bargain with the elector, and the money promised (*pronuntiata* [cf. Cic. *pro. Planc.* 45; *Ep. ad Att.* i. xvi. 13]) was paid by the candidates themselves, either directly to the paymasters (*divisores* [cf. *Ep. ad Att.* IV. xvi. 7; *pro Planc.* 55]) for distribution, or to trustees (*sequestres*) appointed by the parties, who held it until the elections were over. Cicero, in the *de Lege Agr.* (ii. 4), terms the *lex Gabinia* the law whereby 'Liberty can assert herself without a word'; but in practice the voice of Liberty was as much stifled then as it was afterwards in the case of the English boroughs. In Rome, as in England, electors appear to have habitually adhered to their contracts.

By the *lex Ælia Calpurnia* (67 B.C.), a heavy fine was imposed on the candidate who should use bribery, whether successful or not; and this law deprived him for ever of the right of holding an office or sitting in the Senate, in this respect surpassing in stringency even the Corrupt Practices Prevention Act, under which the disability to sit in the House of Commons or to vote at an election to Parliament lasts only seven years. This just law contains a provision which grates somewhat harshly on our ears. If a person convicted of bribery secured the conviction of another on the same charge, in the eyes of the law his guilt was wiped out. The *lex Ælia Calpurnia* seems to have inflicted a fine on *divisores* and other agents, thus recognizing a principle which was long ignored in English legislation. The law in question was repeated, with additional rigour as to its penal clauses, in the *lex Tullia de ambitu*, which was passed in Cicero's consulate (63 B.C.). The purport of this measure is given in the *Scholia Bobbiensia* (p. 309) and in Dio Cassius (xxxvii. 29), as well as by Cicero himself in several passages of the speeches *pro Murena* (47, 89), in *Vatinium*, and others (*pro Sest.* 133; *Interr. in Vat.* 37; *pro Planc.* 83).

In his desire for reform, Cicero was supported by all true patriots, amongst others by Servius Sulpicius, who wished for some change of the laws

relating to elections under certain conditions, viz. to establish *confusio suffragiorum*, or 'mass-voting,' as a means of preventing bribery, whenever a fresh election took place in consequence of an elected magistrate having been convicted of *ambitus*. We also begin to hear of *iudices editicii* to try cases of bribery. The Senate, on Cicero's motion, declared by a *senatus-consultum* the provisions of the *lex Ælia Calpurnia* applicable to any candidate who should keep about him hired followers, or who should entertain the people with gladiatorial shows—except under the peculiar circumstances of its being required by a testamentary disposition—or refreshments of any kind. The last clause is perhaps the earliest law against 'treating' of which we find record. In the provinces the *lex Colonia Genetiva* likewise forbade treating at municipal elections. By it—and the provisions sound wonderfully modern—no candidate is to give, or cause to be given, dinners; he is not to have more than nine any day at dinner; nor is he to give, or cause to be given, bribes or gifts; nor is any one else to give dinners or bribes for him. The penalty for the violation of this statute is five thousand sesterces. The *lex Tullia* of Cicero's consulate confirmed the provisions of the *lex Ælia Calpurnia*, punished corrupt candidates with ten years' exile, and inflicted severe penalties on corrupt electors. It prohibited the candidate from exhibiting gladiatorial shows or public amusements within two years of the commencement of his candidature.

If efficiently enforced, the *lex Tullia* should have stamped out bribery. Roman history, however, shows how little effect this law exercised in putting an end to corruption. The price of the consulate showed no tendency to fall. The quotations for the year 54 B.C. show the enormous figure of ten million sesterces—practically £100,000—offered for the first voting division alone. A few facts about some of the chief men speak eloquently as to the spread of bribery. In the year 62 B.C., Cæsar owed nearly £250,000 sterling. When twenty-four years of age, Marcus Antonius owed £50,000; fourteen years later his liability was no less than £300,000. Cicero (*Ep. ad Att. iv. xv. 7*) writes to Atticus: 'Bribery is at boiling point. *Ecoe signum!* On 15th July interest on money rose from 4 to 8 per cent.' This means that money was so much in demand for the electors that the rate of interest doubled. The Senate felt impelled to take action, and in 61 B.C. two noteworthy decrees were passed. By one it was rendered lawful to search the houses of magistrates suspected of having money deposited with them to be used for corrupt purposes (*ib. i. xvi. 13*). By the other it was enacted that any magistrate in whose house bribing agents should be harboured should be held guilty of a State offence. When Cicero (*pro Plane.*) speaks of a sum of money hidden in the Flaminian circus, and seized by the authorities, he clearly implies that the concealers thereof meant the voters to find it.

This ancient plan has been imitated in modern times. For example, in 1868 each freeman in the city of Dublin received his £5 note from a hole in the wall. At Shaftesbury, in 1774, an alderman of the town, disguised as Punch, passed through a hole in the door twenty guineas to each voter, for which each was obliged to sign a bill payable to a fictitious Glenbucket, in order to disguise the nature of the transaction.

The two decrees of 61 B.C. were as ill obeyed as their predecessors. In the year 59 B.C. was carried the *lex Licinia de Sodaliciis*, which forbade the corruption of the tribes by means of the illegal organization of clubs. This law brings before us the difference between legal and illegal canvassing, and at times the border line between the two was thin. For example, it was right and proper to give treats or public shows to the voters in their tribes (*tributim*), but it was illegitimate if given to

the people *en masse* (*vulgo*). It was right and proper to employ *liberalitas* in the conduct of the election, while it was wrong and improper to use *largitio* (*pro Mur. 77*). It was fitting that candidates should look to their *sodalicia*, or 'brotherhoods,' for assistance at the time of election; but, if they employed the *sodales* to mark off the tribe into small companies (*decurie*), each to be brought by the viles of one of the brotherhood to favour a particular candidate, then the Licinian law pronounced this candidate guilty of using undue influence (on the *modus operandi*, cf. *pro Plane. 44-47*, also 37, 39). Unsuccessful candidates could be punished for ordinary *ambitus*, but only successful ones could be tried under the provisions of the *Act de Sodaliciis*. In 52 B.C. Pompeius introduced a measure against bribery, intimidation, and illegal influence, which applied to offences committed so far back as 20 years before his third consulship. That the offenders were many is evident from the letters of Cicero. In *Fam. vii. ii. 4* he writes: 'I am kept incessantly at work by the number of trials under the new Act.' The retrospective clause proved of grave importance, and in the issue hastened the fall of the Republic. Julius Cæsar perceived the hopelessness of attempting to suppress corruption by statute, and he endeavoured to minimize its effects by reserving to himself the choice of half the candidates. Under the Empire the all-important power of the Princeps left no room for *ambitio*, save in the restricted sphere of election to municipal office. The attention of Augustus was directed not against electoral corruption, but against the bribing of jurymen. Cicero's reference to this is well known. Clodius had been acquitted on the charge of violating the rites of the Bona Dea, when Cicero gave evidence against the *alibi* which he set up. 'The jury,' sneered Clodius, 'did not give you credit on your oath.' 'Yes,' retorted Cicero, 'twenty-five out of the fifty-six did; the remaining thirty-one refused you credit, for they took the bribe in advance.'

When we bear in mind the scanty amount of legislation in early times, it is obvious that strenuous efforts—at least on paper—were made to put down corruption. In practice, however, little was done, and we feel inclined to think that many of these laws savoured of the pious resolutions often passed at public meetings nowadays. The laws, like the resolutions, looked well. An unenlightened electorate like the Roman may have a vague sense of public duty which we may call Imperialism. Unless moved by this spirit, or unless highly organized by the party system, it is almost inevitable that bribes will be employed with such voters. The Roman lacked this sense of Imperialism, and he certainly lacked the party spirit.

'Party phrases,' writes Mommsen (*iii. 300*), 'were in free circulation: of the parties themselves there was little trace in matters really and directly practical. Throughout the whole seventh century the annual public elections to the civil magistracies, especially to the consulship and censorship, formed the real standing question of the day, and the focus of political agitation; but it was only in isolated and rare instances that the different candidates represented opposite political principles; ordinarily the question related purely to persons, and it was for the course of affairs a matter of indifference whether the majority of votes fell to a Cæcilian or to a Cornelian. The Romans thus lacked that which outweighs and compensates all the evils of party-life—the free and common movement of the masses towards what they discern as a befitting aim—and yet endured all those evils solely for the benefit of the paltry game of the ruling coteries.'

2. Ancient Greece.—Greek history discloses a purer state of affairs than Roman, and this is due, *inter alia*, to the fact that Imperialism and party spirit prevailed to a large extent in Greece. Nicías knew that he could reckon on the spirit of Imperialism when he reminded his soldiers, in dire straits in the harbour of Syracuse, of τὸ μέγα νόημα τῶν Ἀθηναίων. The democracy of Athens possessed

a political education superior to the Roman, and her citizens developed a sense of duty to the City of the Violet Crown, not possessed to the same extent by him who owed allegiance to the City of the Seven Hills. When no longer moved by these better feelings, party spirit (*epithela*) exercised much influence. Solon saw the useful aspect of loyalty to party when he punished the citizen who, on the outbreak of any sedition or attempt at revolution, should stand aloof and take part with neither side—an enactment that we find in some Continental constitutions. Aristotle (*Pol.* v. ix. 11) records the terms of an oligarchical oath taken on assuming office. 'And I will be malignant,' it runs, 'against the people, and I will devise against them whatever evil I can.' In order to meet with a parallel to this frank statement of one's duty to his party, we must refer to the notorious remark of President Andrew Jackson when he proclaimed the doctrine, 'To the victors belong the spoils.' The dependence of office on lot, the mode of electing the elders in Lacedæmon (Plutarch, *Lycurg.* 26), rendered electoral corruption impossible in Greece. One fact is highly significant. The word *dekazein*, the only Greek word for 'to bribe,' is a very rare verb indeed, and its normal use is for tampering with juries rather than with electors. Aristotle does not recognize electoral corruption at all, unless such be his meaning when he says that in Carthage the most important offices, including even the throne and the command of the forces, were 'purchasable' (*ἀντιράς*, *Pol.* ii. xi. 10), adding the outspoken reflexion, 'It is natural that a man should make money of his office if he has to pay for it.' Perhaps his meaning is that it may have been possible to purchase high office in Carthage, just as it was possible, till our own day, to purchase commissions in the British army or judicial positions in France. If his meaning is that office was accessible only by bribery,—and this seems to be the view of Polybius (vi. lvi. 4),—then in this respect Carthage, in the opinion of Aristotle, was unique in the ancient world.

The payment of persons invested with public functions to induce them to use them unjustly, and of juries to procure verdicts against the evidence, were, however, grave forms of corruption. The quarrels of Demosthenes and Æschines show how untrustworthy the public functionaries became, and the history of Sparta illustrates the same matter (Herod. ix. 87, 88).

Pausanias, for example, when attainted of treason, returned to Sparta in the certainty that he could buy off his punishment (Thuc. i. 131). Laotychides, Pleistonnax, Astoychus, Cleandridas, and Gylippus all took bribes. Thucydides tells us (viii. 45) that the trierarchs and generals of the Lacedæmonian and allied fleet—all save Hermocrates—took money from Tissaphernes to betray the interests of their country. Themistocles (Herod. viii. 4, 5) took and administered bribes; but it was to save, not to betray, his country. Aristotle evidently thought that the ephorality in Sparta was corrupt. 'The ephors,' he remarks, 'are chosen from the whole body of the people, so the office often falls into the hands of very needy persons, who accordingly have shown themselves corrupt' (*Pol.* ii. ix. 19). As he terms the ephorality 'the keystone of the constitution,' we may infer that Sparta was more corrupt than the majority of the Greek States.

One remark of Aristotle shows clearly how little electoral corruption prevailed in Greece. He condemns canvassing; he condemns even the candidate's application for office. 'The man,' he informs us, 'who is fit for the place should have it, whether he wants it or not. No one would apply for office if he were not ambitious; and ambition and covetousness are the most common motives to crime' (*Pol.* ii. ix. 27). With regard to corruption, Aristotle was plainly afraid of the embezzling of public moneys, and the dishonest discharge of public functions. To meet the former abuse, he proposes (v. viii. 19) that transfers of public money should be made in the presence of all the citizens, and

that duplicates of the accounts should be deposited with certain bodies; and, to counteract the latter, that there should be 'certain distinctions ordained by law for those who have a good name for probity.' In England and other countries the latter provision is customarily observed. Aristotle holds that public officials should be absolved from the necessity of supporting themselves while serving the State. They must have leisure to govern. But at the present time, he writes (*Pol.* iii. vi. 10), 'for the sake of the profit to be made out of the public purse and official position, men want to be always in office. They hunt after places with such eagerness that one might imagine they were invalids to whom health was impossible except when in office.' These official salaries, however, must not be so great as to excite cupidity. A mere competence was not the goal of that 'ambition' which Aristotle regarded with such alarm.

3. The East.—In the West we are accustomed to speak of the dangers of democracy; but in this, as in so many other particulars, no such language prevails in the East. In India—till lately, at least—the people are not to be feared. 'Blessed are the poor and needy' is the familiar account of Holy Writ. St. James, however, stands in some dread of the influence of the rich and powerful (cf. chs. 2, 5). In the East the masses are never the objects of attempts at corruption, but the classes are; whereas in the West the exact reverse holds good. The corruption in the East assumes the terrible form of being directed from below upwards. The aged Samuel, when he invites the closest examination of his conduct, exclaims, 'Whose ox have I taken? or whose ass have I taken? or whom have I defrauded? whom have I oppressed? or of whose hand have I received any bribe to blind mine eyes therewith?' (1 S 12³). Amos, in his denunciation of the rule of Jeroboam II., exclaims, 'They afflict the just, they take a bribe, and they turn aside the poor in the gate from their right' (Am 5¹²).

In the OT the acceptance of a bribe is expressly forbidden (Ex 23^{1, 6, 8}, Dt 16¹⁹), and one of the grievous woes of Isaiah is launched at them 'which justify the wicked for reward, and take away the righteousness of the righteous from him' (Is 5²³; cf. Job 15³⁴, Am 2⁹), while 'he that despiseth the gain of oppressions, that shaketh his hands from holding of bribes . . . shall dwell on high' (Is 33¹⁶). Accordingly, Jehoshaphat forbade his judges to accept bribes (2 Ch 19⁷; cf. Ex 18²¹), though it is only too obvious that the Hebrews were by no means unfamiliar with corruption (Is 1²³, Ezk 22¹³, Mic 7³, Mt 28¹²), among the cases being the betrayal of our Lord by Judas. Talmudic Judaism was very severe on bribery, though it seems to have been permissible, before the time when the judge received a regular salary, for him to accept an equal amount from each of two litigant parties before trying a case (*JE* iii. 379-381).

Zoroastrianism, with its intense horror of falsehood, was naturally strongly opposed to bribery, though no specific mention of corruption occurs in the extant Avesta texts. According to the late Pahlavi vision of *Artā-Virāf* (ch. lxxix., ed. Haug and West, Bombay, 1872, p. 194), the soul of the bribe-taker suffered horrible torture in the world to come. Both in China and in Japan the corrupt judge is severely punished; and it may here be noted that in ancient America, among the Aztecs, such a judge suffered the death penalty in grave cases of bribery, while for lighter forms of venality he was degraded from office, with the additional contumely of having his head shorn (Post, *Grundriss der ethnolog. Jurisprudenz*, Oldenburg, 1894-95, ii. 328).

In the East it is always the people who bribe, it is always the officials who are bribed; and in India

the difference between East and West is conspicuous. It is perfectly true that the Hindu law-books rank bribery in the class of 'open thefts,' and that the crime was punishable by fine, confiscation of property, banishment, loss of the case, etc. (Jolly, *Recht und Sitte* [= *GIAP* ii. 8], pp. 125, 142); but, in spite of this, the native Indian under British rule is greatly puzzled by the apparent purity of the English officials. That they are really incorruptible he cannot believe. He looks on incorruptibility as Charles II. looked on honour and virtue. Yet he knows that he could not dare to offer a bribe to the 'Burra Sahib' directly. It must, he thinks, be conveyed through successive grades of native servants about the Court, and it will surely—for, after all, an Englishman is not different from other mortals—be accepted, if offered with sufficient discretion. No experience can teach him that pure administration of justice is an existing fact, or anything else but a means subtly devised for making small bribes ineffectual.

A native became an Indian Civil Servant, and, as such, accepted presents. His principle in so doing was that of Francis Bacon. He gave his judgment on the merits of the case. If the plaintiff won, he kept his gift and returned that of the defendant, and *vice versa*. The hard thing is that the Indians understood and admired the attitude of this judge, while that of his British colleague was incomprehensible to the native mind. That incorruptibility is regarded as a rare virtue is clearly shown in a memoir of the Hon. Onocool Chunder Mookerjee, who attained the position of a judgeship in the High Court. 'Such was the integrity of this remarkable man,' writes his nephew, 'that, having taken a brief from one party in a case and read it, he invariably refused a fee from the other side.'

4. Great Britain and Ireland.—We turn from the East to the West, and we find the whole situation changed. With us the tendency is to corrupt the people in many insidious ways. In Stuart days the members of Parliament were corrupted because they were not easily amenable to public opinion. It was then thought necessary to lubricate the wheels of political machinery with golden oil; but, as the people gained more control, this bribery of their representatives slowly passed away. Tampering with judge and jury was once common in England.

A statute of the reign of Henry VII. in the year 1494 recites that 'perjury is much and customarily used within the city of London among such persons as passen and been immaned upon issues joined between party and party.' *The Dance of Death*, translated from the French in the same reign by John Lydgate, and adapted to the England of his day, mentions a juror who had given a false verdict for money. Stowe tells us that in 1468 many London jurors were punished by having papers fastened to their heads, setting forth how they had been tampered with in such and such a suit. A letter from the Bishop of London to Cardinal Wolsey, given by Grafton in his *Chronicles*, says that a London jury would find Abel guilty of the murder of Cain. Jardine, in his *Criminal Trials*, p. 8, maintains that the 'proceedings against persons accused of State offences in the early periods of our history do not deserve the name of trials; they were a mockery of justice.'

The impeachment of Bacon made possible the long line of incorruptible judges and immaculate juries that justly forms the glory of England, though the want of publicity gave a longer duration to the existence of bribery by bestowal of office and valuable consideration. This state of affairs is painfully apparent in the reign of George III. For example, 388 peers were created, nearly all for political jobbery (May, *Constitutional History of England*, i. 282). Bad as matters were in England, in Ireland they were a great deal worse.

'I long,' wrote Lord Cornwallis, Lord-Lieutenant of Ireland, to the Duke of Portland on 12th Dec. 1798, 'to kick those whom my public duty obliges me to court. My occupation is to negotiate and job with the most corrupt people under heaven. I despise and hate myself every hour for engaging in such dirty work, and am supported only by the reflection that without a union the British Empire must be dissolved.'

Corruption in England, as in Rome, assumes the shape of bribery of the electorate. This reached its widest development in the days of George III. Writing to Lord North, 16th Oct. 1779, the king said, 'If the Duke of Northumberland requires some gold pills for the election, it would be wrong not to satisfy him.' Aristotle laid down that man

was a political animal, but the evidence of election petitions goes to prove that man is an avaricious animal. If Rome gave her citizens bread and circuses, England was no whit less lavish to her electors. Charles II. held that every man had his price, and the perusal of the details of electioneering almost tempts us to agree with him. If the struggle for the consulate in the 700th year of the Roman Republic produced an offer of nearly £100,000 for the vote of *prærogativa*, it is humiliating to reflect that a little over a hundred years ago, in 1807, when Wilberforce contested Yorkshire against Lord Milton and the Hon. Henry Lascelles, the total expenses of the candidates exceeded a quarter of a million. In the same year, at Wootton Bassett, the price of a single vote rose from twenty guineas to forty-five. From the will of Lord Vernon, £5000 seems to have been the recognized sum paid in 1812 for a seat in Parliament. At so recent a date as the General Election of 1874, corruption was organized on a large scale. 'The moment the trumpet is sounded for a General Election,' deposes a witness before a Norwich Election Commission, 'there seems to spring from the ground, as it were, a host of employment-seekers.' This form of corruption, the bribing of voters by offering good wages for the discharge of nominal functions during the period of election, is now the subtlest form of bribery, except perhaps the bribery which takes the form of munificent donations to local charities. The days are gone when the beautiful Duchess of Devonshire could buy a butcher's vote with a kiss, when the genial Dick Steele could win over the women with an apple-stuffed with guineas—as a prize for the best wife.

5. America.—In the far Western world, our cousins do not seem to have got rid of corruption. Parts of the United States are no better than the small boroughs of Southern England were before the Corrupt Practices Act of 1883. Venality occurs, according to J. Bryce (*American Commonwealth*, ii. 238), chiefly in connexion with private legislation. Foreign missions and consulates, department bureaux, custom-house and revenue offices, army and navy contracts, postmasterships, agencies, and places of all sorts are the spoils of the victors. The essence of the United States system is that paid offices are given and taken away for party reasons. In England, less than sixty men vacate their places with a change of ministry; in America, all officials do so, except those who are appointed after passing the Civil Service examinations. Corruption, of course, is not confined to the taking or giving of money bribes, for by graft there is the taking or giving of bribes in kind. Thus the person corrupted may receive the allotment of a certain quantity of stock or shares in a company, or of an interest in a profitable contract, or of a land grant. Another form may be the doing of a job, e.g. promising a contractor that he shall have the clothing of the police or the cleansing of the city thoroughfares, in return for his political support; giving official advertisements to a particular newspaper which puffs you; promising a railroad president, whose subscription to party funds is hoped for, to secure the defeat of a bill seeking to regulate the freight charges of his road, or threatening its land grants.

The effects of Andrew Jackson's famous doctrine of 'To the victors belong the spoils' can perhaps best be seen in the operations of the Tammany Ring in New York City. The cost of erecting and furnishing the County Court House was estimated in 1868 at \$250,000, but before the end of 1871 about \$18,000,000 had been expended upon it, and it was still unfinished. The items of \$404,847 for safes and \$7500 for thermometers show how the extra money had disappeared. The total price which the city paid for the privilege of being ruled by Tammany from the beginning of 1869 to Sept. 1871—that is, thirty-two months—amounted to no less a sum than \$81,000,000.

6. France.—France believes as thoroughly as America in the creed of Andrew Jackson. As in Greece, so in France, direct tampering with the electorate hardly exists. The Wilson scandals showed that political corruption was wide-spread in the Republic. The public and private bribery of the supporters of the Second Empire left many evil traces behind it. The embellishment of the capital fostered a spirit of jobbery, infecting all the departments of the State. The most dreadful of all the scandals was the Panama affair. The thrift of France had subscribed fifty millions sterling for the piercing of the Isthmus of Panama, undertaken by M. de Lesseps. In 1892 it was known that most of the money had disappeared, and at the trial it was clear that corruption accounted for the disappearance. Floquet avowed that, when Prime Minister, he had laid hands upon £12,000 of the Panama funds, and had utilized it in combating the enemies of the Government on questions unconnected with the Canal (Bodley, *France*, p. 503). He based his defence on the perilous doctrine that, under normal circumstances, it was the right and the duty of the Ministry to supervise the distribution of such subsidies so as to prevent them from being used to the prejudice of the Government (Chambre des Députés: Séance du 23 Décembre 1892). This principle has been followed by ministers both before and since the days of Floquet. The party system is probably the strongest purifying agent in Parliamentary government under extended suffrage. But, as in Rome, so in France. In neither country did the party system exist, and consequently, in both, corruption prevailed. No doubt, the general working of the Parliamentary system assists the operation of a corrupt policy. It is, however, clear that the absence of government by parties means the presence of bribery. 'The great motive power,' concludes Bodley (p. 515), 'to keep wavering members on the path of parliamentary integrity is the party system, and this is wanting in France.' Indirect

tampering with the electorate can always be observed. There is a bridge to be built, or a *lycée* to be instituted, especially in the *arrondissement* which shows itself faithful to the Government. Here we must meet with the kind of corruption we are certain to encounter in the future.

'Perhaps we are not at liberty to forget,' writes Sir Henry Maine in his *Popular Government* (p. 106), 'that there are two kinds of bribery. It can be carried on by promising or giving to expectant partisans places paid out of the taxes, or it may consist in the directer process of legislating away the property of one class and transferring it to another. It is this last which is likely to be the corruption of these latter days.'

Corruption used to appeal to individuals; now it appeals to classes. The farmer is bribed with an anticipation of prairie rent, and the artisan is bribed by the prospect of protective legislation. The future alone can disclose whether the old form or the new form of corruption is the more dangerous.

COSMOGONY AND COSMOLOGY (Introductory).—By cosmogony is meant the theory of the origin of the universe. The existence of a developed cosmogony seems to be characteristic of a somewhat advanced degree of thought. Among the Australians, for example, such careful observers as Spencer, Gillen, and Howitt record no cosmogonic myths, and the South American Indians and even the Finns have but scanty legends of this type. On the other hand, the Polynesians and North American Indian stocks have cosmogonies of considerable elaboration. The reason for this deficiency in certain parts of the world evidently lies in the amount of abstract thought required for the development of a cosmogony; for, though the existence of living beings, especially those of human kind, presents a creation problem which even primitive man endeavours to solve in many ways long before attempting to account for the beginning of the universe, these solutions do not come, strictly speaking, within the scope of cos-

mogony (H. J. JACOBI), p. 155.

mogony, but rather within that of creation (*q.v.*). Yet it must be remembered that at least the rudiments of cosmogonic ideas may exist among tribes which are not now known to entertain them. A further element of difficulty is introduced into the study of primitive cosmogonies by the unconscious absorption of foreign elements derived from Christian missionaries, just as is the case with legends of the Flood.

Throughout all cosmogony run certain basal principles, and it is also noteworthy that legends of this character, at first discordant and contradictory, gradually become harmonized and unified with the progress of religious speculation. Cosmogonic myths, almost without exception, seek to explain the creation of the world from the fewest possible elements. Among the Babylonians, where at least two divergent systems of cosmogony may be traced, the primal element of the universe was water, symbolized and ruled by Tiamât, the personification of 'chaos,' until she was slain by

the god Marduk. This cosmic ocean recurs in other systems as well, notably in some of the Hindu cosmogonies and in the Egyptian legend of the Creation. Yet in various parts of the Nile Valley different cosmogonies were held; at Elephantine it was believed that Khnum had made the cosmic egg from the mud of the Nile; while at Memphis, Ptah was said to have carved the earth, like a statue, into its present form. Among the Greeks, with their highly developed philosophic and abstract thought, a large number of cosmogonies were devised, the prime component of the universe being ocean, according to Homer; earth, according to Hesiod; air, according to Epimenides; ether, according to the rhapsodic cosmogony; water and earth, according to Hieronymus and Hellanicus; water and slime, according to Athenagoras; and water, according to Thales. The Greek cosmogonies may be divided into three classes; those beginning with a spiritual principle, as Zeus; those beginning with an abstract principle, as Chaos, Time, and Night; and those beginning with a material principle, such as water, earth, and ether. Of these, the third category is doubtless the most primitive, although even the Hesiodic cosmogony is so highly developed that it is a system of philosophy rather than of religion. An almost equal degree of speculative thought appears in the earliest record of India's cosmogony. The late 129th hymn of the tenth book of the *Rigveda* describes the 'That,' or abstract universe, as fired with inward meditation that resulted in the creative *Kāma*, which corresponds strikingly and curiously with the cosmogonic Eros of the Greeks. Other Vedic hymns vaguely ascribe the creation of the world to various deities, while a late hymn of the *Rigveda* (x. 90) declares that the world was formed from the different members of the body of a giant. In the later development of Hindu thought the universe is the creation of Brahmā (or of Prajāpati or some other All-God), while the universe itself is conceived as a cosmic egg—a legend as early as the *Brāhmaṇas*, and recalling the cosmic egg of Egypt, the Polynesian creation-myths, and the Greek Orphic mysteries. It is also noteworthy that creation is ascribed to sexual congress in cosmogonies so diverse as the Hindu, Maori, and Taoist.

The Greek and Hindu cosmogonies may be termed *quasi*-philosophic, while the Babylonian creation-myth is rather one of opposition. In the Iranian legend of the origin of the universe the same element of opposition appears, and at the same time it may possibly illustrate the bond which links the two. The earliest form of the legend is marked by a conflict between Ormazd and Ahriman, and the entire cosmic process is a series of beneficent creations by the former and of maleficent counter-creations by the latter, thus affording an analogue, in a certain sense, with the conflicts of the children of Papa and Rangī in the New Zealand creation-myth. At a later period, however, philosophic speculation evolved the doctrine of 'boundless time,' from which both Ormazd and Ahriman, represented by Light and Darkness in Manichæism, were sprung. It is clear that this unitarian tendency is a later development; and if one may argue from analogy it would seem that the earliest Greek cosmogony, instead of being philosophic like the Hesiodic version, was based on opposition, as Hesiod's account itself seems in places to imply.

The order of creation naturally varies in different cosmogonic legends. In one of the numerous systems of Egyptian cosmogony the primal spirit and primal matter co-exist from all eternity in indissoluble union. The primal spirit longs to create, thus recalling the cosmic Desire (*Kāma*, *Ēpos*) of the Hindu and Greek systems. This

results in motion of the primal material, whose basal qualities thus become visible. With the aid of one of them the cosmic egg is formed, from which arises Rē, the god of light, who forms the world and all that it contains. In the Iranian account, as given by the *Bundahishn*, the order of earthly creation is sky, stars, moon, sun, land, sea, river, plants, animals, and man. A certain similarity with the Greek cosmogonies, as represented by Hesiod, is shown in the Germanic version given by the *Völuspá*, in that the creation of the gods, to which the Babylonian creation tablets also refer, is elaborately described. The basal elements are primeval time, Ginnungagap (which corresponds, in many respects, to the Greek Chaos), and primeval matter. The gods Odin, Hœnir, and Lódhur raise aloft the sun and moon (or the earth). After this Midgardh, the home of mankind, is built; the plants are produced by the warmth of the southern sun; the seasons are ordained. The home of the gods is then built, and the three Norns, or Fates, appear, while the cosmogony closes with the creation of dwarfs and men. In this last system the cosmic egg, which plays so prominent a part in many creation-legends, is replaced by the cosmic tree, which is, at least to a certain extent, paralleled by the golden lotus of the Hindu *Purāṇas*.

A curiously isolated cosmogony is found in Chinese Taoism, which derives the four seasons from the conjunction of the male and female principles Yang and Yin. The four seasons, in their turn, produce the eight *kua*, or phenomena of Nature, which are the source of the universe. Equally isolated is the general type of the North American Indian cosmogony, which is essentially one of opposition. It presupposes the prior existence of another world before the earth of man. In this world dwelt the gods, who gradually came into conflict with each other, and in the struggle all, with a few exceptions, were transformed into those objects, both animate and inanimate, to which they were in disposition most closely akin, thus giving rise to beasts, birds, reptiles, trees, rocks, and everything else. Meanwhile, the divinities who had escaped metamorphosis departed to other regions, the present world being occupied by American Indians.

In entire keeping with the late development of cosmogony and its pre-eminently philosophic character, there is almost no instance of an ethical import being attached to it. Few peoples seem to have thought of a design for which the world was brought into being. The Iranians, however, held that the universe was created for the glory of Ormazd, who should finally triumph completely over the machinations and creations of the evil Ahriman. In conclusion, it must be noted that the concept of creation *ex nihilo* was practically unknown to the ancient world. It is present neither in Babylonian, Egyptian, nor Greek; and its existence in Iranian thought is at least problematical. On the other hand, the keenest philosophers of antiquity, the Hindus, evolved the idea as early as the *Rigveda*, even though but vaguely, declaring in a late hymn (x. 72. 2): 'in the primal age of the gods being was born of non-being' (*devānām pūrve yuge satah sad ajāyata*).

LOUIS H. GRAY.

COSMOGONY AND COSMOLOGY (North American).—1. Athapaskan family (widely distributed in many tribes from Hudson's Bay to the Pacific).—The Athapascans of the North-west attribute the phenomena of creation to a raven,

whose eyes were fire, whose glances were lightning, and the clapping of whose wings was thunder. On his descent to the ocean, the earth instantly rose, and remained on the surface of the water. From this being, also, the Athapascans traced their descent.¹ Yeti by name, it saved their ancestors from the flood, and succoured them by bringing them fire from heaven. It probably sprang, with the Mexican god Quetzalcoatl, from some common original form. The more eastern Athapascans believe their ancestors to have sprung from a dog, probably an eponymous totemic being.

2. Iroquoian family (Hurons, Mohawks, Oneidas, etc., situated from the St. Lawrence to the Roanoke, and the Cherokees in Eastern Tennessee).—The Iroquois tribes believe in a similar myth. Their original female ancestress fell from heaven. There was as yet no land to receive her, but presently it 'suddenly bubbled up under her feet, and waxed bigger, so that ere long a whole country was perceptible.'² Some Iroquois tribes, however, believed that amphibious animals, such as the otter, beaver, and musk-rat, beholding her descent, hastened to dig up sufficient earth from beneath the waters to provide her with an island upon which she might dwell.³ Several Iroquois tribes regarded a mountain near the falls of the Oswego River in New York State as the locality in which their forefathers originated, and the name of the Oneida ('People of the stone') is held to indicate some such relationship.

3. Algonquian family (formerly distributed over an area embracing a space from Newfoundland to the Rockies, and from Churchill River on the north to Pamlico Sound on the south).—The words for 'light' and 'rabbit' in the Algonquian tongue are the same, so that Manibosho or Michabo, the sun, their creative agency, has become confounded by them with the rabbit. The myth relates that one day, when Michabo was hunting, the wolves which he used as dogs entered a great lake, and disappeared there. He entered the lake to rescue them, but it rose suddenly, overflowed its banks, covered the land, and destroyed the world. Michabo dispatched the raven to find a piece of earth wherewith to rebuild the land; but, after having searched everywhere, the bird returned, and reported that it could find none. Then he ordered the otter to dive for some, but the animal returned to the surface without any. At last he sent down the musk-rat, which returned with a small piece, which sufficed for Michabo to re-create the solid earth as it now stands. The trees having lost their branches, he shot arrows at their bare trunks, and the arrows became new limbs. He then avenged himself upon the malevolent beings who had caused the flood, and married the musk-rat, by whose aid he peopled the world.

4. Muskogean family (Creeks, Choctaws, Chickasaws, Seminoles, etc., confined chiefly to the Gulf States east of the Mississippi).—The Muskogees believe that before the Creation a great body of water alone was visible. Over the dreary waste two pigeons flew to and fro, and at last espied a blade of grass rising above the surface. Dry land gradually followed, and the mainland and islands took their present shapes. In the centre of the hill *Nunne Chaha* was the house of Esangetuh Emisee, the 'Master of Breath,' who moulded the first man from the clay which surrounded his abode. The waters still covered the earth, so that he was compelled to build a great wall to dry the mud-fashioned men upon. When the soft mud had hardened into flesh and bone, he directed the waters to

their present places, and gave the dry land to the men whom he had made. Here we cannot doubt that the appearance of the two pigeons signifies the brooding of the creative spirit upon the waste of waters. The similarity of this myth to the Creation story of Genesis is most remarkable.

5. Siouan family (Dakotas, Winnebagoes, Mandans, etc., dwelling on the right bank of the Mississippi and Missouri valley).—The Mandan branch of the Sioux possess a very complete creation-myth, which bears a strong resemblance to those of the Karaya Indians of the Amazon and the Warrau Indians of Guiana. They affirm that the entire nation resided in an underground village near a great subterranean lake. The roots of a grape-vine penetrated to their habitation, and some of the more adventurous of them climbed up the vine, and were rewarded with a sight of the earth, which they coveted because of its richness in fruits and the plentifulness of buffalo meat. The pioneers returned laden with grapes, the taste of which so enchanted the people that they resolved to forsake their subterranean dwelling for the delights of the upper world. Men, women, and children clamored up the vine; but, when about half the nation had ascended, a corpulent woman who was climbing up broke the vine with her weight, and by her fall filled up the gap which led to the upper world. At death, the Mandans expect to rejoin their forefathers in their original seat, the good reaching the ancient village by way of the lake, which the burden of the sins of the wicked will not allow them to cross. The cognate Minnetarees had a tradition that their original progenitor emerged from the waters of a lake, bearing in his hand an ear of maize—a typical example of the culture-hero myth. As regards the actual creation of the earth, the Mandans had a vague tradition, resembling that of the Muskogees, concerning the brooding of pigeons upon the primeval waste of waters.

6. Californian sub-families.—California was, and is now, sparsely peopled by a number of Indian tribes belonging to as many as twenty-one distinct linguistic families. The mythologies of these tribes were, however, very similar to one another, and were characterized by unusually well-developed and consistent creation-myths, which are perhaps best typified by that of the Maidu, formerly dwelling in the Sacramento Valley and the adjacent Sierra Nevada. Their mythic era appears to fall into a number of periods, each of which is dealt with by a group of myths. It is in the first of these that their creation-myth makes its appearance, with the coming of Kodoyanpe the Creator, and Coyote. They discovered the world, and proceeded to place it in fitting order for its first inhabitants. These they made from small wooden images, but, as they engaged in violent conflict, they were metamorphosed into animals. Kodoyanpe conceived an antipathy to Coyote, whose evil desires clashed with his beneficent wishes, and resolved upon his destruction. In this he was assisted by a being known as 'the Conqueror,' who destroyed many monsters and evil beings which later would have endangered the life of men who were yet unborn. In the last scene of the cosmic drama Kodoyanpe is defeated by Coyote, and takes his flight eastwards—which shows, at least, that he is not a sun-god. The Indians then spring from the places where the small wooden figures of the 'first people' had been buried. Unlike most American creation-myths, this is a veritable creative act, not a mere reconstruction of the universe. In the beginning was only the great primeval waste of waters upon which Kodoyanpe and Coyote dropped in a canoe. Of the origin of these supernatural beings the Maidu were ignorant; but a neighbouring people, the Achomawi, pushed their cosmogonic legend much

¹ Mackenzie, *Hist. of the Fur Trade*, 1801, p. 83; Richardson, *Arctic Expedition*, 1851, p. 239.

² Soc. Hist. of New York, c. 1660, iv. 130.

³ *Relation de la Nouvelle France*, 1638, p. 161.

further back. According to them, at first there existed only the shoreless sea and the clear sky. A small cloud appeared thereupon, which gradually increased in size, and then condensed until it became the silver-grey fox, the Creator. Then arose a fog, which, condensing, became Coyote. The Ashochimi of California told of the drowning of the world so that no man escaped. But, when the waters retired, the Coyote went forth and planted the feathers of various birds, which grew into the various tribes of men.¹

7. Chinookan family (a distinct family, formerly dwelling on Columbia River).—The creation-myth of the Chinooks is practically the same as that of the Maidu, and relates how Italapas, the Coyote, encountering a heavy surf at a place called Got'at, was afraid that he might be drifted away, and threw sand upon the surf, saying, 'This shall be a prairie, and no surf. The future generations shall walk on that prairie.' The Chinookan mythology is rich in myths of the other world, and in cosmogonic sun-, moon-, and star-myths, which are dealt with at length in art. CHINOOKS.

8. Caddoan family (Pawnees, Kichai, Wichita, etc., dwelling in Nebraska and Arkansas).—The Caddo believed that they came originally from the under world, and related that the first individual to emerge into the light of day was an old man, carrying in one hand fire and a pipe, and in the other a drum. He was followed by his wife with corn and pumpkin-seed. They spoke of a creator, Atius Tiraawa, intangible and omnipotent, whose house was the heavens, and whose messengers were the eagle and the buzzard. He it was who called sun, moon, and stars into being, and ordered them their various circuits.²

9. Shoshonean family (Hopi or Moqui, Comanches, etc., inhabiting a tract from Oregon to Texas, and from Nevada to Colorado).—The Shoshonean stock had originally no conception of a Great Spirit. They speak of the earth as always having existed, and of the human race as having emerged through an opening in the earth called the *Sipapu*, which was identified with the Grand Cañon of the Colorado. The dead they suppose to return to the under world. The Sky-father and Earth-mother they hold as responsible for the upkeep of the universe.

10. Pueblo Indians of New Mexico (Zuñi, etc.).—The Zuñi believe that the Creator—Awonawilona, Maker and Container of all—existed before the beginning of time, in the darkness which knew no beginning.³ He then conceived within himself, and, projecting his creative thoughts into the void of night, evolved fogs potent with growth. He next took upon himself the form of the Sun, the father of men, who thus came into being, and by whose light and brightness the cloud-mists resolved themselves into water, gradually evolving into the primeval sea. Then from his flesh, 'outdrawn from the surface of his person,' he made the seed of two worlds, and fecundated the sea therewith. By the heat of his rays green scums formed, which became the 'Fourfold containing Mother-earth,' and the 'All-covering Father-sky.' Terrestrial life sprang from the embraces of these, and they separated. These twain were described as 'transmutable at thought, manifesting themselves in any form at will, as dancers may by mask-making' (Cushing, *op. cit.* 379 f.). Then, from the lowest of the four wombs of the world, the seed of men and living things took form and grew, until the lowest cave or womb grew over-full of living and half-finished creatures, men among them, and the press became so great that Poshaiyankya, the

wisest and foremost of men, arising from the nethermost sea, obtained egress from the first world-cave through such a dark and narrow pathway that movement was difficult. Alone did Poshaiyankya come from one cave to another into this world, then island-like, lying amidst the world-waters, vast, wet, and unstable. He sought and found the Sun-father, and entreated him to deliver the men and the creatures from that nethermost world. In another variation of the legend the people were delivered by one Janauluha, a master magician, who, bearing a staff plumed and covered with feathers, guided imprisoned humanity upward to the light. He then created birds of shining plumage, the raven and the macaw, who were the spirits of winter and summer, and the totems of the two original clans of men.

LEWIS SPENCE.

COSMOGONY AND COSMOLOGY (Babylonian).—The cosmology generally accepted in Babylonia had its origin at Eridu, the primitive seaport of the country, on the shores of the Persian Gulf. Here the land was constantly growing through the deposition of silt, and the belief consequently arose that the earth had originated in the same way. The water of 'the great deep,' accordingly, came to be regarded as the primordial element out of which the universe was generated. The 'Deep' was identified with the Persian Gulf, which was conceived as encircling the earth, and as such was called the *Nāru Marratu*, the 'Bitter' or 'Salt River.' On its inner bank in the extreme north was 'the Mountain of the World,' on which the sky rested and the gods had their seat. An early Babylonian map of the world (*Cuneiform Texts*, xxii. 48) places at certain distances from one another on the outer bank a number of *nagē*, or 'coastlands,' which, however, seem to owe their origin to the discovery of the existence of countries beyond the region of the Euphrates and Tigris, made subsequently to the period when the primitive system of cosmology first became an article of belief. In one of the islands off the mouths of the Euphrates and Tigris the Babylonian Paradise was located, where the Chaldean Noah and other ancient heroes were supposed to dwell.

Apsu, 'the Deep,' belonged to the orderly framework of Nature; the waters of the annual inundation which irrigated the Babylonian plain poured into it, and the trading vessels which brought wealth and culture to Eridu passed over its bosom. Hence it became the home of Ea, the culture-god of Eridu; his palace was within it, and his throne, *Du-azagga*, 'the holy mound,' was identified with an island which had been formed on the eastern side of the Gulf. But there was another aspect under which the watery element could be regarded; the thunderstorm and the whirlwind rose out of the Gulf, carrying destruction in their path, and the deep itself had once burst its bonds and destroyed mankind with a deluge. Under this destructive and anarchic aspect the watery element was known as *Tiamtu* or *Tiamât* (Heb. *Tēhôm*), which was mythologically pictured as a dragon, the enemy of the gods of light and law. While *Apsu*, the Deep, had been the origin of all things in the present orderly universe, *Tiamât* was a yet older principle, whose anarchic waters still existed beyond the limits of the universe, in the waters above the firmament and the waters below the earth and sea, which were always ready to break forth once more as soon as the barriers of law that confined them were removed. The conception of *Tiamât*

² G. B. Grinnell, in *JAF*, 1893, p. 113.

³ F. H. Cushing, 'Zuñi Creation Myths,' in *IS REW*, 1896.

probably emanated from Nippur in northern Babylonia, and was harmonized with difficulty with the cosmology of Eridu (Sayce, *Religions of Ancient Egypt and Babylonia*, pp. 376, 377).

The cosmological beliefs of Eridu are embodied in a bilingual (Sumerian and Babylonian) poem, discovered by Pinches (*JRAS*, 1891, pp. 393-408), which, however, in its present form has been much modernized by the introduction of lines referring to Babylon and the other chief cities of later Babylonia, and the substitution of Merodach, the god of Babylon, for Ea, the god of Eridu. The original version began as follows:

'No holy house, no house of the gods in a holy place had as yet been built,
No reed had grown, no tree been planted,
No bricks been made, no brick-mould formed,
No house been built, no city founded,
No city built, no man (*adam*) made to stand upright;
The deep was uncreated, Eridu unbuilt,
The seat of its holy house, the house of the gods, unerected:
All the earth was sea,
While within the sea was a current' (literally 'watercourse,' *pišannu*).

Then we are told how

'(Ea) tied (reeds) together to form a weir in the water,
He made dust and mixed it with the reeds of the weir,
That the gods might dwell in the seat of their well-being;
The cattle of the field (*Edinnu*), the living creatures in the field, he created;
The Tigris and Euphrates he made and set them in their place,
Giving them good names,
Moss and seed-plant of the marsh, rush and reed he created,
He created the green herb of the field,
The earth, the marsh, the jungle,
The cow and its young, the calf, the sheep and its young, the lamb of the fold.'

Of far later date is the so-called Epic of Creation, which is really a hymn in honour of Merodach and his overthrow of Tiamât and the powers of chaos. As this involved the creation of the existing world, the poem is prefaced by an account of the origin of the universe as it was conceived in the schools. The cosmology is frankly materialistic, abstract principles taking the place of the gods who are themselves the offspring of the principles, in flagrant contradiction of the rest of the Epic, in which the god Merodach appears as the creator. The Semitic idea of generation is invoked in order to explain the creation, which thus becomes a process of evolution, the old animistic objects of Sumerian worship being introduced to form the links in the chain of development. Water remains the primordial element, but an attempt is made to reconcile the antagonism between the two conceptions of this element, according as it is regarded as anarchic or as under the dominion of law, by making Apšu (the Deep) and Tiamât (the watery chaos) complementary principles whose union resulted in starting the evolutionary process. The first lines of the Epic run thus:

'When above unnamed was the heaven,
(And) earth below by a name was uncalled,
Apšu (the deep) in the beginning (*ristû*) being their begetter,
(And) the flood (Mummu) of Tiamât the mother of them all,
Their waters were embosomed together (in one place),
But no reed had been harvested, no marsh-plant seen;
At that time the gods had not appeared, any one (of them)
By no name were they called, no destiny [was fixed].
Then were the gods created in the midst of [heaven?],
Lakhamu and Lakhamu appeared [the first].
The ages multiplied, they . . .
Ansar and Kisar (the Upper and Lower Firmaments) were created . . .
Long were the days, forth came . . .
Anu their son, [Bel and Ea].'

The cosmogony of the Epic is reproduced by Damascius, a contemporary of Justinian (*de Prim. Princip.* 125 [p. 384, ed. Kopp, 1826]).

'The Babylonians,' he says, 'like the rest of the barbarians, pass over in silence the one principle of the universe and constitute two, Tavrthê (Tiamât) and Apasôn (Apšu), making Apasôn the husband of Tavrthê, and denominating her "the mother of the gods." And from these proceeds an only-begotten son Mômymis, which, I conceive, is no other than the intelligible world (*νοῦτος κόσμος*) proceeding from the two principles. From

them also another progeny is derived, Lakhê and Lakhos (corrupted in the MSS into Dakhê, Dakhos); and again a third, Kissarê and Assôros; from which last three others proceed, Anos and Illillos (corrupted into Illinos) and Aos. And of Aos and Davkê (Damkina) is born a son called Bêlos (Bel-Merodach), who, they say, is the fabricator of the world.'

Here Mummu, 'the flood' or chaos, who is identified with Tiamât in the cuneiform text, becomes the son of Tiamât and Apšu, and is accordingly explained by Damascius as the ideal world—that is to say, the world as it exists in the mind before it is realized externally. Such an explanation, however, is excluded by the Epic, where Mummu would rather correspond with the 'darkness' which in Gn 1² is said to have been 'upon the face of the deep.'

According to the Babylonian legend, the appearance of the gods of light and order was followed by the revolt of Tiamât (or, as it would seem, according to another version, of Apšu). But the powers of darkness and chaos were overthrown by Bel-Merodach, who cut Tiamât in two, and stretched the sky across one of the two halves, thus preventing the waters which were in her veins from breaking forth again, while the other half was similarly confined under the earth and sea, the springs of which it feeds. The conquest of Tiamât was followed by the creation of man, who was brought into existence in order to build temples and altars and offer sacrifices and prayers to the gods. The world, however, had to be prepared for the reception of man by fixing the movements of the celestial luminaries, and so regulating the sacred calendar, and then by creating plants and animals which could be offered or used in the service of the temple. The heavenly bodies had existed before the war with Tiamât, since the deities with whom they were identified had been the offspring of the trinity or triad of Anu, En-il, and Ea. Indeed, Bel-Merodach himself was originally a Sun-god.

In the Epic, allusion is made to another system of cosmology, which ascribed the universe to the creative word. Merodach is described as destroying and creating by his word alone, and so proving his fitness to destroy the forces of anarchy and create a world that should be governed by law.

Another system of cosmology was that which emanated from Nippur (now Niffer) in northern Babylonia. In this Tiamât, the dragon of the subterranean waters of chaos, was the elementary principle, the earth having risen out of it in the form of a mountain. The brood of chaos, composite creatures who belonged to a first and imperfect creation, continued to exist in the dark underground, which was also the dwelling-place of the ghosts and demons of night. How the world-mountain was believed to have been formed we do not yet know. At the Syrian Hierapolis (Membij) the waters of the deluge of the Babylonian Sisylthes were believed to have drained off into a cavern beneath the temple, which was accordingly kept securely closed, and Simi, the daughter of the supreme god Hadad, was said to have put an end to the attacks of a demon by filling the pit in which the monster lived, with the water of the sea (Cureton and Renan, in Pitra, *Spicilegium Solesmense*, ii. p. xlv).

COSMOGONY AND COSMOLOGY (Buddhist).—I. Preliminary notes.—

(1) In the earliest times, speculations on the universe were apparently regarded as wrong. We may recall the attitude of the Buddha towards (heretical) doctrines of the infinity or non-infinity of the world (see AGNOSTICISM [Buddhist], vol. i. p. 221), and his efforts to give a moral or psychological meaning to

the researches of natural science: when a monk wants to know where the material elements (earth, water, etc.) stop in their extent, the Buddha explains, by way of answer, how people are delivered from desire and from existence. Obviously that is where the problem lies; the exterior world, in fact, exists only as long as one is conscious of it (*Digha*, i. 215).¹

It is probable that a large number of Buddhists, imbued with the 'moralism' of their master, avoided frivolous curiosities, — 'non-Buddhist', 'mundane' disciplines (*lokayāta*),² — and were content with denying, on the one hand, a supreme personal creating power (a lord, *Īśvara*), against the theists, the Brahmins; and, on the other, the innate independent power of things (*svabhāva*), against the *svabhāva*adins, the materialists. The formula, 'The diversity of the world comes from the act,'³ contains for a well-informed Buddhist the Alpha and Omega of the necessary cosmological information.

But, long before the time when the Mahāyānist books demanded that the learned Buddhist, the preaching Bodhisattva, must have a knowledge of lay sciences,⁴ a Buddhist cosmology was formed, constituting a very well developed collection of various opinions and systematizations; and, in fact, accurate information on cosmological questions seems to have been as ancient as the statements defending or ridiculing the speculations of this kind which we recalled above.

The aim of the present article is to give an outline of Buddhist cosmology, without entering into details (except on a few points which have not yet been published, or are obscure), and without spending time over variants. It should prove interesting, and profitable for the history of the sects, to study the history of the various theories, to distinguish the most ancient elements and aspects of them, and to note the succession of borrowings, inventions, and arrangements. Such a study, however, is possible for only a limited number of the theories; we shall endeavour to pursue it wherever we can with prudence.

(2) *Meaning of the word.* — 'Cosmology' seems to be the most accurate translation of *lokaprajñapti*, 'world-teaching,' a term denoting that part of the Sarvāstivādin *Abhidharma* ('summaries and systematization of matters of doctrine' [see *ABHIDHAMMA*, vol. i. p. 19]) which deals with cosmological problems — the origin, arrangement, and destruction of the universe.⁵

But the *lokaprajñapti* deals also with questions that we do not include as cosmological: the Buddhists, in fact (at least the Sarvāstivādins), distinguish two 'worlds' (*loka*) — the *bhājanaloka*, 'receptacle-world,'⁶ the universe as the abode of beings (*sattva*), and the *sattvaloka*, 'world of beings,' i.e. the mass of living beings. There are, accordingly, two *lokaprajñapti*, the first a 'cosmology,' the second a 'zoology' (*sattva* = *śōva*).⁷

There are, naturally, close connexions between these two 'worlds,' for the first is made for the second, being created and arranged to form a shelter for it. The whole of demonology, anthropology, and theology (i.e. pantheology) is connected with cosmology. Although it is difficult to separate the two, we shall give special prominence to the facts considered by our sources as relating to the 'receptacle-world' (*bhājanaloka*); e.g., the abodes of the gods, the length of their lives, the dimensions

of their bodies, and their 'non-embryogeny' are 'cosmological,' while their psychology and the right they possess or do not possess to the exercise of virtue are 'zoological' (*sattvalaukika*). The beings, likewise, in one and the same class, inhabiting the same part of the 'receptacle-world,' may differ in their method of generation; men, serpent-dragons, and *garuḍas* (mythic birds) are not always born from the womb or the egg; the *chakravartin* kings (see art. *CHAKRAVARTIN*, vol. iii. p. 386 f.) resemble gods far more than men, etc. — none of this is cosmological.

Nevertheless, in order to understand the cosmological system, we must know the main lines of the distribution of beings (*sattvaloka*). There are (1) 'immaterial' beings, who form the 'immaterial' category (*dhātu*), the *arūpya*; they are nowhere; they have no place in the 'receptacle-world' (but see below, § 8); (2) beings called 'material' (*rūpin*),¹ but of a subtle material; they inhabit the higher part of the 'receptacle-world,' i.e. the *rūpadhātu*, or 'material category or region,' according as we regard the beings or their habitation (see § 7); and (3) material beings, of grosser substance the lower they are in the scale, living in a world of gross material, concupiscent (*kāmāvacara*, *kāmaḥvuj*, *kāmaprabhāvita*), and subject to sensual and especially sexual desire (men alone are capable of continence, *saṃvara*, in this respect); these beings occupy the lower part of the 'receptacle-world,' the *kāmadhātu*, or 'concupiscent category or region.'²

On the other hand, beings are divided into five categories, two good and three bad, called *gati*, 'destinies,' 'kinds of existence,' themselves further subdivided into numerous sub-*gatis*: (1) the gods (*devas*) of three classes, according as they constitute the first *dhātu* (four kinds), or inhabit the second *dhātu* (sixteen kinds and sixteen 'places,' *āvāsa*), or inhabit the third *dhātu*, the *kāmadhātu* (six kinds and six 'places') (see below, § 6); (2) men, who are allotted four places, the four continents (see below, § 4); (3) ghosts (*pretas*), one place [see below, § 5 (iii.)]; (4) animals, one place [see below, § 5 (ii.)]; and (5) the damned, eight places; eight hells [see below, § 5 (i.)]. According to this division, there would be twenty places in the *kāmadhātu*. Indeed, it is not at all a satisfactory division,³ for there are numerous categories of beings who have no place in it, notably the *asuras*.

Many treatises, some of them of ancient date, regard the *asuras* as a sixth *gati*, placing them between men and ghosts (see *JPTS*, 1889, p. 105 [this is the opinion of the *Andhakas* and several *Uttarāpathakas*]; Burnouf, *Lotus*, 1852, p. 309 [*SBE* xxi. 7]; *Piṭapūtrasaṃgama*, ad *Bodhiccharyāvatāra*, ix. 73; *JPTS*, 1884, p. 158, etc.). But the authorities on *Abhidharma* (*Kathāvatthu*, viii. 1; the Sarvāstivādin *Saṃgītiparyāya* [in *JPTS*, 1905, p. 102]; Chandakīrti's *Pañcaskandhaprakaraṇa*)⁴ hold that the *asuras* are not a *gati*. Some of them have the same colour, pleasures, and length of life as the gods or the ghosts, and intermarry with them.⁵ Nevertheless, the *asuras* have a well-defined place or places (see below, § 5 (iv.)).

As regards the numerous demi-gods, good and bad genii, vampires (*vīkṣas*), dragons (*nāgas*), divine birds (*garuḍas*), and celestial musicians (*gandharvas*, cf. *Mahāvūyupatti*, § 166), some of them have a definite place in hell (demons of torture), at the foot of Meru, or near the deities whose followers or commensals they are (see below, § 5 ad fin.); others have the position rather of magician-ghosts. Popular mythology had shrewd theories concerning them, but they do not appear to have much importance in 'cosmology' (*lokaprajñapti*).

(3) *Sources.* — The most systematic work on Buddhist cosmology is undoubtedly the second *Rūpa* is usually translated 'form,' *arūpa*, 'formless,' and *arūpya*, 'formlessness.' But, although 'matter' is far from being to us what *rūpa* is to the Buddhists, the present writer prefers the translation 'matter' (see C. A. F. Rhys Davids, *Buddhist Psychology*, London, 1900, p. xliii; *JPTS*, 1884, p. 27 f.; *Mahāvūyupatti*, § 101, etc.).

² Generally translated 'desire-sphere,' but 'desire' is inaccurate. There is desire, attachment (*rāga*), in the 'region of matter,' but only 'attachment to life' (*bhavarāga*); in the 'region of concupiscent' there is also 'attachment to sensual pleasures' (*kāmāraṇa*), 'concupiscent.'

³ Cf. al-Bīrūnī on 'the different classes of created beings and their names,' *India*, tr. Sachau (1910), ch. viii.

⁴ Buddhaghosa refers to *Majjhima*, i. 73; see *Digha*, xxxiii.; *Avadānaśataka*, xii.; *Madhyamakavartti*, p. 269, 9 and note.

⁵ Tanjur, *Mdo*, xxiv.

⁶ See *Kathāvatthu*, loc. cit.; cf. *JPTS*, 1884, p. 158.

¹ Rhys Davids, *Dialogues of the Buddha*, London, 1899, i. 280; cf. the 'foolish questions' in *Milinda*, p. 295 (*SBE* xxxvi. 153).

² Rhys Davids, *op. cit.* i. 166, and Bendall's review in *Athenaeum*, June 30th, 1900; also *Sikṣasamuccaya*, p. 192, 7. ³ *Karmajñāna lokavācchitryam* (*Abhidharmakośa*, iv. st. 1). On *Karma* as the cause of the universe, see art. *KARMA*.

⁴ e.g. *Bodhisattvabhūmi*, ch. viii.

⁵ This last part, the destruction of the universe, has been treated in the art. *ACTS OF THE WORLD* (Buddhist), vol. i. p. 189. The *Abhidharma* of the Pāli language does not seem to include any *lokaprajñapti*.

⁶ This expression does not appear to exist in Pāli, where we find *sākkhāraloka*, 'material world' (including trees, etc.) (see Childers, *Dict. of the Pāli Language*, London, 1875, p. 453), and *okāsaloka* (= *avakāsaloka*), 'room-world,' Spence Hardy (see Childers, p. 299) translates 'the world of space,' the far-extended vacuum (see *Vissuddhimagga*, vii. [*JPTS*, 1891-2, p. 99]).

⁷ The *pudgala paññatti*, which constitutes one of the sections of the Pāli *Abhidharma* (*JPTS*, 1883), is the enumeration and definition of the various categories of 'individuals,' 'noble individuals' (*āryapudgala*), etc., from the moral standpoint, particularly from the point of view of their progress in the 'way' of *nirvāṇa* (*JPTS*, 1905, p. 133).

treatise of the *Abhidharma* (*Abhidharmaśāstra*) of the Sarvāstivādin school, entitled *Prajñāpīṣāstra*, the first section of which is the *Lokaprajñāpi* (Tanjur, *Mdo*, lxii, 1; see Takakusu, *JPTS*, 1905, pp. 77, 117, 142).¹ On this section is based the *Abhidharmakośa* of Vasubandhu² (ch. iii. st. I-44 *sattvatoka*, 45-102 *bhājanatoka*), known particularly for the commentary of Yaśomitra, *Abhidharmakośavyākhyā*.³

A Tibetan work of the end of the 18th cent., *Dpag-bsam-lyon-bzavi* (= *Kalpadrūma*), ed. by Sarat Chandra, Calcutta, 1908, refers to the same *Abhidharmakośa*, which is quoted by Georgi, *Alphabetum Tibetanum* (Rome, 1762), p. 470, and used, along with other Sarvāstivādin sources and the Chinese literature of the two vehicles, by S. Beal, *Catena of Buddhist Scriptures* (London, 1871), p. 15 f., the most complete work that we have on the subject as yet.

The ancient sources (Pāli and Skt. 'Little Vehicle'), which are the most interesting of all, are somewhat scanty and scattered; they will be mentioned *ad locum*.

The Pāli commentaries have had little attention from this point of view. Probably most of the information they contain has passed into the works of Spence Hardy, *Manual of Buddhism* (London, 1860), and *Legends and Theories of the Buddhists* (London, 1866).⁴

2. Foundation of the universe: the 'great elements.'—(a) An important cosmogonical feature can be traced in the earliest Buddhist texts, and is evidently pre-Buddhistic. When Ānanda inquires as to the causes of earthquakes, Buddha answers as follows: 'This great earth, Ānanda, is established on water, the water on wind, and the wind rests upon space. And at such a time, Ānanda, as the mighty winds blow, the waters are shaken by the mighty winds as they blow, and by the moving water the earth is shaken.'⁵ Another *sūtra* relates the questions of the Brāhman Kāśyapa: 'On what rests the earth?'—'On the circle of water.' 'And the circle of water?'—'On the wind.' 'And the wind?'—'On the ether.' 'And the ether?'—'You go too far, O Brāhman. The ether does not rest on anything; it has no support.'⁶ (see below, § 9).

¹ By the kindness of Dr. Cordier, the present writer has been enabled to use extracts from this work, for the *dīpas* in particular (see below, § 4). Prof. Takakusu seems to be mistaken when he says the section does not exist in Chinese (see p. 118 of his art.).

² On this work see the article in vol. i. p. 20; Burnouf, *Introduction à l'hist. du bouddhisme indien*, Paris, 1844, pp. 563-574 ff.; and the article of Takakusu. The present writer is indebted to Mr. F. W. Thomas for a copy of ch. iii. (Tibetan tr.).

³ This source will be quoted as A.K.V., and the folio in the MS of the 'Société asiatique' will be given; sometimes reference will be made to the MS of Burnouf (Burn.) in the 'Bibliothèque nationale.'

⁴ The European works most frequently referred to in this art. are: Warren, *Buddhism in Translations* (Cambridge, Mass., 1896); Burnouf, *Lotus de la bonne loi* (Paris, 1852), and *Introduction à l'hist. du bouddhisme indien* (Paris, 1844); Rémusat, *Mélanges posthumes* (Paris, 1843); Georgi, *Alphabetum Tibetanum* (Rome, 1762); Köppen, *Religion des Buddha* (Berlin, 1857-59); Waddell, *Buddhism of Tibet* (London, 1895); C. A. F. Rhys Davids, *Buddhist Psychology* (London, 1900). See also literature at art. AGES OF THE WORLD (Buddhist).

⁵ See *Dīgha*, ii. 107 (*SBE* xi. 45), and cf. *Divyāvadāna*, p. 204; also *Aṅguttara*, iv. 312; *Milinda*, p. 68 (*SBE* xxxv. 106); Beal, *Catena*, p. 471. The authorities of Rémusat, *Mélanges posthumes*, p. 79 f., sometimes add a circle of fire between water and wind, and a circle of diamond (where the relics of the Buddhas are enclosed) between wind and ether.

⁶ Quoted in A.K.V., and translated by Burnouf, *Introd.* p. 448 (see *SBE* xxxv. 106); cf. *Madhyamakavṛtti*, p. 166, n. 5; Sañkara, *ad Brahmasūtras*, n. ii. 4; Rāmānuja, *ad* n. iii. 1. For the Vedic origins of this notion, spoken of by Burnouf, cf. *Brhadāraṇyaka*, iii. 6; *Āitareya-brāhmaṇa*, xi. 6. 4. 'The sky rests on the air, the air on the earth, the earth on the waters, the waters on the reality (truth, *satya*), the reality on the brahman, the brahman on the tapas (creative fervour)'; *Chāṇḍogya*, i. 9. 1: 'It is the space whence all these creatures proceed and into which they again descend' (see Oltmanns, *Théosophie brahmanique*, Paris, 1906, i. 292; Deussen-Geden, *Phil. of the Upanishads*, Edin. 1906, p. 214 ff.).

(b) The Buddhists admit four 'great elements' (*mahābhūta*).¹ called great because they are the substance of all material things; they are earth, water, fire, and wind, or, as Mrs. Rhys Davids expresses it, earth-element, fluid-element, flame-element, and air-element (for their specific qualities reference may be made to *Dhammasaṅgani*, § 962 [= C. A. F. Rhys Davids, *Bud. Psych.* p. 241], and to *Viśuddhimagga*, xi. [tr. by Warren, *op. cit.* p. 157], where their functions in the human body are especially treated. Cf. also *Majjhima*, i. 195 and iii. 240 [quoted in A.K.V., Burn. 42a], and *Sikkasamuccaya*, p. 244, a re-cast of *Majjhima*, iii. 240). The 'great elements' constitute the *bhūtarūpa*, 'element-matter', whence is derived 'elementary matter', 'dependent matter' (*bhautikāṇ rūpam, upādāna rūpam*), e.g. the sense-organs, in so far as they are distinct from 'the eye of flesh', etc. This kind of matter is subtle and refined, in contradistinction to the elements that are solid and gross (*sūkṣma, prapita; audārika, hina*).

The common Indian belief that there is a fifth great element, viz. ether (or space, *ākāśa*),² is accepted by the Vaiśhāṣikas, who quote the *sūtra* mentioned above (2 a); and it would not be difficult to find documentary or logical arguments in their favour. (*Ākāśa* is reckoned a *dhātu* (a term that often denotes 'element': *prthivīdhātu*, 'earthy-element', etc.), and the *Abhidharma* ranks it in the category of *rūpa* (matter).) But for the Sautrāntikas and Mādhyamikas *ākāśa* is simply 'space' (not 'ether'), 'void' (*vyoman*=sky), not a thing (*artha*), but simply the absence of anything tangible, that which gives place to things, whence its name (*anākāśaḥ dadātīti ākāśam*).³ This is only a name, as the past, *nirvāṇa*, and the person (*pudgala*) are only names (says a *sūtra*). But the Buddhists do not deny a 'far extended vacuum', eternal, infinite, not made (*asaṃskṛta*), the great nonentity to which, according to the materialists (*Dīgha*, i. 35; *Samyutta*, iii. 207), the senses and intelligence return at death.

3. The small universe: general notions.—

We shall see below (§ 9) that the Buddhists imagined great 'cosmoi', or 'chilocosmoi', but we shall first consider the 'small universe', the creative unit of these great combinations, which extend to the farthest limits of space.

The starting-point of the 'small cosmology' is the old Indian and Brāhmanic geographical notion: in the centre of the world is a great mountain (Meru, Sumeru = Himalaya), where the gods dwell, and round which the sun moves. To the south lies India (*Jambudvīpa*); to the other sides, the other continents. The following is the Buddhist description, in its most systematic form (*Abhidharmakośa* and commentary). When the time has come for a new creation, after chaos, when everything is burnt up or 'volatilized' (see art. AGES OF THE WORLD [Buddhist]), the heaven of Brahma appears first of all (and the gods who had been re-born in higher heavens come to be re-born here); then the heavens of the gods *Paranirmitavāsavartins*, *Nirmānaratis*, *Tuṣitas*, and *Yāmas* (see § 6); next, much lower, come (1) the wind-circle (*vāyumanḍala*), infinite in surface, resting on space, and 1,600,000 *yojanas* (or leagues) in thickness.⁴ On this wind-circle, the cloud of the creation pours a sea of 1,120,000 leagues of golden water in a circle of 1,203,450 leagues' diameter. This sea, set in motion by the wind, gives (2) the water-circle (*āpmanḍala*), of 800,000 leagues' thickness, and (3) the golden earth (*koñchanamayi bhūmi*), which rises to the top like cream on milk, 320,000 leagues in thickness. The cloud then pours on this golden earth gold, precious stones,

¹ C. A. F. Rhys Davids (*op. cit.* pp. 166, 197, 205) translates *mahābhūta* 'the things that have become, die, grow, Genowden, *ra yavajjāna*, a far more scientific term than elements or *bhūta*,' but possibly the expression *mahābhūta* is pre-Buddhist, and is used in a sense that is not specifically Buddhist. What is not matter (*rūpa*)—thought, etc.—although 'becoming' par excellence, is not *bhūta*.

² There is a good summary on *ākāśa*, 'space' or 'ether', in Vasudev Anant Sukhtankar, *Vedānta according to Rāmānuja* (Vienna, 1906), p. 52. See also Burnouf, *Lotus*, p. 515; *Sloka-vārtika*, pp. 380, 770 (Chowkhambā Skr. Ser.), tr. pp. 196, 435 (*Bibl. Indica*, 1907); Sarat Chandra, *Tib. Dict.* (Calcutta, 1902), p. 425; *Sikkasamuccaya*, pp. 249, 323; *Madhyamakavṛtti*, pp. 129, 271, 389, 413, 505, 528; *Aṅguttara*, i. 176; *Majjhima*, iii. 241; *Kathāvatthu*, vi. 6. 7; and C. A. F. Rhys Davids, *op. cit.* p. 198 (cf. *Viśuddhimagga*, *JPTS*, 1891, p. 124, and *JPTS*, 1884, pp. 27, 29).

³ *Ākāśa* is great, since it gives place to the production (*bhava*?) of all rūpa, but it is not a *bhūta* (Chandrakīrti, *Pañcaskandhaprakaraṇa*, p. 275a).

⁴ Certain sources give the names of the whirlwinds of this wind-circle: see Beal, *Catena*, p. 191; cf. below, p. 137. According to *Abhidharmakośa*, iii. 87, the *yojana*=8 *krośa* (= the length the voice can carry)=4000 'arcs' (*daya*?)=16,000 hands (*hasta*, i.e. 'cubits')=16,000×24 fingers (*angul*).

earth, water, iron, etc., which form (a) in the centre of the system, Mount Meru; (b) eight mountains, or concentric chains of mountains, seven of which (of gold) are quite near Meru and near each other, while the eighth (of iron) is almost at the very edge of the system; (c) oceans flowing between the concentric mountain-chains; and (d) islands, notably four great islands or continents situated in the largest of the oceans—the 'exterior' ocean, between the 7th and 8th mountains.¹

The outside mountain is called Chakravāla, and this name is also applied to the entire 'small universe', *lokadhātu*, or *chāturdvīpakalokadhātu*, 'four-continents-universe.'

Chakravāla (*oṣṭā, oṣṭā, the Sakala of Sp. Hardy*) = 'circle', 'bracelet', 'horizon' (see E. Senart, *Essai sur la légende du Buddha*, Paris, 1882, p. 6 ff.). In the northern sources there are a *chakravāla*-mountain and a great-*chakravāla*-mountain, called 'black mountains' or 'time-mountains' (*kālaparvata*; see Mahesvara, ad *Amarakosa*, 2, 2, 2; *Dharmasāṅgraha*, § 124; *Lalitavistara* [Halle, 1902], p. 132; *Lotus*, in *SBE* xxi. 232; *Sikāsāsamuchchaya*, p. 246). Perhaps the 'great *chakravāla*' envelops a group of small universes (see below, § 9). Between three universes, which form three tangent circles, there is a dark region, 'intramundane darkness' (*lokāntarika*), a special hell—a cosmic abyss, which recalls the *anārambhanam tamas*, 'unsupported darkness,' of *Rigveda*, i. 182. 6, vii. 104. 3 (see *Dīgha*, com. on ii. 12; Sp. Hardy, *Legends*, p. 110; Burnouf, *Lotus*, p. 332; and Beal, *Catena*, p. 64).

The iron-mountain-range, Chakravāla, like the continents, rests on the golden earth. It is 312½ leagues high and 312½ broad, and 312½ leagues above the level of the exterior ocean which it surrounds. This ocean is 322,000 leagues in extent,² and is bounded on the inner side by the *Nemindhara* range ('felly-bearing'), 625 leagues in height and breadth, and 312½ leagues in projection (above the ocean's level). Then there is an ocean of 1250 leagues;³ then *Vinataka*, 'inclined,' 1250 in height and breadth, 625 in projection; an ocean of 2500 leagues; *Āśvakarṇa*, 'horse-ear,' 2500; an ocean of 5000; *Sudarśana*, 'beautiful,' 5000; an ocean of 10,000; *Khadiraka*, 'acacia (?)', 10,000; an ocean, 20,000; *Isādhara*, 'plough-pole-bearing,' 20,000; an ocean, 40,000; *Yugandhara*, 'yoke-bearing,' 40,000; an ocean, 80,000; Mount Meru, 160,000 leagues high, 80,000 leagues above the level of the ocean, 80,000 leagues broad, and 320,000 leagues in perimeter. The distance, therefore, from the axis of Meru to the Chakravāla-mountain is 600,437.5 leagues; the diameter of the whole is 1,200,875 (*Abhidharmakośa*).

As regards the order of the mountains, we have followed A. K. V., *Dīvyāvadāna* (p. 217), Beal, Eitel (*Handbook of Chinese Buddhism*, London, 1888); there are curious variations in *Mahāvastu*, p. 246; *Dharmasāṅgraha*, § 125; *Mahāvastu*, ii. 300; *Sikāsā*, p. 246; *Visuddhimagga*, and *Nemijātaka* (*Jātaka*, vi. 125). Cf. a curious discussion in Burnouf, *Lotus*, p. 844, on the commentators on some of these divergencies; cf. also Sp. Hardy, *Legends*, p. 82. The names of the mountains are sometimes doubtful, e.g. *Isādhara*, *Isādhara*, *Isādhara*, *Isādhara*, *Isādhara*. The dimensions of the mountains and oceans also differ. The Pāli documents have, as the starting-point of their calculations, a Meru of 168,000 leagues high, with base 84 × 84, and 80,000 above sea-level (ancient source, *Anguttara*, iv. 100); from this, if we adopt a scheme that appears as classical in all sources, we get 42,000 for the first ocean, and the same for the first circular chain of mountains, then 21,000. . . This would give a greater total diameter than that which we get according to the *Abhidharmakośa*. Now, the Pāli *Jñānānkāra* has for the diameter of Chakravāla 1,119,440 (Sp. Hardy, *Legends*, p. 85, seems inaccurate), and the *Visuddhimagga* has 1,203,450, i.e. the number attributed by the *Kōsa* to the water-circle, which, according to A. K. V., exceeds Chakravāla by 2575.

The seven concentric mountain-ranges have the generic name of *Kulachala*, 'principal, noble mountains.' They are composed of gold, being excrescences of the golden earth. They are 'like walls,' their height and thickness being equal. One may ask,

however, whether they are perpendicular, or, like our mountains, inclined. The answer is that they are really a little broader at the base (A. K. V.). It is not clear whether they are circular or form squares. They are often represented square; I-tsing believes the earth to be square, like Buddhist convents. It is quite certain that, in the Sanskrit *Abhidharmakośa*, Meru is a parallelepiped.⁴

4. *Dvīpas*, 'islands' or 'continents,' (abodes of mankind).⁵ In the 'exterior' ocean, facing the eastern, southern, etc., sides of Mount Meru, and lit up in succession at distances of 6 hours after each other by the sun turning round Meru, are four islands (*dvīpa, dvīpa*). They are formed of excellent earth, and rest on the golden earth, or circle of gold (*kāñchanachakra*), with a depth of 80,000 leagues of water (cf. *Dīvyāvadāna*, p. 197, 7). These islands are supposed to be on a level with the ocean, and it appears that, in this general definition, the small variations that constitute our earthly mountains are not taken into consideration.⁶

(1) In the east is the *Pūrvavideha*, 'Eastern Videha,'⁷ in the form of a half or crescent moon, to which are attributed, nevertheless, four sides: three 2000 leagues (*yojana*) long, the fourth 350 leagues (perimeter, 6350 leagues). The men in this continent dwell in towns and villages, and live for 250 years; they are 8 cubits (*hasta*) in height, and their faces, like the continent itself, are half-moon-shaped.⁸

(2) In the south is *Jambudvīpa*,⁹ 'Rose-apple-tree's continent,'¹⁰ our continent, the continent where the Buddhas are born. It is a chariot in form, with four sides: three 2000 leagues long, the fourth 3.5 leagues (perimeter, 6003.5). The men there live 100 years at most;¹¹ their height is from 3.50 to 4 cubits; they resemble the continent in shape. (3) In the west is the *Aparagodāna* (or '*godāniya* or '*goyāna*'), 'Western pasturage.'¹² It

¹ The present writer does not know the source of Sp. Hardy's curious description (*Manual of Buddhism*, p. 10): Meru is round; at the summit and at the base it is 10,000 leagues in diameter, halfway up (at the sea-level) 50,000, and halfway up the projecting part 30,000 leagues. On Brāhminical authorities concerning Meru, see Böhtlingk-Roth, s.v. 'Meru'; Fausbøll, *Indian Mythology*, 1903; E. W. Hopkins, *JACS*, 1910, p. 366; Al-Bīrūnī, *India*, i. 242, 327.

² The Pāli canonical sources seem very scanty; thus the enumeration of the *dvīpas* is missing in the chapter of the 'Four' in the *Anguttara*, while the *Saṃyutta* speaks of four *dvīpas*, the possession of which is not so precious as that of the four virtues. See Spence Hardy, *Manual*, pp. 4, 14, *Legends*, p. 85; Warren, p. 40, 64; *Mahāvastu*, p. 164; *Dharmasāṅgraha*, § 120; *Dīvyāvadāna*, p. 214 ff.; *Lalitavistara*, p. 149; Georgi, *Tibet*, p. 473; Köppen, *Buddhism*, i. 233; Waddell, *Lamaism*, p. 397; Rémusat, *Le Fou-ki*, Paris, 1836, p. 81, *Mélanges* posth. p. 71; Beal, *Catena*, p. 21, 35. The Brāhmins have various nomenclatures for the continents, and notably one of four: *Bhadraśva* ('good horses'), *Jambu*, *Ketumāla*, *Uttarakuru* (see E. W. Hopkins, *JACS*, 1910, p. 368, and art. COSMOGONY AND COSMOLOGY [Indian]).

³ Sarad Chandra (*Tibetan Dict.* p. 1173 ff.) gives the names of the mountains of the several continents—six, four, five, and two respectively—with the names of the wild beasts inhabiting them.

⁴ *Videha* = the modern Tirhut; Tibetan *lus-hphags*, 'noble body' (play on the Skt. word *deha*, 'body'), 'because the human height there is double what it is in our continent,' i.e. in the *Jambudvīpa*.

⁵ *Bhūmivāsāt*, 'because of the influence of the place, as well as the inhabitants of the Himalāya or the Vindhya mountains, have particular characteristics' (A. K. V. 256a; cf. Sp. Hardy, *Legends*, p. 85). Notice the good foundation for this ethnographical observation. The inhabitants of these parts of India are really of Tibetan race or 'autochthonous.'

⁶ Also *Jambusand(h)a*, 'thicket of jambu-trees' (*Anguttara*, iv. 90; *Suttantapitaka*, 552; A. K. V. 252a).

⁷ On this name, see art. COSMOGONY AND COSMOLOGY (Indian), *Anguttara*, i. 104 (1888). According to Sarad Chandra (*Tib. Dict.* p. 1048), this continent is also named 'from the jam-jam sound made by the falling from heaven of the leaves of the wishing-tree into the river Ganges.' We are not concerned with the Buddhist geography of this continent (Sp. Hardy, *Manual*, p. 15, etc.).

⁸ The *Vidhāga* (PTS, 1004, p. 422) knows only one length of human life which is the same as that of *Jambū*: *assavātam alipam va bhivyo dā*. Life differs in one and the same continent according to the period of the age of the world (see AGES OF THE WORLD [Buddhist], vol. i. p. 189).

⁹ This is, at least, the meaning of the Tibetan *Nub ba-las-spyod*, but *godā* is a geographical name.

¹ See an excellent map of the Chakravāla (100,000 leagues to an inch) in Gogerly, *Ceylon Buddhism*, Colombo, 1908.

² There are numerous legends on this 'great ocean'; see Sp. Hardy, *Legends*, p. 121. On the *Mahāsāmudra* we may refer to *Saṃyutta*, v. 441.

³ The generic name of the seven 'interior' oceans is *śānta* (?), Tibetan *rol-mtsho*, 'lakes with gentle waves.' For their particular names, see *Dharmasāṅgraha*, § 126; Childers, s.v. 'Sāgaro'; Sp. Hardy, *Legends*, p. 84; Rémusat, *op. cit.* p. 80.

is round, i.e. it has three sides of 2500 leagues (perim. 7500); length of human life, 500 years; height, 16 cubits. (4) In the north, the *Uttarakuru*, 'Northern Kuru-land'² (*Auttarakaurava*), is an oblong, 4×2000 leagues. There are neither villages nor towns; length of life, 2000 years; height, 32 cubits.

The above dimensions are those of the *Lokaprajñapti* and the *Abhidharmakośa* (ii. 53 f.). The *Lalitavistara* has them arranged in this order—9000, 7000, 8000, and 10,000 leagues; Sp. Hardy has 7000, 10,000 (in length and breadth), 7000, and 8000.

In the diagrams which the Buddhist cult (Great Vehicle and Tantrism) uses for the 'offering of the universe',³ the continents are represented: (1) half-moon (*arāhachandra*) and white, (2) triangular (*tryaśra*) and golden, (3) circular and red, and (4) square and dark blue.

According to the 'northern' sources, there are alongside of each continent two small continents (*upadīpas*), of the same shape but half the size, in the following order, starting from N.E.: Deha and Videha, Chāmara (Chowrie?) and Aparachāmara (Western Chowrie), Sātas-island and Uttaramitrānī-island, Kurus-island and Kauravas-island. Their inhabitants are monstrous creatures with three eyes, legs, and ears (*Kalpadruma*). According to *Jātaka*, i. 63 (Warren, p. 64), there is an archipelago of 600 islands round each continent.

The *Mahāvūṭpatti* names the last four 'little continents' according to the names of their inhabitants (cf. *uttarāḥ kuravāḥ* [*Mahābhārata*, vi. 208])—*Sāta*, an inhabitant of Sāta, an ancient geographical name, although the readings *Sāta* and *Sāthā* have a feminine appearance; Tibetan *gyo-lan*, 'deceitful' (= *sātha*); *Uttaramitrānī* = *lam-mchog-hgro*, 'best-way-going'. For *kurus* and *kauravas* (*sgra-mi-shān* and *sgra-mi-shān-zla*, according to Desgodins), see Waddell, p. 399.

5. Unhappy existences (*apāya*).—(i.) THE DAMNED.⁴—(a) *Hot hells*.—Twenty thousand leagues under *Jambūdvīpa* (the southern part, or part under *Bodh Gaya*) is the *Avīchi* hell ('no release' [?]), forming a cube of 20,000 leagues. Above it are seven other hot hells, called (in descending order): (1) *Saijīva*, 'reviving,' because winds re-animate the dying damned; (2) *Kālasūtra*, 'black string,' which cuts the damned into pieces (cf. *JPTS*, 1884, p. 76); (3) *Saṅghāta*, 'dashing together,' between mountains, etc.; (4) *Raurava*, 'weeping'; (5) *Mahāraurava*, 'great weeping'; (6) *Tāpana*, 'heating'; and (7) *Pratāpana*, 'greatly heating' (*A.K.V.* ad iii. 58).

Some authorities (cf. *A.K.V.* and Beal, *Catena*, p. 67) think that the hells are pyramidal in shape, each of them being smaller towards the upper part, 'like a heap of grain.' We are told also that each hell is 4000 leagues deep. According to the *Kalpadruma*, there is, first of all, a layer of 600 leagues of white clay, then 500 leagues of black clay, then the *Saijīva* and the other six hells occupying 10,000 leagues, the last of them, *Pratāpana*, reaching 19,000 leagues underneath the surface of the *Jambūdvīpa*; then the *Avīchi* is 20,000 leagues.⁵

No name seems to exist in the earliest Pāli texts for the burning 'great hell' of *Majjhima*, i. 337, ii. 167, 183 (cf. *Anguttara*, i. 138), which is also the hell in which schismatics suffer for an 'age of the world' (*kalpa*) (see *Chullavagga*, vi. 5, 4; *Anguttara*, v. 76, etc.). This hell is clearly the *Avīchi* of the later literature.⁶ See, e.g., the description in *Majjhima* of the ma-

hāniraya, which has three names: (1) *chaphassāyatānika* (cf. *Saṅkhyā*, iv. 126), 'six organs (suffering)'; (2) *sankhisa-nāhata*, 'reunion of javelins,' because every thousand years (or every hundred years) two javelins pierce the heart of the damned, and meet inside it; and (3) *pachchātānandaniya*, 'to be known only by personal experience.' After innumerable centuries the guilty one passes into the *utsāda*, a zone which surrounds the great hell, and where there is access through four gates to the four cardinal points, and there suffers the pain called *vūṭṭhānima*.

On each of the four sides of each hell there are four *utsādas* (*ussada*; *osupat* in Sp. Hardy, *Manual*, p. 27), excrescences (cf. *narakakumbha*, 'hell-jar,' 'hell-prominence'), ante-chambers, or rather 'post-chambers,' of hell, in which the damned in succession are tortured on leaving hell (in which they are sometimes finally rejected). They are: (1) *kukkūla* (*kukkūla*), 'fiery pit,' 'chaff-fire'; (2) *kuṇapa*, 'corpse-quagmire' (cf. *gūṭhaniraya*); (3) *ksuramārga*, 'razor-road,' etc. (etc. = *asipattravana*, 'sword-leaved forest,' and *sālmālvana*, 'seemul-forest' with cruel birds); (4) the *nadi*, 'river,' by its name *Vaitarani*, the Indian Styx, which is conjectured to be as early as the *Brāhmanas* (cf. *Khārodakā nadi* [*Majjhima*], *A.K.V.* iii. 59).¹

Hell contains sixteen *utsādas* (*brgyad-po kun-la thag bu-drug*, 'to each of the eight, sixteen *utsādas*' [*A.K.V.*]). A primitive idea, which is more satisfactory, is to regard the four *utsādas* as so many zones surrounding the igneous cage in the centre.

The damned of the *Saijīva* live there for 600 years of 12 months of 30 days, but each day is equal to the length of the life of gods in the heaven of the Four Kings (see below, § 6), and so on, life in the *Tāpana* being calculated as a function of the life of the *paranirmitāvaśavartin* gods (see *ib.*). In the *Pratāpana* life lasts for half of an *antarakalpa* (see art. *AGES OF THE WORLD* [Buddhist], vol. i. p. 188), in the *Avīchi* one *antarakalpa* (*A.K.V.*). The interpretation of the *Kōsa* is, therefore, similar to *Buddhaghosa's* (*Kāthāvatthu*, xii. 1), which fixes the existence of the damned, called *kalpasha*, 'lasting a *kalpa*,' at $\frac{1}{16}$ of a (great) *kalpa*, while the *Rājagirikas* understand a great *kalpa* here (see the texts concerning schematics quoted above).²

(b) *Cold hells*.—According to the northern sources, eight cold hells are distinguished: (1) *Arbuda*, (2) *Nirarbuda*, (3) *Atāta*, (4) *Hahava*, (5) *Huhuva*, (6) *Utpala*, (7) *Padma*, (8) *Mahāpadma*. (1), (2), (6), (7), and (8) are named from the shape of their inhabitants; in (1) and (2) the damned are like *arbudas*, 'a round mass,' 'bubble,' 'tumour,' 'first-month fetus'; in (6), (7), and (8) they resemble lotuses. The names of (3), (4), and (5) are onomatopoeitic: the teeth of the damned, knocking against each other with the cold, produce the sound *atāta*, etc. (*A.K.V.*).³

These hells, which are 2000 leagues deep, are arranged in stages, like the hot hells, and near them (*Kalpadruma*); or—a view which seems preferable—they are placed in the 'intra-mundane darkness' (*lokāntarika niraya*), among the *Chakravālas* (Beal, *Catena*, p. 64, according to *Abhidharmasāstra*; *Dialogues*, ii. 9). Sp. Hardy (*Manual*, p. 59) places the ghosts (*pretas*) in this darkness.

The ancient Pāli texts, *Saṅgutta*, i. 152, *Anguttara*, v. 172, and *Suttanipāta*, p. 123 (*SBE* v. 119), give the same nomenclature with a few variants and additions (Kern, *Manual of Ind. Buddhism*, Strassburg, 1896, p. 58); but the names, originally at least, did not refer to distinct hells. They denoted the periods, increasing by the multiple 20, during which the damned person lives in hell: 'If there were a load of sesamum seed containing sixty bushels (20 *khāris*), and a man after the lapse of

¹ On the *utsādas*, see Morris, in *JPTS*, 1887, p. 144; *Mahāvūṭpatti*, § 215; Burnout, *Lotus*, p. 568; E. Senart, *Mahāvūṭ*, i. 6, 372 note, iii. 369, with which cf. *Majjhima*, iii. 135 (Neumann, iii. 854, translates *kukkūtaniraya* wrongly as 'dogs' hell'), *JPTS*, 1884, p. 155, 1887, p. 47; Sarat Chandra, *Tib. Diet.*, p. 983; Waddell, p. 96; *Suttanipāta*, v. 670.

² *Buddhaghosa* gives a different interpretation (ad *Kāthāvatthu*, xi. 5).

³ *Arbuda* = Tib. *chu-bur*, 'water-bubble'; *nirarbuda* = *chu-bur-rād-ba-can*, 'dust-bubbles' (but elsewhere *rād-ba-can* [?]); then *so-tham-pa*, 'chattering of teeth,' and *a-chu* . . . *zer-ba*, 'where one says "Akiu"; *ut-pala* = *ti-ba-bur-gas-pa*, 'where one is split [by the cold] like an *utpala*,' i.e. the damned are split into 8, 30, or 60 pieces, according to the number of petals of the lotus after which the hell is called (Georgi, *Alph. Tibet.* p. 266; cf. Beal, *Catena*, p. 63, and Waddell, p. 96).

¹ = 3 in the *Abhidharmakośa*. Sp. Hardy has 3'1285 (*Manual*, p. 10).

² Different from the *Kurus* (Central India) and the Southern *Kurus*. It is Ptolemy's *Ottorokorra* (see art. *BLIST*, *AGODE* of *REK* [Buddhist], vol. ii. p. 637, and [Hindui] *ib.* p. 693 f., and also *Anguttara*, iv. 396, on the moral and spiritual characters of the *Uttarakurus*). The Tibetan translation of this word, like several others, is onomatopoeitic, *sgra-mi-shān*, 'disagreeable sound' (*ku-rava*; *ku-ru*, *ku*, a pejorative, *ru*, 'to make any noise'), 'for during the seven days before death, one hears the disagreeable sound of the death.'

³ See 'Adikarmapradīpa,' in Pousin, *Bouddhisme; Études et Matériaux*, Brussels and London, 1898, p. 224; Waddell, *Lamaism*, p. 398 (with plate); Georgi, *Alph. Tibetanum*, p. 472.

⁴ See art. *HELL* (Buddhist). The chief sources for the Buddhist hells are *A.K.V.* fol. 256; *Kalpadruma*, p. 5; *Mahāvūṭ*, i. 4; *Nāgārjuna's* 'Epistle,' in *JPTS*, 1886; Chandra-gomin's 'Epistle,' in *Zapiski*, iv. 29 ff.; *JPTS*, 1884, p. 164; Beal, *Catena*, p. 67; Waddell, *Lamaism*, p. 32; and on the pains, *Anguttara*, i. 138 (Warren, p. 257); *Dīrghavāda*, p. 375; *Majjhima*, no. 129; *Kāthāvatthu*, xx. 3. A comparison with the Brāhmanical and Hindu sources is instructive and necessary (see especially Feer, 'L'Enfer indien,' in *J.A.*, 1892, ii. [partly translated in the *JETS* of India, 1894, pt. iv. app. ii.]).

⁵ Cf. Sp. Hardy, *Manual*, p. 27. Waddell makes the hells begin 11,900 leagues below the surface.

⁶ *Avīchi*, 'no refuge,' 'no release.' The Chinese sources mention various regions in the *Avīchi*; cf. the *Saddharma-smṛtyu-paśāna* (Nanjio, *Catalogue*, 1883, pp. 679, 804) quoted in *Sikāsamuchchaya*, p. 69 f., the 'terrible-roads' (3000 leagues), 'the infernal precipice,' 'the hole with wheels,' etc.

every hundred years were to take from it one sesamum seed, that load would sooner dwindle away than one Abbuda hell; and even as are twenty Abbuda hells, so is one Nirabbuda hell.' The *Abhidharmakośa* (iii. 84) has the same method of counting for the *arbuda*, etc. *Arbuda*, etc., are what are called 'high numerals' (*Mahāvīyutpatti*, § 246 [101-102], § 250 [9-14]; see AGES OF THE WORLD [Buddhist], vol. i. p. 188').

(c) There are some hells about which we know nothing but the names, e.g. the *Sahasavaka* (*Vimānavatthu*, p. 50), and the traditions of the Great Vehicle are rich in multiple inventions. We may mention the hells that the Tibetans call 'ephemeral' (*hi-tshe-ba*), which are the 'frontier hells' of Beal (*Catena*, p. 65), Skt. *prādeśika* or *pratyekanarakas* (?) (see *Mahāvastu*, i. 458, and Burnouf, *Introduction*, p. 320). They are reserved for small sins or for special categories of sinners (see art. *BODUR-SATTVA*, vol. ii. p. 744b). They are found on the borders of the hells, in the ocean, in the world of men, and in the deserts of *Jambudvīpa*. There are 84,000 of them.

(ii.) ANIMALS.—The animals form the class immediately above the damned. They are divided into many categories (e.g. *Majjhima*, no. 129), and their special abode is the 'exterior ocean'; but, as everybody knows, they are met with in the world of men, and (in spite of what certain heretics say) not in the world of the gods (*Kathāvatthu*, xx. 4).

(iii.) PRETAS, 'THE DEAD' or 'GHOSTS'.—The popular beliefs concerning the dead have not yet been systematized, as may be seen from the *Peta-vatthu* and the literature of every epoch (see art. DEATH, etc. [Buddhist], STATE OF THE DEAD [Buddhist], etc.). Speaking generally, we may say that the *pretas* dwell almost everywhere throughout the world of men, but especially in the kingdom of *Yama*, which is divided into 36 provinces, situated 500 leagues below *Jambudvīpa*. There they live 500 years, a day being equal to a human month.¹

(iv.) ASURAS, 'NON-GODS'.²—Their abode is especially in the caverns of Mount Meru, below the level of the sea, where there are four towns of 11,000 leagues, at depths of 20,000, 40,000, 60,000, and 80,000 leagues, namely, 'Shining,' 'Star-tassel,' 'Deep,' and 'Golden town,' with Rāhu (the spirit of the eclipse), *Kaṇhamālādharā*, *Puṣpamālādharā*, and *Vemachitra* as kings.³ But they often leave their abysses to conquer Meru, and fight with the 'Thirty-three gods' and their vanguard (dragons and *yakṣas*); hence the mistake made by some authors in saying that they dwell on the fourth stage of Meru.

There is an infinite number of *yakṣas* (*yakkha*, 'a being to be worshipped,' 'a powerful spirit' [Kern, *Manual*, p. 59]), terrestrial (*bhauma*, living on the surface of the earth and under the earth), atmospheric, etc.⁴ Three categories occupy a special place in our sources (*Abhidharmakośa*, iii. 56) as inhabitants of Mount Meru.

On Meru there are four terraces (*pariṣaṇḍa*, *ban-rim*) of 16,000, 8000, 4000, and 2000 leagues, separated from each other by 10,000 leagues. The fourth is reserved for the Four Kings, who are classed as gods (*devas*) (see below, § 6); the other three are inhabited by (1) the *yakṣas karotāpānis*, 'bowl in hand,' (2) the *yakṣas mālādharas*, 'bearing

¹ A study of the *pretas* 'with magical power,' and of the king of the *pretas* (*pettirāja*), as well as that of the 'guardians of the hells' (who may bear the name of god [*Kathāvatthu*, xx. 3]), etc., belongs to the doctrine of existing beings rather than to cosmology.

² On the *asuras*, see above, p. 130; and art. DAITYA.

³ According to *Kalpadrūpa*, p. 6; Beal (*Catena*, p. 51) is of a different opinion. See Burnouf, *Introduction*, p. 601 (in error); Köppen, i. 246; Nāgārjuna's 'Epistle,' in *JPTS*, 1886, p. 27; *Mahāvīyutpatti*, § 171; *Divyāvadāna*, pp. 126, 148, 222; *Mahāvastu*, i. 30, ii. 344, iii. 138, 254. The *Mahāvastu* speaks of five armies of *asuras*, but mentions only three kings—*Vemachitrin*, *Rāhu*, and *Mucchlinda*. The *Kathāvatthu* (viii. 1) associates the companions of *Vepacitti* with the gods, and the *kāṭakāṇjakas* with the *pretas*. On the war of the *asuras* with the *asuras*, see *Āṅguttara*, iv. 433; *JPTS*, 1908, p. 145, etc.

⁴ We may mention the twenty-eight generals of the *yakṣas* referred to in *Latīvīstara*, p. 202.

garlands,' and (3) the *yakṣas sadāmadas* (*saddamattas* [*Digha*, ii. 260]), 'always drunk.'¹

6. Heavens of the concupiscence-world (*kāma-dhātu*).—(a) On the fourth terrace of Meru is the retinue of the Four Great Kings (*chāturmahārājakāyikas*, *catummahārājikas*), 80,000 in all (?),² and (higher up, if we are to believe *Digha*, i. 216) the Four Great Kings, rulers of the cardinal points. These are the first beings who regularly receive the name of 'gods,' and are classed as such. The length of their life is 500 years, a day being equal to 50 human years, and their height is $\frac{1}{2}$ *krōśa* (= $\frac{1}{2}$ *yojana*, 'league'). Perhaps the numerous servants and courtiers of the Great Kings, the *gan-dharvas*, 'celestial musicians,' etc., although they are not *devas*, ought to be regarded as belonging to this category.

Half-way up Meru are the chariots of the sun (51 leagues), of the moon (a league further down), and of the stars. These deities do not form a special class.³

(b) On the summit of Meru are the gods 'who have the Thirty-three at their head' (*trāyastriṃśas*; *tāvatimsas*), to the number of 100,000 (?), and, above them (according to *Digha*), is their king Śakra, *devānām indra*, 'the Indra of the gods.' Their town, 'Lovely view,' is 2500 miles square, and contains the Palace of Victory (*vaijayaṇṭa* [*Majjhima*, i. 253]), etc. They live for 1000 years, one day being equal to 100 human years (*Digha*, ii. 327),⁴ and their height is $\frac{1}{2}$ *krōśa*.

Then there are palaces which might be called aerial (*vimāna*):⁵

(c) 160,000 leagues above *Jambudvīpa*, i.e. 80,000 above the Thirty-three, and 80,000 leagues broad, the palace of the *yāmas* gods,⁶ whose king *Suyāma*, according to *Digha*, dwells higher up. Length of life, 2000 years, one day = 200 human years; height, $\frac{1}{2}$ *krōśa*.

(d) The abode of the *tusitas*, 'satisfied' or 'blissful'; the residence of a future Buddha before his last existence; king, *Samtuṣita*; length of life, 4000 years; height, 1 *krōśa*.

(e) The abode of the *nirmāṇaratis*, 'who have their pleasure in creation,' 'happy creators'; king, *Sunirmita*, 'well-built.' According to the *A.K.V.*, the meaning of this name is 'enjoying self-created pleasures,' in contrast with the inferior gods, who enjoy objects which are presented to them on account of their deserts (cf. *Itivuttaka*, p. 94). Length of life, 8000 years; height, $\frac{1}{2}$ *krōśa*.

(f) 1,280,000 leagues above *Jambudvīpa*, 640,000 leagues broad, the abode of the 60,000 *paranirmitāvāsārtins* (*paranirmita*, and sometimes wrongly [*?*] *pari*), having *Vaśavartin*, 'the sovereign,' as king (*Digha*, i. 219). The name of these gods means 'rulers over the things created by

¹ See *Mahāvīyutpatti*, § 163, 38-38; Burnouf, *Introduction*, p. 599 (quoting Georgi, p. 480); *Mahāvastu*, i. 30; *Divyāvadāna*, p. 218 (which mentions *nāgas*, 'dragons,' resting on the water [*udakaniṣṭhita*] at the foot of Meru); Morris, *JPTS*, 1891, pp. 21-25. These *devit*, *diti* *minors*, are sometimes called *devas*, especially the *karotāpānis* (*Divyāvadāna* and *Mahāvīyutpatti*); so also the *bhauma devas* in *Latīvīstara*, etc. *Devat-mitra*, 'god-son,' 'divine,' is sometimes an epithet of greater gods.

² According to *Latīvīstara*, p. 46, 19.

³ See *A.K.V.* iii. 60; Beal, *Catena*, p. 71; Spence Hardy, *Manual*, p. 26.

⁴ Here, as elsewhere, years consisting of 12 months of 30 days are meant. In *Divyāvadāna*, p. 225, the day of Śakra and of the Thirty-three is equal to only one human year; hence a total of 360,000 human years.

⁵ The Tibetan translation means 'non-measurable (*vi-māna*) mansions.' These palaces may be spiritual, i.e. they are composed of subtle matter: 'splendid, pagoda-shaped palaces, movable from place to place by an effort of will' (Childers, *Dict.* p. 574); see *Vimānavatthu*, and Böhtlingk-Roth, s.v. 'Vimāna.'

⁶ The meaning of *yāmas* is not clear. The Tibetan is *hthab-bral-ba*, 'free from battle,' because they have not to wage war with the *asuras*, as the Thirty-three have to do. The *yāmas*, as we have seen (§ 3), are created before the *chakravāla*. The kings are named in *Latīvīstara*, p. 44.

others,' 'disposers of others' creations' (C. A. F. Rhys Davids' tr.), i.e. they themselves create, or they cause others to create, the objects of enjoyment which they desire. Length of life, 160,000 years, one day = 16,000 human years; height, $1\frac{1}{2}$ *krośa*.

Some sources regard Māra, the Satan of early Buddhism, as the Supreme god of the world of concupiscence, and assign a special place to him, Mārābhavana, with 68,000 good assistants. Length of life, 32,000 years (see *Lalitavistara*, index, and Beal, *Catena*, p. 85, who adds, from the Chinese *Dirghāgama*, the weight of the clothing of each class; it varies from 1 *oz.* to 1½ *oz.*).

The gods of 'concupiscence' (*kāma*bhogin) enjoy sensuous pleasures; but there is a progressive refinement in their food (see C. A. F. Rhys Davids, *Buddh. Psych.* p. 197). In the higher spheres the sexual act is accomplished by binding (*ādingana*, among the *yāmas*), by joining hands (*pānyāpti*, among the *tuṣṭas*), by smiling (*hasita*, among the *nirmāparatis*), or by a simple look (*uṣṭita*, among the *paranirmitaśaśavartins*) (see A.K.V. iii. 62, and Georgi, p. 483). On the birth of the gods, who do not come out of the womb, although they are not 'apparitional beings' (see § 7), see Beal, *Catena*, pp. 74, 78, and cf. Waddell, *Lamaism*, p. 58.

The Four Kings and the Thirty-three are well-known in the Brāhmanical sources, and are much older than Buddhism. There are several Brāhmanical references to the *yāmas* (*suyāmas*), *tuṣṭas*, *nirmāparatis* (*Mahābhārata*, xiii. 18, 74; see Burnout, *Introd.* p. 604 f.), but they are probably borrowed from Buddhism (*tuṣṭā brahma-kāya*).

The sextuple division of the gods of concupiscence appears in the earliest Buddhist books, e.g. *Majjhima*, ii. 194, iii. 100, *Digha*, i. 216; and the length of the lives is fixed just as in the scholastic era (*Vibhanga*, p. 422). But lists of gods, like *Digha*, ii. 256 (six series of ten divine groups, *kāyas*), seem to be older than this sextuple division (see reference to *yāmas*, etc., on p. 261).

7. Heavens of the material world (*rūpādhatu*) or Brahmā-world.—Probably the most ancient documents on divine beings superior to the *devas* properly so-called, to the gods of desire, are *Digha*, i. 17, 34, 195.¹ The following is a summary. According to the 'names, expressions, turns of speech, designations in common use in the world' (the indifference of Buddhists to what is not the way of salvation is clearly shown in these precautions of the ancient editor, who seems to have been conscious that the Buddha regards such things as accessory and un-sure), there are three classes of gods (or kinds of existence, *attabhāva*), which must not be called by each other's names, viz. (1) 'divine, having form (or material, *rūpī*), belonging to the sensuous (or sexual) plan (*kāma*śācāra), feeding on solid food,' in a word, 'solid' (*olarika*), 'formed of the four great elements'; (2) 'divine, having form, made of mind, with all major and minor links complete, not deficient in any organs,' in a word, 'made of mind' (*manomaya*);² (3) immaterial (formless), made up of consciousness (or thought, *saññā*) only.

To the first class belong the six categories of gods 'who enjoy pleasures' (*kāma*bhuy), the Four Kings, . . . the *paranirmitaśaśavartins*.

We must now consider the second class, *rūpācāra*, or gods of the realm of matter, of whom Brahmā is the ancient type and the representative *par excellence* to such a degree that the 'world of matter' is called the 'world of Brahmā.' The gods here are born without parents, by apparitional birth (*āupapātika*); they are not immaterial, but their matter is subtle (*sūkṣma*, *pranīta*), for they feed on joy (*prītibhākṣa*), and are luminous—the same as the first men (see art. AGES OF THE WORLD [Buddhist], vol. i. p. 190³). We may compare the *rūbhū*s of *Mahābhārata*, iii. 15461; 'They have divine bodies, and not material forms' (*vigrahā-mūrti*).⁴ The idea of the progressive refinement of the body of the gods is old (*Satapathabrāhmaṇa*, x. i. 5. 4; *Taittiriya Upaniṣad*, ii. 1-5 [Rhys Davids, *Dialogues*, i. 48]; and with the Brāhmanas the worlds of Prajāpati (cf. *Majjhima*, i. 2) and

Brahmā were placed above the heavens of the *karma*-gods (gods owing to their merit) and the birth-gods (*Taitt. Up.* ii. 8; Windisch, *Buddha's Geburt*, Leipzig, 1908, p. 15). Being by his nature invisible to the inferior gods, Brahmā creates a 'solid' body for himself when it pleases him to show himself to the Thirty-three (*Digha*, ii. 210). In this respect there is some resemblance between the *Kenopaniṣad* and *Digha*, i. 220. The connexion is still more marked with *Majjhima*, i. 330, where Brahmā (the god Brahmā then called *Baka*, 'Heron') tries in vain to disappear from the eyes of Buddha; he was more successful with Varuṇa, the Vedic god.

The text which we have quoted, 'divine . . . with all major and minor limbs complete' (cf. *Majjhima*, ii. 17, i. 26), is clear enough: the *rūpa*-gods possess all the organs of the body. This opinion, however, came to be regarded as almost 'heretical' by Pāli orthodoxy as well as by Northern orthodoxy (see *Vibhanga*, p. 418; *Kathāvatthu*, viii. 7, with the commentary, and A.K.V. (Burn. 44). Smell (*gandha*) and taste (*rasa*) are solid food (*kaṇḍakārahāra*), and consequently cannot be perceived by the gods of *rūpādhatu*; therefore noses and tongues are useless to them. If these gods possess these organs, it is replied that it is merely for reasons of beauty. The sexual organ is of no use to them, and it would detract from their beauty if it were not hidden as it was in the body of Śākyamuni (see *Suttanipāṭa*, p. 99 = *SBE* x. 100, and elsewhere). This discussion, which we might consider rather frivolous, is characteristic of a part of scholastic Buddhism; there are some points in it which we shall never see clearly, and about which the Buddhists themselves are confused.

The Buddhists, making the most of the theory of the four *dhyānas* (*jhānas*, 'trances'), have established very coherent systems on the hierarchy of the so-called 'material' celestial spheres. The complete table is as follows:

(i.) FIRST-TRANCE HEAVENS.—(1) *Brahmapārśadyas* (or *°kāyikas*),¹ retinue of Brahmā; length of life, 20 small ages of the world (20 *antarakālpas* = $\frac{1}{2}$ great *kālpa*); height, $\frac{1}{2}$ league. The heaven is situated 2,580,000 leagues above *Jambudvīpa*,² and is 1,290,000 leagues broad. These numbers have to be doubled for the following heavens. (2) *Brahmapurohitās*, 'Brahmā-chaplains'; length of life, $\frac{1}{2}$ great *kālpa*; height, 1 league. (3) *Mahābrahmāṇas*, 'Great Brahmās'; length of life, $\frac{1}{2}$ *kālpa*; height, $1\frac{1}{2}$ league.³

The common opinion is that there are as many stages as there are classes of gods. But some say that 'Brahmā has no distinct abode; only in the middle of the *purohita*-heaven there is a high storeyed tower, and this is the abode of Brahmā.' Every trance-heaven has a king, ministers, and people (Beal, *Catena*, p. 95; cf. *Anguttara*, ii. 128, where Brahmākāyika [life, 1 *kālpa*] is the general name of the gods of the first trance). Contrast with this *Digha*, i. 216: the retinue of the great Brahmā does not know 'where, why, whence Brahmā is.' This text is not familiar with *purohitās*. On the other hand, according to A.K.V., the Kashmirians do not distinguish the *purohitās* from the great Brahmās. It will be noted that this plural, 'great Brahmās,' is strange, because there cannot be, and in former Buddhist mythology there was not, more than one Brahmā. But the early texts, when mentioning several 'prenomenes' of different Brahmās, probably believed to belong to different cosmoi or to different ages of the world, have opened the way for this new idea. On different classes of Brahmās, see below, § 9.

(ii.) SECOND-TRANCE HEAVENS.—(1) *Paritābhas* ('Limited splendour'); length of life, 2 *kālpas*; height, 2 leagues. These figures are doubled for the next five classes. (2) *Apramāṇābhas*, 'Im-

¹ Mentioned in *Sahyutta*, i. 145, 155. The *Lalitavistara* (p. 150) draws a distinction between *°kāyikas* and *°parśadyas* (see also p. 44).

² According to *Kalpadrūma*, Feer (*AMG* v. 535) says 256, i.e. double the height of the heaven of the *paranirmitaśaśavartins*.

³ We give the heights and lengths of life according to the A.K.V. 'The first gods of the *rūpa*-world are $\frac{1}{2}$ *yojana* in height; another $\frac{1}{2}$ *yojana* must be added for the following classes, and one must double from the *paritābhas*.' As regards the length of life, the Pāli sources have for these three classes $\frac{1}{2}$, $\frac{1}{2}$, and 1 *kālpa* (*Vibhanga*, p. 424; Warren, p. 290). The text quoted in the commentary to *Kathāvatthu*, xl. 6, however, assigns a *kālpa* to the *brahmākāyikas*; but, according to Buddhaghosa, it refers to a *kappakadesa*, i.e. a portion of a *kālpa*. The *Abhidharmakośa* has $\frac{1}{2}$, 1, $\frac{1}{2}$ *kālpa* (see Feer, *AMG* v. 535); but its commentary, the *Vyākhyā*, maintains that *kālpa* must be taken to mean $\frac{1}{2}$ *kālpa*, therefore $\frac{1}{2}$, $\frac{1}{2}$, $\frac{1}{2}$. It refers to a large *kālpa*; but, according to the *Kalpadrūma*, the length of life in the *rūpa*-world extends from a small *kālpa* ($\frac{1}{16}$ of a large *kālpa*) to 16 small *kālpas*.

¹ See Rhys Davids, *Dialogues*, i. 46, 259, 260 (line 2 to be read: 'The second has form. . .'); cf. *Sumaṅgalavāṇīśini*, ad loc.

² On *manomaya*, see art. BOHISATVA, vol. ii. p. 742b, note §; also A.K.V. 265.

³ See Faussöll *Indian Mythology*, p. 144.

But we must not regard the double negation 'neither consciousness . . . ' as an absolute negation of consciousness; though (*chitta*) and its derivatives (*chaitta*) remain, although in a very attenuated state.¹ In fact, if thought happened to cease in these immaterial existences, the result would be *nirvāṇa*; and we know (*Āṅguttara*, i. 267) that 'non-converted' persons (*prthagjana*) may reach them without being worthy of *nirvāṇa*, without being free from the danger of falling back again into hell or among the *pretas*.

Several schools maintain the existence of 'matter' in the 'Immaterial World.' This refers to a 'fine or attenuated form of matter,' according to the *Mahāsāṅghikas*, but such that it includes the five kinds of perceptible knowledge (*vijñāna-kāyas*).² The syllable *ā* of *ārupa*, 'formlessness' (which is the *vādhi*, initial emphasis, of the abstract word derived from *drūpa*, 'formless'), is explained as a diminutive (*śaḍarthe*). An argument in favour of this opinion is that the intellect (*vijñāna*) needs a material support (*āśraya*), and this support must be the special 'matter' called *hṛdayanastu*, 'heart-thing' (according to the *A. K. V.* the opinion of the *Tāmaraparijaya*, i.e. the Buddhists of Taprobane, the Sinhalese).³ Another argument is that, according to the formula of 'dependent origination' name (intellectual data) and matter (*rūpa*) proceed from *vijñāna*.⁴

9. Cosmic systems, chiliocosms.—It is possible that the most ancient Buddhist cosmology did not imagine anything but the 'small universe,' the *chakravāla* properly speaking; but, in documents which appear to be very archaic (agreeing, in fact, with what we believe we know of the teaching of the Buddha), the notion of the infinity of the world is stated—from which arises that of the existence of other universes (*lokadhātu*) or *chakravālas* similar to ours;⁵ and in the *Āṅguttara* (i. 227) we find great combinations of 'thousands of universes,' which will remain the basis of the 'great cosmology,' if we may thus express it, namely: (1) A system of a thousand universes, 'small chiliocosm,' *sahasā chūlanikā lokadhātu*,⁶ or *sahasadhā loka* (ib. v. 59); (2) a system of a million universes, a thousand 'small chiliocosms'; this is the 'middle chiliocosm,' *dvisahassā majjhīmikā lokadhātu* ('two-thousandth middle universe'); and (3) a system of a thousand million universes, 'great chiliocosm,' or 'three-thousandth great-thousandth universe,' *tisahassā mahāsahasā lokadhātu*.⁷

¹ See *Kāthāvatthu*, iii. 12; Beal, *Catena*, p. 91; C. A. F. Rhys Davids, *Buddh. Psych.* p. 74 f.; *Saṅgītiśūta* (*Digha*, xxxiii.), in Burnouf, *Lotus*, p. 809; *Āṅguttara*, v. 7, 318.

² See Beal, *Catena*, pp. 92, 104; Wastellieff, *Buddhismus*, 1860, p. 237 (261).

³ See *A. K. V.* (Burn. 28b), cited in Burnouf, *Lotus*, p. 513 (cf. Walliser, *Phil. Grundlage des älteren Buddhismus*, Heidelberg, 1904, p. 106). On the *hadayavatthu*, 'basis' or 'site,' of the *sensorium commune* (*manas*), see C. A. F. Rhys Davids, *op. cit.* p. 123, note; cf. p. 173 and index; *JPTS*, 1884, p. 28; *Visuddhimagga*, *JPTS*, 1891, p. 124, and Burnouf, *Introduction*, p. 609; the rôle of the heart in the ancient Hindu philosophy is well known (Böhtlingk-Roth, s.v. 'Dhātū', p. 934^b).

⁴ *Kāthāvatthu*, viii. 8; cf. Warren, *Buddhism*, p. 178, l. 15, and see also *Saṅgītiśūta*, iii. 53.

⁵ The *Brahmāṇas* admit the infinity of the world upwards and sideways (see *Pañcaviṃśabrahmaṇa*, xviii. 6, 2, in Hopkins, 'Gods and Saints of the Great Brahmanā', *Trans. Connecticut Acad.* xv. 25, July 1909). The theory that the world is infinite across, and finite in upward and downward directions, is condemned in *Digha*, i. 23 (Rhys Davids, *Dialogues*, i. 36; see AENOSTICISM [Buddhist], vol. i. p. 224^b, note). A tradition which was long in being attested (*Athasālini*, § 374, quoted in Burnouf, *Lotus*, p. 844, wanting in the 'Chapter of the Fours' of the *Āṅguttara*, as Rhys Davids remarks, *loc. cit.*) states that four things are infinite: space, the number of universes, the number of living beings, and the wisdom of a Buddha.

⁶ *Lokadhātu*, masc. in *Mahāvastu*, i. 40, 7, and *Sikṣāsamuccaya*, p. 246; fem. in *Pāli Mahāvastu*, ii. 300, 16, *Karuṇapūṇḍarika*, p. 4, etc. The word *sukhāvati*, 'the happy' (see BLEST, ABOVE OF THE [Bud.], vol. ii. p. 688^b), must be understood as *sukhāvati lokadhātu*, 'the happy world,' and not as *sukhāvati bhūmi*, 'the happy earth or storey.'

⁷ The *Skr.* forms in *Mahāvastupatti*, § 153, *Boḥicharyāvātārapāṇīkā*, ad ii. 14: *sahasas chūdikā lokadhātuh*; *drisahaso madhyamo* . . . ; *trisahasamahāsahasro* There are variants in *Mahāvastu* and elsewhere (*trisahasā* . . .). See Lefmann, *Lalitavistara überet*, Berlin, 1874, p. 298. *Chūdikā*, *chātika* (Pāli-Prākṛit *chūka*, 'small') cf. *Skr. kṛudh* is traced to *chūḍā*, 'top,' 'crest' (tuft left on the head after tonsure), but see *Saddharmapūṇḍarika*, p. 327 (*śūdrakalokadhātu*).

The traditional meaning of the words *dvisahassi*, *tisahassi*, seems to be quite clear. The *Āṅguttara* says that the *dvisahassi* = 1000 *sahasā*, and the *tisahassi* = 1000 *dvisahassi*. *Dvi* and *ti* are exponents, not multipliers. We find 1000, 1000², 1000³, Schmidt's interpretation, 'das grosse Tausend der 3000 Welten,' is wrong; and Köppen (*Buddhismus*, ii. 337) is also incorrect, if we can trust the *Āṅguttara* and the *Abhidharmakośa*. But it must be remembered that the universes appear grouped in triads in order to form the hell of 'intramundane darkness'—which justifies the number 3000. But in the multiplication of 1000 by 1000 there are other differences which strike scholars: 'The holy words of Buddha cannot be in disagreement; how is it then that there are so many differences in the accounts found in the *sūtras* and treatises (*Abhidharmasūtras*)?' For instance, in regard to the number of mountains called *Sumeru* (there is a *Meru* in each small universe, *chakravāla* [see above, p. 131]), if we rely on the *Āgamas* (= *Pāli nikāya*, 'canonic collection') and the *Kośa*, each great chiliocosm has one thousand million, whereas the *Svaraparakāśa* and the *Avatamsaka* (Great Vehicle) say there are only ten millions. Then with regard to the various measurements and the contradictory statements relating to the number of the *rūpa*-heavens,¹ how are these differences to be accounted for?²

In order to establish a sort of coherence among these multiplications of universes and on account of theories on the more or less complete destructions of the world, the following arrangement has been imagined:—

One thousand *chakravālas* make a small chiliocosm, with 4000 continents, 1000 *Merus*, and 1000 heavens of *Brahmā*-gods (gods of the first trance). This small chiliocosm is surrounded by a mountain which separates it from the neighbouring small chiliocosms; and there is by way of a roof, so to speak, a heaven of gods of the second trance. The middle chiliocosm includes 1000 heavens of this second trance, with as many small chiliocosms beneath them; the walls reach up to the third trance; it is covered by a heaven of the third trance. The great chiliocosm comprises 1000 heavens of this trance, and is crowned with a heaven of the fourth.

The documents which show this superimposing do not seem to be very old (Köppen, i. 236; Rémusat, *Mélanges posthumes*, p. 94; but Beal, p. 103, cites the *Vibhāṣāsāstra*). The *Lalitavistara* (p. 150) certainly does not know it, for it informs us that the great chiliocosm contains a thousand million (100 *koṭis*) heavens of each kind.

We must point out a certain number of cosmic multiplications which are independent of and probably previous to the chiliocosmic conception; e.g. *Mahāvastu*, i. 5, 81 (*Ātaka*, i. 63), *āyath dasasahasā lokadhātu* (where the reference is to 10,000 worlds and not to 1000¹⁰ worlds); *Digha*, ii. 139, where the gods of ten universes (*dasāsu lokadhātusū*) gather together to be present at the death of the Buddha. There are different kinds of *Brahmā*-gods; in *Digha*, ii. 261, *Mahābrahmā*, 'the great Brahmanā,' reigns over 1000 *Brahmā*-worlds; *Majjhima*, iii. 101, distinguishes between a *Sahasro brahmā*, 'thousandth Brahmanā,' governing a *sahasā lokadhātu* (cf. *Āṅguttara*, i. 277), a *Dvisahasso* . . . and a *Dasasahasro* (10,000th-Brahmanā), governing a *dasasahasā lokadhātu* (cf. *Saṅgītiśūta*, i. 146). See *Visuddhimagga*, xii. (Warren, p. 321; S. Hardy, *Manual*, p. 2; Burnouf, *Lotus*, p. 363) on the three 'fields' or 'domains' (*ketra*) of the Buddha: 'Birth-domain (*janma*) comprises 10,000 worlds; all tremble at different moments in the life of a Buddha (cf. *Mahāvastu*, i. 6, 81). Authority-domain (*ajñā*) comprises a hundred thousand times ten millions of worlds (= 100 great chiliocosms); over all extends the protecting power of the "formula of protection" (the so-called *paritta*) given by the Buddha. Knowledge-domain (*jñāna*) is without limit.' The *Mahāvastu* mentions a *buddhaketra* equal to 61 great chiliocosms, and an *upakṣetra* equal to 244 great chiliocosms (i. 121, cf. pp. xxxii and 471, and iii. 341). In the later literature 'great chiliocosm' and *buddhaketra* are, as a rule, synonymous (cf. *Āṅguttara*, i. 228).

The chiliocosm did not satisfy the Buddhist imagination. The *Mahāvastu* (i. 122) and the *Mahāyānasūtras* consider that the number of chiliocosms, or 'fields of Buddha,' is infinite in every direction (e.g. *Lotus*, xi; *SBE* xxi. 232), and there are quoted, by the dozen, names of these 'great universes' (e.g. *Karuṇapūṇḍarika*); and in the *Avatamsaka* we get a systematic arrangement of these chiliocosms.

On whirlwinds rests the Fragrant Ocean, which carries an infinite number of world-germs (*lokajīva* ?); from it there issue lotuses infinite in number—very far removed, indeed, from each other. From each of these lotuses is born a universe (great chiliocosm), above which (separated by whirlwinds) there are three, then five, and so on up to the twentieth tier, where there are 39 great chiliocosms. We are not told whether this development of a 'world-germ' is in the form of a *tranche* or of a fan, or whether it is to be understood as an inverted

¹ The text says *arūpā*-heavens. This must be a mistake (see above, p. 136).

² *Show-hun*, tr. in Beal, *Catena*, p. 103.

pyramid (I, 32, 54, . . . 392). But, on the other hand, we learn that the universe in which we are, the *Sahalokadhātu*,¹ forms part of the thirteenth stage, and constitutes the 'field' of the Buddha Vairocana (see art. *ADIBUDDHA*, vol. i. p. 99^a note II), and that, on the same level at the same stage, in the extreme west, is the blessed universe of the Buddha Amitābha, the *Sukhāvāṭi*, where a *kalpa* of our universe is equal to a day and a night (see art. *BLESSED, ABODES OF THE (Buddhist)*, vol. ii. p. 638^b).²

LITERATURE.—See preliminary note 3 on p. 180 f., and p. 181^a, note 4, and works mentioned throughout the article. See also the tr. of the *Abhidhammasaṅgaha* by Shive Zan Aung and C. A. F. Rhys Davids under the title *Compendium of Philosophy (PTS)*, London, 1910, the tr. of *Digha*, ii., by T. W. and C. A. F. Rhys Davids, *Dialogues of the Buddha*, ii. (Oxford, 1910). Reference must also be made to Mañjuśaṅgā-savajra's *Siddhanta*, i. fol. 223-248.

L. DE LA VALLÉE POUSSIN.

COSMOGONY AND COSMOLOGY (Celtic).

—We do not know the ancient Celtic ideas with respect to the origin of the world. According to Strabo (IV. iv. 4), the Druids, as well as others, said that the soul and the world were immortal, and that one day fire and water would prevail. On the other hand, the Celts of the Adriatic said to Alexander: 'We fear only one thing, and that is that the sky may fall on us' (Strabo, VII. iii. 8). This belief in the fall of the sky is seen frequently in the oaths of Irish epic poetry. In a note on the hymn of Ultan (verse 9) mention is made of the two pillars of the sky.

These confused and contradictory ideas do not enable us to re-construct Celtic cosmology. It would be dangerous, besides, to look for this cosmology in the Christian legends of the Irish Middle Ages, or in the so-called secrets of the bards of the Island of Britain, or in the oral traditions of Armorican Brittany; for the elements contained in these different sources are either foreign or modern in origin. See also art. *CELTS*, vol. iii. p. 298.

LITERATURE.—Rogel de Belloguet, *Ethnogenie gauloise*, Paris, 1861-75, iii. 137; C. Julian, *Histoire de la Gaule*, Paris, 1907, i. 380, ii. 126, 176; H. Gaidoz in *Zeitschrift für celtische Philologie*, 1897-1901, i. 371.

G. DOTTIN.

COSMOGONY AND COSMOLOGY

(Chinese).—Chinese theories of cosmogony and cosmology may be said to be of comparatively modern date. They profess, however, to be based on a system which claims an almost immemorial antiquity, i.e. the 8 trigrams, which are usually attributed to Fu-hsi (2552 B.C.), though somewhat contradictory accounts are given as to their ultimate origin. These figures were intended to represent the stalks of the milfoil (*Ptarmica sibirica*), which were employed by diviners in close association with the lines which were produced on the shell of the tortoise, as described in art. *COMMUNION WITH THE DEAD (Chinese)*, vol. iii. p. 731^b. The stalks were divided into longer and shorter lengths, and the order in which they were drawn and disposed, in varying combinations of long and short or 'strong' and 'weak' lines, was interpreted

¹ This expression seems to denote a great chiliocosm, but it is certain that its natural meaning should be the small universe, the *chakravāla* in which we live. *Saha* is an adjective; we find a fem. form *sahā* (*Mahāvijyūtpatti*, i. 154, 21; *Dīnyāvadāna*, p. 293, 19; *Mahāvastu*, ii. 379, 21; *Lankāvatāra*, in Burnout, *Introduction*, p. 596; *Karuṇapūṇḍarīka*, p. 119; Wilson, ii. 32; and probably *Rājataranginī*, i. 172, where A. Stein reads *mahi*), and more rarely the masc. form *saha* (Triglotte, § 46, and *sahalokanātha*, in *Mahāvastu*, ii. 385). This expression, which has been translated 'enduring', 'suffering', or 'supporting' (from root *sah*), is not clear. The Tibetan *mi mjed* or *mjed* (see Jaschke, *Tib. Dict.*, London, 1881, p. 174) does not shed any light on the question, and the designation of Brahmā as *Sahāpati* (*Sahāpati*) remains obscure (Burnout, *Introduction*, p. 594; Beal, *Catena*, p. 16; Eitel, *Handbook*, p. 134).

² The present sources are Rémusat, *Mélanges posthumes*, p. 96; Beal, *Catena*, p. 121. The two authors differ on many points; e.g. Beal regards *Sahā* as the name of the whole thirteenth stage. Between the *Sahā* (centre of this stage) and the *Sukhāvāṭi* (regarded not as a chiliocosm but as a privileged *chakravāla*, with no hell, and no cosmic mountains), there are 10,000,000,000 universes. The original source is the *Avatamsaka*—a word which denotes a part of the Chinese canon of the Great Vehicle (Nanjo, *Catal.*, 1883, p. 32 ff., on which see Taranātha, p. 63, and Wassilief, *Buddhismus*, esp. p. 157 [171] f.).

in accordance with the arbitrary methods which prevailed from time to time, but of which the details have not been handed down. It may, however, safely be assumed that the function of the trigrams was limited to questions of tribal or domestic interest, and that nothing of a theological or cosmological character was attached to them.

The trigrams were arranged in 8 groups thus :

=====

A new arrangement was invented by Si-peh (1231-1135 B.C.), during his two years' imprisonment at the hands of the ruler of the Yin dynasty, and it is probable that to him is also due the combination of the original 8 trigrams to form the 64 hexagrams which are the basis of the *Yi-king*, or Canon of Permutations, commonly known as the Book of Changes.

Si-peh, afterwards canonized as Wên-wang (= King Wên), appended to each of the hexagrams an explanatory outline, giving the general sense supposed to be conveyed by the figure, but his son Tan, better known as Chow-kung (Duke of Chow), added an analysis, showing how each line of the hexagram was to be interpreted so as to contribute to the general conclusion which his father had established. The deductions of King Wên, with the analyses of the Duke of Chow, form the text of the *Yi-king*. Throughout the 64 chapters of the original work there is nothing whatever of a cosmological character; the compilers were entirely occupied with political and personal matters, endeavouring to learn from the omens furnished by the stalks and their representative symbols the probable results of certain courses of conduct which were in contemplation. The harmless trifling, as it seemed to his jailers, with which the prisoner, Si-peh, employed his leisure, was in reality a means by which he was able to develop his revolutionary schemes without let or hindrance; none but himself knew the significance attaching to the harmless straws with which he amused himself; and when, in course of time, his liberty was restored, he was enabled to consummate his schemes with complete success.

A new element is, however, introduced in the 10 Appendices to the *Yi-king* which bear the imprimatur of Confucius, though it seems probable that only the first and second are properly attributed to him. To Confucius it seemed inevitable that the thought which had been expended upon the hexagrams, by sages so eminent as Si-peh and his son, could not fail to be of permanent value, and that, though the political conditions which had first inspired their studies no longer existed, the lessons which they contributed might be applied with equal value to the troublous circumstances of his own times. Hence Confucius, in later life, devoted a great deal of attention to the study of the *Yi-king*, frankly acknowledging the difficulty he experienced in the interpretation of its cryptic phraseology, and in adapting its lessons to his own enlarged conception of the scope of the work. Later commentators, building upon the theory that the three lines of the early trigrams represent the three powers—Heaven, Earth, and Man—attempt to transfer the lessons of the figures from the smaller stage of human affairs to the larger theatre of universal Nature. In the Appendices, therefore, we discover, in an ever-ascending scale, the application of the hexagrams to the constitution and course of Nature, the later chapters furnishing some of the material out of which Chu-hsi (Chucius, A.D. 1130-1200) developed his scheme of cosmogony and cosmology, which now represents modern Chinese philosophic thought on the subject.

A word of explanation may here be necessary in order to show the mechanism of the developed

system of the *Yi-king*. Each trigram bears a distinctive name, as well as a local habitation or direction, together with a natural affinity, quality, etc. Thus the 6th group, as arranged by Si-pek, originally the first group according to the earlier system, consisting of 3 unbroken or 'strong' lines, is denominated *k'ien*, which means 'untiring,' 'strength,' etc., and represents Heaven, a sovereign, a father, etc. Its locality or direction is north-west; its affinity, ether; its quality, humidity, etc.

The hexagrams are formed by the combination of 2 trigrams, and also have distinctive names. Each line bears a certain relation to the other lines; thus the first or bottom line in the lower trigram is related to the first line of the upper trigram, i.e. to the 4th line of the hexagram. The position of the various lines is a most important consideration—sometimes a 'strong' line is found in a 'weak' place, and *vice versa*.

An illustration from Legge's *Yi-king* (SBE, xvi. 71) may serve to indicate the method of interpretation. The 7th hexagram, known as *sze*, is written thus: , consisting of the 2 tri-

grams *k'an* , representing water, and *kw'un* , representing earth, suggesting, by the combination, waters collected on the earth, or, in the language of the diviner, multitudes of people mustering for purposes of defence or attack. The 'strong' or unbroken line occupies the most important place in the *inner* or lower trigram, i.e. the middle, second only to the middle place in the *outer*, or upper, trigram, which is the paramount position in the whole figure. The 'strong' line, therefore, occupying a secondary position, must stand for the leader of the host; were he to occupy the highest position, i.e. the 5th line from the bottom—the middle line of the upper trigram—he would represent the sovereign. These, of course, are perfectly arbitrary preconceptions.

The Duke of Chow thus interprets the figure: 'The first line (reckoning from below), divided, shows the host going forth according to the rules (for such a movement). If these (rules) be not good, there will be evil.' Legge adds: 'The line is divided, a weak line in a strong place, not correct; this justifies the caution which follows.'

'The second line, undivided, shows (the leader) in the midst of the hosts. There will be good fortune and no error. The king has thrice conveyed to him his charge.'

'The third line, divided, shows how the hosts may possibly have many commanders; (in such a case) there will be evil.' Legge explains: 'The third place is odd, and should be occupied by a strong line, instead of which we have a weak line in it. But it is at the top of the lower trigram, and its subject should be in office or activity. There is suggested the idea that its subject has vaulted over the second line, and wishes to share in the command and honour of him who has been appointed to be commander-in-chief. The lesson of the previous line is made of none effect. We have a divided authority in the expedition. The result can only be evil.'

'The fourth line, divided, shows the hosts in retreat: there is no error.' Legge comments thus: 'The line is also weak, and victory cannot be expected; but in the fourth place a weak line is in its correct position, and its subject will do what is right in his circumstances. He will retreat, and a retreat is for him the part of wisdom.'

'The fifth line, divided, shows birds in the fields, which it is advantageous to seize (and destroy). There will be no error. If the oldest son lead the host, and younger men be (also) in command, however firm and correct he may be, there will be evil.' Legge interprets the Duke's findings thus: 'We have an intimation [in this passage] . . . that only defensive war, or war waged by the rightful authority to put down rebellion and lawlessness, is right. "The birds in the fields" are emblematic of plunderers and invaders, whom it will be well to destroy. The fifth line symbolizes the chief authority, but here he is weak or humble, and has given all power and authority to execute judgment into the hands of the commander-in-chief, who is the oldest son; and in the subject of line 3 we have an example of the younger men who would cause evil if allowed to share his power.'

'The topmost line, divided, shows the great ruler delivering his charges (to the men who have distinguished themselves), appointing some to be rulers of States, and others to be chiefs of clans. But small men should not be employed (in such positions).' Legge thus comments: 'The action of the hexagram has been gone through. The expedition has been conducted to a successful end. The enemy has been subdued.

His territories are at the disposal of the conqueror. The commander-in-chief has done his part well. His sovereign, "the great ruler," comes upon the scene, and rewards the officers who have been conspicuous by their bravery and skill, conferring on them rank and lands. But he is warned to have respect in doing so to their moral character. Small men, of ordinary or less than ordinary character, may be rewarded with riches and certain honours; but land and the welfare of its population should not be given into the hands of any who are not equal to the responsibility of such a trust.'

To turn now to the main deduction of King Wên, of which the above is the detailed explanation. We find the lessons of the hexagram thus expressed: '*Sze* indicates how (in the age which it supposes), with firmness and correctness and (a leader of) age and experience, there will be no error.'

It will be observed, from this example, how the character of the lines (whether divided or undivided), their place in the hexagram (whether odd or even, e.g. 1, 3, 5; or 2, 4, 6), and their mutual relation to each other (2 corresponding to 5, etc.) are all of great importance in the exposition of the lessons they are supposed to convey. The mutual relation of the 2 trigrams in each hexagram is also a matter of importance.

This specimen will serve to show how little there is of any cosmological element in the original Book of Changes, and how far the modern commentators have wandered from the intention of the compiler and his earliest expositor; in fact, it was only by an arbitrary forcing of the primitive modes of divination, and the introduction of entirely new ideas in the Appendixes, that Chucius succeeded in building up the system which is attributed to him, and which has only the slightest affinity with the diagrams of King Wên. A rough parallel might be established between the diagrams and our modern playing cards, in which the calendar may be said to be represented, though with no cosmological intention, the 4 suits representing the 4 seasons; the 13 cards in each suit = the 13 sidereal months; the 52 cards = the 52 weeks of the year; the 364 pips (including the value of the 'coat' cards) = the days of the year, etc.; and, as the cards are now employed by pretended 'fortune-tellers' as a key to the secrets of human existence, so the hexagrams of King Wên came to be applied, in course of time, to issues much larger than were ever contemplated by their inventor.

The chief exponent of the modern system was Chucius, whose name is pre-eminent amongst the philosophers of the Sung school of the 11th and 12th centuries in China. Confucius and Mencius were practical philosophers, but Chucius was not content to accept the fact of Heaven and Earth, which had been sufficient for the great teachers who preceded him; he endeavoured to establish a systematic theory of the origin of all things, finding in the *Yi-king*, as he supposed, a groundwork for his researches. He was further aided in his speculations by Taoistic and Buddhist suggestions, as well as by other philosophic concepts which may well have reached China by that time, and which to an ardent and omnivorous student would prove attractive. It is not unlikely that he was familiar with Persian and early Christian ideas propagated by the Nestorian teachers in the centuries preceding him.

It is very important to bear in mind that the earliest conception of the Chinese regarding the universe was a theological one, while the later system of Chucius is philosophical; and it is owing to this fact that Chucius found himself involved in frequent difficulties in the endeavour to harmonize the two. The ancient or theological concept takes its starting-point from Shang-ti, or Heaven; the Taoistic or philosophic theory goes no further back than the 'Great Extreme'; but Chucius, though professedly no theologian, appears unable to elimin-

ate from his system some traces of the ancient conviction that behind all phenomena there is a power, variously described as Heaven, the 'Controller,' the 'Great Framer' (or 'Potter'), etc., while he shrank from any suggestion of anthropomorphism, and disclaimed the view that that power actively interfered in the affairs of men.

As a matter of fact, the theories of Chucius are not intended to account for ultimate beginnings; his conception of the present world is that it is but one of a long series of similar existences which have flourished in turn, and have been corrupted, each disappearing eventually from view and giving place to a new world. He makes no attempt to explain how the primal element came into being, but finds his starting-point in the theory of the existence of a Natural Law which he denominates *Li* (pronounced *Lee*), and a vital essence which he calls *K'i* (pronounced *Chee*). He does not inquire wherein this Law resides, or where this vital 'breath' is derived from. The theologian may contend for the recognition of a Divine creator or framer, but Chucius, though he does not traverse the argument, declines to discuss the subject. In inquiring, therefore, into the evolution of this present world, he finds its material basis in *K'i* (vapour, breath, air, etc.), and its active principle in *Li*—both eternal in their nature, as existing before the clock of time began to strike, yet admitting of a priority of order in the case of *Li*. The alternate action and inaction of *Li*, in the sphere of *K'i*, produced the positive and negative forms, *Yang* and *Yin*, variously represented as Light and Darkness, Heaven and Earth, Male and Female, etc., whose vicissitudes constitute the *Tao*, or Course of Nature, as reflected in the 4 seasons, the alternations of day and night, etc. The *Yang* and *Yin* contain the 'Five elements' in embryo, viz. metal, wood, water, fire, and earth, of which water and fire are regarded as the simplest forms. Each element possesses a *Yang* and a *Yin* quality, and all are pervaded by *Li*. As a result of the interaction of these two 'forms'—the *Yang* and the *Yin*, which are in constant motion—a certain amount of 'sediment' is precipitated to the centre of the whirling mass and becomes Earth, whilst the more subtle excreta are flung upwards to the outer ring of the circle, and become Heaven. Earth remains motionless in the centre, whilst the Heavens revolve continually, as the movements of the heavenly bodies serve to show.

The myriad creatures were produced by the spontaneous coagulation of the finer essences of the five elements in the *Yang-Yin*, forming a hermaphroditic being or pair, which in course of time separated and gave birth to the male and female species which now constitute the human race.

It will be seen at a glance how far removed these theories are from the system of divination attributed to King Wen, and it seems inevitable that they represent an interpretation of that system entirely alien to the purpose which inspired its first exponents. From Chucius' own words, we are led to conclude that the study of the *Yi* had made little progress during the centuries which had elapsed from the days of Confucius until his own time. It seems probable that the later Appendixes, popularly ascribed to the great 'Master' himself, belong to a period long posterior, and they seem to reflect opinions which began to be current only in Chucius' days. Philosophers such as Shao-yung (A.D. 1011-1077), of whom Chucius says, 'From the time of Confucius no one understood this (i.e. the relation between the Great Extreme, the 8 diagrams, etc.) until Shao explained it,' and Chow Tun-i (A.D. 1017-1073), to whom is attributed the circular diagram of the Great Extreme, apparently made use of the *Yi* as a vehicle of

Taoistic ideas, and applied to the 'strong' and 'weak' lines of King Wen the system of *Yang* and *Yin*, which nowhere appears in the text of the *Yi*, but which is suggested by the words of Lao-tze in the *Tao-Tê-King*:

'Tao produced unity; unity produced duality; duality produced trinity; and trinity produced the innumerable objects; the innumerable objects, carrying the feminine or shadow principle on the one side, and the masculine or sunlight principle on the other, created a just harmony by their respective clashes of primitive impulse or ether' (Parker's tr.).

It may be assumed, therefore, that the Chinese cosmogony is of comparatively recent origin, and that the ancients were content to accept the fact of the universe without abstruse theorizing as to its origin and method. The Sung philosophers adopted the trilinear figures of the *Yi*, but devised a new diagram of what they called the 'Great Extreme,' viz. a circle intended to represent the ultimate principle *Li*, which, in their system, indicates the limit of philosophical discussion. This circle was subdivided thus:

to illustrate the interaction and constant gyrations of the *Yang* and *Yin*, i.e. the primal essence, or *K'i* in its 2 forms, the motive power in which is *Li*. Another circle represents the *K'i* as divided into its constituent elements, i.e. the five active principles—water, fire, wood, metal, and earth. Sometimes the four seasons are represented.

From these we may learn that, according to Chucius, the world came into existence as a result of the operation of *Li*, or 'Natural Law,' setting in motion the *K'i*, or 'vital essence,' which, by the interaction of its two forms, *Yang* and *Yin*, containing the 5 elements, threw off, in its perpetual revolutions, the excreta which coagulated respectively into Heaven, on the outward edge, and Earth, in the centre; and that the vicissitudes of *Yang* and *Yin* account for the regular succession of day and night, the alternate waxing and waning of the same being the cause of the four seasons; and that, when the great cycle, calculated as occupying a *kalpa*, or 129,600 years, is accomplished through the exhaustion of the *Yang* element in man, as exhibited by moral declension and universal corruption, the whole system is resolved into its constituent elements, and a new heaven and earth are called into being.

Man's place in Nature.—As to the place which man occupies in this system, since man is compounded of the five elements constituting the *K'i*, or vital essence, in which the *Li* operates, he is described as a microcosm—a world in miniature—from which it follows that every man has within him a 'spark of the Divine.' In some men the *Yang* predominates; in others the *Yin*. Of the former are the Sages, the great men of past and present times; the latter are represented by the 'mean' men, the dull, the criminal, etc. As in the case of Nature, so man has his seasons of spring, summer, etc., and his days and nights, and, like the world, comes to an end by the exhaustion of the *K'i*, or vital breath. His great business, therefore, is to frame and fashion his life so as to live in conformity with the *Tao*, or observed order of the universe. 'No contrariety' must be his motto. By so doing he may attain in time the proud distinction of being an associate of Heaven and

Earth. As to his future, neither Lao-tze, Confucius, nor Chucius has anything to say; probably, from the philosophical point of view, death to them, though they would not discuss it, meant a return to the original chaos, like the universe at the end of its cycle of existence; or, to express it in the polite but equivocal phrase of ancient and modern days, a 'return to Heaven.'

The philosophic idea was, however, too lofty and illusive for common acceptance, and, during the Sung dynasty, the tradition of a 'first man' was evolved, ascribing the ancestry of the human race to a certain P'an-ku, of whom it is stated in the *Lu-she* (Mayers' tr.):

'When the great first principle had given birth to the two primary forms, and these had produced the four secondary figures, the latter underwent transformations and evolutions, whence the natural objects depending from their respective influences came abundantly into being. The first who came forth to rule the world was named P'an-ku, and he was also called the "Undeveloped and Unenlightened" (i.e. the Embryo).'

This idea is now almost universally accepted by the mass of the unlearned in China, and by not a few of the scholarly class, being, as it were, a sort of concretion of the indefinite theories of the Chucian philosophers as to the origin of man.

The place occupied by spiritual beings.—Though Confucius and Chucius (16 centuries later) were unwilling to enter into the question of spiritual existences, and though the latter expressly declared the difficulties involved in such a theory, the fact that the earliest records refer so frequently to the existence of spirits made it necessary that a place should be found for them in the Chinese philosophy, and, accordingly, the *Kuei-shen*, or spirits, were adopted as representing, so to speak, in personal form, the activities at work in the changing phenomena of Nature; but the ancient doctrine that the spirits are the ministers of God, carrying out His behests, on the analogy of the officers of State fulfilling the decrees of the sovereign, survives, in a somewhat debased form, in the popular opinion which invests the earth and air with a numberless host of good and evil spirits or demons.

The place of God.—In the earliest days of which we possess any record, Shang-ti, or God, appears to have occupied a chief place in the mind of China's rulers, but at the beginning of the Chow dynasty (12th cent. B.C.) we find the terms 'Heaven' and 'Earth' coming into prominence, representing the operations of God in Nature and Providence, and, as a consequence, Shang-ti is removed to a greater distance than that intimate relation in which he seems to have stood *vis-à-vis* his votaries in the earlier days. Later developments contributed towards the increasing of this distance, and the attitude of Confucius towards metaphysical and transcendental questions tended to widen the chasm. Chucius appears to have relegated God to a position of infinite remoteness and unknowableness, though he did not deny the possibility of there being an ultimate ruling power, of whose existence individual students must satisfy themselves; and he refers to the 'Great Framer,' the 'Root of the Great Extreme,' the 'Heavenly decree which set in motion the primal elements,' etc. His conviction seems to be that God, or the 'Infinite,' invested the *K'i*, or vital essence, with His own *Li*, or Law, and then allowed the creation to develop itself spontaneously, He Himself taking no further active share in the affairs of Nature or of human life. Such a contention, indeed, was directly contrary to the earlier beliefs, and led Chucius, unwillingly, into conflict with the received opinions. He, however, steadily refused to discuss the matter, and insisted that every man should be 'fully persuaded in his own mind' and make his own investigations. Here again the agnosticism

of Chucius was unable to overcome the immemorial persuasion of his fellow-countrymen, that the 'Supreme Ruler' interferes actively in the affairs of the nation, and sends forth His agents, including spirits and sages, to fulfil His behests. Hence it happens that Shang-ti is still worshipped officially by the Emperors of China, and Heaven is invoked by the mass of the people, whilst the spirits are solicited to exert their influence on behalf of their petitioners. The theological concept has thus survived the philosophical, and, by a strange inconsistency, the materialism of Confucius and Chucius, as represented by the modern Chinese literate, is exhibited in a country which, above all others, is remarkable for its active and almost frenzied addiction to the propitiation of spirits and demons.

W. GILBERT WALSH.

COSMOGONY AND COSMOLOGY (Christian).—**I. Early.**—The early Christians were not seriously perplexed by questions of cosmogony. They had come into a heritage, whereby they had grown up into the current Palestinian-Jewish ideas of the origin and constitution of the world. Moreover, they looked out upon the world and the whole realm of Nature from the purely religious standpoint. 'In the beginning God' (Gn 1¹) was the primary article of their faith. It was Jahweh, the God of Israel, who had 'measured the waters in the hollow of his hand, and meted out heaven with the span, and comprehended the dust of the earth in a measure, and weighed the mountains in scales, and the hills in a balance. . . . It is he that sitteth upon the circle of the earth . . . that stretcheth out the heavens as a curtain, and spreadeth them out as a tent to dwell in. . . . I am Jahweh, and there is none else. . . . I form the light, and create darkness: I make peace, and create evil. I, Jahweh, do all these things' (Is 40¹²⁻²² 45⁵⁻⁷). Psalms 8 and 104 express the same idea of the sole, beneficent creatorship of God, and in Psalms 136 and 148 creation by the *spoken word* is confidently expressed. The Book of Job is likewise pervaded by this belief, and the same is true of Pr 8²²⁻³¹. These seem to have been the primary sources from which the early Christians drew their conception of the material cosmos and God's relation to it. This simple religious view found free expression in their prayers: 'O Lord, thou that didst make the heaven and the earth and the sea, and all that in them is' (Ac 4²⁴). And Jesus had expressed His faith in the same direct and simple way. To Him God was 'Lord of heaven and earth' (Mt 11²⁶), who 'maketh his sun to rise on the evil and the good, and sendeth rain on the just and the unjust' (Mt 5⁴⁵). His heavenly Father also feeds the birds of the heavens, and clothes the grass of the fields (Mt 6^{26, 30}). The disciples, like their Master, were absorbed in the thought of the loving care of God, and His gracious provision for all His creatures. 'In him,' says St. Paul, 'we live, and move, and have our being' (Ac 17²⁸).

But the profound and enduring impression which Jesus made upon His followers soon constrained them to associate Him with the Father in the work of creation. It was He who had brought redemption from sin, and given them a glad new sense of sonship with God. But Lordship in the spiritual world must and did ultimately involve equal Lordship in the material world and in the whole realm of the Divine activity. This idea was early expressed by St. Paul, who says: 'To us there is one God, the Father, of whom are all things, and we unto him; and one Lord, Jesus

Christ, through whom are all things, and we through him' (1 Co 8⁹); 'for in him [the Son] were all things created . . . things visible and things invisible . . . and he is before all things, and in him all things consist' (Col 1^{16a}; cf. He 1^{11c}). 'By faith we understand,' says the author of the Ep. to the Hebrews, 'that the worlds have been framed by the word (*phrasi*) of God' (He 11³). 'In the beginning was the Logos,' says St. John, 'and the Logos was with God, and the Logos was God . . . all things were made by him' (Jn 1³; cf. Rev 4¹¹). The specific use of the word Logos by the Fourth Evangelist completed and confirmed a development which had been in progress for several decades, by which Jesus as the Son was definitely classed with God the Father, and associated with Him in the creation and government of both the visible and the invisible world. It also tended to reconcile and adjust the Christian faith to the late Jewish development of the concept 'wisdom' (Pr 8, Sir 24, Wis 8, and the like) and the current Hellenistic idea of the Logos (Book of Wisdom, Philo Judæus, and the like). Christian cosmology henceforth was definitely related to the Person of Christ.

But the tragic fate which overtook Jesus, and His own utterances concerning the machinations of the 'prince of this world,' together with His teachings regarding His 'return,' and the 'day of judgment,' and the 'last things,' made a deep and solemn impression upon His disciples. Everything seemed to constrain them to believe in the presence of an opposing Satanic power in the universe (Ac 5, 8, 13; Rev 2¹³ and oft.). St. Paul speaks of the 'lawless one' . . . whose 'coming is according to the working of Satan' (2 Th 2^{8c}); he declares that the 'whole creation groaneth and travaileth in pain together until now' (Ro 8²²), and that 'our wrestling is not against flesh and blood, but against the principalities, against the powers, against the world-rulers of this darkness, against the spiritual hosts of wickedness in the heavenly places' (Eph 6¹²). The Book of Revelation attempts to describe this great world-drama, this duel between good and evil, and the final triumph of the 'Lamb that hath been slain.' In this more or less incoherent and dualistic view of things, we have the outcropping of Babylonian and Persian ideas, which for several generations had been occupying a large place in Jewish thought (see *Test. Twelve Patriarchs*, Bk. of Jubilees, Bk. of Enoch, *Assump. of Moses*; cf. Mt 4¹⁴, 12^{24a}, 13³⁹, Jn 8⁴⁴, 12³¹, Ac 13¹⁰, 2 Co 11¹⁴, Eph 2², 6¹², Ja 4⁷, 1 P 5⁸, He 2¹⁴, 1 Jn 3⁸, and oft.). Christian cosmology, accordingly, becomes profoundly affected by the resurgence of Bab.-Pers.-Jewish ideas, and takes on a dualistic cast.

The lapse into 'sins of the flesh' on the part of professing Christians, as well as the appalling moral corruption of environing paganism, gradually led to the conviction that sin has its primal seat in 'the flesh.' Here, again, we have the outcropping of ideas already rife in current Judaism and paganism. St. Paul's teaching was more or less infected by the half-assumption of the physical basis of sin, and he exhibits a distinct tendency toward asceticism (Gal 5^{16a}, 1 Co 3¹⁴, 7^{1a}, Ro 7^{14a}). The whole trend of thought within the Christian Church gradually became reactionary and ascetic. Some began to withdraw from marital and social relations and to 'flee from the world.' Asceticism entered as a constituent element into Christian ethics, and soon coloured the whole view of things, giving its character to contemporary cosmology. If evil is inherent in matter, or, rather, if matter is inherently evil, the question of the creation and government of the world by an all-wise and beneficent God becomes seriously complicated. The Christians were, as a rule, inclined to emphasize

the Genesis story of the 'Creation' and 'Fall,' and thereby to shield God from complicity in the introduction of evil into the universe. But there were other and diverse accounts of the origin of the cosmos and the entrance of evil into it.

The Gnostics were not only the 'first Christian theologians,' but the first cosmogonists and cosmologists. Indeed, their primary concern was to discover and develop a theory of the cosmos which should shield the Supreme Being from all complicity in, or responsibility for, its creation, which seemed to them to involve also the production of evil. They, accordingly, assumed that the material cosmos arose through the more or less blind and perverse activity of the Demiurge, who was far removed from the Supreme God and the heavenly Pleroma. Although man was created by the Demiurge, he yet received, through 'Sophia,' sparks from the Divine nature, and is struggling to get free from his material bondage. Ascetic discipline is, accordingly, one of the means by which the Gnostic is to overcome 'sin in the flesh,' and secure salvation. Another means is the rational revelation which the Logos made to the world when He became manifest in the Christ. The 'prince of this world' must be overthrown by the Supreme God, who has sent His Son to rescue men from their bondage to evil (= *δὲν*). In all these Gnostic views we have but the exaggeration or perversion of ideas that were then present in current Christian thought, and which had come as a heritage from Judaism and environing paganism. In other words, Gnosticism (*q.v.*) was but an aberrant form of the Christian faith, and its crude and fantastic cosmologies were, after all, only abortive efforts to solve the riddle of the universe in a supposedly Christian fashion. The cosmic views of the Gnostics persisted in modified forms in Neo-Platonism (*q.v.*) and in Manichæism (*q.v.*).

The Apologists, contemporaries of the Gnostics, fell back, as a rule, upon the simple 'Creation' and 'Fall' stories of Genesis, and thereby escaped the worst excesses. They also made ample use of the Platonic-Stoic-Philonian Logos idea, and emphasized the mediatorship of the Logos in the work of creation. They were likewise surcharged with a belief in demons and opposing Satanic powers, but they looked forward to the destruction of the material cosmos and the overthrow of all hostile forces. Justin Martyr and Athenagoras speak of God as having fashioned the world out of formless material (*ὄλη*), but Theophilus declares that God created all things *ex nihilo* (*ἐξ οὐκ ὄντων*). Each based his assumption upon Gn 1^{1c}, 2^{4c} (Justin, *Apol.* i. 10, 20, 59, 67; Athenag. *Apol. for Christ.* 15; Theophilus, *Autol.* i. 6, 7, 10, ii. 4, 6, 10; cf. Tatian, *Addr. to Greeks*, 5 and 12; Aristides, *Apol.* 1 and 4). The Apologists, as a rule, thought of evil as inherent in matter, and accordingly were inclined towards asceticism; but they preserved, to a degree, the simpler religious view of Apostolic times, which they derived mainly from the OT.

Irenæus and Tertullian, Clem. Alex., Origen, and Hippolytus reject the Gnostic theory of the creation of the world by the Demiurge, and emphasize the function of the Logos-Son in the whole realm of the Divine activity. The NT writings are now quoted as authoritative Scripture, but the OT is also heavily drawn upon to explain God's relation to the cosmos. But, as was to be expected, these men were 'children of their own times,' although seeking to pass on a heritage. Some of the earlier crudities were retained, especially the belief in evil as somehow inherent in material things. With some slight aberrations, the Church Fathers of the 3rd cent. were true to the unformulated cosmology of the OT and NT, coloured by the speculations of the Apologists

(Iren. c. *Hær.* i. iii. 6, x. 1 f., xxii. 1, ii. x. and xi., v. xviii.; Tert. *adv. Herm.* 29-34 and 45, *adv. Prax.* 19, *adv. Marc.* i. 15 and 16; Clem. Alex. *Str.* vi. 16; Origen, *de Prin.*, Præf., i. ii., ii. i. iii. ix., iii. v., c. *Cels.* vi. 49-61, *Com. in Joh.* i. 17 and 22; Hippol. *Phil.* i. 1 f., c. *Noët.* 9-14; cf. Arnob. *adv. Gent.* ii. 58; Lactant. *Div. Inst.* ii. 10, vii. 5; *Symb. Apostol.*).

The Nicene Fathers make no distinct advance upon the cosmology of their predecessors. Athanasius refutes the heathen views of the origin and constitution of the universe (c. *Gent.* 6, 7, 29, 35-40), and emphasizes the co-operation of the Son in the work of creation (c. *Arianos.* i. 22, 29, ii. 21). Eusebius, in his *Præp. Evang.*, describes the cosmologies of the Phœnicians, Egyptians, and Greeks (i. 6-11), and later expands the Creation-story of the Hebrews, quoting, in confirmation of his own views, from Philo, Origen, Dionysius Alex., Maximus, Plato, and others (vii. 10-22, viii. 13 f., xi. 29-38, xiv. 23). Plato he assumes to have derived his knowledge of the creation and constitution of the universe from Moses. Eusebius then sets forth the teaching of the Stoics and Neo-Platonists by extended quotations, testing always by the Genesis story. The standard exposition of Gn 1 and 2 meets us in Basil's *Hexameron*. But the treatment here is homiletical and fervently religious. In this we are reminded of the early Christian view of things (NT; Clem. Rom. 20 and 33; Herm. *Past. Vis.* i. 3, 4, iii. 4, 1; *Didache*, 3 and 10).

Augustine has only incidental allusions to cosmology, but is chiefly interested in defending the Creator from complicity in the origin of evil. This he does by assuming that sin has its principal seat in the will. Rebellion against God on the part of both angels and men was the beginning of sin and the cause of 'all our woes, with loss of Eden' (*Conf.* vii. 5-7, 9, 15-20, xii. 7, 8, 12, 15-29, *de Civ. Dei*, xi. 4, 6-23, xii. 10-15). The eschatological element, which was so prominent in Apostolic times, has practically disappeared in Augustine. It began to wane at the opening of the 2nd cent., and diminished as the Church became established in the Empire and set about to conquer the world. In other respects the cosmological elements remain in about the same proportions.

The picture which the early Christians made for themselves of the cosmos and its related parts is not easily portrayed. The earth is, of course, central in their universe, and is surrounded and sustained from beneath by the chaotic watery abyss. Above is the firmament, which supports the heavens as a fixed vault, furnishing a path for the sun and all the planets. Beyond and above the firmament are the fixed stars, and all the hosts of heaven. The waters above the firmament are separated by it from the waters beneath, and serve as a fountain to refresh the earth with timely showers. Sheol, or Hades, was placed beneath the earth, and served as the prison-house, or waiting-place, for departed spirits. The cosmos as a whole was conceived as having been created for the sake of man and the heavenly intelligences, and as ruled over in wisdom and righteousness. It reveals the glory of God, and interprets His majesty and eternal Divinity.

E. K. MITCHELL.

2. Mediæval and modern.—In the period from the fall of the Roman Empire to the 10th cent.

there was little thought upon these subjects. The leaders of the Church were content to follow the teachings of the Fathers, and Augustine's interpretation of the formation of the world was accepted without question. The first one to depart from the accepted belief, or to try to explain it in a philosophical way, was John Scotus Erigena. In his study of the writings of Dionysius he became acquainted with Neo-Platonic ideas, and he tried to apply these to the Biblical account of Creation. He departed from the views of the Fathers by bringing in the theory that all things emanate from God. His views are expressed in his book entitled *Concerning the Division of Nature*, including under 'Nature' the sum-total of existence. Nature in this sense is divided into four species: that which creates and is not created; that which is created and creates; that which is created and does not create; that which neither creates nor is created. The first of these—that which creates and is not created—is God as the essence, source, and substance of all things, the one Being who truly exists. Erigena's view is pantheistic, in that he teaches that God created the world out of His own essence. He held to an all-including unity because God is all. It was easy for him to reconcile his apparent pantheism with the teaching of the Church, by saying that the Divine essence was the nothing out of which the world was created.

Through the Middle Ages the Schoolmen gave little attention to the subject of Creation. They were content to accept the views which had been handed down to them, and those who failed to do this were sure to come into conflict with the Church authorities. It was agreed that the universe came into being and was sustained and governed by the Divine will. Whether the six days of Creation were days of twenty-four hours each was open to some discussion; but two points must be agreed to by the orthodox, viz. that the universe was created out of nothing, and that it was not from eternity, but had a beginning in time. The most profound thinker on this subject in the mediæval period was Anselm of Canterbury, who modified the traditional views by the introduction of Platonic ideas. He explains (*Monolog.* ix.) the meaning of the expression *ex nihilo* by saying that there is no way by which anything can be made by another unless it previously exists in the mind of the one making it. Before creation things existed eternally, from God and in God, as ideas. They did not exist as individuals, but in the sense that God foresaw and predestined that they would be made. They were in the Divine mind as an example, similitude, or rule of what was to be made. Before the making of the universe it was in the thought of the Supreme Being, but no material existed out of which it was to be made. Yet it was not nothing in its relation to the reason of the One making. By reasoning in this way Anselm is able to reconcile his philosophical views with the accepted interpretation of the account given in Genesis. There is one passage (*Cur Deus Homo*, i. 18) in which he implies that perhaps the six days of Creation were different from the days with which we are acquainted. Thomas Aquinas discusses the subject at considerable length, but adds little to the current views. He accepts the Biblical cosmology, admitting that there is room for a difference of opinion about the six days. Like Albertus Magnus, he teaches that Creation was a miracle which cannot be comprehended by the natural reason. He believed that it was not possible to demonstrate that matter was not eternal, deprecating the efforts of other men to make the temporal character of the material universe a matter that could be proven.

He taught that it was an article of faith to believe that the world was created in time.

Contemporary with the Schoolmen were the various heretical sects, differing in some respects from the orthodox in their views of the creation and government of the world. The most divergent from the commonly accepted views were the dualistic sects, which at the same time claimed to be Christian. They went by various names, such as Cathari, Albigenses, and so on. They seem to have gained their heretical views from contact with the religions of the East, where dualism was very common at the time. In general they held that there were two principles, or spirits, or creators, which had to do with the making of the universe visible and invisible. These two were the good and the evil, and both were from eternity, though some held that the evil spirit was originally good and had fallen from his first estate. The evil spirit was the author of the OT, and the maker of all visible Nature. He had created man as a physical being, and was the cause of all natural phenomena and all disorders in Nature. The good spirit was the author of the NT. He was also the creator of the human soul, which had been captured and imprisoned by the evil spirit.

In the later Middle Ages there arose various schools of Mystics. Some of these were heretical and frankly pantheistic. Others, like Master Eckhart, considered themselves orthodox Christians, but were unable to escape the suspicion of pantheism. Eckhart was in agreement with Aquinas in his belief that there existed from eternity a world of ideas distinct from the world of creatures. He explained what seemed to his contemporaries to be pantheism, by saying that creatures are made in time and out of nothing, and that they existed from eternity in God in the same sense that a work of art exists in the mind of the artist before it takes material form. The existence of the creation from all time was in the Divine reason. God exists in created visible objects as their essence. The external world is but the reflexion of the innermost essence of God.

The modern Roman Catholic Church holds to the teaching of Aquinas, but allows a difference of opinion on unimportant points. What a Roman Catholic must believe to-day in regard to cosmology and cosmogony is defined by the Vatican Decrees. The Council declared against the statement that matter alone exists, and in opposition to the view that the substance and essence of God and of all things are one and the same; also in opposition to the view that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance, or that the Divine essence by the manifestation and evolution of itself became all things, or that God is universal or indefinite Being, which, by determining itself, constitutes the universality of things. The positive statement by the Council was that God from the very beginning of time produced out of nothing the world and all things both spiritual and corporeal.

The Protestant position, as given in the earlier creeds, is merely a paraphrase of the cosmology found in Genesis. The Westminster Confession states: 'It pleased God in the beginning to make or create out of nothing the world and all things therein in the space of six days' (iv. 1). The Belgic Confession is more explicit: 'We believe that the Father by the Word created of nothing the heavens, the earth, and all creatures, as it seemed good unto Him, giving unto every creature its being, shape, forms, and several offices to serve its creator.' 'We believe that He doth also uphold and govern them by His infinite power for the service of mankind to the end that man may serve His God' (Art. xii.).

There is, of course, no authoritative statement for Protestantism relating to Christian cosmology and cosmogony. With the freedom of investigation which characterizes modern Protestantism, there are many divergent views. Some still hold to the statements of the older creeds, and believe that the conclusions of science have nothing to do with religion. The extreme holders of this position maintain that the world was made in six days of twenty-four hours each, but this view has a decreasing number of adherents. Others believe that the account of Creation given in Genesis is strictly scientific, and that the statements there found correspond in a minute degree to the facts of geology. Others consider that the account in Genesis agrees with the facts only in a general way. Others regard the account as a myth or legend corresponding to the Creation stories in Assyrian and Babylonian literature. The only points upon which modern Protestants agree are that God is the source of the universe; that it came into being as a result of the free exercise of His will; and that it is continually under His care and control.

COSMOGONY AND COSMOLOGY (Egyptian).—We shall here divide this subject into three stages: (1) earth-myths, (2) sun-myths, (3) theolgy.

1. **Earth-myths.**—The attention of primitive man was naturally first directed to explaining tangible Nature—the earth, the sea, and the mists which lay on the land. The most elementary distinction between racial views is the sex of the earth and of the abyss or sea, which from its blueness was naturally thought to be of the same nature as the blue sky—the heavenly ocean. In Egypt the sky (Nut) was feminine, the land (To) was masculine. Exceptionally in the 13th cent. B.C., when Semitic influence was strongest, the sexes were reversed, as in Hebrew *shāmāyīm* ('heavens') is masculine, and *'ādāmāh* ('earth') is feminine. Similarly in Babylonia, Ea (the deep) and Anu (the sky) are masculine, while Damkina (the land) is feminine. The same attribution is adopted by Greek, Latin, and German, and in the New Zealand mythology. Egypt was, therefore, exceptional in the sex of land and sky.

These elements of land and water were thought to have been evolved in the primal chaos of the universal ocean (Nu or Nun), when 'not yet was the heaven, not yet the earth, men were not, not yet born were the gods, not yet was death' (Pyramid of Pepy I., l. 663).

This idea passed to Hesiod, along with the same sexes as in Egypt:

From chaos were generated Erebus (masc.) and black Night (fem.),

And from Night again were generated Ether and Day.

Whom she brought forth, having conceived from the embrace of Erebus.

(Theogony, 123 ff.)

He probably derived it through the Sidonians, who, Damascius asserts, 'before all things place Chronos, and Pothos, and Omichlēs, and by a connexion between Pothos and Omichlēs, as the two principles, are generated Aer and Aura.' This view then seems to have prevailed in the eastern Mediterranean.

The lifting of the watery mists, which are seen rising each morning from the Nile, the parting of them from the earth and the raising of them to the sky, was a work variously attributed

to Ra (the sun) or Shu (the atmosphere). The heaven (Nut) was forced apart from the earth (Keb or Seb); and usually Shu is represented upholding Nut over his head.

Similarly in New Zealand, the earth and heaven clave together in the darkness, and had produced gods and men. The gods try to part them, but cannot until the god and father of forests, birds, and insects strives; 'his head is now firmly planted on his mother the earth, his feet he raises up and rests against his father the skies, he strains his back and limbs with mighty effort. Now are rent apart Rangī and Papa, and with cries and groans of woe they shriek aloud. . . . It was the fierce thrusting of Tane which tore the heaven from the earth, so that they were rent apart, and darkness was made manifest, and so was the light' (G. Grey, *Polynesian Mythology*, Lond. 1855 [reprint, p. 3]).

In Egypt it was similarly assumed that Seb and Nut had produced Ra or Shu before they were separated.

2. Sun-myths.—The genesis of the sun (Ra) is variously attributed to Seb and to Nut. According to one view, Ra was 'the egg of the great cockler,' Seb being, by a play on words, equated with the goose. In another view, Ra was born as a calf of the celestial cow, or child of the sky-goddess; and this may be the motive for regarding the sky as feminine. Another, and a more general, view, when the theologic frame of creation came forward, was to posit the formation of Ra direct from the chaos Nun, and so make him an ancestor of Seb and Nut. Probably this view was that of the Heliopolitan Ra-worshippers, as distinct from the older Seb- and Nut-worshippers in the Nile valley. Ra came into being 'while as yet there was no heaven, . . . and there was nothing that was with him in that place where he was . . . resting in the waters of Nun, and he found no place where he could stand' (Erman, *Religion*, p. 26). Ra then united with his own shadow, and from his seed created Shu and Tefnut, in the midst of the chaos. Shu certainly represents space or air, symbolized by an ostrich feather; Tefnut represents moisture. From Shu and Tefnut were born Seb and Nut; and from them, in turn, the Osiride family, and mankind.

The heaven was regarded as an ocean parallel with that on earth. It was on the heavenly ocean that the sun, the moon, and the stars sailed in ships each day and night. To explain the sun's re-appearing in the morning, they supposed a nocturnal ocean beneath the world, on which the sun sailed as by day. The dead were, on this view, considered as joining the boat of Ra, and sailing, under his protection, through the hours of the night as well as of the day.

3. Theology.—The gods associated with creation are many. *Khnemu*, 'the Shaper,' who shapes living things on his potter's wheel, 'created all that is, he formed all that exists, he is the father of fathers, the mother of mothers . . . he fashioned men, he made the gods, he was father from the beginning . . . he is the creator of the heaven, the earth, the under world, the water, the mountains . . . he formed a male and a female of all birds, fishes, wild beasts, cattle, and of all worms' (Wiedemann, *HDB*, vol. v. p. 179^b). He is figured always with the ram's head, to signify his creative power, and was worshipped at the source of the Nile—the cataract. *Ptah*, 'the Great Artificer,' the Demiurge, shapes the sun- and moon-eggs on his potter's wheel; he is the god of law and order who created all things by *Maat*, truth or exactness. *Osiris* 'formed with his hand the earth, its water, its air, its plants, all its cattle, all its birds, all its winged fowl, all its reptiles, all its quadrupeds.' This is the development of the primitive idea of Osiris as a god of vegetation. *Amon-Ra* also, on the growth of his worship when Thebes was the capital, became 'the father of the gods, the fashioner of men,' and all other things (see Wiedemann, *loc. cit.*).

Thoth, according to Hermopolite legend, when in the chaos of Nun, created Seb and Nut by his word; and they were parted asunder at Hermopolis. This creation by the word was the highly spiritualized idea of later times, and is seen in the *Korē Kosmou* (500 B.C.), where Thoth-Hermes is first of the gods.

Other sky-gods are *Anher*, 'He who goes above god of Theni or Gizeh; and *Horus* as the sky supported by four pillars who are the four sons of Horus. The mixtures of ideas in later times are complex, and so combined with the theology, that we cannot touch on them here. Our object has been to show the primitive ideas, and the various nuclei of thought which were combined.

W. M. FLINDERS PETRIE.

COSMOGONY AND COSMOLOGY (Greek).

—Since the word 'cosmogony' describes the origin of the universe by the figure of birth, it suggests to us in the first instance accounts of a mainly poetic and mythological kind. Yet science also has its fairy tales, and one who sought for information about Greek cosmogonies might not unreasonably look for some account of that, for example, which is contained in the *Timæus*. If this be introduced, so should those of one or two other philosophical systems. We propose, therefore, to deal first with what may be called the poetic cosmogonies, and afterwards with the philosophical. We shall devote rather more space to the former, as being probably less familiar to most readers. In the case of the latter, we shall take three typical examples, describe them briefly, and try to show the place of each in the history of Greek thought as to the relation between God and the world.

1. *POETICAL COSMOGONIES*.—1. *Homer*.—We find in Homer not a complete cosmogony, but ideas of a cosmogonical kind, or, rather, of a geogonical, as all he is concerned about is the world in which we live. In *Il.* xiv. 246, Oceanus is the father (*γενεῖς*) of all the gods, and in xiv. 201 he is the father, and Tethys the mother. The latter name is usually derived (F. Lukas, *Kosmogonien*, p. 154 n.) from *θησθαι*, 'to suck' (*τροφή* = 'nurse'). Tethys will then symbolize the suckling mother, Earth. But behind these Nature-powers stands a third still more august, the goddess Night. In *Il.* xiv. 244, Zeus is referred to as younger, indeed, but more potent, than Oceanus; Night, on the other hand, even Zeus fears to offend (*ib.* 259 ff.). Lukas, therefore, follows Damascius (6th cent. A.D.), our chief authority on the first principles of the Greek cosmogonies, in supposing that, for Homer, Night was the supreme geogonical conception (Damasc. *περί πρώτων ἀρχῶν*, c. 124, ed. Kopp, 1826, p. 382).

2. *Oldest Orphic cosmogony*.—To this head Lukas refers those fundamental conceptions which in various fragmentary notices are directly ascribed to Orpheus. Not the least evidence of their antiquity is their practical identity with what we have found in Homer. Eudemus the Peripatetic declared, according to Damascius (*l.c.*), that Orpheus made his beginning with Night. John Lydus (6th cent. A.D.) stated that Orpheus' three first principles were: Night, Earth, Heaven (Lobeck, *Aglaoph.* 1829, i. 494). Plato, again, quotes a couplet as from Orpheus, describing Oceanus and Tethys as the first wedded pair (*Crat.* 402 B), while he informs us in the *Timæus* (41 A) that Oceanus and Tethys were the offspring of Earth and Heaven. As the former statement is expressly referred to Orpheus, we may be sure that he had the same

real or fancied authority for the latter. In this Orphic cosmogony, it will be seen, Oceanus and Tethys are a degree less venerable than in Homer; Earth and Heaven are the older pair. Yet the difference is insignificant, and here, as in Homer, Night is the supreme conception. According to Gruppe (*Griech. Culte*, etc., 1887, i. 613 f.), the cosmogony of *Il.* xiv. was borrowed from the Orphic. But the question of their relation is an extremely difficult one, which cannot be discussed here.

3. Hesiod.—In the introduction to his *Theogony*, Hesiod actually names Earth, Heaven, and Night—the reputed Orphic trinity—as the sources of the gods (verses 106–107); and one feels that, whatever its origin, he is using a familiar and probably already ancient formula. But, at the outset of the poem proper, he proceeds to give us what in fact, though not in name, is a cosmogony of his own (verses 116–136). Its outline is as follows: In the beginning was Chaos, after whom, on the one hand, came Gaia and Eros, and, on the other, Erebus and Night. Erebus and Night were the parents of Æther (or Light) and Day. Gaia of herself produced, first Uranus (Heaven), that he might be a cover to her round about, and that she might be a secure dwelling-place for the gods; and after him the mountains and seas. Lastly, mating with Uranus, she became mother of all the gods, except the few who sprang from Erebus and Night.

At the top, then, of Hesiod's cosmogony stands Chaos. Its meaning has been variously interpreted by ancient no less than by modern commentators. It has been taken for Water, Air, Fire, and Space (cf. for ref. Lukas, *op. cit.* p. 157 f.). Etymology has been appealed to in each case. But no derivation seems more probable than that from $\chi\alpha$ or $\chi\alpha\upsilon$ (the root of $\chi\alpha\lambda\upsilon\omega$, 'to gape,' $\chi\alpha\lambda\upsilon\sigma$, $\chi\alpha\sigma\mu\alpha$, Lat. *hisco*, *hiatus*, etc.). Thus we get the meaning of Space, and this further accords with the manner in which Hesiod seems to have arrived at his first principle, viz. by *abstraction*. In pondering the origin of the universe, he thinks away one by one its various contents, until he reaches Space as the final presupposition of all things. As Time comes first in the Phœnician cosmogony given by Eudemus, and, as we shall see, in some Greek cosmogonies, so does Space in this of Hesiod. Zeller (*Pre-Socr. Phil.* i. 88 f.) agrees with Lukas that Space was Hesiod's first principle, and that he reached it by abstraction, but thinks that Hesiod pictured it 'as an immeasurable, waste, and formless mass,' while Lukas understands by it the mere unlimited void.

On the next cosmogonical stage we have two pairs, of which the first is Gaia and Eros. Gaia is Earth, not however as an element, but as a vaguely conceived mass. There is, at first sight, something detached about the appearance of Eros. He enters the stage with the others, but seems to perform no rôle. But the reason is that he is a potency rather than a person. He is the soul of all the unions here recorded. He is the Eros, not of art, but of early local cult like that at Thespis (Paus. ix. 27. 1), who was life and love in one, and was taken over by the Orphics (cf. Gomperz, *Gr. Thinkers*, i. 89, and, for the connexion of Eros with the Orphics, J. Harrison, *Proleg. to Gr. Relig.* ch. xii.). We are not told how Gaia and Eros came into being. They may symbolize matter and spirit, but they are not derived from Chaos as a higher principle. The ruling principle of the cosmogony is not that of cause and effect, but that of sequence in time. We only hear that Gaia and Eros came afterwards (*ἔπειτα*). And the same is doubtless true of the second pair, Erebus and Night. They are said to have come *ἐκ* $\chi\alpha\sigma\mu\alpha$, but the *ἐκ* may be merely local (Space being referred to), or temporal, or both. Accordingly Gaia, Eros, Erebus, and

Night occupy together the second cosmogonical stage.

A step further removed from Chaos are Æther and Day, who are children of Erebus and Night. So the unrelieved darkness gives place to the succession of night and day. Earth also at this stage gives birth to Heaven, that he may shield her with his vault, to the mountains also and the seas; and then, when all is ready for their reception, Earth and Heaven become the parents of the gods.

In Hesiod's cosmogony there is no real attempt to explain the causes of things. But it has, according to Lukas, two elements of speculative worth—the conception of *purpose* in creation (the provision of a safe home for the gods), and the far-reaching *abstraction* by which the poet goes back to Space, and then step by step reconstructs the world.

Passing by Acusilaus, a prose chronicler of the 6th cent., and, like Hesiod, a native of Boeotia, whose cosmogony, contained in Damascus, resembles Hesiod's, and has also a marked Orphic colouring (Lukas, *op. cit.* pp. 162–163), we come next to—

4. Pherecydes.—He was a native of Syros, but lived at Athens at the court of Pisistratus (6th cent. B.C.). At Athens 'he founded an Orphic community, though how far he was the disciple and prophet of the Orphic doctrines we are hardly able to say' (Gomperz, *op. cit.* i. 86). His own work has been lost, but numerous notices, which have come down to us from ancient times, and which relate to various parts of his cosmogony, enable us to form, though with reserve on some disputed points, a tolerably full as well as reliable estimate of his system. According to both Damascius (e. 124, ed. Kopp, p. 334) and Diog. Laert. (i. 119), Pherecydes derived the universe from three first principles—Zas (=Zeus), Chronos, and Chthonia (or Chthon). At the summit of the cosmogony, then, stands Zeus. He is probably best regarded as a purely spiritual principle (so, e.g., Arist. *Met.* xiv. 4, 1091a, and many moderns, but cf. e.g. Zeller, *op. cit.* i. 91), so far as mind was consciously distinguished from matter at that early date. The spiritual interpretation is confirmed by the statement of Proclus (5th cent. A.D.)—which at the same time presents a new and interesting phase of the cosmogony—that the Zeus of Pherecydes changed himself into Eros when he meant to create the world (*Tim.* 155). Zeus as such, therefore, stands outside the world; he is the principle of supreme might. Chronos, the second member of the trinity, naturally denotes the Time, in which everything happens, and occupies an analogous position to Space in Hesiod's cosmogony. Lastly, Chthonia must be taken to mean either primary matter (Lukas, *op. cit.* p. 170) or the Earth-spirit (Gomperz, *op. cit.* i. 88).

Some of the ancients asserted that *water* was Pherecydes' first principle; but this conflicts not only with Diog. Laert. but with the more detailed account of the cosmogony given in Damascus. A full discussion of this obscure and difficult question will be found in Lukas, *op. cit.* pp. 168–170, or Zeller, *op. cit.* i. 93–94 n.

As regards the relation of the three principles to one another, Damascius implies that Zeus was in some sense first; but his exposition is purely Neo-Platonic. It is safer, therefore, to trust the more objective Diogenes, according to whom the three first principles of Pherecydes were alike eternal (*ἴσταν ἀεί*).

The cosmogony begins when Chronos produces from his seed Fire, Air, and Water, who then beget the five families of the gods. Thus gods and elements alike are the offspring of Time. And now Zeus-Eros plans to create the world. But at this stage, according to Max. Tyrius (*Dissert.* xxix. p. 304, ed. Davis; cf. also Celsus *ap. Origen c. Cels.* vi. 42, *et al.*), a fearful conflict intervenes betwixt Cronos (not to be confused with Chronos) and the

dragon Ophioneus for the lordship of Nature. Only when Cronos wins and the dragon is cast into the sea can Zeus set about his creative task. The episode is not quite of a piece with the cosmogony, since Zeus is from eternity,—there is no Cronos before him. But there is no reason to doubt that Pherecydes employed the myth. Perhaps, as Philo of Byblus states (*ap. Eus. Præp. Ev. i. 10, 33*), he borrowed it from the Phœnicians. In any case the meaning is clear: before the ordered world, the *κόσμος*, can be established, a victory must be won over the forces of disorder.

The final stage is related by Clem. Alex. (*Strom. vi. 621 A*): 'Pherecydes the Syrian says: Zas makes a mantle, large and fair, and broiders on it earth and ocean and ocean's dwellings.' Again he speaks (*ib. 642 A*) of 'the winged oak and the embroidered mantle that rests upon it.' The 'winged oak' is no doubt 'the earth floating freely in space'—a conception lately introduced by Anaximander (Gomperz, *op. cit. i. 89*). The rest of the imagery explains itself.

Points of likeness between the cosmogonies of Pherecydes and Hesiod will readily occur to the reader. Here we only note points in which Pherecydes marks an advance. In the first place, Zeus, according to the interpretation here followed, and even on the lower, is a more spiritual conception than Chaos (Space). In the second, there is a certain suggestion of science in the cosmogony. The four elements are named before the formation of the world. So far, indeed, as our accounts go, Pherecydes does not work the suggestion out. On the other hand, he clearly treated Eros (Love) as a cosmical principle, and one cannot but suspect that, if his whole work had reached us, we should have found that Zeus-Eros used the elements as materials for his creative task.

Damascius (c. 124, ed. Kopp, p. 385) gives a fragment of a cosmogony by the Cretan Epimenides (c. 600 B.C.). In this cosmogony we meet for the first time among the Greeks the doctrine of the World-Egg. But it is little more than mentioned, and so we shall pass at once to give some account of the later Orphic cosmogonies, in which it plays a prominent part.

5. Later Orphic cosmogonies.—In a former section we dealt with certain thoughts about the origin of the world which were ascribed to Orpheus, but here we are dealing with entire systems. They are highly mystical and pantheistic, and, though fanciful and grotesque, are most naturally referred to a period of religious and philosophical syncretism. Hence some critics like Zeller (*op. cit. i. 100 ff.*) refuse to regard any of them as earlier than the 1st or 2nd cent. B.C. Others, however, assign a much earlier date to the one which Damascius tells us was contained in the current 'Rhapsodies,' and which he describes as the usual Orphic theology. Thus O. Gruppe (in Roscher, *s.v. 'Orpheus'*) argues strongly, but cautiously, in favour of the view that it was formed in the 6th cent. B.C. on the basis of a still earlier Orphic myth. To this system we now turn our attention.

(1) *Rhapsodist cosmogony.*—This includes what the Orphics taught both about the Divine nature and about its relation to the world. The fullest account of the former is contained in Damascius (c. 123, ed. Kopp, p. 380). He must, indeed, be used with caution, owing to his Neo-Platonic bias. Lukas points this out, but thinks he may be trusted for the number, sequence, and names of his first principles. In this he seems to go too far, but, if we combine all that is essential in Damascius with what we learn from other sources, especially Orphic fragments (for which cf. Gruppe, *l.c. p. 1139*), we reach the following result, which will be

found in essential agreement with what, for example, is contained in Zeller (*op. cit. i. 104*) or in Gruppe (in Roscher, *s.v. 'Phanes'*). At the summit of the system stands Chronos (Time). Next come Æther (bright, fiery substance, cf. 'Stoic cosmogony' below) and Chaos (Space). Lukas observes that, though Time is named before Space, it is not viewed as producing it, but merely as the active principle, while Space receives that which arises in Time (but cf. Zeller, *l.c.*). After Æther and Chaos comes the Egg, which is viewed sometimes as the offspring of Chronos and Æther (fr. 53), sometimes as that of Æther and Chaos (Proclus, *Tim. i. 138*). In either case it springs from Æther, and is thus, as Lukas calls it, an Egg of Light. Damascius elsewhere describes it as *ἀργύρεον*, 'silver-white.' And it deserves the name, not only because it was formed from the light of heaven, but because from it, as we shall see, Phanes, the light of the world, proceeded. Finally, there issues from the Egg the first Orphic god. Damascius, who favours trinities, calls him Phanes-Ericapeus-Metis, which is generally interpreted 'Light, Life-giver, Counsel.' But, above all, he is Phanes, 'Light,' who becomes at will the light of reason, the light of life, and—for he is also Eros—the light of love. As first-born of the gods he is Protogonos. There is something sublime in these conceptions. But Phanes was also 'polymorphic, a beast-mystery god,' a creature monstrous and grotesque, as in the fragment quoted by Proclus (*Tim. ii. 130*):

'Heads had he many,
Head of a ram, a bull, a snake, and a bright-eyed lion'
(J. Harrison, *op. cit. p. 651*).

Such was the Orphic doctrine of the Divine nature. It had one feature which, according to Lukas, gave speculative value to the Rhapsodist cosmogony. This is the effort to explain the origin of life. While many cosmogonies begin with a Divine being, the Orphic sees in his God the last stage in the evolution of life out of the lifeless.

We have next to consider Phanes' relation to the world. He had in him all the forces, or *σπέρματα*, out of which it sprang. Hence, though he was sometimes called its creator, he was generally thought of as having given it birth. The idea took the form of a theogony, in which the successive dynasties of gods represent the successive stages in the evolution of the world. In this process, part of the god became the world's life; with the other he withdrew as sun into the heavens, where only Night could look on him, while his splendour amazed the other gods. But when Zeus attained to sovereignty he devoured Phanes. Thus the old order was dissolved, but thus also Zeus became the sum of all things. He became Phanes (see next section), and from him a new race of gods, a new world, sprang. In his son, Dionysos, the god of the mysteries, Phanes was born again. Like Phanes, Zeus became the world—*Ζεὺς κεφαλὴ, Ζεὺς μέσσα, Διὸς δ' ἐκ πάντα τέτυκται* (fr. 123),—but, like Phanes also, he dwelt apart, for his mind was the ether (Gruppe, in Roscher, *s.v. 'Orpheus'* and 'Phanes'; Pauly-Wissowa, *s.v. 'Orpheus'*; Zeller, *op. cit. p. 104 f.*; J. Adam, *Relig. Teachers of Greece*, p. 95 f.; Lobeck, *Aglaoph.* 518 ff.; fr. 120 ff.).

The story of the swallowing of Phanes has usually been explained as a device to recover for Zeus his ancient dignity as source of life—for had he not long ago devoured Metis and borne Athene? This could be done by showing that he swallowed Phanes who was also Metis. But Gruppe sees in the story a different motive. It was to depict the periodical renewal of the universe, which he regards as the ground thought of the Rhapsodist cosmogony. This was a feature of Stoic cosmo-

gony (see below) to which the Orphic doctrine has other points of resemblance—especially its pantheistic materialism, and its view of Æther as the principle of Divine life. On the whole, it is difficult not to believe that there was a close connexion between the two cosmogonies, on which ever side the borrowing lies.

(2) *The cosmogony of Hieronymus and Hellanicus.*—From the Rhapsodist theology, Damascius passes to one which he describes as ἡ κατὰ τὸν Ἱερώνυμον φερόμενὴ καὶ Ἑλληνικόν. It is uncertain, and cannot be here discussed, whether it was known to Hellanicus of Lesbos in the 5th cent. B.C., or was published under his name by Hieronymus in one of the later pre-Christian centuries. It was generally Orphic in character, but differed, as Damascius indicates, from the current Orphic theology. We cannot, indeed, be sure as to its precise form. This is due chiefly to the fact that we find in Athenagoras (2nd cent. A.D.) what is evidently a different version of the same original doctrine. The differences will be afterwards mentioned. Meantime we shall notice briefly the main points in Damascius' version.

At the head of this cosmogony we find, not Chronos, as in the last, but—Water and Slime. Out of these springs Chronos. This does not mean that Time is not viewed as an active first principle, but only that it is more concrete. Here Time is viewed as force—force which presupposes matter to work on. The Orphic imagination runs riot in depicting this force. Chronos is a winged dragon with the heads of a bull and a lion, and betwixt them the face of a god. He is Chronos-Herakles-Ananke-Adrasteia. Herakles betokens his might, Ananke his necessity, Adrasteia his inevitability. Next, Chronos produces Æther, Chaos, and Erebus. We met Æther and Chaos in the Rhapsodist cosmogony, but here they follow after primary matter, and so Æther is more grossly conceived as *humid* (ὕδρεος). In the last, where Erebus is *misty* (δυσχλῶδες). Lastly, in the midst of the vaporous space, with its mingled light and gloom, Chronos produced an Egg (ᾧδον ἐγέννησεν). This naturally implies that it partook of the substance with which space was filled. It was, therefore, formed out of grosser elements than the Egg of the Rhapsodist cosmogony. Thus also we are told that it had within it the seed of male and female, and likewise of all manner of things without life. For this very reason it better deserves to be called a World-Egg. But it is not an Egg of Light. And, lastly, we have the same contrast in the Divine Being, the Maker and Ruler of the world, who issues from the Egg. In his monstrous and grotesque form he resembles the first-born God of the other cosmogony. But he has lost his title of Phanes, the god of light, and appears as Protogonos-Zeus-Pan.

As compared with the current Orphic doctrine, that just examined is marked by a certain coarse realism. Both in form and spirit it is less distinctively Greek. In some points, indeed, it closely resembles the Phœnician cosmogony, and Zeller maintains that its author borrowed directly from that source (*op. cit.* i. 102-3 n.; but, on the other side, cf. Gruppe, in Roscher, s.v. 'Orpheus,' p. 1141).

In describing the Orphic doctrine, Athenagoras, who was a Christian, no doubt selected the cosmogony of Hellanicus and Hieronymus because he saw most in it to condemn. But what specially concerns us is the form in which he presented it. The series begins with Water and Slime, and out of these Chronos-Herakles is evolved. But here the resemblance to Damascius ceases. No mention is made of Æther, Chaos, and Erebus. Chronos-Herakles produces a gigantic egg, which breaks into halves, of which the upper forms the heaven, and the lower the earth. In this naive conception there is clearly no element of speculative value. The egg has no special significance beyond its shape. On the other hand, in the cosmogonies

described by Damascius, the World-Egg is an expression of the profound thought that the universe is an organism, gradually formed from an original germ, in obedience to the same law which governs every living thing.

(3) Before leaving the Orphic cosmogonies proper, we may briefly notice three others of minor importance. (a) The first and the best known is that of *Apollonius Rhodius* (3rd cent. B.C.), who in the *Argonautica* (i. 494 ff.) puts into the mouth of Orpheus some verses describing the origin of the world. Here the separation of the four elements is ascribed to the action of Discord—an idea evidently borrowed from Empedocles. The legend of Ophioneus and Chronos, which was used by Pherecydes (see above), is introduced in a somewhat different and, judging by internal evidence, less authentic form (cf. Gomperz, *op. cit.* i. 91). (b) *Alexander of Aphrodisias* (3rd cent. A.D.) gives us the following series: Chaos, Oceanus, Night, Uranus, Zeus. This, it will be seen, resembles the older rather than the later form of Orphic cosmogonies. (c) Lastly, the author of the *Clementine Recognitions* (x. xvii.) gives a brief summary of Orphic doctrine. Some of the first principles, notably the Egg and Phantasia, remind us of the Rhapsodist cosmogony, but the account as a whole is less coherent, and strikes one as probably less accurate, than that of Damascius.

6. *Aristophanes.*—In one famous passage (*Av.* 693 ff.) Aristophanes depicts the origin of the universe. In the beginning were Chaos, Night, Erebus, and Tartarus. Into the bosom of Erebus, Night laid a wind-born egg (ὄρνις ἐνέμεινον φόνον) from which, as the seasons rolled, Eros sprang, gleaming with golden wings. Eros blended all things together, and from their union Heaven, Ocean, Earth, and the race of the gods were born. J. Harrison (*op. cit.* p. 626) calls the passage about the birth of Love 'pure Orphism.' And, indeed, Gruppe (in Roscher, s.v. 'Orpheus,' p. 1121) maintains that the gold-winged Eros springing from the egg was part of the oldest Orphic doctrine. But some details in the passage remind us of other cosmogonies, especially that of Hesiod (cf. Lukas, *op. cit.* p. 196).

The 'theologians,' as Aristotle calls those whose doctrines we have been considering, represent a perfectly distinct phase of Greek thought. 'Their mind was less scientific than that of the "physiologists."' They made a far keener demand for a vivid representation of the origin and development of the world' (Gomperz, *op. cit.* i. 85). Nor were they satisfied with the current mythology. Its tales were perhaps too immoral. Certainly its cosmogony was too vague. And so they sought to fill up its gaps partly from local legend, partly from the traditions of foreign peoples.

Gomperz has striven to show (*op. cit.* i. 92-97) that various features in the Greek cosmogonies—the World-Egg, the twofold nature of the Orphic godhead, in which the male and female attributes were united, and the important position occupied by Chronos as the Time-principle—were ultimately derived from Babylon, although the two former had probably their direct source in Egypt, but a discussion of this question would carry us beyond our present limits.

II. *PHILOSOPHICAL COSMOGONIES.*—The cosmogonies we have examined, though not without elements of speculative value, are essentially hypothetical in character; those to which we now turn represent the effort to explain the world on philosophical principles, and in each case from a distinct philosophical point of view. For this very reason, however, they cannot be properly understood or appreciated apart from the general movement of Greek thought. This, therefore, we must also try very briefly to indicate.

1. *Early Ionian philosophers.*—The earliest Greek philosophers were natives of Ionia in Asia Minor. Beginning with *Thales*, who flourished at Miletus about 600 B.C., they each sought to explain

the universe from a single, and that a material first principle. They discussed more or less fully the nature of the changes which the primary matter underwent, but the ultimate cause of the movement, by which the world in all its parts was formed out of material elements, was a subject on which Thales and his immediate successors had little or nothing to say. The reason was that they regarded the cause as inherent in the nature of matter itself (Gomperz, *op. cit.* i. 56). This was also true of Heraclitus of Ephesus (c. 500 B.C.): to him also matter was 'organically alive' (*ib.* p. 66). But a great step in the history of Greek speculation is marked by his doctrine of the *Logos*, by which he gave expression to the thought that the world-forming process must be guided by Intelligence. He taught, indeed, that all reality is material, and that the primary element is Fire; but, as he assigned to the latter the attribute of reason, he called it also the *Logos*. In other words, the *Logos* viewed on its corporeal side was Fire, and Fire viewed on its spiritual side was the *Logos* (J. Adam, *op. cit.* p. 224). Here, then, a first principle was postulated, which was at once material and rational, and it was on this basis that the Stoic cosmogony (see below) was afterwards reared. But before that time the great thinkers of Greece had sought to show that the world was framed by God as at once a rational and non-material Being, and Heraclitus at least paved the way for that conception when he endowed his First Cause with the attribute of reason.

2. The first Greek philosopher who traced the world to a non-material agency was Empedocles (c. 450 B.C.). He did this in his doctrine of the four elements, whose movements were determined by the twofold agency of Love and Discord (J. Adam, *op. cit.* p. 245). But a far more important step in the direction of idealism was taken by Anaxagoras, who, though born rather earlier than Empedocles, probably had the work of the latter before him when he wrote (*ib.* p. 254). According to Aristotle, it was Anaxagoras who first pointed to the real cause of the movement by which the world was formed. This cause he named *Nous*, or Reason, to which also he seems to have attributed a mainly, if not exclusively, transcendent existence (*ib.* p. 371).

3. Plato.—Though Anaxagoras did not make much use of his great conception, it led to far-reaching results. Especially it brought into clear view the opposition between matter and spirit. The opposition may not be absolute, but it was naturally the distinction between the two which first occupied the attention of philosophers. It was the chief problem of Plato's Dialectic. But it is with its cosmological aspect that we are here concerned. If the First Cause was purely immaterial, how could He act on matter at all so as to create the world? In this question and the answer to it lies the chief significance of the cosmogony which Plato has set before us in the *Timæus*:

Even apart from much that does not strictly belong to it, the cosmogony of the *Timæus* is intricate, but here it will be enough to consider its main ideas. For a fuller exposition and discussion the reader may be referred to Jowett's *Plato*, vol. iii., or to Adam, *op. cit.* p. 380 ff.

God formed the world out of a material so intractable that it could not be completely moulded to His will. But He introduced into the primary substance 'as many proportions as it was possible for it to receive' (*Tim.* 69 B). The stubborn power, which thus resists the Creator, Plato calls 'Necessity.' It is the root of evil in the world, and, as it will not wholly yield to God, 'the Creator in Plato is still subject to a remnant of Necessity which he cannot wholly overcome' (Jowett, *Plato*, iii. 391).

In forming the world, God gave it a Body and also a Soul. (1) *The body*. On certain portions of

primary matter, which was formless and chaotic, God imprinted various mathematical 'forms' and 'numbers' (*Tim.* 53 B). Thus arose the four elements of which the body of the universe was composed. The idea of a Divine mathematician, in which Pythagorean influence is plainly visible, runs through the whole account of creation. According to Plutarch, Plato said that God is always playing the mathematician (*θεός δὲ μαθηματικὸς*). (2) *The soul*. Plato describes the elements of which the World-Soul was composed, but his account is highly metaphysical, and need not detain us here. It is enough to examine its attributes. Of these the first is Motion. It is manifested in the movements of the planets (*Tim.* 36 D), but it has other aspects, not directly referred to in the *Timæus*, which are important in estimating the nature of the World-Soul. According to the *Laws* (x. 896 A), the essential quality of soul is self-movement. Further, the Soul is the cause of movement in other things, and by movement (*κίνησις*) Plato understood every kind of change (*ib.*, *Phædrus*, 245 C). The World-Soul, therefore, is the cause, not only of locomotion, but also of 'separation and combination, growth, decay, and dissolution' (J. Adam, *op. cit.* p. 368). The second attribute is Intelligence. It is here to be taken in the widest sense, for we are given to understand that the World-Soul apprehends not only ideas, but sensible realities, and such as lie between the two (*ib.* p. 369 f.). On the other hand, 'the World-Soul, as described in the *Timæus*, has nothing analogous to the principles of anger and desire . . . which, according to Plato, constitute so large and turbulent a portion of the human soul' (*ib.* p. 370). Plato speaks of the World-Soul as created. In what sense he used the term he nowhere precisely explains, but there can be little doubt that he thought of an emanational process. Such is the view of the writer just quoted, who thus sums up the cosmogonical process: 'At the beginning of Time, God created the Universe. A spirit or soul went forth from him, and inhabited the body which he redeemed from chaos by imprinting mathematical forms on primordial matter' (*ib.* p. 373).

The universe, thus formed of body and soul, is described as *εἰκὼν τοῦ ποιητοῦ, μονογενής*, 'image of its Creator, only-begotten.' Thus it is related to Him as son to father. Further, it is itself a god, a *θεὸς ἀσθητός*, or 'perceivable god' (*Tim.* 92 C). On the other hand, the Creator is a Being mysteriously remote, 'hard to discover' (*ib.* 28 C), who, when He had made the world, 'abode in his own nature' (*ib.* 42 E).

We may now see how the Platonic cosmogony was an attempt to explain the world on dualistic principles. Since God as pure thought could have no contact with matter, Plato was obliged to assume for the work of creation some formative principle separate from God Himself. Hence the separate existence of the mathematical forms imprinted on matter, and especially of the World-Soul incorporated within it. It is from this point of view that Caird describes the World-Soul as 'a kind of bridge to connect two terms which it is impossible really to unite' (*Evolution of Theology in the Gr. Phil.* ii. 266).

4. Although Aristotle (*q.v.*) effectually criticized the theory of 'Ideas,' which Plato held to exist apart from matter, yet his own doctrine was fundamentally dualistic, as appears from his view of the Divine life as an energy of self-contemplation. But after his time Greek thought swung round to the opposite pole. Abandoning the dualism by which mind and matter, subject and object, were opposed to each other as mutually exclusive realities, it sought to explain the world by means of

a single principle. This men sought where they felt surest of finding it, in their own subjective experience. Thus they hoped for a certainty which they could never have about an object with whose appearances only they were acquainted. It may be added that the subjective trend in philosophy was part of a general movement affecting the last epoch of Greek national life, from Alexander the Great onwards (Schwegler, *Hist. of Phil.* pp. 120-122). Now, the subjective life itself has two sides, the one universal and spiritual, the other individual and material. It was on the latter view of man's nature that the Epicureans based both their ethical and their physical theories. The Stoics, on the other hand, appealed in their Ethics to man's rational nature, while in their Physics they derived the world from a material principle (for the reason of this apparent inconsistency, see Schwegler, *op. cit.* p. 125). It will be seen that in their use of a single principle the Stoics and Epicureans returned to the point from which philosophy had diverged after the time of Heraclitus, but, as R. D. Hicks remarks (art. 'Stoics,' in *EBR*¹¹), 'until dualism had been thought out, as in the Peripatetic school, it was impossible that monism (or at any rate materialistic monism) should be definitely and consciously maintained.' Both the Epicureans and the Stoics had what may be called a materialistic cosmogony, but that of the Stoics is in several ways the more important, and to it therefore we now turn.

5. Stoic cosmogony.—The Stoic first principle was akin to the Fire of Heraclitus, but of a subtler nature—a fiery breath (*πνεῦμα*) or ether (*αἰθήρ*). But in a more important respect it differed from Heraclitus' first principle. For the Stoic primary substance was matter regarded in its distinctively active aspect as force. Viewed in relation to the actual world, it is thus described by R. D. Hicks (*loc. cit.*):

'Before there was heaven or earth, there was primitive substance or Pneuma, the everlasting presupposition of particular things. This is the totality of all existence; out of it the whole visible universe proceeds, hereafter to be again resolved into it. Not the less is it the creative force, or deity, which develops and shapes this universal order or cosmos.'

So far the Stoic theory reminds us of much that we have already met with in other systems. But the *mode* of the creative activity, as conceived by the Stoics, was altogether new. The Stoic primary substance, be it remembered, is matter and force in one (cf. Zeller, *Stoics*, etc., p. 148: 'the forming force . . . is in itself something material,' etc.). Its force is that of *tension*, the expansive and dispersive pressure due to heat, and the extremity of the tension is seen in the fact that all distinction of particular things, due to relative density, is lost within it. It cannot long withstand the intensity of this inward pressure. It sways to and fro, and this movement cools a little the glowing ether. Condensation begins, and with it the first distinction within the primal substance—the separation of force from matter. Matter is now the relatively passive; but, as first formed, it differs but little from the pure activity of the substance from which it sprang. It is the element of fire. But again, as condensation proceeds, fire produces air, and this in turn the grosser elements of water and earth. Throughout the process, however, the more active substance never quite surrenders its own nature. Thus only a portion of air becomes water or earth, and something of the pure *Pneuma* itself remains in the ether which stretches above and around the world. As already seen, the distinction of active and passive in the case of the four elements is only relative; and this appears still further in the blending of the elements with one another, and the formation of all particular things. In the universe thus formed the finer substances are

those in which the tension of the primary substance is greatest, and the solid are those in which it is most relaxed, and in which matter appears most inert and passive. And, finally, all the shapes and other attributes of things are referred to the ethereal force. Here the need of a guiding Intelligence is most felt. And in fact the force moving in the world was to the Stoic the Soul of the World. Although material, it was, like the Fire of Heraclitus, also intelligent, even as the λόγοι σπερματικοί before the dawn of creation slumbered within it.

The Stoic cosmogony was the chief attempt made by the Greeks not merely to derive but to *explain* the origin of the world from a purely material first principle. It was ingenious, and its account of the manner in which force works in the material world contained elements of permanent value. But it went too far in treating force as a genetic first principle. For material energy is always relative to matter as passive and inert. Nor does it, indeed, appear that the Stoics conceived of force as anything else than the formative aspect of matter (cf. Zeller, *l.c.*). Nevertheless, by regarding it as a primary substance out of which the world was evolved, they *ipso facto* ascribed to it an independent reality. Hence the Stoic first principle was an abstraction which could explain nothing.

6. Neo-Platonic cosmogony.—Before leaving the Greek cosmogonies, we must notice briefly a second and very different attempt to explain the origin of the world from a monistic standpoint. We refer to the system of the Neo-Platonists, who belonged to the last period of Greek thought, when Stoicism and Epicureanism had run their course. The Neo-Platonists taught that the ultimate source of being was neither matter nor spirit, but a real unity transcending both. In this they might seem to quit the subjective standpoint of the later philosophical systems. Yet in reality theirs was the most subjective of all. They found the key to the Divine nature solely in the subjective side of human experience, in the unity given to outward impressions by the thinking subject. They taught also that the material is less real and perfect than the ideal world, that intellectual cognition is the pathway to truth and goodness, and that actual contact with these realities is attained only by means of an 'ecstasy,' in which the distinction between subject and object disappears.

The Neo-Platonists claimed that their doctrine was the direct outcome of Plato's teaching, but in this they did less than justice to the objective element in the latter. No doubt there were features in Plato, especially the terms in which he described the transcendence of God, which gave some support to this claim. But Neo-Platonism owed far more to Oriental influence, the causes of which we cannot stop to inquire (cf. Ueberweg, *Hist. of Philos.* i. 222 f.). It is, in fact, a blend of Greek and Oriental elements. It may be added that 'the religious philosophy of the Alexandrian Jews and the Gnosis of early Christianity are products of the same elements, but under an Oriental form' (*ib.* p. 223).

Plotinus (A.D. 204-269) is the most representative teacher of this school. Of his doctrine, contained in the six *Enneads*, which were published by his pupil Porphyry, a very brief summary must suffice:—The first principle, from which Plotinus derives the universe, is called by him the One, or the Good. This supreme essence is absolutely transcendent, and incognizable. It cannot be described as either Being or Intelligence, for either epithet would imply a limitation of its absolute unity. It is *ἐπέκεινα τῆς οὐσίας* and also *ἐπέκεινα*

νοήσεως. It is not however, irrational, but only supra-rational (ὑπερβηχὸς τὴν νοῦ φύσιν). Its title of 'the Good' immediately reminds us of the Supreme Being in Plato. But, in spite of the abstract manner in which 'the Good' or 'the Idea of the Good' is described in the *Republic*, it is clear that Plato ascribed to it both being and intelligence. (For the meaning of 'the Good' in Plato, and for a comparison with Plotinus, see J. Adam, *op. cit.* p. 446 f., and Ueberweg, *op. cit.* i. 122, 246 f.)

As the source of all things, the One produces first of all the highest kind of actual being, which is Mind (νοῦς), i.e. the Divine Mind (Ueberweg, *op. cit.* i. 248). In this Mind the Ideas (νοήματα) are immanent. They are not, however, mere thoughts, but parts of the Mind's essence, and for this reason, on which Plotinus lays great stress, they are absolutely true objects of thought. Thus the Nous is at once the Subject and the Object of knowledge; in the first aspect Plotinus regards it as at rest, in the second as active. But how did the Nous originate from the One? Plotinus regards this as a problem so difficult that it must be approached with prayer (*Enn.* v. 1, 6). He finds an analogy in the idea of radiation (περιλαμψίς). The Nous arises from the One like brightness from the sun (*ib.*). The great difficulty, of course, was to explain how actual Being could arise from a source to which the attribute of Being was denied. But he finds a solution 'in the transcending power of the One, which latter, as the superior, can send forth from the superabundance of its perfection the inferior, without having contained the latter, as such, in itself' (Ueberweg, *op. cit.* i. 247; *Enn.* v. 2, 1).

As the One produces Mind, so does Mind produce Soul (ψυχὴν γεννᾷ νοῦς, *Enn.* v. 1, 7). And, as Ideas appear along with Mind, so does Body along with Soul. As Plotinus expresses it, Soul, as it issues from Nous, extends itself into the corporeal, as the point extended becomes a line (*ib.* iv. 1). Plotinus says that the Soul has a divisible element, yet he also says that it is immaterial. He tries to reconcile the two statements as follows: 'The soul is *per se* indivisible, being divided only as related to the bodies into which it enters, since these could not receive it if it remained undivided' (*ib.* iv. 21; Ueberweg, *op. cit.* i. 249). The Soul in its entirety is present throughout the body, yet in all its faculties—reason, memory, perception, and even life-force—is absolutely separable from it. There is a plurality of souls. The highest of all is the Soul of the World, but other souls have also a separate existence of their own (*Enn.* iv. 3, 7, iv. 9).

Lastly, what is the Neo-Platonist view about the nature and origin of matter? In Plato, matter and mind remain as two ultimate facts. Plotinus, on the other hand, declares that the soul, in virtue of its mobility, *begets* matter (*ib.* iii. 7, 10, iv. 3, 9; Ueberweg, *loc. cit.* i. 249). Now, so far as the material is known to us, i.e. so far as it possesses form, it partakes of an ideal nature. But Plotinus recognizes that beneath that form there is a *substratum* (ὑποκείμενον), a something which is different from the form and which might take other forms. This *substratum* he calls the βάθος, or 'depth,' of each thing, and he says that it has no real existence; it is *μη ὄν*. He explains its nature partly by reference to the Ideas which are the objects of Nous. In its most general sense the term εἶδη ('matter') is also applied to these. And just because they are objects of thought, they also possess this quality of βάθος, or 'depth.' But they are nevertheless wholly real, like the Mind which knows them. And Plotinus says that the *substratum* of sensible things is only a shadow (εἰδωλον)

of the *substratum*, as their form is but a shadow of the form pertaining to the Ideas.

The theory whose essential features we have thus tried to give represents the last important attempt made by Greek thought to explain the origin of the world. It fails mainly through the abstractness of its first principle—a Unity of which not even Being can be predicated.

In its mysticism the Neo-Platonic theory of the world reminds us not a little of the Orphic cosmogonies. It resembles them, indeed, both in form and in spirit, as might be inferred from the fact that the notices of the latter given by Damascius are interwoven with Neo-Platonic conceptions.

LITERATURE.—The following, though only a selection from an immense number of books dealing with various parts of the subject, will, together with their references, supply all needed help to those who wish to study it further: F. Lukas, *Die Grundbeg. in den Kosmog. der alten Völker*, Leipzig, 1893, to whom the writer has been specially indebted in the first part of the subject; O. Gruppe, *Griechische Culte und Mythen*, I, Leipzig, 1887, and art. 'Orpheus' and 'Phanes,' in Roscher; E. Abel, *Orphica*, Leipzig, 1885; T. Gomperz, *Gr. Thinkers*, Eng. tr., vol. I, London, 1901; E. Zeller, *Stoics*, etc., new and rev. ed., do. 1892, *Pre-Socr. Phil.*, vol. I, do. 1881, *Outlines of Hist. of Gr. Phil.*, do. 1892, *Plato and the Older Acad.*, do. 1876; J. E. Harrison, *Proleg. to Study of Gr. Relig.*, Camb., 1908; J. Adam, *The Relig. Teachers of Greece*, Edinb., 1902; B. Jowett, *Dialogues of Plato*, vol. III, Oxford, 1892; R. D. Hicks, art. 'Stoics,' in *EBR*, also *Stoic and Epicur.*, London, 1910; T. Whittaker, *The Neo-Platonists*, Camb. 1901; C. Bigg, *Neoplatonism*, Lond. 1895; E. Caird, *The Evol. of Theol. in the Gr. Philosophers*, Glasgow, 1904; J. Horowitz, *Philons u. Platons Lehre v. d. Welterschöpfung*, Marburg, 1900; R. Adamson, *Development of Gr. Philos.*, ed. W. R. Sorley and R. P. Hardie, London, 1908; A. Schweigler, *Handb. of the Hist. of Philos.*, Edin. 1885; F. Ueberweg, *Hist. of Philos.*, vol. I, London, 1872; J. E. Erdmann, *Hist. of Philos.*, do. 1898; A. Harnack, *Hist. of Dogma*, Eng. tr., do. 1894-1899. I. F. BURNS.

COSMOGONY AND COSMOLOGY (Hebrew).—There are generally recognized in the Hebrew Scriptures two formal cosmogonies, the earlier of which is contained in Gn 2, beginning with v.⁴, or rather v.⁵.

1. Cosmogony of J.—This story, as we have it, belongs to the pre-exilic, historical, Prophetic narrative of the Judean kingdom (J), which was in course of composition from about the time of Solomon until the middle of the 8th cent. B.C. The cosmogony, as much as we have of it in Gn 2, assumes the world as already existing, and deals only with its preparation for the use of man. With it is connected the story of the Garden of Eden, the Temptation, and the Fall and its consequences. The object is not so much to answer the question, How did the world come into existence? as the questions, Where did man come from? Why does man differ from the beasts? especially, Why does man have a sex consciousness and a sex shame, which the beasts do not have? and, Why must man, who is the crown of creation, toil and labour to get his bread, and to reproduce his kind, by the sweat of his brow and the agony of his body? So far as the nature of man is concerned, this cosmogony, while naively primitive, is full of a childlike wisdom and sweet spirituality, which has commended it to all succeeding ages, and which was doubtless the cause of this part of the J narrative being preserved at a time when the Pentateuch was cast into the present form and prefaced by the great cosmogony of the Priestly Code (Gn 1-2^d).

In the cosmogony of Gn 2, the earth is assumed as already in existence, a barren place on which there were no shrubs and no herbs, because Jahweh Elohim had not yet caused rain to fall on it, and because—a charming bucolic touch, characteristic of the anthropomorphism of the whole narrative—there were no men to till the ground. But a fountain¹ went up out of the

¹ נַחַל, practically a *šar. ley.* (the only other occurrence is Job 36²⁷), rendered in EV 'mist.' LXX has πηγή, which, practically, Gunkel follows. This accords with the following narrative, the reference being apparently to the great source out of which came all the rivers of the world. In this narrative the waters

earth and watered all the face of the ground (v. 5). Then, out of the dust of the ground, moistened by this water, Jahweh Elohim, like a potter, made man, and, having made him, breathed into his nostrils the breath of life, whereupon man became a living creature. And, because he was made out of the ground (*'ādāmā*), therefore he was called 'man' (*'ādām*). Then Jahweh Elohim planted a garden in Eden, far away to the east, and caused all sorts of beautiful trees and goodly fruits to grow there, and the tree of life and the tree of the knowledge of good and evil. Through the garden, coming from the fountain which connected with the waters beneath the earth, flowed a great stream, watering the garden and dividing, as it left it, into the four great rivers of the world—Pishon, Gihon, Tigris, and Euphrates.

Jahweh Elohim put man in His garden to till it and guard it, and permitted him to eat of all the trees in the garden, except only of the tree of the knowledge of good and evil. Then, seeing that the man was alone, He planned to give him a helpmeet, and formed all the beasts and birds and brought them to man, who named them. But among them was found no mate for man. Then Jahweh Elohim caused man to fall into a profound sleep, and, taking one of his ribs, clothed it with flesh and made out of it woman; and her the man at once recognized as his mate, bone of his bone and flesh of his flesh. Woman (*'ishshā*) was she called, because derived from man (*'ish*); therefore a man leaves his father and his mother and cleaves to his wife, and they become (literally, by physical union) one flesh. And the two of them, the man and his wife, were naked, and were not ashamed.¹

The story here told is in many of its particulars identical with the cosmogonies and cosmologies which we meet elsewhere. The thought is world thought, the out-thinking of primitive man almost anywhere. When he asks himself the question, Of what is man created? the natural answer is: Dead, he returns to dust; therefore, out of dust he came; and so, as the potter makes vessels out of clay (dust mixed with water), God made man. So breath, which is wind (a part of God's breath), is the element of life; for, if the wind or breath goes out of a man, he is dead. So, again, the relation of name to thing, which plays so important a part in this cosmogony, is not characteristic of any one people, but is a very wide-spread conception of primitive men. Name and thing are one. To know the name is to know the essence of the thing; and to know is to have power over—the utterance by Adam of the names of the beasts put those beasts in subjection to him who had given them their names. The serious plays upon words—*'ādāmā* and *'ādām*, *'ish* and *'ishshā*—are based upon the same theory of the identity of name and thing. Of course, this assumes that the primitive language was Hebrew, in accordance with the universal belief of primitive peoples that their own language was spoken by God Himself. The story of the origin of mankind, told in the person of a being bearing the name 'Man,' is common also to various national cosmological myths. The same is true of the relation of man and woman here described, and, to a considerable extent, of the garden of God in which man was placed.

But, while much in the story may be classed as universal primitive thought, there are also certain ear-marks which unmistakably indicate a Bab. connexion for at least some of the fundamental thoughts of our tale.

The park or garden which God plants, and in which He sets the man whom He creates, is far off, in some remote land away to the east. This is the case also with the Egyptian paradise; but, when we note the name Eden, apparently the Bab. *ēdinu*, 'plain,' for the garden, and the names of the rivers which have their source in it, we are obliged to recognize the influence of Bab. thought. The garden, it is true, is not in Babylonia, yet

it lies in the region out of which the rivers of Babylonia take their origin. It is a plain on the top of the mysterious mountain of the north, where, in Bab. thought, the gods had their abode.¹ Probably also the fourfold number of the rivers connects itself with those representations which we find in early Bab. art of a four-divided stream, all the rivers of the earth pouring out from one great fountain connecting with the great deep, the waters beneath the earth. In the relation of man to the beasts, before woman was created, there is also at least a suggestion of resemblance to the story of the wild primitive man, Eabani, in the Bab. Gilgamesh legend. Eabani was made out of clay by the goddess Ishtar, in whom is the womb of life. At the outset he consorted with the beasts of the field. 'He ate grass with the gazelles, he drank water with the cattle of the field, he amused himself with the animals of the water.' Out of this condition he was raised to true manhood by entering into relation with a woman, a priestess of Ishtar, who came to entice him. It was by finding a mate in her that he developed out of a being like the beasts into civilizable man. So, apparently, in the thought of the Heb. story, Adam was at first like Eabani, but no true mate was found for him among the beasts of the field. His manhood required a helpmeet of his own kind, bone of his bone, flesh of his flesh. Perhaps another Bab. element is the eating of the tree of life, which appears in the sequel of this story, the Fall of Man (Gn 3). This bears a certain resemblance to the Adapa myth, of which a copy was found among the Tell el-Amarna tablets. The cherubim also which God placed eastward of the Garden of Eden, appear to be of Bab. origin. The peculiar emphasis laid upon Assyria in the geography of the Garden of Eden, and apparently on a very early Assyria, when Ashur, and not Calah or Nineveh, was the capital of Assyria, when, in fact, the city of Ashur was Assyria (for the Tigris is here made to flow to the east of Assyria), leads one to ask whether the Bab. elements in this story were not largely, or in some part, mediated through Upper Mesopotamia, with which the ancestry of Israel was connected by a very strong tradition. Cf., further, COSMOGONY AND COSMOLOGY (Bab.).

But while the cosmogony of this story has evident connexions with Bab. thought, such connexions are ancient and remote. The characteristic colouring is evidently Palestinian. It is the native of a *b'ēlāh* land, a land of the *b'a'al*, like Palestine (where fertility comes directly from the rain sent down from heaven), not the native of a land like Babylonia (where fertility depends on the overflowing of the rivers), who gives us in Gn 2 the picture of the barrenness of the world before Jahweh Elohim sent rain and man tilled the ground. It is worthy of note that similarly, in the J version of the Flood story, the Flood was caused by the rain which Jahweh sent from heaven, not by the breaking out also of the waters of the abyss beneath.²

Another independent evidence of the antiquity of the J cosmogony, in addition to the allusion to Assyria, is the relation of man to woman. It is not the woman who leaves father and mother to cleave to the man, but the man who leaves father and mother to cleave to his wife—an apparent survival of the old matriarchy, of which we also have an example in the Samson story, where the woman remains with her tribe or clan or family, and is visited by the man (Jg 15').

In general, we may say of the cosmogony contained in Gn 2 that it is based upon a primitive folklore developed in Palestine, going back to a very great antiquity, into which have been absorbed, at some time or another, by an indirect process, some elements of Bab. myth and legend, possibly coming through the Mesopotamian region, with which, according to tradition, the Israelitic ancestors were closely connected. In the form in which it has come down to us, it has been thoroughly Hebraized, above all in the monotheism of its conceptions. The Creation is due to Jahweh only. There is no other God mentioned. He is Elohim (God), albeit He is conceived of in a most anthropomorphic fashion. Growing upon Canaanite soil, rooting in the remote past, utilizing in its composition Bab.

¹ In the most important Heb. traditions the abode of God (Jahu) was in the south, in Sinal, or Horeb (cf. e.g. Jg 6⁹, Ex 19¹¹); but, by a borrowing apparently from Can. traditions (ultimately derived, probably, from Babylonia), it is also placed in the mountain of the north (cf. Ps 46, Ezk 1), as is the account of the Deluge (Gn 7¹¹).

² Cf., for the latter, the P version of the Flood story (Gn 7¹¹).

beneath the earth are assumed; it is only with the rain, which comes from above, from Jahweh Elohim, that we are concerned. Cf. Skinner, *ad loc.*

¹ This story is a man's story, *homo sexualis*. In general it is an interesting example of the methods of early thought. Man measures the universe by himself. He explains the relations of all about him by what he knows of himself. Woman depends upon man, and woman was made for man. She is a subordinate but very intimate part of himself. The rib is chosen for the material of her construction because ribs are relatively numerous, and therefore superfluous, in man's composition, while at the same time a rib belongs so much to the inward part of man, so to speak, as to establish by its use in the construction of woman the most intimate relation with himself.

material indirectly derived, it shows, in the last stages of its development, the high, spiritual thought of the Prophetic narrators of the 9th and 8th cent. B.C., who paved the way for the great writing prophets of the succeeding centuries.

The story was evidently popular among the Hebrews, not on the side of what may be properly called its cosmogony, but for its account of the Garden of God in Eden and the Fall of man, which we find particularly used in later literature in the Book of Ezekiel (cf., for instance, ch. 28, and the other chapters dealing with the fall of Tyre). It is this element also which has profoundly influenced Christian thought. The cosmogony proper is negligible in its influence on later thought, and is manifestly in itself very incomplete.

2. Cosmogonic myths in Hebrew literature.—A more complete and more systematic cosmogony is contained in Gn 1. The composition of this chapter dates probably from the early post-exilic period, but it is founded on old myths, which appear in much older passages, and which display a striking similarity to the cosmogonic myths of Babylonia. Some of these passages it is worth while to consider before we analyze the more systematic and elaborate cosmogony of Gn 1.

Ps 89¹⁴ is an old passage, of Galilean origin (as is shown clearly by the use, in v. 12, of Tabor and Hermon as landmarks of north and south), now forming part of a later Psalm. This is one of those Psalms whose words imply a polytheistic conception: 'Who among the clouds is like unto Jahweh, is equal to Jahweh among the sons of the gods?' Jahweh is described as ruling the waves of the sea, stilling the tumult of its billows. He has smitten and contemptuously treated Rahab. With His strong arm He has scattered His foes. This is referred to as a part of the Creation work by which He founded the heavens and the earth, the world and its fullness, Creation being depicted as connected with a battle of Jahweh against some monster, here called Rahab, and its allies, who are foes of God or of the gods.

Ps 74¹²⁻¹⁷ is similarly an ancient passage, apparently of north Israelitic origin,¹ in a Psalm which, in its later form, is Maccabean. Here God is described as having, in olden time, done wonderful works in the midst of the earth. He divided the sea by His strength, He smote the heads of dragons or sea-monsters on the waters, He crushed the heads of Leviathan and gave him for food to the jackals—a more specific note of that contemptuous treatment to which there is reference in Ps 89. That this is part of a Creation-myth is shown by the following description, where, as the result of this battle with the sea-dragons and Leviathan, God digs out the fountains and the valleys in which their waters run, dries up the primitive rivers, forms night and day, moon and sun, establishes the boundaries of the earth, etc.

The Book of Job, while itself of relatively late origin, is notably full of old traits. In it we find a number of references to mythical monsters, with whom God contended in connexion with the creation of the world. Of these the most noteworthy perhaps is Job 26^{12f}:

'With his strength he troubled the sea,
And with his skill he pierced Rahab.
His wind spread out heaven,
His hand slew flying serpent.'

We have here two monsters—Rahab (connected with the sea) and flying serpent (connected with the heavens). The battle with the sea, indicated in the first line, is connected with the piercing of Rahab; and bound up with this is the spreading

¹ Cf., among other things, the almost exclusive reference in the Asaph Psalter to Jacob, Joseph, and Benjamin, and the use of Elohim instead of Jahweh—differentiating this collection, or rather these collections, from the first book of Psalms, precisely as E is differentiated from J in the Pentateuch.

out of heaven by His wind, and the slaughter, apparently in heaven, of another monster.

Chapters 40 and 41 deal much more fully with two monsters, here, however, differently named—Behemoth, whose home is on the dry land, and the much more dreadful Leviathan, which inhabits the deep. These monsters were evidently well known in Heb. tradition of a later date. Thus, in 2 Es 6⁴⁰⁻⁴² we have a description of two living creatures which God preserved on the fifth day of creation—Behemoth and Leviathan—to the former of whom He gave as his habitation a part of the dry land whereon are a thousand hills, while to the latter He gave that seventh part of the earth occupied by the sea. In Enoch 60⁷⁻⁹ we find the same two monsters, with the further note that Behemoth, who occupies the barren waste, is a male, while Leviathan, the monster of the abyss, over the source of the waters, is a female. Enoch 54⁹ corresponds somewhat more closely with the account of the two animals in Job, in that it describes the water which is above the heavens as male, and the water which is under the earth as female. In Job 7¹² and 9¹⁸ we have incidental references to a sea-monster of the deep called in one place 'dragon,' *ṭān*,² and in the other Rahab,³ which, with its allies, has been overcome by God and imprisoned by Him. In ch. 38 there is no mention of the monsters, but of a struggle of God with the deep itself (v. 74): 'When the morning stars sang together, and all the sons of God shouted for joy: when God shut up the sea with doors, fastening it in with bars and gates.' According to the cosmogonic ideas of this book, 'God spread out the sky, strong as a molten mirror' (37¹⁸); this rests upon pillars (26¹¹), and above it are the waters held up by the clouds (v. 9): the earth rests upon a chaos of waters or a great sea (v. 7); in the bowels of the earth is Sheol or Abaddon (v. 9). Waters are closely connected with darkness, and both those above and those below the earth form the habitation of monsters.

Abundant other references, early and late, show this to be certainly a very wide-spread view of the origin of the world among the Hebrews and later Jews. There are, however, slight variants of this general view, and the monsters of the deep are called by different names. The deep itself and the chaos to which the original deep belonged are designated sometimes merely by words expressing the sea, at other times by more technical titles; and the same is true of the monsters of chaos or the deep.

The ancient myth is applied also to historical events, very much as we may find parts of the *Nibelungenlied* mixed up with actual historical events of mediæval history, or in Babylonian literature events of the history of Erech combined with the Epic of Gilgamesh.⁴ In Is 51⁹ the delivery from Egypt is described in terms of the old cosmogonic myth: 'The arm of Jahweh cut Rahab in pieces, pierced the dragon.' In Is 30⁷ Egypt is called Rahab because 'she helpeth in vain.' In Ps 87⁴ and elsewhere we find the same use. The myth is also applied eschatologically. As God once created the earth after destroying the monsters of chaos, so He shall again, out of a world reduced to chaos because of the wickedness of man, re-create a new earth and a new heaven

¹ See also Ezk 29³⁻⁶, Ps-Sol 22^{2b-34}. In Ezekiel the dragon-myth is used in describing the fate of Egypt, and in the Psalms of Solomon, of Pompey; but in both cases the ancient myth is clearly in mind.

² In Ps 40⁴ the plural of this, *ṭāhām*, appears to mean 'false gods'; and *ṭōhū* is used in the same sense in 1 S 12²⁴ and Is 41²⁹.

³ Folk-lore frequently exhibits this phenomenon. So, for instance, in the Wendish Spreewald one finds old fairy tales, identical with those collected by Grimm, told about Frederick the Great, Ziethen, and others of the same period.

by the same means (cf. the late Isaianic Apocalypse, Is 24-27). Here, however, we have (27¹) three monsters: Leviathan the swift serpent or flying serpent (which appears to be alluded to in Job 3⁸, inhabiting the waters above the firmament and causing the eclipse); Leviathan the crooked serpent, which is the sea encircling the earth; and the dragon in the depths of the sea, which is the serpent of Am 9².

In a somewhat similar picture of the reduction of the earth to chaos through the wrath of God, in Jer 4^{23a}, birds, men, and beasts are destroyed; mountains and hills lose their solidity and shake to and fro; the light of the heavens is turned into darkness; and the earth becomes waste and void—*tôhû* and *bôhû*—the technical words for 'chaos' used in Gn 1².

Out of these various references we may reconstruct the general cosmogonic conception of the Hebrews: first, a condition of chaos and darkness, a waste of waters, inhabited by monstrous and noxious forms; then a battle of Jahweh, with the approval and rejoicing of the gods (divine or semi-divine beings, stars, etc.), against the deep and the monsters of chaos, in which in some way He uses the wind. By means of this He spreads out a firmament above, resting upon pillars, provided with windows,¹ through which the waters above may be let down upon the earth. Beneath, upon the great void, He spreads the earth, a dwelling-place for living things, under which is the sea or abyss (*t'hôm*).² In this abyss, as also in the heights above, still dwell great monsters, whom the Lord has preserved there, whom no other than He can control, and who are dangerous and noxious to men and to the works of men.

This was not only the cosmogonic thought of the Hebrews; it also constituted an element of their religion, and was represented in their ritual and religious paraphernalia. So, in the temple of Solomon was a great laver, the so-called 'sea,' representing the *t'hôm*;* and on the candlesticks of Herod's temple, as represented on Titus' Arch at Rome, are apparently pictured the monsters of that *t'hôm* which Jahweh had overcome.⁴

This cosmogony clearly is closely related to that of Babylonia, where we have the same contest of Marduk (acting for the other gods, whom he thereby largely supplants) with a great female monster, *Tiamât*,⁵ which is by root the same as the Heb. *t'hôm*. This monster he splits in two, after inflating her with a great wind. He reduces her various allies to submission, and, after treating her corpse with contumely, he divides it into two parts, out of one of which he makes the heaven, and out of the other the earth, the waters being thus separated into two great seas, the one above the firmament of heaven and the other beneath the earth.

3. Systematized cosmogony of the Priestly Code.—The Bab. cosmogony, as we know it in the cuneiform texts, is contained in seven tablets. Similarly the systematized cosmogony of the Heb. Priestly Code (Gn 1-24), which formulates and develops in a scientific and exact manner the popular belief, is divided into seven days.

This cosmogony commences with the description of a condition where the earth was *tôhû* and *bôhû* (i.e. chaos)—two words evidently handed down from antiquity. This chaotic condition is further described as 'darkness upon the face of *t'hôm*.' *T'hôm*, as already stated, is radically identical with the Bab. *Tiamât* (here used without the article), and is evidently, like *tôhû* and *bôhû*, a technical term of the cosmogonic

myth. Following this description of the condition of darkness, chaos, and enormity, the narrative proceeds: 'The wind of God was rushing upon the face of the waters.'¹ Here perhaps we have a remnant of the myth which represents Marduk using the wind as his weapon against *Tiamât*.

Having thus condensed the mythical material, which bulks so largely in the Bab. story, and which evidently played an equally important part in the common Jewish cosmogony, and having altogether eliminated its polytheism, the Priestly narrator then proceeds on a higher plane to describe Creation as a result of seven utterances of God. The order of these creative utterances may be supposed to coincide in general with that of the Bab. seven tablets, although this cannot be stated certainly, owing to the fragmentary condition of those tablets.

First came light; second, the firmament in the midst of the waters, to divide the waters beneath from the waters above; third, the separation of dry land and the springing of verdure, trees, and the like upon the earth; fourth, the creation of sun, moon, and stars, which are set in the heavens, both to give light and to rule the day and the night—the latter, perhaps, containing a trace of the polytheistic conception of the old astral worship, which it is intended to correct by stating that these rulers of day and night are creations of God; fifth, the creatures of the sea and the birds of the air, both of them created out of water, among which it is noteworthy that the writer recognizes the continued existence of the great sea-monsters, dragons, serpents, etc., of the popular belief (v. 2), included in Job, Enoch, and Esdras, under the titles Behemoth and Leviathan. The sixth day covers the creation of the creatures of the earth and of man. In the note of the creation of man (v. 26) we have a remnant of the more primitive anthropomorphic conception of God, of which the writer could not readily divest himself, in the statement that man was made in the image of God; and perhaps also an echo of the earlier polytheism in the words put in the mouth of Elohim: 'Let us make man in our image.' Not that the writer means to speak of more than one God of Israel, but he cannot yet altogether divest himself of the thought of a plurality of gods in human shape. The resting of God on the seventh day, and the establishment in connexion with that of an eternal Sabbath, are peculiarly Hebrew; for, although a rudimentary Sabbath existed among the Babylonians, it played no important part in Bab. religion or mythology. The seventh tablet of the Babylonian Creation-series, with which in Hebrew corresponds the establishment of the Sabbath as a part of Creation itself, contains a hymn of praise to Marduk as the creator.

The question arises, To what extent was this cosmogony based on Bab. ideas? We have already seen that, in general, it is a statement, in precise, scientific, monotheistic, and unmythological form, of cosmogonic views prevailing among the people of Israel from an early period. Certain resemblances have also been pointed out between those cosmogonic myths and the cosmogonic myths of the Babylonians. It would seem that at some early period Bab. cosmogony became known to the people of Palestine. The general view at present is that, in some form, locally modified, the Bab. cosmogony became the common property of Palestine and surrounding regions during the centuries of predominating Bab. influence in the West (c. 2000 B.C.), and that the Hebrews adopted that cosmogony, in whole or in part, gradually modifying it to fit into their religion,² eliminating the polytheistic and grosser traits, and spiritualizing and rationalizing the residue. The cosmogonic myth, accordingly, pursued the same course

¹ Commonly rendered 'the spirit of God was brooding,' etc. This rendering of the Heb. כִּכְוֶהֶת is suggested by a supposed connexion with an Aram. root. In Hebrew it occurs elsewhere only in Dt 32¹¹, in a description of the vulture teaching its young to fly, where it has been translated 'hovering.' This is manifestly incorrect (but see Skinner on Gn 1²). The parent birds do not hover over the young when turning them out of the nest to fly for themselves, but make rushes at them, and away from them. The LXX has preserved the correct tr. of the word כִּכְוֶהֶת of Gn 1², viz. *ἐνεπνεύετο*, 'was rushing upon.' This agrees with other references in Heb. literature to the use by God of wind in creation (see above), and also agrees with the Bab. myth.

² Unfortunately we lack, up to the present time, a sufficient knowledge of Phœnician cosmogony and the cosmogony of other neighbouring peoples to prove or disprove this theory. True, certain fragments of Phœn. cosmogony have come down to us, claimed to be the relics of the writings of a certain Sanchuniathon; but, in the first place, it is very doubtful whether such a man ever existed, and, in the second place, what has been handed down has reached us in such a form that it is almost impossible to determine its origins and connexions. We do find, however, in Phœn. cosmogony, a creature, *Tauthe*, which is the same as *Tiamât* and the Heb. *t'hôm*, and a *Bau*, which appears to be the Hebrew *bôhû*; so that extent Phœn. remains may be said to support this hypothesis.

¹ Cf. Gn 7¹¹, 2 K 72¹⁹, Ps 78²⁹.

² Gn 7¹¹ 49²⁵, Dt 33¹³, Ps 42⁷ 78¹⁵, Pr 32²⁰.

³ 1 K 7²³, interpreted by comparison with Bab. use.

⁴ Cf. the similar use in Bab. temples.

⁵ In the Bab. myth we have also *apsu*, 'sea,' as a technical term or name. At least once in Hebrew (Is 40¹⁷) the corresponding root *DSK* has the same sense.

as almost everything else in Hebrew ritual and religion. The cosmogony in Gn 1 represents the final stage of its development, when the effort was made to rid it altogether of its grosser and polytheistic elements, to spiritualize it, and to fit it into the new scheme of the purified and reformed religion of Israel, which the priestly schools of the Captivity sought to establish. The final author may possibly have been affected directly by Bab. models to the extent that he adopted from the seven tablets his arrangement by seven days; but even this seems improbable, for the seven-day system was already in existence in Israel, and constituted an integral part of its religion. The Bab. seven tablets of Creation were ancient. Their 'sevenness' is an element which would naturally have impressed any people, but especially one regarding the number seven as holy; and, while there is no other evidence in the Biblical passages, indicating acquaintance with the cosmogonic myth, of knowledge of this 'sevenness,' it nevertheless seems more probable that it formed part of the popular scheme of cosmogony,¹ even though the events of the days of Creation may not coincide altogether with the order of events in the Bab. tablets, than that it was borrowed by the Priestly Code from the Babylonians. The author of the Priestly Code cosmogony was concerned rather with those things which differentiate the Heb. from the Bab. versions of the cosmogony. And, indeed, the difference between the two is far more striking than the resemblance. It is wonderful how out of the fantastical, puerile, and gross fancies of the Bab. original there has been developed so sane, so lofty, and so spiritual a system of cosmogony as that contained in Gn 1-2⁴.

4. Cosmogony of J compared with popular cosmogony and cosmogony of P.—How does it happen that two cosmogonies so radically different in conception continued to exist side by side? As already pointed out, ch. 2 deals, not with the creation of the world, but with the problems of man. It finds him on the barren hills of Judæa. It does not concern itself with their creation, but with the manner in which they are made habitable, and the problems of the men who inhabited them, who had been driven out, for their sins, from the beautiful Garden of God in the fertile far east, to live on, and to till, this land of thorns and thistles. Had the narrator been asked how the dry land, the heavens, etc., came into existence, he would doubtless, incompatible as the two things seem to us, have told of a contest of Jahweh with chaos and the monsters of the deep, and the formation of an earth resting on the great deep, with the solid firmament of heaven above, and the waters still above that—substantially the scheme described in Gn 1, though not in the same systematized and highly developed form. Theoretically he believed in a deep beneath the earth, as is shown in the fountain from which a stream came out and watered the Garden of God, being the source of all the rivers of the world. But practically this deep was negligible in Judæa, where one must look to Jahweh for water from heaven; and so even in the Flood-story of J the water comes down only from above.

5. The highest and final Hebrew thought concerning Creation.—The cosmogony of Gn 1-2⁴, lofty as it is in its monotheistic conception of the power of God, did not reach the highest limits of Hebrew thought. Hampered by the old myths, it stood perilously near dualism in reckoning chaos, darkness, and the deep as existing, independently

of God, from eternity. There were men of the same period, but of a different school of thought, with prophetic vision, and a higher, less hampered spirituality, who had perceived and were teaching a still higher thought, namely, that God was the Creator of darkness as well as of light, of chaos as well as of order, of evil as well as of good. Deutero-Isaiah was familiar, as we have seen, with the popular cosmogonic myths, and apparently also with the more formal cosmogony ultimately formulated in Gn 1-2⁴; but its fundamental conception of the opposition of chaos, darkness, and the deep to God he utterly rejects. 'I am Jahweh, and there is none else, forming light and creating darkness, making prosperity and creating evil' (Is 45^{6a}). This is the highest expression of the creative thought in the Old Testament. In Pr 8²⁰⁻²¹ Creation is an expression of the wisdom of God, which is almost hypostatized. In some of the late Psalms we have very beautiful and spiritual conceptions of Creation, especially in Ps 104,¹ but in principle these are only poetic liberties with the cosmogony of Gn 1. More and more this cosmogony became an essential part of the religion of the Jews, on which Judaism and Christianity, almost up to the present time, have founded literally their conception of the creation of the world. Along with this also some of the old mythological conceptions continued to linger on.² Indeed, there is nothing in Gn 1 to forbid them, and, as we have seen, the writer of v.²¹ evidently himself believed in the existence of the mythical monsters of the deep. What part these played in later Judaism one may see from the Book of Esdras and from Enoch, which have already been quoted, and finally even from the Apocalypse in the New Testament, many of the images and concepts in which, particularly in chs. 12, 13, 17, 21, reflect the ancient mythology of the battle of the representative of the gods with the dragons and monsters of chaos and the deep.

LITERATURE.—The OT commentaries, especially those of Delitzsch (Eng. tr., Edinburgh, 1888-89), Dillmann, (Eng. tr., Edinburgh, 1897), Holzinger (Freiburg, 1898), Gunkel² (Göttingen, 1902), Driver³ (London, 1905), Ayles (New York, 1904), and Skinner (Edinburgh, 1910), on *Genesis*; A. B. Davidson (London, 1882), Dillmann⁴ (Leipzig, 1891), Budde (Göttingen, 1896), and Duhm (Freiburg, 1897), on *Job*; Cheyne⁵ (London, 1886), Dillmann-Kittel (Leipzig, 1898), Marti (Tübingen, 1900), and Duhm² (Göttingen, 1902), on *Isaiah*; Bertholet (Freiburg, 1897) and Kraetzschmar (Göttingen, 1900), on *Ezekiel*. JOHN P. PETERS.

COSMOGONY AND COSMOLOGY (Indian).

—Cosmological speculations were, in India as elsewhere, the first manifestation of philosophical thought; they are already met with in the Rig-veda, in single verses as well as in entire hymns. The basis of these speculations, in the Vedic period, was not a generally adopted theory or mythological conception as to the origin of the world; widely differing ideas about this problem seem to have been current, which the more philosophically minded poets developed and combined. There is a kind of progress from crude and unconnected notions to more refined ideas and broader views; but this development did not lead to a well-established cosmogony such as we find in the first chapter of Genesis. A similar variety of opinion prevailed also in the period of the Brahmanas and Upanishads, though there is an apparent tendency towards closer agreement. Uniformity, however, was never

¹ Cf., for instance, the form of the Fourth Commandment in Ex 20, which, however far removed from the form of the original 'Word,' is at least much earlier than the Priestly Code.

² Cf. also Ps 88⁶.

³ Ps 148⁷.

achieved, even in the Purāṇas; for all statements, however contradictory, contained in the revealed literature were regarded as truth, and might be reproduced by later writers. Cosmography, on the other hand, had another fate. Different writers of the same period are much more nearly at one regarding the plan and structure of the Universe, at least in its main outlines, than regarding its origin and development; but it goes without saying that both sets of ideas—cosmogonic as well as cosmographic—are equally fanciful, and lack the basis of well-ascertained facts.

1. Vedic period.—The world, according to Vedic notions, consists of three parts—earth, air, and sky, or heaven. But, when the idea of 'Universe' is to be expressed, the phrase most commonly used is 'heaven and earth.' Both Heaven and Earth are regarded as gods and as the parents of gods (*deva-putra*), even although they are said to have been generated by gods. Sometimes one god,—Indra, or Agni, or Rudra, or Soma,—sometimes all the gods together, are said to have generated or created heaven and earth, the whole world; and the act of creating is metaphorically expressed as building, sacrificing, or weaving. That heaven and earth should be parents of the gods, and at the same time have been generated by them, is a downright self-contradiction; but it seems to have only enhanced the mystery of this conception without lessening its value, since it recurs even in advanced speculation. It is avoided in the declaration that mother Aditi is everything, and brings forth everything by and from herself, though in another place it is said that Aditi brought forth Dakṣa, and Dakṣa generated Aditi. Here Aditi is apparently a mythological expression for the female principle in creation, and Dakṣa for the male principle or creative force. The latter is more directly called Puruṣa, man or male spirit, and is conceived as the primeval male who is transformed, or who transforms himself, into the world. To him is dedicated the famous *Puruṣasūkta*, Rīgveda, x. 90, which recurs, with variations, in the *Atharvaveda* (xix. 6), the *Vājasaneyi Samhitā* (xxxi.), and the *Taittiriya Aranyaka* (iii. 12), and greatly influenced later theosophical speculation. As a specimen of Vedic cosmogony we subjoin Muir's translation of it (from *Orig. Skr. Texts*, v. 368 ff.), though it, or rather the original, contains many obscure points:

'Puruṣa has a thousand heads, a thousand eyes, and a thousand feet. On every side enveloping the earth, he transcended (it) by a space of ten fingers (1). Puruṣa himself is this whole [universe], whatever has been, and whatever shall be. He is also the lord of immortality, since through food he expands (2). Such is his greatness; and Puruṣa is superior to this. And existing things are a quarter (or foot) of him, and that which is immortal in the sky is three-quarters of him (3). With three-quarters Puruṣa mounted upwards. A quarter of him again was produced here below. He then became diffused everywhere among things animate and inanimate (4). From him Virāj was born, and from Virāj, Puruṣa. As soon as he was born, he extended beyond the earth, both behind and before (5). When the gods offered up Puruṣa as a sacrifice, the spring was his clarified butter, summer its fuel, and autumn the [accompanying] oblation (6). This victim, Puruṣa born in the beginning, they immolated on the sacrificial grass; with him as their offering, the gods, Sādhyas, and Rīṣis sacrificed (7). From that universal oblation were produced curds and clarified butter. He (Puruṣa) formed those aerial creatures, and the animals, both wild and tame (8). From that universal sacrifice sprang the hymns called Rīch and Sāman, the metres, and the Yajus (9). From it were produced horses, and all animals with two rows of teeth, cows, goats, and sheep (10). When they divided Puruṣa, into how many parts did they distribute him? What was his mouth? What were his arms? What were called his thighs and feet? (11). The Brāhmaṇa was his mouth; the Rājanya became his arms; the Vaiśya his thighs; the Śūdra sprang from his feet (12). The moon was produced from his soul; the sun from his eye; Indra and Agni from his mouth; and Vāyu from his breath (13). From his navel came the atmosphere; from his head arose the sky; from his feet came the earth; from his ear the four quarters; so they formed the worlds (14). When the gods, in performing their sacrifice, bound Puruṣa as a victim, there were seven pieces of wood laid for him round the fire, and thrice seven pieces of fuel employed (15). With sacrifice the

gods worshipped the sacrifice. These were the first institutions. These great beings attained to the heaven where the gods, the ancient Sādhyas, reside (16).

The unity of the Godhead as the cause of the world, which is recognized in the above hymn, is directly expressed in others where he is called the One, the Unborn, and placed above all gods. In two hymns (Rīgveda, x. 81, 82) he is invoked under the name Viśvakarman, 'All-creator,' who in later mythology became the architect of the gods; in another remarkable hymn (x. 121) the poet inquires who is the first-born god that created the world and upholds it, and in the last verse he invokes him as Prajāpati, 'Lord of the creatures.' Prajāpati later became the current designation of the creator, and synonymous with Brahmā. In connexion with Viśvakarman and Prajāpati occurs what seems to be an ancient mythological conception: the highest god is said to have originated in the primeval waters as the Golden Germ (*Hiranyagarbha*) which contained all the gods and the world, or became the creator. This idea was afterwards developed to that of the world-egg, and of *Hiranyagarbha* = Brahmā.

An entirely different treatment of the cosmological problem is contained in the philosophical hymn, Rīgveda, x. 129 (cf. *Taittiriya Brāhmaṇa*, ii. 8, 9, 3-6), which, for depth of speculation, is one of the most admirable poems of the Rīgveda. Notwithstanding the labour of many ingenious interpreters, the meaning of some passages still remains doubtful; yet a general idea of its contents may be got from the subjoined metrical translation of Muir (*op. cit.* v. 356, note 530):

'Then there was neither Aught nor Nought, no air nor sky, beyond.

What covered all? Where rested all? In watery gulf profound?

Nor death was then, nor deathlessness, nor change of night and day.

That One breathed calmly, self-sustained; nought else beyond It lay.

Gloom hid in gloom existed first—one sea, eluding view.

That One, a void in chaos wrapt, by inward fervour grew.

Within It first arose desire, the primal germ of mind,

Which Nothing with Existence links, as sages searching find.

The kindling ray that shot across the dark and drear abyss,—

Was it beneath? or high aloft? What bard can answer this?

There fountaining powers were found, and mighty forces strove,—

A self-supporting mass beneath, and energy above.

Who knows, who ever told, from whence this vast creation rose?

No gods had then been born,—who then can e'er the truth disclose?

Whence sprang this world, and whether framed by hand divine or no,—

Its lord in heaven alone can tell, if even he can show.'

In the *Atharvaveda* we meet with some cosmological hymns, chiefly of the Prajāpati type, in which the highest god and creator is conceived under other forms, and invoked under various names, such as Rohita (the red one), Anadvān (the ox), Vaśā (the cow), Kāla (time), Kāma (desire), etc.

LITERATURE.—J. Muir, *Orig. Sanskrit Texts*, London, 1858-73, iv. ch. 1, v. sect. xxi.; L. Scherman, *Philos. Hymnen aus der Rīg- und Atharvaveda-Samhitā*, Strassburg, 1887; P. Deussen, *Allgem. Gesch. der Philosophie*, 12 1 (Leipzig, 1900); K. F. Geldner, 'Zur Kosmogonie des Rīgveda' (*Universitätschrift zur feierlichen Einführung des Rektors*, Marburg, 1908).

2. Period of the Brāhmaṇas and the Upaniṣads. —The Brāhmaṇas contain many legends about Prajāpati's creating of the world. They usually open with some statement like the following: 'In the beginning was Prajāpati, nothing but Prajāpati; he desired, "May I become many"; he performed austerities, and thereby created these worlds' (either the living beings, or heaven, air, and earth). Besides Prajāpati, other names of the creator are met with: Svayambhū Nārāyaṇa, Svayambhū Brahman, and even Non-Being. The authors of the Brāhmaṇas, being wholly engrossed with liturgy and ceremonial, introduce these legends in order to explain some detail of ritual

or the like; and therefore, after a few general remarks on the creation of the world, they plunge again into ritualistic discussions (see the specimens given by Deussen, *op. cit.* p. 183 ff.). But the little information they give is sufficient to show what were in their time the popular opinions about the origin of the world. Besides the statement that Prajāpati was at the beginning of things, there are others, according to which the waters seem to have been believed to be coeval with him or to have preceded him. Thus it is said (*Taittiriya Samhitā*, v. 6, 4, 2, and similarly vii. 1, 5, 1) that in the beginning there was nothing but the waters, and Prajāpati, as wind, went over them or floated on a lotus leaf. Connected with this order of ideas is the now more fully developed conception of the world-egg in *Satapatha Brāhmaṇa*, xi. 1, 6, 1 ff., which runs thus in Muir's translation (iv. 25):

'In the beginning this universe was water, nothing but water. The waters desired, "How can we be reproduced?" So saying, they toiled, they performed austerity. While they were performing austerity, a golden egg came into existence. Being produced, it then became a year. Wherefore this golden egg floated about for the period of a year. From it in a year a male (*puruṣa*) came into existence, who was Prajāpati. . . . He divided this golden egg. . . . In a year he desired to speak. He uttered "bhūr," which became this earth; "bhuvah," which became this firmament; and "svaṛ," which became that sky. . . . He was born with a life of a thousand years. He perceived the further end of his life as one may perceive the opposite bank of a river. Desiring offspring, he went on worshipping and toiling. He conceived progeny in himself; with his mouth he created the gods,' etc.

We append, for the sake of comparison, another ancient account of the world-egg from the *Chhândogya Upaniṣad*, iii. 19 (*SBE* i. 54 f.): 'In the beginning this was non-existent. It became existent, it grew.' It turned into an egg. The egg lay for the time of a year. The egg broke open. The two halves were one of silver, the other of gold. The silver one became this earth, the golden one the sky, the thick membrane (of the white) the mountains, the thin membrane (of the yolk) the mist with the clouds, the small veins the rivers, the fluid the sea. And what was born from it was Aditya, the sun,' etc.

While the authors of the Brāhmaṇas treated cosmogonic myths from their liturgical point of view, the authors of the Upaniṣads used them in order to illustrate their great philosophical tenet of the transcendent oneness of Brahman and its presence in all created things. Accordingly, they frequently substitute for Prajāpati philosophical abstractions, e.g. Brahman, Ātman, Not-Being, or Being, and derive from this first principle the worlds, or the Vedas, or those cosmical and psychological agencies which chiefly engross their speculations. They develop and combine these notions in ever-varying ways; but it is to be understood, or it is expressly stated, that the first principle, after having created things, entered them, so that it is present in them, and, in a way, is identical with, and yet different from, them. It is impossible to reduce the variety of opinion on the origin of the world, contained in the Upaniṣads, to one general idea underlying them; we shall, therefore, illustrate them by some selected specimens.

In *Brhad Aranyaka*, i. 4, the creation is ascribed to Ātman in the shape of a man (*puruṣa*): as there was nothing but himself, he felt no delight, and therefore 'made this his Self to fall in two, and thence arose husband and wife.' He embraced her, and men were born. In the same way he created all beings that exist in pairs. Then he created other things, developed them by name and form, and 'entered thither, to the very tips of the finger-nails, as a razor might be fitted in a razor-case, or as fire in a fire-place' (*SBE* xv. 87). The account of the world-egg in the *Chhândogya Upaniṣad* has already been quoted above. Of a less mythological and more speculative character is a passage in *Taittiriya Upaniṣad*, ii. 1, according to which from this Self (Brahman) sprang space, from space wind, from wind fire, from fire water, from water earth, from earth food, from food seed, men, and all creatures. An older account in *Chhândogya*

Upaniṣad, vi. 2, 2 f., mentions only three elements; it runs thus (*SBE* i. 93 ff.):

(Uddālaka speaks to Śvetaketu): 'In the beginning, my dear, there was that only which is (*ṛb̄ ṁ*), one only, without a second. Others say, in the beginning there was that only which is not (*ṛb̄ ṁ ṁ*), one only, without a second; and from that which is not, that which is was born.' 'But how could it be thus, my dear?' the father continued. 'How could that which is, be born of that which is not? No, my dear, only that which is, was in the beginning, one only, without a second. It thought, "May I be many, may I grow forth." It sent forth fire. That fire thought, "May I be many, may I grow forth." It sent forth water. And therefore whenever anybody anywhere is hot and perspires, water is produced on him from fire alone. Water thought, "May I be many, may I grow forth." It sent forth earth (food). Therefore whenever it rains anywhere, most food is then produced. From water alone is eatable food produced. . . . That Being (i.e. that which had produced fire, water, and earth) thought, "Let me now enter those three beings (fire, water, earth) with this living Self (*jīva ātma*), and let me then reveal (develop) names and forms." Then that Being, having said, "Let me make each of these three tripartite" (so that fire, water, and earth should each have itself for its principal ingredient, besides an admixture of the other two), entered into those three beings with this living self only, and revealed names and forms,' etc.

Here we have the first forerunner of Sāṅkhya ideas, which are more fully developed in the *Svet-āsvatara* and some later Upaniṣads which form the connecting link between this period and that of the Epics and Purāṇas. The genesis of the evolutionary theory of Sāṅkhya can be traced to these Upaniṣads (see Deussen, *op. cit.* i. 2, p. 216); but we pass this subject over here, as it will be treated in § 3.

The notions as to the structure of the Universe entertained by the Vedic poets continued to prevail in the period of the Brāhmaṇas and Upaniṣads, where frequently the Universe is spoken of as tripartite: earth, air, and sky, symbolized in the three 'great utterances' (*vyāhrtis*), 'bhūr,' 'bhuvah,' 'svaṛ.' In *Āitareya Aranyaka*, ii. 4, 1, however, it is said that in the beginning the Self sent forth the worlds of Ambhas, Marichī, Mara, and Ap. 'That Ambhas (water) is above the heaven, and it is heaven, the support. The Marichīs (the lights) are the sky. The Mara (mortal) is the earth, and the waters under the earth are the Ap world.' Nine or ten worlds are enumerated in *Brhad Aranyaka Upaniṣad*, iii. 6, viz. the worlds of wind, air, Gandharvas, sun, moon, stars, gods, Indra, Prajāpati, and Brahman;¹ each of these worlds is woven into the next higher one, 'like warp and woof.' More importance is attached to a sevenfold division of the world. This was introduced by the augmentation of the *vyāhrtis* from three, the usual number, to seven, which number first occurs in *Taittiriya Aranyaka*, x. 27 f. There we find the following *vyāhrtis*: 'bhūr,' 'bhuvah,' 'svaṛ,' 'mahar,' 'janas,' 'tapas,' and 'satyam.' Now, as the three first, the original *vyāhrtis* ('bhūr,' 'bhuvah,' 'svaṛ'), symbolically denoted the three worlds (earth, air, sky), so the four added *vyāhrtis* ('mahar,' 'janas,' 'tapas,' 'satyam') became names of still higher worlds. Thus, in some later Upaniṣads seven worlds are mentioned, and in the *Aranyaka Upaniṣad* these seven worlds ('bhūr' . . . 'satyam') are distinguished from seven nether worlds: Atala, Pātāla, Vītala, Sūtala, Rasātala, Mahātala, and Talātala. This last conception of a twice sevenfold world was, in the next period, developed in detail.

3. Period of the Epics and the Purāṇas.—While in the preceding period cosmogonic myths are of an episodic character, the same subject is now treated more at length, and for its own sake. Its importance is fully recognized in the Purāṇas; for cosmogony and secondary creation—i.e. the successive destructions and renovations of the world—belong to the five characteristic topics (*pañchalakṣaṇa*) of the Purāṇas.

¹ In the cosmography of the *Yogabhāṣya*, which will be dealt with in § 3, the names of the highest celestial spheres are Mahendra, Prajāpati, and Brahman.

The variety of views as to the origin of the world which obtained in the preceding periods still continues; but there is a decided tendency towards introducing some order. The mythological elements of cosmogony are mostly adopted from Vedic literature, and further developed; some are of more modern origin; both elements are variously combined. These mythological elements are as follows: (1) the highest godhead, Brahman or Ātman, identified with Nārāyaṇa, Viṣṇu, Śaṃbhu, etc., according to the sectarian tendency of the author; (2) the primeval waters or darkness; (3) the Puruṣa or Hiraṇyagarbha, who sprang up therein; (4) the world-egg, which brought forth Brahmā (or Prajāpati, Pitāmaha); (5) the lotus, from which sprang Brahmā; the lotus itself came forth either from the waters or from the navel of Viṣṇu; (6) the intermediate creators, or mental sons of Brahmā, numbering seven or eight, Marichi, etc.; (7) the successive creations and destructions of the world. Though the last-mentioned conception can be traced to a greater antiquity,¹ it was only then developed into a gigantic chronology of the world which reckoned by *kalpas*, *manvantaras*, and *yugas* (see art. AGES OF THE WORLD [Indian]). This system was employed in order to reconcile conflicting views on the origin of the world by assigning some cosmogonic processes to primary, some to secondary, creation, and by distinguishing the several secondary creations. But all these attempts at systematic order resulted in greater confusion, for primary and secondary creations were inextricably mixed up with one another. The framers of cosmogonic systems in the *Mahābhārata* and the Purāṇas freely laid under contribution the Sāṅkhya philosophy; they took over from it the evolutionary theory as taught by Kapila, or they tried to improve on it. As it formed the theoretical foundation of cosmogony, a brief sketch of it must be given here.

According to Sāṅkhya philosophy, there are two principles, entirely independent of each other: (1) the souls, *Puruṣas*; and (2) *Prakṛti*, original nature, or *Pradhāna* (principle, viz. matter), which is made up of the three *guṇas* (secondary elements)—darkness (*tamās*), activity (*rajas*), and goodness (*satva*)—in the state of equipoise. When this equilibrium is disturbed through the presence (or co-existence) of the *Puruṣa*, then from *Prakṛti* is developed *Mahān* or *Buddhi*, the thinking substance, which chiefly consists of *satva*. From *Buddhi* is developed *Ahaṁkāra*, a substance the function of which is to produce the conceit of individuality. *Ahaṁkāra* produces the mind (*manas*), the five organs of sense (*buddhindriya*), the five organs of action (*karmendriya*), and the five subtle elements (*tanmātrā*). The last, combining with one another, form the five gross elements (*mahābhūta*): space (or air), fire, wind, water, and earth. These are the twenty-five principles (*tattvas*) of Sāṅkhya. They and the order of their production have been adopted, and adapted to the order of ideas taught in the Upaniṣads, by the authors of those parts of the *Mahābhārata* which deal with the evolution of the world. In trying to reconcile Vedic cosmogony with the principles of Sāṅkhya philosophy, those didactic poets invented various changes of the latter or of their arrangement, though none of these attempts was generally adopted. We shall mention only two points in which the epic writers departed from the Sāṅkhya system and, at the same time, disagreed among themselves. (1) The established belief in a first cause, Brahman or Ātman, was radically opposed to the Sāṅkhya doctrine of two mutually independent principles, *Puruṣa* and *Prakṛti*; yet both

views had to be harmonized somehow. No wonder that opinion differed widely on this head. For instance, *Puruṣa* is identified with *Pradhāna*, or Hiraṇyagarbha with *Buddhi*, or Brahman with *Ahaṁkāra*, etc. (2) The Sāṅkhya doctrine, which derived the elements from *Ahaṁkāra* through the interposition of the transcendent *tanmātrās*, seems to have been thought unduly abstruse by those poets who preached to a mixed audience. They therefore usually omit the *tanmātrās*, and make the *mahābhūtas* the direct product of *Ahaṁkāra*, just as in the Upaniṣads the elements are said to have sprung directly from Brahman. It is needless for our purpose to multiply instances; for details the reader is referred to E. Washburn Hopkins' work, *The Great Epic of India*, New York, 1901, in which epic philosophy is exhaustively treated (p. 85 ff.). It must, however, be stated that some scholars, e.g. Dahlmann,² and Deussen,³ are of the opinion that epic Sāṅkhya represents a preliminary state of speculation, from which systematic Sāṅkhya was developed.

The cosmological passages of the Great Epic belong to an age of transition, and none of them seems ever to have been generally accepted as an authoritative exposition of the subject. It is, however, different with another document which may roughly be assigned to the same period—the cosmogonic account in the *Laws of Manu*, i. 5 ff.; for it (or parts of it) is quoted in a great number of mediæval works, and it may therefore serve to illustrate the state of the views on cosmogony which prevailed before the time when the Purāṇas took their present form. We quote here Bühler's translation in *SBE* xxv. 2 ff.

'This (universe) existed in the shape of Darkness, unperceived, destitute of distinctive marks, unattainable by reasoning, unknowable, wholly immersed, as it were, in deep sleep (5). Then the divine Self-existent (Svayambhū, himself) indiscernible, (but) making (all) this, the great elements and the rest, discernible, appeared with irresistible (creative) power, dispelling the darkness (6). He who can be perceived by the internal organ (alone), who is subtle, indiscernible, and eternal, who contains all created beings and is inconceivable, shone forth of his own (will) (7). He, desiring to produce beings of many kinds from his own body, first with a thought created the waters, and placed his seed in them (8). That (seed) became a golden egg, in brilliancy equal to the sun; in that (egg) he himself was born as Brahman, the progenitor of the whole world (9). The waters are called *nārāṇ*, (for) the waters are, indeed, the offspring of Nara; as they were his first residence (*ayana*), he thence is named Nārāyaṇa (10). From that (first) cause, which is indiscernible, eternal, and both real and unreal, was produced that male (Puruṣa), who is famed in this world (under the appellation) of Brahman (11). The divine one resided in that egg during a whole year, then he himself by his thought (alone) divided it into two halves (12); and out of those two halves he formed heaven and earth, between them the middle sphere, the eight points of the horizon, and the eternal abode of the waters (13). From himself (*dimanah*) he also drew forth the mind, which is both real and unreal, likewise from the mind egoism, which possesses the function of self-consciousness (and 14) lordly (14); moreover, the great one, the soul, and all (products) affected by the three qualities, and, in their order, the five organs which perceive the objects of sensation (15). But, joining minute particles even of those six, which possess measureless power, with particles of himself, he created all beings (16). Because those six (kinds of) minute particles, which form the (creator's) frame, enter (*ā-śrī*) these (creatures), therefore the wise call his frame *śūra* (the body) (17). That the great elements enter, together with their functions and the mind, through its minute parts the framer of all beings, the imperishable one (18). But from minute body (framing) particles of these seven very powerful Puruṣas springs this (world), the perishable from the imperishable (19). Among them, each (succeeding) element acquires the quality of the preceding one, and whatever place (in the sequence) each of them occupies, even so many qualities it is declared to possess (20). But in the beginning he assigned their several names, actions, and conditions to all (created beings), even according to the words of the Veda (21). He, the Lord, also created the class of the gods, who are endowed with life, and whose nature is action; and the subtle class of the Sādhyas, and the eternal sacrifice (22). But from fire, wind, and the sun he drew forth the threefold eternal Veda, called Rich, Yajus, and Sāman, for the due performance of the sacrifice (23). Time and the divisions of time,

¹ It is found as early as the *Śvetāśvatara* and *Maitrāyaṇa Upaniṣads*.

² *Mahābhārata-Studien*, II. 'Die Sāṅkhya-Philosophie', Berlin, 1902.

³ *Op. cit.* I. 3. p. 13.

the lunar mansions and the planets, the rivers, the oceans, the mountains, plains, and uneven ground (24), austerity, speech, pleasure, desire, and anger, this whole creation he likewise produced, as he desired to call these beings into existence (25). Moreover, in order to distinguish actions, he separated merit from demerit, and he caused the creatures to be affected by the pairs (of opposites), such as pain and pleasure (26). But with the minute perishable particles of the five (elements) which have been mentioned, this whole (world) is framed in due order (27). . . . But for the sake of the prosperity of the worlds, he caused the Brāhmaṇa, the Kṣatriya, the Vaiśya, and the Śūdra to proceed from his mouth, his arms, his thighs, and his feet (31). Dividing his own body, the Lord became half male and half female; with that female he produced Virāj (32).¹ From Virāj sprang Manu Svāyambhu, who, 'desiring to produce created beings, performed very difficult austerities, and (thereby) called into existence ten great sages, lords of created beings—Marichi, Atri, Aṅgiras, Pulastya, Pulaha, Kratu, Prachetas, Vasishtha, Bhṛgu, and Nārada (34, 35).² These secondary Prajāpatis created the other Manu, gods, demons, men, animals, plants, etc. Next comes the account of the destructions and secondary creations of the world, the days and nights of Brahmā, the system of *yugas* and *manvantaras*, etc. (For details, see AGES OF THE WORLD [Indian].)

A very full discussion of the cosmogony in Manu and its relation to the accounts in other sources will be found in W. Jahn, *Über die kosmogon. Grundanschauungen im Mānava-dharma-śāstram*, Leipzig, 1904.

Cosmogony in the Purāṇas, in the form in which they have come down to us, is, on the whole, a later development of that which we have just described. Here, too, the evolutionary theory of Sāṅkhya has been so modified as to agree with the Vedāntic doctrine about the oneness of Brahman, by assuming that *Puruṣa* and *Prakṛti* are but two forms of the Supreme Deity, who is identified with one of the popular gods according to the sectarian character of the work. An abstract from the account of the creation in the *Viṣṇu Purāṇa*¹ may serve to illustrate Paurāṇic cosmogony, if we keep in mind that the accounts in other Purāṇas are, on the whole, similar in tenor, though they may vary in details. According to the *Viṣṇu Purāṇa*, the self-existent Brahman is Vāsudeva; he is originally and essentially but one, still he exists in three successively proceeding forms: *Puruṣa*, *Pradhāna* (both unevolved and evolved), and *Kālā* (time), the latter acting as the bond connecting the former two. When the Supreme Deity enters *Puruṣa* and *Pradhāna* (the equilibrium of the three *guṇas*), then *Pradhāna* produces Mahān or Buddhi, which in its turn produces Anāṅkāra; and so the five subtle elements, the gross elements, and the eleven organs are produced, much in the same way as is taught in Sāṅkhya philosophy. But the Purāṇas teach, in addition to the evolutionary theory, that each generating principle or element envelops the one generated by it. The gross elements combine into a compact mass, the world-egg (*brāhmāṇḍa*), which rests on the waters, and is surrounded by seven envelopes—water, wind, fire, air, Anāṅkāra, Buddhi, and *Pradhāna*. In the world-egg the highest deity, invested with the *guṇa* activity, appeared in the form of Brahmā, and created all things. The same deity in the *guṇa* goodness preserves, as Viṣṇu, the Universe till the end of a *kalpa*, when the same god, in the awful form of Rudra, destroys it. The third chapter of the *Viṣṇu Purāṇa* deals with time, the days and nights of Brahmā, the duration of his life, etc. (see AGES OF THE WORLD [Indian]). The next chapter describes how, in the beginning of a *kalpa*, Nārāyaṇa, in the shape of a boar, raised the earth from beneath the waters and created the four lower spheres—earth, sky, heaven, and Maharloka. In the fifth chapter occur some more speculations of Sāṅkhya character, and a description of nine creations:

¹ The first creation was that of Mahat, or Intellect, which is called the creation of Brahmā. The second was that of the rudimental principles (*tanmātrās*), thence termed elemental creation (*Bhūtasarga*). The third was the modified form of egotism, termed the organic creation or creation of the senses (*Āndriyika*). These three were the Prakṛta creations, the

developments of indiscrete nature, preceded by the Indiscrete principle. The fourth or fundamental creation (of perceptible things) was that of inanimate bodies. The fifth, the *Tairāgyayona* creation, was that of animals. The sixth was the *Urdhvasrota* creation, or that of the divinities. The creation of the *Arvāk*-*srota* beings was the seventh, and was that of man. There is an eighth creation, termed *Anugraha*, which possesses both the qualities of goodness and darkness. Of these creations five are secondary, and three are primary. But there is a ninth, the *Kaumāra* creation, which is both primary and secondary. These are the nine creations of the great progenitor of all, and, both as primary and secondary, are the radical causes of the world, proceeding from the sovereign creator.¹

The seventh chapter relates how Brahmā after the creation of the world created 'other mind-born sons like himself'; about the number and names, however, of these Prajāpatis, or mental sons of Brahmā, the different Purāṇas do not agree.² Then Brahmā created Manu Svāyambhuva, for the protection of created beings. Manu's daughter Prasūti was married to one of the Prajāpatis, Dakṣa, who thereby became the ancestor of a great number of divine beings, mostly of an allegorical character, as personified virtues and vices.

The preceding abstracts from the *Viṣṇu Purāṇa* give some idea of the heterogeneous character of the cosmogonic theory which henceforth was generally adopted. Mythological and theosophic notions inherited from the Vedic period have been combined with notions of later origin—genealogic legends, the evolutionary system of Sāṅkhya, and the scheme of the Ages of the World—in order to give a rational theory of the origin and development of the world in harmony with the teachings of the Vedas. But the materials proved too refractory, or rather the authors were not bold enough in re-modelling the old traditions; hence their work leaves the impression of disparate parts, ill-combined or only formally united.

The authors of the Purāṇas succeeded better in delineating a plan of the Universe; for the cosmographic notions which are contained in the Vedas, and which have been sketched above under § 1, lent themselves readily to such an undertaking. The Great Epic added little to the old stock of cosmographic ideas, except a detailed description of the earth and some particulars about the hells. There was, indeed, the ancient belief in worlds of Indra, Varuṇa, Vāyu, Agni, Āditya, Yama, etc., but the notions as to the situation of these worlds (except those of Indra and Yama) seem always to have been rather vague, so that the authors of the Purāṇas were not over much prejudiced by tradition in their endeavours to devise a systematic cosmography. The system is practically the same in all Purāṇas; the following description of it is based on the *Viṣṇu Purāṇa*, while for the discrepancies in details the reader may be referred to Wilson's notes in his translation of the *Viṣṇu Purāṇa*.

The whole system of the worlds contained in the world-egg may be divided into three parts in agreement with the current expressions *trībhuvana*, *trailokya*, etc., 'the three worlds.' The middle part, which is, however, many times nearer the base than the top, is formed by the earth, an enormous disk of five hundred millions of *yojanas* in extent; it is encircled by the Lokāloka mountain, and contains the continents and oceans. A description of the earth need not detain us here, as it will be given in the art. GEOGRAPHY (Mythical). Above the earth are the heavens, and below it the nether worlds, or *Pātāla*. But actually the Universe is divided into two parts; for it consists of seven upper regions, the lowest of which is the earth, and of the seven nether regions. Hence frequently fourteen worlds are spoken of. To these two divisions have been added the hells, somewhere in the lowest part of the Universe. The number of

¹ Wilson, *op. cit.* i. 74 ff.

² *Ib.* p. 100, note; cf. the passage from Manu quoted above, verse 34 f.

¹ H. H. Wilson, *Viṣṇu Purāṇa*, vol. I. (London, 1864).

hells seems originally not to have been fixed (*Viṣṇu Purāṇa*, ii. 6), though Manu (iv. 87) gives their number as twenty-one.¹

Omitting the hells, there are seven nether worlds (*Atala*, *Vitala*, *Nitala*, *Gabhastimat*, *Mahātala*, *Sutala*, and *Pātāla*),² and the seven upper worlds (*Bhūr* [the earth], *Dyaus*, *Svar*, *Mahar*, *Janas*, *Tapas*, and *Satya*). *Pātāla*—for this is also the collective name of the seven nether worlds—extends downwards 70,000 *yojanas* below the surface of the earth, each of its seven regions having a depth of 10,000 *yojanas*. *Pātāla* is the abode of *Nāgas*, *Daiṭyas*, and *Dānavas*, and it equals the heavens in beauty and magnificence. Below *Pātāla* is the dragon *Seṣa*, who 'bears the entire world like a diadem upon his head, and who is the foundation on which the seven *Pātālas* rest.' As said above, the hells, or *narakas*, are beneath *Pātāla*; but their exact situation cannot be made out, because some place them below, some above, the waters which encircle the Universe. The cause of this uncertainty with regard to the hells seems to have been that originally they were not distinguished from the nether worlds. For, as will be seen below (§ 4), the Jains have seven hells instead of seven *Pātālas*, and find room for the *Asuras* in caves below the earth and above the first hell, instead of seven *Pātālas*. The upper regions begin with the terrestrial sphere, *Bhūrloka*; the next is *Bhuvārloka*, or *Dyaus*, which reaches thence to the sun; while from the sun to the pole star extends the *Svarloka*, or the heaven of the gods. These three worlds are destroyed at the end of each *kalpa*. The next higher world, *Mahārloka*, is not destroyed, but at the end of the *kalpa* its tenants repair to the next region, the *Janaloka*, the inhabitants of which are *Sanandana* and other sons of *Brahmā*. The sixth region is *Tapaloka*, peopled by the *Vairāja* gods; and above it is the highest region, *Satyaloka* or *Brahmaloka*, the inhabitants of which never know death. It must, however, be stated that the different *Purāṇas* do not agree regarding the inhabitants of the higher heavens. The distance of these regions from one another increases from below upwards: *Mahārloka* is ten million *yojanas* above the pole star, *Janaloka* twenty, *Tapaloka* eighty, and *Satyaloka* a hundred and twenty, millions of *yojanas* above the next lower region.

A somewhat different description of the Universe is given by *Vyāsa* in the *Yogabhāṣya*, iii. 28. This account, which may be ascribed to the 7th cent. A.D., is much more detailed than that of the *Purāṇas*, with which, however, it agrees on the whole. But it has also some curious affinities with the Buddhist description of the world, in proper names as well as in the part played by contemplation. The entire Universe is contained in the world-egg, which is but an infinitesimally small particle of the *Pradhāna*. It consists of seven regions (*bhūmis*), one above the other. The lowest is *Bhūrloka*, which extends from the lowest hell to the top of mount *Meru*. The second region, *Antarikṣaloka*, reaches to the pole star. The third is termed *Svar*- or *Mahendraloka*; the fourth *Mahar*- or *Prājāpatyaloka*. The fifth, sixth, and seventh regions, called *Jana*-, *Tapa*-, and *Satya*-*lokas*, form together the tripartite *Brāhmaloka*. *Bhūrloka* is subdivided into hells, *Pātālas*, and earth. At the bottom of *Bhūrloka* are the seven hells, one above the other. Their names are: *Avichi*, *Ghana*, *Salila*, *Anala*, *Anila*, *Ākāśa*, and *Tamaḥpratiṣṭha*; with the exception of *Avichi*, a popular name of hell, these hells seem to be identical with the envelopes of the world-egg

in the Paurāṇic account. Probably for this reason these six hells each bear another name, as stated by *Vyāsa*, viz. *Mahākāla*, *Ambariṣa*, *Raurava*, *Mahāraurava*, *Kālasūtra*, and *Andhatāmira*. Above the hells are the seven *Pātālas*: *Mahātāla*, *Rasātāla*, *Atala*, *Sutala*, *Vitala*, *Talātāla*, and *Pātāla*. Above these seven *bhūmis* is the eighth, the earth, *Vasumatī*, with the seven continents, etc., which may be passed over here.

As to the inhabitants of the seven regions of the Universe, the following notions are found. (1) In the *Pātālas*, in the oceans and on the mountains of the earth live the following classes of gods (*devanikāyas*): *Asuras*, *Gandharvas*, *Kinnaras*, *Kimpuruṣas*, *Yakṣas*, *Rākṣasas*, *Bhūtas*, *Pretas*, *Apasmārakas*, *Apsaras*, *Brahmarākṣasas*, *Kṣmāṇḍas*, and *Vināyakas*; in the continents live gods and men, and on *Meru* are the parks and palaces of the gods. (2) *Antarikṣaloka* is the sphere of the celestial bodies. (3) In *Mahendra* are six classes of gods: *Tridaśas*, *Agniśvātas*, *Yāmyas*, *Tuṣitas*, *Apārinirmītavāsavartins*, and *Parinirmītavāsavartins*. (4) In *Prājāpatya* there are five classes of gods: *Kumudas*, *Ribhus*, *Pratardanas*, *Añjanābhas*, and *Prachitābhas*. (5) In *Janaloka* there are four classes: *Brahmapurohitas*, *Brahmakāyikas*, *Brahmamahākāyikas*, and *Amaras*. (6) In *Tapaloka* there are three classes: *Ābhāsvaras*, *Mahābhāsvaras*, and *Satyamahābhāsvaras*. (7) In *Satyaloka* there are four classes: *Achyutas*, *Sudhanivāsas*, *Satyābhas*, and *Sanjñāsānjñins*. The gods in the regions from *Prājāpatya* upwards live on contemplation (*dhyānāhāra*); their powers and the duration of their life increase by bounds from below upwards; the gods in *Tapaloka* are not reborn in a lower sphere, and the four classes of gods in *Satyaloka* realize the happiness of the four degrees of contemplation respectively—*savitarka*, *savichāra*, *ānandamātra*, and *asmitāmātra-dhyāna*. Cf. art. COSMOGONY AND COSMOLOGY (Buddhist).

The detailed knowledge of the structure of the Universe was generally believed to have been reached by contemplation; this is expressly stated by *Patañjali* in *Yogasūtra*, iii. 28, and by the Jain writer *Umāsvāti* in *Tattvārthadhigama Sūtra*, ix. 37. Notwithstanding, or rather because of, its visionary character, Paurāṇic cosmography became, as it were, an article of faith.¹ The general belief in it was not shaken even by the introduction of scientific astronomy, though the astronomers tried to remodel the traditional cosmography on the basis of their science. The result of this compromise may be seen in the following abstract from the *Sūrya Siddhānta*, xii. 29 ff.:²

'This *Brahma*-egg is hollow; within it is the universe, consisting of earth, sky, etc.; it has the form of a sphere, like a receptacle made of a pair of caldrons (29). A circle within the *Brahma*-egg is styled the orbit of the ether (*vyoman*); within that is the revolution of the asterisms (*bhaḥ*); and likewise, in order, one below the other (30) revolve *Saturn*, *Jupiter*, *Mars*, the sun, *Venus*, *Mercury*, and the moon; below, in succession, the Perfected (*siddha*), the Possessors of Knowledge (*vidyādhara*), and the clouds (31). . . . Seven cavities within it, the abodes of serpents (*nāga*) and demons (*asura*), endowed with the savour of heavenly plants, delightful, are the inter-terrestrial (*pātāla*) earths (35). A collection of manifold jewels, a mountain of gold, is *Meru*, passing through the middle of the earth-globe, and protruding on either side (36).'

Literature to §§ 2 and 3 has been indicated in the above.

4. **Jain cosmography.**—According to the Jains, the world is eternal, without beginning or end. They have therefore no cosmogony, but they have a cosmography of their own which differs widely from that of the *Brāhmins*, especially with regard to the upper spheres or heavens. The Universe takes up only that part of space which, from this

¹ It is worthy of remark that in these cosmographic systems worlds are assigned to the more ancient gods, viz. *Indra*, the *Prajāpatis*, and *Brahman*, but not to *Viṣṇu* and *Śiva*; indeed *Viṣṇu*'s heaven, *Vaiṣṇuptha*, is wanting in those lists of heavens. Apparently the authors of cosmography had not come under the influence of popular *Vaiṣṇavism* or *Saivism*.

² Burgess's tr. in *JAOS* vi. 246.

¹ For particulars, see *Wilson*, *op. cit.* ii. 215, and *Hall's* note to that passage.

² For variations in other *Purāṇas*, see *Wilson*, *op. cit.* i. 208.

circumstance, is called Lokākāśa; the remaining part, Alokākāśa, is an absolute void and perfectly impenetrable to anything, either matter or souls. The Lokākāśa is coterminous with the two substances Dharma and Adharma, the substrata of motion and rest, which are, therefore, the indispensable conditions of the presence of all existing things. 'The world is figured by the Jains as a spindle resting on half of another; or, as they describe it, three cups, of which the lowest is inverted; and the uppermost meets at its circumference the middle one. They also represent the world by comparison to a woman with her arms akimbo.'¹ Older, however, is the comparison with a man (*puruṣa*). The disk of the earth is in the lower part of the middle, and forms the waist of the *puruṣa*; below the earth are the hells, and above it the upper regions. The entire world rests on a big layer of 'thick water,' this on one of 'thick wind,' and this again on one of 'thin wind.' The last two layers measure innumerable thousands of *yojanas*. The seven lower regions (*bhūmis*), one below the other, are Ratnaprabhā, Sankarāprabhā, Vālukāprabhā, Paṅkāprabhā, Dhūmaprabhā, Tamāprabhā, and Mahātāmāprabhā. Another set of names for them is given by Umāsvāti: Dharmā, Vamśā, Sailā, Añjanā, Ariṣṭā, Mādhavyā, and Mādāhavi (cf. the double set of names for the hells in the *Yogabhāṣya*, above, § 3). These regions contain the hells; the lowest one has but five, while the highest one, Ratnaprabhā, has three millions of hells. Their inhabitants are the damned, *nārakas*, whose stay in hell is not without end, but for fixed periods of time, varying from 10,000 years to 33 oceans of years, when they are re-born in other conditions of life. These regions are separated from each other by layers of 10,000 *yojanas* containing no hells; but in the layer separating Ratnaprabhā from the earth are the dwellings of the Bhavanāśāsin gods; these dwellings are apparently the Jain counterpart of the Brāhmanic Pātalas. Above the seven regions of the hells is the disk of the earth, with its numerous continents in concentric circles separated by rings of oceans (see art. GEOGRAPHY [Mythical]). In the middle of the earth towers Mount Meru, 100,000 *yojanas* high, round which revolve suns, moons, and stars, the Jyotiṣka-gods. Immediately above the top of Mount Meru begins the threefold series of heavenly regions styled Vimānas, and inhabited by the Vaimānika gods. These regions are as follows: (1) the twelve *kalpas*, Saudharma, Aśāna, Sanatkuṃāra, Māhendra, Brahma-loka,² Lāntaka, Mahāśukra, Sahasrārā, Anata, Prānata, Arāna, and Achyuta (the Digambaras add Brahmottara before Lāntaka; Kāpiṣṭha and Śukra after it, and Satāra after Mahāśukra); (2) the nine *Graivayakas* (these heavens form the neck [*grīva*] of the man figuring the world; hence their name); (3) the five *Anuttaras*, Vijaya, Vaijayanta, Jayanta, Aparājita, and Sarvārthasiddha. The gods in the Anuttara Vimānas will be re-born no more than twice. It is to be understood that all these twenty-six heavens are one above the other. Above Sarvārthasiddha, at the top of the Universe, is situated Iṣatprāgbhāra, the place where the souls resort on their liberation (*nirvāṇa*). The following description of it is given in the *Uttarādhyayana Sūtra*, xxxvi. 57 ff. (*SBE* xlv. 211 f.):

'Perfected souls are debarred from the non-world (Alōka); they reside on the top of the world; they leave their bodies here (below), and go there, on reaching perfection (57). Twelve

yojanas above the (Vimāna) Sarvārtha is the place called Iṣatprāgbhāra, which has the form of an umbrella (58). It is forty-five hundred thousand *yojanas* long, and as many broad, and it is somewhat more than three times as many in circumference (59). Its thickness is eight *yojanas*; it is greatest in the middle, and decreases toward the margin; till it is thinner than the wing of a fly (60). This place, by nature pure, consisting of white gold, resembles in form an open umbrella, as has been said by the best of Jinās (61). (Above it) is a pure blessed place (called Sita), which is white like a conch-shell, the *arkā*-stone, and *kunda*-flowers; a *yojana* thence is the end of the world (62). The perfected souls penetrate the sixth part of the uppermost *krōśa* of the (above-mentioned) *yojanas* (63). There at the top of the world reside the blessed perfected souls, rid of all transmigration, and arrived at the excellent state of perfection (64).'

In concluding our exposition of Jain cosmography it may be remarked that the knowledge of it seems always to have been popular among the Jains, for the plan of the Universe as described above is always before the mind of Jain authors, and they presuppose an acquaintance with it on the part of their readers.

LITERATURE.—The above account of Jain cosmography is based chiefly on Umāsvāti's *Tattvārthadhigama Sūtra* (tr. by the present writer in *ZDMG* ix. [Leipzig, 1906]).

H. JACOBI.

COSMOGONY AND COSMOLOGY (Iranian).—The chief Iranian texts on the creation of the world are *Vendidad* i. and *Bundahishn*. Of these the more elaborate is the latter, and according to it both Ormazd and Ahriman have existed from all eternity—a view which is as old as the Gāthās (cf. *Yasna* xxx. 3, which distinctly terms the two spirits 'twins'—*yemā*—and xlv. 2). The pair are parted by the ether (*vāyu*), and Ormazd dwells in 'endless light,' while his opponent lurks in an abyss of infinite darkness. Ormazd, moreover, was aware, through his omniscience, of the existence of Ahriman, but the evil spirit was ignorant of the higher being until aroused to conflict with him by beholding light. Thereupon, as Ormazd created excellent lands, Ahriman sought to mar his work by bringing into being plagues, moral and physical. Herein the essential dualism of Zoroastrianism finds one of its most important illustrations.

Zoroastrian cosmogony covers a period of 12,000 years, which are divided into four ages of 3,000 years each. The first of these epochs is the age of the spiritual creation, in which the creations remained 'in a spiritual state, so that they were unthinking and unmoving, with intangible bodies' (*Bundahishn* i. 8; *Selections of Zāt-spāram* i. 22). These spiritual creations bear a remarkable analogy to the Platonic 'Ideas,' and Darmesteter has sought (*Le Zend-Avesta* iii., Paris, 1893, pp. li-liiii), although without success, to trace an actual connexion between the two. Meanwhile, Ahriman created demons for the overthrow of the creatures of Ormazd, and refused the peace which the celestial being offered him. Thereupon, they agreed to combat for nine thousand years, Ormazd foreknowing that for three thousand years all things would go according to his own will, while in the second three thousand years the two spirits should struggle in bitter conflict, and in the third Ahriman should be utterly put to rout. The second epoch of three thousand years was that of the material creation, the order being, after the Amesha Spentas (*g.v.*), heaven (including the heavenly bodies), water, earth, plants, animals, and man. The third period of three thousand years begins with the eruption of Ahriman into the good creation of Ormazd. The evil spirit spreads disease, devastations, and noxious creatures, throughout the world, harming and defiling water, earth, plants, and fire, in addition to slaying the primeval ox and the primeval man. Finally, however, the demoniac hosts are driven back to hell. The remainder of this period is concerned with the legendary history of the Iranian kings, so that

¹ Colebrooke, *Miscellaneous Essays*, London, 1837, II. 198.

² About the Brahma-loka the following details are given: in it live the Lokāntika gods (who will reach *nirvāṇa* after one re-birth); and round it, in the cardinal and intermediate points of the compass, N.E., E. etc., are situated the Vimānas of the following eight classes of gods: Śarasvatās, Adityas, Vahnīs, Aruṇas, Gardatoyas, Tūṣṭas, Ayyābādhas, and Ariṣṭas.

neither it nor the final eschatologic period comes under consideration in an outline of the Persian cosmogony.

Throughout the Avesta the creation of all things is ascribed to Ahura Mazda (Ormazd), as in *Yasna* xvi. 1, although a certain amount of creative activity is also attributed to the Amshaspands (*Yasna* lrv. 12; *Vīsparad* xi. 12; *Yast* xix. 18). In *Yasna* xxxvii. 1 occurs the striking passage: 'Here, then, we worship Ahura Mazda, who created both kine and holiness, and created water, created both good trees and light, both the earth and all good things' (cf. xlv. 3-5). That this belief was Iranian is shown by the recurrence of similar phraseology in the Old Persian inscriptions, as in N.R. a, 1-3: 'A great god is Auramazda, who created this earth, who created yon heaven, who created man, who created peace for man, who made Darius king, the one king of many, the one ruler of many,' although similar phrases are not unknown in Assyrian inscriptions (Gray, *AJSL* xvii. 152).

The creation itself, according to the Parsi *Āfrin Gahanbār* (tr. by Darmesteter, *op. cit.* pp. 180-187, and edited by him in *Études iran.*, Paris, 1883, ii. 318-333) and the *Bundahishn* xxv. 1 (cf. also the section of the *Great Bundahishn*, tr. by Blochet, *RHR* xxxii. 223), occupied a year. The tradition of a cosmic epoch of 12,000 years, although not mentioned in the extant Avesta, must be of considerable antiquity, for the historian Theopompus, an author of the 4th cent. B.C., says, in a fragment preserved by Plutarch (*de Iside et Osiride*, xlvii.): 'According to the Magi, one of the gods conquers and the other is conquered for three thousand years each; and for another three thousand years they fight and war, and one destroys the works of the other; but finally Hades loses, and mankind shall be blessed, neither needing nourishment nor casting shadows.'¹ The Iranian cosmogony seems to have been geocentric, and, according to *Dāristān-i-Denik* xxxvii. 24, 'the sky is in three thirds, of which the one at the top is joined to the endless light, in which is the constantly-beneficial space; the one at the bottom reached to the gloomy abyss, in which is the fiend full of evil; and one is between those two thirds which are below and above' (cf. *Yast* xiii. 2). This has led some scholars, notably Spiegel, to seek to find the idea of the cosmic egg in Iran, but of this, as Casartelli has well pointed out, there seems to be little evidence. The question whether the Iranian cosmogony presupposes a creation *ex nihilo* has been much discussed, although it would seem from the phrase in the *Bundahishn* (xxx. 5), 'when they were formed, it was not forming the future out of the past,' that at least in the later development of the religion this doctrine was not unknown. The earlier texts, however, shed little light on this problem, nor do the verbs used of the creative activity of Ormazd (*dā*, 'establish,' *θwares*, 'cut'; *taš*, 'form,' cf. Gr. *τέκνω*) and Ahriman (*karat*, 'cut') give much aid, although *θwares*, *taš*, and *karat* seem to imply the elaboration of already existing material, while it may be urged that *dā* connotes, at least in some passages, actual creation *ex nihilo*. Equally dubious is the problem of the origin of the Iranian cosmogony. An elaborate comparison has been drawn by Spiegel (*Erānische Alterthumskunde*, i. 440-457) between the Iranian and the Semitic, particularly Hebrew, accounts of the creation of the world; but this is, to say the least, unproven. It is true that, both in Genesis and in the *Bundahishn*, creation occupies six periods, but in the former the epoch

is a week of six days, and in the latter a year of six *gāhānbārs*, and the correspondence in the main between the order of the two accounts is a natural sequence of development, and not necessarily due to the borrowing of either from the other. It should also be noted that the Iranian account makes no allowance for the seventh day of the Biblical record, thus further increasing the improbability of borrowing from either side. On the other hand, the division of the earth into seven *karšvars*, or 'zones,' which is mentioned repeatedly in the Avesta (as in *Yasna* lxi. 5; *Yast* xix. 82), and is as old as the *Gāthās* (*Yasna* xxxii. 3), is doubtless late Babylonian in origin, especially as the Semitic cosmogony likewise divided the earth into seven zones (*tubūḡātī*). This origin of the Iranian *karšvars* seems more probable than the view which equates them with the *dvipas* ('islands') of Hindu cosmogony, which usually number seven, although they are occasionally regarded as four or thirteen. They are not mentioned, however, before the *Mahābhārata* and the *Purāṇas*, and are thus probably too late to have influenced the Avesta (cf. Muir, *Original Sanskrit Texts*, i.² London, 1872, pp. 489-504; and, for the proof of Bab. influence, P. Jensen, *Kosmol. der Babylonier*, Strassburg, 1890, pp. 175-184).

The cosmogony of the Iranians, as outlined in the Avesta and the Pahlavi texts, underwent some slight changes in the course of time as a result of philosophic thought. The reduction of the dualism of the *Gāthās*—itself, no doubt, a reduction of an earlier polytheism—to a monotheism gave rise to the elaboration of the concept of 'Boundless Time' (*zrvan akarana*), which is hailed as a godling even in the so-called Younger Avesta (*Yasna* lxxii. 10; *Nyāiś* i. 8; *Vendidad* xix. 13). The Zarvanite sect, which was an important factor in Parsiism as early as the 4th cent. A.D., derived both Ormazd and Ahriman from 'Boundless Time,' making the evil spirit born first in consequence of the doubt of 'Boundless Time,' while Ormazd did not come into being until later, and was long inferior in power to Ahriman. In somewhat similar fashion, the Kaiyomartians, another Zoroastrian sect, held that Ahriman, the principle of evil, was sprung from Yazdān ('God,' i.e. Ormazd) because of his sinful thought, 'if I had an adversary, how would he be fashioned?' (Cf. the account of these sects by al-Shahrastāni, tr. Haarbrücker, i. Halle, 1850, pp. 276-280; and see Spiegel, *Erān. Alterthumskunde*, ii. 175-189; Darmesteter, *Ormazd et Ahriman*, Paris, 1877, pp. 314-338.) This extreme unitarian tendency, however, by which evil itself was traced back ultimately to Ormazd, was always rejected by orthodox Zoroastrianism.

LOUIS H. GRAY.

COSMOGONY AND COSMOLOGY (Japanese).—The most ancient and most authentic account of Japanese cosmogony is found in the *Kojiki* ('Records of Ancient Matters,' A.D. 712). The following is the description of the genesis of the universe contained in this valuable text:

'The names of the Deities that became (i.e. that were born) in the Plain of High Heaven, when Heaven and Earth began, were Ame-no-mi-naka-nushi-no-kami (the Deity Master-of-the-August-Centre-of-Heaven), next Taka-mi-musu-bi-no-kami (the High-August-Producing-Wondrous-Deity), next Kami-musu-bi-no-kami (the Divine-Producing-Wondrous-Deity). These three Deities were all Deities born alone (i.e. spontaneously, without being procreated), and hid their persons (i.e. disappeared, by death or otherwise). The names of the Deities that were born next from a thing that sprouted up like unto a reed-shoot when

¹ For the Gr. text, see vol. I. p. 205a, where a different interpretation from the one here given (which agrees independently with that of Lagrange, *RB*, 1904, p. 86) may be found.

the country (i.e. the earth), young and like unto floating oil, drifted about medusa-like, were Umsai-asht-kabi-hiko-ji-no-kami (the Pleasant-Reed-Shoot-Prince-Elder-Deity), next Ame-no-toko-tachi-no-kami (the Deity Standing-Eternally-in-Heaven). These two Deities were likewise born alone, and hid their persons. The five Deities in the above list are separate Heavenly Deities (i.e. were separate from those who came into existence afterwards).

The names of the Deities that were born next were Kuni-no-toko-tachi-no-kami (the Deity Standing-Eternally-on-Earth), next Toyo-kumo-nu-no-kami (the Luxuriant-Integrating-Master-Deity). These two Deities were likewise Deities born alone, and hid their persons. The names of the Deities that were born next were U-hiji-ni-no-kami (the Deity Mud-Earth-Lord), next his younger sister (i.e. wife) Su-hiji-ni-no-kami (the Deity Mud-Earth-Lady); next Tsunu-guhi-no-kami (the Germ-Integrating-Deity), next his younger sister Iku-guhi-no-kami (the Life-Integrating-Deity); next Oho-to-no-ji-no-kami (the Deity Elder-of-the-Great-Place), next his younger sister Oho-to-no-be-no-kami (the Deity Elder-Lady-of-the-Great-Place); next Omo-daru-no-kami (the Deity Perfect-Exterior), next his younger sister Aya-kashiko-ne-no-kami (the Deity Oh-Awful, or Venerable-Lady); next Izana-gi-no-kami (the Deity the Male-Who-Invites), next his younger sister Izana-mi-no-kami (the Deity the Female-Who-Invites). From the Deity Standing-Eternally-in-Heaven down to the Deity the Female-Who-Invites in the foregoing list are what are termed the Seven Divine Generations. The two solitary Deities above-mentioned are each called one generation: of the succeeding ten Deities each pair of Deities is called a generation' (*Kojiki*, at the beginning of vol. I; tr. B. H. Chamberlain, ed. 1906, p. 15 f.).

From these very first lines of the sacred account we have before us a genesis that is not lacking in grandeur. The world appears as a nebulous, moving chaos; Divine beings develop in it by spontaneous generation, some being born in the heart of space, others coming from a reed-shoot that has arisen from the mud; while others spring up, at first solitary, then in pairs, following a progress and bearing names that recall in a striking manner our theory of evolution. This rational explanation of the ancient national myth did not escape the Japanese commentators who elucidated these texts in the 18th and 19th centuries.

'The god U-hiji-ni and the goddess Su-hiji-ni, says Hirata, 'are so called because they contained the germs from which the earth itself was to spring. The god Oho-to-no-ji and the goddess Oho-to-no-be are so called from the primitive appearance of this earth. The god Tsunu-guhi and the goddess Iku-guhi are so called from the common appearance of the earth and the deities when they sprang into existence. The god Omo-daru and the goddess Aya-kashiko-ne are so called from the perfect character of the august persons of these deities. Thus the names of all these gods were given them according to the gradual progress of the creation.'

And, indeed, it cannot be denied that the above-quoted myth conceals under the transparent symbolism of its Divine figures an intellectual effort to find a logical explanation of the genesis of the universe.

To this slender outline of the *Kojiki* we may now add the complementary picture supplied by the *Nihongi* ('Chronicles of Japan,' A.D. 720). This account is less simple, and is permeated by Chinese ideas, which must be eliminated; but, on the other hand, it is also richer in various developments borrowed from other indigenous sources.

'Of old, Heaven and Earth were not yet separated, and the *In* and *Yō* not yet divided. They formed a chaotic mass like an egg, which was of obscurely defined limits, and contained germs. The purer and clearer part was thinly diffused and formed Heaven, while the heavier and grosser element settled down and became Earth. The finer element easily became a united body, but the consolidation of the heavy and gross element was accomplished with difficulty. Heaven was therefore formed first, and Earth was established subsequently. Thereafter Divine Beings were produced between them. Hence it is said that, when the world began to be created, the soil of which lands were composed floated about in a manner which might be compared to the floating of a fish sporting on the surface of the water. At this time a certain thing was produced between Heaven and Earth. It was in form like a reed-shoot. Now this became transformed into a god, and was called Kunitoko-tachi-no-mikoto (the August Standing-Eternally-on-Earth). Next there was Kuni-no-sa-tsuchi-no-mikoto (the August True-Soil-of-the-Country), and next Toyo-kumu-nu-no-mikoto (the August Luxuriant-Integrating-Master), in all three Deities. These were pure males spontaneously developed by the operation of the principle of Heaven.'

At this point the account breaks off, and the narrator gives us curious variants from the ancient manuscripts (now lost) that he had before him.

Sometimes we have the original existence, in the midst of the Void (*sora*), of a 'thing whose form cannot be described,' and from which the first god is produced. Sometimes, again, we have the birth, 'at the time when the country was young and the earth was young, floating like floating oil,' within the country, of a 'thing in appearance like unto a reed-shoot when it shows itself above the ground.' Sometimes, again, all we are told is that, 'when the Heavens and the Earth were in a state of chaos, there was at the very outset a Divine man'; or, 'when the Heavens and the Earth began, there were Deities produced together.' Another version, which is more original, says: 'Before the Heavens and the Earth, there existed something which might be compared to a cloud floating on the sea, and having no means of support. In the midst of this was engendered a thing resembling a reed-shoot springing out of the mud; and this thing was immediately metamorphosed into human form.' A last variant shows us once more 'a thing produced in the midst of the Void, which resembled a reed-shoot and changed into a god'; then a 'thing produced in the midst of the Void, like floating oil, from which a god was developed.' After this we see unfolding again the series of the Seven Divine Generations (see the *Nihongi*, Shukai ed. i. 1-4; W. G. Aston's tr., Yokohama, 1896, i. 1 ff.).

All these texts are valuable from their very incoherence, which, like the incoherence of the Hindu myths on the same subject, proves their authenticity and affords all the more interest from the point of view of comparative mythology. In the first place, indeed, this abundance of versions enables us to trace in Japan the cosmogonic myths of many other races: e.g. the idea that gods and men were sprung from certain plants—an idea that we meet with from the time of the ancient Greeks, who believed that they had sprung from the earth like cabbages, were born from certain trees, or had risen out of a marsh, right down to the Amazulu, who make their Unkulunkulu come from a bed of reeds or even from a reed-shoot (which corresponds exactly with the Japanese idea). In the second place, by examining these most ancient texts in relation to each other, we can distinguish, as far as is possible, the true native Japanese conception from the Chinese notions added thereto. The idea of the separation of the Heavens and the Earth, with which the *Nihongi* begins, and which also exists in China (myth of Pan-ku), is found again in India, Greece (Kronos myth), and New Zealand (Rangi and Papa), and consequently it would be rash to affirm a simple Chinese imitation here. But the whole passage on the *In* and the *Yō* (the *Yin* and the *Yang*, the passive or female principle, and the active or male principle, which are the mainspring of Nature in Chinese philosophy) is clearly only a little dissertation of foreign metaphysics, preparing the way for the native tradition of Izanagi and Izanami, the creators of Japan. As regards the cosmic egg which appears next, although it is found among a great number of peoples, both ancient (Indians, Egyptians, Phœnicians, Greeks) and modern (Fijians, Finns, etc.), and may therefore have been one of the spontaneous hypotheses which struggled for mastery in the mind of the primitive Japanese, it seems more probable that it also was a product of the same Chinese inspiration, especially when we consider the fact that this idea of the egg is posterior to the indication of the male and female principles, and that it does not harmonize very well with the image of the fish employed immediately after. It is only at this point ('Hence it is said . . .') that the real national account, agreeing with that of the *Kojiki*, begins. Thus we see the

leading line of the purely Japanese myth disentangling itself, viz. the essential notion of a floating earth, from which springs a reed-shoot, which in turn engenders the human form. And in this way we have, along with the origin of the world, the origin of man himself: the cosmogony terminates in a mysterious theogony, in which the Divine and human elements are confused in an insensible transition.

At this stage the last couple born in the Plain of the High Heavens are commissioned by the other gods to 'make, consolidate, and give birth to this drifting land':

'Hereupon all the Heavenly Deities commanded the two Deities, His Augustness the Male-Who-Invites and Her Augustness the Female-Who-Invites, ordering them to "make, consolidate, and give birth to this drifting land." Granting to them an heavenly jewelled spear, they thus deigned to charge them. So the two Deities, standing upon the Floating Bridge of Heaven (most probably, the Rainbow), pushed down the jewelled spear and stirred with it, whereupon, when they had stirred the brine till it went curdle curdle, and drew the spear up, the brine that dripped down from the end of the spear was piled up and became an island. This is the Island of Onogoro (i.e. Self-Condensed)' (*Kojiki*, 19).

Izanagi and Izanami descend from Heaven to this island and celebrate their union. They give birth first to a weakly child, which they abandon in a reed-boat, and then to the islet of Awa (Foam), which also they refuse to acknowledge. But, on being told by the celestial gods that, if 'these children were not good,' it is 'because the woman spoke first' in the marriage-ceremony, they resume their work of creation under more favourable conditions, and give birth first to the island of Awaji (Foam-way), and then to the other islands of the archipelago. After this, they put into the world in the same manner a whole tribe of Nature-gods. Here, again, we observe the idea of evolution so familiar to Japanese thought.

The god of Fire, Kagu-tsuchi, Izanami's last-born, accidentally scorches his mother so badly that she dies in a terrible fever. Izanagi in despair drags himself round about the body groaning, and from his tears is born another god. He buries his wife on Mount Hiba, on the borders of the land of Izumo. Then, in the fury of his grief, he tears the matricide to pieces, the blood and scattered members also changing into new deities. He finally descends to Hades to recover his wife, and finds himself face to face with a mass of putrid matter. Horror-struck, he returns to the light of day, and proceeds to elaborate ablutions in a river of Kyūshū, in order to get rid of the uncleanness contracted in his sojourn with darkness and death. Twelve deities are at this time born from his staff, various parts of his clothing, and his bracelets, as he throws them on the ground; then fourteen others spring from the various processes of his ablutions, among these being three illustrious deities who are the last to appear, when he washes his left eye, his right eye, and his nose, viz. Ame-terasu-oho-mi-kami (the Heaven-Shining-Great-August-Deity), Tsuki-yomi-no kami (the Moon-Night-Deity), and Take-haya-susa-no-wo-nomikoto (His Brave-Swift-Impetuous-Male-Augustness). To these three deities—the goddess of the Sun, the god of the Moon, and the god of the Ocean, soon transformed into the god of the Storm—Izanagi proceeds to give the investiture of the government of the universe:

'At this time His Augustness the Male-Who-Invites greatly rejoiced, saying: "I, begetting child after child, have at my final begetting gotten three illustrious children." At once jinglingly taking off and shaking the string of jewels forming his august necklode, he bestowed it on the Heaven-Shining-Great-August-Deity, saying: "Do Thine Augustness rule the Plain of High Heaven." With this charge he bestowed it on her. . . . Next he said to the Moon-Night-Deity: "Do Thine Augustness rule the Dominion of the Night." Thus he charged him. Next he said to His Brave-Swift-Impetuous-Male-Augustness: "Do Thine Augustness rule the Sea-Plain"' (*Kojiki*, 50).

So, then, is the universe organized in its essen-

tial elements. It still remains, however, to complete the construction of the earth. This is the task, after the death of Izanagi, of a descendant of Susa-no-wo in the sixth generation—the god Oho-kuni-nushi (Master-of-the-Great-Land, i.e. of Izumo), who is the hero of a new cycle of legends. He is assisted in his work first by a dwarf god, a sort of magician, from foreign parts, and then by a mysterious spirit, which reveals itself as one of the hero's own doubles. One might be tempted to think that here it is no longer a question of the task of the material construction of the world, but rather some political organization of the country by a powerful chief. But this is not so, as is shown by the following curious account taken by the author from an old document at the very heart of this legendary cycle, the *Izumo Fudoki* ('Topographical Description of Izumo,' A.D. 733):

'The august god declared: "The country of Izumo . . . is indeed a youthful country of narrow stuff. The original country is still very little. Therefore, I am going to sew a new piece of land to it." He spoke; and, as he looked towards the cape of Shiragi (a Korean kingdom) to see whether there was not an excess of land there, he said to himself: "There is an excess of land," and with a mattock he hollowed out a cleft like that between a young maiden's breasts; he separated the part with blows, like those dealt on the gills of a large fish (to kill it); and cut it away . . . ; and, fastening round it a thick three-strand rope, he drew it along, balanced, as if by *tazura* (*Pueraria Thunbergiana*) blackened by frost, and as smoothly as a boat on a river, saying: "Come, Land! Come, Land!" The piece of land thus sewed on is to be found between the extreme boundary of Kozu and the promontory of Kizuki, which has been formed eight times. The post arranged in this way is Mount Sahime, on the boundary between the country of Ihami and that of Izumo. Moreover, the rope with which he dragged the land along is the long beach of Sono. When he looked towards the country of Saki, at the gates of the North (i.e. in the North), to see whether there was not an excess of land there, he said: "There is an excess of land" (as above, down to "Come, Land!"). The land thus brought and sewed on is the country of Sada, which extends from the very borders of Taku to here. When he looked towards the country of Sunami, at the gates of the North, to see whether there was not an excess of land there, he said: "There is an excess of land" (once more the same words, ending with "Come, Land!"). The land thus brought and sewed on is the country of Kurami, extending from the borders of Taguhi to here. When he looked towards Cape Tsutau, of Koehi, to see whether there was not an excess of land there, he said: "There is an excess of land" (always the same phrase). The country thus brought and sewed on is Cape Miho. The rope with which it was brought is the island of Yomi (one of the place-names that are connected with the entrance to Hades, situated in Izumo). The post arranged in this way is Mount Oho-kami, in Habaki. "Now we have finished bringing land," he said. And, as he drove his august staff into the ground, in the wood of O-u, he cried: "O-we!" whence the name O-u" (*Izumo Fudoki*, ed. Ohira, 1896, pp. 4-6).

This 'bringing of land' (*kuni-biki*), the naive account of which ends with an equally childish explanation of the name of the place, is a striking illustration of the material character of the task devolving upon Oho-kuni-nushi—the finishing of the work begun by the creator-couple, then continued by Izanagi on his being widowed, and finally interrupted by Izanagi's death. Only the method is different. A short passage in the *Nihongi* (ii. 366) shows the extent to which this putting together of the country seemed a natural work: one night, in A.D. 684, a noise was heard coming from the east like the rolling of drums; in the morning it was seen that an island had suddenly risen out of the waves; the conclusion was that the ominous noise was the din the gods made when building this island in the darkness. Without leaving Japan, we can trace the same idea of building in an Ainu myth. It is intended to explain why the west coast of Yezo ends in treacherous rocks, while the east slopes down gently to the sea. The explanation is that the island was built by a Divine couple, and the woman, who had charge of the west shore, neglected her task by speaking all the time.

In short, apart from spontaneous generation, which is freely admitted for the primordial gods, the creation of the world can be explained prin-

cipally either by a more or less precise normal generation or by a Divine construction. The idea of generation is the one that dominates the Japanese myths, and is seen in its most material form in the story of Izanagi and Izanami. Nothing could be more natural than this conception, for it is logical to think that things, just as organic beings, could not form themselves without connexion of male and female. Among some peoples, the primitive couple are placed at the very beginning of the evolution: e.g. in Nicaragua, a man and woman, Famagoztad and Zipaltotl, created the heavens, the earth, moon, stars, and human beings—the whole world; in Polynesia, Tangaloa and O-te-papa are the parents of the islands and their inhabitants. We have the same idea among the Japanese, except that, being more metaphysical, and wishing to find the cause of the first couple, they imagined vague terrestrial deities who had to precede the first couple, and then went still further back to far-off deities, some of whom are still attached to the earth, while others appeared spontaneously in Heaven. As to the idea of construction, it appears chiefly, as we have just seen, when the task of perfecting the work of creation comes into question. These are two conceptions which are likewise found among the ancient Greeks, and which were combined in the Pythagorean cosmogony.

We now pass from the formation of the world to the laws controlling it. We find among the ancient Japanese various attempts at explanations, which sometimes even form a rudimentary cosmology. What they wanted to explain first of all was the cause of the great physical phenomena, beginning with the phenomena of light, which are the most striking of all to the primitive man, as they are to the child. For instance, Why do the sun and moon not shine at the same time?—Because the goddess of the Sun, enraged by a crime committed by the god of the Moon, determined never to see him again:

'Now when Ama-terasu-no-oho-kami was already in Heaven, she said: "I hear that in the Central country of reed-plains there is the Deity Uke-mochi-no-kami (the goddess of Food). Do thou, Tsuki-yomi-no-mikoto, go and wait upon her." Tsuki-yomi-no-mikoto, on receiving this command, descended and went to the place where Uke-mochi-no-kami was. Thereupon Uke-mochi-no-kami turned her head towards the land, and forthwith from her mouth there came boiled rice: she faced the sea, and again there came from her mouth things broad of fin and things narrow of fin (i.e. fishes both great and small). She faced the mountains, and again there came from her mouth things rough of hair and things soft of hair (i.e. all kinds of game). These things were all prepared and set out on one hundred tables for his entertainment. Then Tsuki-yomi-no-mikoto became flushed with anger, and said: "Filthy! Nasty! That thou shouldst dare to feed me with things disgorged from thy mouth." So he drew his sword and slew her, and then returned and made his report, relating all the circumstances. Upon this Ama-terasu-no-oho-kami was exceedingly angry, and said: "Thou art a wicked Deity. I must not see thee face to face." So they were separated by one day and one night, and dwelt apart' (*Nihongi*, i. 32).

Similarly, How does it happen that the brightness of the Sun is one day totally obscured?—The same Sun-goddess, persecuted by her terrible brother, Susa-no-wo, and indignant at his wickedness, hides herself in a celestial cave; and, when the other gods make her come out by magic processes, the world is lit up again (*Kojiki*, 52-65). In the same way, again, Why, at a more recent time, did the heavens remain dark for whole days on end?—Because two priests were buried in the same tomb; on the separation of their coffins, the division of night from day re-appeared (*Nihongi*, i. 238).

In the first legend, we have to do with a fundamental law of the universe; in the second, with an unusual phenomenon of such a kind as to strike the imagination for a time; in the third, with a far less important occurrence in which we see hardly anything more than a portent. The first mystery is explained by an important act in the drama played by the gods; the second, by an

analogous incident, in which, however, human intervention is already making itself more evident; the last, as the result of a simple mistake in ritual. But in all three cases one and the same psychological process appears—a process explaining the normal order and the exceptional disorders of light by the human passions of the Sun. And the story of the other gods would give us similar motives for all the physical phenomena which exercised primitive intelligence—from the stability of the solid sky, which the winds hold up like pillars (*Ritual*, no. iv.), to the instability of the soil, which the subterranean god shakes with earthquakes (*Nihongi*, ii. 124). Nor must we omit to note how the resentment of a sea-princess against a terrestrial god is offered as the explanation of the fact that 'there is no communication between the earth and the sea' (*Nihongi*, i. 107).

After these attempts to explain the greater aspects of Nature, the ancient Japanese turned their attention to lesser objects—stones, plants, animals. The thing which most impressed them about stone was the spark they could get from it, and this mysterious property the myths are quick to explain, solving at the same time the same question with regard to the fire-principle concealed in tree and plant. When a flint is rubbed, or two pieces of wood are rubbed together for a time, fire appears; it must therefore be concealed in these substances. In order to exist thus in a latent manner, it must have entered these substances. But how? It is here that the hypotheses differ more or less according to the various mythologies.

In New Zealand, Maui obtained from an old Divine grandmother, Mahu-Ika, one of her nails, which produced fire by friction; only he extinguished this fire at once, started off to renew his request, and continued until Mahu-Ika had to part with all her nails one by one; finally, she became enraged and pursued him with her flames, and was prevented from consuming him only by an opportune fall of rain; fortunately some sparks got lodged in certain trees, and from them they can be brought forth again. This is clearly the logical evolution of the production of fire, first by knocking a stone, then by rubbing certain hard woods. Alongside of this Maori Prometheus we may place the Prometheus of the Thlinkets, who fills the same civilizing rôle on the north-west coast of the Pacific: the hero Yehl, in the shape of a raven, stole the heavenly fire, carrying off a burning brand in his mouth; the fire fell upon stones and pieces of wood, and it is from these that it can be extracted again to-day. The same idea is found among the Eskimos, according to whom the rocks contain fire-spirits which are often seen in the form of will-o'-the-wisps; among the American Indians—e.g. the Sioux and Chippeways—who believe that flints are thrown down by thunderbolts; among the black races of Africa, who established the same connexion between heavenly fire and stones on earth; and among the ancient Hindus, who supposed that there were Agnis, apparently descended from Heaven, in stones, plants, and trees, just as they knew them to be present in the whole of Nature, in man, in the cloud, and even in the sea.

It is interesting to find this wide-spread myth in Japan. When the god of Fire was slain by his father, his blood leapt up in one place to the sky, and there, in the region of the Milky Way (*Nihongi*, i. 23, 29), it seems to have lit up certain stars which, like Sirius, appear pale to-day, but which, at the time when the Japanese myths were elaborated, certainly shone with a ruddy glow (cf. *Hor. Sat. II. v. 39*; *Seneca, Quest. Nat. bk. i.*); in another place, this blood flowed over the ground, and infused the fire-principle into plants and trees, stones and rocks. One variant of the *Nihongi* (i. 29) is particularly clear on this point:

'At this time the blood from the wounds spurted out and stained the rocks, trees, and herbage. This is the reason that herbs, trees, and pebbles naturally contain the element of fire.'

These myths, touching sometimes upon cosmogony, sometimes upon cosmology, but always coming from the same desire to explain the most varied phenomena, had, of course, to attempt to account for all the strange things in the animal world. For example, why has the *bêche-de-mer* (trepang) a peculiar mouth? Because long ago its mouth was slit as a Divine punishment:

'Ame-no-uzume-no-mikoto (Her Augustness the Heavenly-Alarming-Female) drove together all the things broad of fin and the things narrow of fin, and asked them, saying: "Will ye respectfully serve the august son of the Heavenly Deities?" upon which all the fishes declared that they would respectfully serve him. Only the *bêche-de-mer* said nothing. Then Her Augustness the Heavenly-Alarming-Female spoke to the *bêche-de-mer*, saying: "Ah! This mouth is a mouth that gives no reply!" and slit the mouth with her small string-sword. So at the present day the *bêche-de-mer* has a slit mouth' (*Kojiki*, 189).

In the same way the Breton legend explains how the plaice, for making a grimace at the Holy Virgin, ever after had a crooked mouth; and an Oceanic legend tells how the sole refused to sing, and was trampled upon by the angered fishes, and was flat ever after. In Japan itself a popular tale, which is not in the sacred books, but which is nevertheless undoubtedly very ancient, tells us that the reason why the medusa has no bones to sustain her shapeless substance is that, for being stupid in the performance of a task entrusted to her by the god of the Seas, she was so mauled by blows that she was reduced to pulp. In all these stories, as in that of the Biblical serpent condemned to creep for ever (Gn 3^d), the punishment continues in the descendants of the afflicted animal—a very natural conclusion, since the established form of the animal precisely constitutes the *raison d'être* of the myth.

We find myths of this kind to an even greater extent in relation to man himself, his physical nature, and, above all, his death, which shocks his instinct of preservation. Like all primitive peoples, the ancient Japanese see in death an abnormal phenomenon. Natural death does not exist: death must be the work of some supernatural agent. The fatal fever of Izanami must be a manifestation of the god of fire, and the last illness of the hero Yamato-dake, who was seized with a sudden chill in an icy shower, must be the effect of the vengeance of the god of the mountain when he lost his way. Speaking in a more general way, just as the majority of civilized races claim a spiritual immortality which they deny to animals, so primitive man liked to believe that physical immortality would have distinguished him from all other beings, if death had not been introduced into the world by some mistake or as a mysterious punishment. This conception is found equally among Hebrews and Greeks, Kafirs and Hottentots, Fijians, New Zealanders, etc. The punishment hypothesis is that of the Shinto myth:

'Ama-tsu-hi-daka-hiko-ho-no-ni-nigi-no-mikoto (His Augustness Heaven's-Sun-Height-Prince-Rice-ear-Ruddy-Plenty) met a beautiful person at the august Cape of Kasasa, and asked her whose daughter she was. She replied, saying: "I am a daughter of Oho-yama-tsu-mi-no-kami (the Deity Great-Mountain-Possessor), and my name is the Divine-Princess-of-Ata, another name by which I am called being Ko-no-hana-sakura-hime (the Princess Blossoming-Brilliantly-Like-the-Flowers-of-the-Trees)." Again he asked: "Hast thou any brethren?" She replied, saying: "There is my elder sister, Iha-naga-hime (the Princess Long, i.e. Enduring, as-the-Rocks)." Then he charged her, saying: "I wish to make thee my wife. How wilt this be?" She replied, saying: "I am not able to say. My father, the Deity Great-Mountain-Possessor, will say." So he sent a request to her father the Deity Great-Mountain-Possessor, who, greatly delighted, respectfully sent her off, joining to her her elder sister Princess Long-as-the-Rocks, and causing merchandise to be carried on tables holding an hundred. So then, owing to the elder sister being very hideous, His Augustness Prince Rice-ear-Ruddy-Plenty was alarmed at the sight of her, and sent her back, only keeping the younger sister Princess Blossoming-Brilliantly-Like-the-Flowers-of-the-Trees, whom he wedded for one night. Then the Deity Great-Mountain-Possessor was covered with shame at Princess Long-as-the-Rocks being sent back, and sent a message, saying: "My reason for respectfully presenting both my daughters together was that, by sending Princess Long-as-the-Rocks, the august offspring of the Heavenly Deity, though the snow fall and the wind blow, might live eternally immovable like unto the enduring rocks, and again that, by sending Princess Blossoming-Brilliantly-Like-the-Flowers-of-the-Trees, they might live flourishingly like unto the flowering of the blossoms of the trees: to ensure this, I offered them. But owing to thy thus sending back Princess Long-as-the-Rocks, and keeping only Princess Blossoming-Brilliantly-Like-the-Flowers-of-the-Trees, the august offspring of the Heavenly Deity shall be but as frail as the flowers of

the trees." So it is for this reason that, down to the present day, the august lives of Their Augustnesses the Heavenly Sovereigns are not long' (*Kojiki*, 140-142).

This curse seems at first sight to apply only to the Imperial line, but there is no doubt whatever that, in primitive thought, it was meant to explain why all men are mortal. This is proved by the following variant of the *Nihongi* (i. 94):

'Iha-naga-hime, in her shame and resentment, spat and wept. She said: "The race of visible mankind shall change swiftly like the flowers of the trees, and shall decay and pass away." This is the reason why the life of man is so short.'

There is a rather striking resemblance to be seen between this myth and a legend of the North American Indians: the Pebble and the Bush were with child at the same time, but the children of the Bush were born first; that is why man is subject to death. Iha-naga-hime also recalls in a wonderful manner O-te-papa, the rock-wife of Tangaloa, in Polynesian myth.

Besides death, life also has its place, especially among a light-hearted people like the ancient Japanese, whom even Buddhism itself could not subdue. They sought to probe to the origin of death, but they understood none the less that this was not the only problem of their destiny. They admired life with its fertility; and another important myth proceeds to tell how, in spite of the calls of the region of darkness, humanity develops and triumphs in the immortality of its perpetual rejuvenation. Izanagi, the father of men and islands, fled from the subterranean kingdom, pursued by the Furies, the Thunderbolts, and all the horrible army of Hades.

'Last of all his younger sister Her Augustness the Princess-Who-Invites came out herself in pursuit. So he drew a thousand-draught rock, and blocked up the Even Pass of Hades (Yomo-tsu-hira-saka, forming the frontier-line between Hades and the World of the Living), and placed the rock in the middle; and they stood opposite to one another and exchanged leave-takings; and Her Augustness the Female-Who-Invites said: "My lovely elder brother, Thine Augustness! If thou do like this, I will in one day strangle to death a thousand of the folks of thy land." Then His Augustness the Male-Who-Invites replied: "My lovely younger sister, Thine Augustness! If thou do this, I will in one day set up a thousand and five hundred parturition-houses (the separate hut for a woman about to be delivered). In this manner each day a thousand people would surely die, and each day a thousand and five hundred people would surely be born."

Izanami is thus conquered; Izanagi prevails; and in commemoration of his victory the Japanese thereafter called themselves Ame-no-masu-hito-ra, 'the heavenly surplus-population.'

All these stories—the common aim of which was to answer the innumerable questions of primitive curiosity regarding the affairs of Nature and of man, of physical phenomena and living beings, the origin of the world and its present appearance, in short, regarding everything that afterwards constituted the complicated object of the sciences—provide us with a mythology in which cosmogony holds the place of honour, and cosmology is only beginning to appear. The ancient Japanese felt themselves enveloped in mysteries which they would have been glad to solve; but, as the limited extent of their knowledge set strict bounds to their attempts, they soon tired of looking for these causes; they accordingly stopped short with infantile explanations which seemed satisfying to them, but which could scarcely approach a deep investigation of the laws that underlie the sensible world. It was only under Chinese influence that this type of investigation developed, and that the ancient mythology became complicated with abstract principles, as we have seen in the typical example of the story of the creation in the *Nihongi*. This desire to harmonize national tradition with the philosophical ideas of China, or even of Europe, was bound to end in the most ludicrous theories in the hands of the modern Shintoist theologians. Thus, e.g., they attempted to explain the origin of the stars, sometimes by investigating whether they

might have sprung from the excess of material stirred up and scattered into space by Izanagi's spear, sometimes by supposing that the shell of the primitive egg got broken, and that the fragments were caught up by the rotatory motion of the sun and thus drawn into the astronomical whirl (Hirata, *Koshiden*, 1812, ii. 36, 38). But these apologist fantasies are clearly foreign to the simple cosmogony and embryonic cosmology of the ancient Japanese.

LITERATURE.—W. G. Aston, *Nihongi* (*Trans. of the Japan Society*, Supp. I.), London, 1896, and *Shinto, the Way of the Gods*, London, 1906; B. H. Chamberlain, *The Kojiki* (*TASS*, vol. x., Supp.), reprinted, Tokyo, 1906; K. Griffis, *The Religions of Japan*, New York, 1896; M. Revon, *Le Shintoïsme*, Paris, 1907, and *Anthologie de la littérature japonaise*, Paris, 1910; Ernest Satow, *The Revival of pure Shinto* (*TASS*, vol. iii., appendix), reprinted, Tokyo, 1888.

COSMOGONY AND COSMOLOGY (Jewish).

—Speaking generally, it may be said that speculation as to the origin of the world was not encouraged during the early Rabbinic period. Between Biblical times and the era of the Jewish philosophers, cosmology in the modern sense can scarcely be said to have flourished, and ultimately it is so closely connected with philosophy itself that separate treatment is scarcely possible. The well-known verses of Ben Sira (Sir 34th),

*Search not the things that are too wonderful for thee;
And seek not that which is hid from thee;
 . . . thou hast no business with the secret things

(tr. O. Taylor),

are quoted in Talmud and Midrash, and are applied to this form of investigation (see *JQR* iii. [1890-1] 690; Bab. *Hagiga*, 113a, etc.; Midr. *Beresith Rabba*, ch. viii.; cf. also parallel passages quoted in *JQR* iii. 698). It may also be said that, in most cases where cosmological elements are found in Rabbinic sources, the scientific character is subordinated to the religious. Leaving the Biblical records, the following are the main groups of writings, during this intermediate period, which deal with the question of creation: (1) references in Talmud and Midrash (cited above); (2) special references to the 'Logos' as distinct from other means of creation; (3) Kabbalistic writings and references, such as the *Sepher Yēšira* and the *Zohar*, etc.

With regard to the first class, the verses of Ben Sira which have been cited are typical of the disapproval displayed by the Rabbis towards cosmological study. With them should be carefully compared the Gemara in the first Mishna of the second *perek* of *Hagiga* (11b). This passage is the *locus classicus*, though scarcely less noteworthy are the beginnings of *Genesis Rabba* and *Tanhuma*. It is evident that the dislike of the Rabbis to the study of cosmology was due to two causes—the fact that the material and method appeared to be Greek in origin, and the fact that such study sometimes led to atheism and apostasy. In support of this the famous story of Elisha b. Abuya (Aler) (cf. *Hagiga*, 15b foot, etc.) may be recalled. The study of Greek mythology and philosophy leads to Hellenization, and must be discouraged.¹ It would seem, however, that the ardour for these studies grew, in spite of checks from the Rabbis; and the latter seem to have abandoned a policy of resistance and adopted a new attitude—that the creation of the world must be shown to have depended entirely on the Divine power. Hence the early chapters of *Beresith Rabba* are devoted to proving that God, and God alone, is the Creator. There are clear traces of replies, on the

part of the Rabbis who are there quoted, to opponents, who seem to have been Gnostics and dualists, by whom the Biblical scheme of creation is rejected; in some cases it would seem as though we were face to face with Pantheistic ideas, but that would be difficult to establish. The *creatio ex nihilo* is frequently affirmed, but this question, as well as that of the 'eternity of matter,' belongs to Jewish philosophy rather than to cosmology; they cannot be considered without reference to later writers, e.g. Maimonides and Judah Hallevi.

Each of the three great Semitic religions has had to face the problem of harmonizing a doctrine of pre-existence, in some shape or form, with a concurrent belief in the *creatio ex nihilo*. In the case of Christianity it is the Arian controversy. Among the Muslims, the question of the Qur'an—whether it was created or eternal—was one of the points on which the Mutazilite heresy turned. But in Judaism, at least in the early period, the question of the pre-existence of the Torah was never a burning one. It was the application to the Torah of Pr 8th that gave rise to this belief. Perhaps Gnostic ideas were originally responsible, but at all events it is certain that Jewish theology, whether private or official, was not seriously disturbed. Had this been the case, the doctrine must have been pushed to its logical conclusion, and it would have been alleged that the Torah had some share in the actual work of creation (contrast *B. Rabba*, ed. Theodor, p. 6). But, while the *Beresith Rabba* compares the Torah to the parchment plans of an architect, the functions of the Divine Creator are not only never usurped, but, on the contrary, the supremacy of the Godhead in the work of creation is emphatically stated. From this it may be inferred that the belief was never reduced to definite form. The same may be said of the passages in the Midrash. Their purpose is homily, not science; their concern is to praise the works of the Deity rather than to investigate the ways of Nature or to explain the riddle of the universe. This is clear from the methods employed. A verse of Scripture is regularly interpreted by natural phenomena, and the functions of heaven and earth are derived philologically from the Bible. Had the objective of the Rabbis been practical, a different plan would have been adopted. As it is, arguments *post factum* are quite legitimate and in keeping with the purpose.

To imagine that the Rabbis would have been content with such methods of argument, or would have considered them adequate, is impossible for two reasons. (1) This would overlook the true character of Haggāda (i.e. allegoric homily); and (2) it would imply ignorance of the scientific capabilities of the Rabbis. It is only necessary to turn to astronomy, in order to see what they could achieve. Hence it is desirable, for cosmological purposes, to pass over *Beresith Rabba* and most Talmudical passages. It is also fair to exclude the famous controversy of Hillel and Shammai as to the relative precedence of Heaven and Earth¹ in this category (*Hag. 12a*), because their objective also was religion, not science. On the whole, the dogma of the *creatio ex nihilo* was accepted, though not without reservations and even opposition. In 2 Mac 7th the author speaks actually of a creation ἐξ οὐκ ὄντων, but Wis 11th prefers the theory of re-arrangement of existing matter rather than creation.² Philo allegorizes: God gave the form, not the matter; though, of course, ultimately He is the Creator. According to the

¹ Cf. *Hagiga*, 11b, בְּרֵאשִׁית בְּרֵאשִׁית . . . בְּרֵאשִׁית . . .
*Men are not to expound . . . the work of Creation with two
(sc. disciples), tr. Sireane.

¹ This was one of the questions asked by Alexander of Macedon (see *Tamid*, 32a, and *B. Rabba*, ed. Theodor, p. 13).

² ἡ παρονομασία σου χεῖρ κτίστῃ τὸν κόσμον ἐξ ἀυφάνων ὕλων.

beginning of *de Opific. Mundi*, the world was created for the מַלְאָכִים ; and with the מַלְאָכִים all natural phenomena must be in harmony. This is perhaps an extension of the Midrashic thought that the world was created בְּמַלְאָכִים (*B. Rabba*, ed. Theodor, p. 9, line 9). Philo's Logos does not perform quite the same functions as the Mishnic or Targumic Logos or Memra—if such a term may be used. In *Aboth* (v. 1) we read that the world was created by ten מַלְאָכִים , or sayings; that is to say, וַיֹּאמֶר , 'And God said,' occurs ten times with reference to the Creation. Now this theory has developed from what may briefly and conveniently be described as the Targumic attitude—the objection to anthropomorphism. The *Maṣmār*, or *Memra*, to some extent intervenes and becomes the mouthpiece or instrument of creation. This gives rise to theories of Mediators, whether in form of Demiurge or of *Metatron*, which are, however, often expressly repudiated: e.g. *Beresith Rabba* (ed. Theodor, p. 5, l. 10, and p. 27, l. 3), where the date of the creation of angels is discussed. The question is in itself unimportant. Stress is laid on the fact that they could not have been created on the first day, lest any share in the work of the creation should be ascribed to them. *Metatron* ($\mu\epsilon\tau\acute{\alpha}\ \theta\acute{\epsilon}\omicron\pi\omicron\nu\omicron\ \text{or}\ \mu\epsilon\tau\alpha\tau\omicron\rho$?) is mentioned by name frequently (cf. *Sanhedrin*, 38b, which is a warning against ascribing Divine powers to *Metatron*). It may be doubted whether it was ever believed that the *Maṣmārōth* actually exercised functions; it is more probable that the idea was invented to account for the text, and repudiated when felt to be dangerous. At all events it cannot be included in true cosmology.

In considering the Kabbala, which, of course, belongs really to a later period, the same air of unreality is experienced. In the *Sepher Yēṣira* and similar works, permutations and arrangements of numbers and letters are the basis of argument, and this is typical of the whole mystical outlook of the Kabbala. A close relation is postulated between the real and the unseen, between the written word and the abstract idea of which it is the symbol; hence it was believed to be possible to extract the spiritual from the physical form, i.e. from the word in which it was confined. The deductions are, of course, ingenious, but they are reached by literary or quasi-philological arguments. It is obvious that either scientific investigation or carefully selected tradition must form the foundation of cosmology, and it cannot definitely be stated to what practical extent the authors of Kabbalistic reasoning desired their results to be taken. The truth is that between the period of the Bible and that of the mediæval Jewish philosophers there is no real cosmology. The Scriptures supplied the needs of all seekers, until Judaism was brought face to face with Aristotelianism and Neo-Platonism. Hitherto cosmology was not taken seriously in the scientific sense, it was mere homily; but henceforward it became an integral portion of the system of each thinker. It is impossible to discuss the theories of בְּרֵאשִׁית , *creatio ex nihilo*, in mediæval times, apart from the rest of the philosophy which was established upon it.

LITERATURE.—There is a critical edition of the Midrash *Beresith Rabba* by J. Theodor (Berlin, 1903). For those unacquainted with Hebrew the Talmudic references may be studied in M. L. Rodkinson's tr. (*Hagiqa*=vol. vi.), New York, 1899, or preferably in L. Goldschmidt's Germ. tr. (Berlin, 1897 ff.). The treatise *Hagiqa* was translated (with notes, etc.) by A. W. Streane, Cambridge, 1891. Some idea of the Midrash may be obtained from S. Rapaport's *Tales and Maxims from the Midrash* (London, 1907); see also J.E. art. 'Cosmology,' 'Creation.'

HERBERT LOEWE.

COSMOGONY AND COSMOLOGY (Mexican and South American).—I. Mexico.—On the origin

and constitution of the universe the ancient Mexicans developed a number of complex and, in part, discordant myths. In the earliest times, according to Sahagun's version, the gods assembled in Teotihuacan for the purpose of debating who was to govern the world and who was to be the sun, for at that time there was no daylight. A deity named Tecuciztecatl offered to illuminate the world. His compeers asked who would act as his mate, but none of them could summon sufficient courage, each offering excuses. At last they delegated the task to Nanauatzin, who was afflicted with the pox (*buboso*), and he cheerfully acquiesced. The luminaries-elect then began a four days' penance. A fire was built, and both made their offerings. After the four days had elapsed, Tecuciztecatl and Nanauatzin received their ceremonial vestments. The gods ranged themselves in two rows, one on either side of the fire, and first called upon Tecuciztecatl to leap into the flames. The deity approached the blaze, but recoiled from its excessive heat. Four times he made the attempt, and four times he abandoned it. Then the gods ordered Nanauatzin to try. He mustered up all his courage, closed his eyes, and leapt into the flames. Immediately a crackling sound was heard. Then Tecuciztecatl followed suit. When the two deities had been completely consumed by the fire, the other gods seated themselves, expecting to see them rise. After a long period of waiting, the sky assumed a reddish aspect, and there appeared the light of dawn. The gods fell on their knees and turned hither and thither, not knowing from what quarter the sun would come, for the light of dawn was shining everywhere. At last it rose from the east, swaying to and fro, and dazzling the onlookers with its brilliancy. Presently the moon rose from the same cardinal direction. They appeared in the same order in which the two gods had entered the fire. At first sun and moon were equally brilliant. The other gods debated whether this was proper, and decided in the negative. Then one of them began to run, and struck Tecuciztecatl's face with a hare. Straightway it turned darker, lost its splendour, and assumed the present appearance of the moon. Though the sun and the moon had thus been created, they were still stationary. The gods asked one another: 'How could we live under these conditions? The sun does not move. Are we to spend all our life among unworthy mortals? Let us all die, so that our death may animate these luminaries.' The wind then offered to kill the gods, and did so. Still the sun did not begin to move. At last the wind blew so violently that he forced the sun to commence its journey, but the moon remained stationary for a while. Finally, it also began to move. Thus, sun and moon became separated and assumed the habit of rising at different hours of the day. Had Tecuciztecatl leapt into the fire before Nanauatzin, he would have been the sun.¹

A somewhat similar version has been recorded by Mendieta. Citlalatonac and Citlalicue appear as the primeval deities. The latter bore a flint, which her enraged sons hurled to the earth. From the shattered stone there developed 1600 gods, who asked their mother for permission to create mankind. Citlalicue referred them to Mictlantecutli, who was to furnish them with the bones and ashes of the deceased. The messenger of the gods received the required objects from the lord of the under world, but, lest Mictlantecutli might recall his gift, he fled in haste, stumbled, and broke the bones. He quickly gathered the fragments and presented them to the gods, who enclosed them in

¹ Sahagun, *Hist. gén. des choses de la Nouvelle-Espagne* (Paris, 1880), 478-482.

a bag and bespattered them with their own blood. On the fourth day there issued forth a boy, and on the eighth a girl. These became the ancestors of mankind. The sun was not yet in existence. The gods assembled in Teotihuacan and announced that whosoever would jump into the fire should be transformed into the sun. One man ventured to leap in, and the spectators anxiously watched for the rising of the sun. In the meantime they laid a wager that the animals present would not be able to guess the place whence the sun would rise, and, as the animals actually failed to do so, they were all sacrificed. At last the sun appeared, but did not move. Angered by his immovability, Citli ('Hare') let fly three arrows at him, wounding him twice. The enraged solar deity hurled one arrow back at the enemy, piercing his forehead. The gods then recognized their relative inferiority, and consented to be sacrificed. Xolotl tore out their hearts, and himself committed suicide. Appeased by this sacrifice, the sun began his daily course.¹

A rather different tale is narrated in the Zumaraga Codex. There dwelt originally in the thirteenth heaven a Divine couple, Tonacatecutli and Tonacacihuatl, who begat four sons, viz. Camaxtli, Yayanquitezcatlipuca, Quetzalcoatl, and Huitzilopochtli. After 600 years of inactivity these four created the world. Quetzalcoatl and Huitzilopochtli created fire and a half-sun, the first pair of human beings, the days, the denizens of infernal regions, the heavens beyond the thirteenth, and finally water and the monster Cipactli. In the further creation the entire quartet participated. They formed the sea-deities Tlalocatecutli and Chalchiuhtlicue, and then created out of Cipactli the earth and her deity Tlaltecuctli. The first human pair, Oxomoco and Cipactonal, begat a son who married a woman shaped out of Xochiquetzal's hair. As the half-sun gave forth but little light, it was decided to perfect it, and accordingly Tezcatlipoca transformed himself into a real sun. Then the giants were created. After Tezcatlipoca had shone for 676 years (13 cycles), Quetzalcoatl hurled him into the water, himself assuming solar functions, while his enemy transformed himself into a tiger which devoured the giant race. In commemoration of this event, there developed the constellation of Charles's Wain, which represents Tezcatlipoca descending into the ocean. After Quetzalcoatl had served for an equal space of time, his rival hurled him headlong with a blow of his paws, causing a tempest that destroyed the majority of human beings. Then Tlalocatecutli reigned as the sun for 364 years (7 cycles), but Quetzalcoatl drove him away by means of a torrent of fire and installed Chalchiuhtlicue in his place. She served in this position for 312 years (6 cycles), then a deluge occurred, mankind were changed into fish, and the heavens fell down. The divine quartet next opened a passage under ground, and created four men. By the joint efforts of all of these the sky was raised to its present altitude. As a token of his gratitude, Tonacatecutli transferred to his sons the sovereignty of the stars, they settled in the heavens, and by their migrations they are smoothing the path known as the Milky Way. Two years later Tezcatlipoca first produced fire by friction, and, several years later still, a new race of man was created. After the lapse of five years, the gods decreed the formation of a new sun. War was waged in order to secure a sufficient number of human sacrifices for the sun, then the gods fasted, drew blood from their own bodies, and heaped up firewood. Into the blaze Quetzalcoatl

cast his own son, who thus became the sun. Tlalocatecutli, however, threw his son into the ashes, thus making him rise as the moon, which continually follows the sun without ever overtaking it. Both luminaries wander through the air without ever reaching the heavens. The Codex Vaticanus mentions the bi-sexual deity Ometecutli as the creator of the universe. He creates the first human pair, Oxomoco and Cipactonal. These beget Tonacatecutli, to whom the later stages of creation are due.¹

The modern Tarahumare believe that the present world was preceded by many others, all of which were destroyed. In these earlier periods all the watercourses flowed eastward, but now there are also some rivers that empty into the Pacific. Originally, the world was but a waste of sand, which the bears put into shape. The rocks were at first soft and small, but they grew to be large and hard. The people grew up from the soil, and the earth was quite level. At that time men lived to be only one year old, dying like the flowers. According to another tradition, they came from heaven with corn and potatoes in their ears, and were led by Tata Dios—a solar character designated by a Christian name—into the mountains, the middle of the world. In the beginning, the Morning Star was the only heavenly body to illuminate the earth, and the 600 Indians then in existence were greatly irritated by the surrounding darkness, for they were unable to do their work and were continually stumbling about. The sun and the moon were then children, dressed in palm-leaf garments and dwelling in a house thatched with palm leaves. The Indians at last dipped small crosses into *tesvino* (native beer) and with them touched the sun and the moon on the chest, on the head, and on the back. Then they began to shine.²

2. Maya.—The creation-myth of the ancient Quiché is the fullest cosmogony of the Maya stock now accessible to us. In the beginning there were heaven and water, but everything was stagnant and dark. Gucumatz, Tepeu, and Hurakan held a council and created the world, forming mountains, plains, and rivers. First there appeared the vegetable, and later the animal, kingdom. But the animals were unable to call by name or greet their creators, and were accordingly condemned to be killed and eaten. Next the gods created men out of clay; but, as this material lacked vitality, it dissolved in the water. Then the deities invoked the aid of Xpiyacoc and Xmucane, and created a man out of the wood of one tree and a woman from the sap of another. Both were able to move about and propagate their kind, but they lacked intelligence and lived like the brute creation. Accordingly the gods sent showers of pitch which caused a flood, and wild animals which destroyed the race. From the few survivors are descended the small monkeys dwelling in the forests. At last there were created four perfect men out of yellow and white maize: Balam Quitze, Balam Agab, Mahucutah, and Iquibalam. These were intelligent, and were able to perceive things far and near by the light of the morning star, and to penetrate the most recondite matters. Rejoicing in their powers, they thanked their creators. The latter, however, became envious of their creatures and blew a cloud over their eyes, so that they were able to see only what was near. While the men were asleep, the gods created four women for them. The race multiplied, but, as they lacked patron deities, they moved to Tulan Zuiva, where they acquired the necessary divinities.

Tohil, one of these tutelary gods, gave fire to the people, but it was extinguished by rain and hail, and Tohil then created it anew by stamping his feet. Owing to the suffering undergone by the people in Tulan, they abandoned the place under Tohil's guidance, and, after long-continued migrations, reached Mt. Hacavitz. There sun, moon, and stars were called into being, though they did not then shine as brightly as they do now. The origin of these heavenly bodies, however, is differently accounted for in the myth of Hunahpu and Xbalanque, the miraculously born twin heroes of Quiché folklore. In order to avenge their father's death, the brothers descend to the infernal realm of Xibalba, and slay their parent's murderers. They cause their father and his brother to rise as the sun and moon respectively, while 400 youths who had been killed by the Xibalba monarch's son are transferred to the sky as stars.¹

The Maya proper of the present day believe that the world is in the fourth period of its existence. In the first era there lived the Saiyamwinkoob ('Adjusters'), the mythical dwarfish aborigines of Yucatan, who are credited with the construction of the ruins before the appearance of the sun. As soon as the sun appeared, these people turned to stone. Figures found in the temples of Chichen Itza and other archaeological sites are supposed to represent the Saiyamwinkoob. After a deluge, another race, the 'Offenders,' came into being, but again a flood destroyed the greater part of the world, and the Masehualli, or modern Maya, rose to power. Another deluge occurred and ushered in the present period, during which a mixture of all the previous inhabitants of Yucatan took place. The present natives of Yucatan distinguish seven heavens, each of which has a hole in the centre, one directly above the other. A giant tree (*Bombax ceiba*) sends its branches through these seven openings, and by means of it the spirits of the dead clamber up to their final place of repose. One version substitutes a ladder of vines for the tree. The *Gran Dios* of the white man is believed to reside in the uppermost heaven, while the lower heavens are peopled by the older deities of the natives, now degraded to the rank of subordinate spirits. Below the earth there is an under world. The spirits of the dead first descend to this region for a short space of time, but soon begin their ascent to the upper worlds. Men who have died in war and women who have died in childbirth are absolved from the obligation to visit the under world, and commence their ascent without delay.²

3. Chibcha.—The Chibcha philosophers postulated as the original substance *chiminigagua*—light enclosed in some undefined envelope. When the light freed itself from this covering, it created black birds which flew through the world, emitting radiant air from their beaks. Later it created all living things save men. Mankind traced their descent from a woman named Bachue (or Fuzachogue) and a boy, both of whom issued from a lagoon in the vicinity of Tunja. On reaching puberty, the boy married his companion, and their numerous progeny soon peopled the entire country. According to another myth, mankind was created by the *caciques* of Sogamozo and Ramiriqui—men out of yellow earth, and women out of hollow plant-stems. As darkness reigned over the earth, the *cacique* of Sogamozo bade his nephew, Ramiriqui, ascend to the sky and illuminate the world. Nevertheless, the night remained dark. Accordingly the *cacique* transformed himself into the moon. An interesting cosmological concept was

connected with the myth of Chibchachum. This deity, angered by the inhabitants of Bogota, had afflicted them with an inundation of the Sopo and Tibito rivers. The Indians prayed to Bechica, who put a stop to the devastation of the country and punished Chibchachum by ordering him to support the earth, which hitherto had rested on wooden props. Earthquakes originated whenever the tired Atlas shifted his burden from one shoulder to the other.³

4. Peru.—A number of essentially different Peruvian cosmogonies are recorded in the earlier writings. According to one legend, Con, a boneless son of the sun and the moon, created the world and man, levelled mountains, and raised valleys by his supernatural powers. He is said to have come from the north. J. von Tschudi regards him as the deity of the Chimú, the natives of the north-western coast district. Con became displeased with the dwellers of the coast, and converted the region into a desert, though he mitigated this punishment by allowing some rivers to flow through the land so that the people might slake their thirst, and also provided his creatures with wild herbs and fruits. After him came Pachacamac, another son of the sun and the moon, and Con disappeared. Pachacamac transformed into birds, apes, pumas, and other animals the human race called into being by his brother. He then created the Indians of historical times, giving them for their occupation the cultivation of fields and the growing of fruit. Turrue's fuller account relates that in the beginning of the world Pachacamac created a man and a woman, without, however, supplying them with food. The man starved, but the woman prayed to the sun for relief, and the deity descended, comforted her, and impregnated her with his rays, so that she gave birth to a son four days later. Pachacamac, however, was angered at the thought that she had supplicated his father rather than himself, destroyed the infant, cut him in pieces, and sowed the dismembered parts of the child's body. From the teeth grew corn, from the bones yuccas, and from the flesh all the other fruits and vegetables. Thus, the Indians were indebted to Pachacamac for their food. The slain child's mother, however, clamoured for revenge. The sun again took pity on her, and created another son, Vichama, out of the murdered infant's umbilical cord. When grown to maturity, Vichama set out to journey all over the world. In the meantime Pachacamac killed his mother and caused birds of prey to devour her body, except the hair and bones, which he left near the shore. Then he created men and women, and appointed chiefs to rule over them. When Vichama learned of his mother's death, he restored her to life from her concealed hair and bones; then he set out to avenge her destruction. Pachacamac threw himself into the sea where afterwards stood the temple and city named after him. Vichama devastated the fields, and implored the sun to turn the people of Vegueta into stone, because, he alleged, they had participated in his mother's murder. Thus, all Pachacamac's creatures were transformed into stones. Repenting of their deed, the sun and Vichama transferred the former chiefs and nobles to the coast, setting them up there as *huacas* to be worshipped in the future. Then Vichama implored his father to create a new race. The sun gave him eggs of gold, silver, and copper, from which there developed the chiefs, their wives, and the common herd, respectively. Still another legend derives mankind from two male and two female stars sent down to earth by Pachacamac.⁴

⁴ Uhle, *Pachacamac* (Philadelphia, 1903), 492; Brühl, *op. cit.* 464 f.

On the shores of Lake Titicaca there developed variants of another myth. Before the reign of the Incas, the natives believed, there was no sun, and their ancestors prayed to the gods for light. Suddenly the sun rose radiant from the island of Titicaca. At the same time there appeared from the south a white man of slim figure, who levelled the mountains and caused springs to gush forth from the rocks. Hence he was regarded as the author of all things, the creator of the sun, mankind, and the brute creation. He travelled northward, and never retraced his steps. In the course of his journey he admonished the Indians to live in peace. The name by which he was commonly known was Ticiviracocha. Some time after his departure there appeared another man who cured the sick and wrought miracles. The inhabitants of Pueblo Cacha, however, rose against him, and were about to stone him to death; but he merely raised his hands, and flames darted from the sky, threatening to consume his assailants. Taking pity on the terrified Indians, he extinguished the fire, leaving only the burnt rocks as evidence of his power. He then wandered to the coast, spread his cloak over the waves, and vanished from sight. The name of this second wonder-worker was Viracocha. For a more substantial creation-tale we are indebted to Betanzos. Long ago, according to his narrative, there rose from a lake Con Tici Viracocha, who created heaven and earth and mankind, but did not supply them with light. Offended by man's ingratitude, he transformed the race into stones. He again rose out of the lake with several companions, created the sun in Tiahuanaco, and later the moon and the stars. Next, he re-peopled the earth in the following way: for every province he fashioned a number of stone images; then he sent all but two of his companions towards the east, where they called into being such people as their master had indicated in his stone effigies; finally, he dispatched, with similar powers, the two men that had remained with him, one to Condesuyo, and the other to Andesuyo, while he himself wandered to Cuzco, creating human beings as he passed along. In Pueblo Cacha he was attacked by the newly created Indians, but reduced them to submission, as in the version already quoted. In Cuzco he also created a tribe, and gave to the place its name. When he arrived at the seashore, he was joined by his associates, and they all walked across the sea as though it were solid earth. The full name given to this creator is Con Tici Viracocha Pachayachachic, while his assistants figure as 'viracochas' generically. In Molina's version, the two *viracochas* that remained with their master after the others had set out on their mission are called Ymayman Viracocha, and Tocapo Viracocha. The former was credited with having named trees and plants, and with having instructed the Indians as to their nutritive and medicinal virtues. Tocapo, on the other hand, named the rivers, and taught the people about the fruits and flowers. According to the same variant of the myth, the sun, while rising from the Island of Titicaca in human shape, addressed the ancestors of the Incas, promising them that their descendants would rule the land and subject many tribes.¹

5. Primitive tribes.—The *Arawak* of Guiana say that, before the existence of mankind, a being broke off twigs and pieces of bark from a silk-cotton tree and threw them broadcast around him. Some turned into birds; others fell into the water and became fish; still others fell on land and became beasts, reptiles, men, and women. The *Warrau* myth begins with a period when the ancestors of the Indians lived in the sky. There

Okonorote', a great hunter, once pursued a bird for many days. At length he was able to shoot it, but his quarry fell into a deep pit and was lost to sight. Okonorote', however, saw daylight in the pit, and soon discovered a land down below, inhabited by many quadrupeds. He hung a long piece of bush-rope down towards the earth, and climbed down. After a successful chase, he returned home with some venison. The *Warrau* relished the food so much that they decided to emigrate to the earth. After many of them had climbed down, a woman of large proportions got stuck in the opening, and, though her fellow-tribesmen attempted to extricate her, it was found impossible. Accordingly, those *Warrau* who were already on the earth were obliged to remain in their new place of residence, while those who were still in the sky-land could not but stay in the upper regions. The same story, with trifling modifications, is told by the Carib Indians.¹

The *Bakairi*, a Carib tribe living on the affluents of the upper Xingu river, regard the sun as a large ball made of the feathers of the red macaw and the toucan, and the moon as a corresponding ball of the tail feathers of the Cassicus. The sun is covered at night with a large pot, which is removed at daybreak. During the rainy season it is carried by a snail, during the dry season by the fast-flying humming-bird. The waning of the moon is due to the successive appearance of a lizard, an ordinary armadillo, and a giant armadillo, the last of which completely covers the feather-ball. Corresponding explanations are offered for solar and lunar eclipses. Orion is a frame for drying manioc, the larger stars form doorpost knobs, and Sirius constitutes a large cross-beam supporting the frame on the side. The Pleiades are simply a pile of flour-grains. The firmament shows merely a duplication of terrestrial affairs: the Indians find there manioc, cultivated soil, forests, etc. The Milky Way is a huge totem, near which the two culture-heroes, Keri and Kame, performed their deeds. Other heavenly phenomena are regarded as a jaguar, ant-eater, vulture, etc.

The place of a genuine cosmogony is taken by a number of myths, accounting not so much for the ultimate origin as for the more or less miraculous arrangement and regulation of observed phenomena through the power of the twin culture-heroes, Keri and Kame. Practically everything now existing in the universe is believed to have existed from the very beginning: there were even some *Bakairi* tribesmen and members of other tribes. Conditions, however, represented a sort of topsy-turvydom as compared with the present cosmos. In the beginning the earth was the sky. Earth and sky were in close proximity, so that it was possible to walk to and fro. Keri bade the sky shift its position, for his people were dying; but the sky refused to do so. Then Keri decided to depart. Accordingly, he and all his tribe went to the earth, and the sky rose to its present height. The sun was in the possession of the Urubú vulture; when the bird was away, darkness reigned supreme. Owing to this darkness, the tapir fell into a pit belonging to the Urubú. Keri saw him and entered one of his front feet; while Kame, who had entered a little yellow singing-bird, was to inform his brother of everything that was going on. When the vulture swooped down on his prey, Keri seized him, and on pain of death, ordered him to surrender the sun. The Urubú dispatched his brother to bring the sun, but his messenger only came back with the dawn. Sent back again, the vulture's brother offered Keri the moon, but the hero persisted in his demand until the sun was presented to him. Then he released the Urubú. The sun was shining continually, and Keri did not know what to do with it, though finally he covered it with a large pot, which was simply removed to make daylight. Thus, the later-day distinction of day and night was first introduced. The moon was given to Kame. Another quasi-cosmogonic tale accounts for the origin of the Paranaatinga and Ronuro-Kulisehu rivers. Keri and Kame were sent for water. They found three pots with water, but broke two of them, so that the water flowed down, forming the water-courses in question.

The remaining origin-tales of the *Bakairi*, though for the greater part belonging to the same cycle, are not cosmogonic at all, but merely narrate the heroes' exploits in acquiring fire, manioc, tobacco, the hammock, and other necessities of life for the benefit of mankind.²

² K. von den Steinen, *Unter den Naturvölkern Zentral-Brasiliens* (Berlin, 1894), 357-386.

¹ Brühl, *op. cit.* 464-472.

The *Paressi*, though members of the Nu-Arawak family, possess a number of cosmic notions akin to those of the Bakairi. They also believe the sun to be composed of red macaw feathers, which are hidden in a gourd at night and uncovered by their owner at daybreak. The moon consists of yellow 'mutung' feathers. The full moon begins to wane when a thin spider appears on its edge, and it is successively covered by four armadillos, the last being the giant armadillo, *Dasyurus gigas*. The galaxy is dotted with countless yellow fruits, and of the stars many are recognized as an ostrich, jaguar, or some other animal. In the beginning there was a woman named Maisö. Neither earth nor water was in existence, and there was no light. She took a piece of wood and introduced it into her body, from which there then issued forth the Rio Cuyaba. Its muddy stream was soon followed by the limpid waters of the Rio Paressi. Maisö then placed land in the stream, and thus made the earth. Maisö also gave birth to many quasi-human beings of stone, first of all being Darukavaitere, who married Uarahiulu. This couple precreated the sun, the moon, and all the other celestial beings, and assigned to each its place in the firmament. Next, Darukavaitere begat parrots and snakes, until Maisö made his wife conceive Uazale, the ancestor of the Paressi and the first really human being.¹

Of the *Weltanschauung* of the *Bororo* we have, unfortunately, but a meagre sketch. Like the Bakairi and Paressi, they regard the sun and moon as bunches of macaw feathers. Mankind are believed to dwell on a large island in a river. The sun and moon, or their owners, are on one side and pass through the river; when they meet, the moon passes by and becomes the new moon. The Pleiades are the blossoms of a tree, Orion is looked upon as a tortoise, and single stars are generally regarded as sand-fleas, Venus, for example, being characterized as 'the large sand-flea.' The rainbow is supposed to be a large shamanistic water-snake. A meteor that appeared during the second German Xingu expedition was regarded as the soul of a shaman bent on afflicting some Bororo with dysentery.²

The cosmogonic notions of the *Jibaro* of Ecuador are insufficiently known. According to one tale, the world was fashioned by a great spirit who amused himself with manufacturing clay objects. He constructed a large blue vessel, and placed it where the sky is nowadays seen.

A more detailed account is given of the deluge. A member of the Murato sub-tribe was fishing in a lagoon. A little crocodile swallowed his hook, and was killed by the Indian. The mother of the crocodiles was so incensed at this deed that she struck the water with her tail, and flooded all the country bordering on the lagoon. All the Indians perished, save a single individual who climbed a *pivai* palm, where he stayed many days in utter darkness. From time to time he dropped a *pivai* fruit, but he invariably heard it strike water. One day, however, the fruit appeared to strike the earth. The Murato climbed down, built a lodge, began to till the soil, and planted a piece of flesh from his own body. From this there grew up a woman, whom he married. A deluge-myth derived from the *Cahari*, but also attributed by Suarez to the *Jibaro*, records the escape of two brothers, who fled from the flood to the top of a mountain, which continued rising with the elevation of the waters. After the flood the two Indians went in quest of food, and on their return were astonished to find some dishes already prepared in the hut they had constructed. One of the brothers hid himself in order to fathom the mystery, and discovered two parrot-women, who set themselves to preparing the meal. Suddenly rushing from his hiding-place, he seized one of the bird-women and married her. The couple had three sons and three daughters, who became the ancestors of the *Jibaro*.³

The *Caraya* of the Araguayá River believe that their ancestor, Kaboi, and his people once lived in the under world, where the sun shone when the earth was dark, and *vice versa*. Hearing the call of a bird, Kaboi decided to follow it. He got to

an opening leading to the earth, but, while his companions succeeded in passing through it, he himself proved too large and was able to get only his head above ground. The other Indians gathered many kinds of fruit, also honey and bees, as well as dead and dry wood, and brought their finds to the chief. Kaboi told them that, while the country seemed to be beautiful and fertile, its inhabitants, as indicated by the dry wood, could not live to the old age that fell to the lot of their own people, for in the under world the Indians attained a very great age, and died only when they were too old to move any part of their body. In spite of this warning, the people preferred to stay above ground. Accordingly, while their fellow-beings in the lower regions are still in the prime of life, the descendants of Kaboi's companions are destined to die. At an apparently later period, two powerful beings, Tenira and Sokroa, hurled all the Indians into a blazing fire and then destroyed each other in a trial of strength. Only two dwarf parrots and two belated youths, returning from the hunt after the destruction of their fellow-tribesmen, escaped. When the young men set out on the next day to hunt, they heard the pounding of mortars, and on their return discovered that their meals had been prepared by unknown hands. This was repeated on the next day. On the third day they discovered that the food had been cooked by the two parrot-women, married them, and thus became the ancestors of the modern *Caraya*.

Another tale recounts the destruction of the Indians by a flood. The *Caraya* were out hunting and drove their game into a pit. After taking out the captured animals, they dug up the magician named Anatiua, and brought him to their village. Frightened by his strange antics and unintelligible gibberish, they fled from him, but Anatiua pursued them. He had with him numerous calabashes filled with water. By breaking these, he made the river rise until he had caused a deluge. The Indians fled to the top of two mountain-peaks, but Anatiua summoned to his aid several species of fish. Finally, one fish possessing a beak-like mouth ascended the peaks from the rear, pushed the people down, and thus drowned them. Only a few of them escaped. These descended to the valley when the waters had fallen again.⁴

The *Caingang* of the State of Paraná (Brazil) tell of a great flood which submerged the entire world inhabited by their ancestors, with the exception of a single mountain-peak. The *Caingang*, the *Kadjurukre*, and the *Kame* all swam towards this summit, carrying firesticks in their mouths, but only the *Caingang* and a small number of *Kuruton* Indians reached the goal, where they stayed without food for many days, some lying on the ground, while others, for lack of space, were obliged to cling to the branches of the trees. They were beginning to give up hope when they heard the singing of *saracura* (water-fowl), which were carrying hampers full of earth. By dropping this into the water, they caused the flood to recede. The Indians shouted to them to make haste, which they did, asking the ducks to aid them. In a short time they got to the summit of the mountain and formed a platform, on which the *Caingang* departed, those that had clung to the branches of the trees being transformed into *Monito*, and the *Kuruton* into *Caraya*, Indians. Because the *saracura* had begun their work in the east, all the watercourses of the land flow towards the west into the Paraná. After the flood the *Caingang* established themselves in the vicinity of the mountains. The *Kadjurukre* and *Kame*, whose souls had gone to dwell inside the sierra, began to cut roads, and finally succeeded in getting out in two opposite directions. The *Kadjurukre* entered a level country watered by a brook and without rocks, so that their feet remained small. The road of the *Kame*, however, led to a rocky region,

where their feet were bruised and swelled up to their present size. As there was no spring there, they had to beg water of the Kadjurukre. On leaving the sierra, the Caingang ordered the Kuruton to look for the baskets and calabashes which they had abandoned below before the deluge. The Kuruton departed, but were too lazy to re-ascend the mountain, so they remained where they were and never joined the Caingang. During the night following their departure from the sierra, they built a fire, and a Kadjurukre made tigers out of the ashes and coals, bidding them devour the people and the game. As he had not enough coal left for painting the creatures he meant to fashion next, he made the tapirs, painting them with ashes and bidding them eat game. But, as they were hard of hearing, they asked him to tell them again what to do. Being already engaged in creating another species, the Kadjurukre answered gruffly, 'Eat leaves and the branches of trees!' Since then they have eaten only foliage and the branches or fruits of trees. The Kadjurukre was making another animal, which still lacked a tongue, teeth, and several claws, when the day began to break. As he was unable to complete the animal in the daylight, he quickly put a thin rod in its mouth and said, 'As you have no teeth, feed on ants!' Hence the imperfections of the ant-eater. The next night the Kadjurukre resumed his labours and created other animals and insects, among them the bees. In the meantime the Kame had created other animals to combat his rival's, such as the pumas, venomous snakes, and wasps. All the Indians marched on together. The young men of the Kadjurukre's band married the girls in the Kame's, and *vice versa*; and, as there were still left a great many young men, these married the Caingang women. For this reason the Kadjurukre, Caingang, and Kame consider themselves allies and relatives of one another.¹

The *Tupi* derive their origin from Monan, the creator. Offended by his creatures, this deity caused a universal conflagration, which destroyed all human beings save Irinmage. Upon the solicitation of Irinmage, Monan extinguished the fire, and afterwards gave him a wife. From the descendants of this pair there issued Monan Maire, who acted as culture-hero, transforming men into animals and establishing the cultivation of plants. However, the Indians feared him for his magic, and forced him to commit suicide. One of his descendants, Maire Poxi, dwelt in insignificance among mankind, but finally ascended to heaven radiant with beauty. His son vainly attempted to follow, being transformed into stone. Another scion of the same line, Maire Ata, begat the twins Tameduare and Arikute. The brothers went in search of their father, who resided in the east, and were subjected to a number of tests. They proved their miraculous powers by shooting an arrow into the sky and sending an arrow into its notch, continuing this process until the chain of arrows was complete. They further passed through clashing rocks ('symplegades') and descended to the under world. In the course of their wanderings Arikute attacked his brother, who caused a deluge, from which both were obliged to flee, seeking the shelter of trees. After the flood they re-peopled the earth, becoming the ancestors of two tribal divisions.²

The *Araucanians* worship as their supreme deity the representative of thunder, lightning, and fire, the latter being regarded as the origin of all life. This deity, Pillan, is believed to reside on the highest summits of the Andes, and definite localities

are still named after him. At a later period there appeared Mapu, the creator of the earth, and Pillan became his enemy, gradually assuming the character of an evil being. His messengers and subordinate genii introduced disease among the Indians and their cattle, but could be driven away by means of burning branches. One of these supernatural beings, named Cherruve, took the form of comets and large meteors, and generally resided near the crater of volcanoes. Smaller meteorites were inhabited by another form of being with human head and serpentine body. The moon, Anchimalguen, was the wife of the sun, and was formerly regarded as a beneficent deity. More recently, she is described as an *ignis fatuus*, who frightens the traveller by throwing herself under his horse's body. When the rider attempts to lasso her, she flees and seeks refuge in the hut of a witch.³

RÉSUMÉ.—While the material available for comparison is far from complete, some interesting historical problems present themselves to the student of Central and South American myths. So far as homologies occur among neighbouring tribes, or tribes linguistically affiliated, the theory of dispersion from a common source of origin offers the readiest explanation of the similarities in question. Thus, there can be no doubt that the Warrau and Carib myths recorded by Im Thurn have a common prototype, and the conception of sun and moon as balls of feathers can hardly be supposed to have originated independently among the Bakairi, Paressi, and Bororo. The surreptitious preparation of food by bird-women constitutes so characteristic a motive that, though the Jibaro are far removed from the Caraya, we cannot assume that the incident developed twice, and we must depend on future research to indicate more clearly the path of transmission. It is far more difficult to apply this theory to the South American deluge-myths. While in the northern half of the New World the deluge-myth generally assumes a stereotyped form from the Atlantic to the Pacific, embodying highly characteristic elements, the South American narratives of floods do not seem to be united by any striking element of likeness. In the absence of such homologies the possibility of independent development cannot be denied, and we might suppose with Andree² that, so far as the myths are autochthonous, the flood motive has been suggested several times by local inundations. In view of the cultural affinity of North and South America, the question broached by Ehrenreich, whether this relationship is exemplified in the mythology of these continents, is of great significance. As Ehrenreich points out, the arrow-chain by which heroes ascend to an upper world in British Columbian mythology recurs among the Eastern Tupi, who are separated from their northern kinsmen by fifty degrees of latitude; and the blocking of a passage-way to another world by a person of generous proportions is equally prominent in the Warrau, Caraya, and Mandan cosmogonies.³ But, striking as are these resemblances, they are as yet suggestive rather than convincing, and it must devolve on future investigators to settle the problem of a pristine community of cosmogonic tales in the Western Hemisphere.

Psychologically, it is perhaps worth while to emphasize the essentially unphilosophical character of the South American cosmogonies. A certain degree of systematization is apparent in the Mexican, Mayan, and Peruvian myths; but the bulk of even these cosmogonic narratives is akin in spirit

and substance to the folk-tales current among their less civilized congeners in both Americas. The Quiché myth is probably fuller of abstract conceptions than any other Central and South American creation-story, yet these metaphysical portions of the *Popol Vuh* are relatively insignificant compared with the elaborate tale of the twin heroes, which has numerous parallels on both continents. Contrary to the traditional theory that folk-tales are degenerate myths, it might, therefore, be plausibly contended that myths are merely *Märchen* with a speculative gloss, or secondarily invested with a religious significance. This view, however, which has been urged by the present writer,¹ still awaits intensive discussion.

LITERATURE.—This is sufficiently indicated in the article.

ROBERT H. LOWIE.

COSMOGONY AND COSMOLOGY (Muhammadan).—The account in the Qur'an of the creation of the universe is founded upon an imperfect version of the story in Genesis. In xli. 8 ff. it is written (Rodwell's tr.):

'Do ye indeed disbelieve in Him who in two days created the earth? . . . and He hath placed on the earth the firm mountains which tower above it, and He hath blessed it, and distributed its nourishments throughout it, for the cravings of all alike, in four days; then He applied Himself to the heaven, which was but smoke: and to it and to the earth He said: "Come ye, in obedience or against your will"; and they both said: "We come obedient." And He completed them as seven heavens in two days, and in each heaven made known its office: and He furnished the lower heaven with lights and guardian angels.' Other references are xv. 16 ff., xvi. 8 ff., xxxv. 12, etc.

The commentators Zamahshari and Baidāwī, whose remarks are abstracted in the notes to Sale's *Koran* (Lond. 1734, p. 389), explain that the 'smoke' or 'darkness' of the heaven proceeded from the waters under the throne of God (which was created before the heavens and the earth), and rose above the water; and, the water being dried up, the earth was formed out of it; and the heavens out of the smoke which had mounted aloft. It is added that the heavens were created on Thursday; the sun, moon, and stars on Friday, in the evening of which Adam was made. The guardian angels were appointed to ward off prying devils (Baidāwī, *ib.* 211). The Traditions add little to this vague material:

'God was; but nothing was before Him, and His imperial throne was upon water. After that God created the regions and the earth; and wrote everything on the tablet of His own memory.' The angels were created from a bright gem, and the *Jinn* from fire without smoke, and Adam from clay. 'When God created Adam in paradise . . . the devil came and took a look at him, and, when he saw him with a body, he knew that God had created a creation which could not guard itself from hunger' (*Mishkāt al-Maqābīh*, tr. Matthews, Calcutta, 1810, xxiv. i. 1).

Orthodox Muslim imagination has elaborated a fantastic idea of the Creation out of these scanty materials, aided by suggestions from foreign sources (such as the seven spheres and seven climates), but without allowing notions of science or philosophy to trench upon revelation. Thus the Qur'an (ii. 20, lxxviii. 6) states that the earth was 'spread out as a bed,' or 'as a carpet'; so it manifestly must be a flat surface. The Muhammadans interpret the sayings of their Prophet literally, and believe that there are seven heavens, one above the other, and seven earths, one beneath the other; and they lay down the distances between them, and the diameter of each, and the substance of which each is constructed, with much precision. (These valueless speculations and opinions may be read in some detail in Lane, *1001 Nights*, London, 1859, Introd., note 2.) One account pretends that, the seven superimposed earths being unstable, God created a series of supports beneath them: first He ordered an immense angel to go beneath and hold the earth (or rather the seven earths) on his

¹ Lowie, 'The Test-Theme in North American Mythology,' *JAFS* xli. (1908) 97-148, xlii. (1909) 431 ff.

shoulders; and beneath his feet, to support him, God created a rock of ruby, with 7000 perforations, from each of which poured a sea. But the rock stood upon nothing, so God created a huge bull called Kuyūta, with 4000 eyes, and an equal number of other features, to bear it up on his back and horns. And under the bull God made Behemoth (Bahamūt), the giant fish, to lie; beneath which was placed water, and under the water darkness, 'and the knowledge of mankind fails as to what is under the darkness' (al-Damiri, Ibn-al-Wardī, etc., *ap.* Lane, *op. cit.*); but the general belief is that there lies Hell with its seven stages, just as Paradise is supposed to be in the seventh heaven or above it. Muslim philosophers naturally did not always subscribe to such opinions, but, as their philosophy was wholly borrowed, their ideas of cosmogony possess no original value.

LITERATURE.—This is given in the article.

STANLEY LANE-POOLE.

COSMOGONY (Polynesian).—Throughout Polynesia the creation of the world is assigned to Tangaloa, the god of heaven, who is thus named in Tonga and Samoa, while in Tahiti, Raiatea, the Hervey Islands, and elsewhere he is called Taaroa, in New Zealand Tangaroa, and in Hawaii Kanaloa. He dwells in the highest heaven, and is often believed to have the form of a bird, this being his aspect as the celestial wind-god. The sun is his left eye, and he is likewise often the god of the sea, the mirror and the earthly representative of the blue sky. His wife is an enormous rock named O-te-papa, by whom he became the parent of the gods, the planets, the sea, and the winds. The gods, in their turn, were the parents of mankind, although, according to other accounts, Tangaloa himself formed man of red earth. Besides O-te-papa, Tangaloa had other wives, by one of whom, Hina, at once his daughter and his wife (as in many other cosmogonic myths), some legends made him the parent of heaven, earth, sea, and numerous gods. After man he created beasts, fowls, and fishes. Still other creation-myths ascribe the creation of the sky, clouds, stars, winds, beasts, fishes, sea, and the like to Raitubu, 'the maker of heaven,' a sort of demiurge and the son of Tangaloa. The earth is also explained, especially in the western Society Islands, as the exterior of Tangaloa's body, while in Raiatea he was believed to live in a sort of mussel, throwing away the shells from time to time, and thus enlarging the world. The myth of the cosmic egg was not unknown in Polynesia. A legend current in Hawaii, the Society Islands, and Tahiti, made Tangaloa, in his aspect as a bird, a prisoner for long ages in a gigantic egg. He finally broke this place of confinement, however, and the two halves of the shell formed the heaven and the earth, while the smaller fragments became the islands. Another tradition makes the islands bits broken from the cosmic rock O-te-papa, as she was dragged by her husband through the sea, or else pieces broken off from the mainland by angry gods. The myth of the cosmic egg recurs in New Zealand, where mankind were believed to be produced from an egg laid on the waters by a gigantic bird.

Tangaloa's exertions at the creation of the world were so great that, according to some cosmogonic legends of Polynesia, the salt sweat which streamed from him formed the ocean. From this ocean Tangaloa attempted to fish the earth; but, just as land was appearing above the surface of the water, his line broke, and the potential continent was dashed into a mass of small islands. A similar legend of Tangaloa fishing up the earth was found in Samoa, though the inchoate condition of Polynesian cosmogony is again exemplified by the existence in this island of divergent myths on this subject. Two islands, Savaii and Upolu, were

hurled from heaven by Tangaloa. He then sent his daughter, Turi or Tuli, to people this first land, and she, assuming the form of a snipe, settled down upon the islands, bearing with her a creeper which grew in the earth that formed beneath her feet. From the decaying leaves and tendrils of the creeper came worms, which Tuli pecked in two with her beak, thus forming human beings.

Both heaven and earth were regarded as impersonal in Samoa, Tahiti, and Rarotonga, and as being so close together that men could not stand upright, but were forced to crawl on the ground. The two were separated, according to the Samoan and Rarotongan versions of the myth, by a man who pressed them apart. In Tahiti, on the other hand, Ru, the sea-god, raised the sky to its present elevation. In Raiatea, a monstrous cuttle-fish held the earth and the heaven together, but he was killed by the sun-god Maui, whereupon the sky rose up to heaven. On the shoulders or the back of this god the earth rests; and, when he moves, the earth quakes. He is also confused with Tangaloa as the deity who fished the earth from the sea, while in other legends he takes the place of Tangaloa's daughter, Tuli, assumes the shape of a bird, and forms man by dividing a worm in two. In Tonga the earthquake is caused by the subterranean god Mafuike, who carries Samoa in his left arm. This same phenomenon is elsewhere ascribed to other gods, such as Maui himself in Tahiti.

Throughout this cycle of Polynesian cosmogonic myth one fact, not without parallel in other religions, is clear. O-te-papa, the primal barren earth or rock, represents the female principle, which is fructified and made to give birth to all things living, by the fertilizing rain which falls from the superincumbent male Tangaloa, the sky. In New Zealand the myth of the separation of earth and sky undergoes a curious modification.

Originally Rangī, the sky, who takes the place of the general Polynesian Tangaloa, who becomes a mere sea-god in this island, was closely united in nuptial embrace with Papa, the earth. From this union sprang countless children, but they were forced to dwell in utter darkness. In discomfort at this gloomy existence, the offspring of the pair sought to separate their parents. Tu-matauenga, the most cruel of all, urged that Rangī and Papa be killed; but Tane-mahuta, the god of trees, urged that the pair be parted. All assented, excepting Tawhiri-matea, the god of winds. The gods in turn now endeavoured to break the embrace of their parents—Rongo-matane, the god of cultivated plants, Haumia-tikitiki, the god of wild plants, Tangaloa, the god of fishes and reptiles, and Tu-matauenga, the god of heroes. Finally, Tane-mahuta pressed his back against his mother and his feet against his father, thus parting Rangī from Papa. Tawhiri-matea, however, was angry with his brothers and followed his father, so that the wind and his children, the storm winds, still make war on the forests and the sea, and only man, the offspring of the terrible Tu-matauenga, is able to resist them. Strife also arose among the gods who had remained on earth, especially between the god of the sea and the god of the forest, since the latter gave Tu-matauenga wood for fishing-implements, whereas the sea is angry with men and seeks to devour them. On the other hand, Ma-taenga and his offspring, mankind, were able to conquer all the gods, with the exception of the wind which blows from heaven.

This version, although more detailed than any other Polynesian creation-myth, is obviously of much later origin than the legends current elsewhere in this part of Oceania.

COSMOGONY AND COSMOLOGY (Roman).

—The only Roman cosmogonies which go beyond mere single statements about the origin of the world are found in the works of later writers. They belong, therefore, to a period when Roman culture was permeated with foreign, and especially Greek, elements. On the other hand, we meet with various cosmogonical ideas which may be referred without hesitation to the earliest Roman times. We shall, therefore, give some account of these, and afterwards inquire how far they enter into, and

give a genuinely Roman character to, the cosmogonies of a later age.

1. **Early cosmogonical ideas.**—Nearly all the cosmogonical ideas of the Romans were connected with the god Janus, who is admittedly one of the very oldest Roman divinities (cf. e.g. Herodian, i. 16: *θεὸς ἀρχαῖτατος τῆς Ἰταλίας ἐπιχώριος*). As F. Lukas (see Literature) puts it, he is related to Juppiter as the First is to the Highest. Accordingly, in the public worship of the Romans the first sacrifice was paid to Janus (Mart. *Epig.* x. 28. 2). As first in time he was naturally also regarded as the cause of all that followed after. So Festus, explaining why the first sacrifice was paid to Janus, adds: 'Jano primum fuisse supplicatum, quasi parenti, a quo rerum omnium factum putabant principium.' M. Val. Messala, the augur (50 B.C.), describes his cosmogonical character more fully: 'qui cuncta fingit eademque regit, aquae terraeque vim ac naturam gravem atque pronam in profundum dilatentem, ignis atque animae levem, in immensum in sublime fugientem, copulavit circumdato coelo,' etc. (Macr. *Sat.* i. 9). Martial (*Epig.* x. 28. 1) describes him as 'sator mundi.' As the author of organic life, he is described in a fragment of the Salaric Hymn (Varro, *Ling. Lat.* 7, 26) as 'donus cerus'—where 'donus' = *bonus*, 'good,' and 'cerus' (or 'kerus,' connected with *creo*, Skr. *kar*, 'to make') means a creative spirit, and, as it is an older word for Genius, the creative deity of the family in particular (Lukas, p. 200). As the author of life, he was also invoked as Consivius (*a conserendo*, Macr. *Sat.* i. 9, 16).

It is clear, then, that Janus was a cosmogonic personage. But it is difficult to say what cosmic principle, if any, was originally represented by him. Here everything depends on the meaning of the name, about which opinions have varied greatly both in ancient and in modern times (cf. Roscher, s.v. 'Janus'). Of the ancient explanations, that which regarded Janus as a personification of the Sun (Nigid. Fig. in Macr. *Sat.* i. 9, 11, etc.) has been most generally adopted by recent writers, amongst whom we include those who think of the sun's light rather than the sun itself (cf. Roscher, l.c.; Lukas, p. 202, etc.). According to another and very similar ancient view, Janus represented the Heaven (Macr. *Sat.* i. 9, 11), and, further, we are informed by Varro that in this character he occupied a place of the highest honour among the Etruscans—*ἀνὴρ παρὰ θεοῖς οὐρανὸν λέγεσθαι καὶ ἑσπερον πᾶσι πρῶτος* (ap. J. Lydus, *De mens.* iv. 2). Now, there is a remarkable fragment of an Etruscan cosmogony in the oracle of Vegöia or Vegone (see *Gromat. Vet.* 350; cf. Müller-Deecke, *Die Etrusk.* ii. 30 ff., 165, 299, 312; Preller, *Röm. Mythol.* i. 172, 256), which begins: 'Scias mare ex aethere remotum. Cum autem Juppiter terram Etruriae sibi vindicavit,' etc. Here we have a Latin translation, probably of the 2nd or 3rd cent. B.C., of an ancient Etruscan oracle, which, according to Preller, represents ancient Italian popular belief. The oracle, which relates to the protection of landed property in Etruria, is thus prefaced by a priestly doctrine about the origin of the world: the Sea arose by separation out of primal Aether—and the same must also have been asserted in the original oracle about the Earth (Preller, i. 256 n.). But Aether is practically the same as Heaven (see art. *ÆTHER* in vol. i.; Roscher, s.v. 'Aither'), with which we are told that Janus was identified in Etruria, and it includes the notion of Light (see 'Greek' art. above; and Lukas, p. 208—'Aether=Licht des Himmels'), which others regarded as the essential attribute of Janus. Hence it is reasonable to suppose that the early Italians not only regarded Janus as creator of the world, but pictured his creative activity after the manner described

in the Etruscan oracle (Lukas, *loc. cit.*; Preller, p. 172).

2. *Literary cosmogonies.*—We are now in a position to inquire how far the cosmogonies of the later poets can be regarded as an independent product of Roman thought. We may fairly ascribe this character to any cosmogony which is based on the ideas already described. Franz Lukas has tried to show that this is the case with regard to the theory sketched by Ovid in the *Metam.* i. 5 ff., and *Fasti*, i. 103 ff. Ovid's is also, so far as we know, the only complete cosmogony whose dependence on primitive Roman ideas can be at all confidently asserted. To it, therefore, we shall now turn.

In the *Metamorphoses* we read that the world was preceded by Chaos. This was not, however, the empty void of the Hesiodic cosmogony, but the primary substance with which space was filled. It was a formless and confused mass—'rudis indigestaque moles'—the parts of which all struggled with one another, by reason of opposite qualities of moist and dry, hot and cold, etc. The process by which the world arose out of Chaos is attributed to what Ovid calls 'Deus et melior natura.' The 'melior natura' is evidently the material force by means of which order is brought out of chaos. Did it reside in matter from the first? The passage is not clear on this point (cf. Lukas, p. 208). But at least it implies that at some point of time the Deity either infused a higher nature into the primal substance, or gave effect to a higher power latent within it. Forthwith the diverse elements separated from each other, and united with their like, and the wholes thus formed took up a relative position in accordance with their several natures. Fire, the lightest element, flashed forth from the topmost arch of heaven; beneath it was the Air, and lower still the Earth, while Water, encircling the latter ('circumfluit humor'), still further compressed its solid mass. Next, the Deity moulded the Earth, which must here be taken as including the liquid element, into a sphere, and formed it in all its parts—seas, fountains, lakes, marshes, and rivers, plains, valleys, hills, and zones. He likewise completed the severance of the Æther from the Air, the region of cloud and storm. Then the constellations, erstwhile hidden in Chaos, glowed in the firmament. Life in all its grades appeared. The stars, as Divine Beings, dwelt in heaven; fish, bird, and beast tenanted their respective homes, and lastly Man was born.

The cosmogony of the *Fasti* is similar, but with some notable differences. There is nothing here about the 'Deus' or the 'melior natura.' The former is absent because the poet is concerned with the evolution of the four elements rather than with the formation of the world; and the latter, because here, whatever may be the case in the *Metam.*, the evolution of the primary matter is regarded as due to its own indwelling force. Another difference lies in the fact that the primary matter, which is again called Chaos, is here expressly identified with the god Janus. This brings us directly to the question whether the Ovidian cosmogony is to be regarded as essentially Roman. Now, the mere fact that Ovid equates Chaos with Janus counts for little, as the connexion of the names depends on a fantastic etymology (cf. Roscher, *s.v.* 'Janus,' pp. 35, 43). What is important is that the cosmogonical ideas contained in the *Fasti* are expressly associated with the old Roman god. The ground-thought of the passage is the separation of the elements from primal matter in obedience to the law of its own nature. The same thought is present in the *Metam.*, though there the evolutionary process is ascribed in part to a 'melior natura' working along with a separate Divine agency. We have seen, further, that the

separation of the elements from the primal Æther (and that apparently without reference to an external agency) was an ancient Etruscan doctrine, and that in all probability Æther and Janus were equivalent terms. Still the connexion of the Etruscan doctrine with Janus rested on conjectural etymological grounds. But the fact that Ovid expressly associates the same ideas with Janus is strong evidence both that the former inference was correct, and that we have here a genuine Roman cosmogony. At the same time it is probable that in the working out of the fundamental idea Ovid was more or less indebted to Greek thought (cf. Lukas, p. 209).

The idea of a force inherent in primary matter, which forms the basis of Ovid's cosmogony, appears also in the representations which other poets give of Nature in general. As examples of these, Lukas refers to Virg. *Georg.* ii. 336 ff., and *Æn.* vi. 724 ff. In the former passage the poet ascribes the origin of the world to the same force which at each new spring-time clothes it with fresh life:

Non alios prima crescentis origine mundi
Iluxisse dies; aliumve habuisse tenorem
Crediderim. Ver illud erat; ver magnus agebat
Orbis, et hibernis parebant fatibus Euri,
Quum prima lucem pecudes haurire, viridique
Ferae progenies duris caput extulit arvis,
Immissaque ferae silvis et sidera coelo.

In the second passage he speaks of the Soul which animates the body of the world, which streams through every member, and from which every living creature sprang. In both these passages the poet, no doubt, borrowed freely from other writers, and especially from Lucretius (see Conington's *Virg.*). But he gives expression to the thought which we have seen reason to believe was familiar to the Romans from the earliest time—that, namely, of the evolutionary capacity of matter.

LITERATURE.—Roscher (see COSMOGONY AND COSMOLOGY [Gr.], 'Literature'), where readers will find a full account and criticism of views relating to Janus; F. Lukas, *Kosm.* (see *ib.*); *Gromat. Vel.*, ex rec. C. Lachmann, 2 vols., Berlin, 1848-67; K. O. Müller, *Die Etrusker*, new ed. by W. Deecke, 2 vols., Stuttgart, 1877; L. Preller, *Röm. Mythol.*, 2 vols., 3rd ed. by H. Jordan, Berlin, 1881-3. I. F. BURNS.

COSMOGONY AND COSMOLOGY (Teutonic).—The word 'Teutonic,' as we take it, is in its way descriptive of all peoples of Germanic origin, such as the Scandinavian, German, Dutch, and Anglo-Saxon. The word 'Teuton' first appears in the 4th cent. B.C., and is then applied to the Germanic tribe living around the mouth of the river Elbe. Modern ethnologists join in the common division of the Teutonic race, as yet existing, into three branches: (1) the Scandinavian, (2) the Low German, and (3) the High German. The Scandinavian branch includes the Icelanders, the Norwegians, the Swedes, and the Danes; the Low German branch includes the Frisians, the Dutch, the Low or Northern Germans, the Flemings, and the Anglo-Saxons; the High Germans are the Germans of Middle and Upper Germany, of Switzerland, and of Austria. For convenience' sake it is just as well, however, to speak only of the Scandinavian and the German branches, since this is both common and satisfactory.¹

As Teutons, these two great branches had a common origin and a common faith in the supernatural. Thus their myths are also essentially identical, though the Scandinavian is much richer than the German. This is especially the case with reference to their cosmogony, for which we have to depend almost entirely upon Scandinavian sources. But whether the common stock of Teutonic belief

¹ Some divide the entire Teutonic race into the Eastern, Western, and Northern branches. Of these the Eastern, which once consisted of Ostrogoths, Visigoths, and Moevgoths, is now extinct; and the other two divisions are identical with the German and the Scandinavian branches.

is faithfully preserved in the Northern myths is a matter of much dispute. In reference to this problem, two different schools have developed—the conservative, and the critical—to which must be added a number of more or less independent investigators of a mediating type, leaning towards the one side or the other, though, of course, having much in common with both (cf. Literature at end of art.).

It is, however, safe to say that most modern scholars hold that Christianity in its earlier forms has, in a marked degree, influenced the old Norse poets, their songs, and their sagas, and consequently has made it very difficult to ascertain which elements in this mythology are genuinely Teutonic. The important poem *Völuspá* especially is viewed with much suspicion, as may be well noted, for instance, in E. H. Meyer's edition of it (*Völuspá, eine Untersuchung*, Berlin, 1889), in which he arrives at the conclusion that this great cosmogonic source is a mere Christian poem in a heathen disguise, composed in the 12th cent. by Saemund the Learned. Several later authors do not agree with this view, but rather consider it erroneous, though they allow that the great song has suffered from foreign influences, probably mostly Christian. Furthermore, it is generally held that the author of this poem, as well as of all the songs of the poetic Edda, is unknown, though the various lays were all collected in the 13th century.

From the German sources little can be learnt concerning the cosmogony of the old Teutons. Indeed, they tell us next to nothing of any of the beginnings, and they have no prophecies with reference to the future, while there is much of both kinds in the Scandinavian myths. Traces, indeed, have been found in Germany of a mythological belief similar to the Scandinavian, and even identical with it. Thus in Waitz's 'Merseburg MS' (probably from the 10th cent.) there are indications of a Balder as an originally Teutonic character; Odin is mentioned and Frija his wife, as is also a class of beings named Idisi, who perform the same services as the Valkyries of the Northern myths. These names occur in certain magic formulæ of undoubted heathen character, which are contained in the manuscript just mentioned. A similar source is the so-called 'Wessobrunn Prayer' from the 8th cent., in which, according to Müllenhoff and others, there are traces also of an original Teutonic cosmogony with the concept of a large void and yawning abyss, etc. But this may have been derived from Christian influences, as Wackernagel contends. Another source is found in Tacitus' works, in which he incidentally or otherwise touches upon the belief of the Teutons (cf. esp. *An.* xiii. 57; *Germ.* ii.). From these notices it seems that the old Teutons considered fire and water, and also salt, as original elements. Similar notions are to be found in Snorri Sturlason's *Gylfaginning*, chs. 5 and 6 (cf. below, p. 178, on the cow Audhumla licking salty stones in Ginnungagap). Finally, there exists at Mainz a letter of Daniel of Winchester (*Ep.* 15, Mon. Moguntina Coll.) to Boniface, the missionary to the Germans, written c. 720, which to some extent describes the cultus and beliefs of the ancient heathen. In it there are some references to the origin of the world and of the gods themselves.

These are really the only remains which we possess from the German branch of the Teutons as to the beginning of the world, except that in the idiom of the language itself and in certain remaining forms of magic there are some recollections of ideas once entertained by the original Teutons. But from all these remnants brought together there cannot be constructed anything like a

Teutonic cosmogony. For such we have, as already indicated, to turn to the North.

The two main cosmogonic sources of the Scandinavian branch of the Teutons are Snorri Sturlason's *Gylfaginning* and the *Völuspá*. The former is, however, of less value as being very much a construction from the period of its composition, so that we shall have to draw mainly from the latter. According to it, the origin of the world, with its resultants, was as follows:

'There was, in times of old, where Ymir dwelt,
nor land nor sea, nor gelid waves;
earth existed not, nor heaven above;
there was a chaotic chasm,
and verdure nowhere.

Before Bör's sons raised up heaven's vault,
they who the noble Midhgardh shaped,
the sun shone from the south
on the structure's rocks;

there was the earth begrown
with green herbage.

The sun from the south, the moon's companion,
her right hand cast round the heavenly horses;
the sun knew not where it had a dwelling;
the moon knew not what power it possessed;
the stars knew not where they had station.

The Aesir met on Idha's plain;
they altar-steads and temples high constructed;
their strength they proved, all things tried,
furnaces established,
precious things forged,
formed tongs, and fabricated tools.

At tables played at home; joyous they were;
to them was not the want of gold,
until there came Thurs-maidens three
all powerful,
from Jötunheim.

Then went all the powers to their judgment-seats,
the all-holy gods, and thereon held council
who should the dwarfs' race create,
from the sea-giant's blood
and livid bones.

Then was Mótsognir created,
greatest of all the dwarfs,
and Durin second;
there in man's likeness
they created many dwarfs from earth,
as Durin said.'

Then follows a list of some fifty-five dwarfs, which the high gods created to be remembered as long as mortal men exist on earth. And, as in Genesis and most other cosmogonies, so in the Edda there is a story of a double creation, for now we are told that

'There came three mighty and benevolent Aesir
to the world from their assembly.
They found on earth nearly powerless
Ask and Embla,
void of destiny.

Spirit they possessed not, sense they had not,
nor blood, nor motive powers, nor goodly colour.
Spirit gave Odin, sense gave Hoenir,
blood gave Lodhur,
and goodly colour.'

According to this description of the Creation, we find that before either heaven or earth was made there existed a chaotic state with a deep yawning chasm, later called Ginnungagap ('yawning gap'). This may be considered as the *terminus a quo* for the Teutonic idea of creation. In the *Völuspá* the story of the making of the world is given as here quoted, but it would hardly be fair to make this the only source of the cosmogony of the Teutons, as long as there is another, which proceeds to a much more detailed description. This is found in the prose Edda of Snorri Sturlason, and under the heading *Gylfaginning*, as before mentioned, but it is rather too extensive to quote. In the remaining literature of the Eddas there are also a few other references to the creation of the world and the

origin of things, and these, together with the two main sources just mentioned, offer the following composite view of the Teutonic cosmogony.

Ginnungagap was limited to the north by the cold and frosty region called Niflheim, and to the south by Múspellsheim, with its fire and burning heat. In Ginnungagap itself the cold from Niflheim, carried along by the twelve poisonous rivers, the Elivágar from the fountain Hvergelmir in the lowest depths of the abyss, met the heat from Múspellsheim, resulting in the first development of life, which took form in a being similar to a man and called Ymir, who was of immense size and became the progenitor of the giants.

Along with Ymir there arose from the same union of cold and heat a monstrous cow called Audhumla—an original conception, it seems, and as such the fructifying power. With her milk she sustained Ymir, while she herself fed from the salty stones in Ginnungagap, which she licked. From her contact with the salty stones there grew forth another being called Buri, who united with Ymir's daughter Bestla, a sister of Mimir, the water-demon. By Bestla, Buri had a son Bór, who became the father of Odin, Vili, and Vé. Of these Odin was the greatest, and as such he is sometimes called the father of the gods. Odin and his brethren finally killed Ymir, drowning in his own blood his entire progeny, the giants, with the exception of Bergelmir, who escaped, and, in his turn, now became the father of a new race of giants. With Ymir's body the gods filled the awful and dark abyss, Ginnungagap, and there made the world. From Ymir's flesh they formed the earth; from his blood the rivers, lakes, and seas; from his teeth and smaller bones they made the rocks and pebbles; while from the larger bones they formed the mountains. With his eyebrows they surrounded this new-made earth, and called it Midgardh, outside of which there was the ocean—the whole being now overtopped by heaven, which was made out of Ymir's skull and illuminated with sparks from Múspellsheim itself. From the giant's brains the gods made the flying clouds and the mists.

The next creative act of the Aesir, or high gods, was the making of man. Originally he was made into a pair from the mystic trees Ask and Embla, which the sons of Bór found on the seacoast, when one day they were walking there. To these new-made beings Odin himself gave life, Hoenir understanding, and Lódhur the blood and the lower senses, placing all this in a most beautiful form. Of man in his original state we noted the following from the *Völuspá*: 'Spirit they possessed not, sense they had not, nor blood, nor motive powers, nor goodly colour; spirit gave Odin, sense gave Hoenir, blood gave Lódhur, and goodly colour.' It should be remarked that Hoenir and Lódhur are identical with Vé and Vili.

As we have seen, the dwarfs made another class of beings with which men always had to contend, and who probably represent a later stage in the forming of the Teutonic myths, caused, perhaps, by the resistance of an earlier race to the coming invaders. These dwarfs constituted a hostile power of great number, and are mentioned at many places in the Eddas and in the earlier Icelandic literature.

From the account of the creation of man we have seen that trees have had a prominent place in the Teutonic mind from the very beginning. Most important of these trees was the great ash Yggdrasil, which was the life-tree, the tree of cosmic unity and of all existence, spreading its branches out over the whole world, and reaching with its top even to the abode of the gods, while sending its roots under the world in order to support it. Of

these roots, one goes to Niflheim, where it is constantly gnawed by the subterranean serpent Nídhögg in order to destroy the tree and the world; the second root stretches to the region of the giants, where it enters the spring of Mimir, the great ruler of the nether world and the keeper of the tree itself. From this spring even Odin has to draw his wisdom. The third root reaches to the home of the gods themselves, from under which the sacred spring of Urd has its place, and whence the Norns, the sole arbiters of all human destinies, constantly scoop water to pour over the great ash, so as not to allow it to wither. But, notwithstanding all this care, there will come a time when the great tree will lose some of its leaves and branches, and then it will begin to groan. This will be the signal of Ragnarök, or the end of the present condition of the world. Now the final struggle between the gods and the giants, between good and evil, shall be fought, when evil will be for ever vanquished. After this the Yggdrasil will flourish as never before, and there shall be a new age, with a new earth, in which the hosts of the righteous shall dwell for ever in perfect bliss.

This is as nearly as possible an objective statement of the views of the early Teutons as regards the beginning of the world. But no one can tell whether these beliefs were not preceded by others of a more rude and simple character. This view seems probable to the present writer. But, as the examination of this hypothesis would lead us into the altogether uncertain, we shall have to rest satisfied with the matter we have in hand, and congratulate ourselves that we have so much. Perhaps its philosophy may be summed up as follows. The early Teutons believed in a pre-existing substance in a completely chaotic state, out of which, through the incompatible forces of cold and heat, there arose the primitive forms of life, endowed from the beginning with reproductive power. In this early state only the most monstrous beings were produced—beings like Ymir and his race, the giants. In the generating forces of the cow Audhumla, as well as in the two trees Ask and Embla, we meet new factors of organization, forming gods and men, which have a very near relationship. These are not generated outside of Nature, but within it, and are thus dependent upon it. Hence it follows that even the gods themselves are temporal a *parte ante*, and not eternal. Undoubtedly this was the early idea of the Teutonic race as regards the superior powers in which it believed. Furthermore, the gods are not real creators, but organizers forming the desirable objects out of pre-existing elements, which may have been considered as eternal. The gods may be said to have been generated from Nature, while man is the work of these gods through Nature, and they all in common have to conquer their baser instincts in order to remain free from trouble and curse. It is along these lines that the world itself, considered as a whole, will proceed until, after a final struggle, the new world, with its new conditions of happiness and bliss, shall be ushered in.

Such is the story of the cosmogony of the Teutons contained in some of the most sublime poetry of ancient literature. Few will doubt that it has, at least in a measure, been influenced by early mediæval Christianity, as Meyer and Bugge, together with many others, have proved; but none will deny that in these Icelandic lays we possess the essential strata of genuine Teutonic belief.

LITERATURE.—The *Poetic or Sæmundar Edda*, crit. ed. by S. Bugge, Christiania, 1867, Eng. tr. by Benjamin Thorpe, London, 1866, literal tr. in Vigfusson's *Corpus Poeticum Fornale*, Oxford, 1883; the *Snorra Edda*, ed. Copenhagen, 1848-57, partial Eng. tr. by I. A. Blackwell, in *Northern Antiquities*, London, 1847, and by R. B. Anderson, Chicago, 1880; K. Blind, 'The Teutonic Tree of Existence,' *Frazer's Magazine*, 1887; P. D. Chantepie

de la Saussaye, *Rel. of the Teutons*, tr. Boston and London, 1902; S. Bugge, *Studier over de nordiske Gude- og Heltesagns Oprindelse*, I-II, Christiania, 1881-1889, Germ. tr. by O. Brenner, Munich, 1889 (Eng. tr. of vol. II, under the title *The Home of the Eddic Poems*, London, 1899); J. Darmesteter, 'Les Cosmogonies aryennes,' in *Essais orientaux*, Paris, 1888; C. F. Keary, *Outlines of Primitive Belief*, London, 1882; A. V. Rydberg, *Fädersnas gudasaga*?, Stockholm, 1898, also *Germanisk Mythologi*, I-II, Stockholm, 1886-1889 (Eng. tr. of vol. II, by R. E. Anderson for the Norroena Library, London, 1906 ff.); W. Golther, *German. Mythologie*, Leipzig, 1895, pp. 601-543; J. Grimm, *Deutsche Mythologie*?, Berlin, 1876; E. H. Meyer, *Völsungd*, Berlin, 1889 (this work has a good list of references to sources, literature, and commentaries), also *Die eddische Kosmogonie*, Freib. 1891; K. Müllenhoff, *Deutsche Altertumskunde*, vol. V. (by H. Gering, 'Die Edda,' Berlin, 1892); E. Mogk, *Ger-*

man. Mythologie, Leipzig, 1906; H. Paul, *Grundriss d. germ. Phil.* III. 2, Strassburg, 1896-1900; H. Petersen, *Om nordboernes gudekyrkelse*, Copenhagen, 1876; K. Simrock, *Handbuch d. deutschen Mythologie*?, Bonn, 1887, §§ 6-53; F. Kauffmann, *Deutsche Mythologie*?, Leipzig, 1898; Paul Hermann, *Nordische Mythologie*, Leipzig, 1903; H. Schück, 'Svensk gudatros under hednaden,' *Finsk Tidskrift*, 1898; cf. also T. Möbius, *Catalogus Librorum*, Leipzig, 1860, also his *Verzeichniss*, Leipzig, 1880.

Darmesteter, Rydberg, and Grimm belong to the 'conservative' school, while Mogk and Meyer are very critical with reference to the contents in much of the Icelandic literature, particularly in *Völsungd* and the *Snorra Edda*; Golther occupies a sort of intermediate ground; Müllenhoff is generally considered a very safe guide and a good authority.

COUNCILS AND SYNODS.

Buddhist (L. DE LA VALLÉE POUSSIN), p. 179.

Christian—

Early (D. STONE), p. 185.

COUNCILS (Buddhist).—

Before giving a short survey of the traditions relative to the Buddhist Councils, it seems advisable to state what these Councils were. While it is impossible to accept the Buddhist opinion, which views them as ecumenical assemblies after the Nicene type, it is at the same time necessary to explain how Buddhist monastic life, without the help of such solemn assemblies, nevertheless resulted in a sort of 'catholicism,' and secured the redaction and the compilation of Canons of scriptures very like one another. The problem of the origin and character of the early sects cannot be evaded, for sectarianism is as old as catholicism in the Buddhist world; and Councils are said to have been held by the 'orthodox' to impugn sectarianism, and by the 'heterodox' to define their own peculiar tenets. As the history of the Canons and of the Sects will be dealt with elsewhere, we shall say here only what is necessary to avoid misleading ideas about the Councils, and to justify our half-conservative, half-critical position.

I. COUNCILS, CANONS, AND SECTS.—The professed dogma of the Buddhists of the post-canonic ages is that Councils were solemn synods of Saints, where quasi-omniscient and sinless old men (*arhats*, *sthaviras*) gathered in order to rehearse, to 'chant together' (*saṅgiti*), the Word of Buddha (First Council), or to re-state it against the heretical views of innovators (Second and Third Councils), or to approve the addition of new treatises to the sacred lore, or to give authoritativeness to some theory of exegesis (Third Council and Kāśika's Council).

It is hardly necessary to point out that, as regards the First Council, the ecclesiastical dogma is untenable. No European would admit the 'authenticity' of the whole Pāli scriptures; and—without troubling to refer to a number of specious arguments—in presence of such facts as are adduced by Rhys Davids (*Buddhist India*, London, 1903, p. 176) or R. O. Franke ('Buddhist Councils' in *JPTS*, 1908, p. 8), the relative lateness of a great or the greater part of the *Nikāyas* themselves is evident (see below, on the later Councils). But it is safe to believe with Kern, whose critical methods are by no means uncritical, that there have been 'synods' ('Qu'il y ait eu des synodes, personne ne le nie' [*Geschiedenis*, II. 265]). Upaniṣads as well as Suttantas furnish many evidences of the habit of discussing doctrinal matters.¹ We shall venture to add (1) that Councils were sometimes legal sessions, of the type approved of in the Pāli *Vinaya*, held by the parochial or diocesan (or even polydiocesan) clergy, i.e. a *saṅgha*, in order to inquire into accusations brought against a monk or group of monks (First Council, ordeal of Ānanda [if it be historical], Second Council, on the ten extra-allowances of the monks of Vaiśālī); (2) that heretical views, no less than extra-legal practices, may have been a matter of scandal, of inquiry, of doctrinal appreciation by the *soi-disant* supporters of tradition (Council on the Five Points

Christian—

Mediaeval (D. S. SCHAFF), p. 193.

Modern (H. THURSTON), p. 197.

of Mahādeva?)—there was on some occasions at least more or less formal 'consensus' of the contending parties; (3) that, possibly—we dare not say probably, for no human being knows anything about it, and 'probably' would be misleading where no appreciation of probability is possible—immediately after the death of the Master, some of his disciples, headed by Upālī or Ānanda or Kāśyapa, tried to ascertain at least a list of his authentic sermons and teachings; they agreed, let us say, on the technical 'phrases' which are the oldest form of the *Prātimokṣa* (cf. *Mahāvūyutpatti*, § 256 ff.), on the wording of the Benares sermon, etc.; (4) that kings of old concerned themselves with ecclesiastical affairs, as did kings of later times¹—synods and doctrinal disputations, usual in the Middle Ages, as we are told in many sources,² may sometimes have acquired special importance, owing to royal intervention (Āśoka, Kāśika?); (5) that some monasteries (and in early times there were huge monasteries) were like permanent councils. Their 'living libraries' became Canons; for the canonic shape which the Word of Buddha (*buddhapravachana*) received at last, when Word became Scripture, had been for a very long time foreshadowed by the oral and mnemonic distribution of the Word into several Baskets (*Piṭakas*) and Collections (*Nikāyas*).³

Real synods, regional or local, would have furnished Buddhists with the idea of primitive and catholic Councils, if the immemorial custom of conversing on the Law had not early evolved this very idea, and if the sectarian spirit had not given to it a special importance: 'Our Scriptures are the Word of Buddha, for they have been authenticated by sinless and divinely-eyed witnesses.'

But, while acknowledging the possibility (even the probability) of synods, we are at no loss to point out more certain and farther reaching causes of the facts to be explained, viz. the formation of the body of the Scriptures, the general (if not strict) 'consensus' of the sects of the Hinayāna as concerns Buddha's teaching, and, conversely, the splitting of the Order into sects.

If one excepts the division of the clergy named *āraṇyikas*, 'forest men,' or *pratyekabuddhas*, 'those who leave the world to live as the saints of old' (*vipravrajyā* [see Poussin, *Boudhisme*, 1909, p. 365, and art. TANTRAS]), Buddhist monks have never been hermits, 'rhinoceros-like' solitaries. A novitiate so-called, and often prolonged apprenticeship, study, and service at the feet of the preceptor, fortnightly confession, coenobitic life, and prolonged living together during the rainy season

¹ We may cite Āśoka's Bhābrī Edict and Pillar inscription at Sārnāth (V. A. Smith, *Early History of India*?, Oxford, 1908, p. 160); also (possibly) his Edict on the Quinquennial Assembly (Fourth Rock Edict) (V. A. Smith, *Āśoka*, Oxford, 1901, p. 116; Kern, *Manual*, 101); on the assemblies convened by Harsa, see V. A. Smith, *Early History*, p. 322; Kern, *loc. cit.*, and *Geschiedenis*, II. 220.

² For instance, Tārānātha (*Geschichte des Buddhismus im Indien*, tr. Schleier, 1869), Hsien Tsiang (*Buddhist Records of the Western World*, tr. Beal, 1884).

³ On the oral transmission of the *Vinayas*, see Fa-hien, xxxi.

¹ See, for instance, *Digha*, I. 178; Rhys Davids, *Dialogues of the Buddha*, I., Oxford, 1899, p. 244, n. 2.

were designed to prevent the admission of heterogeneous elements or to lead to their expulsion.¹ True Buddhist life was secured in every monastery, and the itinerant habits² which led the Brethren from their aboriginal country to the farthest monasteries of the 'Universal Church' established strong ties between the fraternities. Thus, the sons of Śākya constitute only one family 'held together (not) merely through their common reverence for their master, and through a common spiritual aim'³ but by frequent intercourse and a common fear of deviating from Buddha's practice. Rival orders, whether Jain or Brahman, were a danger to orthodoxy, although they were also a cause of it.

There are no bishops in the Buddhist Order, nor even abbots in monasteries (*vihāras*); there was no monk entitled by the Buddha himself, or by the Church, or by 'Elders in number' (*sambhūta*), to be the 'protection' (*paṭisāraṇa*) of his brothers.⁴ Nevertheless, the present writer is now inclined to believe that Buddhism contains more of a hierarchy than Oldenberg (*Buddha*⁵, p. 395 = *Bouddha*⁶, p. 333) and he himself (*Bouddhisme*, Paris, 1909, p. 335) have hitherto been willing to admit.

The 'ecclesiastical age,' the number of years elapsed since the admission into the Order, and the 'sanctity' (arhat-ship), the number of years elapsed since the acquisition of the passionlessness of an arhat, are the principle of a hierarchy—not a constraining, but a very effectual one. The rule of addressing an 'elder in religious life' by a special title, *bhante*, 'venerable,' instead of using the primitive and levelling *āvuso*, 'friend,' is attributed to the dying Buddha; it was enforced at an early epoch, though not at the very beginning.⁵ Arhats were jealous of their privileges; they regarded it as a very grave crime unduly to claim

¹ As too often happens in such obscure fields, our documents are double-edged, and one can use them to demonstrate conflicting theories—original 'orthodoxy' as well as original 'anarchy.' For instance, we are told of monks 'who had no preceptors and received no exhortation or instruction,' wearing improper garments, eating improper food . . . (*Mahāvagga*, I. 25, in *SBE* xiii. [Vinaya Texts, pt. I.] 161); of 'a certain monk, who had formerly belonged to a non-Buddhist school, silencing his preceptor by reasoning, and going back to that same non-Buddhist school' (*ib.* I. 31. 8). Even old monks return to the world or go over to a (schismatic) faction (*ib.* I. 36. 1). There are monks who forbid novices the use of all food that is taken with the mouth (*ib.* I. 57. 3). Relations with non-Buddhist devotees are forbidden (*Pāc.* 41). The *jaṭilas*, or ascetics with matted hair, are said to have thrown their hair and their sacrificial utensils into the river when Buddha converted them; nevertheless, the phrase *nāthi hutam*, 'obligations to fire are of no use,' is with the Buddhists a heretical tenet (*mithyādrṣṭi*), just as it was probably with the *jaṭilas*. It is not held as absurd and impossible that a monk, when at the half month the *Paṭimokkha* ('Book of Confession') is being recited, should say: 'Now for the first time do I notice that this rule, they say, is handed down in the Suttas . . .' (*Pāc.* 73). Nay, we find the case discussed of not a single monk, among all the Brethren dwelling in some particular place, knowing the *Paṭimokkha* (*Mahāvagga*, II. 77. 6 [*SBE* xiii. p. xxxiv]), but this would prove far too much. It sometimes happens that the sinful monks are strong, and the pious monks feeble; these last are dejected, forced to silence in the *saṅgha*, and go away to another country (*Anguttara*, I. 63).

All these testimonies, and many others, e.g. the dishonest method of securing concord and orthodoxy by manipulation of the votes (Oldenberg, *Buddha*⁵, p. 398 = *Bouddha*⁶ [tr. Foucher], p. 388; *Chullavagga*, IV. 14, 26, in *SBE* xx. [Vinaya Texts, pt. III.] 56), establish at the same time: (1) that there are germs of division, and no small danger of the Order's losing its originality; (2) that, conversely, there is a catholic and traditional spirit, asserting itself in the rules of excommunication, etc. That this spirit gained the upper hand is sufficiently proved by the history of the Church, the constitution of Canons, etc. But the same history (growth of Mahāsaṅgha, Lokottaravāda, Mahāyāna, Tantrayāna) confirms the view that there has always been a Buddhism *du dehors*, a heretical, popular Buddhism, which later gained the predominance.

² See Minayeff, *Recherches sur le bouddhisme*, ch. v. esp. p. 116 ff.; cf. S. Lévi, 'Saintes écritures du Bouddhisme,' *Conférences faites au Musée Guimet, AMG Bibl. de vulgarisation*, xxxi. (1909) 125.

³ *SBE* xiii. p. xii; see Poussin, *Muséon*, 1905, p. 311.

⁴ *Majjhima*, III. 8; reference in Oldenberg, *Buddha*⁵, p. 397 = *Bouddha*⁶, p. 335.

⁵ On this point, see R. O. Franke, *JPTS*, 1908, p. 181. His inquiry shows how much light can be derived from a careful comparison of texts. It establishes the fact that 'in the older canonical texts there appears a certain customary mode of address, different from that prescribed for the future by the Buddha.' Here, again, one may urge that the doctrine of the 'elderness' is not primitive.

arhat-ship; they considered themselves as the spiritual aristocracy of the Church, the universal *saṅgha* (cf. the legend of the judgment of Ananda),¹ There are not only Elders (*thera*), but 'Older Elders' (*theratara* = *πρεσβύτερος*, *therachirapabbajita*), and 'the oldest Elder on earth' (*pathavyā saṅghathera*);² and these old monks are styled 'Fathers of the Church,' 'Leaders of the Church' (*saṅghapituro*, *saṅghaparināyaka*).³

Thus was evolved the idea of Patriarchs, *vinayapāṃokkhas*, 'chiefs of discipline,' or *ācāryas*, 'Masters,' who are supposed by the Sinhalese and the Northern Buddhists to have successively controlled the universal Church. Oldenberg rightly observes that this idea of Patriarchs is foreign to the canonical literature; but we are told in *Dīgha*, II. 124, that such and such a *saṅgha* possesses *theras* and *pāṃokkhas*.⁴

The feeling of the unity of the Order, and the actual striving to promote or to restore this unity, assert themselves in the sermons of Buddha on 'schism' (*saṅghabhedā*),⁵ the most hateful crime, in punishment of which an eternity (*kappa*, 'age of the world') of suffering is hardly sufficient!⁶ In some cases Buddha goes so far as to forbid the re-ordination of monks who have turned away to schism (or who have followed schismatics).⁷

But we ought to be aware that these sermons contain a lesson to the 'rigorists,' or conservative party, as well as to fosterers of division.

The following is reported to Buddha: 'A certain monk, Lord, had committed an offence which he considered as an offence, while the other monks considered that offence as no offence. Afterwards he began to consider that offence as no offence, and the other monks began to consider that offence as an offence. . . . Then those monks . . . pronounced expulsion against that monk for his refusal to see that offence. . . . Then that monk got his companions and friends among the monks on his side, and sent a messenger to his companions and friends among the monks of the whole country. . . . And the partisans of the expelled monk . . . persevered on the side of that expelled monk and followed him. . . . Buddha piteously exclaims: 'The *saṅgha* is divided! The *saṅgha* is divided!' but he has words of rebuke for the 'expellers': 'Do not think, O monks, that you are to pronounce expulsion against a monk for this or that, saying: "It occurs to us to do so."⁸

One has to distinguish between what is really important and what is not worth disputing. *Paṭimokkha*, the essential rule of the Order, and *Dhamma*, the essential doctrine leading to salvation

¹ In *Mahāyāna*, *saṅgha* = *bodhisattvagana*, 'the cohort of the celestial Bodhisattvas' (*Sāntideva's Bodhicaryāvatāra*, Com. II. st. 1). In the later *Hinayāna*, *saṅgha* = *chattāro pariyāyika*, the four owners of, and the four candidates for, the fruits of *śrotāpanna* . . . arhat (*Kāthāvatthu*, Com. p. 32, *Madhyamakavivṛti*, p. 478). This idea that saints (or quasi-saints) only are real members of the *saṅgha* is visible in *Saṃyutta*, I. 233: *chattāro eva paṭipannā chattāro eva phale* (*thitā esa saṅgho yujjhūto*, and also in the history of Councils (*Chullavagga*, XI. xii.), see discussion in *Kāthāvatthu*, xvii. 6.

² *Chullavagga*, xii.

³ *Dīgha*, II. 77 (= *SBE* xl. 6): 'So long as the brethren honour and esteem and revere and support the elders of experience and long standing, the fathers and leaders of the order, and hold it a point of duty to hearken to their words,' etc. (We have objections to the translation 'of the order,' and prefer 'of the fraternities, of the parishes.') Here, again, the text shows that disrespect towards Elders was not impossible. Cf. the Vaiśālī legend.

⁴ See *Buddha*⁵, 398 (= *Bouddha*⁶, 336), reference to *Dīpanīsa*, v., *Parivāra*, 2; Kern, II. 291; *Samantapāsādikā*, 292 (*Vinaya-piṭakam*, vol. III. [1881]). See also, on the 'Northern' Patriarchs, Kern, *Geschiedenis*, I. 215.

⁵ There are a number of synonyms, or quasi-synonyms, which are translated as follows: 'altercations, contentions, discord, quarrels, divisions' among the *saṅgha* (*bhedā*), disunion among the *saṅgha* (*naji*), separations among the *saṅgha* (*vavathāna*), schism among the *saṅgha* (*nānakarava*; *SBE* xvii. 288). There is 'disunion,' when the number of disputing monks does not exceed eight; 'schism,' when they are nine or more (*Chullavagga*). It must be observed that the Vinaya has in view disputes in a parish; but it states that 'expelled' monks search for partisans 'in the whole country' (*janapada*), and that 'expellers' give notice abroad of the expulsion. The *Abhidharmakosa* distinguishes between common *saṅghabhedā* and *chakrabhedā* (7), which is the real *saṅghabhedā*; it adds that *bhedā* supposes in the 'schismatic' (*bhettar*) the folly of believing oneself a 'Master' (*āstara*), like Buddha.

⁶ *Itivuttaka*, § 18 = *Anguttara*, v. 76 = *Kāthāvatthu*, xlii. 1 = *Parivāra*, xvii. 78 = *Chullavagga*, vii. 5. 4. [We are indebted for these references to Prof. R. O. Franke.]

⁷ See *Chullavagga*, vii. 5. 4; but cf. the whole paragraph.

⁸ *Mahāvagga*, x. 1; the translators of 'Vinaya Texts' (*SBE* xvii. 237) have: 'expulsion against a bhikkhu whatever be the facts of the case. . . . (*yaṃsīm vā taṃsīm vā*).

—these are important; and happily 'there are not,' Ananda says to Buddha, 'two monks who differ concerning the Eightfold Path, the Four Efforts,' etc.¹ There are also *Adhīpātīnakkha*, *Ajjhāyāva*, and *Abhidhamma*, subtleties or refinements or niceties concerning monastic life and doctrine, but these are mere trifles.

When two monks differ (or believe that they differ) on *Abhidhamma*, one has to content oneself with the mere statement of facts: 'You differ concerning the meaning and the letter [of a Sūtra]; well, do acknowledge that you differ, and do not dispute thereof.'²

Again, 'orthodoxy' has two aspects: not to rest content with 'unreliable' evidences (see below), and not to impugn systematically received opinions: 'Whatsoever monk . . . shall speak thus: "I cannot submit myself to that precept, brother, until I shall have inquired touching it of another monk, an experienced master of the Discipline," that is a Pācittiya, a fault requiring repentance' (*Pāc. 71*).

The principle of the *āchiṇṇa* at once occurs to us, according to which 'it is allowable to do a thing on the ground that "my preceptor, my teacher, has practised this or that"': this principle, acknowledged in Brāhman circles, was maintained by some Buddhists, the heretics of Vaiśālī (*Chullavagga*, xii. 2, 8); and it was to some extent agreed to by the orthodox, for we are told that, when the First Council was just concluded, there came a celebrated monk, Purāṇa, with his 500 disciples, who refused to adhere to the resolutions of the Council: 'The doctrine and the disciplinary rule have been well sung by the Elders; nevertheless, even in such manner as it has been heard by me, and received by me from the very mouth of the Blessed One, in that manner will I bear it in my memory.' Neither the Elders nor the chief writer have a word of rebuke for this individualism (*Chullavagga*, xi. 11).

There are, we say, evidences of a very tolerating tendency; in order to assure concord, the most reasonable are to yield, for discord is the greatest evil. The care to live 'well, without dispute,' and the care not to lose any word of Buddha, whencesoever it might come, were both commended.

It may even happen that laymen are the only supporters of some important texts: 'If he sends a messenger to the monks, saying, "Might their reverences come and learn this suttanta; otherwise this suttanta will fall into oblivion," . . . then you ought to go even during the rainy season' (*Mahāvagga*, iii. 5, 9 [SBE xiii. p. xxvii]).

But the care to be 'orthodox,' and not to alter Buddha's practice (*Buddha-āchiṇṇa*) has not proved less effective. Not only irregular practices, but sinful theories (*pāpikā dīṭṭhi*), must be abandoned.³ The legend of the Vaiśālī Council relates the endeavours of the 'good ones' to enforce the old rules.⁴ The *Mahāparinibbānasutta*, without mentioning Councils, points out that one ought not to rest content, in the matter of the orthodoxy of a theory or of a practice, merely with the testimony of a hearer of Buddha, of an Elder, of a (parish) *saṅgha*, or of many Elders, but that one must look at what we venture to style the original source: 'Without praise and without scorn every word and syllable' [of a hearer, of an Elder, etc.] should be carefully understood, and then one must go for them to the Sūtra, look for them in the Discipline. If they are not to be found in the Sūtra, if they are not to be seen in the Discipline, then you may come to the conclusion, "Verily, this is not the word of the Exalted One" (*Digha*, ii. 124).⁵

¹ *Majjhima*, ii. 245; cf. iii. 128. But we are told by Buddhaghosa that these very lists were altered by heretics (see *Anguttara*, i. 1893 [not 1895], p. 98).

² *Majjhima*, ii. 238 (nos. 103 and 104).

³ See SBE xiii. 226, note: 'Temporary expulsion . . . is pronounced against monks who refuse . . . to renounce a false doctrine.'

⁴ See below, p. 183.

⁵ Although Buddha said: 'Syllables are without any importance; you ought not to dispute on mere trifles' (*Majjhima*, ii. 240).

⁶ See SBE xi. 67; *Dialogues*, ii. 133 (Rhys Davids' tr., from which we venture to differ somewhat in wording); cf. the Sanskrit rendering of these criteria of authenticity in Poussin, *Buddhisme*, p. 144.

There is no reason to deny *a priori* that such a notion of the *Dhamma-Vinaya*, as being more authoritative than individual assertions or local traditions, is very old and even primitive. Without turning the early monachism into a catholicism, one may trace strong catholic tendencies in the 'universal fraternity' (*chātuvāsa saṅgha*). The order of the dying Buddha that, after his death, 'the "Law" is the recourse, the lamp, the island,' has been obeyed. From religious and intellectual needs has issued a system of rehearsing practical, legendary, and doctrinal lore—an ever-increasing and more or less organic growth of the primitive wisdom. The schools which style themselves *śāśvatas* (*Thera*, *Theravādins*) wrongly believe that they maintain the doctrine ascertained in the Councils of the Elders; but the older and more 'historical' conception is very similar, viz. that there was a tradition, called the tradition of the Elders, because the Elders were in early times the authoritative witnesses of the Buddha's word.

To sum up: it is not to be believed that 'Canons' were compiled before a relatively late epoch, and additions were possible for a long time after the sacred lore had been converted into sacred books: the Pāli *Parivāra* and *Abhidhammas* may be quoted as evident additions. But already at the time of the compilation of the *Mahāparinibbānasutta*, the notion of an authentic tradition, whose claims are not to be overborne by isolated *theras* or by parish-clergy, had made its way. And, without admitting a solemn consensus of the universal Church, gathered in Nicene-like assemblies, one can understand how the cœnobic and itinerant organization of the clergy produced this 'common patrimony' of all the sects—to use Cecil Bendall's phrase—which underlies the sectarian development of the Canons known to us.¹

Whilst, in order to explain the 'splitting into sects' and the diversity of the Canons, a Buddhist would admit the *mūlasaṅgiti-bhraṇsa*, 'decay of the original chanting together of the Law,' 'rupture of the primitive consensus,' we shall rather look at the manifold and numerous variants in the wording, and not a few discrepancies in the *mise en œuvre* of the 'common patrimony,' as the natural result of a (doctrinally and locally) diversified work on the oral tradition. The Pāli Canon itself, with its 'polygenous' *loci communes*, its repetitions, its parallel stories with interchangeable heroes, and its contradictions, furnishes us with the best idea of what this tradition was. Nay, it would not be impossible to extract from this Canon two or three Canons all complete, all like one another, and all conflicting.

If the above observations are correct, it is not impossible to work out a provisional theory concerning the origin and the character of sects.² The legend of Purāṇa and numerous evidences of every kind prove that a central authority was wanting, that the original precise dogmatism postulated by some modern historians is purely conjectural, that Buddhist monachism contained germs of 'localization' or division.³ But all this is not inconsistent with a sort of 'catholicism' or 'orthodoxy' at least. Sects (*bhedas*) may arise and develop, without being the results or the causes of formal schisms or divisions of the Church (*saṅghabheda*), and without implying repudiation or the prohibition of 'eating together' or 'communicating together' with monks (*asambhogash saṅghena*, [*Mahāvagga*, x. etc.])—a prohibition which is made known by the repudiating parish to the parishes in general. There may

¹ The consensus of the different sects as concerns the sacred character of many passages, in dogma or history, is not a proof that these passages were unanimously acknowledged before the splitting into sects. Mutual borrowing from sect to sect was by no means impossible; opposition between sects was, on the whole, restricted to a few rules of practice or a few doctrinal tenets; local traditions, or fresh acquisitions, by a particular sect, by some monastery or group of monasteries, were, we must admit, generally welcomed by the others. And it may be urged that a sect—possibly the Pāli-speaking one—which would surpass its fellow-sects in compiling an organized body of Scriptures (or, to be more precise, in designing a drawer-desk in which to put the Buddha's words) would exercise *ipso facto* a profound and decisive influence on the Buddhist Order at large. It does not follow that the traditions of this sect were the oldest, or genuine and free from borrowing, or that they have not been, since their earliest compilation, manipulated, developed, or adulterated in many ways.

² See art. *Śekṛa* (Buddhist). We are not here concerned with the 'Great Vehicle' (*Mahāyāna*).

³ 'Forest men' are allowed to observe ascetic practices that are more or less in contradiction to the principles of the 'middle way' between asceticism and laxity—a principle solemnly stated in the Benares Sermon.

be 'cantonments' without discord, 'diversities' without excommunication. It is, for instance, a fact that Buddhists used their own dialect—Buddha himself is said to have allowed his disciples to do so; and diversity of language is more than sufficient to cause distinction and what we may call 'liturgical' opposition. Details concerning monastic life, robes, and food are also decisive in this regard: discrepancies could not but arise. The Pāli *Vinaya* states that extra allowances ought to be tolerated in some provinces (*Avanti*); four monks make a *saṅgha* in 'bordering countries', nine are necessary in 'middle countries' (*madhyameṣu*), etc.

As we know from later documents, such discrepancies did not lead to scandal or rupture. Of course, a monk ought to follow the rules to which he has subscribed as a novice; but he is not obliged to protest when he is the guest of monks who use food forbidden to him; conversely, his guests have no right to force their own rules upon him.³ But, as it is said, 'the very water has taken fire' (*SBE* xx. 119), the very evidence to which we refer shows that intolerance, too, was by no means impossible in such cases.

Diocesan varieties, which we may consider as the usual origin of sectarian rivalries, did not prevent union and communion, and, therefore, did not prevent collaboration on the Canonical Literature. Anything that claimed to be 'Buddha's word' obtained, as a rule, adhesion. *Sūtras* attested by extraneous tradition (*parasaṃyayas*) were taken into consideration, for later doctrinal contradictions between schools depend upon excesses rather than upon sources, and are more concerned with the meaning of the *Sūtras* than with their authenticity. Schools work on a common literary stock, made up from mutual borrowings, and they arrive at divergent conclusions, even when they do not start from divergent dogmatical tenets. As a rule, doctrinal contradictions do not disrupt the *saṅgha*. If the clergy of a diocese, through the action of a synod or otherwise, draw up a synthesis of the Law, the objection is ready at hand: 'You alter the Law' (*śāsanāṃ navakāṃ*).³ 'No, we have not modified the cardinal principles, theological or moral,' is the answer. And this answer, be it right or wrong, is probably accepted. It may happen that a theory, for instance, the *pudgalavāda* ('doctrine of a permanent ego'), would lead some sectaries so far as to deny the authenticity of certain *sūtras*; or, conversely, it may be a question amongst the orthodox whether such sectaries have any right to style themselves Buddhists, and yet they are recognized as 'scions' of the tradition of the Elders.⁴

Thus, if we consider the mutual relations of sects and their legal position as branches of the universal *Saṅgha*—leaving out of account doctrinal divergences which are not, as such, of paramount importance—sects are not to be contrasted as hostile bodies, with closed traditions. The dream of Bimbisāra may be quoted as giving a true symbol of the Buddhist church:

King Bimbisāra once saw in a dream that a piece of cloth was torn, and a gold stick broken, both into eighteen fragments.⁵ Being frightened, he asked the Buddha the reason. In reply, Buddha said: 'More than a hundred years after my attainment of *nirvāṇa*, there will arise a king, named Aśoka. . . . At that time, my teaching, handed down by several Bhikṣus, will be split into eighteen schools, all agreeing, however, in the end, that is to say, all attaining the goal of final liberation. The dream foretells this, O king, you need not be afraid.'⁶

II. TRADITIONS CONCERNING THE COUNCILS.—

1. First Council or Rājagṛha Council.—The Pāli canonical narrative of the First Council (*Chullavagga*, xi. [SBE xx. 370]) may be summarized in the words of Kern:⁷ 'After the demise of the Master, a certain Subhaddha said to his fellows: "Do not grieve! We are happily rid of the Great Ascetic. We used to be annoyed by being told, "This becometh you, this becometh you not." But now we shall be able to do what we like, and what we do not like we shall not have to do." In order to obviate the dangerous effects of such unseemly

utterances, Kāśyapa the Great made the proposal that the Brethren should assemble to rehearse the Lord's precepts. The proposal was adopted, and Kāśyapa was now entreated to select 500 Arhats. This being done, it was decided that Rājagṛha should be the place of assembly. During a seven months' session the *Vinaya* ("Discipline") was fixed, with the assistance of Upālī; the *Dhamma* ("Law," doctrine), with the assistance of Ānanda.' There are added some details regarding certain errors or misdeeds of Ānanda, who had to make amends for them. Lastly, a celebrated monk, Purāṇa, arrives when the 'chanting together' of the Law is completed, and, although he admits that the Law has been well 'sung' by the Elders or Arhats, he prefers to 'bear' the Law as he has himself received it from the Master.

According to Oldenberg, 'what we have here before us is not history, but pure invention';¹ and every one will agree with him, as far as the 'chanting together' of the whole *Vinaya* and *Dhamma* (= *Sūtras*) is concerned, although, in the words of Kern, 'it is by no means incredible that the disciples, after the death of the founder of their sect, came together to come to an agreement concerning the principal points of the creed and of the discipline.'² As concerns the minor details, whose unhistorical character is by no means evident (misdeeds of Ānanda, excommunication of Chhanna, etc.), Minayeff thinks that they are to some extent historical, and the present writer does not see how this opinion can be 'proved' to be either right or wrong.³ He ventures to believe that it is right. The author of *Chullavagga*, xi., in order to embellish his history of the First Council (a legend or a quasi-legend, an 'ætiologic' or 'apologetic' construction which may cover some kernel of truth), has used traditional data, which are neither more nor less reliable than the whole of the ancient Buddhist Tradition contained in *Vinayas* or *Sūtras*. Moreover, it is not necessary to decide whether these data are true or false; in any case, they present us with useful evidence as to the early Church.

The narratives of several sects—*Dharmaguptas*, *Mahīśāsakas*, *Sarvāstivādins*, *Mahāśāṅghikas*—are parallel with the *Chullavagga*. Although there are manifold discrepancies, it is far from certain that they furnish us with independent traditions.⁴ The *Chullavagga* looks older, for it does not contain any allusion to the rehearsing of the Abhidharma.

Much importance has been attributed by Oldenberg and Franke to the fact that the *Mahāparinibbānasutta*⁵ altogether ignores the Council, although it tells of the indecent attitude of Subhaddha (which, according to the *Chullavagga*, was the occasion of the Council); while, on the other hand, the *Chullavagga* depends (or seems to depend) on the *Mahāparinibbāna*;⁶ therefore, when the last text was compiled, the very idea of a primitive Council had not yet appeared. The present writer does not think that such weighty conclusions can be drawn from a mere literary comparison of the documents. The very argument would not have emerged if the Pāli *Mahāparinibbāna*, like some northern editions of the 'Last days of Buddha,' had been followed by the narrative of the Council; and it is not absurd to suppose that its redactor, for mere literary reasons, abstained from giving an account of the Council.⁷

¹ *Introd. to Vinaya Piṭakam*, p. xxvii.

² Kern, *Manual*, p. 103. According to *Digha*, iii. 210, the divisions among the Jains at the death of the Jina caused Śāriputta to 'rehearse' the Law, to compile a mere numerical enumeration of the dogmatic topics. There is much truth in this information.

³ As is well said by Oldenberg, quoted in *IA*, 1908, p. 7.

⁴ See R. O. Franke, 'Buddhist Councils,' in *JPTS*, 1908, p. 75.

⁵ 'The Book of the Great Decease,' the Pāli narrative of the last days and the funeral of Buddha, tr. Rhys Davids, *SBE* xl., and *Dialogues*, ii.

⁶ See *Dialogues*, ii. 70.

⁷ See *IA*, 1908, p. 8, note; also Nanjio, *Catalogue of the Chinese Transl. of the Bud. Tripiṭaka* (Oxford, 1853), no. 552, and *SBE* xl. p. xxxviii. [We are indebted for this reference and this argument to M. Louis Finot.] A typical instance of the complexity of these literary and historical problems is furnished by the various narratives of the episode of Purāṇa.

This episode is more developed in some *Vinayas* than it is in the Pāli *Vinaya Chullavagga*. According to the *Vinaya* of the *Mahīśāsakas*, Purāṇa demanded the insertion of seven permissions (keeping food indoors, cooking indoors, etc.); according to the *Dharmaguptas*, of eight. Now the Pāli *Vinaya Mahāvagga*, vi. 17-19, 20. 4, 32) states that the problem of the 'eight

¹ *Chullavagga*, v. 33. 1: *sakā nirutti*, 'one's own language'—understood by the commentary as meaning 'Buddha's own language.' See Oldenberg, *Introd. to Vinaya Piṭakam* (1879), p. xlix; Minayeff, *Pāli Grammar* (Guyard's French tr., Paris, 1874), pp. xxxix, xlix, and *Pāṇinīyā* (1869), p. xlv.

² I-tsing, *Religieux éminents*, tr. Ed. Chavannes (Paris, 1894), p. 45.

³ *Kathāvatthu*, xxi. 1; cf. *Majjhima*, ii. 245.

⁴ For more details, see art. *Secrs* (Buddhist).

⁵ This figure, 18, which does not agree with our lists of sects, possibly depends upon the 18 *bhedakara-vatthus*, 'causes of division in the Church'—a fanciful list (*Chullavagga*, vi. 5. 2).

⁶ I-tsing, *A Record of the Buddhist Religion* (tr. Takakura, Oxford, 1896), pp. 13-14; cf. and cf. Taranātha, tr. Von Schietner, St. Petersburg, 1869, p. 274; and Watters, *On Yuan Chuang* (1904), i. 162 ff.: 'The tenets of the Schools keep these isolated, and controversy runs high; heresies on special doctrines lead many ways to the same end. . . .'

⁷ *Manual* (1896), p. 101 f. (with some omissions).

2. Council of Vaiśālī (Vesālī).—According to a tradition fully developed in *Chullavagga*, xii. (SBE xx. 386), and common at least to several sects, there was held, in the year 100 or 110 after the Nirvāṇa,¹ a Council to examine and condemn ten extra-legal practices of the monks of Vaiśālī. The inhabitants of Vaiśālī and surrounding country (Vraja, the modern Braj) are known as *Vṛjīs* (Pāli *Vajjīs*), and the heretic monks as *Vṛjiputrakas* (Pāli, *Vajjiputtakas*). The heretical practices were described, or technically pointed out, in short phrases—'two fingers,' 'another village,' 'dwelling-place,' etc.—some of which were no longer intelligible when *Chullavagga*, xii., and the other *Vinayas* alluded to were compiled, as is shown by the discrepancies in the interpretation of the 'phrases.'

We may safely acknowledge the historical character of a Vaiśālīan controversy on ten points of monastic discipline, but it is as yet impossible to draw from our documents any conclusion regarding the importance or the date of the event, the development of the monastic institution at that time, or the date of the Pāli *Vinaya* as a whole. The present writer considers it a misleading opinion that the whole Pāli *Vinaya* was anterior to the Vaiśālī Council because it does not contain any allusion to the ten 'phrases.' Further, as is generally admitted, the figures 100 and 110 are round numbers.

Oldenberg's remarks on Vaiśālī (Intro. to *Vinaya Piṭakam*, and 'Buddh. Studien,' ZDMG xlii. 613) cannot be said to have settled the question in favour of the priority of the *Vinaya*. For a discussion of the arguments *pro* and *con* one may refer to *IA*, 1908, p. 81 ff.

R. O. Franke defends an altogether different estimate of the 'Vaiśālīan' legend. His argument against Rājagṛha and Vaiśālī, is, in short, as follows: The author of *Chullavagga*, xi. (First Council), has turned into history the saying of Buddha that 'after my death, O monks, the Law ought to be your refuge.' Therefore, thought this ecclesiastical romancer, the Elders compiled the Law just after the Nirvāṇa; and, as there was no tradition whatever concerning this supposed Council, he employed all the 'evangelical' data which could be of use for an 'apostolic' history. Again, Buddha was said to have delivered many discourses (compiled in the Suttas or in the *Vinaya*) concerning heretics 'who proclaim and hold as right (*dhamma*) what is wrong (*adhamma*), as Discipline (*vinaya*) what is un-Discipline (*avinaya*);' may more, he predicted that the Vajjia would be destroyed owing to their disrespect for Arhats, their discords, etc. Various misdeeds of the Vesālīan *Vajjiputtakas* were also well known; during the lifetime of Buddha, they adhered to the 'five points' (ascetic exaggerations of Devadatta), *Chullavagga*, vii. 4. 1; or, on the contrary, they indulged in the most strange indulgences—eating, bathing, and sleeping as they pleased, and permitting themselves sexual intercourse (*Vinaya Piṭakam*, ii. 23; *Pār. i*, 7. 1). From these data, the ecclesiastical romancer has constructed a history of a schism (finally settled at Vaiśālī), parallel with his history of the compilation of the Law (First Council), and showing the same literary skill: '... The chronicle of the "Second Council" ... is not only a merely literary construction; it does not even possess any relevant subject-matter. Whether such monkish steam as those ten puerilities was ever let off

(or seven) points was discussed during the lifetime of the Buddha, who, after having authorized the 'keeping of food indoors,' etc., withdrew this concession (see *IA*, 1908, p. 5). It is not easy to draw any conclusion from such coincidences. (1) One may say that the *Mahāsāṅghikas* and the *Dharmaguptas* have embellished the history of the Council through attributing to Purāṇa some opinions alluded to and condemned in the *Vinaya*; and this opinion is right enough, for Purāṇa seems not to have been a man to patronize extra allowances; and, from a merely literary point of view, the *Mahāvagga* (our Pāli recension, or some other edition of the subject matter of the *Mahāvagga*) is the probable source of the *Mahāsāṅghika* information. But (2) it is very probable, or rather certain, that the redactors of the *Vinaya* (*Pāli-mokkha*, *Mahāvagga*, etc.) have 'antedated' many prescriptions and many events, Buddha himself being said to have condemned practices or tenets which, in fact, appeared only after his death, and became occasions of disputes or schisms.

¹ The date 100 anno nirvāṇi, according to the *Chullavagga*, the *Mahāsāṅghikas* (Wassilief, in Tārānātha, p. 291), the *Dharmaguptas* (Beal, *Four Lectures on Bud. Lit. in China* [London, 1882], p. 83, and Berlin Congress of Orientalists, Ostas. section, p. 33), and Fā-hien (xxv., at the end); the date 110, according to the Sarvāstivādins (Rockhill, *Life*, p. 171; *IA*, 1908, p. 104), Hsien Tsiang (Watters, *On Yuan Chwang*, li. 73 f., cf. p. 75, note). Tārānātha (p. 42) says that the figure 'in the *Vinaya* of other schools' is 210 and 220.

has little or no importance for the history of Buddhist literature.¹

3. The two Aśokas and their Councils.—

(1) The Pāli *Vinaya* (*Chullavagga*, xii.) states that the Vesālī Council was held in A.B. 100, but it does not name the reigning sovereign, and it contains no allusion to any later Council. Othersources (*Mahāsāṅghikas*, *Dharmaguptas*, and *Sarvāstivādins* [A.B. 110]) seem to be equally silent on these points.

(2) Pāli later sources (Sinhalese sources) know the name of the sovereign, Kāśāśoka, and they add that the Vesālīan schismatics (*Vajjiputtakas*) in their turn held a Council, the 'Great Assembly,' whence issued the sect *Mahāsāṅghika*, 'of the Great Assembly'—while the *Mahāsāṅghikas* are said by other sources to maintain that this 'Great Assembly' was held immediately after the Rājagṛha Council.

(3) Vasumitra, the author of a treatise on the sects, hitherto undated (see Minayeff, *Recherches*, p. 195), who seems to ignore Vaiśālī, tells us of a Council held in A.B. 100, at Pāṭliputra, under Aśoka, concerning 'five points';² the Council resulted in the division between the Church and the *Mahāsāṅghika* sect.

(4) Bhavya, the author of another treatise on the sects, relates the tradition of the Sammitiyyas that a Council was held in A.B. 137, at Pāṭliputra, under the kings Nanda and Mahāpadma,³ [concerning 'five points'].

(5) According to the same authority, the *Śthaviras* say that a Council was held in A.B. 160, at Pāṭliputra, under Aśoka, concerning some controverted question, and that it resulted in the *Mahāsāṅghika* schism.

(6) According to Tārānātha (p. 44), during the lifetime of Aśoka, Vatsa, a Brahman from Kāśmīr, a monk or even an elder (*sthavira*) preached to the common people the doctrine of the existence of a soul, and caused no little discussion among the clergy. The 'noble Black' (*ārya Kāla* or *Kṛṣṇa*), who had succeeded Dhitika in the 'protection of the Law,' assembled the whole body of clergy in the Puṣkarinī-monastery, in Maru (Marwar), and after a session of three months the followers of Vatsa and Vatsa himself were converted.

This council appears in an altogether different light, namely, as 'the collection of the Scriptures' through the efforts of Vatsa, in Tanjur, Mdo, 182, where it is dated A.B. 400, and in Bhavya, with the figure 200 or 400.⁴ The sect of the Vatsai-

¹ To the present writer it appears that one might safely maintain the reverse. It is *a priori* probable that the discussion of Buddha on schisms, the prediction of the misfortune of the Vajjias, and their fanciful attribution to them of extra-legal practices, either ascetic or sinful, far from being the literary cause of the legend of a schism, are the consequence, the reflexion of some tradition relative to some historical events in which the Vajjia (or Vaiśālīans) were concerned. And the dispute on the 'ten points' was probably such an event. We are greatly mistaken if a part of the *Vinaya*, nay, of the *Pāli-mokkha* itself, is not made up of new (we do not say modern) acquisitions of the earliest Buddhist discipline, acquisitions mainly due to the development of the Order and to the necessity of stating rules for new cases—acquisitions which were, of course, antedated and solemnly attributed to Buddha himself. For instance, when Buddha is said to have first authorized and finally withdrawn some allowance, have we not some right to suppose that the Church itself had modified its rules? We know little of this early history. Buddhist *Vinaya* and *Sūtra* may be compared with an apocryphal Gospel where the decisions of Nicaea and the Canons of Olney may be found side by side with Apostolic traditions. We have only a few episodes which bear an appearance of truth, in so far at least that they are not piously antedated; but amongst them is the Council of Vaiśālī. The 'ten points' have not been 'concocted' from the data of the *Vinaya* by pseudo-historians, even if the narrative depends on the *Vinaya*, as R. O. Franke has proved it to do; on the contrary, it is not impossible that the *Vinaya* has been largely amplified owing to many Vaiśālī-like disputes.

² Five doctrines on Arhat-ship and the Path, the originator of which is named Mahādeva, and sometimes Bhadrā (see below, p. 184, and *JRAS*, 1910, p. 413).

³ The word 'king' (Tibet. *rgyal-po*) is in the singular (see Rockhill, *Life*, p. 188, note), but Nanda and Mahāpadma are two persons (cf. Tārānātha, p. 61; Wassilief, p. 47 [51]). Nanda seems to have been the second or third successor of Aśoka (see V. A. Smith, *JRAS*, 1901, p. 861).

⁴ See Bhavya ap. Rockhill's *Life*, p. 187. In the words of the latter, '... a Council held in the year A.B. 137 (see (4) above) ... the monks continued to quarrel for sixty-three years afterwards, that is to say, till A.B. 200; and 102 years later (i.e. A.B. 302) the *Śthavira* and *Vātsīputriya* schools verified the canon ["rightly collected the doctrine"].' The present writer holds, against Rockhill, (1) that *gnas-brtan gnas mahā bus* must be translated *Śthavira Vātsīputriyena* (cf. *Ymptrege*), that is to say, 'the Elder and head Vātsīputra collected the doctrine'; (2) that the figure 102 is wrong; Bhavya's *brgya phrag gñis* may be or must be 200 (see Jäschke, *Tibet. Grammar*, Eng. tr., London, 1883, p. 31 n.), and Mañjuśrīśāśvavajra, quoting Bhavya, has *his brgya*, that is to say, 200. We have 137+63=A.B. 200. If we add 200, we have 400, the date of the Vātsīputriya Council according to Tanjur, t. 132, fol. 32 (Tārānātha, p. 298). We prefer to take the figure 200 of Bhavya as the total 137+63, for the phrases *de-nas lo brgya phrag gñis hḍas paṭ rjes la*, *de rjes lo his brgya hḍaspaṭ* may be translated: 'then (*talas*) two hundred years being elapsed, then, after two hundred years' (cf. Tārānātha, p. 298, line 6 f.). [The dispute of 63 years, says Tārānātha (p. 61), lasted 100 years from its commencement till its final settlement.]

putriyas, 'adherents of Vatsiputra,' scions of the *śāhviras*, is well known for its theory of a soul (*pudgala*).¹
(7) Sinhalese sources: a Council in A.B. 236, at Pāṭaliputra, under Aśoka (Dharmāsoka), which proclaimed the orthodoxy of the *Vibhajjavāda* ('doctrine of the distinction'), to which belongs the Pāli or Sinhalese Church, and authenticated the last of the Pāli Abhidharma treatises, the *Kathāvatthu*.

The obvious conclusions are as follows. (a) Nothing precise was known concerning the origin of the Mahāśāṅghikas. They claimed to be ancient and orthodox. Others styled them heretics and schismatics. The Sinhalese identified them with the Vesālian Vajjiputtakas, but there is no evidence in favour of this identification; some sects believed that they originated out of the dispute on the 'five points,' and it seems certain that they admitted the 'five points.' (b) There was a tradition of a Vesālian Council on 'ten points,' late uncertain, no mention of king; and (c) a tradition of a Council on 'some controverted question,' more precisely on 'five points'; date uncertain, and probably no mention of king. (d) The monks of Ceylon supposed that their *Kathāvatthu*, a catalogue of heresies, had been first preached mysteriously by Buddha; they were well aware that the book was 'modern,' nay, that it had been revealed by Tissa Moggaliputta, some centuries after the Nirvāṇa; and they had reasons to admit that their Scriptures, inclusive of the *Kathāvatthu*, had been rehearsed in a Council, which could not be the Vaiśālī Council, since the *Chullavagga* ignores Tissa and the *Kathāvatthu*.

It was reasonable to place all the important events in the history of the Church under Aśoka, a sovereign who had evidently been a second 'mover of the Wheel of the Law'; and this was done. [Note the exceptional mention of Nanda and Mahāpadma, above, p. 183.] Again, Pāṭaliputra was the evident seat of such meetings. Our Northern documents are scanty and conflicting, but they give the impression that there was no certain tradition of the date of Aśoka: 100, 110, 137, or 160 are figures out of which no chronology can be extracted ('no oil out of sand,' *na ekaṭābhīyas tasmā*).

Sinhalese tradition places the Vaiśālī Council in 100 under Kālāsoka, and the Pāṭaliputra Council in 236 under Dharmāsoka. Besides the 'Northern' figures for Aśoka (100 [110], 137, 160), there was a fourth figure, A.B. 236 (17 or 19 years after his coronation in A.B. 217, 219). We are not concerned with the question whether these were fanciful or traditional computations. In fact, the authors of the ecclesiastical history 'concocted' in Ceylon admitted this figure, without troubling themselves very much to adjust it to some other chronological details of their own; and, as they maintained the canonic date of Vaiśālī, and were at a loss to name the sovereign reigning in A.B. 100, they imagined a 'black Aśoka,' *Kālāsoka*—a mere *idolum libri*.²

The Sinhalese narrative of the Third Council is open to serious objections as concerns the rehearsal of the Pāli Canon and of the *Kathāvatthu* as it stands now, and as regards the solemn declaration by the whole clergy that Buddha was a *Vibhajjavādin*, i.e. that he adhered to the tenets of the school of this name. But some details are historical, and the story itself rests on historical ground. Aśoka's inscriptions are explicit enough as to the king's intervention in clerical questions: we know that he decreed expulsion ('putting in white [*i.e.* layman's] garments') against [monks or] nuns. The Sinhalese tradition may be relied upon when it affirms that such rules were enforced against bad monks, 'pseudo-Buddhists';³ but that 'heretics' were ill-treated by the king seems rather incredible. On the other hand, it is unfortunate that the inscriptions contain no allusion to a 'Council,' and some historians feel obliged to place

the Council in the short time between the Pillar-inscriptions and the death of the king (see ii. 126). But the question is whether the Council was what it is said to have been, a 'Nicene' Assembly, and not rather a series of synods or dogmatic disputations.

Until the *Kathāvatthu* has been thoroughly studied and compared with 'Northern' documents, it will be impossible to describe the ancient doctrinal discussions; but we already possess a few hints which may prove useful.

(a) The name of Tissa Moggaliputta, the hero of the Third Council and the 'defender' of the *Vibhajjavādin* faith, is quoted in the books of a rival sect, the Sarvāstivādins. The *Vijñānakāya*, a treatise of this sect, 'is a tedious argumentative treatise combating the views of a Moggalin who denied the reality of the Past and the Future . . .' (Watters, *On Yuan Chwang*, I. 374). This 'thesis of the omni-existence' (*sarvāstivāda*), which gave their name to the Sarvāstivādins, is discussed in the *Kathāvatthu* (l. 6-10). It is at least possible that a Moggaliputta maintained the system or method of distinction (*vibhajja*) which already appears in the sermons of Buddha on *sabbam aṭṭhi*? 'Does anything exist?' (*Samyutta*), and is employed in some places of the *Kathāvatthu*.

(b) It is an interesting fact that the 'five points'—the five theories attributed to a schismatic, Mahādeva by name, concerning the Arhat-ship and the Meditation—whichever, according to the 'northern' sources, were discussed under Aśoka and formed the origin of the Mahāśāṅghika schism,—are also discussed in the *Kathāvatthu* (ii. 1-6).¹

(c) Further, the first heresy condemned in the *Kathāvatthu*—'Is there in the truest and highest sense a soul (*pudgala*)?'—is known from the Northern sources as the capital tenet of the Vātsīputriyas (see above, p. 184); and we believe that the problem of the 'soul' aroused division in the earliest times. The second heresy—'Can an Arhat fall from Arhat-ship?'—is also very ancient, etc.

To sum up: it seems almost certain that a number of heresies discussed in the *Kathāvatthu* may have occasioned discussions, synods, and divisions in the days of Aśoka, and even before his time; that there was a *Kathāvatthupparakaraṇa*, a 'book on controversies,' which could be easily completed, and, in fact, has been enlarged through many and manifold additions. There is no reason to doubt that, in a primitive form, it was in some way connected with Tissa Moggaliputta.

4. Council of Kaniska.—The documents concerning this Council are late, 'more or less at variance, and, moreover, very vague.'²

It seems that this Assembly is, for the Sarvāstivādin School, what Moggaliputta's Council is for the *Vibhajjavādin* School of Ceylon—an apologetic quasi-invention. Like the *Vibhajjavādins*, the Sarvāstivādins possess treatises on Abhidharma,³ and maintain that these are authoritative (word of the Buddha) their authenticity or authority was, they say, recognized at the Council held under Kaniska, and, moreover, a Commentary on the Abhidharma-treatises (*Vibhāṣā*) was compiled or written on this occasion. It must be observed that the *Abhidharmakośa*, while stating the conflicting theories of the *Vaiśāṅkikas* (scions of the Sarvāstivādins, relying on the *Vibhāṣā*) and of the *Sautrāntika* (who consider the Abhidharma-treatises as 'human' works), does not mention, we think, Kaniska's Council; further, that all the Kāśmīras (monks of Kāśmīr, the stronghold of the Sarvāstivādins and *Vaiśāṅkikas*) are not *Vaiśāṅkikas*.

The narratives of this Council are to some extent dogmatic legends,⁴ and seem only to bear witness to the literary activity of the Sarvāstivādins. As is well said by Takakusu, until the treatises of this school shall have been made accessible to scholars, it will be vain to argue about the Council or its proceedings (see artt. *VAIBHĀŚIKAS*, *SARVĀSTIVĀDINS*).

¹ See *JRAS*, 1910, p. 413.

² Kern, *Manual*, p. 121 (see also *Geschiedenis*, II. 359). Kern gives a summary of the narratives of Fa-hien, Hsien Tsiang, Taranātha (Tibet. *Lebensbeschreibung Sakyas Munis*, tr. von Schiefner, St. Petersburg, 1849). V. A. Smith (*Early History*, p. 249 ff.) adds new evidences, especially Takakusu's observations. The date of Kaniska, in the present writer's opinion, has not yet been ascertained; but there is nothing to prove that the Sarvāstivādin books are either earlier or later than Kaniska (q.v.).

³ It seems certain that the two Abhidharmic collections have nothing in common.

⁴ The present writer cannot agree with Kern's opinion (*Manual*, p. 122) that, as a result of the Council, 'somehow an agreement, a *modus vivendi*, was hit upon on the base of the principal truths unassailed by any of the 18 sects.' Such an interpretation of the legends is opposed by the fact that the Sarvāstivādin character of the Council seems to be proved.

¹ *Vātsīputriya*—the reading is certain—is translated *gnas-māhi* *bu*; *Vātsa* is a conjecture of Schiefner for *gnas-pa*; *Vātsīputra*, a conjecture of the present writer for *gnas-māhi* *bu*. Kern says that the *Vātsīputriyas* are 'evidently the same as the Vajjiputtakas of the (Sinhalese) Chronicles' (*Manual*, p. 111); that is to say, in their genealogy 'of the sects the Sinhalese give to the Vātsīputriyas the old name Vajjiputtakas. But there is only quasi-homophony between these two names.'

² See V. A. Smith, *JRAS*, 1901, p. 355. We are much indebted to this authority.

³ See *Samantapāsādikā*, *Vñyāna*, III. 312 [read line 19 *apapabājesi*, 'forced to quit the order']; cf. *Sikṣasāmañchaya*, p. 66 (which forbids such spiritual usurpation of the 'civil power'), and *Lotus of the Good Law*, *SEE* xxi. ch. xii. 17.

5. We must be content simply to note a tradition as to later Councils: A.B. 400—Vātsiputra's Council; A.B. 700—Mahāsammatīyas' Council; A.B. 800—a Council under Bhūtika and Buddhāmītra (Wassilief, *ap. Taranātha*, p. 298).

LITERATURE.—Almost all the books on the history of Buddhism: C. F. Köppen, *Die Religion des Buddha*, Berlin, 1859, ii. 10; W. Wassilief, *Der Buddhismus*, St. Petersburg, 1860, p. 37 [Fr. tr., Paris, 1865]; H. Kern, *Geschiedenis van het Buddhisme*, Haarlem, 1881-84, ii. 232 [French tr. by G. Huët, *Bibl. d'Etudes du Musée Guimet*, x. and xi., 1901-3]; *Manual of Indian Buddhism* (GIAP iii. [1896] 8), p. 101 ff.; H. Oldenberg, *Buddha, sein Leben* . . . p. 399 (5th ed., Stuttgart, 1906; 2nd Fr. ed., Paris, 1903, p. 387); *Introd. to Vinaya Pitakam*, p. xxv, London, 1879; 'Buddhistische Studien' (ZDMG lii. [1898] 612); J. P. Minayeff, *Buddhizm*, St. Petersburg, 1887, [Fr. tr. 'Recherches sur le bouddhisme', *Bibl. d'Et. du Musée Guimet*, iv., 1894]; Vincent A. Smith, *Early Hist. of India*², Oxford, 1908. Some monographs may be noted: V. A. Smith, 'The Identity of Pīyadasi with Aśoka Maurya and some connected Problems' (*JHAS*, Oct. 1901, pp. 827-888); L. de la Vallée Poussin, 'Les Conciles bouddhiques' (*Museon*, 1906 [Fr. JA, 1908]), and 'The Five Points of Mahādeva and the Kathāvatthu' (*JRAS*, 1910, p. 413); R. O. Franke, 'The Buddhist Councils at Rājagṛha and Vesālī' (*JPTS*, 1908). Original sources are chiefly: Pāli *Vinaya* (tr. *SB* xiii. xvii. xx.); Tibetan treatises on sects, in Wassilief, *Buddhismus*; Rockhill, *Life of the Buddha*, London, 1884; Chinese Pilgrims (Fahien [tr. Legge, Oxford, 1886]; Hsuen Tsiang [Watters, *On Yuan Chwang*, London, 1904-5]).

L. DE LA VALLÉE POUSSIN.

COUNCILS (Christian: Early, to A.D. 870).—1. The various kinds of Councils.—The Councils of the early Church may be classified as follows: (1) Diocesan, being the assembly of a single diocese; (2) Provincial, being of all the dioceses comprised in an ecclesiastical province; (3) Councils of united provinces, being assemblies of several neighbouring provinces, sometimes called Plenary Councils (*concilia plenaria*); (4) Patriarchal, being of the provinces united in one patriarchate, sometimes called Plenary or Universal Councils (*concilia plenaria* or *concilia universalia*); (5) National, being of the provinces existing in a country, sometimes called Plenary or Universal Councils, frequently identical with Primate and Patriarchal Councils; (6) General Councils of the East or of the West, being of all the provinces in the East or the West; (7) General Councils representing in their constitutions the whole Church; (8) Ecumenical Councils, being Councils whose decisions were accepted by the whole Church.¹ To these may be added (9) the Councils held at Constantinople in the 4th and following centuries, known as the Home Councils (*οἰκουμενικαὶ ἐνδημοῦσαι*); and (10) the Mixed Councils (*concilia mixta*) of the 9th and following centuries, held in regard to matters of Church and State.

2. The constitution of Councils.—(1) A diocesan Council consisted normally of the presbyters of the diocese, meeting under the presidency of the bishop. The rule of the bishop was not regarded as being rightly exercised altogether independently of the presbyters, although he had the power and the responsibility of decisions.

In the letters of St. Ignatius of Antioch the authority of the bishop is constantly viewed as being exercised in connexion with the presbyters (see, e.g., *ad Eph.* 20; *ad Magn.* 6, 7; *ad Trall.* 3). St. Cyprian (*Ep.* xiv. 4), writing to his presbyters and deacons, says: 'From the beginning of my episcopate I determined to do nothing separately of my own judgment, without your advice and without the assent of the laity.' The advice of clergy and laity was sought by the bishop in regard to those whom he ordained. St. Cyprian (*Ep.* xxviii. 1) writes to his presbyters and deacons and laity: 'In the ordination of clergy it is our custom to consult you beforehand, and to consider in common counsel the character and deserts of individuals'; and a canon of the 6th cent. Gallican document, known as the canons of the 'Fourth Council of Carthage' (canon 22; see Hardouin, *Concilia*, i. 980), which passed into the general Western canon law (*Decret.* ii. xxiv. 6), enacted 'that a bishop is not to ordain clergy without the advice of his clergy, so that he may look for the assent and witness of the people.'

¹ The nomenclature is not uniform; but it prevents confusion to use 'General' for Councils representative of the whole Church in their constitution, and 'Ecumenical' for those whose decisions are accepted by the whole Church.

From this dependence of the bishop on the advice of those in his diocese the diocesan Councils had their origin. The normal constitution of such Councils was that they consisted of the bishop and presbyters of the diocese, though in important matters other bishops were sometimes associated with the Council.

For instance, a Carthaginian Council, probably earlier than A.D. 249, is described by St. Cyprian (*Ep.* i. 1) as composed of 'I and my fellow-bishops who were present, and our fellow-presbyters who sat with us.' At a Roman Council held a little later there were present, besides Cornelius the Bishop of Rome and the Roman presbyters, five bishops who happened to be at Rome at the time (Cornelius in *Cypr. Ep.* xlix. 2). About A.D. 320, Alexander, Bishop of Alexandria, summoned a Council of the presbyters, together with certain bishops who were then at Alexandria, to consider the case of Arius (see *Epiph. adv. Hær.* lix. 2). A 6th cent. Gallican canon in the so-called 'Fourth Council of Carthage' (canon 25; see Hardouin, i. 980), which passed into the general Western canon law (*Decret.* ii. xv. 7 [6]), enacted 'that a bishop is not to hear the case of any one without the presence of his clergy; and the judgment of the bishop shall be void if it is not confirmed by the presence of the clergy.'

By means of his diocesan Council the bishop had the advice of his presbyters and their assent to his decisions in the exercise of discipline and the selection of candidates for ordination, and, moreover, knew the mind of his diocese when he came to meet other bishops in the larger Councils.

(2) As the diocesan Councils arose from the relation of the bishop to the presbyters of his diocese, so the provincial and larger Councils had their origin from his relation to the other bishops of the province. The local Council concerning Arius, held at Alexandria by Bishop Alexander, mentioned above, led to that bishop convening a Council of many bishops (Socrates, *HE* i. 6). The still larger Council of Nicea (A.D. 325) was also due to the controversy about Arius; and this Council formulated a specific provision for the holding of provincial Councils in order that the excommunications of individual bishops might be revised by the bishops of the province, and the danger of injustice consequently lessened.

'In regard to the excommunicated, whether of the clergy or of the laity, the sentence passed by the bishops of each province shall have the force of law in accordance with the canon which enacts that those who have been excommunicated by some bishops shall not be admitted by others. Inquiry must, however, be made to see that the bishop has not passed the sentences of excommunication from smallness of mind, or from love of strife, or from some such perversity. In order, then, that such an inquiry may be held, it has seemed good to decide that during each year, in each province, Councils be held twice in the year, that all the bishops of the province may meet together, and that such inquiries be made, and that thus those who have evidently offended against their bishop may be seen by all to have been reasonably excommunicated, until the assembly of the bishops may think well to pronounce a milder sentence in their case. The Councils are to be held, the one before Lent, in order that all smallness of mind may be put away, and that the gift may be offered to God in pureness, the other in the autumn' (canon 5; see Hardouin, i. 323-326).

This canon of Nicea is of great importance as illustrating (a) the purpose of revising the acts of individual bishops by the holding of provincial Councils; and (b) the connexion between the exercise of the bishop's authority and his power of excommunication. Similarly, it was enacted by the Council of Antioch in 341 that,

'If any one be excommunicated by his own bishop, he may not be admitted by other bishops unless he has been restored by his own bishop, or unless a Council has been held and he has appeared before it and made his defence, and convinced the Council and obtained a new decision. This decree applies to laity and presbyters and deacons and all ecclesiastics' (canon 6; see Hardouin, i. 695).

Apart from exceptions at Rome at the end of the 5th cent., and in Spain in the 7th cent., to be mentioned later, the constituent members of provincial and larger Councils were bishops only, though presbyters and deacons and lay people were sometimes present. The earliest instances of Councils of a character to be reckoned with provincial or larger Councils are those held during

the 2nd cent. in Asia Minor concerning Montanism, and in many places concerning the date of Easter. Such scanty evidence as exists about these Councils indicates that the members of them were bishops only (see Euseb. *HE* v. 16, 23, 24; *Libellus Synodicus*, in Hardouin, v. 1493-1496; Salmon, in Smith-Wace, *DCB* iii. 938; Hefele-Leclercq, *Conciles*, i. 123-130, 151-153). At the African Councils held in the middle of the 3rd cent., presbyters and deacons and lay people were present (see Cypr. *Epp.* xvi. 4, xvii. 1, 3, xix. 2, xxx. 5, xxxi. 6, xxxiv. 4, lv. 5, lix. 15, lxiv. 1), and expressed their opinions, sometimes in opposition to that of their bishop (*ib.* xvii. 3, lix. 15); but the actual decisions were the work of the assembled bishops, who alone were the constituent members of the Councils. For instance, a Council summoned to discuss the question of the validity of baptism administered by schismatics was held at Carthage on 1st Sept. 256. Besides the eighty-seven bishops from provincial Africa, Numidia, and Mauretania, who were the members of the Council, there were present presbyters and deacons, and a large number of lay people. That only the bishops were the constituent members of the Council is shown by the judicial pronouncements being their work alone (see 'Sententia Episcoporum,' in *S. Cypriani Opera*; cf. Cypr. *Epp.* i. 1, xix. 2, xlv., xlv. 2, 4, lix. 13, lxiv. 1, lxx. 1, lxxi. 1, lxxii. 1, lxxiii. 1). The Councils held at Antioch in 264 or 265, and 289, to consider the charges against Paul of Samosata, are described by Eusebius as consisting of bishops. Presbyters and deacons were present at Antioch in connexion with the Councils, and at one of them a presbyter took a prominent part in the discussions; but there is no reason to suppose that these Councils differed from those at Carthage, so as to include others besides bishops as constituent members possessing votes, though the letter written to announce the decision of the last Council of the series was in the name of 'bishops, presbyters, and deacons, and the Churches of God' (see Euseb. vii. 27-30). Similarly, the Arabian Councils about 244 consisted of bishops, though Origen, who was a presbyter, took part in a conference held in connexion with one of the Councils, and appears to have spoken in the actual proceedings of another Council, but on the invitation of the bishops, not as a member of the Council (see Euseb. vi. 33, 37). The constituent members of the Councils held in the 4th cent. were bishops, and any presbyters or deacons or ecclesiastics in minor orders who might be the representatives of absent bishops and empowered to vote on behalf of those whom they represented. Thus, at Elvira in 305, twenty-six or thirty-six presbyters were present, had seats, and signed the decrees in a group after the bishops; deacons were present standing; and lay people were present. But the decrees were described as the decisions of the bishops (see 'Acts of Elvira,' in Hardouin, i. 249, 250). In like manner, at Arles in 314 some presbyters and deacons and ecclesiastics in minor orders were present in attendance on bishops or as representatives of absent bishops; but the natural inference from all the evidence is that the only constituent members of the Council, that is, those with a right to be present and vote, were bishops and representatives of absent bishops (see 'Acts of Arles,' in Hardouin, i. 266-268; cf. Euseb. x. 5). So again, at Nicea in 325, many presbyters, deacons, and acolytes were present as attendants of bishops; Athanasius, then an archdeacon in attendance on the Bishop of Alexandria, was prominent in discussions connected with the Council; laymen took part in conferences before its formal opening; and the Emperor Constantine, though still unbaptized, was present at some of the pro-

ceedings, as the head of the State. But the accounts of all the authorities show that bishops and representatives of absent bishops were the only constituent members of the Council (see Euseb. *Vit. Const.* iii. 6-14; Socrates, i. 8-14; Sozomen, i. 15-25; cf. Bright, *The Age of the Fathers*, .903, i. 78).

Till nearly the end of the 5th cent. the evidence suggests the same conclusions as those which have been mentioned in regard to the Councils of the 2nd and 3rd and early 4th cents., namely, that at provincial and larger Councils bishops alone were entitled to be present and vote, or, if unable to attend the Council, to nominate representatives with power to vote in their absence; that they frequently brought with them to Councils presbyters or deacons in attendance on them and for purposes of consultation, but without votes; and that they often were careful to ascertain the mind of the lay people about the matters which it was the work of the Council to discuss and decide upon. In the series of Roman Councils held in the latter part of the 5th cent. and during the early years of the 6th cent., the constitution of some Councils was the same as already described; in other Councils of the series the presbyters and deacons, who were the precursors of the cardinals, appear to have held a position like that of the bishops. For instance, presbyters apparently shared in the authority of the bishops at the Council held in 495 (see the 'Acts,' in Hardouin, ii. 941-948); and both presbyters and deacons at that held in 499 (*ib.* ii. 959-963). A different instance of others than bishops being members of provincial or larger Councils is in the Spanish Councils of the 7th cent., which included abbots, as, for example, the Eighth Council of Toledo in 653 (*ib.* iii. 967).¹

3. The relation of the laity to Councils.—It is important to distinguish two separate matters: the position of the Christian laity as such, that is, as members of the Christian society, the Church; and the position of the representatives of the State. (1) As already mentioned, Christian lay people—in earlier times probably a multitude who were allowed to come in, and probably including women as well as men,² and in later times selected representatives—were present at Councils. Neither in diocesan nor in larger Councils do they appear to have been members with votes. They were present in order that they might (a) express their opinions on matters under discussion; see, e.g., Cypr. *Epp.* xvii. 3, lix. 15; (b) bring abuses to the knowledge of Councils; see, e.g., canon 4 of Fourth Council of Toledo (633), in Hardouin, iii. 580; (c) know the decisions which the members of the Councils made; see, e.g., the letter of Viventolus, the Archbishop of Lyons, summoning the Council of Epao (517), in Hardouin, ii. 1046. (2) As the friendship of the State towards the Church increased, and the relations between them became closer, the Emperors, or their representatives, and great men of the State were present at Councils. At Nicea (325), Constantine, though unbaptized, and therefore in no sense a representative of the Christian laity, was present (see above); and the Emperors were represented, and were in some cases present, at four of the other six Ecumenical Councils (see below), namely at Ephesus (431), Chalcedon (451), Constantinople (680), and Nicea (787); see 'Acts of Ephesus,' p. i. cap. xx.; 'Acts of Chalcedon,' Acts i. vi.; 'Acts of Constantinople,'

¹ The position of the presbyters in the Roman Councils and that of the abbots in the Spanish Councils mentioned above probably had much to do with the events through which the English provincial Councils in the 13th cent. included abbots and priors and representatives of cathedral and collegiate chapters and of benefited parochial clergy. This, again, was one cause of the privileges of the Lower Houses of the Canterbury and York Convocations.

² Cf. *Act* 1:14-26 for a parallel in Apostolic times.

Act i.; 'Acts of Nicæa,' Acts i., viii., in Hardouin, i. 1345-1348, ii. 53, 463-465, iii. 1056, iv. 33-40, 481-485. Instances of illustrious laymen, present at Councils of the Church as representatives of the State, are not infrequent in later times, particularly in Spanish and Anglo-Saxon Councils; see, e.g., the Acts of the Roman Council of 495 (Hardouin, ii. 943); the Second Council of Orange in 529 (*ib.* 1102); eleven out of the series of sixteen Councils held at Toledo from 589 to 701, the laymen at which were in some cases chosen by the Council itself, and in other cases appointed by the king (*ib.* iii.); and the Councils at Cloveshoo in 747 and 822 (*ib.* iii. 1952, 1953, iv. 1245). Side by side with these Councils, to which lay representatives of the State were admitted, there were Councils restricted to bishops, as, e.g., the Sixth and Seventh Councils of Toledo (638 and 646) and the Councils of Hertford (673) and Hatfield (680) (see Hardouin, iii. 608-610, 623-625; Bede, *HE* iv. 5, 17, 18; cf. Bright, *Chapters of Early Eng. Ch. Hist.*³ 1897, pp. 276, 357, 358; Hunt, *The English Church from its Foundation to the Norman Conquest*, 1899, pp. 137, 151). Lay people were members of the mixed Councils held on matters of joint interest to Church and State; and these sometimes included women, as, e.g., the abbess Hilda at Whitby (664), and the abbess Ælfeda at the Council on the Nidd in Northumberland (705) (see Hardouin, iii. 993, 1826; Haddan-Stubbs, *Councils and Ecclesiastical Documents*, 1869-1878, iii. 101, 266).

4. The convocation of Councils.—Diocesan and provincial Councils were convoked by the bishop of the diocese and the metropolitan of the province respectively. In regard to larger Councils it is necessary to consider the relation of (1) the Emperor, and (2) the Pope; and any initiative of the Pope in regard to local Councils may be discussed together with his relation to the larger Councils.

(1) Each of the seven Ecumenical Councils was summoned by an Emperor—Nicæa (325) by Constantine the Great (Euseb. *Vit. Const.* iii. 5, 6);¹ Constantinople (381) by Theodosius I. (Socrates, v. 8; Sozomen, vii. 7; Theodoret, *HE* v. 7); Ephesus (431) by Theodosius II. and Valentinian III. (see 'Acts of Ephesus,' p. i. cap. xix., xx., in Hardouin, i. 1343-1348); Chalcedon (451) by Marcian and Valentinian III. (see 'Acts of Chalcedon,' p. i. cap. xxx.-xxxvi., *ib.* ii. 45-52); Constantinople (553) by Justinian (see 'Acts of Constantinople,' Coll. i., *ib.* iii. 56); Constantinople (680-1) by Constantine II. (see 'Acts of Constantinople,' Act i., *ib.* iii. 1056); and Nicæa (787) by the Emperor Constantine VI. and the Empress Irene (see 'Acts of Nicæa,' 'Divalis sacra,' and Act i., *ib.* iv. 21-24, 36).

(2) Pope Victor I. appears to have given the initiative for the holding of local Councils to discuss the Paschal question in the 2nd century. Polycrates, Bishop of Ephesus, mentions that the Asiatic Council was summoned by him at the desire of Victor (see his letter in Euseb. *HE* v. 24). This makes it probable that the Councils held in other places at the same time on the same question were convoked because of a wish expressed by Victor. The relation of the Popes to the convoking of the seven Ecumenical Councils must be considered in some detail. (a) It came to be believed that Pope Sylvester I. had shared in, or agreed to, the summoning of the Council of Nicæa (325) by Constantine. In the address of the Sixth Ecumenical

Council (Constantinople, 680) to Constantine IV. it is said that Constantine the Great and Sylvester, Bishop of Rome, summoned the Council of Nicæa (Hardouin, iii. 1417), and in the *Liber Pontificalis* (xxxiv.) it is said that this Council was held with his assent. If it is the case, as Rufinus (*HE* i. 1) says, that Constantine acted in accordance with the views of the bishops, there is strong probability that the Bishop of Rome would be one of those consulted. (b) The Second Ecumenical Council, held at Constantinople in 381, was summoned from the East only, and no Western bishop took part in it. There is no evidence¹ and no probability that the Pope had anything to do with the convocation of it. (c) Pope Celestine I. took no part in the summoning of the Third Ecumenical Council, held at Ephesus in 431. (d) The circumstances connected with the summoning of the Fourth Ecumenical Council, held at Chalcedon in 451, are complicated. They justify the words of Pope Leo I. himself, that the Council was held 'by the command of the Christian princes and by the consent of the Apostolic See' (St. Leo, *Ep.* cxiv. 1), and the courtly phrase of the Emperor Marcian, that the Council was to take place at the suggestion of the Pope (*Opera S. Leonis*, *Ep.* lxxiii.), if some latitude of interpretation is allowed to this phrase. They are inconsistent with the statement of the bishops of Mœsia in their letter to the Emperor Leo that the Council had been assembled 'by the order of Leo, the Roman pontiff, who is truly the head of the bishops, and of the venerable bishop Anatolius' ('Acts of Chalcedon,' cod. encyc. 12, 'Ep. Episc. Mœs. sec. ad Leonem Imper.,' in Hardouin, ii. 710). The facts are as follows. After the 'Robbersynod' of Ephesus in 449, Pope Leo I. asked the Emperor Theodosius II. to summon a Council of bishops from all parts of the world to meet in Italy (*Ep.* xlv.).² He twice repeated the same request (*Epp.* liv., lxi.), though on the second occasion he said that the Council would be unnecessary if without it the bishops would subscribe an orthodox statement of the faith (*Ep.* lxi.). He also asked Valentinian III., the Western Emperor, and his mother and his wife, Galla Placidia and Licinia Eudoxia, to support this request to Theodosius (*Epp.* lv.-lviii.). Soon after St. Leo's third letter to Theodosius, that Emperor died. His successors, Pulcheria and Marcian, wrote to St. Leo that they were willing to convocate a Council, evidently intending that it should be held in the East (St. Leo, *Ep.* lxxiv.), but circumstances had changed since St. Leo had expressed his wish for a Council, and he wrote two letters to Marcian and another to Pulcheria, dropping the wish for a Council, and in the second letter to Marcian urging that it would not now be advisable to hold one (*Epp.* lxxii., lxxiii., lxxiv.). After the writing of the first of these letters, and before the second and third, the Emperor Marcian convoked the Fourth Ecumenical Council. When the Council had been summoned, St. Leo wrote two letters to Marcian. In the first of them, dated 24th June 451, he said that he had hoped for the postponement of the Council, but that, since the Emperor had determined on its being held, he would not offer any hindrance, and appointed representatives to be present at it (*Ep.* lxxix. 1). In the second letter, dated 26th June 451, he wrote that, though he had requested the postponement of the Council, he would not oppose the Emperor's arrangements

¹ In connexion with his summoning of the Council as well as with his presence at it, there is need of remembering that Constantine was still unbaptized. He was baptized shortly before his death by Eusebius, Bishop of Nicomedia (see Euseb. *Vit. Const.* iv. 61, 62; Socrates, i. 39; Sozomen, ii. 34; Theodoret, *HE* i. 82; St. Ambrose, *de Obiit. Theod.* 40; St. Jerome, *Chron.* sub anno 354. This evidence is too early and strong for it to be credible that Constantine was baptized at an earlier date by Sylvester, Bishop of Rome (see *Liber Pontificalis*, xxxiv.).

¹ The reference to the letters of Pope Damasus to Theodosius in the synodical letter preserved by Theodoret (*HE* v. 9) concerns the Council of 382, not that of 381; see v. 8.

² In making this request, St. Leo may possibly have been influenced by the appeals made to him by Flavian of Constantinople and Eusebius of Dorylæum: see G. Amelli, *S. Leone Magno e l'Oriente*, Rome, 1882, pp. 41-49; *Spicilegium Cassinense*, Monte Cassino, 1893, l. 182-187.

(*Ep. xc. 1*). (e) The attitude of Pope Vigilius towards the Fifth Ecumenical Council, held at Constantinople in 553, was in some respects the opposite of that of St. Leo towards the Council of Chalcedon. In his condemnation of Theodorus of Caesarea, Pope Vigilius mentions that such a Council had been contemplated at a meeting at which were present, besides the Emperor and the civil officials, many bishops, including the Bishop of Constantinople and the Bishop of Milan (*Fragm. damn. Theod.*, in Hardouin, iii. 8). Vigilius himself more than once expressed a wish that the Council should be held ('*Ep. ad univ. Eccl.*' and '*Constitutum*,' in Hardouin, iii. 3, 12, 13); but when it had been convoked by the Emperor and the time for holding it had arrived, he desired that it should be postponed, and held aloof from the proceedings of it ('*Acts of Constantinople*,' Coll. i., ii., in Hardouin, iii. 63-66). (f) Pope Agatho I. took no part in the summoning of the Sixth Ecumenical Council, held at Constantinople in 680-681. (g) It was stated by Pope Adrian I. that the Seventh Ecumenical Council, held at Nicea in 787, was by his appointment ('*Acts of Nicea*,' '*Hadriani Scriptum*,' *ib.* iv. 818); but the Council was convoked by the Empress and the Emperor on the suggestion of Tarasius, the Bishop of Constantinople ('*Acts of Nicea*,' '*Apol. ad pop. a Tarasio*,' *ib.* iv. 24, 25), and the only fact to justify the Pope's statement appears to be the practical assent which he gave after receiving the letter from the Empress and the Emperor announcing their intention of convoking the Council ('*Acts of Nicea*,' '*Divalis sacra ad Hadrianum*,' *ib.* iv. 21-24).

5. The presidents of Councils.—The president of a diocesan Council was the bishop of the diocese, of a provincial Council the metropolitan of the province, and of a larger Council the chief bishop present, or a bishop locally eminent, or some bishop of special note. The presidents of the seven Ecumenical Councils were as follows. (a) At Nicea (325), Hosius, the Bishop of Cordova, presided (see the list of signatures in Hardouin, i. 311, 312; cf. Socrates, i. 13). Possibly the reason why he held this position, notwithstanding the presence of Vito and Vincentius, the legates of Pope Sylvester I. (see Euseb. *Vit. Const.* iii. 7; Socrates, i. 13; Sozomen, i. 17; Theodoret, i. 7; signatures in Hardouin, i. 311, 312), and the fact that he was a Western bishop presiding in a Council held in the East, was that he was appointed by the Emperor Constantine, whose chief ecclesiastical adviser he was. Both St. Athanasius and Theodoret, however, speak as though his prominence at Councils was due to his personal eminence.

St. Athanasius writes: 'It is unnecessary that I should speak of the great Hosius, happy in his old age, a true confessor. . . . This aged man is not unknown, but of the greatest distinction. What Council has there been of which he was not the leader, and in which by his right words he did not convince all?' (*Apolog. de fuga*, 5). Theodoret, after quoting this passage, continues: 'Hosius was Bishop of Cordova, and was prominent at the Council of Nicea, and took the first place among those who assembled at Sardica' (*HE* ii. 15).

It is unlikely that credit ought to be given to a statement of Gelasius of Cyzicus, a writer in the second half of the 5th cent., universally regarded as usually untrustworthy, that Hosius presided as the representative of the Pope (see his *Act. Conc. Nic.* ii. 5). (b) At Constantinople (381) the presidents were successively Meletius, Bishop of Antioch; Gregory of Nazianzus, Bishop of Constantinople; and Nectarius, Bishop of Constantinople. Neither the Pope nor any Papal representative was present. (c) At Ephesus (431), St. Cyril of Alexandria was president. The Acts of the Council say that he 'took the place of Celestine, the most holy and most sacred archbishop of the Romans' (see '*Acts of Ephesus*,' in Hardouin, i. 1353, 1465, 1468, 1485, 1509, 1512, 1527, etc.).

Pope Celestine I. sent as legates the bishops Arcadius and Projectus and the presbyter Philip-pus. (d) At Chalcedon (451) the Imperial commissioners (see '*Acts of Chalcedon*,' in Hardouin, ii. 53, 65, 68, 69, 89, 93, 113, 272, 273, 308), and in the sixth session the Emperor Marcian (see '*Acts of Chalcedon*,' Act vi., *ib.* ii. 485-489), acted as presidents; the chief place among the members of the Council was held by the legates of Pope Leo I.—Paschasinus, Lucentius, and Boniface (St. Leo, *Epp.* lxxxix., ciii.; cf. '*Ep. Syn. Chalc.*,' in *Opera S. Leonis*, *Ep.* xviii. 1; '*Acts of Chalcedon*,' Acts i., iii., in Hardouin, ii. 53, 310, 365).¹ (e) At Constantinople (553), Eutychius, Bishop of Constantinople, was president (see '*Acts of Constantinople*,' Coll. viii., in Hardouin, iii. 201); the Pope was neither present nor represented. (f) At Constantinople (680-681) the Emperor Constantine iv. presided ('*Acts of Constantinople*,' Act i., *ib.* iii. 1056); the legates of Pope Agatho I., the presbyters Theodore and George, and the deacon John held the first place among the members of the Council ('*Acts of Constantinople*,' e.g. Acts i., xviii., *ib.* iii. 1056, 1401). (g) At Nicea (787) the legates of Pope Adrian I.—the archpresbyter Peter and the abbot Peter—presided ('*Acts of Nicea*,' Acts i., vii., *ib.* iv. 28, 456).

6. The ratification of Councils.—(1) The decrees of the seven Ecumenical Councils received civil sanction from the Emperors: (a) in the case of Nicea (325) by a letter from the Emperor Constantine (see Euseb. *Vit. Const.* iii. 17-20; Socrates, i. 9; Sozomen, i. 21; Gelasius of Cyzicus, *Act. Conc. Nic.* ii. 36); (b) in the case of Constantinople (381) by an edict of the Emperor Theodosius I. (see Socrates, v. 8; Sozomen, vii. 9); (c) in the case of Ephesus (431) in substance by letters and decrees of the Emperors Theodosius II. and Valentinian III. (see '*Acts of Ephesus*,' in Hardouin, i. 1616, 1669, 1716); (d) in the case of Chalcedon (451) by the decrees and letters of the Emperors Valentinian III. and Marcian, and a letter of the Empress Pulcheria (see '*Acts of Chalcedon*,' p. iii. cap. iii.-xiii., *ib.* ii. 660-688); (e) in the case of Constantinople (553) by an approbation of the Emperor Justinian, if we may trust the statement of Zonaras (*Ann.* xiv. 8), which in this matter has the support of strong general probability;² (f) in the case of Constantinople (680-681) by the signature and edict of the Emperor Constantine IV. (see '*Acts of Constantinople*,' Act xviii., '*Edict. Const.*,' in Hardouin, iii. 1436, 1445-1457, 1633-1639); (g) in the case of Nicea (787) by the signing of the decrees of the Council by the Empress Irene and the Emperor Constantine VI. (see '*Acts of Nicea*,' Act viii., *ib.* iv. 485).³

(2) With the exception of the Second Council and the canons of the Fourth, the decrees of the seven Ecumenical Councils were (a) subscribed by the Papal legates, or (b) both so subscribed and subsequently approved by the Pope, or (c) eventually approved by the Pope. The decisions of Nicea (325) were subscribed by the Papal legates (see '*Acts of Nicea*,' in Hardouin, i. 311-312); those of Ephesus (431) were subscribed by the Papal legates and referred to with approval in letters by Pope Sixtus III. (see '*Acts of Ephesus*,' *ib.* i. 1527; '*Epp. Xysti III. ad Cyrillum*,' in

¹ Julian, Bishop of Cos, and a presbyter Basil are also said to have been appointed as papal legates, but do not appear to have held the same position at the Council as the three mentioned above (see St. Leo, *Epp.* lxxxvi., xc., xciii., xciii.).

² The evidence afforded about this Council by Zonaras is not valuable; but there is no reason for doubting his statement referred to above.

³ There is no record in this case of a formal edict after the Council; but the whole course of events after the Council shows that the decrees were regarded by the State authorities as being in force.

Constant, *Epp. Rom. Pontif.* col. 1231-1240); those of Chalcedon (451) were subscribed by the Papal legates and accepted by Pope Leo I. (see 'Acts of Chalcedon,' in Hardouin, ii. 465-468; St. Leo, *Ep.* xiv.); those of Constantinople (680-681) were subscribed by the Papal legates and accepted by Pope Leo II. (see 'Acts of Constantinople,' in Hardouin, iii. 1424, 1425, 1469-1478, 1729-1736); and those of Nicea (787) were subscribed by the Papal legates and accepted by Pope Adrian I. (see 'Acts of Nicæa,' *ib.* iv. 456, 819). In the case of the Fifth Council, held at Constantinople in 553, Pope Vigilius at first dissented from the action of the Council (Vigilius, *Constitutum* of 553, *ib.* iii. 10-48), and the Council struck his name from the diptychs ('Acts of Constantinople,' Coll. vii., *ib.* iii. 186, 187); but he afterwards changed his mind and declared his approval of the decisions (Vigilius, *Ep. Decret.*; *Constitutum* of 554, in Hardouin, iii. 213-244).

7. The relation of the Emperor to Councils.—After the time of Constantine the Great, the close relations between Church and State led not only to the summoning of Councils and the ratification of their decrees by the Emperors, but also to an influence—sometimes greater, sometimes less—in many other ways. But, whatever the aggressiveness of certain Emperors and the sycophancy of prominent members of the Church at some times, the State recognized, and the Church maintained, that the work of ecclesiastical decisions and legislation belonged to the Church, not to the State. A few instances from Church and State may suffice to illustrate this fact. Both the Second and the Third Ecumenical Councils, in asking the Emperor Theodosius I. and the Emperors Theodosius and Valentinian III. respectively to ratify their decisions, spoke of the decisions themselves as wholly their own work, independently of the State (see 'Acts of Constantinople,' 381, and 'Acts of Ephesus,' Act v., in Hardouin, i. 808, 1501-1510). The Emperor Constantine the Great, in giving circulation to the decrees of the First Ecumenical Council, said: 'Whatever is determined in the holy assemblies of the bishops is to be regarded as showing the will of God' (Euseb. *Vit. Const.* iii. 20). The Emperors Theodosius II. and Valentinian III. wrote to the Third Ecumenical Council that they had sent Candidian to be their representative, 'to have no share in the discussions which may take place about doctrine; for it is unlawful that one who is not on the list of the holy bishops should mingle in the affairs of the Church' ('Acts of Ephesus,' p. i. cap. xx., in Hardouin, i. 1345). The Emperor Marcian addressed the Fourth Ecumenical Council: 'Our will is to be present at the Council is that we may ratify those things which are done, not that we may exercise any power' ('Acts of Chalcedon,' Act vi., *ib.* ii. 465). The historian Theodoret records a dialogue between the Emperor Constantius II. and Pope Liberius, in which Liberius insisted, and incurred banishment for insisting, that St. Athanasius must not be condemned without a fair trial by ecclesiastical authorities and a sentence passed upon him after such a trial in accordance with the rules of the Church (see Theodoret, *HE* ii. 16). The same principle of the independence of the Church is emphatically declared in the letter written by Hosius, Bishop of Cordova, to the Emperor Constantius II., in which he said:

'Push not yourself into the affairs of the Church, neither give commands to us about them; but rather do you learn them from us. God has committed to your hands a kingdom. He has entrusted us with the affairs of the Church. And as he who should steal your rule would be resisting God who appointed it, so do you be afraid on your part to take upon yourself the affairs of the Church and become guilty of a great offence. It is written, "Render unto Cæsar the things that

are Cæsar's, and unto God the things that are God's." Therefore it is not lawful for us to bear rule upon the earth, and you, Sire, have not authority to burn incense. . . . This is my determination; I unite not with the Arians, but I anathematize their heresy. I subscribe not against Athanasius, whom we and the Church of the Romans and the whole council acquitted' (St. Athan. *Hist. Arian.* 44).

Such instances show that, while the Church acquiesced in the use of the most extravagant language to describe the Emperor, as when the Imperial commissioners and others called him 'the divine head,' 'the divine and immortal head,' 'our most divine lord,' or when a letter from him was styled a 'divine letter' (see, e.g., 'Acts of Ephesus,' p. i. cap. 19, 20; 'Epp. Cath.' cap. 17, and 'Acts of Chalcedon,' p. i.; 'Epp.' 20, 36, Acts iv., xi., xiv. p. iii. cap. 5, 7, in Hardouin, i. 1344, 1345, 1616, ii. 36, 52, 413, 545, 572, 664, 668), it was not allowed that the Emperor had any right to dictate what the Councils should do.

8. The relation of the Pope to Councils.—The subject of the relation of the Popes to the convoking and confirming of Councils has been dealt with above. It is necessary to examine also the view of the Papal authority taken by the Councils. As of the Emperor, so of the Pope, language of a strong kind was used at and by the Councils. It must suffice to quote some of the most remarkable instances. At Ephesus (431) the Papal legate Philip described St. Peter as 'the prince and head of the Apostles, the pillar of the faith, and the foundation of the Catholic Church'; declared that he 'up to this time and always lives in his successors and gives judgment'; and in this context referred to Pope Celestine as the 'successor and representative' of St. Peter ('Acts of Ephesus,' in Hardouin, i. 1477, 1478); and the Fathers of the Council, in giving sentence against Nestorius, used the words, 'necessarily impelled by (*ἀνά*) the canons and by (*ἐκ*) the letter of our most holy Father and fellow-minister, Celestine, Bishop of the Roman Church' ('Acts of Ephesus,' Act i., *ib.* i. 1421, 1422). At Chalcedon (451) the Papal legate Paschasius called the Pope the 'head of all the Churches' ('Acts of Chalcedon,' Act i., *ib.* ii. 67, 68); and the Fathers of the Council in their letter to the Emperor Marcian spoke of the Pope as the 'invulnerable champion' whom 'God provided,' and in their letter to Pope Leo described him as the 'head' of which they were the 'members,' and as him to whom 'was entrusted by the Saviour the guarding of the vine,' the Church ('Acts of Chalcedon,' p. iii. cap. 1, 2, *ib.* ii. 643, 644, 655, 656). At Constantinople (680-681) the Fathers of the Council wrote to Pope Agatho: 'We commit to thee, as the chief ruler of the universal Church standing on the firm rock of the faith, what is to be done,' to give effect to the decisions of the Council; and described the Pope's letter to the Emperor as 'uttered about divine truth by the chief head of the Apostles' ('Acts of Constantinople,' Act xviii., *ib.* iii. 1437-1440). Yet, notwithstanding all such statements, the Councils did not regard the Papal utterances as settling anything; they examined and tested the judgment of the Popes; they assented to these as conforming to orthodox standards; they did not shrink from declaring a Pope to be a heretic. At Ephesus (431) the condemnation of Nestorius was not passed until after the most elaborate consideration of his case, though the letter of Pope Celestine condemning him was before them ('Acts of Ephesus,' Act i., *ib.* i. 1353-1434). At Chalcedon (451) there was a like examination of the *Tome* of Pope Leo, and it was eventually approved as being 'consonant with the confession of great Peter' ('Acts of Chalcedon,' Act v., *ib.* ii. 455, 456). The Fifth Ecumenical Council, held at Constantinople in 553, insisted on condemning Theo-

dore of Mopsuestia and Theodoret, in spite of the resistance of Pope Vigilius ('Acts of Constantinople,' Coll. viii., *ib.* iii. 187-208). The Sixth Ecumenical Council, held at Constantinople in 680-681, anathematized Pope Honorius I. as a heretic; and with reference to the letters of Sergius and Honorius declared:

'We find that these documents are altogether alien from the doctrines of the Apostles and the decisions of the holy Councils and all the accepted holy Fathers, and that they follow the false teachings of the heretics. We entirely reject them, and we excommunicate them as destructive to the soul. Moreover, we have determined that the names of the very men whose doctrines we excommunicate as impious are to be cast out from the holy Church of God, namely Sergius. . . . And besides these, we have decided that Honorius, who was Pope of the elder Rome, is to be cast out of the holy Church of God and anathematized together with them. . . . To Theodore of Pharan, the heretic, anathema. To Sergius, the heretic, anathema. To Cyrus, the heretic, anathema. To Honorius, the heretic, anathema. To Pyrrhus, the heretic, anathema' ('Acts of Constantinople,' Acts xiii., xvi., in Hardouin, iii. 1332, 1333, 1335).

A comparison of the different parts of the evidence shows that, while the Pope was regarded as the chief bishop of Christendom, and while his authority and influence were great, the Councils held that it was for them and not for him to decide in matters of doctrine and discipline; and that, while the ordinary and normal desirable process was that Pope and Council should be in agreement, and that what the Council decided the Pope should accept and give effect to, a necessity might arise of a Council taking its own line in opposition to a Pope, and even of condemning him as heretical.

As regards the disciplinary power of the Pope, regulations of the Councils of Nicaea (325) and Sardica (343) are of special importance. Canon 6 of Nicaea assumes the possession by the Pope of a certain patriarchal authority in Italy, parallel with that of other patriarchs elsewhere, referred to as an illustration in a way which may imply a primacy on the part of Rome:

'The old customs in Egypt and Libya and Pentapolis are to be preserved so that the Bishop of Alexandria shall have authority over all these, since this is customary also in the case of the Bishop of Rome. In like manner, in Antioch and in the other provinces the rights are to be preserved to the Churches.'

Canons 3, 4, and 5 of Sardica provide for appeals to Rome in certain cases. They enact that, if a bishop has been deposed by the bishops of his province, there may be an appeal to the Bishop of Rome, who is to decide whether the appeal is to be allowed or not; if it is allowed, the Pope is to nominate bishops from the neighbourhood of the province in question to act as the court for the second hearing of the case; if the appellant can persuade the Pope to do so, the Pope may send presbyters of his own to act as his legates (*ἐλπίαι ἐν τῇ ἐξουσίᾳ αὐτοῦ τοῦ ἐπισκόπου* . . . *ἐχούσας τε τὴν αὐθεντίαν τοῦτον παρ' οὗ ἀπεστάλησαν*) in the court thus formed.

9. The authority of Councils.—The degree of authority which a Council possessed varied greatly with its character. A local Council in itself could make no claim to acceptance wider than in the locality to which it belonged, and its decisions were always open to revision by a larger and more representative body. Thus, a diocesan Council had authority for its diocese, and a provincial Council for its province, but in each case this authority was subject to appeal from the diocese to the province, from the province to a union of provinces, and from any smaller Council to a Council of the whole Church; and as the Council was more fully representative, so its authority was greater. But a Council, however fully representative in constitution, was not finally authoritative simply because of that constitution. The ratification of its decrees by the Emperor gave civil sanction, and the assent to them by the Pope supplied a further ecclesiastical step (cf. the famous saying of St. Augustine, 'Iam enim de hac causa duo con-

cilia missa sunt ad sedem apostolicam: inde etiam rescripta venerunt. Causa finita est: utinam aliquando finiatur error' [*Serm.* cxxxi. 10]). But the Council did not become Ecumenical, in the sense in which that word has been here used, and so completely binding on the whole body of the Church, without the general acceptance by the Church of its doctrinal decisions, since a Council, however representative in constitution, might fail to represent the real mind of the Church, just as a civil body of the most completely representative character, so far as constitution is concerned, might fail to represent the real wishes of the nation which elected it. This acceptance by the whole body of the Church was given to each of the seven Councils which have here been called 'Ecumenical.' In the case of these Councils the acceptance was not always easily or immediately received. For instance, the First Ecumenical Council, that of Nicaea (325), proved to be the occasion of controversy rather than the settlement of it, and did not receive universal acceptance for more than fifty years, until after the Second Ecumenical Council, that of Constantinople (381); and the decisions of the Seventh Ecumenical Council, that of Nicaea (787), were for a long time without acceptance in the West, were actually rejected by the Council of Frankfurt (794) under a misunderstanding of their meaning,¹ and only gradually came to that recognition in the West which, added to the Eastern acceptance, constituted universal approbation. An instance of the way in which a Council not representative of the whole Church by its constitution may become Ecumenical through universal acceptance of its doctrinal teaching is in the Second Ecumenical Council, that of Constantinople (381), which was summoned from the East only, and which no Western bishop attended. The authority of the Ecumenical Councils is thus that of the whole Church. The idea of authority, whether as resident in the Church or as expressed by Councils, was based on the belief that the Church, under the guidance of the Holy Spirit, was giving effect to the teaching of Holy Scripture and the deposit of faith committed by our Lord to His apostles. St. Athanasius described the work of the orthodox bishops at Nicaea (325) as having been 'to collect the sense (*διάνοια*) of the Scriptures' (*de Decr. Nic. Syn.* 20). The work done at Constantinople (381) was described by the bishops who met at Constantinople in the following year, who were almost the same as those of the Council of 381, in the words:

'We, whether we have endured persecutions or tribulations (or the threats of monarchs or the cruelties of rulers or some other trial at the hands of the heretics, have borne these for the sake of the faith of the gospel which was ratified at Nicaea in Bithynia, by the three hundred and eighteen holy Fathers under the guidance of God. For this which we have been at pains to preserve ought to be sufficient for you and for us and for all who do not wrest the word of the true faith. It is the most ancient faith. It is in accordance with our baptism. It teaches us to believe in the name of the Father and of the Son and of the Holy Ghost, and consequently in one Godhead and Power and Essence of the Father and of the Son and of the Holy Ghost, the dignity being equal and the majesty co-eternal; in three wholly perfect Subsistences or three perfect Persons. . . . We also preserve unperverted the doctrine of

¹ The Council of Nicaea (787) affirmed the lawfulness of 'reverence of honour' (*τιμητική προσκύνησις*) addressed to the images of our Lord and the saints, but condemned any offering of 'real worship of adoration' (*ἀληθινή λατρεία*) to them ('Acts of Nicaea,' Act vii., in Hardouin, iv. 456). What the Council of Frankfurt (794) rejected was the offering of adoration: 'Allata est in medium questio de nova Græcorum synodo quam de adorandis imaginibus Constantinopolitani [obviously a blunder for Nicaea] fecerunt, in qua scriptum habebatur ut qui imaginibus sanctorum ita ut deificæ Trinitati servitium aut adorationem non impenderent anathema indicarentur. Qui supra sanctissimi patres nostri omnimodis adorationem et servitium reuocantes contempserunt atque consentientes condemnauerunt' (canon 2 in Hardouin, iv. 904). This ascribes to the Nicene Council (787) exactly what that Council had rejected—the offering to images of the adoration due to the Holy Trinity.

the Incarnation of the Lord, receiving the tradition that the dispensation of the flesh is not without soul or without reason or imperfect, and being fully convinced that the Word of God was perfect before the ages and became perfect man in the last days for our salvation' (see Theodoret, *HE* v. 9).

At Ephesus (431) the bishops gave as their reason for the approval of the letters of St. Cyril that they 'were in no respect discordant with the Scriptures inspired by God or with the faith which has been handed down, which was set forth in the great Council by the holy Fathers who assembled at Nicæa,' and, as their reason for the condemnation of Nestorius, that his teaching was 'wholly alien from the faith of the Apostles and the gospel' ('Acts of Ephesus,' Act v., in Hardouin, i. 1505). At Chalcedon (451) the letter of St. Cyril of Alexandria to John of Antioch was read, containing the following passage:

'Concerning the Virgin Mother of God how we both think and say, and concerning the manner of the Incarnation of the Only-Begotten Son of God, we will speak briefly, necessarily, not by way of addition, but as a full completion, as we have received from the beginning from the divine Scriptures and from the tradition of the holy Fathers.'

The *Tome* of St. Leo, which also was read to the Council, appealed chiefly to the evidence of Holy Scripture, but likewise to the creed confessed by the whole body of Christians. After the *Tome* had been read, the bishops exclaimed:

'This is the faith of the Fathers. This is the faith of the Apostles. Thus do we all believe. Thus do the orthodox believe. Anathema to him who does not so believe. Peter has spoken thus through Leo. Thus did the Apostles teach. Piously and truly has Leo taught. Thus taught Cyril. Eternal be the memory of Cyril. Leo and Cyril taught alike. Thus taught Leo and Cyril. Anathema to him who does not so believe. This is the true faith. Thus are we, the orthodox, minded. This is the faith of the Fathers' ('Acts of Chalcedon,' Act I, II, in Hardouin, II, 121, 305).

At Constantinople (553) the bishops declared:

'Being gathered together, before all things we have briefly confessed that we hold that faith which our Lord Jesus Christ, true God, delivered to His holy Apostles, and through them to the holy Churches, and which the holy Fathers and doctors who succeeded them delivered to the peoples committed to their care'; and described themselves, in their condemnation of heresy, as lighting 'the light of knowledge from the divine Scriptures and the teaching of the Apostles' ('Acts of Constantinople,' 558, Coll. viii., in Hardouin, III, 189, 194).

The bishops at Constantinople (680-681) stated:

'We have examined the synodical letter of Sophronius of holy memory, once patriarch of the holy city of Christ our God, Jerusalem; and, as we have found it to be in harmony with the true faith and in accordance with the teachings of the Apostles and the holy approved Fathers, we have judged it to be orthodox and have received it as profitable to the Holy Catholic and Apostolic Church'; described themselves as 'following the five holy Ecumenical Councils and the holy and approved Fathers,' and as defining the faith 'according as the prophets from the beginning have taught, and Jesus Christ Himself has instructed us, and the symbol of the holy Fathers has delivered to us'; and in their letter to Pope Agatho I. said of their work: 'On us shone the grace of the all-holy Spirit, bestowing His power through your continual prayer, so that we might root out every tare and every tree that bringeth not forth good fruit, and commanding that they should be consumed with fire. And, agreeing in heart and tongue and hand, we have put forth, by the assistance of the life-giving Spirit, a definition most free from error and most certain, not removing the ancient landmarks, as it is said, which God forbid, but abiding by the testimonies of the holy and approved Fathers' ('Acts of Constantinople,' 680-681, Act xiii., xviii., in Hardouin, III, 1833, 1400, 1440).

At Nicæa (787) the bishops defined their work:

'Thus the teaching of our holy Fathers is strengthened, that is, the tradition of the Catholic Church, which has received the Gospel from one end to the other. Thus we follow Paul, who spoke in Christ, and all the company of the divine Apostles and the holy Fathers, holding fast the traditions which we have received'; and wrote to the Empress Irene and to the Emperor Constantius VI.: 'Following the traditions of the Apostles and the Fathers, we are bold to speak, being of one mind in the concord given by the all-holy Spirit; and being all brought together in one, having the tradition of the Catholic Church in harmony with us, we are in accord with the agreeing voices set forth by the six Ecumenical Councils' ('Acts of Nicæa,' Act vii., in Hardouin, IV, 456, 478).

For their great doctrinal decisions the Ecumenical Councils thus possess the authority of the universal Church, and base their work on that tradition of the faith which goes back to and rests on the authority of our Lord Himself. A more difficult

question arises as to the degree of their authority in certain other matters. Some disciplinary enactments obviously dealt with local and temporary circumstances, and therefore have only local and temporary force, as, e.g., regulations about letters of commendation made at Chalcedon (451) in canon 11; but in other matters of discipline it is less easy to decide how far a principle is involved which may tend towards some degree of permanent authority.

An instance may show the complexity of the problem thus raised. The First Ecumenical Council, acting in accordance with the condemnation of 'usury' in canon 20 of the Council of Elvira (305), the excommunication of 'ministers who lend money for interest' in canon 12 of the Council of Arles (314), and the regulation in the forty-fourth *Apostolical Canon*, that 'a bishop, priest, or deacon, who seeks interest from those who owe him money must either cease from the practice or be deposed,' enacted that: 'Since many who are in the list of the clergy, moved by covetousness and the spirit of gain, have forgotten the divine word which says, "He hath not given his money upon interest," and lend and require one per cent per month, the holy and great Council declares that, if any one after this decree be found to be receiving interest . . . he shall be deposed from the clerical office and his name shall be struck off the list' (canon 17); and this canon passed into the ordinary law of both East and West, and became part of the *Corpus iuris canonici* (*Decretum*, I. xlvii. 2, II. xiv. 4 (8)). This canon differs markedly, on the one hand, from doctrinal decisions concerning central truth; and, on the other hand, from regulations of merely local and temporary import.

ro. The work of the Seven Ecumenical Councils.—It has already been indicated that the Ecumenical Councils dealt with matters of very varying character and importance, some doctrinal, others disciplinary.

(1) Their great work was in regard to the *theology of the Incarnation*.—(a) By the acceptance of the Nicene Creed, and in particular of the phrase in it 'of the same essence as the Father' (*ὁμοούσιος τῷ Πατρί*), the FIRST COUNCIL OF NICÆA (325) affirmed the real Deity of Christ (see CONFESSIONS, in vol. III. p. 836, and CREEDS [Ecumenical]). (b) The FIRST COUNCIL OF CONSTANTINOPLE (381) ratified the work of the Council of Nicæa (325) in regard to the Deity of Christ; and in particular, by its condemnation of Apollinarianism—the heresy which maintained that our Lord did not possess a higher human soul or spirit—protected the completeness of Christ's manhood; see canon 1:

'The confession of faith of the three hundred and eighteen Fathers who were assembled at Nicæa in Bithynia shall not be abolished, but shall remain; and every heresy shall be anathematized, especially that of the Eunomians or Anomeans, the Arians or Eudoxians, the semi-Arians or Pneumatomachians, the Sabellians, Marcellians, Photinians, and Apollinarians.'

It has been thought by some that this Council affirmed the longer form of the Nicene Creed, sometimes called the Constantinopolitan Creed (see CONFESSIONS, and CREEDS, *ut supra*). (c) The FIRST COUNCIL OF EPHEBUS (431), by its approval of the letters of St. Cyril of Alexandria and its condemnation of Nestorius, affirmed the one Person of Christ, so that it is accurate to call the Blessed Virgin Mary 'the Mother of God' (*θεοτόκος*), and to say that 'God was born and died.' (d) The COUNCIL OF CHALCEDON (451) ratified the work of the three earlier Councils by its affirmation of the Deity, complete manhood, and one Person of Christ, and by its acceptance of the original Nicene Creed and the Constantinopolitan Creed (see CONFESSIONS, and CREEDS); and declared also the distinctness and permanent reality of Christ's two natures of Deity and manhood by accepting the *Tome* of St. Leo and by acknowledging

'two natures, without confusion, without change, without rending, without separation, while the distinction of the natures is in no way destroyed because of the union, but rather the peculiarity of each nature is preserved and concurs into one Person and one Hypostasis' (Act v., in Hardouin, II, 453-456).

(e) The SECOND COUNCIL OF CONSTANTINOPLE (553), by its condemnation of the 'Three Chapters'—that is (1) the person and writings of Theodore

of Mopsuestia, (2) the writings of Theodoret in defence of Nestorius and against St. Cyril of Alexandria and the Council of Ephesus (431), and (3) the letter of Ibas to Maris—rejected anew the Nestorian heresy and affirmed the doctrine of the one Person of Christ. The words of the sentence of the Council are:

'We receive the four holy Councils, that is, of Nicæa, of Constantinople, the First of Ephesus, and of Chalcedon; and we have affirmed and do affirm those truths which they defined in defence of the one and the same faith. We declare those who do not receive these Councils to be apart from the Catholic Church. We condemn and anathematize, together with all other heretics who have been condemned and anathematized by the aforesaid four holy Councils and by the Holy Catholic and Apostolic Church, Theodore who was Bishop of Mopsuestia and his wicked writings, and the wicked writings of Theodoret against the right faith and against the twelve chapters of the holy Cyril and against the First Council of Ephesus, and his writings in defence of Theodores and Nestorius. Moreover, we anathematize also the wicked letter which Ibas is said to have written to Maris the Persian, which denies that God the Word was incarnate of the holy Mother of God and ever Virgin Mary, and so was made man' ('Acts of Constantinople', 653, Coll. viii., in Hardouin, iii. 193, 194; cf. Evagrius, *HE* iv. 38).

(f) THE THIRD COUNCIL OF CONSTANTINOPLE (680-681) condemned the Monothelite heresy, according to which there is only one will in Christ, and affirmed the reality of His human will as well as of His Divine will. After declaring their adherence to the Councils of Nicæa (325), Constantinople (381), Ephesus (431), Chalcedon (451), and Constantinople (553), and after reciting the original Nicene Creed and the enlarged Nicene or Constantinopolitan Creed (see CONFESSIONS, and CREEDS, *ut supra*), the bishops said:

'This holy and orthodox creed of the Divine grace was in itself enough for the complete knowledge and confirmation of the orthodox faith; but since the author of evil has never ceased to find a serpent to help him, and thereby to diffuse his deadly poison among the human race, and so to find fit instruments to accomplish his will—we mean Theodoret, who was Bishop of Pharan; Sergius, Pyrrhus, Paul, Peter, who were bishops of this royal city; also Honorius, who was Pope of old Rome; and Cyrus, who held the bishopric of Alexandria; also Macarius, who was recently in charge of Antioch, and his disciple, Stephen—he did not fail to bring through them scandalous errors on the whole Church by disseminating in new fashion among the orthodox people the heresy of the one will and one operation in the two natures of the one Christ our true God, one Person of the Holy Trinity, . . . the heresy which serves to take away the fullness of the Incarnation of the one Lord Jesus Christ our God by means of a crafty notion, and which impiously brings in the idea of His rationally quickened flesh as being without will and operation. . . . In like manner, following the teaching of the holy Fathers, we proclaim two natural wills (*θελησεις τρεις θεληματα*) in Him, and two natural operations, without division, without change, without severance, without confusion, and two natural wills not opposed to one another—God forbid—as the wicked heretics said, but his human will following, and not resisting or opposing, but rather subject to His divine and almighty will' ('Acts of Constantinople', 680-681, Act xviii., in Hardouin, iii. 1395-1400).

(g) THE SECOND COUNCIL OF NICÆA (787) dealt with the contentions of the Iconoclasts that Christ might not be represented in a material form because of the infinity of the Godhead, or, as the more moderate members of the party taught, that the representations of Him might not be venerated. In view of these contentions, the Council affirmed the teaching of the six earlier Ecumenical Councils, and proceeded to declare that the material representations of our Lord were the visible signs of the reality of the Incarnation, and that the veneration of these and of the images of the saints—which was to be distinguished from the adoration due to God alone—lifted the thoughts of the worshippers to the realities which these visible things represented:

'We, holding fast in everything the decrees and acts of our divinely guided Fathers, proclaim them with one mouth and one heart, adding nothing to, taking nothing away from, the things which they delivered to us, but in these we are strong, in these we are established; we so confess, we so teach, as the six holy Ecumenical Councils have defined and determined. And we believe in one God, the Father Almighty, Maker of all things visible and invisible; and in one Lord Jesus Christ, His only-begotten Son and Word, through whom all things were made; and in the Holy Ghost, the Lord and Life-Giver, con-

substantial and co-eternal with the Father and His co-eternal Son—the Trinity uncreated, undivided, incomprehensible uncircumscribed, which wholly and alone is to be adored and venerated and worshipped, one Godhead, one Lordship, one Dominion, one Kingdom and Power, which without division is apportioned to the Persons, and without confusion is joined to the Essence. And we confess that One of the same holy and co-essential Trinity, our Lord Jesus Christ, the true God, in the last days for our salvation became flesh and was made Man, and by the saving dispensation of His passion and resurrection and ascension into heaven did save our race and set us free from idolatry. . . . The Lord of glory Himself, God who became Man, saved us and set us free from idolatry. To Him, therefore, be glory; to Him be grace; to Him be thanksgiving; to Him be praise; to Him be majesty. His is redemption and salvation. He alone is able to save to the uttermost. This is the work of no other men, who came from the dust. He Himself, through the dispensation of His incarnation, has fulfilled for us, on whom the ends of the world are come, the words foretold by the prophets. . . . And we greet the words of the Lord, and of the apostles, and of the prophets, by which we have been taught to honour and magnify, first her who is actually and really the Mother of God, who is above all the heavenly powers, and then the holy powers of the angels, the blessed and illustrious apostles, the glorious prophets, the victorious martyrs who fought for Christ, the holy and God-fearing doctors, and all the saints; and to seek for their intercessions, which are able to make us at home with God, the King of all, if we keep His commandments, and strive to live virtuously. We greet, moreover, the figure of the honourable and life-giving cross, and the holy relics of the saints; and we receive and greet and embrace the holy and venerable images, according to the primitive tradition of the Holy Catholic Church of God, that is, our Holy Fathers, who both received them and determined that they should be in all the holy churches of God, and in every place of His dominion. These honourable images, as has been said before, we honour and greet and honourably venerate; namely, the image of the Incarnation of our great God and Saviour Jesus Christ; and of our unstained Lady, the all-holy Mother of God, of whom He was pleased to become flesh, that He might save us and set us free from all wicked idolatry; and of the holy and bodiless angels, who appeared in the form of men to the righteous; and the figures and images of the divine and far-famed apostles, the God-speaking prophets, the triumphant martyrs, and the saints; so that, through their representations, we may be led to the recollection and memory of them who are represented, and may attain to some share in their holiness. . . . In proportion as the saints are beheld by their images, those who behold them are uplifted in memory and affection of those who are represented, so as to assign to these greeting and honourable veneration, not the real adoration which, according to our faith, is due to the nature of God only; but that to these, as to the figure of the honourable and life-giving cross, and to the holy Gospels, and to the other sacred objects, there should be brought incense and lights to do them honour, as has been the pious custom of men of old' ('Acts of Nicæa', 787, Acts iv., vii., in Hardouin, iv. 264, 265, 456).

(2) Of the work done by the Ecumenical Councils in addition to the protection and development of the doctrine of the Incarnation, only a few representative instances can be given. The decision in regard to the schism caused by Meletius, Bishop of Lycopolis, intruding into other dioceses and ordaining in them; the decision about the dispute as to the right day for keeping Easter; the regulation that all were to pray standing on Sundays, at Nicæa (325); the assigning of the first place after the Bishop of Rome to the Bishop of Constantinople, at Constantinople (381); the prohibition of simony and the regulations about deaconesses, at Chalcedon (451)—show the wide scope of the disciplinary enactments of these councils.

II. Other important Councils.—Illustrations of Councils other than the Seven Ecumenical Councils may be placed in three groups.

(1) *The Councils held at Constantinople in 869 and 879.*—That in 869 was regarded in the West, and is still regarded by the Church of Rome, as the Eighth Ecumenical Council. Its chief work was the condemnation of Photius, one of the claimants to the See of Constantinople, who in 866 had issued an encyclical letter in which he attacked the Westerns for (a) keeping Saturday as a fast; (b) eating milk and cheese during part of Lent; (c) not allowing married men to be priests; (d) restricting confirmation to bishops; (e) teaching the double procession of the Holy Ghost (*Ep.* i. 13, in Migne, *PG* cii. 721-742); and who in 867 had presided at a Council at Constantinople which had anathematized the Pope ('Acts of Constan-

tinople,' 869, in Hardouin, v. 749-1196). The Council held in 879 is regarded in the East as the Eighth Ecumenical Council. It reversed the proceedings of the Council of 869 and acknowledged Photius. Legates of the Pope were present at it, and assented to its work; but it was eventually repudiated by the Pope. The absence of Eastern acceptance of the Council of 869 and of Western acceptance of the Council of 879 makes both these Councils to be without that universal acceptance which is a condition of ecumenicity.

(2) Between the Council of Nicæa (325) and the Council of Constantinople (381) a series of Councils concerning the Arian controversy were held. The most important of them were those at Antioch in 341, with supplementary assemblies later in the same year and in 344, which drew up five Creeds which in themselves were orthodox, but which played into the hands of the semi-Arians by the use of ambiguous expressions about the Deity of Christ; at Sardica in 343, which defended St. Athanasius; and the simultaneous Council at Philippopolis, which condemned him and accepted the fourth of the Antiochene Creeds; at Sirmium in 351, 357, and 358, which were favourable to the semi-Arians, and the third of which drew up a Creed of the same character as the Antiochene Creeds; at Ariminum in 359, which accepted a semi-Arian Creed; at Seleucia in 359, which accepted the same Creed as that adopted at Ariminum; and at Alexandria in 362, which, on the temporary return of St. Athanasius to his See, dealt with the various practical difficulties which had arisen through the dominance of the Arians during the reign of Constantius II.

(3) *Particular Councils of special importance.*—(a) The Councils of Laodicea, held between 341 and 381, of Carthage in 397 and 419, and the Quinisext, or Trullan, Council of Constantinople (692) made regulations in regard to the books which might be read in church.—(b) A series of Councils held in the 5th cent. in Africa and Palestine and Italy were concerned with the Pelagian heresy. With these must be placed the highly important Second Council of Orange (529), which condemned Semi-Pelagianism, and definitely asserted the need of Divine grace both to lead man to choose good and to enable him to give effect to his choice; but took pains to avoid exaggerations in the opposite direction, by adding to the canons the following statement:

'When grace has been received through baptism, all the baptized, by the help and co-operation of Christ, are able and ought to fulfil those things which pertain to the salvation of the soul, if they are willing to labour faithfully. That any are predestined to evil by the power of God, we not only do not believe, but also, if there are any who wish to believe so great an evil, we say anathema to them with all abhorrence. This also we healthfully confess and believe, that in every good work it is not we who begin and afterwards are aided by the mercy of God, but God Himself in the first instance inspires into us, without any good deserts of our own preceding, belief in Him and love for Him, so that we both faithfully seek for the sacrament of Baptism, and after Baptism are able with His help to fulfil those things which are pleasing to him' ('Acts of Orange,' 529, in Hardouin, ii. 1101, 1102).

These decisions at Orange were accepted as expressing the general mind of the Church (see PELAGIANISM, SEMI-PELAGIANISM).—(c) A Council was held at Constantinople in 543, to which the *Fifteen Anathematisms on Origen*, which are sometimes ascribed to the Fifth Ecumenical Council, probably belong. They include the anathema, 'If any one maintains the legendary pre-existence of souls and the monstrous idea of restitution which follows from it, let him be anathema' (see Hardouin, iii. 284).—(d) The Third Council of Toledo (589) was the occasion of the Spanish Church and nation repudiating their traditional Arianism, and accepting the Catholic faith as expressed by the orthodox Councils. It is of importance, in regard

to the history of the Creeds and to controversies between the East and the West, that the clause in the enlarged form of the Nicene Creed was recited at this Council as 'ex Patre et Filio procedentem' (see Hardouin, iii. 472).—(e) The Quinisext, or Trullan, Council of Constantinople (692) reaffirmed the doctrinal declarations of the six Ecumenical Councils which had by that time been held, and added to them a series of disciplinary canons which became a recognized part of the Eastern canon law.—(f) The Council of Frankfort (794), expressing the general mind of the Church, condemned the heresy of Adoptionism, declaring that it 'ought to be utterly rooted out of the Church' (canon 1; see Hardouin, iv. 904, and cf. art. ADOPTIANISM). Under a misapprehension, it rejected the decisions of the Second Council of Nicæa about images (see above, p. 190ⁿ).

DARWELL STONE.

COUNCILS (Christian: Mediæval, 870-1400).

—The Councils of this protracted period were not important from a doctrinal standpoint, as compared with the Ecumenical Councils from 325 to 869, or as compared with the later Councils of Trent and the Vatican. The dogma of Transubstantiation is the only dogma which was defined (at the Fourth Lateran, 1215) that had not been defined by one of the first eight Ecumenical Councils. These Synods are, however, of unusual value for the light they throw upon the clerical manners of the period, and the advocacy they gave to some of the greater social and ecclesiastical movements of the Middle Ages. They legislated upon the relation of the Church to the Empire, upon the prerogatives and election of the Popes, upon Church reforms, especially against simony and priestly concubinage, upon heresy and its punishment, upon the details of the conduct of worship, priestly dress and manners, upon the crusades, upon the evils of feud (through the truce of God), and upon the tournaments. As regards locality, Rome was all through the period the chief centre of Church assemblies. Down to 1200, few Synods, of which any account is preserved, were held outside Germany, France, Italy, and England. The important Synod of Szoboles (1092) in Hungarian territory was one of the exceptions. After 1150 the Spanish Synods came into prominence on account of the regulations touching heresy and its extirpation. A notable feature is that not only the Synods in Rome, but many outside of it, were presided over by Popes in person or through their legates. Such were the Synods in France, Germany, and Italy, attended by Leo IX., Urban II., Innocent II., Alexander III., Lucius III. The presence of the supreme head of Christendom gave to the acts of such

Synods a semi-Ecumenical importance. The period witnessed seven Ecumenical Councils, the first in the West, and all called and presided over by Popes. The decrees of some of them are of less importance than the legislation of some of the local Synods, such as the Reform Synods held in Rome in 1049, 1059, etc., the Synod of Clermont (1095), which set the first crusade in motion, the Synod of Verona (1184), which took up heresy, and the Synod of Tours (1229), which, in addition to other important regulations aimed against heretics, forbade laymen to possess copies of the Scriptures. We shall treat the subject under five heads.

I. 870-900.—The Synods of this dark age, so far as they are known to us, were only of temporary and local importance. The subjects discussed were crimes against the clergy and their punishment, the payment of tithes, the rights of patrons over church livings, marriage and divorce. No new measures of Church reform or ecclesiastical polity were taken up. No new statements of doctrine were made. No Synod of importance was held at Rome. The Synod of Tribur, near Mainz (895), was one of the best of them (see Hefele, iv. 552 ff.). It was attended by the three great German archbishops, Hermann of Cologne, Hatto of Mainz, and Rothod of Trèves, by 19 bishops, and many abbots. Twelve of its 58 canons concern marriage, which is declared valid only when the parties are equals. A man having a concubine was expressly permitted, in addition, to take a wife. A man committing adultery with another man's wife was forbidden to marry her, even if the husband died. The old Roman law evidently still had its influence, but the movement of the Church was in the right direction, and at the Roman Synod (1059) under Nicolas II. a layman was forbidden, under pain of excommunication, to have a wife and a concubine at the same time.

II. 900-1050.—The 10th cent. witnessed even fewer Synods than the 9th (Hefele, iv. 571), and this, according to the canonist Hergenröther, was a sign of the decay of Catholic discipline (*Kathol. Kirchenrecht*, 342). The Ottos and Henry III. had a taste for calling Synods, regarding themselves as the successors of Constantine, Theodosius, Marcian, and other Roman Emperors. After the year 1000 there is a very noticeable increase in the number of Synods. Here, again, no theological dogma is stated which had not already been defined. The prerogative of the Papal Chair, which was to form such a conspicuous subject of Conciliar discussion after 1050, was not touched upon, except incidentally at the Synod of St. Bâle, near Rheims (991), where Gerbert, afterwards Sylvester II., took a prominent part, and Archbishop Arnulf was deposed. Sylvester, on becoming Pope, restored him (Hefele, iv. 637 ff., 654; Loofs, *Dogmengesch.*, Halle, 1906, p. 249). A Synod of Rome under Sylvester (998), in the spirit of Nicolas I., imposed a penance of eight years upon Robert, king of France, for his marriage with his blood-relation, Bertha; and the Archbishop of Tours and other prelates, who had assented to the incestuous relationship, were suspended. Of the Synods which took up the cases of individual Popes, the Synod of Rome (963) deposed John XII. and elected Leo VIII.; the Roman Synod of 964 reinstated John XII.; and another Roman Synod (964) restored Leo VIII. Otto the Great called the last of these Synods. The most famous of them, the Synod of Sutri, has a permanent interest, as bearing upon the relation between a Council and the Papacy. It was controlled by Henry III., and disposed of three Popes and elected a fourth. Benedict IX. resigned, Sylvester III. was imprisoned, and Gregory VI. deposed himself, his

resignation being accepted by the assembled Fathers. Descending from the throne, he implored forgiveness for having usurped the supreme seat of Christendom by simoniacal purchase. Clement II. was then seated.

The Synodical legislation of 1000-1050 shows a great revival of interest in ecclesiastical discipline and order, and is characterized by three notable features—a strong movement towards the moral reform of the clergy, the check put upon feuds and bloodshed, and the repression of heresy. The Synods of Pavia (1018), presided over by Benedict VIII., of Goslar (1019), Seligenstadt (1022), and Bourges (1031), busied themselves with questions of reform, especially with the incontinence of the clergy. The deposition of all clerics who had wives or concubines was decreed, from sub-deacon to bishop. The Synod of Seligenstadt recognized the crying evil of excessive masses, when it limited a priest to three a day. The legislation against the deep-rooted evil of uninterrupted feud and blood-revenge begins with the Synod of Poitiers (1000). The Synod of Limoges (1031) threatened the interdict as punishment for such feud. The legislation which started in France was perfected there. The agreement of peace (*pax Dei*), dating from 1034, which required a cessation of warfare all the days of the week, was found impracticable, and (about 1040) Synods in Southern France established the *treuga Dei*, the peace or truce of God, whereby cessation from bloodshed was ordered from Wednesday evening to Monday at sunrise, thus including the sacred days of the Ascension, Passion, Burial, and Resurrection. Later Synods, as the Synod of Narbonne (1054) and the great Synod of Clermont (1095), under the presidency of Urban II., extended the limits of the truce to the Lenten period and other holy seasons of the Church year. This humane legislation was confirmed by the first three Ecumenical Councils of the West (1123, 1139, 1179); and, in putting a check upon the barbarism of mediæval society, it stood probably for a more remarkable measure than the principle of arbitration in international disputes which is now gaining recognition. The Synodical action on heresy opens with the Synod of Orleans (1022). There had been no call for repressive measures for hundreds of years, as heresy was practically unknown in Western Europe. It appeared again in Southern France and Northern Italy; and at Orleans, in the presence of Robert, king of France, and his consort, 13 persons were burned for erroneous teachings and practices. This legislation was taken up by the Synod of Arras, Southern France (1025), which condemned heretics who had emigrated from Italy and rejected baptism and the Lord's Supper, despised marriage, and 'annulled' the Church. Again, at the Synod of Rheims (1049), heretics were condemned. This legislation was renewed at a later time and elaborated by many Synods, culminating in the measure of the Inquisition laid down by Innocent III. at the Fourth Lateran, the rules of the Synod of Tours, and the decrees of Innocent's successors.

III. 1050-1122.—In this, the Hildebrandian period, Synods are numerous. They are a sign of a new age in Church history, and an indication of the administration of vigorous personalities. Their decisions had much influence on the permanent policy and practice of the Latin Church. Hildebrand (Gregory VII.), the most imposing figure of the period, lent the great weight of his presence at these Synods and his confirmation to their enactments. Other powerful Popes who did the same were Leo IX., Nicolas II., and Urban II. The chief subjects legislated upon were the Papal prerogative as involved in the

ceremony of investiture, clerical concubinage, ecclesiastical simony, the mode of electing the Pope, and the crusades. The so-called Reform Synods, assembling in Rome, which took up the first three questions, form an epoch in the history of the Western Church, and bear the same relation to the earlier periods of the Middle Ages that the reformatory Councils of Pisa, Constance, and Basel bear to their last period. The Lord's Supper was the only question of a doctrinal nature to be discussed, being taken up in connexion with the dynamic theory advocated by Berengar of Tours (d. 1088). The doctrine of the transmutation of the elements was assumed, the word 'transubstantiation' not being used. Through the influence of Lanfranc, Berengar's views were condemned in Rome (1050). He failed to appear at the Synod of Vercelli (1050), over which Leo IX. presided. His case was subsequently taken up at several Synods, notably at the Roman Synods (1059 and 1079). At both of these Synods he retracted his view, but afterwards recalled his denials, declaring that they had been made through fear. The 113 bishops present at the Synod of 1059 he called 'wild beasts.' The protection of Gregory VII. saved him. The famous law regulating Papal election and confining it to the cardinals was passed at the Roman Synod of 1059, under the presidency of Nicolas II. The law was elaborated by Alexander III. at the Ecumenical Council of 1179, and again at the second Ecumenical Council at Lyons (1274).

The Reform Synods began at the opening of the period in 1049. At the Roman Synod of 1047, Clement II. had already declared against simony, and punished some bishops who practised it. The Roman Synod of 1049, under Leo IX., declared war in earnest against the two evils of simony and clerical marriage, renewed the old laws on the subject, and forbade to clerics, from the sub-deacon up to the higher orders, the exercise of religious functions so long as they were married or kept concubines. This legislation was repeated the same year by Synods at Rheims and Mainz, both presided over by Leo. Vigorous laws were also passed by the Roman Synods of 1059 and 1061, under Nicolas II., and by the Synod of Melfi, near Monte Cassino (1059), presided over by the same Pontiff. The energy with which the canon of celibacy was pushed is shown by Nicolas' despatch of legates to propagate the Papal views, and the action of the Synods of Vienne and Tours (1060) along the same line. Gregory VII. won for himself a foremost place among Papal reformers by the boldness with which he advocated moral reforms, and the suffering he was ready to undergo in their interest. Simony, clerical concubinage, and lay investiture were the three evils against which he waged vigorous war. At the Lenten Synod in Rome (1074), the first of his pontificate, he ordered all holding ecclesiastical offices by purchase to relinquish them, and all guilty of the *crimen fornicationis*, that is, having a wife or a concubine, to desist from saying mass. To the resistance offered by localities and bishops to the latter decree was added the unfavourable action of the local Synods of Paris and Erfurt (1074). But such Synodal action was as a passing cloud. Other Synods came to Gregory's aid, and those held at Rome year by year renewed the war; and the legislation condemning the marriage of the clergy was repeated again and again, even in far-off England, as at the Synods of Winchester under Lanfranc (1076), at London under Anselm (1102, 1108), and at Westminster (1138), etc. These Synods extended the war to the sons of priests, who were excluded from succeeding to the benefices held by their fathers. The Roman Synod of 1083, the last

under Gregory, placed in one and the same category the sons of priests, the sons of adulterers, and all other bastards, and pronounced them ineligible for ordination. The difficulty met with in putting a stop to the marriage of clerics is shown by the action of the Hungarian Synod of Szoboles (1092), which, for the sake of peace, granted priests already married the indulgence to keep their wives (see Hefele, v. 204 ff.).

A positive prohibition of lay investiture was laid down by Gregory in the Lenten Synod at Rome (1075). Henceforward the custom was illegal where by the Emperor and princes had inducted bishops and abbots into their office by the gift of ring and staff. This right Gregory now reserved for the spiritual authorities, to whom it properly belonged. The principle was asserted at one Council after another, and thus the moral weight of Conciliar action was added to the heroic boldness of Gregory in his personal struggle with Henry IV., until the matter was finally settled by the Concordat of Worms (1122).

Synods undertook an easy task when they began to urge Western Christendom to endeavour to rescue Jerusalem and the other sacred sites from the grasp of the infidel. The spirit of chivalry, as well as the impulse of piety, was touched when the appeal was made to assert by arms the right of the Church to the localities where the Redeemer was born, had died, and lay in the grave for three days. The subject was first brought to the attention of a Council at the Synod of Piacenza (1095), when an embassy appeared from the Emperor Alexius calling for aid against the encroachments of the Turk upon the Eastern Empire. At the Council of Clermont (1095), presided over by Urban II., the first crusade was determined upon. Urban's address, picturing the distress of Jerusalem, fired the heart of the large assembly with such enthusiasm, that the cry arose, 'God wills it, God wills it,' and multitudes took the cross. More effective sermon was never preached, and at once throughout Central Europe was heard the noise of preparation for the main army which was to start under Godfrey, and the preliminary swarms under Peter the Hermit, Walter the Penniless, etc. See CRUSADES.

IV. 1122-1400 (the Ecumenical Councils).—This period of 280 years is marked by seven Ecumenical Councils, a great increase in the number of local Synods, and their spread over all Western Europe. They were called forth by the crusades, the spread of heresy, the conflicts of the Popes with the Emperors, the evils in the Church which called for reformation, and other considerations. The inclination of the Popes to strengthen their hands and carry out their plans through the action of Synods continued to be a marked feature of the Papal policy, as it had been in the Hildebrandian age. The greatest of the Popes—Alexander III., Innocent III., Gregory IX., and Innocent IV.—summoned Synods and laid their projects before them. The Ecumenical Councils were called by Popes, and the secular prince had nothing to do with their being summoned. Thus the theory of the ancient Church was set aside (see Döllinger-Friedrich, *Das Papstthum*, 88 ff.). The Papal ratification gave authority to their decrees, and the first canon of the First Lateran runs: 'Auctoritate sedis apost. prohibemus,' etc. It is true that the approbation of the assembled prelates is sometimes mentioned, and it was assumed that it was given. The formula ran: 'Sacro approbante concilio,' or 'Sacro praesente concilio.' So the Fourth Lateran. The seven General Councils were as follows:—

(1) *The First Lateran* (1123), so called from having met in the Lateran Church in Rome, was

—following the counting of the Latins—the 9th Ecumenical Council, or the next in the list after the Council of Constantinople (869). It was called by Calixtus II., and had for its principal object the ratification of the Concordat of Worms, known also as the *Pactum Calixtinum*. By that pact the Church reserved to itself the exclusive right of investing bishops with the ring and the crozier, and of inducting them into the spiritual functions of their sees, while the temporal prince retained the right of inducting them into the temporalities and of being present at the elections. Our reports of the First Lateran vary in giving the number of attending bishops and abbots as 300–997. It was the first Ecumenical Council to enjoin clerical celibacy. Following the example of Urban II. at Clermont, it granted indulgence of sins to all participating in the crusades, and, in addition, it took their relatives and their goods under the special protection of the Church.

(2) *The Second Lateran*, or 10th Ecumenical (1139), was opened with an address by Innocent II., witnessed the close of the disastrous Papal schism which had distracted the Church for nine years, and pronounced against the heresy of Arnold of Brescia (see Otto of Freising, *de gestis Frederici*, ii. 20). It also condemned simony, priestly concubinage, and the ministrations of the sons of priests, and introduced a new element in forbidding, for a term of years, tournaments. Like the First Lateran and the Third Lateran, it enjoined the truce of God.

(3) *The Third Lateran*, or 11th Ecumenical (1179), was summoned and presided over by Alexander III. 237 or, according to other reports, 300 or 396 bishops were present, besides many abbots and other clergy. It celebrated the establishment of peace between the Papacy and Frederick Barbarossa. It made some additions to the rules for electing a Pope. Falling back on the 12th canon of the Second Lateran, it legislated against heretics, especially the Cathari and Patarini, and ordered separate burial-places and churches for lepers.

(4) *The Fourth Lateran*, or 12th Ecumenical (1215), was, with the Council of Constance, the most important ecclesiastical assembly of the Middle Ages, and one of the most eventful in all Church history. Its two chief acts were the declaration of Transubstantiation as a dogma of the Church, and the establishment of the Inquisition. The Council was called by Innocent III., and attended by 412 bishops, 800 abbots, the representatives of many absent prelates, also the representatives of the Emperor Frederick II., the Latin Emperor of Constantinople, the kings of England, France, Aragon, Hungary, and Jerusalem, and other crowned heads. The Latin patriarchs of the East were also there. The sessions were opened with a sermon by the Pope on Lk 22¹⁹ ‘With desire I have desired to eat this passover with you.’ In his letter of convocation, Innocent had announced as the objects of the Council: measures for the re-conquest of Jerusalem and the betterment of the Church. The business was issued by the Pope, and free discussion in his Imperial presence was not to be thought of. The doctrine of the Eucharist was discussed for the first time at a General Council, and the assembly made the formal declaration that Christ’s body and blood are truly contained in the Sacrament of the Altar under the forms of bread and wine, the bread being *transubstantiated* into the body and the wine into the blood (Mansi, xxii. 982; Mirbt, *Quellen*, 133). The formal adoption of the Inquisition by the Council introduced its harsh and un-Christian measures into the body of the discipline of the Latin Church. The Synods of

Verona (1184), Avignon (1209), and Montpellier (1215) had already taken definite action, but these were local assemblies, although the first was under the presidency of a Pope. The Inquisition, thus established by the highest authority of the Church, —for both Pope and Ecumenical Council ratified it, —was intended to crush freedom of thought wherever the Catholic Church went, and deliberately commended those measures of the civil power which resulted in tens of thousands being brought to the stake for errors of opinion. The third canon calls heresy *heretica foeditas*, and not only summoned all bishops to search out and punish heretics with ecclesiastical penalties, but required rulers, upon pain of excommunication, to clear their realms of heresy by the use of the sword. More especially was the decree launched against the Albigenses; and the Catholics who girded themselves with the sword for the reduction of that people to the faith were promised the same indulgence that was offered to those who took part in the crusades against the Saracens (Mansi, xxii. 986 ff.; Mirbt, *Quellen*, 133 ff.). The Council also approved Innocent’s proposed crusade, which was fixed to start in June 1217. The Pope promised as his own contribution a vessel for the crusaders from Rome and its vicinity, and £30,000 in money. The indulgence for sins was extended to those who contributed to the expenses of the enterprise, as well as to those who went to the East. The speedy death of Innocent deprived it of his powerful support, and, in spite of the efforts of his two successors, Honorius III. and Gregory IX., it was never realized, unless the bizarre expedition of Frederick II. in 1229 be regarded in that light. To these decisions of greater moment were added a series of acts of a moral and ecclesiastical nature, which would of themselves render the Fourth Lateran one of the notable Councils in the history of the Church. The further establishment of monastic orders was forbidden—a canon repeated with an important modification at the second General Council of Lyons (1274). The Jews and Saracens were ordered to wear a different dress from the Christians, lest unawares there might be carnal intercourse between them, and the Jews were forbidden to appear out of doors during Passion week, and excluded from public office. Tournaments were forbidden for three years, on the ground that they would interfere with the crusade. This rule was repeated at the Ecumenical Council of Lyons (1245).

(5) *The First Council of Lyons*, or the 13th Ecumenical (1245), was called by Innocent IV., who had fled from Rome to escape Frederick II. It took the place of the Council called by Gregory IX., whose assemblage had been prevented by the violent action of Frederick and his son Enzo. Innocent, in his opening address, called attention to five wounds of the Church, namely, the low estate of the clergy, the distressed condition of Jerusalem, the Greek schism, the menace of the Tatars in Eastern Europe, and the persecution of the Church by Frederick II. The last was the greatest and most painful wound of all, and itself justified the assembly. With the assent of the Council, Innocent formally deposed Frederick from his throne. No ecclesiastical Synod before or since has taken such ominous action against an exalted monarch. Frederick was unequal to the contest, and died, defeated (1250).

(6) *The Second Council of Lyons*, or the 14th Ecumenical (1274), was summoned by Gregory X., and attended by 500 bishops, 70 abbots, and 1000 other ecclesiastics. Gregory opened the proceedings with an address on Lk 22¹⁹, the text which Innocent III. had used in 1215. The main topic was the re-union of Christendom. The Greek

Church was represented by Imperial delegates—Germanus, patriarch of Constantinople, the archbishop of Nicæa, and other bishops. The Emperor through his representatives announced his acceptance of the double procession of the Holy Spirit, and the primacy of the Apostolic see. The Apostles' Creed was sung in Latin, and then in Greek. A termination of the Schism seemed to be at hand, but the articles of agreement, when they became known in the East, were rejected, and the Council proved a failure at its historic point.

(7) *The Council of Vienne*, or the 15th Ecumenical (October 16, 1311–May 6, 1312), was called by Clement V., the first of the Avignon Popes, at the demand of Philip the Fair of France. The reports of the Council are unsatisfactory, but among the chief objects of business were the abolition of the order of the Knights Templar, the establishment of peace between the two contending wings in the Franciscan order, and the condemnation of Boniface VIII. as a heretic. The condemnation of Boniface, which Philip had strenuously demanded, was, after much discussion, set aside, in view, it is supposed, of Clement's concession to the French sovereign that the Templars should be destroyed.

V. 1122–1400 (important local Synods).—Speaking in a general way, the local Synods of this period derive their chief importance from their regulations concerning the detection and punishment of heresy. They throw much light upon the religious conditions and clerical manners of the period. After the Council of Vienne, and until the close of the 14th century, Synods no longer had the importance they had had before. This was due to the distracted condition of Western Christendom, resulting from the exile of the Papacy to Avignon, to the growing tendency to freedom of thought and expression, as manifested by Dante and by the publicists in the age of Boniface VIII., and the increasing tendency, since Boniface VIII., to autocratic Papal government through bulls. Among the more important of the local Synods were the following:—(1) *Toulouse* (1119), which passed important legislation against heretics. (2) *Tours* (1163), attended by 17 cardinals, 124 bishops, and 414 abbots. Alexander III. presided in person. Thomas à Becket, whose difficulties had begun, was present. The Synod's regulations against heresy are of historical importance. (3) *The Council of Clarendon* (1164), a mixed council of laymen and bishops, passed the famous Clarendon Constitutions, which struck at the root of ecclesiastical arrogance as represented by such prelates as Thomas à Becket, and led to his flight from England. (4) *Verona* (1164), presided over by Lucius III., passed a lengthy and notable decree concerning the trial and punishment of heretics. It makes the first Conciliar mention of the *pauperes de Lugduno*, or Waldenses. Walter Map, the English *littérateur*, was present, and has left us an interesting account of the examination and appearance of the humble Waldensian representatives. Impenitent heretics were turned over to the worldly authority, and magistrates and princes were ordered to aid bishops in spying out heretics and bringing them to trial, on pain of excommunication. (5) *The Synod of Trèves* (1227) has a place of importance on account of its canons which bear upon the administration of the sacraments (see Hefele, v. 944–55). (6) *Toulouse* (1229), presided over by the Papal legate, celebrated the close of the bloody crusades against the Albigenses, prescribed the final punishment of the house of Toulouse, and passed notable canons for the punishment of heretics, its 14th canon forbidding laymen to have in their possession the Old and New Testaments in the original or in translation. The laity—men and women—were ordered

to attend the Communion three times a year, and to visit the confessional the same number of times, upon pain of being suspected of heresy. Toulouse was in the centre of the territory most infected with heresy. There the Papal inquisitors were most active in the 13th century, and many Synods in that region and in Spain—at Beziers, Tarragona, Narbonne, Albi, etc.—repeat the rules for the detection and punishment of the unfortunate victims of the Inquisition. When, in a later century, persecutions for witchcraft were carried on, it was a Papal bull—the bull of Innocent VIII.—and a book—the *Malleus maleficarum*—which encouraged that awful movement, rather than the acts of Synods.

LITERATURE.—The Collections of the Acts of Councils, by Labbe-Cossart, 17 vols., Paris, 1674; Hardouin, 12 vols., Paris, 1715, and additional vol. 1722; esp. Mansi, 31 vols., Venice, 1759–98, continuation, Paris, 1900 ff.; valuable excerpts are given by Mirbt, *Quellen zur Geschichte des Papsttums*, Tübingen, 1901. For the history of the Councils and succinct statement of their acts: C. J. von Hefele, *Conciliengesch.*, nach den Quellen bearbeitet, 9 vols., Freiburg im Br., 1873–1890 [vols. v.–vii. rev. by A. Knöpfer; vols. viii. and ix. prepared by J. A. G. Hergenröther]. For the English Councils: David Wilkins, *Concilia Magnæ Britannicæ et Hibernicæ*, 4 vols., Lond. 1787; Haddan-Stubbs, *Councils and Eccles. Documents relating to Great Britain and Ireland*, 8 vols., Oxf. 1869–78; Gee-Hardy, *Documents illustrative of English Ch. Hist.*, Lond. 1896. For list of Collections of Councils for other countries, see E. Friedberg, *Lehrbuch des kathol. und evang. Kirchenrechts*, Leipzig, 1903, p. 143. For works on Canon Law: especially E. Friedberg, *op. cit.*; Philipp Hergenröther, *Lehrbuch des kathol. Kirchenrechts*, ed. by J. Hollweck, Freiburg im Br. 1905; cf. also, Dillinger-Friedrich, *Das Papatuum*, Munich, 1892; art. 'Concil' in Wetzer-Wake, iii. 779–810; the works on Church History, esp. A. Hauck, *Kirchengesch. Deutschlands*, 4 vols., Leipzig, 1887–1908 [vols. i. and ii. in 4th ed. 1904]. D. S. SCHAFF.

COUNCILS (Christian: Modern, 1400–1910).—

It will be convenient to deal with the Councils of this period under four separate heads. Supremely important as were the dogmatic pronouncements both of Trent and of the Vatican, they were themselves the utterances of two dissimilar assemblies, deliberating under the stress of quite different combinations of circumstances, and animated by a notably different spirit. On the other hand, the ecclesiastico-political influences at work in the early part of the 15th cent., owing to the Great Schism, were absolutely unique in the history of Christianity, while, from the outset of this period, the high relief and importance given to General Councils (owing to the gravity of the crisis and the desperate nature of the evils, which only an Ecumenical assembly could remedy) tended to throw altogether into the background the decrees of diocesan and provincial Synods, and to rob them of all dogmatic character and influence. We have, then, for our four divisions:—(1) The Councils of Pisa, of Constance, and of Basel-Ferrara-Florence, all of which were held under the shadow of the religious anarchy created by the Great Schism of the West, and in all of which the position and power of a *concilium generale* in itself was a question of primary importance. (2) Trent, the great Reformation Council, in respect of which the Fifth Lateran may be regarded as an ineffective preliminary, overshadowed by the really important work which the Papal legates and the Fathers of Trent, in spite of disheartening political obstacles, carried steadfastly to a conclusion. (3) The Council of the Vatican, giving expression to that recognition of the Papal *magisterium* and that acquiescence in the policy of centralization which three centuries of peace, organization, and discipline had bred in the hearts of the more pious, if not always the more learned, representatives of the Roman obedience. (4) We also require to give some brief consideration to the local Synods which, in these last four centuries, have done little more than popularize the great principles of dogma and

discipline laid down at Trent. To the influence of these Synods as a whole is also largely due the extension of those anti-Gallican tendencies which eventually took formal and articulate shape in the definitions of the Vatican.

1. Councils of Pisa, Constance, Basel-Ferrara-Florence.—(1) *Council of Pisa.*—The one outstanding fact in the religious situation at the beginning of the 15th cent. was the division of Christendom owing to the Schism. All attempts to bring about an accommodation between the rival Popes, Gregory XII. and Benedict XIII., had hitherto proved abortive. The situation was intolerable, and patience was becoming exhausted. Finally, in July 1408, cardinals belonging to both Papal courts met at Livorno and proposed as a solution the *via concilii generalis utriusque obediencie*, appointing 25 March 1409 for the meeting of such an assembly. The appeal evoked considerable response. At its maximum the attendance numbered from 22 to 24 cardinals, 80 bishops, 87 abbots, etc., while 102 bishops unable to attend in person sent procurators. In its eighth session (18 May) the Council proclaimed itself ecumenical and canonically convoked. On 5 June it deposed both the reigning Popes as notoriously guilty of schism and heresy, and empowered the cardinals then at Pisa to elect a new Pope in their place. The choice fell upon Peter Philargi, Archbishop of Milan (Alexander V.). But, as neither Benedict XIII. nor Gregory XII. was willing to submit, the only immediate result was that there were now three claimants to the Papacy instead of two. As for the second avowed purpose of convening the assembly at Pisa (the *causa reformationis*), it was agreed that a more careful preparation of measures of reform was necessary than could then be attempted. Any such projects must, therefore, be left for the consideration of another Council to meet in three years' time. Accordingly, on 7 Aug. 1409, the new Pope dissolved the assembly.

It has been the custom to speak of the Council of Pisa with scant respect as a foolish expedient, foredoomed to failure, which only added to the divisions of Christendom. Moreover, on the ground that it was not summoned by a legitimate Pope, or by the whole Church, or generally acknowledged, it has not usually been allowed, except by avowed Gallicans, to rank among the Ecumenical Councils (cf. e.g. Hefele-Leclercq, *Conciles*, 1907 ff., I. 89); but a much more favourable view of its aims and its results has recently found acceptance (see esp. Blumetzrieder, *Das Generalkonzil*, 806-339). In any case, the assembly at Pisa certainly did much to pave the way for the solution ultimately reached.

(2) *Council of Constance.*—Alexander V., the Pope elected at Pisa, died within a year of his election, when he was succeeded by John XXIII. (Baldassare Cossa), who, though not the monster of depravity his enemies have depicted, was certainly unworthy of his high position, and was himself the cause of scandal rather than a promoter of reform. Nothing in John's behaviour seemed to promise an end of the Schism, and so, after an abortive Council at Rome (1412), which mainly occupied itself with Wyclif's writings, Sigismund, king of the Romans, put pressure on John and forced him to summon a Council to meet at Constance on 1 Nov. 1414. Under Sigismund's patronage, a vast and rather motley assembly gathered there, with the triple object (1) of defining the true doctrine of the Church with regard to the teaching of Wyclif and Hus (*causa fidei*); (2) of putting an end to the Schism (*causa unionis*); and (3) of reforming the Church alike in its head and in its members (*causa reformationis*). In respect of the first object a long series of propositions was extracted from the writings of Wyclif and his Bohemian followers, and these were unanimously condemned. On the question of Communion in one kind the Council drafted a detailed decree, in which the custom of the Church was approved, that the Sacrament of the Eucharist 'should be

received by those who consecrated it under both kinds, and by the laity only under one,' seeing that 'it must be most firmly held that the Body and Blood of Christ are contained entire both under the species of bread and under the species of wine.'

In the 15th session of the Council (6 July 1415), Hus, who, in spite of his safe-conduct from King Sigismund, had been kept in close confinement for several months previously, was, after his refusal to retract his errors, solemnly degraded from the priesthood and burnt at the stake. No special pleading can palliate this breach of faith, whether the main responsibility falls upon Sigismund personally or upon the ecclesiastics of the Council (see Wylie, *The Council of Constance to the Death of John Hus*).

Meanwhile, as regards the healing of the Schism, the path of the Council had not been so easy. In spite of John's favoured position as the convoker of the assembly under the protection of Sigismund, men were not slow to declare that a settlement could be reached only by the resignation of all three Popes. To destroy the numerical preponderance of the Italian bishops a plan was adopted of voting by nations (Italian, German, French, English, and, at a later date, also Spanish) to the exclusion, in the general sessions, of the system previously adhered to, which based the decision upon the simple majority of voices. The outcry against Pope John made itself more insistently heard, and on 20 March 1415 he fled from the city. Despite the desertion of its official president, the Council, at the instigation primarily of Zabarella, d'Ailly, and Gerson, passed the famous 'Decrees of Constance,' declaring itself to be ecumenical and lawfully convened; asserting the claim of a General Council, in so far as it holds its jurisdiction immediately from God, to the obedience of all men, even though of Papal dignity; and finally proclaiming that contumacious resistance to its authority was a crime legally deserving of punishment, and involving, it might be, the guilt of schism or heresy. The formal deposition of John, on the grounds of simony, immorality, and the fostering of schism, followed shortly afterwards. Gregory XII. resigned, and Benedict XIII., after he had been forsaken by the King of Arragon, was also deposed (26 July 1417). Finally, Odo Colonna (Martin V.) was elected Pope (11 Nov. 1417) by 23 cardinals and 30 deputies—six from each of the five nations—thus at last ending the Schism.

A few spasmodic attempts at reform were also made before the Council dispersed. Serious differences of opinion among the 'nations'—the Italian bishops, for example, favouring the Papal claim to Provisors—led to the decision that, while certain general decrees should be passed upon matters as to which all were agreed, the Pope should be left free on the contested points to arrange Concordats with the different nations separately. The periodical convening of General Councils was also determined upon, the first to be held at Pavia in 1423; and on 22 April 1418, Martin V. dissolved the assembly.

The ecumenicity of the Council of Constance is a subject of much debate. No one, practically speaking, denies that character to the Council after the election of Martin V. Again, the doctrinal decrees condemning Wyclif and Hus are certainly covered by the declaration of Martin V. in the last session, that he desired to maintain and to ratify the decrees, 'in matters of faith,' which had been determined by the assembled Fathers *conciliariter*. But the decrees maintaining the superiority of a General Council over the Pope were not, so it is held, arrived at *conciliariter* but rather *unilateraliter*. In any case, Martin's language obviously suggests that he did not approve the decrees of Constance *en bloc*, while, if he excepted anything from his sanction, it must have been the bold, and up to that time almost unheard of, pretension to exalt conciliar authority at the expense of the Papacy, which in 1682 became the founda-

tion of the famous Gallican Articles (see, e.g., Hefele-Leclercq, *Conciles*, i. 60-72). By no Roman theologian of the present day is the ecumenicity of the Council of Constance admitted without reservation.

(3) *Council of Basel-Ferrara-Florence*.—In accordance with the provisions of Constance, Martin V. was bound to convoke a Council at Pavia in 1423; this was done, but the small attendance, the transference to Siena on account of plague, and other causes, furnished a reasonable pretext for dissolving the assembly altogether in May 1424. Deference, however, was still paid to the agreement arrived at in Constance regarding the periodical recurrence of Councils, and Basel was selected for the next meeting in 1431. Martin V. died before the day appointed, and Eugenius IV., who succeeded him, looking with apprehension at the spirit which had already manifested itself in the handful of delegates present at Basel—a spirit which still persisted in treating the Pope as only the *caput ministeriale ecclesie*—decided to dissolve the Council even before the end of 1431. A period of great distraction followed. Eugenius, who had to some extent been misinformed regarding the condition of affairs at Basel, and who was also, no doubt, honestly influenced by the desire to facilitate the re-union of the Greeks by summoning a Council in some, to them more accessible, town in Italy, was eventually constrained, by the determination of the prelates at Basel and the political support accorded them, to set aside his bull of dissolution and to suffer the Council to proceed. Meanwhile the assembly had explicitly renewed the decrees of Constance asserting the supremacy of a General Council over the Pope, and denying to the Pope the right of dissolution without the consent of the Council itself. Notwithstanding this, Eugenius found himself compelled to pronounce (*decernimus et declaramus*) the continuity of the Council of Basel as a legitimately constituted assembly from the beginning, to declare *pure et simpliciter* that it was in the enjoyment of his favour, and to annul (*cassamus, revocamus*, etc.) whatever he himself had attempted 'to its prejudice or against its authority.'

During the period which followed, beginning with the 16th session (5 Feb. 1434), the assembly passed many useful decrees of reformation, but, by its almost entire abolition of annates and reservations, it bore very hardly upon the financial resources of the Holy See.

With regard to some dogmatic points in the proposed re-union with the Greeks there was further friction between Pope and Council, and the unstable peace was at length entirely wrecked over the question of the locality to which the Orientals should be invited for the discussion of their differences. On this point Eugenius stood firm, and when, on 18 Sept. 1437, he convened a Re-union Council to meet at Ferrara, Christendom at large gave him its support in the long run. The remnant of the Basel assembly, after defining, on 17 Sept. 1439, the doctrine of the Immaculate Conception of the Blessed Virgin (Mansi, xxix. 184), proceeded, under the leadership of Card. Lewis Aleman, first to suspend and then to depose Eugenius; and on 5 Nov. 1439 they elected a new anti-Pope, Felix V. But the common sense of Europe revolted against this renewal of the Schism. The handful of prelates at Basel were gradually deserted by their supporters. In 1448 they were banished from the city, migrated to Lausanne, and eventually, in 1449, made their submission to Nicholas V.

Meanwhile, at Ferrara, whence in Jan. 1439 the assembly, for sanitary reasons, was transferred to Florence, a conspicuously representative deputation of the Greeks, headed by Joseph II., Patriarch

of Constantinople, and the Emperor John Palæologus, had gathered for the Re-union Council, influenced mainly, no doubt, by the hope of inducing a united Christendom to make common cause in resisting the Turks. The path of conciliation was a very thorny one, but eventually the *Filioque* difficulty was broached, and in the end the Western doctrine was accepted by all the Greek representatives save Marcus Eugenius of Ephesus. Agreement was also arrived at concerning the use of unleavened bread, the 'epiclesis' question in the liturgy, the doctrine of purgatory, and, with more difficulty, the Roman primacy. Most, but not quite all, of the matters discussed were enshrined in a Papal bull *Latentur cæli* (6 July 1439), which informed the world that the decree of union had received the signature of the Greek representatives.

Though the main object of the Re-union Council had thus, for the time being, been attained, it continued to sit on, probably as a counterpoise to the schismatical assembly at Basel. Several other Eastern Churches—the Armenians (autumn of 1439), the Jacobites (1442), and, after the sessions of the Council had been transferred to the Lateran, the Syrian church of Mesopotamia (1444), and certain Maronites and Nestorian Chaldeans (1445)—sent in their submission. The conspectus of doctrine, however, in the respective decrees of union, notably the *decretum pro Armenis* and the *decretum pro Jacobitis* (Denzinger-Bannwart, *Enchiridion Symbolorum*¹⁰, Freiburg, 1908, nos. 695-715), though very important as an indication of theological opinion, is not usually regarded as an infallible pronouncement, being considered as aiming rather at disciplinary instruction than at definition of dogma.

The question of the ecumenicity of the decrees of Basel-Ferrara-Florence has been much discussed, and the theologians of the extreme Gallican school in the 17th and 18th centuries habitually maintained that the anti-Papal edicts of Basel, like those of Constance, were to be regarded as the duly authorized expression of the voice of the Church assembled in General Council. At present the more received view asserts that, while the sessions at Ferrara-Florence may be regarded as ecumenical, those at Basel can claim ecumenicity only for the decrees passed before 1437 and concerned with the suppression of heresy, the peace of Christendom, and the reform of the Church. The Papal approval necessary for their validity cannot be considered to have extended to any other matter (see Hefele-Leclercq, *Conciles*, i. 80-86, and Baudrillart in *Dict. Théol. Cath.* ii. [1905] 125-128).

2. The Council of Reform (Council of Trent).—

The extravagant pretensions of the Councils of Constance and Basel had had disastrous results. The hope of reform in the Church was almost crushed, for the very mention of the word 'Council' awakened resentment and mistrust. Still the energetic protests of such men as Savonarola and Geiler of Kaisersberg kept the idea alive, and, when the friction between Julius II. and Louis XII. induced the latter to threaten the Pope with a General Council and to organize the schismatical assembly at Pisa (1511), the need of reform was put forward as a rallying cry. Julius responded by anathematizing the *concordiabulum* and its authors, but at the same time he convoked a Council himself, the Fifth Lateran (1512), generally reckoned the 18th General Council. It was not numerously attended, and, though it was prolonged by Leo X. until 1517, the work of reform in the Church, with which it professed to identify itself, was taken in hand very half-heartedly. Some useful decrees were passed concerning Papal provisions to benefices, etc., but the chief work accomplished was the condemnation of the Pragmatic Sanction of Charles VII., for which was substituted a Concordat with Francis I. (18 Aug. 1516). This received the formal approval of the Council, 19 Dec. 1516; and in the bull *Pastor æternus*, issued with the approval of the assembled Fathers in the

same connexion, the Pope was declared to possess authority over General Councils, which he had also the right to convoke, transfer, and dissolve (Mansi, xxxii. 967). Indirectly the 'Gravamina' drafted by Wimpfeling in 1510, which in many respects were based on the Pragmatic Sanction of Bourges, received their answer in the same bull.

There was little, then, in the proceedings of the Fifth Lateran to still the clamour for the suppression of abuses, which made itself heard more and more insistently after the revolt of Luther in 1517. Soon the appeal came, in a form not to be ignored, from the great ruler and statesman who found himself called upon at the same time to maintain the peace of the German Empire and to uphold the ancient faith. The preliminaries of the Council which Charles V. aspired to control form a long and extraordinarily intricate history, the details of which have only recently been given to the world in such collections of original documents as the *Nuntiaturberichte aus Deutschland* and the *Concil. Trident. . . . nova collectio*, iv., edited for the Görres Gesellschaft by Ehse, or, again, the fifth volume of Pastor's *Gesch. der Päpste*. The Council was first to have met at Mantua on 23 May 1537 (Ehse, p. 3), but the unwillingness of the Protestants to take part in an assembly on Italian soil, together with the numberless political complications, as well as the disagreements between Pope and Emperor, caused many delays. In 1542, Paul III. summoned the Council to meet at Trent on 1 Nov. of that year, but the difficulties were such that a beginning was not made until 13 Dec. 1545. Three Roman cardinals presided as legates over its early sessions—del Monte (afterwards Julius III.), Cervini (afterwards Marcellus II.), and Reginald Pole. The city of Trent had been selected, as situated upon Imperial territory, though south of the Alps, and easily accessible both from Germany and Italy. In the 8th session (11 March 1547), on account of the appearance of the plague, the transference of the Council to Bologna was decided upon, in spite of the opposition of the Emperor. Still, as Charles's bishops remained at Trent and the numbers at Bologna were very small, no decrees were passed during the two sessions held there. To put an end to the impossible situation, Paul III. prorogued the Council on 17 Sept. 1549.

Julius III. again convoked the Fathers in 1551, and business was transacted in the 13th to 16th sessions (11 Oct. 1551–28 Apr. 1552); but, on the fresh outbreak of hostilities against the Emperor, when the troops of the Elector of Saxony seemed to threaten the safety of the Council, another prorogation took place.

Finally, Pius IV. (29 Nov. 1560) summoned the bishops to Trent for the third time. They should have met at Easter, but the work of the Council did not begin until Jan. 1562. The Pope's interest in the proceedings, which were pushed on with great energy, was manifested alike in the sending of five Cardinal legates to represent him, and in the voluminous correspondence maintained by the Pontiff's nephew and secretary, Card. Charles Borromeo, afterwards canonized (see Susta, *Die röm. Curie und d. Concil. v. Tr. unter Pius IV.*). The 17th–22nd sessions were held between 15 Jan. and 17 Sept. 1562, after which followed a long period of stormy discussions which nearly brought about the abandonment of the Council; but, thanks to the tact of the Papal legates, two other public sessions were held in July and November. The 25th and concluding session took place under the presidency of Card. Morone, 3–4 Dec. 1563.

It should be noted, as regards the method of procedure, that by the word 'session,' which is

always used in quoting the decrees of Trent (thus, for example, the famous ordinance for the founding of seminaries in every diocese is cited 'Conc. Trid. sess. xxiv. *de Reform.* cap. 14'), we must understand the public and solemn sittings in which the Fathers met to record, by an as nearly as possible unanimous vote, the acceptance of decrees already prepared and agreed to. No discussion took place at these sittings; the subjects pronounced upon had already been fully debated in preliminary 'general congregations.' Further, in anticipation of these general congregations, schedules of 'articles' were usually drafted by the legates, and then certain theologians (*theologi minores*), who themselves had no vote, were invited to express their opinion thereon before the assembled Fathers, to assist them in forming a judgment. At the same time it had been arranged, almost from the beginning of the Council, that doctrine and discipline should be discussed simultaneously. The Pope had wished the dogmatic questions at issue between the Catholics and the Protestants to be authoritatively defined before the Fathers turned their attention to reform within the Church. Charles V., on the other hand, had wished these delicate points of doctrine to be deferred, and he demanded precedence for the correction of abuses. The Council compromised by issuing, at each session productive of legislation, a body of ordinances *de Reformatione* together with a varying number of dogmatic decisions and canons. All questions were decided not by nations, but by a simple majority of voices. Practically speaking, only prelates of episcopal dignity and the generals of religious orders had votes, though Paul III., in the first period of the Council, allowed the procurators of certain German bishops to vote, on the plea that the state of that country rendered it difficult for bishops to quit their dioceses. The Italian sees had at all times a great numerical preponderance. France, owing to its rivalry with the Emperor, sent hardly any representatives except its ambassadors. No Protestants appeared in the first period of the Council, but in the second period, under Julius III., a body of Protestant divines—of course under a safe-conduct—attended the deliberations which preceded the 15th session, in view of the possibility of arriving at some compromise regarding the concession of the cup to the laity. They were not allowed a vote, being in that respect on the same footing as those Catholic divines who were not bishops. A safe-conduct was also offered to Protestants of all countries in the 18th session (4 March 1562), but none availed themselves of the invitation. For various causes several of the sessions were barren of all legislation. For a summary of the decrees and canons of the Council, see art. *CONFESSIONS*, vol. iii. pp. 839–841.

The publishing of a revised index of prohibited books, as well as of a Missal, a Breviary, and a doctrinal Catechism (the famous *Catechismus ad Parochos*), which last had already been set in hand, was left to the charge of the Holy See; and, with a recognition of the need of Papal confirmation for its decrees, the great Council concluded its work.

A convenient summary of the more noteworthy additions made by the Council of Trent to the body of doctrine previously defined is afforded by the *Professio Fidei Tridentina*, commonly known as the Creed of Pope Pius IV. Its Confessional importance is indicated by the fact that at the present day a convert joining the Church of Rome is required to make such a profession of faith in the same or equivalent terms. Formerly the Creed of Pope Pius itself was always used, but latterly the option has been given of employing a shorter form. *Per contra*, when in the year 1714

a *Form for admitting converts from the Church of Rome* was drawn up and approved by both Houses of the Convocation of Canterbury, the proselyte, if in holy orders, was to be asked: 'Dost thou in particular renounce the twelve last articles added in the confession commonly called "the Creed of Pope Pius IV.," after having read them and duly considered them?'—to which the proselyte was required to answer: 'I do upon mature deliberation reject them all, as founded upon no warrant of Scripture, but rather repugnant to the word of God' (see *The Month*, Jan. 1907, pp. 1-18). This Anglican form for the reception of a convert has of recent years been considerably modified.

Prof. Fid. Trid. is quoted in full in art. CONFESSIONS, vol. iii. p. 841 f.

3. **The Vatican Council.**—The first hint of Pope Pius IX.'s intention to convoke an Ecumenical Council seems to date from 6 Dec. 1864, and a little later all the Cardinals resident in Rome were invited to send in their written opinion upon the proposal. The majority favoured it, but a few feared political complications. Only two of the twenty-one, when speaking of the purposes to be served by such an assembly, made any reference to a definition of Papal infallibility (Granderath, *Gesch.* i. 44). The matter being further brought to the notice of a select number of bishops in all parts of Europe, together with certain Catholic Orientals, an almost unanimous reply was received in favour of the scheme. The motive principally insisted on was the dangerous and subversive nature of much modern religious teaching, which rendered it desirable to emphasize the powers inherent in the Holy See as against the Gallican and Erastian tendencies of the times. In 1868, accordingly, a bull was issued convoking the Council for 8 Dec. 1869. A special Congregation of Cardinals had already been appointed to prepare the topics to be discussed and pronounced upon, and, in subordination to this, five separate sub-committees, or 'commissions,' were created to deal with (i.) Doctrine, (ii.) Discipline, (iii.) the Regulars (i.e. Monks and Nuns), (iv.) the Oriental Churches and Foreign Missions, and (v.) Politico-eclesiastical questions. Considerable uneasiness was aroused in circles of Gallican sympathy by the strong Ultramontane bias of many of the preliminary arrangements. The selection of consultants invited to sit on the commissions—a selection which excluded such scholars as Dollinger and von Schulte—evoked protest from many moderate men, e.g. from Cardinal von Schwartzberg, Archbishop of Prague.

The endorsement by the *Civiltà Cattolica*, 6 Feb. 1868, of a wish, attributed to many influential French Catholics, that the definition of Papal infallibility might be carried by acclamation, was taken to indicate the mind, not only of the Jesuits, but of Pius IX. himself. The occasion was used by Dollinger to publish five articles anonymously in the *AZ* of Augsburg, in which the main purpose of the forthcoming Council was assumed to be the definition of the Pope's infallibility, and the doctrine was attacked on historical grounds. The articles were reprinted under the pseudonym of 'Janus,' and were widely read outside Germany. Other publications, deprecating a pronouncement in favour of infallibility, were issued by Mgr. Maret, titular Archbishop of Sura, and Mgr. Dupanloup, Bishop of Orleans.

The Papal constitution *Multiplices inter* of 27 Nov. 1869, determining the procedure of the Council and affirming the Pope's exclusive right to decide what matters should be submitted for discussion, also gave considerable dissatisfaction; and, when the known opponents of the proposed definition were systematically excluded from the 'deputa-

tions' and from other sub-committees appointed in the Council, it became clear that the infallibilists, secure in their overwhelming majority, intended to carry things with a high hand. They were, moreover, better organized, more nearly unanimous, and more energetic than their opponents, who, from the fact that the objection was, in the case of the greater number, one of expediency, not of principle, lacked cohesion, and were far from presenting a united front. Even those who most pressed the historical difficulty knew that it was largely founded on a series of highly debatable incidents about which we have no clear information. That the opponents of the definition were sincere when almost all described themselves as 'inopportunist' rather than anti-infallibilists may be inferred from their subsequent submission, and may be illustrated from the famous letter of Newman to the Bishop of Birmingham, which, made public through an indiscretion, showed upon the face of it that it was written to his bishop in absolute candour. Herein, at the very time that he describes the projected definition as the work of 'an aggressive insolent faction,' he remarks: 'When we are all at rest and have no doubts, and—at least practically, not to say doctrinally—hold the Holy Father to be infallible, suddenly there is thunder in the clear sky,' etc.; while, again, the conclusion of the letter makes it manifest that the writer had no intention of doing otherwise than loyally to accept the definition, if it were pronounced (see *Collectio Lacensis*, vii. 1513). On the other hand, Manning (not then a Cardinal) seems to have been the chief and most energetic of the organizers of the movement within the Council to press forward the definition as a matter of the utmost urgency (see Granderath, *Gesch.* ii. 69, 73), and he himself made no secret of the policy of the committee organized by him, to exclude from the *deputatio de fide* every name known to be adverse to the definition. This, however, was the work of a section, who were carrying through a plan of campaign on constitutional lines. It was not the work of the Pope or the Curia (cf. Friedrich, *Gesch.* iii. 175).

The first two public 'sessions' of the Vatican Council transacted only formal business (8 Dec. 1869, and 6 Jan. 1870); but previously to the third session, which took place on Low-Sunday (24 Apr.) 1870, a considerable amount of work was done, and the *Constitutio dogmatica de Fide Catholica* was then passed unanimously. It consists of a prologue and four chapters—(i.) of God the Creator of all things, (ii.) of Revelation, (iii.) of Faith, and (iv.) of Faith and Reason—followed by 18 canons which sum up the principal points defined, and subject the contrary propositions to anathema. The errors so condemned included some of the fundamental conceptions of Pantheism, Naturalism, and Rationalism; for example, canon 4 of (i.) runs thus:

'If any one shall say that finite things, both corporeal and spiritual, or at least spiritual, have emanated from the Divine substance, or that the Divine essence, by the manifestation or evolution of itself, becomes all things; or, lastly, that God is universal or indefinite being, which, by determining itself, constitutes the universality of things, distinct according to genus, species, and individuals: let him be anathema.'

Again, in ch. ii. the Council, developing somewhat the doctrine defined at Trent (sess. iv.), declares that:

'The books of the Old and New Testament [as enumerated by the Council of Trent] are to be received as sacred and canonical, in their integrity, with all their parts . . . not because, having been carefully composed by mere human industry, they were afterwards approved by her [the Church's] authority, or merely because they contain revelation, with no admixture of error; but because, having been written by the inspiration of the Holy Ghost, they have God for their author, and have been delivered as such to the Church herself.'

It is to be noted also that, contrary to the usage

of earlier General Councils, the Vatican decrees are formally issued, not in the name of the Ecumenical Synod, but 'in the name of the Supreme Pontiff, with the bishops of the whole world assembled round us and judging with us.' An amendment, proposing to add the word *definitivus* to the *sedentibus Nobiscum et judicantibus universi orbis episcopis* of the decree, was rejected after a somewhat heated discussion.

Twenty of the general congregations (10th to 29th) which preceded the third session were given up to questions of disciplinary reform, the most interesting of which was perhaps the proposal to draw up one form of elementary catechism, the use of which should be obligatory throughout the whole Church. But this, like other disciplinary schemes, came to nothing, owing to the premature termination of the Council. Much time was, however, wasted in debate, and the Papal ordinance of 20 Feb. 1870, for abbreviating the discussions and introducing a form of closure, despite the violent protests it elicited from the minority, was really a necessary measure.

By this time, however, the energetic agitation of Manning, Sénestrey, and other leading infallibilists, resulting, for example, in a petition for the definition, signed by 480 of the Fathers, had pushed matters so far that the subject could not be shelved. Originally the question of Papal infallibility had not formed part of the proposed decree 'on the Church of Christ' (see *Coll. Lacensis*, vii. 567-578), but it was later on added to the *schemata*, and became the subject of the liveliest controversy. The Cardinal Presidents in the general congregations opposed rather than favoured the efforts to declare this discussion urgent, but they yielded eventually to the agitation headed by Manning and Sénestrey (Granderath, *Gesch.* iii. 270). Fourteen sittings were devoted to the infallibility question in general, and sixty-four speeches were delivered before the closure was applied. Thirteen other sittings and fifty-seven speeches were devoted to amendments. Finally, when the vote was taken (13 July 1870), of 601 Fathers present 450 voted *placet*, 88 *non placet*, and 62 *placet juxta modum*. Throughout the debate not more than three or four speakers had openly expressed disbelief in the doctrine itself; the minority, as a rule, contested only the opportuneness of defining it.

Before the public session, 18 July 1870, many of the minority left Rome. Of the 535 Fathers present only two voted *non placet*. The whole decree *de Ecclesia Christi*, like its predecessor, consists of four chapters. Ch. i. concerns the Apostolic primacy of St. Peter, ch. ii. the perpetuity of the primacy in the Roman pontiffs, ch. iii. the powers and nature of the primacy, and ch. iv. the infallible teaching of the Holy See. The kernel of the doctrine thus set forth is expressed in the terms quoted above, in art. CONFESSIONS, vol. iii. p. 628^a.

Owing to the heat of summer and the outbreak of the Franco-Prussian War, fewer than 200 Fathers stayed on in Rome. Some further discussions on matters of discipline took place, but the occupation of Rome by the Piedmontese troops occurred soon afterwards, and on 20 Oct. 1870, Pope Pius IX. formally prorogued the assembly.

Severe criticisms have been directed by many Old Catholic and other writers (cf. e.g. Littledale, art. 'Vatican Council,' in *EBV*⁹) against the procedure followed in the Vatican Council, more especially with regard to the infallibility definition. It has been urged that the minority were coerced into a simulated acceptance of the decrees, that the assembly was not representative, that the majority was largely formed of Italian, missionary, or titular bishops, who came without mandate from any appreciable body of the faithful,¹ that free discussion

was not permitted, etc. There is no doubt foundation for some of these objections, but the facts remain that, owing to the facility of locomotion, the assembly was not less, but immensely more, representative of the Catholic episcopate than any of its predecessors; that the vast majority were whole-hearted in favour of the definition; that in no Council of the Church has it ever been the custom to attach weight to the suffrages of the bishops in proportion to the population of the dioceses they represented; that the greater part of the opposition, whether sincerely or not, had from the beginning styled itself 'inopportunist,' not anti-infallibilist, and so forth. No special pleading can disguise the fact that the subsequent action of the faithful at large has as completely justified the Fathers of the Vatican as the subsequent action of the faithful justified the Fathers of Nicaea or Chalcedon. If the inopportunist bishops made their submission, as they all did without exception, we may assume that either they followed the dictates of their conscience in so doing, or else they were convinced that their flocks would not support them in any act of schism. Whether we hold that the ultimate appeal lies to the collective voice of the bishops or to the sense of the great body of the faithful, the definition in either case, from the point of view of the Roman Church, is fully justified. The sensitiveness to the rights of minorities displayed by the critics of the Council is, after all, a thing of modern growth. Any alleged high-handedness or irregularity of procedure at the Vatican could probably be paralleled many times over in the history of earlier Councils. No view of the Divine constitution of the Church has ever regarded the assistance of the Holy Spirit as promised only to the learned few in any episcopal assembly, while the plea that the minority had not been able to make their objections heard, after all the discussions on the spot, and after the sensation caused, long months before, by the writings of Dollinger, Dupanloup, and others, cannot be treated seriously.

4. Councils other than Ecumenical.—Upon the plenary Councils, provincial Councils, and diocesan Synods of this period, little need be said. Although elaborate disciplinary regulations aiming at the correction of abuses among both clergy and people were passed in such Councils as those of Mainz (1451), Sens, or, more correctly, Paris (1528), Cologne (1536 and 1549), and Augsburg (1548), still the political disturbances of the times, and the moral anarchy which almost necessarily follows in the wake of a fundamental change in religion, stood in the way of any lasting improvement. It was to the Council of Trent that men's eyes were turned (not altogether in vain) to inaugurate a new era, and the annual diocesan Synods and triennial provincial Councils, which in many places (e.g. at Milan under St. Charles Borromeo) were convoked in strict obedience to the Tridentine decrees (sess. xxiv. *de Reform.* cap. 2), undoubtedly helped greatly to turn the Council's measures of reform to practical account. But under Pope Sixtus v. the important Papal constitution *Immensa* (22 June 1589) profoundly modified the conditions which affected the legislation of these provincial Synods. It was now required that the decrees of provincial (though not diocesan) Synods must be submitted to a Roman Congregation, and could be promulgated only after correction, and subject to the modifications, or even the additions, of the congregation in question. This measure, which was made the ground of animated protest at the Vatican Council (see Granderath, ii. 179 ff.), has greatly furthered the centralizing tendencies at work in the Church of Rome during the last three centuries, but it has also much diminished the importance of provincial synods, now practically deprived of their independence. The same cause was probably not without its effect in bringing about the almost entire neglect of such Councils during the 17th and 18th centuries. In comparatively modern times—possibly as a result of the religious reaction which followed upon the French Revolution—a renewed energy began to make itself felt in convoking these assemblies. In France, for example, in the year 1849 Provincial Councils were people, while 65 bishops came from the States of the Church with a population of less than 1,000,000. But statistics of this kind are plainly most fallacious. The 2,000,000 of the diocese of Paris include the hordes of the Commune who twelve months later became masters of the city, imprisoned the Archbishop, and condemned him to death. It would be as reasonable to argue that Manning represented the six millions of London and the adjacent counties comprised in his diocese.

¹ It has been pointed out, for example, that Mgr. Darboy (inopportunist), Archbishop of Paris, represented 2,000,000

held at Paris, Rheims, Tours, and Avignon; and in 1850 at Albi, Lyons, Rouen, Bordeaux, Sens, Aix, Toulouse, and Bourges. In Central Europe there were provincial Councils at Vienna (1858), Gran (1858), Cologne (1860), Prague (1860), Kalocsa (1863), etc. In the United States six bishops assisted at the first Provincial Council of Baltimore (1829), but at the first Plenary Council, which met at Baltimore in 1852, the presence of six archbishops and twenty-six bishops marked the developments of Roman Catholicism in the New World. In England four Provincial Councils have been held since the restoration of the hierarchy, viz. in 1852, 1853, 1859, and 1873.

Historically speaking, apart from the Vatican Council, interest during the last three hundred years has centred chiefly in conventions of a rather unorthodox character. Such, for example, was the Gallican Assembly of the clergy summoned by Louis XIV. (1681-1682), which drew up the famous four Gallican Articles: (1) denying any jurisdiction of the Pope over the royal authority in temporal matters; (2) declaring the Pope to be inferior to a General Council; (3) limiting the exercise of the Papal prerogative by the Conciliary decrees and by the customs of the Gallican Church; and (4) affirming that the Pope's definitions, even in matters of faith, become irrefragable only when confirmed by the consent of the whole Church. Louis XIV. imposed the teaching of these Articles upon the clergy throughout his dominions; but, in the face of uncompromising Papal opposition, he eventually withdrew them in 1693.

Very similar was the spirit which, growing out of the 'Febronianism,' or 'Josephism,' current in Germany in the 18th cent., manifested itself at the so-called Synod of Pistoia (1786). The Synod was convened by Scipio Ricci, Bishop of Pistoia-Prato, at the instigation of Ludolph, Grand Duke of Tuscany; and it passed a long array of decrees on points of canon law, ceremonial, the rights of the secular authority in religious matters, etc.—all very Gallican and Jansenistic in spirit. Pius VI., in the bull *Auctorem fidei* (1794), condemned 85 propositions of the Synod of Pistoia; and Ricci, in 1799, and again in 1803, made humble submission to the censure thus passed.

LITERATURE.—I. **GENERAL.**—Most of the great collections of the Councils, e.g. those of Mansi, Hardouin, Labbe and Cossart, etc., have already been mentioned. It may be noticed, as the contrary has been implied in a printed advertisement emanating from the publisher himself, that at the date of writing (Oct. 1910), the volume of indexes long ago promised as vol. xxxvi. in the facsimile reprint of Mansi has not yet appeared. On the Canon Law of Councils, see Wernz, *Un decretatum*, Rome, 1906, li. 22, 720 ff. P. Hinschius, *System des kath. Kirchenrechts*, Berlin, 1869, iii. 833 ff. Upon the relations between Pope and Council, see J. Turmel, *Hist. de la théol. positive du Concile de Trente au Concile du Vatican*, Paris, 1904, pp. 300-405.

ii. **FIFTEENTH CENTURY COUNCILS.**—Hefele-Hergenröther, *Conciliengesch.*, Freiburg im B. 1887-1890, vii. vii. ix.; Haller, and others, *Concil. Basiliense, Studien und Quellen*, vols. 1-v., Basel, 1896-1904; H. Finke, *Acta Concil. Constant.*, Münster, 1896 (only one volume published); H. v. d. Hardt, *Magnum oecum. Constant. Concilium*, 6 vols., Frankfurt and Leipzig, 1897-1700; *Monumenta Concil. General. Sæc. XV.*, published by the Vienna Academy, 3 vols., Vienna, 1887-1890; J. Haller, *Papsttum und Kirchenreform*, vol. 1, Berlin, 1903; F. P. Elmenztzrieder, *Das Generalkonzilium im grossen abendländ. Schisma*, Paderborn, 1904; L. Pastor, *Gesch. der Päpste*, vols. i. and ii., Freiburg, 1904; M. Creighton, *History of the Papacy from the Great Schism*, i.-ii., London, 1897; H. Finke, *Forsch. u. Quellen z. Gesch. d. Konst. Konzils*, Paderborn, 1889; L. Salembier, *Le grand schisme d'Occident*, Paris, 1900 (Eng. tr. 1908); N. Valois, *La France et le gr. schisme d'Occid.*, 4 vols., Paris, 1896-1902; V. Vannutelli, *Il Concilio di Firenze*, Florence, 1899; J. H. Wylie, *Council of Constance to the Death of John Hus*, London, 1900.

iii. **COUNCIL OF TRENT.**—F. Bagnenault de Puchesse, *Hist. du Conc. de Trente*, Paris, 1870 (still the best general view in small compass); A. Theiner, *Acta Genuina Conc. Trid.*, 2 vols., Zagrabia, 1874; *Conc. Trid. Diplomatum, Actuum, Epistularum, Tractatum nova collectio*, vol. i. ed. S. Merkle, Freiburg, 1901; vol. iv., ed. S. Ehes, Freiburg, 1904 (two other volumes of this great work, which appears under the auspices

of the Görres Gesellschaft, are announced to be in the press; ten or twelve volumes are contemplated); J. Le Plat, *Monumentorum ad Hist. Conc. Trid. spectantium Collectio*, 7 vols., Louvain, 1781-1787; I. v. Dollinger, *Ungedruckte Berichte u. Tagebücher z. Gesch. d. Con. v. Tr.*, 2 vols., Nördlingen, 1876; A. v. Druffel-Brandi, *Monumenta Tridentina*, 4 vols., Munich, 1885-1897; J. Susta, *Die röm. Curie und das Con. v. Tr. unter Pius IV.*, 2 vols., Vienna, 1904-1909; T. v. Sichel, *Zur Gesch. des Concils v. Tr.*, Vienna, 1872; L. Maynier, *Étude histor. sur le Conc. de Trente*, Paris, 1874; O. Braunsberger, *Beati P. Canisii Epistulae ad Acta*, vol. iii., Freiburg, 1901; L. Pastor, *Gesch. der Päpste*, vol. v., Freiburg, 1909. The two standard histories are, of course, Stora-Pallavicino, *istoria del Conc. di Trento*, Rome, 1652 (3 vols., written with access to the archives, from the official and Ultramontane standpoint); and 'Pietro Soave Polano' (Fra Paolo Sarpi), *Hist. del Conc. Trid.*, Venice, 1629 (conspicuously anti-Papal in tone, and often distorting facts in the interest of the writer's prejudices). J. A. Freude's *Lectures on the Council of Trent*, London, 1896, treats only of the first period of the Council, and is written without any reference to the abundant new material published within the last fifty years. *The Canons and Decrees of the Council of Trent* have been translated into English by J. Waterworth, London, 1848.

iv. **THE VATICAN COUNCIL.**—The *Acta and Decreta* of the Vatican Council, with a very large number of documents bearing upon the preliminaries of the Council and the discussions to which it gave rise, have been printed in vol. vii. of the *Collectio Lacensis*, Freiburg, 1890. The chief histories are those of E. Cecconi, *Storia del Conc. Ecum. Vaticano*, 3 vols., Rome, 1872-1879; J. Friedrich, *Gesch. d. Vat. Konzils*, 3 vols., Bonn, 1877-1887 (this is written from the Old Catholic standpoint); T. Granderath, *Gesch. d. Vat. Konzils*, 3 vols., Freiburg, 1903-1906 (in the preparation of this work the author was afforded every facility by the Roman authorities, and it may be regarded as in some sense the official history; a French tr. is in course of publication); H. E. Manning, *The True Story of the Vatican Council*, London, 1877; cf. also E. Olivier, *L'Eglise et l'État au Concile du Vatican*, 2 vols., Paris, 1879; 'Quirinus' (I. v. Dollinger), *Römische Briefe*, Munich, 1870 (a collection of critical and denunciatory letters which appeared in the *Allgemeine Zeitung*; there is an Eng. tr., London, 1870).

v. **OTHER COUNCILS.**—The principal collection is *Acta et Decreta Sacrorum Conciliorum recentiorum*, 7 vols., Freiburg, 1869-1890, but the proceedings of many of the provincial and other Synods, e.g. those of Baltimore, Westminster, and Maynooth, are published separately. A very famous local collection is also the *Acta Ecclesiae Mediolanensis*, 2 vols., Milan, 1599.

HERBERT THURSTON.

COUNSELS AND PRECEPTS.—According to the doctrine of the Catholic Church, 'precepts' are commands laid upon every Christian, obedience to which cannot be avoided without risking the loss of eternal salvation ('quae sunt necessaria ad consequendum finem aeternae beatitudinis,' Thomas Aquinas, *Summa*, II. i. q. cviii. art. 4). 'Counsels' or 'counsels of perfection' are suggestions of very virtuous ways of living, by the following out of which a man may arrive more quickly and better at eternal life ('per quae melius et expeditius potest homo consequi finem praedictum,' *ib.*), but which he may yet refuse without incurring blame or imperilling the salvation of his soul ('consilium autem in optione ponitur ejus cui datur,' *ib.*). The 'precepts' are the new law of the gospel. 'Counsels' are something added to that law.

This formal doctrine is simply a statement of the judgment formed by the Church on Christian living—a reasonable account of certain plain phenomena which came within the view of all observers. It was obvious from the very earliest times that some men renounced more of the world's goods, honours, and pleasures than others did; accomplishing, as it seemed, a more complete dedication of their mental and bodily powers to the Lord. These were naturally thought of as living a fuller and higher kind of spiritual life. The judgment was in accord with that of St. Paul (1 Co 7^{26ff.}), where the virgin state is reckoned superior to the married, although he that marries has not sinned.

The distinction between a higher and lower Christian life meets us in Hermas (c. 84-85) *ἐν τῷ ἀγαθῷ νοήματι ἐκτός τῆς ἐντολῆς τοῦ θεοῦ*, *συναιρῶν περὶ τοῦτο δοῦναι περισσώτερον καὶ ἐν ἐνδοξότερον παρά τῷ θεῷ οὐ ἐμύλλας εἶναι* [Sim. v. 8. 3. cf. *Mand.* iv. 4. 2]; in Tertullian in greater detail (*ad Uxor.* i. 8. ii. 1, *adv. Marc.* i. 29, *de Monog.* i. 6, *de Pudic.* 16); in Cyprinus, who repeats almost the words of his 'master' ('nec hoc jubet Dominus sed hortatur; nec jugum necessitatis imponit, quando maneat voluntatis arbitrium liberum . . . carnis desideria castrantes majores

gratiae premium in coelestibus obtinetis' [*de Habit. Virg.* 23]; in Origen, where a new idea is introduced and a new passage of Scripture referred to ('Donec quis hoc facit tantum quod debet, id est ea quae praecepta sunt, inutilis servus est; si autem addas aliquid praeceptis, tunc jam non inutilis servus eris' [*ad Rom.* iii. 3]); in the pseudo-Clementine *Epistles to Virgins*, where there is a repetition of Hermas' teaching [*Ep. ad Virg.* i. 4]; and in Methodius, who teaches, as Tertullian does, the lawfulness of marriage, but the superior sanctity of the virgin state [*Convo.* iii. 13, 14].

The rise of Monasticism gave a new importance to the distinction between a higher and lower Christian life. Hitherto the contrast between the most obviously ascetic and the most naturally human kinds of life had been plain but less striking, less clamorous for reasoned expression, than it was when the whole Church became aware of the supreme self-denial of St. Anthony and his followers. The drift of crowds of nominal Christians into the Church, which followed the conversion of Constantine, tending, as it did, towards a relaxation of the earlier strictness and a lowering of the general standard of Christian living, still further emphasized the distinction, and made the formulating of a theory of Christian life which would cover all the observed facts an absolute necessity. It is noticeable that the early monks themselves neither elaborated nor seemed conscious of the theory that their lives were the following out of counsels of a higher way and transcended the obedience to the commands obligatory on all Christians. It was St. Ambrose who explained their position for them, and formulated more clearly than any of his predecessors the doctrine of 'counsels' and 'precepts':

'Officium autem omne aut medium aut perfectum est, quod aequae Scripturarum auctoritate probare possumus. Habemus etenim in Evangelio dixisse Dominum: Si vis in vitam aeternam venire, serva mandata. Dixit ille: quae? etc., following Mt 19:17, adding: 'Haec sunt media officia, quibus aliquid deest. Denique dicit illi adolescens: Omnia haec custodivi,' etc., following vv. 20, 21, adding, 'Hoc est igitur perfectum officium' [*de Offic. Mtn.* i. xi.]. Here for the first time in this connexion the passage which afterwards became a standard proof of the doctrine is quoted from St. Matthew (see also, for St. Ambrose's statement of the doctrine, *de Vid.* xii.). The use of the expressions 'medium' and 'perfectum officium' suggests that St. Ambrose felt the influence of Stoic philosophy. St. Augustine, in his *Enchiridion* (121) and elsewhere, and St. Jerome (*adv. Jovin.* i. 12), teach as St. Ambrose does.

So far the doctrine of the distinction between 'counsels' and 'precepts' appears to have been quite a natural and probably an inevitable explanation of observed fact. The way of Christ was a way of renunciation. It is thus that He Himself sets it forth when He demands absolute poverty (Mt 19:17) and recognizes virginity persisted in for the Kingdom of Heaven's sake (v. 12). It was obvious that some Christians accomplished a more complete renunciation than others. Yet the general conscience of the Church refused to count blameworthy those who renounced less. It followed that the life of more perfect renunciation was a higher kind of life voluntarily entered upon by those who were ambitious of perfection. It is probable that the doctrine thus enunciated by St. Ambrose and St. Augustine was wholesome for the Church. There was continually set before men a very lofty kind of life, and this was recognized as worthy of peculiar praise on earth and as inheriting a great reward in heaven.

The doctrine of 'counsels' and 'precepts' was worked out by the Schoolmen, and made to serve a purpose which was not conducive to spiritual life in the Church. As the power of the Church to remit the temporal and purgatorial punishments of sin came to be more and more insisted on, the need was felt of a theory which should justify the power claimed and ultimately make less hopelessly unintelligible the distribution of indulgences. The existence of a treasury of merits ('thesaurus meritorum' [Ps.-Clem. vi.; *Unigenitus Dei Filius*, 1343]) was supposed; and it was placed at the

disposal of the head of the Church for distribution. This treasury was filled with the infinite merits of Christ and the superfluous merits of those who, by following the counsels of perfection, had done more than was required (*opera supererogationis*) for their own salvation. ('In operibus poenitentiae supererogaverunt ad mensuram debitorum suorum, et multi etiam tribulationes injustas sustinuerunt patienter, per quas multitudo poenarum poterat expiari eis deberetur,' Thomas Aq. *Summa*, suppl. qu. xxv. art. 1). In the end the conscience of the Church was shocked, and the Reformation precipitated, by the shameless sale of these indulgences. Luther and his fellow-Reformers, in attacking the traffic, traced it back first to the theory of a 'treasury of merits' and then to the doctrine of 'counsels' and 'precepts' (Luther, *Werke*, Erlangen edition, 1826-57, lx. 256, v. 216, iv. 451; *Articuli Smalcaldici*, iii. 3, 39). It is plain, however, that, although the existence of the 'treasury of merits' was logically deducible from the doctrine of 'counsels' and 'precepts,' the deduction need never have been made. The Schoolmen might have stopped short of it; probably would never have thought of making it but for the necessity of completing and strengthening the doctrine of the remission of penalties. Also the Reformers might have recognized as justifiable and inevitable the original distinction between counsels of perfection and obligatory precepts. Their position probably would have been stronger if they had.

In another way also the doctrine of 'counsels' and 'precepts,' as elaborated by the Schoolmen, militated against spirituality, viz. by lowering the general tone of the Christian life. The harder sayings of our Lord, especially those in the Sermon on the Mount, came to be reckoned as 'counsels,' and so removed from the life ideals of ordinary men. Thus among the 'counsels,' ordinarily reckoned as twelve, are to be found: loving our enemies, giving alms not only from our superfluity, not swearing without necessity, and so on (see H. Lämmer, *Die vortribent. kath. Theol.*, Berl. 1858, p. 171 ff.). It is inevitable that at periods of low spiritual vitality there will be a tendency to transfer into the catalogue of counsels of perfection duties which make very high demands on devotion, in communities where the Catholic doctrine is fully accepted. This constitutes a serious danger and a real objection to the doctrine.

The Protestant theologians denied that there was any choice given to man between a higher and a lower kind of Christian life. The fundamental command to love the Lord with all the heart was binding upon all, and, as there was no possibility of doing more than this, so every failure to attain to the fullness of such love was sin (Luther, xiv. 35). Cases like that of the young man in the Gospel who was bidden to sell all and follow Christ (Mt 19:17) were met by the assumption that the command in such cases was to an individual, absolutely binding on that individual under pain of the sin of definite and deliberate disobedience; but, having nothing to do, either as a suggestion of higher perfection or as an example of eminent virtue, with those to whom such a personal command was not given. This was Wyclif's position ('omne consilium Christi obligat quemcunque ipso consultum'). It ignored the distinction (made, however, only in Mt., not in the parallel passages) between 'if thou wilt enter into life' and 'if thou wilt be perfect.' This theory that a 'counsel' was simply a precept given to an individual—according to Wyclif only to an 'heroic' individual—was modified by the later Reformers; and 'counsels' came to be considered as means suggested to certain individuals whereby they might fulfil the com-

mandments of which the 'counsels' seemed to be refinements. Sometimes for these particular individuals the 'counsel' was the *only* means by which the original commandment could be fulfilled at all. Luther, opposing Eck, says that 'counsels' are not 'supra' but 'infra praecepta'; because they are only means of conveniently fulfilling commandments. Thus virginity is not a counsel to be adopted at will or refused. It is a means, perhaps for some the only means, of fulfilling the law of chastity. To such individuals it is evident that to refrain from marriage is a precept, absolutely obligatory. To the others it is not a counsel of perfection, since, being able in the married state to observe the law of chastity, there is nothing to be gained by renouncing marriage (Luther, *de Votis Monasticis*, viii. 583, 30 ff.).

The result of the Protestant theory is a reversal of the previous judgment of the Christian conscience about those who follow the evangelic 'counsels.' A life of virginity or of voluntary poverty ought no longer to be considered a very eminent kind of devotion. It is a confession of weakness, an absolutely less perfect way of following Christ than that of the ordinary citizen of the world. In comparison with the old Catholic judgment that the way of greater renunciation is the way of nobler devotion, the Protestant view appears strained, and is not in accordance with the voice of the general conscience. It is not possible to alter the judgment of the common man's conscience so as to bring it into line with the deductions which theological thinkers make from the positions forced upon them by their polemics. In spite of their theory, Protestants still continue to regard as peculiarly admirable the lives of those who have sacrificed wealth, honour, or bodily desire for the sake of Christ (for full discussion of this fact see Append. III. of J. O. Hannay's *Spirit and Origin of Christian Monasticism*, 1903). It is, however, to be observed that the Protestant theologian's denial of special honour to lives of complete renunciation has had a certain effect. Protestantism is less rich than Catholicism in examples of heroic Christianity. The general tendency of Protestantism has been to raise to a high level the common Christian life and to develop certain virtues of a kind suitable to the lives of citizens. It has not made for, and, except in comparatively rare instances, has not achieved, the production of unique saints, like, for example, St. Francis of Assisi, whose devotion lays hold upon the popular imagination. This failure must be attributed to the denial of the doctrine of 'counsels' and 'precepts,' and the consequent unwillingness of Protestant teachers to hold up for admiration lives which must always be rare, and are never imitable except by those who realize the peculiar glory of very great kinds of renunciation.

Further, it has happened that certain evangelic sayings, regarded by the Schoolmen as counsels of perfection, have, in times of high religious vitality, laid hold of the consciences of earnest Protestants and compelled obedience. Thus, during the 17th cent. in England, our Lord's teaching about the non-resistance of evil fascinated the early Quakers. In a Catholic community their kind of life would have been recognized as a following of a counsel of perfection, and they might very well have become an Order within the Church. The refusal of Protestants to recognize the distinction between 'counsels' and 'precepts' had a double effect. It forced the Quakers, who in this matter thought as Protestants, to defend their literal obedience to the commands of Christ as the only way of following Christ. It obliged those Christians whose consciences did not forbid them to use force in self-protection or in the interests of society, to

condemn the position of the Quakers as fantastic, exaggerated, and definitely wrong. The same sort of thing happened in Germany and Flanders at the time of the Anabaptist protest against the possession of private property; and less strikingly in other similar cases (see J. O. Hannay, *op. cit.* ch. i.). The greater and more fully organized Protestant Churches have thus been deprived of the services of many very enthusiastic men and women who might have been most valuable in deepening the spirituality of the general life; and the teachers of these Churches have been obliged to read glosses into certain passages of Scripture, notably certain passages of the Sermon on the Mount, in such a way as to obscure their plain meaning and weaken their original force.

It appears, therefore, that in formulating the doctrine of 'counsels' and 'precepts' the Catholic Church did no more than endorse and give scientific expression to the natural and obvious judgment of conscience which recognized in the life of great renunciation a peculiarly high kind of life; that by formulating the doctrine the Church ran the risk of deductions being made from it which would in the end outrage, and actually have outraged, the consciences of sincere believers; and the further risk of the list of 'counsels' being enlarged and that of 'precepts' diminished, until the common man's standard of life was seriously lowered. It appears also that Protestant theologians, in refusing to endorse the natural judgments of conscience, have not succeeded, in fact, in preventing such judgments being made by their followers, but have deprived Protestants of an incentive to a lofty kind of life; and have risked, and actually suffered, the loss to organized Protestant Churches of souls who have felt the need of heroic self-sacrifice for the sake of Christ.

JAMES O. HANNAY.

COURAGE.—Courage has figured as one of the prominent virtues in every ethical system. Yet it has from early times given trouble to scientific moralists, because it seems at first sight compatible with an utterly worthless or vicious character. This is, however, only the case where it is identified with fearlessness (*q.v.*). Absence of fear in physical danger may be the result of temperament and so contain no moral element at all, while a certain dread of moral evil is not exclusive of courage as usually understood. Thus the Greek philosophers discerned that, to gain an accurate notion of courage, it was necessary to define things worthy or unworthy of fear.

In some of Plato's Dialogues, notably the *Laches* and the *Protagoras*, we are made to see the difficulty of finding a place for courage in any system which recognizes the paramount position of wisdom or knowledge in moral life, since not only do brute beasts show spirit and endurance in combat, but the conduct of men in vigorous military efforts loses the merit of courage if prudence suggests that the forces are adequate to the occasion. In the *Republic*, however (bk. iv. 429 f.), Plato distinctly lays down the principle that the Guardians of the City (in whom the virtue of courage principally resides) must acquire that quality by a sound training in the nature of things to be feared and of things not to be feared.

Aristotle, in bk. iii. of the *Nic. Ethics*, submits the whole subject to a searching analysis. According to his principle of the Mean, courage lies between rashness on the one hand and cowardice on the other. As fear, the foreboding of evil, is not

altogether to be disparaged, Aristotle, like Plato, has to distinguish legitimate from illegitimate fears, and finds that courage exists where danger is despised from a noble motive—from preference of that which is most honourable. He subsequently distinguishes real courage from five spurious forms: (1) that which is induced by respect for authority, or for opinion; (2) that which comes from knowledge that the danger apprehended is not real; (3) courage arising solely from emotion—anger or vengeance—which man shares with some animals; (4) the courage of a hopeful temperament; (5) the courage of ignorance which cannot recognize danger. It may, perhaps, be said that this distinction between genuine and spurious courage corresponds for the most part to the modern distinction between moral courage and that which is purely physical.

Although Aristotle in his general treatment of courage seems somewhat nearer to the modern ideas than Plato, in one respect Plato would seem to us more satisfactory; he includes in courage the power and will to resist evil generally, or to bear calamity without flinching; whereas Aristotle would restrict the term to its primary military significance, regarding other meanings as derivative or metaphorical. Certainly it seems illogical to refuse the epithet of 'courageous' to a man who is not alarmed but stands to his duty in a shipwreck or an earthquake, while allowing it to one who behaves in like manner during the attack on a city.

Courage thus held its place with the three other virtues—wisdom, justice, temperance—in the system of Greece and Rome. These 'cardinal' virtues were combined with the three Christian graces of faith, hope, and charity, to form the seven virtues inculcated in the Christian morality of the Middle Ages. Yet in the new atmosphere, courage—or fortitude, as it is commonly called in this connexion—underwent some transmutation. St. Ambrose—who derived his ethical system from the Greeks *via* Cicero, and passed it on to St. Augustine, and through him to the Western world—would make fortitude include boldness in withstanding temptations to sin. To a certain extent, he agrees here with Plato. But he also dwells much on heroic endurance of physical suffering as shown by the Christian martyrs. It would seem probable that the martyr-cult must have tended in the direction of emphasizing the passive side of courage or fortitude, by which it is assimilated to patience or resignation.

The Christian idea of fortitude is expressed in many admirable works of mediæval art. Many readers will recall Ruskin's remarks on the Fortitude of Botticelli (*Mornings in Florence*, iii.):

'Botticelli's Fortitude is no match, it may be, for any that are coming. Worn, somewhat; and not a little weary, instead of standing ready for all comers, she is sitting, apparently in reverie, her fingers playing restlessly and idly—nay, I think, even nervously, about the hilt of her sword . . . and yet, how swiftly and gladly will they close on it, when the far-off trumpet blows, which she will hear through all her reverie.'

It may be noticed that by mediæval Christian moralists fortitude is regarded as the corrective of *accidie* (*g.v.*), the sin of gloom and inaction. It seems thus to contain necessarily an element of cheerfulness, a resolution to live in an atmosphere of hope.

Perhaps there are few virtues that have varied more than courage in their manifestations among different peoples and at different times. There is always an æsthetic as well as a purely moral element in the conception of courage, and human notions vary even more about the beautiful than about the good. Thus, during the age of chivalry in the West, the maturer civilization of the East looked on the aggressive, unreasoning courage of the Crusaders as crude and barbarous, while the

knightly spirit of the Franks despised Eastern subtlety as mean and cowardly. Non-military times call for the exercise of patience more than for that of intrepidity,—though both are essential to the well-being of any people,—and there is occasionally cause for fear lest a comparative contempt for merely physical courage, or 'spirit,' may bring about general slackness of effort. On the whole, however, the actively combative powers are likely to retain their importance in popular esteem.

There is one kind of courage which seems especially to belong to a highly civilized society—intellectual courage. By this is to be understood the power and determination to follow loyally and reasonably one's own beliefs and principles, irrespective not only of the disapproval of neighbours, but also of painful disturbance in one's own mind. The abandonment of an intellectual position, which has been reached by honest effort, for fear of the further efforts which may be required to reconstitute one's theories in the light of new knowledge, is a cowardly proceeding, and ought to receive more reprobation than it commonly incurs.

Of cowardice (*ignavia*) as the opposite of courage, little need be said. It is commonly due to constitutional timidity not checked by habits of self-control, or to a selfish propensity to exaggerate the importance of personal dangers and risks; or, again, to a want of appreciation of ideals worthy of risk on the part of those who desire to attain them.

COURTESY.—See CIVILITY.

COUVADE.—See BIRTH.

COVENANT.—I. Introduction.—A covenant is a bond or agreement entered into between two persons or groups of persons, or between a man or a group of men and a god or gods. The covenant thus entered upon may be for a specified time, or for all time; it may cover certain clearly-defined purposes, or it may be indefinite. The covenant state is usually produced, or—at a later time—symbolized, by artificial means: eating or drinking together; drinking, or being inculcated with, one another's blood; or by exchange of names or of articles belonging to the covenanting parties. The relation produced by the covenant, as well as the real intention of these ritual acts, is still in debate. According to some writers, the covenant produces kinship and introduces the stranger into the clan which now adopts him.

'He who has drunk a clansman's blood is no longer a stranger but a brother, and included in the mystic circle of those who have a share in the life-blood that is common to all the clan' (W. R. Smith, p. 215; cf. Hartland, *LP* ii. 237).

This is regarded as the primitive purpose of the covenant, and, moreover,

'if the individual kinsman made a blood-covenant with a stranger, the whole of each tribe was bound thereby,' while 'the original form of alliance . . . was always and necessarily between clans, not between individuals' (Jevons, *Introd. to Hist. of Religion*, 99, 142).

The actual evidence hardly supports these views, nor does the covenant producing kinship appear among the lowest races. Generally the covenant is an engagement between individuals, between representatives, or between tribes; but there is hardly ever produced kinship or blood-relationship. Hence another theory maintains that the covenant relationship is that of the identity of individuals, who are mutually inculcated by cer-

tain ritual actions of which the blood-covenant is a well-known, though probably a late, instance. There is produced identity of aims and interests, as well as mutual agreement and sympathy.

'Each has a part of the other in his keeping, and this part not only assimilates each to the other by transmission of properties, but is a pledge, deposit, and hostage. Thus identity of interests is secured, and the possibility of mutual treachery or wrong is prevented, not only by the fact that injury done to B by A is equivalent to injury done by A to himself, but also by the fact that, if B is wronged, he may work vengeance by injuring . . . the part of A which he possesses' (Crawley, *Mystic Rose*, 287).

Without laying too much stress on the latter part of this theory, it is certain that the covenant-relationship as one of identity fits the facts better than as one of kinship. Yet it may be observed that, if the covenant produces identity of aims and interests, since the aims and interests of the individual are largely those of his kin, the covenant state will so far produce a kinship relation. But, as a third theory, it is maintained that the ritual act (eating together, transfusion of blood, etc.), while it involves the parties to the covenant in certain duties to each other, 'serves as a conductor of conditional imprecations,' of potential punishments for the transgression of these duties (Westermarck, *Moral Ideas*, i. 590, ii. 208; art. CURSING AND BLESSING, p. 369^b, below).

Frequently the parties to a covenant take an oath to keep it, or execrate vengeance on each other if it is broken. And, as many examples show, the food, drink, blood, etc., is itself the oath or curse, or is the vehicle of either. Thus, in Madagascar, the oath-takers pray that the liquid may poison him who is faithless to the bond (Dumont d'Urville, *Voy. pittoresque autour du monde*, Paris, 1834-1835, i. 81). Or, as in Morocco, a compact of friendship is sealed by eating together at the tomb of a saint, and, according to the phrase used, 'the food will repay' him who breaks the compact (Westermarck, i. 587; cf. below, p. 369^b).

Examples show now the working of the principle contained in one of these theories, now that involved in the others, but the kinship theory is seldom observed in the complete form which the theory itself presupposes. It is not impossible that the primitive covenant contained both the idea of mutual identity and that of a conditional curse, for the two are not mutually exclusive, as various examples suggest. But it should not be forgotten that the covenant frequently implies no more than faithfulness to the object of the covenant, without any thought of its producing identity of persons, of aims, or of interests, much less of kinship.

2. **Covenants between men.**—Of all the various outward signs of the covenant, that to which most attention has been drawn is that each party to it *drinks or is inoculated with the other's blood, or that they smear each other or some sacred object with it*. Where the parties to the covenant form two groups, selected individuals undergo the ceremony, which usually forms an indissoluble bond (see BLOOD; BROTHERHOOD [artificial], and works cited there). Probably the idea that kinship means blood-relationship—a relationship which can be produced by the blood-covenant—is not primitive. More primitive is the idea that contact, eating and drinking together, exchange of names, garments, weapons, and the like, will produce a close bond, whether involving identity or relationship, between two unrelated persons. Here the underlying ideas are that the whole adheres in the part, that whatever has been in contact with a person, whatever is his, is for all practical purposes himself; that for another to obtain possession of it brings the owner under his control; hence to offer it to another is in effect to offer

oneself. Thus mutual eating, especially where the food is exchanged, or the mutual exchange of common possessions, makes men entirely dependent upon each other, makes their aims and interests the same, or produces identity or, according to the first theory, kinship. Here, primitively, the act of eating or exchange is itself the covenant, but the food or articles exchanged are also seen to be vehicles of conditional oaths or curses verbally pronounced. At the same time, witnesses human or Divine may be called to the compact which has been made. The purposes for which a covenant is entered upon are, e.g., friendship and comradeship between individuals; the adoption of a stranger into a kin-group; mutual aid and protection—assistance in war, in revenge, or in some hostile purpose; peace between tribes after war; commercial purposes; union between the members of a society or association, usually at the time of initiation into it, etc. It is obvious that, since a covenant brings the parties to it into such close affinity, their responsibilities towards each other are great and must be accurately fulfilled, while also there are produced many mutual privileges.

Where a common meal is the chief feature of a covenant, there is the idea that what is partaken of in common establishes a bond of union or of identity, and this is still more marked where there is an exchange of food. It is possible that the covenant-meal may have been the earliest form of the covenant, and it should be observed that, quite apart from the theoretic view of the effects of mutual eating common among primitive peoples, there is a natural basis to it. For, wherever men eat and drink together, they tend to be friendly towards each other. But, where the theoretic view prevails, the eating together of unrelated persons produces automatically the covenant-state. The stranger who eats with the Arab is no longer a stranger; the two parties have entered upon a bond of friendship, with mutual obligations which are absolutely sacred. The same is true elsewhere, as among the Omaha Indians, with whom, if an enemy

'appear in the lodge, and receive a mouthful of food or water, or put the pipe in his mouth . . . he is bound for the time being by the ties of hospitality' (Dorsey, *S RBEV*, 1884, p. 271).

In general the stranger is regarded as a source of potential evil. Hence to give him food identifies him with his host, and probably at the same time makes him liable, should he do wrong, to a conditional curse swallowed with the food. We find also covenants of mutual friendship expressed by eating together, especially where there has hitherto been hostility between the parties. Thus in Morocco persons who wish to be reconciled join hands before a holy man or at a saint's tomb, usually after partaking of a common meal. This is the usual method of sealing a compact of friendship. If any party to the compact is guilty of a breach of faith, it is commonly said that 'God and the food will repay him,' the food being the vehicle of a conditional curse (Westermarck, ii. 623-624; cf. Gn 26²⁸⁻³¹ 31⁴⁴⁻⁴⁶; see also the article CURSING AND BLESSING, p. 373^b). Between villages, clans, or tribes, which have been at war, on the cessation of hostilities the covenant of peace is almost invariably marked by a common meal or a species of sacrament. A typical instance is found among the Battas, who, on making peace and forming unions, divide the heart of a slain animal into as many pieces as there are chiefs present. Each chief roasts his piece, holds it up, and says:

'If I should ever violate my oath, I am willing to be slaughtered like the bleeding animal which lies before me, and to be devoured like the piece of heart I am about to eat' (Featherman, *Soc. Hist. of the Races of Mankind*, London, 1881-1891, II. 833).

Among the Ceramese the covenant of peace between two villages is entered upon by the people of one village making a feast to which those of the other are invited. The chiefs drop some of their blood into a dish of food, and weapons are also dipped into it. The food is then eaten alternately. A similar feast is also held at the other village, and the covenant is complete. Here there is a combination (found elsewhere also) of the blood-covenant with the covenant-meal (Riedel, *De sluik- en kroesharige rassen*, The Hague, 1886, p. 128; cf., for a similar instance among the Nilotic Negroes, Johnston, *Uganda Protectorate*; London, 1902, ii. 795).

Drinking together is another common form of covenant ceremony, the draught being frequently accompanied by an oath, while, as many examples show, the liquid partaken of is regarded as the oath itself, which will harm the breaker of it. But there is also such a simple form of friendship covenant as that of the aborigines of Formosa, who put their arms round each other's necks and drink simultaneously a cup of wine (*L'Anthropologie*, v. [Paris, 1894] 352). Survivals of such a ceremony as this are well known. Nor is it improbable that drinking each other's blood at the making of a covenant was an extension of such a practice, while it is a common custom to mingle some blood with the liquid which is drunk.

As the basis of a covenant of friendship, the *exchange of names* is very frequent among savage tribes, the name being regarded as part of the personality, while the sacred nature of the act is seen in the fact that the name is usually not revealed, lest any one should do its owner harm by making use of it. In such a case the alliance is indissoluble, and forms one of the most sacred of bonds. Other exchanges of personal belongings—garments or weapons—form the basis of covenants of friendship, and will make lasting friends of men who have been enemies. A temporary exchange of wives is occasionally found as a means of sealing a compact, especially among Australian tribes, with whom also, on the occasion of making peace between tribes or certain other alliances, a general exchange of wives takes place for the time being. By this means the identity or union of the two parties is assured (cf. *ADULTERY*, vol. i. p. 125 (b); *JAI* xxiv. 169, 173).

Saliva is occasionally the vehicle of the covenant state. Thus, among the Orango in the Bissagos Archipelago the ceremony for sealing a friendship is to spit in each other's hands. The Masai spat at a man with whom they swore eternal friendship (Hinde, *Last of the Masai*, London, 1901, p. 47); and among the Somalis a stranger becomes a member of his host's family by the host spitting in his right hand and rubbing it on the stranger's forehead (Paulitschke, *Ethnogr. Nordost-Afrikas*, Berlin, 1893-1896, p. 246).

Opposite theories of the meaning of this rite are found. Mutual spitting is regarded as an interchange of life, since by many peoples saliva is held to contain the element of life (Crombie, *Trans. Inter. FL Cong.*, 1891, p. 249 ff.). Westermarck, on the other hand, is of the opinion that saliva is the vehicle of a conditional curse, since the Masai spit copiously when cursing (*op. cit.* ii. 209). Spitting among the Masai is also reported to be a sign of the greatest goodwill and a compliment (Johnston, *op. cit.* ii. 833).

Covenants of peace between tribes which have been at war are frequently sealed by a common meal (see above). In some cases the material of the covenant-meal is the flesh of a human victim. Thus, the people of Vate kill one or more of their number and send the flesh for consumption to the hostile tribe with whom they desire peace (Erschine, *Journal of a Cruise among the Islands of the W. Pacific*, London, 1853, p. 334). In other alliances the cannibal meal is found. Chiefs among the Bambala

(a Bantu tribe), in making a covenant against future bloodshed, partake with their followers of the flesh of a slave fattened for the occasion. Any chief who kills a slave after such a covenant must pay a fine to every village which took part in the bond (*JAI* xxxv. 404, 409). This is equivalent to that form of the blood-covenant in which the blood of a slaughtered victim is drunk by all the parties to the compact (cf. Herod. iii. 11; and the case of Catiline and his fellow-conspirators, who drank the blood of a slave in wine).

A pleasanter practice, and one ultimately based on the fact that sensuous satisfaction tends to goodwill, is that of *smoking the calumet* among American Indian tribes which had been at war. It was also done at the ratification of treaties and as a symbol of hospitality, and was regarded as so sacred that to break the covenant thus made would have been followed automatically by fatal consequences.

Other ceremonies are used elsewhere, with the purpose of making a covenant of peace binding. In Tahiti a wreath was made of green boughs, to which each party contributed. Two young dogs were exchanged, and a band of cloth was made together. The wreath and the cloth were then offered to the gods, and imprecations were uttered on those who should break the covenant (Ellis, *Polynes. Researches*, London, 1829, i. 318; see other instances in Farrer, *Military Manners and Customs*, London, 1885, p. 162 ff.).

Where the bodies of the parties to a covenant are cut to obtain blood, the marks of the wounds serve as tokens of the covenant. Similarly the garments or weapons exchanged will be constant reminders of it. At other times a cairn is set up as a witness of the covenant state (cf. Gn 31⁴⁵; Frazer, in *Anthrop. Essays presented to E. B. Tylor*, Oxford, 1907, p. 131 ff.).

In later times, and in more advanced civilizations, the covenant becomes simply a bond or oath for mutual support, or for amity between men more or less animated by a common purpose. Here there is little or no idea of kinship or identity, though some of the older ritual acts may survive, and the parties to such bonds recognize a brotherly feeling existing between themselves as a result of their bond and of their common purpose. In fact, the covenant at all times is intended to produce solidarity among those who are parties to it, though in these later covenants brotherhood is not actually and automatically produced. And, though the breaker of the covenant risks great dangers, these are not supposed to result automatically from the oath which he has taken, as in many instances from savage life.

3. *Covenants between men and gods, etc.*—The ceremonies and symbolism of covenants are even more important than the words of contract used, and, in fact, they constitute the covenant. Hence, in great measure, all religious ceremonial and worship is the expression of a covenant relationship between men and gods. For the worship paid, men expect the god to perform duties towards them, and this worship also tends to confirm that relationship. But there are certain ceremonies, especially those of a sacramental or sacrificial nature, in which the covenant relationship appears more emphatically. In all sacrifices in which the victim is, or represents, the god, and in which a sacramental meal is made of his flesh, the meal is the expression of a close union or a covenant between the god and the group of worshippers. This is seen in the fact that all the worshippers partake, while there are instances, as in Hawaii, where a refusal to eat would be followed by death (Bastian, *Der Mensch*, Leipzig, 1860, iii. 152). But, even where the slain animal is not the god,

the sacrifice or the meal which follows it marks a desire for union with the god, and is an expression of a covenant alliance with him. In this case, as in covenants between men, there is a common meal of which the two parties to the covenant partake—the god and the group of worshippers. In the OT, God is often represented as making a covenant with individuals and their descendants, or with Israel (Gn 9¹⁵, Nu 25¹⁸, Ex 6²⁴, Dt 5³, Jer 34¹⁸), and the probability is that sacrifice was the basis of all covenant rites between God and the individual or the people of Israel (cf. Ps 50⁵, Jer 34¹⁸). This is particularly noticeable in the case of the covenant with Abraham (Gn 15⁸⁻⁹) and with Israel at Sinai (Ex 24⁴⁻⁸). In the first case there is no mention of a sacrificial meal, and in the second the blood of the sacrifice is sprinkled on the altar and the people, thus uniting the covenanting parties, since the altar is the token of God's presence. This rite of sprinkling image or altar and worshippers, or the analogous custom of the worshipper shedding his blood or sprinkling it on the *sacra* (cf. 1 K 18³⁶), is widely spread, and constitutes a simple method of union with the god—in other words, of effecting or strengthening the covenant relation with him, or of reminding him of it. In other cases the covenant ritual consists in placing and leaving the worshipper's hair, clothing, etc., on the altar, but frequently in the OT the sacrificial meal may be regarded as the basis of the covenant—the god or his worshippers eating together and renewing their union with each other. Hence, according to one theory, the meal itself unites god and men in an act of communion (W. R. Smith, p. 271); or, according to another view, the food is here again the vehicle of conditional curses mutually transferred to god and worshipper (Westermarck, *op. cit.* ii. 623 ff.). Both purposes may, however, be served by the sacrificial meal. It is certainly the case that, in the view of the OT writers, breaking of the covenant by the individual or the nation was followed by punishment (Dt 17², Jos 7¹¹⁻¹², 23¹⁶, Jg 2⁹, 2 K 18¹²⁻¹³), while blessing followed its being observed (Ps 132¹²). In any case, what holds true of these OT sacrifices is true of similar sacrifices elsewhere. Indeed, in some aspects the mere offering of sacrifice to a god, thus propitiating him, is the token of an alliance with him; hence the worshipper asks and expects help from the god to whom he, for his part, is faithful. The same is true of the vows made to a god by a worshipper, in which he promises certain things, usually a sacrifice, for some specified help given him by the god.

In the OT other things are found as signs of a Divine and human covenant, e.g. the rainbow in the case of Noah and his posterity (Gn 9¹²), though here a covenant sacrifice appears also (8²⁰⁻²¹); circumcision is the token of the covenant with Israel (Gn 17¹⁰⁻¹²), though it is to some extent a sacrificial rite; and in Ex 31¹⁶ the Sabbath is to be kept for a perpetual covenant. For marks or cuttings on the body as signs of a covenant, see BADGES.

Totemism, as 'an intimate relation which is supposed to exist between a group of kindred people on the one side and a species of natural or artificial objects on the other side, which objects are called the totems of the human group' (Frazer, *Totemism and Exogamy*, London, 1910, iv. 1), is essentially a covenant relationship, since both parties have entered explicitly or implicitly into an alliance for mutual help and protection. This covenant state is generally furthered by various ritual acts, by which men assimilate themselves to their totem, these being analogous to the covenant rites between human beings. The group of men is, in effect, identified with the animal species which is their totem: the relation is one of

identity. Similarly, in the rites used at puberty for obtaining an individual animal guardian or *manitou*, and in the relative positions in which the individual and his *manitou* stand to each other, there is the suggestion that this relation is essentially a covenant one. Blood-letting is the most significant of these rites. Thus, the Mosquito Indians are said to have sealed their compact with the *manitou* by drawing blood from different parts of their body (NR i. 740). Among the Indians of Honduras each youth formed a contract with his *nagual*, by offering some of his blood to it, 'whereupon such friendship was contracted between them that, when one of them died, the other did not survive' (Herrera, *General Hist. of . . . America*, 1740, iv. 188).

The American Indian youth generally killed the animal which was to be his *manitou*, and used its skin as a 'medicine-bag.' There was thus some kind of blood-covenant between the youth and his guardian, and, as in Omaha Indian belief there was a bond between them so close that the man acquired the properties of the animal, so generally it was held that the youth would not survive the death of his *nagual*; and there was a common idea of the identity of the two, or perhaps of an interchange of life between them.

The meal eaten by survivors at a death, and repeated on anniversary occasions, and of which the ghost is supposed to partake, has the intention of uniting the ghostly and human eaters, and of preserving the goodwill of the ghost by showing that he is not forgotten. It is thus a species of covenant with the dead. This is still more closely marked in cases where the mourners eat the dead man himself—perhaps the origin of the funeral feast. Other methods of this implicit covenant with the dead may be looked for in such rites as that of the mourners cutting themselves, letting the blood drop on the grave, making offerings of their hair, or anointing themselves with the fat or decomposed matter of the corpse. These are analogous to the similar rites in connexion with the cult of gods (see Hartland, *op. cit.* ii. 277 ff.; Jevons, *op. cit.* 41 ff.).

Various customs in human covenants—in which, e.g., the parties hold an animal which is sacrificed, its blood being sometimes sprinkled on a sacred object, or are sprinkled with sacrificial blood or that of an animal not apparently sacrificial—are probably connected with that type of covenant sacrifice in which the parties are a god and a group of men. Here, perhaps, the sacred nature of the sacrifice makes it an important basis of the human covenant, while sacrifices are frequently the vehicles of a curse; or, again, the god to whom the sacrifice or the blood is offered is regarded as a third party to the covenant (for examples, see BROTHERHOOD [artificial], vol. ii. pp. 859, 870; Wellhausen, *Reste arab. Heid.*, Berlin, 1897, p. 128; Lewin, *Wild Races of S.E. India*, London, 1870, p. 228). In many human covenants a god is expressly called upon as witness to the contract, as in the similar appeal in the case of an oath. The god is then expected to visit with his wrath the breaker of the covenant (cf. Herod. iii. 8; Tylor, *Prim. Cult.*, London, 1903, ii. 342; Wilson, *Western Africa*, 1856, pp. 210, 392).

LITERATURE.—A. E. Crawley, *The Mystic Rose*, London, 1902; E. S. Hartland, *LP*, London, 1895, vol. ii. F. B. Jevons, *Intro. to History of Religion*, London, 1896; J. COVENANT (American).—The substitution of an artificial for a natural basis of subsistence had the effect in America, as elsewhere, of establishing

the gods as the principal members of the agricultural community. On their co-operation the maintenance of such a community depended. To some extent the obligation was mutual; for, while men reaped much benefit from the encouragement, advice, and practical assistance of the gods, they were beholden to men for the sustenance tendered through sacrifice. A definite and tacit, if unwritten, covenant thus came into being between gods and men, any human breach of which was visited with Divine punishment. The arrangement was purely one of self-interest on both sides. Man felt the necessity of placating the only beings from whom he could obtain foreknowledge of seasonal and other changes, and, deeply sensible of the value of supernatural assistance, he rewarded it as handsomely as he could—by gifts of such food, drink, and clothing as in his sight appeared most desirable.

Commencing this practice by an 'understanding' with the earlier tribal deities, he later extended it to the 'great gods' of the heavens and earth, whom from time to time he admitted into his pantheon. He felt that the wealth accruing from this co-operation with Divine beings should be fairly divided. This applied to the fruits of the earth produced under supernatural guidance, and to such live stock as had been raised under the same auspices. A step further, and we perceive that the logical outcome of such a policy was to set apart such fields and flocks as would satisfy the god, for his own special use—these to be worked and tended by (in all probability) the most skilful labourers. Thus, according to Gumilla (*Orinoco Ilustrado*, Madrid, 1745, vol. ii. p. 278), a tribe of the Guayanos, in consternation at an eclipse of the moon, at once commenced work upon a plantation for the moon-spirit, considering the eclipse to be a sign of his displeasure at their failure to supply him with a separate field of maize. The gods of Peru had their own herds of llamas and pacos, the flesh of which was largely consumed on their altars, while the wool, woven into cloth, was burned to provide them with 'astral' clothing, or used in the provision of raiment for their images and attendants.

When mere animal sacrifice fails, either, as in Mexico, owing to the lack of large animals, or, perhaps, because of a more sanguinary popular temperament, the blood of human victims is supplied to the gods as nutriment. Thus the Mexican god Huitzilopochtli lived wholly upon human sacrifice, countless thousands of victims, for the most part members of hostile tribes, being slain annually upon his altar. The hunter, too, as well as the cultivator and herdsman, paid his debt to the gods, who assisted him to track his game in dreams. Thus the Nicaraguan tendered to his deer- and rabbit-gods clotted blood wrapped in a cloth, and the Otomi offered blood to the great Cloud-serpent, Mixcoatl. Dwellings, too, were supplied to the Divine beings.

The natural conclusion of the savage in these circumstances is that a breach of his covenant with the gods brings upon him calamities of every description. There is much temptation on the part of the cultivator to withhold a portion of the firstfruits or other sacrifice; and, should this temptation overcome him, he becomes an easy prey to the malevolence of the slighted deity. The Peruvians believed that in such a case the offended god sent an evil spirit to haunt the wrongdoer, and that it lay in wait for him in his habitual resorts. His crops failed, his health gave way under some terrible disease, his stock perished. Such were thought to be the consequences of *hucha*, or sin, in Peru; and, in the event of a national calamity, every member of the com-

munity was rigorously examined, until, the guilty one being discovered, restitution was forced from him. Throughout the two Americas the idea of the covenant with the gods was quite as current as elsewhere; and its inevitable workings have been observed in the economy of nearly every tribe.

COVENANTERS.—The subscribers of the National Covenant and the Solemn League and Covenant rejected the theory of the Divine right of kings, and vigorously opposed the absolutism which crushed the liberties of the people. In the days of James VI., before the Covenants, the conflict was begun. George Buchanan in 1579 published his *De Jure Regni apud Scotos*, in which he taught that kings are chosen and continued in office by the people, and, in particular, that the Scots had always claimed and exercised the right to call wicked rulers to account. Two Scotsmen had already dealt with the old question of the right of kings. As early as 1521, John Major asserted in his *History* that the people first made kings, and could dethrone them; while Hector Boece in his *History*, published in 1527, assumed that the royal authority is derived from the people. In 1584, Buchanan's book was condemned by Act of Parliament, and in the same year were passed the 'Black Acts,' which declared, contrary to the teaching of Knox, that the king was head of the Church as of the State, that assemblies should not meet without his sanction, that there should be bishops who should be appointed by him, and that ministers should not discuss public affairs under pain of treason. When these statutes were framed, James's adviser was James Stuart, Earl of Arran, who had succeeded Esmé Stuart, Lord of Aubigny. Leaving the court of Henry III. of France, in which the doctrine of royal absolutism was cherished, D'Aubigny had proceeded to Scotland, on the mission of the Guises for the restoration of Mary Stuart and the Catholic religion, and there had taught the young king to be an autocrat. The Scots, however, feared a popish plot; and honestly or dishonestly he approved the drawing up of the Negative Confession, assailing Romanism, which in 1581 was signed by James and his courtiers. While D'Aubigny was directing the king, Andrew Melvill was leading the Church and inveighing against 'the bloodie guillie of absolute authority.' By his influence the Assembly of 1580 condemned Episcopacy; and in 1581 presbyteries were established with the king's consent, and the Assembly approved the Second Book of Discipline. The Raid of Ruthven, which was devised for the liberation of James from the hands of D'Aubigny, was successful; but it could not make the king forget the Frenchman's lessons in absolutism; and, when Arran was the chief counsellor, the Black Acts, with their assertion of the royal supremacy, were passed. Though Arran's rule terminated in 1585, James was able, two years later, to persuade the Parliament to declare that all ecclesiastical property belonged to the crown.

For a time, however, James did nothing for the bishops, and before and after his marriage seemed to favour Presbyterianism. In 1590 the Assembly ordained 'the subscription of the band of maintaining religion and confession *de novo*,' and, in 1592, Presbyterianism received from Parliament its 'Magna Charta,' whereby the ecclesiastical courts were legalized, and the liberty of the Church was ratified by the abrogation of the Black Acts, so far as they interfered with its authority in matters

of religion. The royal favour to Presbyterianism was of short duration, and in 1596 Andrew Melvill told James that he was 'but God's sillie vassall,' and said :

'Sir, as diverse tymes before, so now again I must tell you, there are two kings and two kingdomes in Scotland; there is Christ Jesus and His kingdom the Kirk, whose subject King James the Sixth is, and of whose kingdom not a king, nor a head, nor a Lord, but a member.'

The words did not convince, and James, casting aside tradition, called by his own authority Assemblies, which yielded to his pressure. At last in 1610 an Assembly restored Episcopacy, and in 1612 the Estates ratified the new order of ecclesiastical government. In justification of his authority, James published, in 1598, *The True Law of Free Monarchies*, and set forth the Divine origin of the royal power.

'Monarchy,' he wrote, 'as resembling the Divinity, approacheth nearest to perfection, as all the learned and wise men from the beginning have agreed upon.' He declared that 'kings are called Gods by the propheticall King David, because they sit upon God his throne upon earth, and have the count of their ministration to give unto him.' Scripture texts were used to show that the people should pay obedience to the king 'as to God's lieutenant on earth, obeying his commandments in all things, except directly against God, as the commands of God's minister, acknowledging him a judge set by God over them, having power to judge them, but to be judged only by God, to whom only he must give account of his judgment.'

In the *Basiliikon Doron*, published shortly after *The True Law of Free Monarchies*, James instructed his son to know and love God, who had made him 'a little God to sit on his throne, and rule over other men.'

True to his exalted notion of his office, James used his authority to change the government of the Church, and then turned to the customs and forms of worship. In the Assembly of 1616, called by him, and the first which met after 1610, a new Confession of Faith, Catechism, Liturgy, and Book of Canons were projected; and in an Assembly at Perth in 1618 royal coercion secured the passing of the famous Five Articles, which were startling innovations in the Scottish ritual. When the government of the Church had been changed and the ritual modified, the king was satisfied with the exercise and recognition of his supremacy; but, while by his actions and writings he showed his attachment to the theory of the Divine right of kings, he ruled in the Church through Assemblies, and, though these were coerced, he preserved the recognized forms of legislation.

Charles I. succeeded to his father's belief in his Divine right, and continued, but without tact or discretion, the assertion of royal absolutism. In May 1635 he signed the warrant for a Book of Canons, which in the following year was imposed upon the Scottish Church, without the sanction of either an Assembly or a Parliament. Reference was made in the Book itself to a Liturgy, afterwards known as Laud's Liturgy, which was ratified in 1636, and in 1637, on the sole authority of the king, was sent to Scotland. The Canons, as they made no outward change in the Church, did not stir the people, though they saw in them a violent exercise of royal power; but the Liturgy, also devised by the king as an autocrat, roused a popular clamour, and set the nation against him. The Liturgy met with instant opposition, and the riot which occurred in the church of St. Giles, Edinburgh, when it was first read, inaugurated a revolution which spread through the greater part of Scotland. The Scots, ever fond of legal bonds of association, prepared a document which is known as the 'National Covenant,' and multitudes signed it.

The document was prepared by Johnston of Warriston, one of the ablest of the lawyers, and the Rev. Alexander Henderson, minister of Leuchars, who was the ecclesiastical leader of the

Presbyterians; and with them most probably was associated Hope, the king's advocate. It included the Negative Confession of 1581, which James VI. had signed; a list of the Acts of Parliament confirming the Confession; and the Covenant proper, by which the subscribers bound themselves to defend their religion and their king as guardian of it. The signing of the Covenant was begun on 28th Feb. 1638, in the Greyfriars churchyard, which contained the burial-place of George Buchanan, whose *De Jure* helped to drive James towards absolutism. If the first Covenanters, drawn from all classes and representing the greater part of the country, were rebels against the king's tyranny, their document infringed no law of the land. Yet it was the bond of a nation against the sovereign, and, with troubles in England, Charles was forced to yield. He appointed the Marquis of Hamilton as his commissioner, who tried to divide the Covenanters by means of a new Covenant, the King's Covenant, which included but did not enforce the Confession of 1581; and, when the project failed, Hamilton in his master's name promised a free Assembly, a Parliament, and the abolition of the Courts of High Commission which, with bishops among the judges, tried ecclesiastical cases. The Presbyterians did not admit that the royal assent was necessary for an Assembly, and accordingly they called one, which met on 21st November in Glasgow. The Marquis of Hamilton appeared as the king's representative, and the members chose Henderson as moderator and Johnston of Warriston as clerk.

Henderson and his associates had summoned the bishops, but these refused to recognize the authority of the Assembly; and, when their cases were considered, the commissioner declared the proceedings illegal, and dissolved the Assembly. The Presbyterians, however, were undaunted, and the business was continued, without and in spite of the king's representative. The bishops were deposed, and some of them excommunicated; the Book of Canons, the Liturgy, and the Five Articles of Perth were condemned, and the Courts of Commission abolished. Thus did the Covenanters in the Glasgow Assembly answer the king with his absolutism. The Earl of Argyle accepted the Covenant in Glasgow, and it had been signed by the Earl of Montrose in Edinburgh.

War was inevitable, and Charles devised schemes for which he had no money. He attempted, however, to irritate the English by representing that the Scots were preparing an invasion; and the Scots, in defence of their honesty, published 'An Information for all good Christians within the Kingdoms of England.' Another document appeared, the 'Large Declaration,' which Dr. Balcanquhal wrote and Charles authorized. It was the king's version of his troubles with the Scots, and was not a contribution to truth. Something more than a distribution of pamphlets was required to settle the quarrel between the people and their king, and Charles mustered an army of 21,000 men at Berwick. The Scottish forces, numbering 20,000 men, were entrusted to Alexander Leslie, who had followed the profession of arms on the Continent. Marching southwards, he fixed his quarters at Dunse Law, twelve miles from Berwick. The First Bishops' War was a demonstration and not a battle, and on 18th June 1639 commissioners arranged the Pacification of Berwick, which secured their demands for the Covenanters.

By the Treaty an Assembly and a Parliament were to meet; and on 12th August the Assembly sanctioned the Acts of the Glasgow Assembly, that they might have undisputed legal validity. The members requested the Privy Council to require every one in the nation to sign the Covenant, and,

so doing, violated the rules of toleration. The Earl of Traquair, the king's commissioner, ratified the proceedings of the Assembly, though Charles indicated to Archbishop Spottiswoode that what had been done could be undone. Parliament approved the action of the Assembly in overthrowing Episcopacy; and, in spite of his action as commissioner to the Assembly, Traquair refused assent in the king's name, and against precedent dissolved the Parliament. War was once more inevitable, since the nation's demands, in spite of the Treaty of Berwick, had been refused. Charles summoned an English Parliament, known as the Short Parliament, and dismissed it when supplies for a war with Scotland were refused. He succeeded, however, in collecting a force at York on 22nd August 1640; and on the 20th of the same month Leslie entered England with an army of 20,000, and marched to Newcastle. The Second Bishops' War was no more romantic than the First; and commissioners were appointed to meet at Ripon, and to arrange terms of peace on the basis of the abolition of Episcopacy and the recognition of the Covenant. The troubles in England forced Charles again to yield to the Scots, though not till 10th August 1641 was an arrangement made with the Long Parliament, which had taken the business out of the hands of the king.

Hoping to create a party in his favour, Charles in 1641 visited Scotland, and remedied further abuses, especially in the Privy Council and Court of Session, which by his own act were filled with his partisans. He expected to strengthen the opponents of the Covenant, already represented by the Incendiaries and the Plotters or Banders. The Earl of Traquair and Sir Robert Spottiswoode, the archbishop's son, were the chief men among the Incendiaries, who had been the advisers of Charles from the time of the Covenant; while the Plotters were led by Montrose, who had passed to the side of the king, perhaps through jealousy of Argyle's prominence among the Covenanters. The affair known as 'The Incident,' whether it was a fact or merely a story, told against the king, and, when he departed from Scotland in October, he had neither weakened his enemies nor strengthened his own party.

In August 1642, Charles raised his standard at Nottingham, and the Civil War in England was begun. The king and the Parliament each sought the aid of the Scots, who, though themselves divided, were in great numbers favourable to the Parliamentary cause. The Parliament informed them that an Assembly at Westminster had been appointed to consider 'a reformation in church discipline and ceremonies'; and on 2nd Aug. 1643 the General Assembly, associated with the Convention of the Scottish Estates, put forward the Solemn League and Covenant, drafted by Alexander Henderson, as the condition of an alliance. The subscribers to the Covenant were to bind themselves to preserve the Reformed religion in Scotland, to secure in England and Ireland a reform in doctrine, worship, discipline, and government, according to the Word of God and the example of the best Reformed Churches; to seek the extirpation of Popery, prelacy, superstition, heresy, and schism; and to defend the privileges of the Parliament, and also the person and authority of the king. The English Parliament accepted the Covenant on 25th September, and in Jan. 1644, Leslie, who had been created Earl of Leven, led an army into England, which helped to secure the victory of Marston Moor. In his difficulties, Charles granted a commission to Montrose, and, after an arrangement with the Marquis of Antrim, sent him a wild horde of Irish and Scots-Celts. Victory after victory in Scotland was gained by

Montrose, though at the expense of horrible cruelties perpetrated by the savages of his army; and he did not know defeat till September 1645, when he met David Leslie, Leven's nephew, at Philiphaugh. The triumph of the Covenanters was secured, and was cruelly celebrated in the execution of Sir Robert Spottiswoode and other Malignants, as the Royalists were called.

In England, the Parliamentary party, after their victory at Naseby, had no further need of the Scots; and they, on the other hand, being opposed by the Independents, despaired of the success of the Solemn League and Covenant. Charles understood the situation, and in May 1646 threw himself into the hands of the Scots. Yet he would not accept their Covenants, and they would not support him. Had he agreed to their terms, they would have defended him; but they handed him over to the English Parliament, on condition that his life should be spared, and the money due to them be paid.

One last effort to save their king was to be made by some of the Scottish nobles. The Earls of Loudon, Lanark, and Lauderdale visited him at Carisbrooke Castle, and made a compact, known as 'The Engagement,' according to which they were to find an army for him, and he was to establish Presbyterianism in England for three years. In the Scottish Parliament, the nobles, barons, and commissioners from the large towns showed by a decided majority that they trusted the king, though the clergy, on the other hand, would not believe that he was sincere. Hamilton, however, raised an army of 10,000 men, who when they reached England were met by Cromwell and defeated.

Charles was executed on 30th Jan. 1649, and Covenanters and Royalists alike were horrified. Charles was the victim of his cherished principle of the Divine right of kings, which, bequeathed to him by his father, destroyed the peace of Scotland, turning a loyal people into rebels whom history has justified. James was a despot who knew the value of discretion; but Charles, with an erroneous doctrine of his personality and an archaic theory of his power, was destitute of tact, and the Scots strenuously opposed him in the defence of their liberties. Yet, though he was a tyrant in their eyes, they would have remembered that he was their king and would not have taken his life.

Six days after the execution at Whitehall, Charles II. was proclaimed king by the Scottish Estates, though he was to be acknowledged only on condition that he accepted the Covenants. The zeal of the Covenanters was not diminishing, and just before the death of the king they secured the Act of Classes, which excluded from civil and military posts all who were hostile to the Covenants. Montrose cared nothing for the Estates, and still dreamed that the country might be subdued. He failed, however, to gather the Royalist army of his visions, and yet would not cease from romantic expeditions and attacks. At last he was taken, and was beheaded on 21st May 1650 at the Market Cross of Edinburgh. Charles II. landed in Scotland in June, and, according to an agreement already made, accepted the Covenants. His presence was a menace to England, and on 22nd July, Cromwell crossed the Border. David Leslie was in command of the Scottish army, which in the rush of events was now gathered for the defence of the king, though many of the Covenanters, led by Johnston of Warriston and James Guthrie, minister of Stirling, did not put their trust in Charles. In their fanaticism they succeeded in banishing all Malignants from the army, and so interfered with Leslie that Cromwell secured a decisive victory at Dunbar. Immediately after the battle they prepared a Remonstrance against the government of Argyle

and his friends, and presented it to the Committee of Estates, with the declaration that they rejected Charles till he proved 'the reality of his profession.' Argyle was forced to choose an alliance with the Remonstrants or with the Malignants, and he gave his support to the friends of Charles. The Committee of the Estates accordingly passed a Resolution in condemnation of the Remonstrance, and the Estates abolished the Act of Classes. On 1st Jan. 1651, Charles was crowned at Scone, and Malignants and Resolutioners alike were satisfied. Cromwell, however, was still in the country, and once more David Leslie was placed in command of an army. In hope of a rising in favour of Charles, the Scots marched into England, but Cromwell followed and utterly defeated them at Worcester. Scotland was subjected to English rule; and, though toleration was enforced, Resolutioners and Remonstrants continued their quarrel, till in 1653 the General Assembly was closed and its meetings forbidden. Enthusiasm for the Covenants was no longer national but sectarian. The National Covenant had been the protest of a realm against the absolutism of the king, and the Solemn League and Covenant had been framed for the reformation of religion by those who believed that the true Church should be Presbyterian. In the events which followed the National Covenant, Charles had been compelled to submit to the Scots, and after his death the Covenanters, true to the Solemn League and Covenant, became the guardians of Presbyterianism. Fanaticism divided them, but the factions were none the less devoted to the Church which James and Charles I. had assailed, and to its worship and government which had been saved from the hands of the destroyers.

Scotland hailed the Restoration with joy, as the English rule was ended and the king was to reign who had been crowned at Scone. The Remonstrants or Protesters alone, in their anxiety for the Church, did not share in the joy, and soon it was seen that they were not foolish in their alarm. Charles nominated a Privy Council, without waiting for a Parliament to advise in the selection; and, while the members of the Council were with him in London, he entrusted the government to the Committee of the Estates, which had not acted after 1651. Remembering injuries and destitute of gratitude, he committed Argyle to the Tower, and then sent him to Scotland for trial, and at the same time issued an order for the seizure of Johnston of Warriston, who, however, escaped to France. The Committee of Estates, recognizing the attitude of the king to the Covenanters, broke up a meeting of Protesters, and seized among others James Guthrie, the minister of Stirling. In their eagerness to please they issued a proclamation against 'all unlawful and unwarrantable meetings and conventicles'; and, in decreeing that there should be no meetings 'without his Majesty's special authority,' showed how the men in the king's service no longer opposed the absolutism and supremacy which had been fatal to his father. It seemed at first that Charles, though ruthless towards the Remonstrants, would uphold the Church for the sake of the Resolutioners; and James Sharp, minister of Crail and professor in St. Andrews, whom the Resolutioners had sent to London, returned on the last day of August with a communication to the Presbytery of Edinburgh. 'We do resolve,' Charles wrote, 'to protect and preserve the government of the Church of Scotland as it is settled by law'; but, while he referred to the government as it existed, he soon afterwards put a strange interpretation on his words. On 1st Jan. 1661, a Parliament with carefully selected members met, and in its sessions passed a multitude of Acts. In an oath of allegiance, Charles was

declared 'supreme Governor of this kingdom over all persons and in all causes'; and a Rescissory Act, which revoked the legislation of every Parliament after 1633, destroyed what the nation had built up in the struggle against royal absolutism. The Church 'settled by law,' to which Charles referred in his letter to the Edinburgh Presbytery, was no longer Presbyterian, and in a communication to the Privy Council he wrote: 'We have, after mature deliberation, declared to those of your Council here our firm resolution to interpose our royal authority for restoring of that Church to its right government by bishops, as it was by law before the late troubles, during the reigns of our royal father and grandfather of blessed memory, and as it now stands settled by law.' The Church was Episcopal, but only one of the bishops was alive; and four men, of whom were James Sharp and Robert Leighton, set out for London to receive episcopal consecration.

The second session of the 'Drunken Parliament,' as it was called, began on 8th May 1662, and, after an Act for 'the restitution and re-establishment of the ancient government of the Church by archbishops and bishops,' the prelates were admitted to the dignity of an Estate. Thereafter the Covenants were declared to be treasonable, and holders of offices of trust were required to abjure them. Another Act was tragic in its consequences. Patronage had been abolished in 1649, and the election of ministers had been entrusted to the kirk-sessions. The Parliament now decreed that every minister who had been ordained after 1649 should receive a presentation from the patron, and institution from the bishop. In the west and south nearly three hundred men refused to comply; and churches were closed till 'curates' were found for them. In the third session of the Parliament the Earl of Rothes took the place of the Earl of Middleton as the king's representative, though the Earl of Lauderdale was the real director of the business. Ecclesiastical affairs were in hopeless disorder. The churches from which the ministers had been excluded were almost empty, and the people flocked to private houses in which these men preached. The Parliament sought a remedy in an Act which required the 'outed' ministers to abstain from preaching, and the people to attend the churches. Fines were to be imposed on those who would not obey, and the Privy Council were to receive reports from the curates regarding offenders. Before the close of the Parliament, Johnston of Warriston, who had been apprehended in France, was sent to execution. Argyle and James Guthrie, and also a man named Govan, had been condemned; and Warriston followed them to the scaffold and to martyrdom for the Covenants. The victims of the king's wrath were few, and Argyle and Guthrie, conspicuous champions of the people's rights, might have satisfied his vengeance; but Warriston was pursued till his death was accomplished. Samuel Rutherford, the Principal of St. Mary's College, St. Andrews, was summoned to appear at Edinburgh, and died before he could answer. In his *Lex Rex* he had set forth the democratic principles which George Buchanan taught in the *De Jure*; and, when he could not be brought to sentence, his book was publicly burned by order of the Government.

Without consent of the Church, Charles II. changed its constitution, and the men who would not obey his orders were driven from their livings. James VI. had forced or corrupted Assemblies and Parliaments to be his agents, while Charles I. had imposed the Canons and Liturgy with neither Assembly nor Parliament. It is true that Charles II. acted through a Parliament and through his Privy Council, but the Parliament was not freely

elected, and the Church itself was not consulted. The 300 evicted ministers could urge the Presbyterian claim of free assembly. Their theory of the Divine origin of the Presbyterian polity might be denied, but they could point to Knox and Melville as the upholders of the Church's freedom, and to the struggles and successes of the first Covenanters. Many of the ministers quietly accepted the Episcopacy ordained by the 'Drunken Parliament,' but the men who were ejected, and not the men who conformed, were obedient to the Presbyterian tradition, and as heirs of the Covenanters were entitled to their name. Opponents of the royal absolutism and advocates of ecclesiastical freedom, the second race of the Covenanters were destined to bear testimony through suffering to their devotion to the lost liberties of their Church.

Fines were imposed by the Privy Council on those who neglected the ministrations of the curates, and soldiers were quartered on offenders till these were paid. At Archbishop Sharp's suggestion the Court of High Commission was re-instituted to deal with breakers of the law, and the troubles increased when Covenanters, to whom an Act of Indemnity had not extended, were ordered by the Court to pay their fines. In the disaffected districts the people were galled by the tyranny of the Council in imposing fines, quartering soldiers, and breaking up conventicles (*q.v.*) for worship. Passive obedience was not a favourite custom of the Scots, and a rising of the oppressed was to be expected. Sir James Turner, the most zealous of the soldiers of the Government, was in Dumfries, and on 15th Nov. 1666 was attacked and taken prisoner by a company of men from Galloway, who had been stirred by a shameful tale of cruelty. From Dumfries they marched, 3000 in number but untrained, across the country to Lanark, where they renewed their adherence to the Covenant. Intending to pass to Edinburgh, they turned on their way to the city, as Sir Thomas Dalziel, a fanatic Royalist who had served in Muscovy, was on their track, and they reached Rullion Green, on the southern slopes of the Pentlands. Dalziel with his disciplined force routed them. Some were killed, many fled, and at least fifty were taken. Two of the leaders, John Neilson of Corsack and Hugh M'Kail, who was a preacher, were tortured with the boot in presence of the Council, that they might reveal a supposed league with the Dutch, and were afterwards sent to the scaffold. Ten men, and then five, were hanged in Edinburgh, and the work of execution was continued in Glasgow and Ayr. Many of those who had been engaged in the rising were fined and their lands and goods confiscated. To Dalziel was given the task of quieting the disturbed places, and with his ruthless severities he terrorized the people. In 1667, however, a respite was offered when Lauderdale, who had overthrown Rothes and Sharp in the Council, intimated an indemnity, under conditions, for the Pentland rising. While many accepted the terms, the sternest of the Presbyterians refused obedience to a Government which required conformity to an Episcopal Church and ignored the Covenant.

After the indemnity no further step towards conciliation was taken till 1669, when an Indulgence was offered. It was ordained that vacant parishes might be given to ministers who were willing to accept collation from the bishops; and those who would not take collation might have the manse and glebe, without the stipend, if they agreed, among other conditions, to administer the sacraments to their parishioners alone. Forty-two ministers, professing their adherence to Presbyterianism, were admitted; but the most zealous of the Covenanters inveighed against them, and

extreme Episcopalians objected to the Indulgence as an Act of Erastianism. Lauderdale, though responsible for the Indulgence with any clemency involved in it, was an avowed supporter of the royal absolutism; and under him the Parliament of 1669 declared in the Asserty Act 'that his Majesty hath the supreme authority and supremacy over all persons, and in all causes ecclesiastical within this kingdom; and that, by virtue thereof, the ordering and disposal of the external government and policy of the Church doth properly belong to his Majesty and his successors, as an inherent right of the crown.'

Burnet, the Archbishop of Glasgow, was deposed for his opposition to the king's authority in the issue of the Indulgence, and Leighton, who succeeded him, proposed an 'accommodation' for peace between Presbyterians and Episcopalians. The scheme was futile, as compromise pleased no one, and Leighton, resigning the archbishopric, departed to England. The Indulgence did not remove the opposition of the Covenanters, and they flocked to the conventicles, carrying arms for safety in attack. The Government, on the other hand, showed no leniency. In 1670 an Act was passed which required any one on oath to give information regarding conventicles and the men who attended them; and another Act made death and confiscation of goods the penalty for preaching at conventicles. Not content with these severities, the Parliament decreed that punishment, even to exile, should be inflicted on those who had their children baptized by the non-conforming ministers, and also on those who for three successive Sundays absented themselves from the parish church. The conventicles, in spite of the Government, did not cease, and the Bass Rock was turned into a prison. In 1672 the Parliament declared the ordination of ministers by the Covenanters a crime, and decreed that parents should be punished who left their children unbaptized by the curates for more than thirty days. For some reason a second Indulgence was published. It was offered to eighty of the clergy, and some of them accepted it, but the Covenanters were not quieted. The Government in their straits decreed that magistrates for the burghs and landowners in respect of their estates were to be made responsible for conventicles, and householders were to answer for their families and servants. Another step was taken in 1675, when letters of intercommuning were issued against 100 persons, including men and women of social position, who were not to be harboured or fed or clothed by any one. Though landowners in 1674 had been made responsible for their tenants and servants, they were required in 1677 to take a bond for all persons on their lands. Many of these men in the disturbed counties, though friendly to the Government, would not sign such a bond; and in February 1678 a host of 6000 Highlanders with 3000 Lowlanders was sent to Ayrshire and let loose for plunder. The Duke of Hamilton and also the Earls of Atholl and Perth appeared with expostulations before the king, and, though Charles approved Lauderdale's actions, the Highlanders were withdrawn. The disorder increased, however, in spite of indulgences and coercive Acts; and the year 1679 witnessed among other tragedies the murder of Archbishop Sharp. From the day of his acceptance of the archbishopric there were few who even respected him, and the Covenanters hated him as their fiercest oppressor. Travelling to St. Andrews he was murdered at Magus Muir, three miles from the city, by a band of men who had been outlawed for attending conventicles. These men were not taken, though a proclamation was issued for their arrest; and another tragic event was to increase the troubles. On 27th May

—the anniversary of the Restoration—a company of eighty men gathered in Rutherglen, and, after extinguishing the bonfires, affixed to the market-cross a paper denouncing the Acts of Parliament against Presbyterianism. The same company, increased in numbers, held a conventicle on the Sunday which followed; and Graham of Claverhouse with a troop of soldiers was sent to disperse it and to seize the men who had appeared at Rutherglen. At Drumclog, two miles from Loudon Hill, where the conventicle had assembled, an engagement took place, and Claverhouse was defeated. The victors determined to form a camp, and many flocked to it. The Government, on the other hand, made ready an army, and the king sent the Duke of Monmouth to command it. The battle of Bothwell Bridge was fought on 22nd June with disastrous results to the Covenanters. They had enthusiasm; but, divided over the Indulgences, they quarrelled when they should have been drilling themselves for action, and there was no capable and trusted leader. While the number of the dead was not great, more than 1000 prisoners were taken and conveyed to Edinburgh. For months many of the wretched men were confined in the Greyfriars churchyard. Two of the ministers were hanged, and five men, who had not been involved in the death of the Archbishop, were sent for execution to Magus Muir, that the murder might be avenged. Many were allowed to leave their prison, after taking a bond not again to bear arms; and others, to the number of 250, were packed into a ship sailing to Barbados, that they might be sold into slavery. The ship, however, was wrecked on one of the Orkney Islands, and 200 of the unfortunate men, who were kept under the hatches, were drowned.

Thanks to Monmouth, an Act of Indemnity was passed for those who had been at Bothwell Bridge, and a third Indulgence for ministers was published. Conditions, however, were attached, and there were few who did not reject them. Clemency was accordingly thrown aside, and diligent search was made for those who had been at Bothwell. The thumbkins and lighted matches to the fingers were used by the savage soldiers of the Government to force unwilling informers to reveal their secrets. Oppression again had its natural consequences, and wild men were made wilder. The Presbyterians who still remained staunch to the Covenants separated from communion with those who had accepted the Indulgences, and deliberately threw off allegiance to the king. Two ministers, Richard Cameron and Donald Cargill, were the leaders, and they and their followers called themselves 'Society People,' and were known as Cameronians, Wanderers, Hillmen, or Whigs. On 22nd June 1680, Cameron and Cargill with some of their men, twenty-one in all, entered Sanquhar and affixed to the market-cross a declaration that they disowned Charles Stuart as king for 'his perjury and breach of covenant to God and His Kirk.' These men did at Sanquhar, in the time of Charles Stuart, what England and Scotland afterwards did when James Stuart was king. Cameron and Cargill were marked by the Government, and at Aird's Moss, on 20th July, Cameron was killed, when he and Hackston of Rathillet, with some of the Hillmen, were attacked by a company of dragoons. Hackston was executed at Edinburgh with a display of abominable cruelty, and Cargill, who was not at Aird's Moss, became the leader of the Covenanters. He appeared in October at Torwood, and in a great assemblage excommunicated the king, the Duke of York, the Duke of Lauderdale, and others; and, though the sentence was futile and the action altogether fanatical, the devotion to a cause consecrated in the tradition of the

country made Cargill a hero in the eyes of the persecuted Whigs. He, too, was to die for the Covenant, and in 1681 was executed in Edinburgh.

In 1681 the Duke of York appeared in Scotland, and, in place of Lauderdale, acted as Royal Commissioner. After the Act for securing the Protestant religion, the Parliament, at his direction and to suit his purposes as a Catholic, passed an Act which declared that the kings of the realm derived their power from God, succeeding to it by lineal descent, and that the succession could not be changed. This declaration, in favour of the Divine right of the king, was followed by the Test Act, which required every holder of office to swear that he owned the Protestant religion as set forth in the Confession of 1567, acknowledged the supremacy of the king in all causes, would not consult about any State matter without royal licence or command, and would never endeavour to alter anything in the Government of the country. Never before had the Scottish Parliament displayed such abject subservience. Eighty of the ministers refused to take the test, and left their parishes; and in January 1682, fifty of the Covenanters published at Lanark a fresh declaration, and burned the Succession and Test Acts. The 'Society People' were counted rebels, as they were, and were treated with savage cruelty; Dalziel and Claverhouse, merciless leaders of the rudest soldiers, earned infamous reputations; and, when the troubles were at an end, men continued to talk of the 'Bloody Clavers,' while they spoke, too, of the 'Bloody Mackenzie,' the Lord Advocate, who was pitiless in his prosecutions. Their victims were fined or sent to slavery, and some were shot and some were hanged. In November 1684 the 'Society People' published their 'Apologetical Declaration,' drawn up by James Renwick, a young minister, which contained a warning to their persecutors that they counted them, and would punish them, as the enemies of God and His covenanted work; and they did not shrink from killing their foes. An oath of abjuration of the Apologetical Declaration was at once prepared by the Government, and he who did not take it might be shot without pretence of trial. John Brown of Priesthill, in whose house were found bullets and treasonable papers, refused to take the oath. 'Whereupon,' wrote Claverhouse, 'I caused shoot him dead, which he suffered very unconcernedly.' A few days later, though Claverhouse was not the perpetrator of the deed, an old woman and a girl were drowned at Wigton, as they would not abjure the Apologetical Declaration.

James II. ascended the throne in 1685, and the Estates expressed their gratitude for the blessings which they owed 'to the sacred race of their most glorious kings, and to the solid, absolute authority wherewith they were invested by the first and fundamental laws of the monarchy.' Acts were passed against the Covenanters, and in one it was declared that any person who preached at or attended a conventicle was to be punished with death and confiscation of goods. The accession of James marked no change of policy in the treatment of the Covenanters, and the first year was known as 'the black year, the killing time.' Argyle, in the plot with Monmouth for the removal of James from the throne, landed in Scotland in 1685; but he received no help from the Covenanters, whose cause, at an earlier time, he had forsaken. The plot ended in failure, and Argyle was taken and carried to Edinburgh, where he was beheaded. Before he arrived in the city, the Government resolved to make sure that their prisoners, who might be in sympathy with him, were securely guarded. About 200 of the Covenanters were accordingly removed to Dunnottar Castle. Men

and women were thrown together into a vault, with but one window for air, and the space hardly gave them room to sit down. Days passed before any of them were removed, and then forty men were sent to another vault, where a break in the wall gave the only current of air. After two months those who were alive were taken to Leith; and, while a few promised allegiance, the majority were sent as slaves to the Plantations.

James was a Roman Catholic, and, whatever his schemes were for the return to Rome of the nations over which he was king, he determined to repeal the penal laws against the Roman Catholics. The Scottish Parliament, which again and again had admitted the royal absolutism, would not consent to more than a serious consideration of his communication regarding the repeal, and was dissolved. Thereafter the Privy Council received an intimation from him that his prerogative enabled him to dispense with all laws, and he charged the Council to rescind the penal laws. Even the most subservient Government could not ignore the fact that Scotland dreaded a return of Popery. James accordingly extended to the Presbyterians the toleration he desired for the Catholics, and they were allowed to meet in private houses or chapels, if no disloyal doctrines were preached. The 'Society People,' however, were excluded from the new Indulgences, as they had thrown off allegiance to the king, and they continued in their opposition and frequented their conventicles. Their leader was James Renwick, and in February 1688, having refused to acknowledge the Government, he was put to death, the last martyr for the Covenants. The year which witnessed the execution of the Covenanter in Edinburgh witnessed also the arrival in London of William of Orange and the flight of James.

In the period between the imposition of the Liturgy and the death of Charles I., and, again, in the period between the Restoration and the Revolution, the Covenanters were the guardians of freedom. After the Restoration the nobles and barons, as if there had been no Covenants, admitted with extraordinary servility the despotism of the kings; and even the Covenanters themselves were not united, since those who profited by the Indulgences submitted to the king, who was an ecclesiastical autocrat. The 'Society People' alone were faithful to the Covenants.

Recognizing Presbyterianism as Divinely instituted, and declaring, therefore, the rights of their Church to be those of the Redeemer, they fought for Christ and the Covenant; and at last threw off allegiance to the king as the enemy of their Lord. In Scotland throughout the 17th cent. the royal absolutism was displayed almost entirely in affairs of the Church, and there was no clear issue, without appeals to religion, between despotism and liberty. Yet in the sphere of the Church, where tyranny pressed, and where a contest alone was possible, the Covenanters asserted the rights of the people.

COVENANT THEOLOGY.—1. Preliminary definition.—By this term is designated a type of theological thought which expresses the relations between God and man in the formula of a covenant or legal agreement, formally entered into by two contracting parties. It was specially common among the English Puritans, from whom it passed to their descendants in America. On the Continent it is first found among the German Reformed theologians in the second half of the 16th century. Its best known Continental representative is Cocceius (John Koch, 1603-69), who is often wrongly said to be its author.¹ Through him and his successors (Burmman, Witsius, and others) it received its most elaborate literary expression, and ever since has constituted one of the recognized types of Calvinistic or Reformed theology. It is the purpose of this article to explain the nature of this type, and to give some account of its origin and history.

2. Nature of the covenant theology.—(1) *The covenant idea and the covenant theology distinguished.*—At the outset it is necessary to distinguish between the covenant idea and the covenant theology. The covenant idea is common Christian property. It is an inheritance of Christianity from the OT, which frequently describes the relation between Jahweh and His people in terms of a covenant, entered into either with individual Israelites (e.g., Noah, Abraham, Phinehas, David), or with the nation as a whole. The covenant theology describes a special type of Christian thought which gives this idea a central importance not elsewhere assigned to it, and uses it as the organizing principle of the entire theological system. According to this scheme, God at the Creation entered into an agreement with Adam as the federal head of the race, promising to him and to his descendants eternal life on condition of his obedience to the Divine command that he should not eat of the fruit of the tree of the knowledge of good and evil, and threatening him with eternal death for himself and his descendants in case of his disobedience. Adam having failed to stand the test, God entered into a second agreement with Christ as the second Adam, on behalf of the elect, promising them forgiveness and eternal life in consideration of Christ's perfect obedience and satisfaction imputed to them by faith, as well as all the gifts and graces which are necessary to the realization of this supreme blessing in experience. The covenant theology in its developed form is a scheme of doctrine in which the entire system of divinity is expressed in the terms of these two covenants, and man's assurance of salvation based upon the fact that he is included within the latter. In order to understand its origin and significance, it is necessary to consider the problem which it was designed to solve.

(2) *The covenant as a ground of assurance.*—This problem was, in a word, the reconciliation of the sovereignty of God with man's assurance of salvation. The federal theologians, as they are called, were Calvinists. Their major premiss was the absolute sovereignty of God. Man, in their view, had no independent right as against his Maker. Unquestioning submission to the Divine command was his duty. Perfect obedience, were such possible, carried with it no merit, and could guarantee no reward. If, then, man was to be admitted to the Divine fellowship or assured of the Divine favour, it could be only by some voluntary condescension on God's part, establishing by arbitrary enactment

¹ So by Strong (*Systematic Theology*⁴, Philad. 1907, p. 612f.).

relations which had no necessary foundation in nature. The importance of the covenant for these theologians consisted in its assurance that such condescension had, as a matter of fact, taken place. By the covenant God not only bound Himself to a certain definite line of conduct, so far as man was concerned, and in so far restricted the freedom of His own choice,¹ but He made known in detail to His creature the nature and conditions of His gracious purpose, and so removed the uncertainty to which he would otherwise have been exposed.

'God,' says Thomas Shephard, in his preface to Bulkeley's *Gospel Covenant*,² 'might have done good to man before his fall, as also since his fall, without binding himself in the bond of Covenant . . . but the Lord's heart is so full of love (especially to his own) that it cannot be contained so long within the bounds of secrecy, . . . but it must beforehand overflow and break out into the many streames of a blessed Covenant.'

Arminian theologians also made use of the covenant idea.³ But for them it had less importance, because their view of the relation between man and his Maker was founded on natural right. Thus, Arminius, while recognizing that God dealt with our first parents by way of covenant, distinguished between the law of nature, which God wrote on the heart of man, and the symbolical law, or law of precept, which deals with matters in themselves indifferent apart from the Divine command. While it is man's duty to obey in either case, the latter obedience is 'far inferior,' and 'is not so much obedience itself as the external profession of willingly yielding obedience' (*Works*, Eng. tr. ii. 370). To the Calvinistic theologians, on the other hand, the highest virtue consisted in submission to the will of God simply because it was God's will, and the covenants gained their great importance because they defined the specific form which, from age to age, that will assumed for man.

This precision of statement explains the prominence of the covenant idea in Puritanism. Puritanism, as is well known, is a type of thought which makes much of uniformity. The Puritan believed that God had not only revealed a way of salvation, but had established certain institutions and laid down certain laws, by means of which this salvation was to be mediated to those whom God had chosen to enjoy its blessings. He was a churchman as well as an individualist, and valued the covenant not only as the ground of personal assurance to the individual Christian, but as the charter which established the existence and defined the laws of the Christian society.

From this fact two further consequences follow which are necessary to the complete definition of the covenant theology: (a) the covenant furnished the framework for the treatment of Christian ethics; and (b) it gave the key to the Christian interpretation of history.

(3) *The covenant as the standard of Christian duty.*—The use of the covenant as a standard of duty, important as it later became, is derivative, not primary. The earlier theologians knew of but one covenant between God and man, namely, the covenant of grace. In this the Father, in consideration of Christ's promise of obedience even unto death, agreed to accept His satisfaction as an

¹ Cf. John Preston (*The New Covenant, or the Saint's Portion*, London, 1629): 'These words contain a further and a greater favour expressed to Abraham than the former words do . . . that is, I will not only tell thee what I am able to do, I will not only express to thee in general that I will deal well with thee, etc. . . . but I am willing to enter into covenant with thee, that is, I will bind myself, I will engage myself, I will enter into bond, as it were, I will not be at liberty any more, but I am willing to make a covenant, a compact and agreement with thee,' etc. (p. 70).

² *The Gospel Covenant, or the Covenant of Grace opened*, etc. . . . preached in Concord in New England, by Peter Bulkeley, London, 1646.

³ Cf. Arminius, *Works*, Eng. tr. by Nichols, London, 1825 ff., ft. 369 ff., 389 ff.; Limborch, *Complete System*, Eng. tr. by Jones, London, 1702, bk. III. ch. i. § 7, p. 211 ff.

equivalent for the punishment due by guilty man, and to accept the persons of the elect as righteous for His sake. God's dealings with Adam in Paradise were not brought under the covenant idea except in so far as the promise to Eve that her seed should bruise the serpent's head (Gn 3¹⁰) was regarded as an anticipation of the later covenant of grace. In the course of time, however, the idea was extended to include all God's dealings with man, before as well as after the Fall. Two covenants were distinguished—the covenant of works made in Paradise with Adam as the federal head of the race, and the covenant of grace made with Christ, the second Adam, or with the elect in Him as their representative. In the former, God reveals the substance of the moral law as the condition which He prescribes for the attainment of salvation. In the latter, He acquaints men with the machinery which He devised for the repair of Adam's fault. But the substitution of the second for the first covenant does not render the moral law obsolete; it only alters man's relation to that law. After as well as before the Fall perfect holiness is essential to salvation, and not the least of the blessings of the covenant of grace is its clear repetition of the substance of the law originally promulgated in Paradise. The covenant of grace differs from the covenant of works in the fact that it adds to the law the promise, i.e. the disclosure of the means through which Adam's original fault is to be repaired and the blessings of salvation won by Christ to be mediated to the elect. Accordingly, the covenant of grace includes, with the substance of the moral law, institutions of worship (i.e. sacraments and ceremonies) which, varying from age to age, typify Christ, and seal to believers the grace which He has merited for them.¹

The literature of the covenant, therefore, is full of discussion as to the nature of the Church and of the sacraments. Since the sacraments are signs and seals of the covenant of grace, it is essential that they should be rightly administered, and that those only should be admitted to partake of them who are really entitled to the privilege. Here we find differences of opinion among those who were agreed as to the general significance of the covenant and were at one in their opposition to Arminianism. Some held that the regenerate only had any right to the privilege of the sacraments;² others were willing to take a Christian profession (i.e. a dogmatical, as distinct from a justifying, faith) as *prima facie* evidence of right of admission to the sacraments.³ The controversy as to the half-way covenant, which agitated New England in the latter part of the 17th and in the 18th cent., is an echo of these earlier disputes.

There was also difference of opinion as to the extent to which the conditional language properly applicable to the covenant of works could be rightly employed of the covenant of grace. In the case of the covenant of works we have to do with a real condition. The whole significance of the agreement into which Adam entered with his Maker turned upon his possession of the freedom of contingency. But, in the case of Adam's descendants, such freedom is lacking. The contracting party in the second covenant is Christ, the second Adam; and one of the most important considerations in the compact into which He entered with the Father was that the Holy Spirit should

¹ The later Covenant theologians, interested in showing the uniformity of God's method with man, carry back the idea of the sacrament to Paradise, and associate it with the law as well as with the Gospel (cf. Thomas Blake, *The Covenant Sealed, or a Treatise of the Sacraments of both Covenants*, . . . London, 1655, p. 9 ff.).

² e.g. Richard Baxter, *Plain Scripture Proof of Infants Church-Membership and Baptism* (London, 1666), p. 327, quoted by Blake, *op. cit.* p. 114.

³ Thomas Blake, *op. cit.* p. 114.

be granted to the elect to make possible a faith of which they are incapable by nature. It would seem, then, an abuse of language to speak of any condition to be fulfilled on the part of the elect as distinct from Christ, and this was the position taken by some of the more rigorous Puritans. Christ, they held, was the sole party to the covenant of grace.¹ Others,² however, distinguished two covenants: the covenant of redemption entered into between the Father and the Son, and the covenant of grace made with the elect through Him. The covenant of grace, no less than that of works, they regarded as conditional, the difference being that in the former case the sole condition was faith in Christ, which faith was itself made possible through the gift of the Spirit.

But, whatever difference of opinion there may have been as to the conditionality of the covenant of grace, all agreed that no one could be saved whose life did not conform to the standard which it revealed. Of all heresies Antinomianism (*q.v.*) was most abhorrent to the Puritan, and many controversial tracts reveal the eagerness of the advocates of the covenant theology to clear their skirts from any imputation of sympathy with so abominable and dangerous an opinion. The assurance in which the Puritans rejoiced was indeed an assurance of salvation, but it was a salvation which included ultimate conformity to the Divine law.³

(4) *The covenant as a key to the Christian interpretation of history.*—Thus far we have considered the covenant theology primarily on its practical side, but it had an important theoretical significance as well, since it furnished the formula for the Christian interpretation of history. The Biblical writers speak of a number of different covenants entered into by God with different individuals at different times, and it was natural that the problem of the relation of these covenants one to another should engage the attention of Christian theologians. Protestants were agreed that God followed a uniform method in His treatment of men, and hence could not admit any essential difference in principle between the covenants; but they could not shut their eyes to the contrast between the covenant with Moses at Sinai and the new covenant foretold by Jeremiah and the prophets, which the Apostle Paul identifies with the Christian gospel; nor could they overlook the contrast drawn by Paul himself between the promise to Abraham and the law given by Moses. Thus, the relation between these different covenants constituted a problem, the solution of which furnished the nearest approach to a philosophy of history which the theology of the time possessed.

In general, it may be said that it was the disposition of the earlier Protestant theologians to minimize the difference between the Christian gospel and its preparation in the religion of Israel. All the Reformers recognize the contrast between the OT and the NT, and devote a section of their theology to a discussion of their differences. But they are agreed that these differences are superficial, and that, in substance, the two Testaments are the same. What the old dispensation shadows forth in types, the new fulfils in reality, but both alike, the OT and the NT, the law of Moses and the gospel of Christ, are to be regarded as different forms of the one covenant of grace (cf. the Westminster formula, 'one covenant under different administrations,' *Westm. Con.* vii. 5, 6).

¹ So John Saltmarsh, *Free Grace, or the Floodings of Christ's Flood freely to Sinners*, London, 1646, p. 125; Tobias Crisp (1600-1642), *Christ Alone Exalted*, 1643-6.

² e.g. Daniel Williams, *Gospel Truth Stated and Vindicated*, etc., London, 1692, a reply to Crisp.

³ This consciousness of strict moral responsibility found expression in the National Covenants, to which reference will presently be made, as well as in the large space given to the exposition of the moral law in the Catechisms of Puritanism.

With the recognition of the twofold covenant a further distinction is introduced. We have now the contrast between the covenant of works entered into between God and Adam, the substance of whose requirement is repeated in the law given on Sinai, and the covenant of grace under its twofold administration, the OT and the NT. Another distinction meets us in William Ames (*Amesius*),¹ and was further developed by Cocceius and his successors in the early part of the 17th century. These theologians, while making use of the general formula already described, distinguished within the administration of the old dispensation various historic stages marked by characteristics of their own.² Thus, there are the periods (1) from Adam to Noah, (2) from Noah to Abraham, (3) from Abraham to Moses, (4) from Moses to David, (5) from David to Christ, each of which has its own institutions and sacraments. In like manner, the NT has its own divisions, e.g. (1) from the Advent to the Resurrection, (2) from the Resurrection to the Second Coming, and (3) the Final Consummation in the world to come. Such a treatment made it possible for those theologians to do more justice to the facts of Biblical history than was possible under the more rigorous scheme of their predecessors. Robertson Smith, speaking of the federal theology of Cocceius, says with justice that, 'with all its defects,' it 'is the most important attempt, in the older Protestant theology, to do justice to the historical development of revelation' (*Prophets of Israel*, Edin. 1882, p. 375).

Thus the covenant theology has a threefold significance. In the first place, it is a theory of salvation; in the second place, it is a programme for conduct; in the third place, it is a philosophy of history. The section that follows will attempt to show how the different interests cross and re-cross in the course of the history.

3. *History of the covenant theology.*—(1) *The antecedents.*—The Biblical basis for the covenant theology is found partly in the account given in the OT of various covenants made by Jahweh with Israel³ or with representative Israelites,⁴ partly in the Pauline identification of the Christian gospel with the new or spiritual covenant prophesied by Jeremiah and other prophets.

The Heb. word בְּרִית, tr. 'covenant' in our versions, denotes either a treaty or alliance entered into between equals (e.g. between Abraham and the Amorites, Gn 14¹⁸, AV and RV 'confederate'; Hiram and Solomon, 1 K 5¹², AV and RV 'league'), or a constitution or ordinance establishing the relation between a monarch and his subjects (e.g. David and the Israelites, 2 S 5³; Zedekiah and his people, Jer 34⁸⁻¹⁸). This difference of meaning is not without its bearing on the later history.

If we analyze the transactions described in the OT by the term 'covenant' (בְּרִית), we find that they fall into two classes—those in which Jahweh reveals to His servants a purpose which He has conceived independently of man, and whose execution is dependent upon no one but Himself, and those in which the conduct of the people with whom the covenant is made is a determining factor. Of the former class are the covenants with Noah and Abraham; to the latter belong the covenant at Sinai and the later covenants with Jehoiada (2 K 11¹⁷), Hezekiah (2 Ch 29¹⁰), and Josiah (2 K 23³). The promise to Noah that day and night shall no more fail (Gn 8²²), or to

² Gess (*Gesch. der prot. Dogmatik*, Berlin, 1857, II. 265), following Schweizer (*Reform. Glaubenslehre*, I. 103 ff.) and Schneckenburger (*Vergleichende Darstellung*, etc., II. 146), regards this disposition to apply the covenanting form to the different stages in the history of religion as characteristic of the Reformed theology from the first, and finds its beginnings in Bullinger and Leo Jud.

³ e.g. at Sinai (Ex 19²⁴ [E] 34¹⁰, 37²⁸ [J] 31¹⁶, Lv 21³ [P] 24²⁶ [Dt 4¹³]) in the plain of Moab (Dt 29¹⁻¹¹).

⁴ e.g. Noah (Gn 9¹¹⁻¹⁷ [P], Is 54¹⁰, Jer 33²⁰⁻²⁵); Abraham, Isaac, and Jacob (Gn 15¹⁸ [J] 17²¹, Ex 24⁴, Lv 24⁴² [P], 2 K 13²³, 1 Ch 16¹⁰, Ps 105⁸⁻¹⁰, Neh 9⁸, Jer 34¹⁸); Phinehas, (Nu 25¹² [P]); Joshua and Israel (Jos 24²⁸ [E]); David (Ps 89²⁸⁻³⁴, 132¹², cf. 2 S 7, 1 Ch 17); Jehoiada (2 K 11¹⁷, 2 Ch 29¹⁰); Hezekiah (2 Ch 29¹⁰); Josiah (2 K 23³); and Ezra (Ezr 10⁸).

Abraham that in his seed all nations shall be blessed (Gn 12³ etc.), is obviously not in the same class with the promises which accompanied the giving of the Law to Israel, which were, in the nature of the case, conditional upon the future conduct of the Israelites. Yet both alike are described by the same word.

Besides these covenants there is also frequent reference in the prophets to a new covenant which Jahweh is to establish with redeemed Israel in the future (Jer 31³¹⁻³³, cf. Is 42⁶ 49⁸ 55³ 59²¹ 61⁸, Jer 32⁴⁰ 50⁵, Ezk 16⁶⁰ 62¹⁰ 37²⁶ 34²⁸ 37²⁶, Ezk 218³⁰). Unlike the old covenant, this is to be inward and spiritual, a law written on the hearts of the people (Jer 31³³), and will be of everlasting validity.

This new covenant the NT identifies with the Christian gospel, which is contrasted with the Mosaic law as the former or old covenant (Gal 4⁴, He 9¹⁵, 18, cf. 8², 2 Co 3⁶). Like the latter, it was sealed with sacrifice—even the blood of Christ, who by His voluntary obedience and submission unto death has rendered the older sacrificial system superfluous and become the mediator of a new and better covenant (He 7²² 8⁶⁻⁹ 12²⁴), since it is an everlasting one (13²⁰). This new covenant is symbolized in the cup which Jesus gave to His disciples at the Last Supper (Mt 26²⁸, Mk 14²⁴, Lk 22²⁰, 1 Co 11²⁵). It has its anticipation in the covenant of promise made by Jahweh with Abraham (Gal 3¹⁷ cf. Eph 2¹², Ac 8²), which, being prior to the Law, could not be superseded by it.

We find thus in the NT the same double usage which we found in the OT, the word *διαθήκη* being used now to denote a free promise of God, as to Abraham and his seed, and later to Christian believers in the gospel, now of a series of precepts and orders given through Moses and his successors, and conditional in their effects upon the obedience of the people.

In He 9¹⁸ the idea of the covenant is interchanged with that of the testament, or will—a substitution which explains the uniform rendering of *διαθήκη* in the Vulgate by the Lat. *testamentum*, and its frequent translation in AV by the word 'testament' (e.g. Mt 26²⁸, Mk 14²⁴, Lk 22²⁰, 1 Co 11²⁵, 2 Co 3⁶, 14, He 7²² 9¹⁷).

In view of the emphasis laid by the Biblical writers upon the covenant idea, and their use of the conception to describe the different steps in the Divine training of mankind, it is surprising that it should so early and so completely have fallen into the background. Irenæus is the only early Christian writer who makes much use of it. He distinguishes several different covenants (*διαθήκη, testamentum*) into which God has entered with man, and regards the study of their nature and relations as a legitimate subject for Christian investigation.¹ His interest in the subject is, doubtless, due to the fact that, like St. Paul, he was chiefly concerned with the question of the nature of the difference between Judaism and Christianity—a difference which naturally expressed itself in the contrast between the old covenant and the new. When this question fell into the background, as it soon did, the covenant phraseology went out of use. Augustine makes no use of the idea in his *City of God*, and it plays no important part in the theology of Roman Cathol-

¹ While in one passage (III. xi. 8) Irenæus distinguishes four distinct covenants (namely, those with Noah [so the Greek text; the Latin reads 'Adam,' and substitutes Noah for Abraham, omitting the latter], Abraham, Moses, and Christ), in general he recognizes only two, namely, the old covenant, or law, given through Moses, and the new, or gospel, given through Christ (III. xii. 11; IV. ix. 1, xxxii. 2). According to this division, God's dealing with man in the pre-Mosaic period is not to be conceived under the covenant relation, the reason being that law is not needed by those who are just (IV. xvi. 2). The Law, by which Irenæus means the Jewish ceremonial law, was added later because of sin, and was destined in time to be replaced by the Christian gospel, or new law of liberty (*lex vivificatrix*, IV. xxxiv. 4), as the means through which alone full righteousness and salvation are made possible.

We have thus in Irenæus three distinct stages in the process of the Divine training of man—the pre-Mosaic period, typified by Abraham, in which man works out his own salvation through obedience to the natural law written on the heart; the period from Moses to Christ, in which his salvation is conditioned upon fidelity to the Jewish ceremonial law; and the period of the gospel, in which the ceremonial law is abrogated, and salvation depends upon man's free fulfilment of the moral law, which Christ has reaffirmed and reinforced with new sanctions. While, in general, the covenant idea is applied to the two later of these periods only, in principle the three belong together, and, in one passage, the covenant idea is extended backwards to include the pre-Mosaic period. In this, as we shall see, Irenæus is typical of the development of the later covenant theology.

On the theology of Irenæus, cf. Werner, 'Der Paulinismus des Irenæus,' in *TU*, Leipzig, 1889, pp. 179-202. On the significance of Irenæus in early Christian theology, cf. W. A. Brown, *Essence of Christianity*, Edinburgh, 1906, p. 64 f.

icism. It was only when the rise of a new religious type, historically derived from Catholicism, but independent of it, brought the question of the distinctive nature of Christianity again into the foreground, that the subjects which engaged Irenæus' thought became again of general interest. This condition emerged at the Reformation, and one of its consequences was the revival of the covenant idea.

But, though Catholicism contributed little directly to the preparation for this type of theology, its indirect contribution was great. The conception of God as lawgiver and judge, the expression of Christ's work in terms of satisfaction and equivalence, the conception of the Christian Church as the inheritor of the rights and privileges of the Jewish Church, and the loss of St. Paul's sense of the novelty of Christianity as a historic religion, all helped to prepare the way for the use by Protestant theologians of OT legalistic phraseology to describe a type of religious experience whose characteristic feature was the denial of the possibility of salvation by works.

(2) *The beginnings of the covenant theology.*—In tracing the history of the covenant theology in Protestantism, we have to recall the distinction already made between the covenant idea and the covenant theology. The idea of the covenant or testament is used by all the Reformers to express God's gracious revelation to His people, both before and after Christ. Two such revelations were distinguished, the OT and the NT, agreeing in substance, but differing in administration, and the nature at once of the agreement and of the difference forms the subject of a special *locus* in the early Protestant dogmatics (e.g. on the Law and the Gospel; on the difference between the OT and the NT).¹ But the conception was not given the structural importance in the system which it later acquired, and which warrants us in speaking of a covenant theology as distinct from the covenant idea.

We may take Calvin as typical of all the Reformers. He distinguishes the Gospel not merely from the Law, but from earlier gracious revelations of God within the OT, yet he hastens to add that we must not imagine that the Gospel has 'succeeded the whole Law in such a sense as to introduce a different mode of salvation. It rather confirms the Law, and proves that everything which it promised is fulfilled. What was shadow, it has made substance. When Christ says that the Law and the Prophets were until John, he does not consign the fathers to the curse, which, as the slaves of the Law, they could not escape. He intimates that they were only imbued with the rudiments, and remained far beneath the height of the Gospel doctrine. . . . Hence we infer that, when the whole Law is spoken of, the Gospel differs from it only in respect of clearness of manifestation' (*Institutes*, II. ix. 4).²

¹ Thus Calvin finds the agreement (1) in the common hope of immortality; (2) in the fact that both were established by the mercy of God; (3) in that 'they both had and knew Christ, the Mediator, by whom they were united to God and made capable of receiving His promises.' The difference consisted (1) in that in the old covenant the heavenly inheritance was exhibited under the form of temporal blessings, which was not the case in the new; (2) in that the OT typified Christ under ceremonies which exhibited 'only the image of truth, the shadow, not the substance,' whereas the NT gives us 'both the full truth and the entire body'; (3) in that the OT is literal, and the NT spiritual; (4) in that the OT is one of bondage, the NT one of liberty; and, finally, (5) in that the OT is for one people only, while the NT is for all. Cf. Brown, *Essence of Christianity*, p. 103 f.

² It is instructive to compare Calvin's view with that of Irenæus. He follows Irenæus in conceiving of two covenants or testaments, the Old and the New. He agrees with him further in that he does not apply the term 'covenant' to God's primitive revelation to Adam in Paradise. He differs from Irenæus in that he brings both covenants under the conception of grace rather than of law. Irenæus, like the early theologians in general, conceived salvation primarily in terms of the fulfilment of law. To Calvin, as to all the Reformers, salvation is a means of repairing the damage wrought by man's transgression of law. Like Irenæus, Calvin regards both covenants as expressions of a single principle. But, whereas Irenæus carries forward the idea of merit from the Law and applies it to the Gospel, Calvin carries back the idea of free grace into the Law, and interprets the latter by the

In thus emphasizing the essential unity of God's dealings with His people, Calvin is representative of all the Reformers. Luther¹ and Melancthon² recognize no difference in principle between God's dealings with His people under the old dispensation and under the new. The first specific treatise on the covenant which the present writer has been able to discover is that of the Swiss reformer, Henry Bullinger, which bears date 1534, and has for its title *De Testamento sive fœdere Dei unico et æterno*. Bullinger, like his predecessors, recognizes only one covenant, namely, the covenant of grace.³

The beginnings of the covenant theology in a technical sense are to be found on German soil, and precede the more famous school of Cocceius by more than half a century. Its representatives were Reformed theologians who, under the influence of a warm and vital piety, had developed a theology which differed in several respects from the stricter predestinarianism of Switzerland and France. This theology had three main characteristics. In the first place, it used the conception of the Divine covenant, with its synonyms, the Church or the Kingdom, as a comprehensive theological idea to express the purpose at once of creation and of redemption, and to give unity to the rest of the system. In the second place, it associated this conception with the idea of the believer's mystic union with Christ; and, in the third place, it deduced from the combination of these two conceptions, rather than from the doctrine of predestination, its doctrine of the perseverance of the saints.⁴ The two best known representatives of this theology were Caspar Olevianus and Zacharias Ursinus, the authors of the Heidelberg Catechism.⁵

Olevianus' most important dogmatic monograph, published anonymously in 1585, is entitled *De substantia fœderis gratuiti inter Deum et electos, itemque de mediis*, etc. This work, as the title indicates, discusses the nature of the free covenant between God and the elect, and the means through which its substance is communicated to us. The substance of the covenant consists in God's promise and oath that He will never be angry with His former. We may say, indeed, that the characteristic feature of the Reformed theology is the attempt to use legal phraseology to express a gospel which is essentially anti-legal; and the reason why the covenant idea finds such favour with its representatives is the fact that the covenant expresses an obligation voluntarily assumed on either side, and hence not properly to be brought under the sphere of necessity.

¹ Cf. the references in Köstlin, *Luthers Theologie in ihrer geschichtlichen Entwicklung und ihrem inneren Zusammenhang*², Stuttgart, 1883, 2 vols., esp. II. 376 ff., Eng. tr. II. 359 ff.

² Cf. his *Loc Communes*, ed. Kolde, 2nd ed., Leipzig, 1900, esp. p. 211 ff.

³ The design of Bullinger's treatise is to show that the gospel is older than Judaism, Muhammadanism, and Catholicism; indeed, that it goes back to 'Noah, Enoch, Seth, Abel, Adam, who without circumcision pleased God through faith.' He holds that there is no Christian virtue commended in the NT which was not equally exemplified in the words and deeds of Abraham. Cf. the citations given by Rockwell, *Die Doppelte des Landgrafen Philipp von Hessen*, Marburg, 1904, p. 223, note 2.

⁴ So Heppé, *Dogmatik des deutschen Protestantismus im 16ten Jahrhundert*, Gotha, 1857, I. 143 ff. Heppé is the best authority on the German Reformed theology, and this work gives much information concerning works otherwise inaccessible to English readers. Cf. esp. pp. 139 ff., 188 ff.

⁵ Besides Olevianus and Ursinus, Heppé mentions, as representatives of the covenant theology, Andrew Hyperius, Professor of Theology at Marburg from 1541 to 1564 (*Methodi theologicæ sive præcipuorum Christianæ religionis locorum communium*, Basel, 1566); Peter Boquinius, Professor of Theology at Heidelberg, died 1582 (*Æægesis divina atque humana controversas*, Heidelberg, 1581); Joachim Cursus (*Æægesis perspicua et ferme integra controversas de sacra cœna*, 1574, ed. Scheffer, Marburg, 1858); Bohnius (*Methodus theologicæ*, Oyp. ed. 3, I. 234 ff.); Raphael Eglin, Professor of Theology in Marburg (*Diezodius theologicus de magno illo institutionis nostras in Christum mysterio Rom. 6; De fœdere gratiæ ex loco Rom. 8²¹*, Marburg, 1613), and esp. the theologians of Bremen, Matthias Martinus (*Christianæ doctrinæ summa capita*, 1603), and Ludwig Crocius (*De perseverantia sanctorum libri septem dogmatici et apologetici*, Bremen, 1616).

elect, but will receive them as sons of God and heirs of eternal life in Jesus Christ. This promise consists in the offering through the gospel of the Son of God, with the double benefit which He brings, namely, the remission of sins and renewal after the Divine image through the life-giving Spirit. These gifts are made known to us outwardly, by the word and by visible signs, as a testimony of agreement between God and ourselves, and are confirmed with inner efficacy by the free gift of faith through the infinite mercy of God to the elect. The work is introduced by a discussion of the following questions: (1) Who is God, the author of the covenant? (2) Who is man, with whom God establishes His covenant? (3) What is the nature of the covenant itself?

Even more striking in its historic significance is an earlier treatise of Olevianus, the *Expositio Symboli*,¹ in which the Apostles' Creed is interpreted under the form of an exposition of the covenant of grace, the articles of the Creed being regarded as a brief statement of the terms of the covenant. It is to be noted that the first book of the *De substantia fœderis* also takes the form of an exposition of the Apostles' Creed, the second book being given to the proofs of the covenant. Under this head Olevianus discusses the function of the Church, and more specifically the word and the sacraments. Here we see the covenant idea given structural significance and made a comprehensive conception under which the whole content of Christian faith and practice may be brought.²

Olevianus recognized in principle but a single covenant, namely, the covenant of grace. It was reserved for his successors (e.g. Raphael Eglin, and Matthias Martinus) to extend the covenant idea to the relation of man before the Fall and to distinguish two covenants—that of works and that of grace.³ With this distinction the scheme of the covenant theology in its later form is complete.

(3) *The covenant theology in Puritanism.*—Parallel with the movement already described, we find another developing on the other side of the channel. In English Puritanism, as we have already seen, the covenant idea found congenial soil, and the later treatises of Cocceius and his school owe quite as much to the impulse gained from English writers⁴ as to the German theologians already referred to.

¹ *Expositio Symboli Apostolici, sive articulorum fidei, in qua summa gratuiti fœderis æterni inter Deum et fideles breviter et perspicue tractatur*, Frankfurt, 1576.

² While agreeing in substance with Olevianus, Ursinus does not give the covenant so important a place in the structure of his system. His views are set forth most fully in his *Sum of the Christian Religion* of 1598 (*Corpus doctrinæ christianæ ecclesiæ papæ reformatarum, continens explicationes catecheticas D. Zachariæ Ursini . . . studio Davidis Parei . . .*). This work was the outgrowth of Ursinus' lectures on the Heidelberg Catechism, first published in Geneva in 1584; afterwards in a fuller edition by David Pareus in 1591. Pareus' work was a revision and amplification based upon his own notes, and included much matter for which Ursinus was not responsible. This matter the later edition of 1598 omits, and it may be regarded as the most authoritative statement of Ursinus' views. It was often reprinted, and was translated into English under the title, *The Summe of Christian Religion*, by Dr. Henry Parry, London, 1645.

The discussion of the covenant is introduced by Ursinus between Questions 18 and 19, which deal with the mediatorship of Christ, and the gospel, and includes the following sub-heads: (1) What a covenant is; (2) Whether it can be made without a mediator; (3) Whether there be but one and the same covenant, or more; (4) In what the old and the new covenant agree, and in what they differ.

³ Cf. Heppé, *op. cit.* p. 197. It is an interesting question when the idea of the covenant of God with Adam first makes its appearance. We find no trace of it in our canonical Scriptures. Schmidt (art. 'Covenant' in *EBI*) finds the first appearance of the idea in Sir 17¹², but the reference is not altogether clear, and other commentators refer the passage to Sinai.

⁴ Among Cocceius' teachers, besides Martinus and Crocius, was the English Puritan, William Ames.

The covenant idea makes its earliest appearance in English history in practical rather than theoretical form, in the National Covenants entered into by the Scottish people and their rulers. These were solemn engagements, in which the nation as a whole pledged itself to be true to the revealed will of God as set forth in the Scriptures, and interpreted with the stern literalism of the Puritan conscience. Such a national covenant is the so-called *Second Scottish Confession*, a practical appendix to the early Confession of Knox (1560), to which the people publicly subscribed in the year 1581. It was frequently renewed in the course of the later history, and played a momentous part in the struggles of the Stuarts with their rebellious fellow-countrymen. It is not strange that an idea familiarized to the Scottish people in so dramatic a way should have received early literary expression. See art. COVENANTERS.

One of the earliest Scottish monographs on the covenant bears date 1598, and is by Robert Rollock (1555-1598), a distinguished Principal of the University of Edinburgh (*Quæstiones et Responsiones aliquot de fœdere Dei deque sacramento quod fœderis Dei sigillum est*). Here already there is emphasized the close connexion between the covenant and the sacrament which is characteristic of the later history.¹

English monographs were frequent during the first half of the 17th century. An anonymous treatise, bearing date 1616, is dedicated to the mayor and magistrates of the town of Feversham in Kent.² Like Olevianus, its author uses the covenant idea as a framework for the exposition of the Creed. His practical interest is apparent in his emphasis upon the importance of renewing one's covenant made in baptism through 'a continual repeating' of it, which takes place in catechizing the children of the faithful (p. 63). Other treatises by John Preston (*The New Covenant, or the Saints' Portion*, London, 1629), and George Downame (*The Covenant of Grace, or an Exposition upon Lk 17th. 74. 75*, Dublin, 1631), are likewise practical in nature.

The theological significance of the idea is apparent in the place given to it in systematic treatises. William Ames (1576-1633) in his *Modulus S.S. Theologie* (Eng. tr. *Marrow of Sacred Divinity*, 1642)³ distinguishes two covenants—the law or covenant of works given to Adam in Paradise, having as its symbols the two trees of the Garden (I. x. 33), and the covenant of grace made with the redeemed through Christ. Ames traces the various steps in the administration of the covenant of grace, distinguishing not only the periods before and after Christ (the OT and NT), but also, under the first, the periods from Adam to Abraham, from Abraham to Moses, from Moses to Christ; and, under the second, the period from Christ to the end of the world and the eternal reign of the saints in heaven (I. xxxviii. xxxix.). In this he anticipates the later teaching of his pupil Cocceius.

Even more detailed is the description of the covenant given by Ussher in his *Body of Divinity*.⁴ Here the nature of the compact made by God with Adam is described in great detail, and man in the person of our first parent is declared to have pro-

¹ Mitchell (*Westminster Assembly*, London, 1883, p. 877) cites Howie as another early Scottish representative of the covenant theology, but the present writer has not been able to verify the reference.

² *The covenant between God and man plainly declared in laying down the chiefest points of Christian religion*, London, 1616.

³ Cf. also William Perkins, *A Golden Chain, or the description of theologie* (*Works*, London, 1635, i. 701.); *An exposition of the symbols or Creeds of the Apostles* (ib. p. 164 ff.); John Downame, *The Summe of Sacred Divinitie*, London, n.d., bk. I. ch. xvi., bk. II. ch. i.

⁴ *Body of Divinitie, or the Summe and Substance of Christian Religion*, London, 1645.

mised 'by that power which he had received to keep the whole law, binding himself over to punishment in case he did not obey' (p. 126). On the other hand, the covenant of grace was made by 'God alone,' who, immediately after man's fall in Paradise, declared to Adam His gracious purpose to save the elect through Christ (p. 158).¹

Through Ussher the covenant idea received its first confessional expression in Puritanism. It appears in the 21st article of the *Irish Articles*, of which he was the author, and from them passed to the *Westminster Confession of Faith*, in which it forms the subject of a special chapter (vii.).²

The covenant was frequently discussed in the latter half of the 17th century. It appears not only in the works of the great Puritan theologians, Richard Baxter³ (1615-1691), and John Owen⁴ (1616-1683), but in many monographs by men less known to fame, e.g. John Saltmarsh,⁵ Thomas Blake,⁶ William Allen,⁷ Edward Leigh,⁸ and Daniel Williams.⁹ It filled an important rôle in the controversies that divided the different parties in the Church, and a correct understanding of its nature and scope was regarded as one of the prime requisites of a sound orthodoxy.

Thus, as we have already seen, the stricter and the looser predestinarians were divided as to the conditionality of the covenant of grace. The stricter predestinarians denied that it was conditional at all. Like Ussher, they held that God alone was its author, or, at most, God and Christ. Representatives of this view were Saltmarsh and Crisp. Others, like Owen and Baxter himself, held to a true conditionality. They distinguished between the covenant of redemption, made between the Father and the Son, and the covenant of grace, made by the Father with the elect in Christ;¹⁰ and, while they held that the redeemed were enabled to fulfil their part only through the grace which Christ had merited for them, yet they believed in preaching as though all depended upon

¹ Cf. also *The Marrow of Modern Divinity*, in two parts, 1645, 1649, by E. F., edited with Introduction, Notes, and an Appendix, Biographical and Bibliographical, by O. G. M'Orrie, 1902. The sub-title of this 'epoch-marking, if not epoch-making,' work, as M'Orrie calls it, reads: 'Touching both the Covenant of Works, and the Covenant of Grace: with their use and end, both in the time of the Old Testament and in the time of the New' (*Confessiones of the Church of Scotland*, Edinburgh, 1907, p. 69).

² Even more prominent is the use made of the covenant idea in the *Sum of Saving Knowledge*, a brief compendium of doctrine which appeared in Scotland in 1650, and is bound up with the Confession and Catechisms in many of the later Scottish editions. Here the language of bargain and sale appears in its baldest form (e.g. Head II.: 'By virtue of the foresaid bargain, made before the world began, He, i.e. Christ, is, in all ages, since the fall of Adam, still upon the work of applying actually the purchased benefits unto the elect: and that He doth by way of entertaining a covenant of free grace and reconciliation with them through faith in Himself, by which covenant He makes over to every believer, a right and interest in Himself, and in all His blessings.')

³ Cf. his *Plain Scripture Proof of Infants' Church-Membership and Baptism*, London, 1658 (pp. 100 ff., 112 ff., 223 ff., 326 ff.), as well as his Preface to Allen's *Discourse on the Nature, Ends, and Difference of the Two Covenants*, London, 1673.

⁴ Cf. his *Doctrine of Justification by Faith*, ch. viii. xiii.; *Treatise on the Doctrine of Perseverance* (*Works*, ed. Gould, xl. 205), Edin. 1851-55, *Salus Electorum Sanguis Jesu, or the Death of Death in the Death of Christ* (Gould's ed., x. 168 ff.).

⁵ *Free Grace, or the Flowings of Christ's Blood freely to Sinners*, London, 1646.

⁶ *Vindiciae Fœderis, or a Treatise of the Covenant of God, entered with mankind, etc.*, London, 1663, *The Covenant Sealed, or a Treatise of the Sacraments of both Covenants, polemically and practically, especially of the Sacraments of the Covenant of Grace*, London, 1655.

⁷ *A Discourse of the Nature, Ends, and Difference of the Two Covenants*, London, 1673.

⁸ *A Treatise of the Divine Promises, in five books. . . In the four last a declaration of the covenant itself, the bundle and body of all the Promises*, London, 1633.

⁹ *Gospel Truth Stated and Vindicated, wherein some of Dr. Crisp's opinions are considered, and the opposite truths are plainly stated and confirmed*, London, 1692.

¹⁰ Cf. Owen, *Doctrine of Justification by Faith*, ch. viii. (*Works*, ed. Gould, v. 191).

the action of the human will. The tract of Williams, already referred to, gives an interesting picture of the questions in controversy, and the extent to which the stricter party were willing to carry their logic.

That these controversies were not confined to Old England, but speedily found their way across the water, finds interesting confirmation in a treatise of Peter Bulkeley, which appeared in London in 1646, and is entitled *The Gospel Covenant, or the Covenant of Grace opened*. It gives the substance of sermons preached by its author in his parish in Concord, in New England. He speaks of great divisions which had arisen about the covenant, and some busybodies who called the preachers 'legall preachers,' and said that they were 'wholly ignorant of the covenant of grace, and . . . shut up under a covenant of works.' The reference is evidently to the rising Antinomianism which is associated with the name of Anne Hutchinson, 'that wretched Jezabell,' as Bulkeley calls her (p. 293). Bulkeley, who himself seems to have been a man of moderate views, gives a list of the questions in dispute, e.g. (1) whether the covenant of grace was made between God and man, or only between God the Father and Christ; (2) what is the meaning of the reference to Abraham's seed in Gal 3¹⁶; (3) what the covenant of Sinai was, whether of works or of grace; (4) whether justification may be evidenced by sanctification; (5) whether the commandment commanding faith be a commandment of the law; (6) whether faith be a condition antecedent to justification or only consequent; and (7) whether the conditional promises be promises of free grace or no (Preface, p. 3).

The theoretical difference had its practical effect in the doctrine of the Church. The question here turned on how far it was possible to preserve the purity of the Church in the administration of the sacraments and ecclesiastical discipline. All but the Baptists agreed that the covenant of grace, like the Abrahamic covenant of the OT, included the children of believers, and therefore defended the practice of infant baptism. But this position raised perplexing questions as to the administration of the other sacraments. Since baptism could rightfully be administered to some who were not regenerate, why should the Lord's Supper be confined any more strictly? Why not recognize that the covenant conferred upon the children of believers certain ecclesiastical rights which extended beyond the circle of the elect, and be willing to accept a dogmatical, as distinct from a justifying, faith as the sufficient ground for admission to the Supper? This was the position taken by Blake in his interesting treatise entitled *The Covenant Sealed*—a position which brought him into a controversy with Baxter, in which it must be confessed that he puts that sturdy defender of the larger liberty to sore straits to defend his more exclusive position on this point.¹

These practical controversies also had their echoes in America. The question as to those who could rightly be admitted to the Lord's Supper was one which agitated the New England churches for many years, and in the so-called half-way covenant the laxer practice advocated by Blake was long prevalent.²

A typical example of the Puritan treatment of the covenant is William Strong's posthumous *Discourse of the Two Covenants* (London, 1678), a voluminous treatise of 447 large quarto pages, the substance of which was originally delivered in the form of sermons. Comparing it with similar treatises by Continental writers, we notice its practical interest, which appears (1) in the constant application of the points made to the different classes of people living in Strong's own day; (2) in the emphasis laid upon the obligations created by the covenant as distinct from its benefits; and (3) in its full discussion of the covenant relation of the children of believers. On the last point he leans to the views of Blake rather than to the stricter views of Baxter. He claims federal holiness for the children of the righteous as distinct from the personal holiness of regeneration; but he does

not specifically apply the principle involved to the question of the Lord's Supper.

(4) *Cocceius and his school*.—The most eminent representative of the covenant theology is undoubtedly John Koch, or, as he is better known by his Latin name, Cocceius. He was born in Bremen in 1603, studied Hebrew under Matthias Martinus, and theology under Ames and Crocius. He was Professor of Theology successively at Bremen, 1630-1636; at Franeker, 1636-1650, where he succeeded Ames; and at Leyden, 1650-1669, where he died. He became the leading opponent and reformer of the scholasticism of his day, and by his more historical treatment of theology prepared the way for the later discipline of Biblical Theology. In this attempt he found a fruitful clue in the covenant idea, which he used as the organizing principle of his system.

Cocceius' leading monograph is entitled *Summa doctrinæ de fœdere et testamento Dei*, and was published at Leyden in 1648.¹ After a discussion on the meaning of the word *fœdus*, or 'covenant,' he defines the covenant of God as nothing else 'than the Divine declaration of the method (*ratio*) of perceiving the love of God and of obtaining union and communion with him' (*Opera*, Amsterdam, 1673, i. 10). It differs from human covenants in the absence of the mutual feature. God alone initiates it, yet it becomes complete only when man by God's grace binds himself to accept its provisions.²

Cocceius, like earlier theologians, distinguishes two covenants, that of works and that of grace. The sum of the former is the law, both natural and written. It is made with Adam for himself and for all his descendants, except Christ. It was abrogated in a fivefold way: (1) so far as the possibility of its fulfilment is concerned, by sin; (2) so far as its condemnation is concerned, by Christ, as set forth in the promises and apprehended by faith; (3) so far as its terror is concerned, by the promulgation of the new covenant; (4) so far as the struggle with sin is concerned, by the death of the body; and (5) so far as all its effects are concerned, by the resurrection from the dead.

The new covenant is the agreement between the Father and Christ as the second Adam, wherein God declares His purpose, in consideration of Christ's atoning sacrifice, to save certain individuals by working in them faith through the word of promise and the gift of the Spirit, and to confirm the same by the institution of the Church, with its sacraments. This covenant is set forth in various ways, both before and after the coming of Christ. It was made known to Adam in Paradise through the institution of sacrifice, and renewed to Abel, Enoch, Noah, Abraham, and to all the people of Israel through Moses. But its most glorious promulgation was through the coming of Christ Himself in the flesh, and the full revelation of God's loving purpose which He made. In this connexion, Cocceius is led to treat at length of the difference between the economies of the OT and of the NT, and to indicate wherein the superior excellence of the NT consists.

The novelty of Cocceius' treatment consists not so much in the special ideas which he enunciates as in the detail in which they are carried out, and, above all, in the free use which he makes of the Biblical material. The idea of the twofold covenant,

¹ Later enlarged edd. 1654, 1660. The covenant is also treated at length in Cocceius' *Summa Theologiæ ex Sacris Scripturis repetita* (Leyden, 1662, Amsterdam and Geneva, 1665), of which the covenant of works forms the subject of the eighth *locus*, and the covenant of grace of the fourteenth and following *loci*.

² Cocceius distinguishes between that form of covenant in which no condition is required on man's part (e.g. the promise to Noah that day and night shall never fail) and the more usual form, which includes the stipulation of acceptance and obedience by man.

¹ Cf. pp. 114, 189. Blake's argument with Baxter turns upon the question whether faith that is short of justifying entitles to baptism, but the principles involved apply with even greater force to the more radical position taken by Blake with reference to the Lord's Supper.

² Cf. F. H. Foster, *A Genetic History of the New England Theology*, Chicago, 1907, p. 81 ff.

as we have seen, goes back to Cocceius' teacher, Matthias Martinus; the distinction of different periods within the OT dispensation is recognized by Ames, but there is a breath of freedom and of originality about Cocceius' treatment which gives it a distinction of its own. It broke away from the prevailing tradition of the contemporary scholasticism, and it called forth, as such innovations always do, bitter opposition on the part of those who sat in the seat of authority.¹ Cocceius, temperate and devout as he was, soon found himself the centre of a bitter controversy, and, what was probably the last thing in the world which he intended, the founder of a school.

Among the representatives of the school of Cocceius may be mentioned Wilhelm Momma,² Francis Burmann,³ Johann Braun,⁴ Johann van der Wayen,⁵ and Hermann Witsius.⁶ The treatise of Witsius on the economy of the covenants was early translated into English, and had many readers both in England and in America. It is one of the best sources for the knowledge of the covenant theology in its later and more developed form.⁷

After an initial discussion of the covenant in general, Witsius begins by describing the covenant of works. He takes up successively the contracting parties, the law or the condition, the promises by which it was accompanied, the penal sanction which was attached to it, and the sacraments by which it was sealed. He speaks of its violation by man's sin, and its consequent abrogation by God in favour of the new covenant of grace. Like Cocceius, Witsius distinguishes between the covenant of redemption, made by the Father with the Son, and the covenant of grace, made by God with the elect. The substance of this is set forth under the familiar theological heads of 'election,' 'effectual calling,' 'regeneration,' 'faith,' etc.; and then its different economies or dispensations in the OT and NT, with their several sacraments and ceremonies, are discussed at length.

With this treatment, the covenant theology reaches its final development. Those who come after add nothing in principle to that which has gone before.

(5) *The later history.*—It is not necessary to follow the later history in detail. Treatises on the covenant continued to be written both in England and on the Continent. Ezekiel Hopkins, Bishop of Londonderry, left the manuscript of a series of sermons on the doctrine of the two covenants, posthumously published in 1712, in which he declares that 'of all the mysterious depths in Christian religion, there is none more necessary for our information or more influential upon our practice than a right apprehension and a distinct knowledge of the doctrine of the covenants' (p. 2). Thomas Boston, a Scottish Presbyterian (1676-1732), wrote a treatise on the covenant of grace,⁸ which was often republished both in England and in America, and

¹ Among the leaders in the attack upon Cocceius were Samuel Maresius, Professor of Theology at Groningen, and Glabertus Voetius, Professor of Theology at Utrecht.

² *De varia conditione et statu ecclesiae Dei sub triplici economia patriarcharum ac Testamenti Veteris ac denique Novi*, Amsterdam, 1673, 2 vols., 4th ed., Basel, 1718.

³ *Synopsis Theologiae et specialium economiae fœderum Dei ab initio sæculorum usque ad consummationem eorum*, Utrecht, 1671.

⁴ *Doctrina fœderum, sive systema theologiae didacticæ et elementis*, Amsterdam, 1688.

⁵ *Summa theologiae christianæ*, 1689.

⁶ *De economia fœderum Dei cum hominibus libri iv.*, 1677.

⁷ Others who were influenced by Cocceius were Abraham Feldanus (1597-1678; *Corpus theologiae christianæ in xv. locos digestum*, 1686) and van Til (*Theologiae utriusque compendium cum naturalis cum revelatæ*, Leyden, 1704), though in the case of both these writers the Cartesian influence is also apparent (cf. Gass, *op. cit.* ii. 300 ff. 321, note).

⁸ *A View of the Covenant of Grace, from the Sacred Records*, posthumously published by his son, Thomas Boston. Boston also left among his papers a similar treatise on the covenant of works, which was published in 1798, with a preface by Michael Boston.

had the rare compliment paid it of being embodied with scarcely the change of a word, in a work written nearly a hundred years later (J. Colquhoun, *Treatise on the Covenant of Grace*)¹—not, indeed, without handsome acknowledgment on the part of the borrower. On the Continent, Turretin² gave the covenant idea a large place in his theology, and with his system it passed to America, to reappear in the federalism of the Princeton theologians, Charles and A. A. Hodge.³ It has continued down to our day to form one of the prominent tenets of evangelical Calvinism.⁴

On the other hand, Jonathan Edwards makes little use of the covenant idea. While the covenant is occasionally mentioned in his history of redemption, the reference is only incidental, and the idea exercises no formative influence upon the structure of the work. This is the more striking because of the extent to which Edwards holds fast to the main tenets of the older Calvinism. The reason is not far to seek. Edwards' primary interest was in the eternal law of things. Not will, but nature, was fundamental in his thought of God. To such a theology the covenant idea, born as it was of the effort to limit the Divine arbitrariness, was foreign. With the stricter predestinarians, like Crisp and Saltmarsh, the covenant idea had long been simply a form into which the wine of a very different gospel had been poured.⁵ Edwards, before all things the original thinker, was not interested in preserving a form to which there was no content to correspond. To the federal theologians, on the other hand, the covenant idea answered a real need. Their conception of freedom involved power to the contrary, both in the case of man and of God. In the former case, it was the foundation of human responsibility, and the covenant of works was conceived as a real transaction between different individuals.⁶ In the latter case, it gave free scope to the electing grace of God; and the covenant of grace, as we have already seen, had its significance as determining the channel within which God, in the exercise of His Divine sovereignty, had determined to confine the river of His grace. God might have acted otherwise, if He had chosen, so the argument ran, but He was pleased to do thus and so, and this sovereign pleasure He has made known to us through the gracious covenant into which He has entered with man through Christ.

It is, no doubt, the weakening of this conception of freedom in our day which explains the falling into the background of the covenant theology. Arbitrariness, whether on man's part or on God's, is no longer the prevailing danger against which theologians are concerned to guard, and, in a world of law, other terms than those of private agreement seem better fitted to express the profoundest and most abiding relationships between God and man. It would, however, be a mistake to minimize the services rendered by the covenant theology to Christian progress. Artificial in its account of the relation between God and man, it was in reality

¹ Edinburgh, 1818. Among others to whom the author expresses his indebtedness are the following, not hitherto mentioned in this art.: Cloppenburg, Moor, Erskine, Brown, Hervey, Gib, Muirhead, and Gill.

³ Charles Hodge, *Systematic Theology*, New York, 1871-73, ii. 117 ff., 354 ff.; A. A. Hodge, *Outlines of Theology, rewritten and enlarged*, New York, 1879, pp. 809 ff., 387 ff.

⁴ Cf. the use of the covenant idea by Timothy Dwight, in his *Theology, Explained and Defended* (Middletown, 1818, i. 437, ii. 207 ff.).

⁵ Heppe (*op. cit.* i. 143 ff.) calls attention to the difference of interest which separated the early covenant theologians from the stricter predestinarians, with whose teaching their system had so much in common.

⁶ This interest appears with special clearness in the American federalists. Cf. A. A. Hodge, *op. cit.* p. 310 f., Questions 5, 9.

designed as a protest against arbitrariness. Untrustworthy in its view of the development of the Biblical religion, it helped to prepare the way for a more scientific treatment of the Biblical history. To its more earnest advocates the covenant theology, as distinct from the type of thought which it opposed, expressed the difference between a God whose purpose was known and whose character could be trusted, and a God whose nature was mysterious and whose actions were unpredictable. Few terms were richer in experimental significance to those who had been trained to understand it than that which gives its title to this article, for none more fully revealed the heart of God. Writing to his son-in-law, Fleetwood, Cromwell sends the following message to his daughter: 'Bid her be cheerful, and rejoice in the Lord, once and again; if she knows the covenant, she cannot but do so.' 'The covenant,' says Edward Leigh, in the title to his *Treatise of the Divine Promises*, Lond. 1633, 'is itself the bundle and body of all the promises.'

LITERATURE.—The more important works on the covenant have been cited in the article. On the Biblical usage, see A. B. Davidson, *Theol. of OT*, Edin. 1904, p. 239 ff., and his art. 'Covenant,' in *HDB*; art. 'Covenant,' in *EBI*; R. Kraetzschmar, *Die Bundestheologie im AT*, Marburg, 1896; Valetton, in *ZATW* xii. [1892] 1-22, 224-226, xiii. [1893] 245-279; A. Bertholet, *Die Stellung der Israeliten und der Juden zu den Fremden*, Freiburg, 1896, pp. 46, 87 ff., 176, 214; W. Robertson Smith, *Rel. Sem.*, London, 1894, pp. 269 ff., 312 ff., 479 ff.; W. M. Ramsay, art. 'Covenant,' in *Expositor*, 6th ser. viii. (Nov. 1898), 521-536.

On the history of the covenant theology in general, cf. Diestel, 'Studien zur Föderaltheologie,' *Jahrb. f. deutsch. Theol.* x. [Gotha, 1865] 309 ff.; T. M. Lindsay, art. 'Covenant Theology,' in the *Brit. and For. Evangel. Review*, July 1879, p. 521 ff.; G. F. Fisher, *Discussions in History and Theology*, N.Y., 1889, pp. 355-409; M. Schneckenburger, *Vergleichende Darstellung des luther. und reform. Lehrbegriffs*, Stuttgart, 1855, ii. 140 ff.; J. H. A. Ebrard, *Christl. Dogmatik*, Königsberg, 1863, i. 77 ff.; and the relevant sections in the histories of W. Gass (*Gesch. der prot. Dogmatik in ihrem Zusammenhange mit der Theol. überhaupt*, Berlin, 1887, ii. 234 ff.), and A. Schweizer (*Die Glaubenslehre der evangel.-reform. Kirche*, Zürich, 1844, i. 103 ff.). Cf. also Emanuel Graf von Korf, *Die Anfänge der Föderaltheologie und ihre erste Ausgestaltung in Zürich und Holland*, Bonn, 1908.

The most reliable account of the beginnings of the covenant theology in Germany is found in H. Hepp, *Dogmatik des deutschen Protestantismus im 16ten Jahrhundert*, Gotha, 1857, i. 139 ff., 188 ff., in which a full description is given of the content of many works otherwise inaccessible to English readers. The theology of Cocceius and his school is fully discussed in the works of Gass and of Diestel, already mentioned, where references to the literature may be found. On the covenant theology in Puritanism, cf. C. G. McCrie, *The Confessions of the Church of Scotland*, Edinburgh, 1907, p. 86 ff.; A. F. Mitchell, *The Theology of the Reformed Church, with special reference to the Westminster Standards* (in Report of Proceedings of the Second General Council of the Presbyterian Churches, 1880, p. 477).

Besides the works cited in the text may be mentioned F. Gomarus, *De Fœderis Dei*, 1594; Wendelin, *Systema Majus*, 1656; J. Ball, *Treatise on the Covenant of Grace*, 1645; Burgess, *Vindicia Legis* (referred to by Blake, in his *Covenant Sealed*); Cotton, *The Covenant of God's Free Grace* (1645); and S. Charnock, *Discourse of God's being the Author of Reconciliation* (Nichol's ed. of the Puritans), iii. 371 ff. H. Malcom, in his *Theological Index* (references to the principal works in every department of religious literature), Boston, 1895), p. 180, gives the titles of a number of works not accessible to the present writer, but without exact description (e.g. Hulsemann, *De Pacto Dei*; Musæus, *De Pacto Dei cum Hominitibus*; Bostock, *On the Covenant of Grace*; Bell, *Covenant of Grace and of Works*; Dixon, *Nature of the Two Covenants*; Taylor, *On the Covenant of Grace*; Kelley, *The Divine Covenants*, etc.).

A good monograph on the history of the covenant theology is still a desideratum. W. ADAMS BROWN.

COVETOUSNESS.—Covetousness in its most general meaning expresses an eager desire to gain some possession on which the heart is set. At first the desire, though strong, may be innocent and even commendable. Thus Caxton says (Geoffroy de la Tour-Landry, i. ii.): 'She ever coveted the pees and love of her lord,' and Shakespeare represents the King in *Henry V.* (Act iv. Sc. 3) as saying:

¹Letter 199, Carlyle's edition, quoted by Lindsay, in *Brit. and For. Evangel. Rev.*, July 1879, p. 521 ff.

'By Jove, I am not covetous for gold,
Nor care I who doth feed upon my cost;
It yearns me not if men my garments wear;
Such outward things dwell not in my desires:
But if it be a sin to covet honour,
I am the most offending soul alive.'

In the AV of the Bible the word 'covet' is commonly of evil significance, but it is also used to translate words of good import. Thus in 1 Co 12³¹ we have St. Paul's exhortation, 'Covet [RV "Desire"] earnestly the best gifts.' Keen desire, however, was usually associated with unworthy objects, and Hobbes (*Leviathan*, i. vi. 26) went so far as to declare: 'Desire of Riches [is called] Covetousness: a name used alwayes in signification of blame.'

In distinction from avarice (*q.v.*), covetousness emphasizes the desire for things not possessed; avarice, the undue retention of actual possessions. Thus, in covetousness the very desire may constitute an evil, and possibly St. Paul, in his declaration of the way in which sin came home to him (Ro 7⁷), dwells upon the part played by the Tenth Commandment in the process, because inordinate desires are there condemned. The possessions sought may not be an evil in themselves, but the heart's desire may be unduly set upon them. An all-absorbing passion for material possessions may be restrained by the experience of their inability to constitute real happiness in life, and by the knowledge that, sooner or later, all material things must be left behind at death; but this passion is effectively curbed only when a still more passionate desire for the nobler possessions of mind and spirit and life lays hold of the heart.

The evil in covetousness may be due, however, not merely to the strength of the desire, but to the fact that the object of desire is the possession of some one else. It may be noble to seek to possess the spiritual insight or the Christian grace of another, for the imparting of such a gift ennobles and enriches both giver and receiver; but to desire a neighbour's land or goods is to seek his impoverishment. When Ahab coveted Naboth's vineyard (1 K 21), and David coveted Uriah's wife (2 S 11), they fell into deadly sin, and similar desires bring shame and guilt on those who cherish them. When these desires are expressed in acts, they are condemned by the law as crimes. True restraint is exercised only when the rights of others are recognized and honoured.

The very spring of covetousness is found in the common experience that what is not possessed seems always most desirable. The virtues and defects of actual possessions are known by the owners, but the blessings that are beyond reach are painted by the imagination in glowing colours, and incite the heart to ardent desire. This tendency has led to some noble achievements, but it is also the source of amusing comedies, and of many of the deepest tragedies of life. The very opposite state of mind is happily represented in the reply that James Smetham gave to a friend when he was asked to go to Rome and Venice:

'I suppose I ought to wish to go with you to Rome and Venice. . . . Nothing but a sense of duty will ever drive me to Rome and Venice. My difficulty is to appreciate our little back-garden, our copper beech, our weeping ash, our little nailed-up rose tree, and twisting yellow creepers' (*Letters of James Smetham*, London, 1892, p. 86 f.).

LITERATURE.—H. L. Martensen, *Christian Ethics* (General), Edin. 1885, p. 106 ff.; Newman Smyth, *Christian Ethics*, Edin. 1902, p. 395; J. Oswald Dykes, *The Manifesto of the King*, London, 1887, p. 450. D. MACRAE TOD.

COW (Hindu).¹—The belief in the sanctity of the cow, which is a very prominent feature of Hinduism, seems to have been inherited by the Indians from pre-historic times, before they and

¹For the place of the cow in other religions, see *art. ANIMALS* in vol. i. p. 506 ff.

the Iranians had separated. In the Avesta¹ we meet with a Divine being called *geus urvan* (or Goshurun), lit. 'the soul of the cow,' who is regarded as the personification and guardian of living beings. Similarly, in the R̥gveda the mystical relation between the cow and the universe is several times alluded to.² It is further developed in the Atharvaveda, one hymn of which (x. 10) is addressed to Vāśā, the prototype of cows, and a kind of generating principle of the universe; and another (iv. 11) to Anadvān, the primeval ox, to whom a similar function is attributed. In Vedic times the word *go*, 'cow,' was used to express some other ideas, not merely in an allegorical way, but rather in a mystical sense so as to suggest a mysterious connexion between them and the cow. Thus in the *Naighaṇṭuka* (the ancient list of Vedic synonyms, on which Yāska commented in the *Nirukta*) the word *go*, which originally and usually denotes 'cow,' is given as a synonym of (1) earth, (2) heaven, (3) rays of light, (4) speech, and (5) singer.³ The Earth especially was conceived under the figure of a cow, and is so represented in later mythology. This idea goes back to the Vedic *Samhitās*. In a hymn, or rather a prose piece, of the Atharvaveda (viii. 10), Virāj, who 'verily was this universe in the beginning,' is extolled, and she is said to have come to various classes of beings; in paragraphs 22-29 she comes to Divine beings and men, who milk from her things characteristic of their functions—the milker, the calf,⁴ and the milking-vessel being stated in each case. Paragraph 24 runs thus:

'She ascended; she came to men; men called to her: "O rich in cheer, come!" of her Manu son of Vivasvat was sprung [lit. "calf"]; earth was vessel; her Pṛthvi son of Vena milked; from her he milked both cultivation and grain.'⁵

This passage contains the germ of a myth which has been fully developed in the Purāṇas.⁶

Pṛthvi, son of Vena, having been constituted universal monarch, desired to recover for his subjects edible plants, which, during the preceding period of anarchy, had all perished. He therefore assailed the Earth, which, assuming the form of a cow, fled from him and traversed all the heavenly regions. At last she yielded to him, and promised to fecundate the soil with her milk. Thereupon Pṛthvi fastened the surface of the earth with his bow, uprooting and thrusting away hundreds and thousands of mountains. Having made Svāyambhuva Manu, the calf, he milked the Earth, and received the milk into his own hand, for the benefit of mankind. Thence proceeded all kinds of corn and vegetables upon which people subsist now and always. By granting life to the Earth, Pṛthvi was as her father; and she thence derived the patronymic appellation *Pṛthivī* ('daughter of Pṛthvi'). Then the gods, the sages, the demons, the Rākṣasas, the Gandharvas, Yakṣas, Pīṭras, serpents, mountains, and trees took a milking vessel suited to their kind, and milked the Earth of appropriate milk. And the milker and the calf were both peculiar to their own species.⁷

This story is most frequently alluded to in classical Sanskrit literature. In legends and popular stories the Earth is occasionally said to assume the figure of a cow, especially in times of distress, and to implore the gods for help, or to give advice to a king or queen, to whom she appears in a dream. Again, the mythical identification of the Earth with a cow furnishes the basis of many poetical conceits, e.g. that a king should milk the Earth tenderly in order to get plentiful revenue, etc. (see

¹ e.g. *Yasna*, xxviii. 1, xdx. 5. 9 (for a complete list of references, see Bartholomae, *Altiran. Wörterb.* 1640 (Strassburg, 1901); or also the Pahlavi texts translated in *SBZ* v. 201, 163, 402, xvi. 380, xxxvii. 237 ff.

² e.g. i. 163, 3, viii. 90. 15, x. 11. 1. On the cow in the period of the R̥gveda, see Macdonell, *Vedic Mythol.* (= *GIAP* iii. 1a), Strassburg, 1897, Index, s.v. 'Cow,' 'Cows'; and Zimmer, *Altind. Leben*, Berlin, 1879, p. 221 ff.

³ *Naigh.* i. 4, 5, ii. iii. 18. Classical lexicographers attribute still further meanings to the word *go*; e.g. Hemachandra in the *Anekārthasamgraha* (i. 6) enumerates the following meanings: sun, water, eye, heaven, heavenly quarter, kine, ray of light, thunderbolt, earth, arrow, and speech.

⁴ The Hindus suppose that a cow yields milk only in the presence of her calf.

⁵ Harvard Oriental Series, viii. 514.

⁶ The account in the text is from the *Vṛṣa Purāṇa* (Wilson's tr., London, 1864-70, i. ch. xiii.). More details given in other Purāṇas are mentioned in Wilson, i. 188 ff.

VOL. IV.—15

Böhtlingk-Roth, *Sanskrit-Wörterb.*, St. Petersburg, 1855-75, s.v. 'Go,' 12).

The identification of cow and speech has not given rise to popular myths, but, as speech is regarded as something Divine in origin and holy in character, it added to the sanctity of the cow, though this identification was perhaps due not so much to a popular association of ideas as to a chance similarity of sound between the two words *go*, 'cow,' and *gā*, 'to sing,' or perhaps *gir* 'speech.'

The sanctity of the cow, which has been shown to underlie certain ancient mythical conceptions, has a practical bearing on religion. It was considered a heinous sin to kill a cow or to eat her flesh. A well-known verse¹ says: 'All that kill, eat, and permit the slaughter of, cows, rot in hell for as many years as there are hairs on the body of the cow so slain.' The same feeling is already present, but not yet so strongly developed, in Vedic times. The *Satapatha Brāhmaṇa*, when prohibiting the eating of the flesh of the cow (iii. 1, 2, 21), adds the interesting statement: 'Yajñavalkya said: "I, for one, eat it, provided that it is tender." And the *Grhya Sūtras* permit the slaughter of a cow on the arrival of a guest, especially at a wedding or a sacrifice. But this ancient practice was given up in later times, when substitutes for the flesh of a cow became the rule in the entertainment of guests.²

In the Great Epic the sacredness of the cow is a firmly established fact. Chapters 69-82 of the *Anuśāsana parvan* of the *Mahābhārata*,³ which chiefly treat of the giving of cows and the merit acquired by it, contain much curious information about the religious ideas regarding the cow, which became deeply engrained in the Hindu mind through the superstitious veneration of the cow. The reason alleged for its sacredness is that cows are the essential requisites for sacrifice, and that 'with their milk and with the Havis manufactured therefrom they uphold all creatures of the universe' (81. 2); they are themselves sacred and capable of cleansing others. Not only are the cows themselves sacred, but the five products of the cow (*pañcagavya*)—milk, curds, ghi, dung, and urine—are means of purifying man, and are used in many ways for that purpose, some of which are rather disgusting. But the pious are told 'never to feel any repugnance for the urine and the dung of the cow' (ib. 78. 17). A curious myth relating to the latter item is told in the *Mahābhārata* (xiii. 82):

Śrī, the goddess of Fortune, who had left the demons for the gods, came to the cows, desiring to reside in them. They would, however, have nothing to do with that fickle deity, but in the end they were moved by her entreaties and consented to honour her: 'Do thou live in our urine and dung; both these are sacred, O auspicious goddess!'

Cows are the daughters of the heavenly Surabhi ('the fragrant one,' so called from the peculiar smell of cows), who was created by Prajāpati from his breath (*Satapatha Brāhmaṇa*, vii. 5. 2, 6). This notion gives rise to the following myth:⁴

Dakṣa the creator, for the sake of the beings he had created drank a quantity of nectar. He became gratified with the nectar he had quaffed, and thereupon an eruption came out, diffusing an excellent perfume all round. As the result of that eruption, Dakṣa saw that it gave birth to a cow which he called Surabhi. This Surabhi was thus a daughter of his, which had sprung from his mouth. The cow called Surabhi brought forth a number of cows, which came to be regarded as the mothers of the world.⁵

¹ *Mahābhārata*, xiii. 74. 4.

² The ancient practice was noticed by a writer of the 7th cent., Bhavabhūti, in his dramatic play *Uttararāmacharita*, 4th Act; but, as the scene is laid in the remote past, we cannot draw any conclusion from it with regard to the usage at the time of the author.

³ We quote from Pratāpa Chandra Ray's translation (Calcutta, 1893).

⁴ *Mahābhārata*, xiii. 77.

There is also a cow-heaven, Goloka, the residence of Surabhi. Once the mother of cows practised austerities, and so pleased Brahmā by her freedom from cupidity that he granted her immortality and assigned her as residence a region above the three worlds, the famous Goloka, while her daughters live among men. In another account,¹ however, Surabhi is said to dwell in Rasātala, the lowest region in the nether world, and to have for daughters the Dikpālīs, or goddesses presiding over the heavenly quarters. The cow-heaven, Goloka, is frequently mentioned in the epics and the Purāṇas. It is described as a kind of paradise, a most beautiful place of the greatest splendour and happiness, which can be attained only by the most pious and virtuous, especially by givers of cows and by their worshippers. For the cow became the centre of a peculiar worship, with proper *mantras* (*Mahābhārata*, xiii. 80. 1-3, 78. 24f.) and rites.² The devotees had to recite the names of the cows, and to bow their heads in reverence to them (*ib.* 78. 16), and they were enjoined to subsist on the five products of the cow, to bathe, using cow dung at the time, etc. For some religious purposes the devotee has to live and to sleep among cows in a cow-pen, or to follow a cow everywhere, as did Dilpa in the story told in the second book of the *Raghuvamśa*.

Lastly, attention may be called to the story according to which Kṛṣṇa, one of the most popular gods of India, passed his youth among cowherds and became the lover of the *gopīs*, their daughters, especially of the lovely Rādhā. This fact illustrates the high reputation which resulted from the connexion with cows, since even herdsmen were thought the fit guardians and companions of the highest god.

Reverence for the cow has not diminished in modern times.³ It is well known that the Hindus of the present day are filled with horror at the slaughter of the cow, which is therefore prohibited in native States under treaties with the English.

LITERATURE.—The literature is given in the article.

H. JACOBI.

COYOTEROS.—The Coyoterōs are a tribal division of the Apaches (*q.v.*), said by Drake (*Indian Tribes of the United States*, Philadelphia, 1884, i. 424) to have been the largest and fiercest of all the Apache tribes, although, owing to the indiscriminate method in which tribal names have been applied, it is difficult to make certain that other tribes are not included in the estimate of its size. The original home of the Coyoterōs was on the head-waters of the Gila, between that river and San Carlos; but they were of nomadic habits, and ranged through Arizona and western New Mexico. Geographically, they are divided into two groups—Pinal Coyoterōs and White Mountain Coyoterōs. The greater number of them are now located on the San Carlos reservation, with other tribes of the Apaches. They took a prominent part in the rebellion caused by the discontent which followed when the Apaches were moved from their tribal grounds to a reservation.

The Spanish name *Coyotero* is said to have been given them on account of the fact that they subsisted partly on the flesh of coyotes, or prairie wolves (Hardy, *Travels in the Interior of Mexico*, London, 1829, p. 430, quoted by Bancroft, *NR* i. 474). Ruxton (*Journ. Ethnol. Soc. Lond.*, 1st ser., ii. 95 [1850]) calls them *coyoterōs*, or 'wolf-eaters.' It is suggested, however, that the name may have been derived from their roving and unsettled habits (Hodge, *Handbook*, p. 356). Among the

¹ *Mahābhārata*, iii. 102. For other references to Goloka, see Bēhtlingk-Roth, *s.v.*

² Cf., further, Hillebrandt, *Rituālit.* (= *GIAP* iii. 2), Strassburg, 1897, p. 88.

³ See the very full discussion of this subject in *PR* ii. 226 f.

Tonto Apaches they are known as *Palāwi* or *Pawitlka* (Gatschet, *Yuma-Spr.* i. [1883] 371, 411; *ZE* xv. 123), while the Navaho name for them was *Silkā*, 'on the mountain' (ten Kate, *Synonymie*, Amsterdam, 1884, p. 6).

In culture they did not differ materially from the other Apaches. Among the Apache tribes themselves, distinctions were recognized in the character of the weapons, the distinguishing mark of the Coyoterōs being the method of winging the arrows. These bore three feathers on the shaft, which was of reed, finished with hard wood and tipped with iron or flint (Cremony, *Life among the Apaches*², San Francisco, 1877, p. 103). Like other members of the Athapascan linguistic stock, they readily assimilated the culture of neighbouring tribes; and, just as the Lipan followed the Comanche, the Pinal Coyoterōs showed traces of Pueblo customs. Their nomadic habits, as well as the character of the country, were unfavourable to any great advance in civilization, while their habitat in Sierra Blanca was peculiarly adapted to the raids by which, like other Apaches, they acquired food and wealth. Their captives were held as slaves until ransomed or sold. The Pinal-eños earned an unenviable notoriety by their success in this tribal pursuit (see Bartlett, *Personal Narrative of Travels in New Mexico*, New York, 1854). Apaches are divided into clans, but these are not totemic. Their names are taken, not from animals, but from natural features of their locality. Affiliation of the clans in different tribes is recognized. Among the Coyoterōs, clans have been recorded, counterparts of which have been found among other Apache divisions and also among the Navahos; while Bourke (*JAF* l. iii. [1890] 112) records a number of identifications between the White Mountain Apaches and the Pinal Coyoterōs.

The Apaches displayed little care in the disposal of their dead. The method followed by the Coyoterōs is described by H. C. Yarrow ('A Further Contribution to the Study of the Mortuary Customs of the North American Indians,' *1 RB&W*, 1881, p. 111f.), who says they take the least possible trouble. A hole in the ground made by a tree stump or a stone is found, and into this they cram the body, partially wrapped up. The stone or stump is then rolled back. They mourn for thirty days, uttering loud lamentations at intervals; but, he adds, unless they are reminded of it, this is frequently forgotten.

LITERATURE.—References to the Coyoterōs are scattered through the literature dealing with the Apaches (see above, and at end of art. APACHES, in vol. I.); cf. also especially footnotes, *passim*, in Bancroft, *NE*; and F. W. Hodge, *Handbook of American Indians* (= *Bull.* 30 *BE*, Washington, 1907), pt. 1, under 'Apache' and 'Coyotero.'

E. N. FALLAIZE.

CREATION.—I. The conception in primitive heathenism.—The principle of causality is a necessary category of thought. The desire for knowledge of the nature and origin of things is inborn. It stimulates the eager wonder and prompts the clamorous questions of every child and savage. Primitive man is philosophical in so far as he does not take things as a matter of course, as he makes the phenomena around him objects of reflexion, as he is keen to understand how everything came about. He is mentally a child, with a child's vague fears of the unknown, a child's love of a thrilling tale, and a child's readiness to be satisfied with any explanation, however grotesque and absurd, of the things which arouse his interest. Curiosity and credulity are the characteristics of the primitive mind, and the roots of all mythology, which has not inaptly been called 'primitive metaphysics.' At the same time it has to be remembered that the childhood of the race included the maturity of the individual, and in not a few creation-myths

there are features which reflect the vices and passions of grown men as well as the simplicity of children. The theories of the savage are of necessity like their inventor, matching his barbaric manners and customs, his crude emotions and rude conduct. Primitive man stands helpless in the midst of a universe of which he knows not the laws, but he is of imagination all compact, and therefore never at a loss for an answer to the questions which are the subject-matter of science and philosophy. He can explain the phenomena of Nature, the making of the universe, the descent of man. The background of all myths is the experience of primitive man interpreted by himself. The tales he spins, the theories he invents, may be grave or gay, prosaic or poetical, attractive or repulsive, clever or absurd; enough if they satisfy him. He does not know how defective is his logic, how riotous his fancy. He is experimenting in thought as best he can, and 'the science of the modern *savant* has been evolved out of the errors of the simple savage' (Jevons, *Introd.* p. 9).

But the problem of origins has to be solved by religion as well as by philosophy, though it is approached from a different side and in a different spirit. Man has not only a speculative, but a religious instinct. Religion is one of his native vital forces, without which he would have what Schelling termed 'an original atheism of consciousness.' No one can manufacture his religion, which is a native personal datum; all that he requires is the due exercise and cultivation of Nature's supreme gift. It is this element in the common consciousness of all generations which makes the search for a Creator a continuous pursuit. The question whether 'the savage state . . . represents an early condition of mankind' (Tylor, *Prim. Cult.* i. 32), or whether we might 'as well judge the wine by the dregs as primitive man by the savage' (Gwatkin, *Knowledge of God*, 1908, i. 253), may be left open. For in the genuine products of the religious sense, uncontaminated by the fancies of the mythopoetic faculty, there seems to be no contrast of high and low. Increasing research into the mental habits of the least advanced races of mankind now living tends to demonstrate that, side by side with the most foolish, tedious, and often repulsive myths, there is almost invariably a high, if vague, conception of a good Being who is the Maker of all things, the undying Guardian of the moral life of men. The evidence is presented with adequate thoroughness and with literary charm in the writings of Andrew Lang and F. B. Jevons.

A. Lang stands in wonder before 'the high gods of low races' (*Making of Religion*², p. 173 ff.). He must needs smile at the opinion expressed by Flint in the earlier days of Comparative Religion (in *Faiths of the World*, Edin. 1882, p. 413), that 'at the bottom of the religious scale . . . it is always easy to see how wretchedly the divine is conceived of . . . how little conscious of his own true wants . . . is the poor worshipper' (*ib.* p. 253). He is convinced that the animistic theory of Spencer and Tylor does not fit the facts. 'The high gods of savages are not ghosts' (p. 250). 'It is a positive fact that among some of the lowest savages there exists, not a doctrinal and abstract Monotheism, but a belief in a moral, powerful, kindly creative Being, while this belief is found in juxtaposition with ghosts, totems, fetiches, and so on' (p. 254 f.). Lang presents 'an array of moral and august savage supreme Beings'; and he believes that 'an old, nay, an obsolete theory—that of degeneration in religion—has facts at its basis, which its very supporters have ignored, which orthodoxy has overlooked' (p. 252).

He finds that 'the belief in relatively pure creative beings, whether they are morally adored, without sacrifice, or merely neglected, is so widely diffused that Anthropology must ignore them, or account for them as "loan-gods," or—give up her theory' (*ib.* p. 225). He observes that the idea of a Good Maker, once reached, becomes 'the germ of future theism,' and he seeks the highest confirmation of his theory in the religion of Israel, which is 'probably a revival and purification of the old conception of a moral, beneficent creator, whose creed had been involved in sacrifice and anthropomorphic myth' (Lang, *Myth, Rit. and Rel.* i. 329).

Unfortunately this involution of religion in

mythology is all but universal. When primitive man tries to explain *how* the world was made, his speculative faculty lands him in all kinds of error and confusion; his theories are incredibly childish and whimsical.

'Savages begin . . . by mythically regarding various animals, spiders, grasshoppers, ravens, eagles, cockatoos, as the creators or recoverers of the world. As civilization advances, those animals still perform their beneficent functions, but are looked on as gods in disguise' (*ib.* i. 241 f.).

Bunjl, the South Australian maker of men and things, is identified with the eagle-hawk; Cagn, the Bushman Creator, with the mantis-insect; and even Brahmā or Vishnu, with a boar, a fish, or a tortoise. Among the native tribes of America the hawk, the coyote, or the musk-rat is the demiurge; among others the crow, the raven, or the hare plays the chief rôle in the task of creation. If the Creator does not partake of the character of a totem or worshipful beast, he is identified with a wizard or medicine-man. Every race has had its legendary account of the origin of things, and, while creation-myths can never be far in advance of the ideas and sentiments of a people, they may, and often do, lag far behind. Religious conservatism makes adult nations slow to put away the childish things that faith has once consecrated. If a creation-legend has found its *vates sacer*, and been incorporated with the ritual of the altar, scarcely anything short of a miracle is strong enough to charm it from the popular mind.

2. The conception in civilized paganism.—All the early ideas of creation are, of course, geocentric. The 'earth' of which mythology offers an account may be but a circle of hills and valleys known to some wandering tribe. But the great phenomena of Nature—sun, moon, and stars, day and night, storm-wind and thunder-cloud, birds and beasts and men—are much the same everywhere, and they form the warp and woof of all cosmogonies. In spite of immense diversities of detail, there is a family likeness in the creation-myths of the world. Nothing is more striking than the parallelism between Hesiod's savage stories and those of the Maoris and Mangaians of to-day. The primitive mind, working on the same materials, seems everywhere to evolve the same crude and infantine speculations regarding the origin of things. Cf. the artt. on COSMOGONY AND COSMOLOGY.

(1) *Egypt*.—The religious history of Egypt, extending over many thousands of years, is the history of a theism almost choked by an animism which deified beasts and birds and trees. The priests of the temples, who were the advanced thinkers of the nation, endeavoured to be true to the high theistic tradition, and therefore chose to regard the innumerable popular gods as only various manifestations of the one Divine creative energy. Even the priests were henotheists rather than monotheists, worshipping one god as if there were no other, ascribing to him all the highest attributes of deity, but without any idea of logically denying the reality of other gods. Ptah, the chief god of Memphis, whom the Greeks identified with Hephaestus, was called by his priests the 'master-artisan,' i.e. the Creator. At Elephantine, in the clay district beside the cataracts, Khnum was the demiurge, who moulded his creatures like a potter. At Hermopolis it was Thoth who made the world, speaking it into existence. 'That which flows from his mouth, happens, and that which he speaks, comes into being.'

The following hymns date from at least 2000 B.C. (1) To Amon-Ra: 'Hail to thee, maker of all things, lord of law, father of the gods; maker of men, creator of beasts. . . . The one without a second . . . king alone, single among the gods.' (2) To Ptah: 'To him is due the work of the hands, the walking of the feet, the sight of the eyes, the hearing of the ears, the breathing of the nostrils, the courage of the heart, the vigour of the hand, activity in body and in the mouth of all the gods

and men, and of all living animals: intelligence and speech, whatever is in the heart and whatever is on the tongue' (Renouf, *Orig. and Growth of Rel. of Anc. Egypt*, p. 220).

In a papyrus in Turin, the following words are put into the mouth of 'the almighty God, the self-existing': 'I am the maker of heaven and of the earth, I raise its mountains and the creatures which are upon it: I make the waters. . . . I am the maker of heaven, and of the mysteries of the twofold horizon. It is I who have given to all the gods the soul which is within them. When I open my eyes, there is light; when I close them, there is darkness. I make the hours, and the hours come into existence. I am Chepera in the morning, Râ at noon, Tâui in the evening' (ib. p. 221 f.). And the following is an extract from a hymn preserved in the museum at Bulak: 'Hail to thee, Amon-Râ . . . lord of all existences, the support of things, the support of all things. The One in his works, single among the gods. . . . Lord of truth, father of the gods; maker of men, creator of beasts. . . . Most glorious one, chief maker of the earth after his image, how great are his thoughts above every God! Atnu, maker of men . . . giving them life . . . listening to the poor who is in distress, gentle of heart when one cries unto him' (ib. 225).

In Egypt, however, as everywhere, the mythical mingled with the religious, the irrational with the rational. See COSMOGONY AND COSMOLOGY (Egyptian).

(2) *India*.—The problem of the origin of things naturally fascinated 'the brooding mind of India.' For ages the East was 'plunged in thought,' and brought up a few pearls, with many empty shells, from the depths. 'Some of the hymns of the Rig-veda are, if not monotheistic, at least henotheistic in their pure and lofty idea of creation. Varuna is praised as the maker of all things:

Truly admirable for grandeur are the works of Him who has separated the two worlds and fixed their vast extent: of Him who has set in motion the high and sublime firmament, who has spread out the heavens above and the earth beneath. . . . This Asura (Lord), who is acquainted with all things, has propped up these heavens, he has fixed the boundaries of the earth. He is enthroned above all the worlds, universal king; all the laws of the world are the laws of Varuna. . . . Between this earth and the sublime heaven above, all things, O Varuna, are of thy creation' (Darmesteter, *Sol. Essays*, p. 234).

But in India, too, we see the inevitable conflict between religion and mythology, with religion often defeated and defiled. The gods of the Vedas are, on the whole, of the usual polytheistic type, and side by side with the majestic hymns of creation we find a crowd of fanciful, humorous, often obscene, myths of the making of the world, all in flagrant contradiction with every pure religious conception. See COSMOGONY AND COSMOLOGY (Indian).

The advanced thinkers of the *Vedānta* accepted a philosophy of idealism, and carried it so far as to affirm that the world of phenomena had no real existence; to the enlightened it was all illusion; only to the soul which was entangled in the deception of the senses did it still appear real. Instead of explaining the universe, they explained it away, and they did not deem it necessary to answer the question, 'Who created *maya*?'

(3) *Persia*.—The Avesta, the sacred book of the Persians, begins with the words, 'I proclaim and worship Ahura Mazda, the Creator.' The religious poetry of Persia does not stop short of monotheism, while its mythology and theology teach a dualism of the most pronounced type.

'It is through me,' says Ahura to his prophet, Zoroaster, 'that the firmament, with its distant boundaries . . . subsists without pillars to rest upon; it is through me that the earth, through me that the sun, the moon, and the stars take their radiant course through the atmosphere: it was I who formed the seeds in such a manner that, when sown in the earth, they should grow,' etc. (Darmesteter, *op. cit.*, p. 238).

Much more poetical is the following piece, which in its eager questioning singularly resembles Job 38-39:

'Reveal to me the truth, O Ahura! What was the beginning of the good creation?
Who is the father, who, at the beginning of time, begat Order?
Who has traced for the sun and the stars the paths that they must follow?
Who makes the moon increase and decrease? . . .
Who has fixed the earth and the immovable stars to establish them firmly, so that they might not fall? Who has fixed the waters and the trees?

Who has directed the rapid course of the wind and of the clouds? What skilful artist has made the light and the darkness! . . .

Those are the things that I wish to ask Thee, O Mazda, G. beneficent Spirit, O Creator of all things!' (ib. p. 290 f.).

The theology of Persia teaches that from the beginning the kingdoms of Ormuzd (Ahura Mazda, 'the Lord Wisdom') and Ahriman (Angra Mainyu, 'destructive spirit') were independent of each other. Ormuzd created this material world as a kind of rampart between the two invisible realms. Heaven and its lights were first made by his word; then, in succession, the waters, the solid land, the plants, the animals, and, lastly, man. But his rival tried to undo all the work, to spoil the fair creation. He confronted light with darkness, he pitted demons against angels, and to life, love, virtue, and truth he opposed error, vice, hatred, and death. Since then, the history of the world has been the history of the conflict between the two kingdoms of good and evil, wherein this earth is the broad field of battle. See, further, COSMOGONY AND COSMOLOGY (Iranian).

Lagarde and other scholars have strongly maintained that the Hebrew cosmogony in Gn 1 is in some respects dependent on the Persian creation-story, particularly as regards the order of events; but it is more probable that the Persian influence on Israel did not begin till after the time of the writing of the Priestly Document to which Gn 1 belongs. Be that as it may, the Persian dualism, with its eternally opposed principles of light and darkness, good and evil, had its obvious parallels in Greek thought, and was revived in Manichæism, while even shrewd thinkers like J. S. Mill have thought that the defects of the universe can be best explained by supposing the Creator hampered through the insufficiency and intractableness of the materials with which He had to work (J. S. Mill, *Three Essays on Religion*, Lond. ed. 1904, pp. 178, 186).

(5) *Greece*.—See COSMOGONY AND COSMOLOGY (Greek).

3. The Biblical conception.—The OT has three types of ideas regarding the Creation, embedded in three strata of its literature. (1) The first is found in Gn 2nd-3rd. The narrative has all the fresh charm of the ancient writing (J) to which it belongs. It is full of naive anthropomorphisms, representing God as moulding, breathing, planting, walking, and it undoubtedly has a background of popular mythology. But the writer adorns whatever he touches, transfusing old legends with a new spirit, so that 'in depth of moral and religious insight the passage is unsurpassed in the OT' (Skinner, *Genesis*, 52). There is no attempt here to represent the creation of 'heaven and earth'; these are taken for granted; speculation is not yet advanced enough to grapple with such magnitudes. The whole interest centres in the making first of man, and then of a pleasant and fruitful place for his abode. See, further, COSMOGONY AND COSMOLOGY (Heb.).

(2) Another type of creation doctrine is found in the Deutero-Isaiah. It was the mission of this prophet to comfort Israel in her exile, and he fulfils it by giving her a lofty conception of God the Creator. He teaches that Jahweh is not merely the God of Israel, but the only God, who brought all things into being by a free act of creation. 'Who hath measured the waters in the hollow of his hand? . . . Lift up your eyes on high, and see who hath created these' (Is 40^{12, 26}). Jahweh is greater than the infinite sea and sky. It was this prophet who made the creatorship of Jahweh a fundamental Jewish belief, and it is to be noted that in his doctrine there is not the faintest echo of the old creation-legends, not the remotest suggestion of a primeval chaos, or of a conflict between light and darkness, to say nothing of a slaying of 'dragons of the prime.' As if to lay the ghosts of all such superstitions, he makes the God of creation say: 'I am Jahweh, and there is none else. I form the light, and create darkness; I make peace, and create evil: I am Jahweh, that doeth all these things' (Is 45⁷).

Pure religion has gained an absolute victory over mythology.

(3) The third type of cosmogony is found in Gn 1. This majestic prologue to the Bible belongs to those Priestly Writings (P) of the post-exilic period which form the greater part of the Hexateuch. Our interpretation of the opening sentences is affected by our solution of a difficult and delicate problem of syntax. Most scholars now read the passage thus:

'When God began to create the heaven and the earth—the earth being without form and void, and darkness being upon the face of the deep, and the spirit of God brooding upon the face of the waters—God said, Let there be light, and there was light.'

If this exegesis is correct, the writer teaches a dualism. He thinks of a dark watery chaos existing before the creation began, and gives it the mythical name *Tēhōm* ('the Deep'), which is evidently the Heb. equivalent of the Bab. *Tiamāt*. This is the first of many parallels between the two famous Epics of creation. See, further, COSMOGONY AND COSMOLOGY (Heb.).

The doctrine of a creation out of nothing—*ex nihilo*—is nowhere expressly taught in Holy Scripture. The first near approach to it occurs in the words of the mother of the Maccabees: *ἐξ οὐκ ὄντων ἐποίησεν αὐτὰ ὁ θεός* (2 Mac 7²³), which are too definitely rendered by the Vulgate: *ex nihilo fecit illa Deus*. The Wisdom of Solomon, on the other hand, distinctly reproduces the Platonic doctrine of the creation of the world 'out of formless matter,' *ἐξ ἀμορφου ὕλης* (11¹⁷). In the NT the Divine creation of the world is presupposed in many sayings of our Lord and His Apostles, as in those which mention the foundation of the world (Mt 25³⁴, Lk 11⁵⁰, Jn 17²⁴, Eph 1⁴, He 4³, 1 P 1²⁰), the creation of man and woman (Mt 19⁴⁻⁶, Ac 17²⁴⁻²⁶, 1 Ti 2¹³); and those which represent Him as the Maker of heaven and earth (Mt 11²⁵, Lk 10²¹, Ac 17²⁴), the Source of all things (Ro 11³⁶, 1 Co 8⁶, Eph 4⁹), the Father who through the Son made the world (Jn 1³, Col 1¹⁶⁻¹⁸, He 1³). Faith grasps the fact 'that the worlds have been framed by the word (*λόγος*) of God; so that what is seen hath not been made out of things which do appear' (*ὃν ἐκ φανερῶν*, He 11³).

4. The Greek conception.—While the old cosmogonic myths were fading in the light of the pure religion of Israel, the wise men of Greece were turning upon them the light of philosophy. The great decisive step which the Ionian cosmologists took once for all consisted, as Grote and Zeller have shown, in the substitution of impersonal causes acting according to law in place of personal causes acting arbitrarily. Burnet expresses the matter by simply saying that they 'left off telling tales.' This was the beginning of a new era in the evolution of thought, and 'history teaches that science has never existed except among those peoples which the Greeks have influenced' (*Early Greek Phil.*, 1892, pp. 8, 27). For details of Greek speculation, see COSMOGONY AND COSMOLOGY (Greek).

5. The dogmatic conception.—Till recent times the Church's doctrine of creation was based on the acceptance of Gn 1 as literal history, and particularly on an ungrammatical exegesis of the first three verses. Most of the Fathers, the scholastics, and the Protestant theologians believed that the world was miraculously created out of nothing, in six days, some six thousand years ago. This was a truth of revelation, which closed all questions. Luther comments on Gn 1, that 'Moses is writing history and reporting things that actually happened' ('*meldet geschahene Dinge*'). The matter therefore cannot be treated speculatively. To reason about it were profane. 'God was pleased,' says Calvin, 'that a history of the creation should

exist,' and he repeats a story of Augustine's about 'a good old man, who, when some one pertly asked . . . what God did before the world was created, answered: He made a hell for the inquisitive' (*Instit.* i. xiv. 1). But the doctrine of *creatio ex nihilo* cannot be deduced from Gn 1¹⁻³, which rather, as we have seen, teaches a dualism. This was, indeed, the explicit doctrine of some of the early Fathers, who remained in closer touch with the Jews, and therefore correctly interpreted the passage in question. Justin Martyr, quoting Gn 1¹⁻³, says that Plato (whom he accuses of atticizing Moses) and his followers 'and we ourselves' have thence learned that 'through the Word of God the whole world came into existence out of things subjacent and before declared by Moses' (*Apol.* i. 59). Clement of Alexandria also maintained that Plato took from Moses his doctrine of a formless matter, expressly referring for the latter to Gn 1² (*Strom.* v. 14).

But Christian thought could not rest in a dualism, whether Mosaic or Platonic or Gnostic. The doctrine of an eternal matter was seen to be a dangerous rival to the doctrine of the eternal Logos, and almost with one accord the theologians of the East and West alike set themselves to demolish the pagan conception of an uncreated *ὕλη*. With the LXX or the Vulgate instead of the Hebrew text before them, they honestly counted Moses as a monist. But, though revelation thus seemed to be on their side, they still habitually based their doctrine upon reason. They were Christian philosophers meeting other philosophers on common ground. Their arguments have been restated in C. M. Walsh's recent book, *The Doctrine of Creation* (1910). 'God alone is without beginning' was the thesis they defended. If matter were uncreated, it would be equal with God—a second God. If there were two first principles, they would be incommunicable without a third, which would be the ultimate principle. Plainly the one must come from the other, and, yet more plainly, matter from God rather than the reverse. To be Lord of all, God must have created matter. If it were uncreated, the world could not be constructed out of it, for it could not be receptive of the qualities which God wished to impose upon it, unless God Himself had made it such as He wished it to be. That which is capable of being made into an artistic world must itself have had a wise and skilful Maker.

These arguments are certainly sufficient to prove the dependence of all things upon God, and the derivation of all things from God. But the affirmation of a time—or rather an eternity—in which God was not a Creator, in which the universe was non-existent, is another matter. Some of the greatest minds found it impossible to conceive such acosmism. Origen held that before the creation of our world God had created others, as He will create others after ours, without beginning or end; that matter, or the substance underlying all the successive worlds, is eternally created (*de Princip.* iii. v. 3-4). Augustine had the deep and pregnant thought that the preservation of the world is a continuous creation (*de Civ. Dei.* xii. 25). Scotus Erigena, the profoundest thinker in the Middle Ages, taught that God's working is equally eternal with His being; that creation is involved in His essence; that He necessarily manifests Himself in the world; that He precedes it not in time but only in the idea, as its cause (*de Divisione Naturae.* iii. 25). Thomas Aquinas confessed that reason could only be satisfied with the assumption that the world had no beginning; that, God being the *sufficiens causa mundi*, the cause must apparently always have its effect; and that the doctrine of a beginning, or the non-eternity of the world, is to be

received *sola fide*, by an act of pure faith, in deference to authority: '*Mundum incoepisse est credibile, non autem demonstrabile vel scribile*' (c. *Gent.* ii. 38; *Summa*, i. 46, 104). The *Theologia Germanica* has this profound passage: 'It belongeth unto the Will, and is its property, that it should will something. What else is it for? For it were vain, unless it had some work to do, and this it cannot have without the creature (or creation). Therefore there must be creatures, and God will have them, to the end that the Will may be put in exercise by their means, and work' (ch. 51). Jacob Boehme likewise saw that a hidden will, which did not become present to itself in the object of its creation, would not attain to manifestation for itself, and so would remain unconscious.

6. The philosophical conception. — Philosophy entered upon a new era when it first ventured to ignore and then to repudiate the orthodox doctrine of creation. For a time it claimed its independence very modestly and tentatively. It seemed still content to bend the knee to authority. Bacon made a distinction between 'one who philosophizes according to the sense alone,' and 'Sacred Writ'—the former representing matter as 'self-existing,' the latter as 'from God.' That 'matter was created from nothing, we know by faith,' as it is 'one to which those philosophies could not rise' (*Works*, ed. Spedding, v. 491). Descartes introduces his revolutionary ideas in the humblest tone. 'It may be believed, without discredit to the miracle of creation, that the nature of things purely material is much more easily conceived when they are beheld coming . . . gradually into existence, than when they are only considered as produced at once in a finished and perfect state' (*On Method*, v.). Locke did not feel justified in rejecting the doctrine of *creatio ex nihilo*. He maintained that the impossibility of conceiving the making of something of which no part existed before cannot be regarded as a reasonable criterion to set a limit to the operations of an infinite Mind. To him the existence of an extra-mundane Creator was capable of demonstration. Its evidence, if he was not mistaken, was equal to mathematical certainty (*Hum. Understanding*, iv. 10). Such demonstrations were numerous during the age of Natural Religion, and Coleridge, not without reason, complained that men had come to regard the relation of the Creator to the universe in the same light as that of a mason to his work. Such mechanical deism easily gave place to pure materialism. It was Spinoza who led philosophy into more fruitful fields. As opposed to those *mechanical* conceptions, 'the developed idea of God as the omnipresent Life of the world, constantly operating in and through natural laws, is common to educated theism with pantheism, and is what modern theism owes to pantheistic exaggeration' (Fraser, *Phil. of Theism*², p. 83). Spinoza regarded the traditional theory of creation as making the nature of God arbitrary and the existence of the world a matter of chance. He therefore entirely rejected it. For, though his *Natura naturans*, or Nature active, may in a manner be called the Creator of his *Natura naturata*, or Nature passive, these are consubstantial and co-eternal, neither before nor after the other. There is no beginning in the universe; there can be no end. The existing order of things is the only one possible, and in its involuntary evolution it flows from its cause, the one infinite reality, with the same mathematical necessity with which the angles of a triangle are derived from the triangle. Fichte follows Spinoza in emphatically repudiating the doctrine of creation, calling it 'the root error of all false metaphysics and dogmatics,' which perverts the idea of God from the outset, investing it with caprice,

and changing thought into a dreaming play of fancy ('ein träumendes Phantasiren,' *Werke*, 1845, v. 479). Hegel accepts the category of creation, but fills it with a new content. 'God,' he says, 'is the Creator of the world; it belongs to His being, His essence, to be Creator; in so far as He is not this, He is imperfectly conceived. Creation is not an act undertaken once upon a time. What belongs to the Idea belongs to it as an eternal moment or determination' (*Werke*, 1832, xii. 157 f.). 'God does not create the world once; He is the eternal Creator. This eternal self-revelation, this *actus*, is His notion, His definition' (*ib.* p. 181). '*Ohne Welt ist Gott nicht Gott*' (xi. 122). Schleiermacher felt that the idea of a beginning of God's creative activity places Him as a temporal being in the domain of change. He regarded the work of God as Creator as one with His work as Preserver, and the two together as identical with the totality of causation in Nature (*Der christl. Glaube*, 1889, i. 294-297).

All the English Idealists agree in identifying the Creation with God's self-manifestation, which they regard as an eternally necessary moral act. 'It is of the very essence of mind or spirit,' says John Caird, 'that it contains in it the necessity of self-manifestation in objective form, and therefore that which we speak of as "the creation of the world" must be conceived as the expression not of arbitrary will, but of the very nature and being of God' (*Fund. Ideas of Christianity*, i. 84 f.). Green expressed the same profound thought more daringly by saying that the world is as necessary to God as God is to the world. The words of two leading German thinkers will show how the later philosophy and theology have welcomed the new conception:

'The will to create,' says Lotze, 'is an absolutely eternal predicate of God, and ought not to be used to designate a deed of His, so much as the absolute dependence of the world upon His will, in contradistinction to its voluntary emanation from His nature' (*Out. of Phil.* of *Ref.* 74). 'It is a sensuous representation,' says Lipsius, 'to trace creation back to a single act now lying in the past, or to speak of a first beginning of creation; rather is the whole world-development, so soon as it is viewed religiously, to be brought under the idea of creation, consequently to be regarded as without beginning or end' (*Dogmatik*, 293).

We cannot do better than close this section with the calm pronouncement of the Nestor of Scottish philosophy:

'I do not find,' says A. C. Fraser, 'that the presence of order and design within the cosmos means that the cosmos must have had a beginning. That the universe should exist without either a beginning or an end of its orderly metamorphoses, does not seem less consistent with the ideas of theism and providence, than the hypothesis of its sudden creation in time—whatever that may mean. . . . We seem to be born into an unbeginning and unending divinely natural evolution' (*Theism*², pp. 125, 133).

7. The scientific conception. — Science has widened man's cosmic view and increased his cosmic emotion. His doctrine of creation is transfigured in the light of astronomy and geology, biology and paleontology. His vision of the making of this world at a certain recent time, and of the rest of the universe with it, is replaced by a grander vision of the slow and progressive formation, by the action of physical forces, of a universe in which countless new worlds are being formed to-day just as this one—this satellite of the sun—was formed hundreds of millions of years ago. His idea of a primeval chaos, which found expression in all his antique cosmogonies (as in *Gn* 1²), is discarded for the conviction that, when he goes back as far as the wings of imagination can carry him, this universe, however changed in aspect, is still a cosmos. And his old belief that 'there are just as many species of plants and animals as there were different forms originally created by the Infinite Being; and that these different forms, according to the laws of reproduction imposed

upon them, produced others, but always forms like themselves' (Linnæus), has yielded to 'a view of life, with its several powers, having been originally breathed by the Creator into a few forms or into one; and, that, whilst this planet has gone cycling on according to the fixed law of gravity, from so simple a beginning endless forms most beautiful and most wonderful have been, and are being evolved' (Darwin, *Origin of Species*⁶, p. 403).

'The progress of science, as Driver frankly admits, 'has brought the Cosmogony of Genesis into sharp and undisguised antagonism with the Cosmogony of science, . . . and to expect to find in it supernatural information on points of scientific fact, is to mistake its entire purpose' (*Genesis*, p. 33). There is nothing, however, in the cosmogony of science that is in conflict with that conception of 'a great and good Maker of the world' which is found at the heart of so many primitive and savage religions; or with Isaiah's idea of a Creator who 'hath measured the waters in the hollow of his hand, and meted out heaven with the span, and comprehended the dust of the earth in a measure, and weighed the mountains in scales, and the hills in a balance'; or with the Platonic faith expressed in the *Timæus*: 'Let me tell you, then, why the Creator created and made the universe. He was good, and desired that all things should be as like Himself as possible' (Jowett, *ili*, 613).

The scientific conception of creation has important bearings upon religion. It has at once made God greater and brought Him nearer. It has not only immeasurably expanded the heavens which declare His glory, but it has substituted the action of an immanent for the action of a transcendent Creator. 'The general effect of the intellectual movement of modern times,' says J. Fiske, 'has been to discredit more than ever' before the Latin idea of God as a power outside of nature and occasionally interfering with it' (*Thorough Nature to God*, 147). The 'Great Original' can no longer be conceived as a Demiurge or Master-builder, putting forth His power once and then staying His hand; His creative action is spread all along the line of gradual development, revealing itself in ever higher potencies. And in place of a God beyond the stars, who created the world once upon a time and then was content with 'seeing it go,' we have a Spirit who is 'closer than breathing, and nearer than hands and feet.'

Further research into the ultimate nature of matter seems destined to upset many hypotheses.

'There is nothing,' said Lord Kelvin, 'between absolute scientific belief in a Creative power, and the acceptance of the theory of a fortuitous concourse of atoms. . . . If you think strongly enough, you will be forced by science to the belief in God which is the foundation of all religion' (*Nineteenth Cent.*, June 1903). And now, even the atomic theory of the origin of things, after a vogue of more than 2000 years, is at length being set aside, for it is found, as Sir O. Lodge says, that the 'atoms of matter, instead of being ultimate, "are liable . . . to break up or explode, and so resolve themselves into simpler forms," called electrons, which again are described as "knots or twists or vortices, or some sort of either static or kinetic modification, of the ether of space" (*Life and Matter*, 28, 32). Ether 'is probably the fundamental substratum of the whole material world, underlying every kind of activity, and constituting the very atoms of which our own bodies are composed' (*The Substance of Faith*, 74). 'If any one thinks that ether, with all its massiveness and energy, has probably no psychical significance, I find myself unable to agree with him' (*The Ether of Space*, 1909, p. 114).

The scientific idea of creation as involution and evolution has thus brought us nearer than ever to 'the Mind which, like our own, must underlie the material fabric,' the Nous of Anaxagoras. 'The process of evolution can be regarded as the gradual unfolding of the Divine Thought, or Logos, throughout the universe, by the action of Spirit upon matter' (*Substance of Faith*, 59). There are some who 'recognise in this extraordinary development a contact between this material frame of things and a universe higher and other than anything known to our senses: . . . a universe capable of infinite development . . . long after this planet . . . shall have fulfilled its present spire of destiny, and retired cold and lifeless upon its endless way' (*Life and Matter*, 199 t.).

CREED (Bab.-Assyr.).—Though the religion of Babylonia and Assyria was practically homogeneous, there were probably nearly as many different beliefs as there were States or provinces; and the creed of the people became modified from time to time, either through the progress of thought or on account of political exigencies. These changes in the beliefs of the people, which sometimes bore upon the nature of the gods whom they worshipped, were in some cases such as to form either important variations in the original creeds, or transformations such as might have made a fresh statement of their position needful.

Notwithstanding that this was the case, it is not certain that in any of the centres of religious teaching the priests ever thought of putting forward anything in the nature of a creed, as we understand the word to-day; indeed, no document in which

they have formulated the articles of their belief has yet come down to us, except the well-known legends of their gods (which, however, are more of the nature of sacred books), and certain introductions to incantations. That they should have formulated a statement of their religious beliefs, however, would not by any means have been either an impossible thing or against their ideas of religious propriety. Often enough, and seemingly at all periods, they declared their creeds in the names they bore. Thus, in the time of Lugal-anda and Uru-ka-gina (c. 4000 B.C.), we meet with names similar to the following: (*Sûr-Bau*, 'man of Bau'; *Ura-Dumuzi*, 'servant of Tammuz'; *Enim-Surupak*¹-zida, 'the word of Surupak is true,' or the

¹ Or *Sukerra*. This was the god of Surippak, or Suruppak, now Fara, which was the city of Ut-napistim, the Babylonian Noah.

like; *Amar-Asnan*, 'the corn-god's steer,' etc.; and names of the same character continued to be used all through the succeeding periods. During the early Semitic period (2000 B.C.) there occur names like *Šumma-ilu-lā-ūlia*, 'if God were not my god'; *Šumma-ilu-lā-Samas*, 'if my god were not the sun-god'; *Sin-lā-šanān*, 'Sin (the moon-god) has no equal'; *Zēr-panitum-ummi*, 'Zērpanitum is my mother'; *Yauun-ilu*, 'Jah is God'; *Nabum-ilu*, 'Nebo is god,' etc. In Assyrian literature we likewise find such names as *Assur-taklak*, 'I trust in Assur'; *Tukulti-Ninip*, 'my trust is Ninip,' with its synonym *Tukulti-apil-ēšarra* (Tiglath-pileser), 'my trust is the son of E-šarra'; *Ušur-amat-ēa*, 'keep the word (or command) of Ea'; *Sin-badān*, 'Sin is our mountain (of defence),' etc. Some names express belief as to the identity of divinities—possibly in opposition to those whose creed was different: for instance, *Nabū-yā'u*, 'Nebo is Jah'; *Yā-Dagunu*, 'Jah is Dagon'; and such names as *Yā-ābini*, 'Jah is our father,' form an interesting series. The Babylonians, like all the Semites, were intensely religious, and seldom objected to asserting their creed; indeed, some of the above names show that the Western Semites in general announced it boldly, and that what men called themselves became, as it were, a challenge to such as they regarded as heterodox.

Naturally, these are very short professions of faith, and it is doubtful whether longer ones are likely to be found. Sometimes, however, it seems to have been considered necessary to make some kind of a statement before beginning the utterance of an incantation. This took the form of a recital of some religious or mythological event, which justified the mystic words and the ceremonies which were to follow. Among these are the stories of the various evil spirits, the poetical description of the vine of Eridu, and the primitive account of the Creation prefixed to, and forming part of, the incantation to toothache. The composition must like a creed, however, is that known as the bilingual story of the Creation, which is prefixed to an incantation for purification:

Incantation.—The holy house, the house of the gods, in a holy place had not been made;

A plant had not been brought forth, a tree had not been created;

A brick had not been laid, a beam had not been shaped;

A house had not been built, a city had not been constructed;

A city had not been made, the inhabitants had not been installed (?);

Niffer had not been built, E-kura¹ had not been constructed;

Erech had not been built, E-anna² had not been constructed;

The Abyss had not been made, Eridu had not been constructed;

The holy house, the house of the gods—its seat had not been made;

The whole of the lands were sea.

When within the sea there was a stream,

In that day Eridu was made, E-sagila was constructed—

E-sagila, which the god Lugal-du-azaga had founded within the Abyss.

Babylon was built, E-sagila was completed;

He made the gods and the Anunnaki altogether,

The holy city, the seat of their hearts' joy, as supreme he proclaimed;

Marduk bound together a reed-bank before the waters,

He made earth, and poured it out against the bank,

To settle the gods in a seat of joy of heart.

He made mankind—

Aruru made the seed of mankind with him.

He made the beasts of the field and the living creatures in the desert;

He made the Tigris and the Euphrates, and set (them) there.

Well³ proclaimed he their name.

Herb, the marsh-plant, the reed, and the thicket, he made;

He made the verdure of the plain;

The lands (and) the marshes were the reedy bank.

The cow, her young, the steer; the sheep, her young, the lamb of the fold;

Plantations and forests also.

The goat and the wild goat were dear (?) to him.

Lord Marduk made a bank on the sea-shore,

... [whilch at first he made not,

¹ The temple at Niffer.

² The temple at Erech.

³ Or, 'as (being) good.'

... he caused to be.

[He made [the plant], he made the tree—

[Everything] he made there—

[He laid the brick], he made the beams;

[He constructed the house], he built the city;

[He built the city], he established the community;

[He built the city Niffer], he built E-kura the temple;

[He built the city Erech], he built E-anna [the temple].

Here the obverse breaks off, and, where the text becomes legible again, on the reverse, it is an incantation for purification, similar to many others in Assyro-Babylonian literature.

It seems probable that the other centres of Divine worship in Babylonia had similar statements of the creed held in the place, and this presupposes theological schools and colleges for the priests. At present we do not know much, if anything, about them; but the temple-libraries may ultimately yield information upon the point, together with statements of their beliefs similar to that translated above.

T. G. PINCHES.

CREED (Buddhist).—Nearly six centuries before the birth of Christ, at a time when religious speculation in India was rife, Siddhārtha Gautama, the son of a Sākya chieftain, went forth from his home to 'seek after what was right.' Reverence and affection for the founder of one of the world's greatest religions have led his disciples, during many centuries, and in different Eastern countries, to embellish, in apocryphal literature, the story of Gautama's life and teaching. But it is beyond doubt that the scheme of life, religious faith, and moral standards attributed to the founder of Buddhism represents his actual teaching. In regard to this the greatest authorities on Buddhism are agreed.

'When it is recollected,' says Rhys Davids, 'that Gautama Buddha did not leave behind him a number of deeply simple sayings, from which his followers subsequently built up a system or systems of their own, but had himself thoroughly elaborated his doctrine, partly as to details, after, but in its fundamental points even before, his mission began; that, during his long career as teacher, he had ample time to repeat the principles and details of the system over and over again to his disciples, and to test their knowledge of it; and finally, that his leading disciples were, like himself, accustomed to the subtlest metaphysical distinctions, and trained to that wonderful command of memory which Indian ascetics then possessed; when these facts are recalled to mind, it will be seen that much more reliance may reasonably be placed upon the doctrinal parts of the Buddhist Scriptures than upon correspondingly late records of other religions' (*Buddhism*, p. 86 f.).

Oldenberg (*Buddha*, p. 203 f., Eng. tr.) speaks to the same general effect: 'On the whole we shall be authorized to refer to Buddha himself the most essential trains of thought which we find recorded in the sacred texts, and in many places it is probably not too much to believe that the very words in which the ascetic of the Sākya house couched his gospel of deliverance have come down to us as they fell from his lips. We find that, throughout the vast complex of ancient Buddhist literature which has been collected, certain mottoes and formulas, the expression of Buddhist convictions upon some of the weightiest problems of religious thought, are expressed over and over again in a standard form adopted once for all. Why may not these be words which have received their currency from the founder of Buddhism, which had been spoken by him hundreds and thousands of times throughout his long life, devoted to teaching?'

In the valley of the Ganges, the birthplace of Buddhism, there was, at the time when the new religion came into being, a maze of interacting ideas, which Rhys Davids (*Early Buddhism*, p. 23) has classified as follows: (1) The very wide and varied group of ideas about souls supposed to dwell within the bodies of men and animals, and to animate moving objects in Nature (trees and plants, rivers, planets, etc.). These may be summed under the convenient modern term of *Animism*. (2) We have later and more advanced

ideas about the souls supposed to animate the greater phenomena of Nature. These may be summed under the convenient modern term of *Polytheism*. (3) We have the still later idea of a unity lying behind all these phenomena, both of the first and of the second class—the hypothesis of a one First Cause on which the whole universe in its varied forms depends, in which it lives and moves, and which is the only reality. This may be summed under the convenient modern term of *Monism*. (4) We have the opposite view. In this the First Cause has either not been reached in thought, or it has been considered and deliberately rejected; but otherwise the whole soul-theory has been retained and amplified, and the hypothesis of the eternity of matter is held at the same time. This may be summed under the convenient modern term of *Dualism*.

These modern Western terms, though useful for classification, never exactly fit the ancient Eastern thought. And we must never forget that the clear-cut distinctions we now use were then perceptible to only quite a few of the clearest thinkers. Most of the people held a strange jumble of many of the notions current around them. The enumeration here made is merely intended to show that, when Buddhism arose, the country was setting, very much as the Western world was at the same period, with a multitude of theories on all sorts of questions—ethical, philosophical, and religious. There was much superstition, no doubt, and no little sophistry. But, owing partly to the easy economic conditions of those times, partly also to the mutual courtesy and intellectual alertness of the people, there was a very large proportion of them who were earnestly occupied in more or less successful attempts to solve the highest problems of thought and conduct' (ib. p. 24).

Traces of the influence of all these ideas upon his mind can be found in the teaching of Gautama, but the current beliefs satisfied neither his nature nor his aspirations. In two authoritative texts he reveals the reasons why prevailing beliefs were impotent to satisfy him, and why he set himself to endeavour to get to the fountain-head of truth. The first is as follows:

'An ordinary unschooled man, though himself subject to old age, not escaped beyond its power, when he beholds another man old, is hurt, ashamed, disgusted, overlooking the while his own condition. Thinking that that would be unsuitable to me, the infatuation of a youth in his youth departed utterly from me' (*Ahuttara*, i. 146).

The other text says:

'Before the days of my enlightenment, when I was still only a Bodhisat, though myself subject to re-birth, old age, disease, and death, to sorrow and to evil, I sought after things subject also to them. Then methought: Why should I act thus? Let me, when subject to these things, seeing the danger therein, seek rather after that which is not subject thereto, even the supreme bliss and security of Nirvana' (*Majjhima*, i. 163).

After having followed, to no purpose, the paths of metaphysical speculation, of mental discipline, and of ascetic rigour, Gautama reaped on one memorable night the fruit of his prolonged spiritual effort, the truth of things being of a sudden so clearly revealed to him that thenceforth he never swerved for a moment from devotion to his creed and to the mission that it imposed upon him.

The enlightenment which Gautama received, and which was regarded by himself and his followers as a victory over all the powers of darkness, is uniformly described as

'a mental state of exaltation, bliss, insight, altruism. The different Suttas emphasize different phases, different facets, as it were, of this condition. But they regard it as one and the same upheaval of the whole mental and moral nature—will, emotion, and intellect being equally concerned. Thus one Sutta (the *Mahā-saccaka*) lays stress on the four Raptures, and the three forms of Knowledge; another (the *Dvedhā-vitakka*) on the certainty, the absence of doubt; another (the *Bhaya-bherava*) on the conquest over fear and agitation; another (the *Āriya-pariyesanā*) on the bliss and security of the Nirvana to which he then attained.'

In the first of these Suttas the recital ends:

'When this knowledge, this insight, had arisen within me, my heart was set free from the intoxication of lusts, set free from the intoxication of becoming, set free from the intoxication of ignorance. In me, thus emancipated, there arose the certainty of that emancipation. And I came to know: "Re-birth is at an end. The higher life has been fulfilled. What had to be done has been accomplished. After this present life there will be no beyond." This last insight did I attain to in the last watch of the night. Ignorance was beaten down, insight arose,

darkness was destroyed, the light came, inasmuch as I was there strenuous, aglow, master of myself' (Rhys Davids, *Early Buddhism*, p. 86 f.).

Having received enlightenment, Buddha proceeded to Benares. There he met some of his former disciples, the five ascetics, and explained to them the fundamental truths of his religion—an exposition preserved in the *Dhammachakka-ppavattana Sutta*, the Sutta of the Foundation of the Kingdom of Righteousness.

'This expression is usually translated "Turning the wheel of the Law," which, while retaining the Buddhist figure of speech, fails to represent the idea the figure was meant to convey; the rendering in the text gives up the figure in order to retain the underlying meaning. The "*cakra*" (Pāli *cakka*) is no ordinary wheel; it is the sign of dominion; and a "*cakravarti*" is "he who makes the wheels of his chariots roll unopposed over all the world"—a universal monarch. *Dharma* (Pāli *Dhamma*) is not law, but that which underlies and includes the law,—a word often most difficult to translate, and best rendered here by truth or righteousness; whereas the word "law" suggests ceremonial observances, outward rules, which it was precisely the object of Gautama's teaching to do away with. *Praavartana* (Pāli *ppavattana*) is "setting in motion onwards," the commencement of an action which is to continue. The whole phrase means, therefore, "To set rolling the royal chariot-wheel of a universal empire of truth and righteousness"' (Rhys Davids, *Buddhism*, p. 46).

The full text of the Sutta is as follows:

'There are two extremes which he who has gone forth ought not to follow—habitual devotion, on the one hand, to the passions, to the pleasures of sensual things, a low and pagan way (of seeking satisfaction), ignoble, unprofitable, fit only for the worldly-minded; and habitual devotion, on the other hand, to self-mortification, which is painful, ignoble, unprofitable. There is a Middle Path discovered by the Tathāgata—a path which opens the eyes, and bestows understanding, which leads to peace, to insight, to the higher wisdom, to Nirvana. Verily! it is this Aryan Eight-fold Path: that is to say, Right Views, Right Aspirations, Right Speech, Right Conduct, Right Mode of Livelihood, Right Effort, Right Mindfulness, and Right Rapture.

Now this is the Noble Truth as to suffering. Birth is attended with pain, decay is painful, disease is painful, death is painful. Union with the unpleasant is painful, painful is separation from the pleasant; and any craving unsatisfied, that, too, is painful. In brief, the five aggregates of clinging (that is, the conditions of individuality) are painful.

Now this is the Noble Truth as to the origin of suffering. Verily! it is the craving thirst that causes the renewal of becoming, that is accompanied by sensual delights, and seeks satisfaction, now here, now there,—that is to say, the craving for the gratification of the senses, or the craving for a future life, or the craving for prosperity.

Now this is the Noble Truth as to the passing away of pain. Verily! it is the passing away so that no passion remains, the giving up, the getting rid of, the emancipation from, the harbouring no longer of, this craving thirst.

Now this is the Noble Truth as to the way that leads to the passing away of pain. Verily! it is this Aryan Eight-fold Path, that is to say, Right Views, Right Aspirations, Right Speech, Conduct, and Mode of Livelihood, Right Effort, Right Mindfulness, and Right Rapture' (Rhys Davids, *Early Buddhism*, p. 61 f.).

This concise statement contains all the essential elements of the Buddhist creed. The great deliverance, of which Gautama himself was conscious, and the means whereby he had attained it, formed the basis of all his subsequent teaching. It was this gospel of deliverance which won his earliest disciples, and which they in turn were commissioned by the Buddha to preach to suffering men. Sixty monks were soon enrolled as converts of the new faith, and they were sent forth as its first apostles. In sending them forth, Gautama thus addressed them:

'I am delivered from all fetters, human and divine. You, too, O monks, are freed from the same fetters. Go forth and wander everywhere, out of compassion for the world, and for the welfare of gods and men. Go forth, one by one, in different directions. Preach the doctrine, salutary in its beginning, middle, and end, in its spirit, and in its letter. Proclaim a life of perfect restraint, chastity, and celibacy. . . . I will go also to preach this doctrine' (*Mahāvagga*, i. 11. 1).

When the band of believers was increased to a thousand, Gautama preached his 'burning' fire-sermon, on a hill Gayāsīsa, near Gayā:

'Everything, O monks, is burning. . . . The eye is burning; visible things are burning. The sensation produced by contact with visible things is burning—burning with the fire of lust (desire), enmity, and delusion, with birth, decay, death, grief, lamentation, pain, dejection, and despair. The ear is burning, sounds are burning; the nose is burning, odours are burning; the tongue is burning, tastes are burning; the body is burning,

objects of sense are burning. The mind is burning, thoughts are burning. All are burning with the fire of passions and lusts. Observing this, O monks, a wise and noble disciple becomes weary of (or disgusted with) the eye, weary of visible things, weary of the ear, weary of sounds, weary of odours, weary of tastes, weary of the body, weary of the mind. Becoming weary, he frees himself from passions and lusts. When free, he realizes that his object is accomplished, that he has lived a life of restraint and chastity, that re-birth is ended' (*Mahāvagga*, i, 21. 2ff.).

Shortly before his death the same teaching was again committed to the faithful Ananda:

'O Ananda, I am now grown old, and full of years, and my journey is drawing to its close; I have reached eighty years—my sun of days—and, just as a worn-out cart can only with much care be made to move along, so my body can only be kept going with difficulty. It is only when I become plunged in meditation that my body is at ease. In future be ye to yourselves your own light, your own refuge; seek no other refuge. Hold fast to the truth as your refuge; look not to any one but yourselves as a refuge' (*Mahā-parinibbāna-sutta*, ii, 32, 33).

Gautama afterwards delivered a summary of the duties of the monks who were to be the missionaries of his faith to the world:

'Which then, O monks, are the truths (the seven jewels) it behoves you to spread abroad, out of pity for the world, for the good of gods and men? They are: (1) the four earnest reflexions (*smṛiti*, *satipathāna*); on the impurities of the body, on the impermanence of the sensations, of the thoughts, of the conditions of existence; (2) the four right exertions (*sammappadhāna*); viz. to prevent demerit from arising, get rid of it when arisen, produce merit, increase it; (3) the four paths to supernatural power (*iḍḍhi-pāda*); viz. will, effort, thought, intense thought; (4) the five forces (*pañña-bala*); viz. faith, energy, recollection, self-concentration, reason; (5) the proper use of the five organs of sense; (6) the seven "limbs" of knowledge (*bodhy-āṅga*); viz. recollection, investigation, energy, joy, serenity, concentration of mind, equanimity; (7) the noble eight-fold path' (*Mahā-parinibbāna*, iii, 65).

In order to form an accurate judgment regarding the meaning of the teaching of Buddha as set forth in the *Dhammachakka-ppavattana Sutta*, it is necessary not only to explain the terms used in the Sutta, but also to understand the doctrines which it involves. In subsequent Suttas each word, each clause, and each idea in the Discourse is fully commented and enlarged upon. It is possible, in the light of these explanations, to arrive at a true conception of the meaning which the Discourses conveyed to early Buddhists. From the same sources a general idea of the underlying beliefs may be gained.

1. The Buddhist scheme of life.—In Buddhist thought man is not regarded as a soul residing in a physical body, or as possessing a soul which may be separated from the body and continue to exist. A belief in self or soul is regarded so distinctly as a heresy that two well-known words in Buddhist terminology have been coined on purpose to stigmatize it. The first of these is *sakkāya-dīṭṭhi*, 'the heresy of individuality,' the name given to this belief as one of the three primary delusions (the others being doubt, and belief in the efficacy of rites and ceremonies) which must be abandoned at the very first stage of the Buddhist path of holiness. The other is *attavāda*, 'the doctrine of soul or self,' which is a name given to it as a part of the chain of causes which lead to the origin of evil. It is there classed—with sensuality, heresy (as to eternity and annihilation), and belief in the efficacy of rites and ceremonies—as one of the four *upā-dānas*, which are the immediate cause of birth, decay, death, sorrow, lamentation, pain, grief, and despair.

What then is man? He is an aggregate of different properties or qualities—called *skandhas*, or aggregates. These *skandhas* are as follows: (1) the material properties or attributes (*rūpa*); (2) the sensations (*vedanā*); (3) the abstract ideas (*sannā*); (4) the tendencies or potentialities (lit. 'confections,' *sāṅkhārā*); and (5) thought, reason (*viññāna*).

It is distinctly laid down that none of these *skandhas* separately, nor the *skandhas* as a whole, is the soul.

'Therefore, O monks, whatever in the way of material form, sensations, perceptions, etc., respectively, has ever been, will be, or is, either in our case or in the outer world, or strong or weak, or low or high, or far or near, it is not self; this must be in truth perceive, who possesses real knowledge. Whosoever regards things in this light, O monks, being a wise and noble hearer of the word, turns himself from sensation and perception, from conformation and consciousness. When he turns therefrom, he becomes free from desire: by the cessation of desire he obtains deliverance; in the delivered there arises a consciousness of his deliverance: re-birth is extinct, holiness is completed, duty is accomplished; there is no more a return to this world, he knows' (*Mahāvagga*, i, 6. 44ff.).

Gautama refused not only to give a definite answer to questions concerning the relation of the body to the soul, but even to discuss the matter. The question 'whether the soul is the same as the body, or different from it,' was one of the Indeterminates, prohibited questions.

It is the union of the *skandhas* which makes the individual:

'Every person, or thing, or god is therefore a putting together, a compound. And in each individual, without any exception, the relation of its component parts is ever changing, is never the same for two consecutive moments. It follows that no sooner has separateness, individuality, begun, than dissolution, disintegration, also begins. There can be no individuality without a putting together: there can be no putting together without a becoming; there can be no becoming without a becoming different: and there can be no becoming different without a dissolution, a passing away, which sooner or later will inevitably be complete' (Rhys Davids, *Early Buddhism*, p. 57).

The great fact of life is the 'Wheel of Life,' called *Paticca-Sammuppāda* (i.e. origination through dependence): (1) on account of Ignorance, the *saṅkhāras*; (2) on account of the *saṅkhāras*, Consciousness; (3) on account of Consciousness, Name and Form; (4) on account of Name and Form, the six Provinces (of the six senses); (5) on account of the six Provinces, Contact; (6) on account of Contact, Sensation; (7) on account of Sensation, Craving; (8) on account of Craving, Attachment; (9) on account of Attachment, Becoming; (10) on account of Becoming, Birth; (11) (12) on account of Birth, old age, and death, grief, lamentation, suffering, dejection, and despair.

Buddhism teaches that everything in life has a cause, and that the Wheel of Life must revolve, one cause leading to another, according to an irresistible law. But there is no attempt to explain the ultimate cause of all things. This Doctrine is embodied in the familiar stanza, which is engraved upon many an image of the Buddha, and impressed upon the moulded ashes of the dead:

'Of all the phenomena sprung from a cause

The Buddha the cause hath told,

And he tells, too, how each shall come to its end,

Such alone is the word of the Sage' (*Vinaya*, i, 40).

Death does not cause the Wheel of Life to cease to turn; it is only a link in the ceaseless chain of existence. At the moment of death a new life comes into being. The *skandhas* re-combine, under conditions determined by the amount of merit or demerit which their previous combination has accumulated. The man is the same as his predecessor in the chain of re-birth. And yet he is not the same; he is on a higher or a lower scale of existence, according as his previous life has been good or bad. This is *karma* (q.v.), the doctrine on which the whole of Buddhism turns.

Existence is conjoined with pain—pain to which there is no ending. The conditions which make an individual are the conditions that give rise to pain. Birth, death, disease, unions, separations, unsatisfied cravings, in fact all that goes to make individuality, are painful; existence, from beginning to end, is painful.

But why this pain of life, this life of pain? The second truth answers the question. Rhys Davids says that the last words in this Noble Truth might be rendered 'the lust of the flesh, the lust of life

and the love of this present world' (*Early Buddhism*, p. 55). The author of *The Creed of Buddha* says (p. 80), with reference to this craving, or thirst, which Gautama affirmed to be the origin of suffering:

'Desire for the pleasures, or rather for the joys, that minister to the real self is wholly good. It is desire for the pleasures that minister to the lower self; it is the desire to affirm the lower self, to live in it, to cling to it, to rest in it; it is the desire to identify oneself with the individual self and the impermanent world which centres in it, instead of with the Universal Self and the eternal world of which it is at once the centre and the circumference.—It is this desire, taking a thousand forms, which is evil, and which proves itself to be evil by causing ceaseless suffering to mankind. If the self is to be delivered from suffering, desire for what is impermanent, changeable, and unreal must be extinguished; and the gradual extinction of unworthy desire must therefore be the central purpose of one's life.'

The question that Gautama set himself to solve was the cessation of the pain consequent upon and inherent in existence itself, and the answer to his search was the attainment of Nirvāṇa, by way of the Noble Eight-fold Path.

2. The Eight-fold Path.—The divisions of the path are, as already stated: Right Views, Right Aspirations, Right Speech, Right Conduct, Right Mode of Livelihood, Right Effort, Right Mindfulness, Right Rapture. The four stages of the path are: (1) The 'entering upon the stream, *Conversion*; which follows on (a) companionship with the good, (b) hearing of the law, (c) enlightened reflexion, or (d) the practice of virtue. The unconverted man is unwise, under the influence of sin, enmity, and impurity; but if, by one or more of the means just mentioned, he has arrived at a perception of the 'four Noble Truths,' he has become converted, and has entered the first path. While in this path, he becomes free successively from the delusion of self, from doubt as to the Buddha and his doctrines, and from the belief in the efficacy of rites and ceremonies. 'Better than universal empire in this world, better than going to heaven, better than lordship over all worlds is (this three-fold) fruit of the first path' (*Dhammapāda*, verse 178). (2) The path of those who will only once return to this world. The converted man, free from doubt and the delusions of self and ritualism, succeeds in this path in reducing to a minimum lust, hatred, and delusion. (3) The path of those who will never return to this world; in which, the last remnants of sensuality and malevolence being destroyed, not the least low desire for oneself, or wrong feeling towards others, can arise in the heart. (4) The path of the holy ones; more exactly, worthy ones, *arahats*; in which the saint becomes free from desire for material, or immaterial, existence; from pride and self-righteousness, and ignorance (Rhys Davids, *Buddhism*, p. 108 f.).

Several words are used in this description of the Eight-fold Path which require explanation.

i. *Right Views*.—Right Views refer principally to the four truths, enunciated in the *Dhammacakka-ppavattana Sutta*, and the 'three signs,' which include (a) the first of the four truths, (b) impermanence, and (c) non-soul, i.e. the absence of a soul. Impermanence and non-soul are both declared to be the 'signs' of every individual, whether god, man, or animal.

ii. *Right Aspirations*.—The Buddhist faith does not teach the suppression of all desire, but the suppression of evil desires, low ideals, useless cravings, idle excitements, by the cultivation of the opposite—right desires and lofty aspirations. In the *Majjhima* (iii. 25) examples are given of right desire, e.g. the desire for emancipation from sensuality, aspirations after the attainment of love for others, the wish not to injure any living thing, the desire for the eradication of wrong, and for the promotion of right dispositions in the heart.

iii. *Right Speech*.—To shun the company of the witless; to hold communion with the wise; to give honour where honour is due: this is a great blessing (*Mahā-parinibbāna Sutta*, i. 31).

iv. *Right Conduct*.—The two most important features of this quality are love and joy. Love, in the Pāli, is *mettā*, and the *Mettā Sutta* (*Sutta Nipāta*, viii. 7-9) says:

'As a mother, even at the risk of her own life, protects her son, her only son, so let him cultivate love without measure towards all beings. Let him cultivate towards the whole world—above, below, around—a heart of love unstinted, unmixed with the sense of differing or opposing interests. Let a man maintain this mindfulness all the while he is awake, whether he be standing, walking, sitting, or lying down. This state of heart is the best in the world.'

Again, the *Majjhima* (i. 129):

'Our mind shall not waver. No evil speech will we utter. Tender and compassionate will we abide, loving in heart, void of malice within. And we will be ever suffusing such an one with the rays of our loving thought. And with that feeling as a basis we will ever be suffusing the whole world with the thought of love, far-reaching, grown great, beyond measure, void of anger or ill-will.'

And the *Itivuttaka* (xxvi.):

'All the means that can be used as bases for doing right are not worth the sixteenth part of the emancipation of heart through Love. That takes all those up into itself, outshining them in radiance and glory, just as whatsoever stars there be, their radiance avails not the sixteenth part of the radiance of the moon. That takes all those up into itself, outshining them in radiance and glory—just as in the last month of the rains, at harvest time, the sun, mounting up on high into the clear and cloudless sky, overwhelms all darkness in the realms of space, and shines forth in radiance and glory—just as in the night, when the dawn is breaking, the Morning Star shines out in radiance and glory—just so all the means that can be used as helps towards doing right avail not the sixteenth part of the emancipation of the heart through Love.'

The joy of the faith is referred to in the 'Dialogues of the Buddha':

'When these five Hindrances have been put away within him, he looks upon himself as freed from debt, rid of disease, out of jail, a free man, and secure. And gladness springs up within him on his realizing that, and joy arises to him thus gladdened, and so rejoicing all his frame becomes at ease, and being thus at ease he is pervaded with a sense of peace, and in that peace his heart is stayed' (Rhys Davids, *Dialogues of the Buddha*, i. 84).

v. *Right Mode of Livelihood*.—'Whoso hurts and harms living creatures, destitute of sympathy for any living thing, let him be known as an out-caste' (*Vasala Sutta*, *Sutta Nipāta*, vii. 2).

vi. *Right Effort*.—This signifies 'a constant intellectual alertness.' The three cardinal sins of Buddhism are: sensuality (*dosa*), ill-will (*moha*), and stupidity or dullness (*rāga*); the last mentioned being regarded as the worst.

The 'Four Great Efforts' (*sammappadhānā*) are the effort or exertion (a) to prevent sinfulness arising, (b) to put away sinful states which have arisen, (c) to produce goodness not previously existing, and (d) to increase goodness where it does exist (*Mahā-parinibbāna-sutta*, *SBE* xi. 63 n.).

'The Four Roads to Saintship' (*iddhipādā*) are four means by which saintship is obtained, viz. (a) the will to acquire it, (b) the necessary exertion, (c) the necessary preparation of the heart, and (d) investigation (*SBE* xi. 63).

vii. *Right Mindfulness*.—This is closely connected with Right Effort. Dialogues in the *Digha* (ii. 290-315) and *Majjhima* (i. 55 f.) are devoted to the subject:

'The disciple, whatsoever he does, whether going forth or coming back, standing or walking, speaking or silent, eating or drinking, is to keep clearly in his mind all that it means, the temporary character of the act, its ethical significance, and that, above all, behind the act there is no actor (goer, seer, eater, speaker) that is an eternally persistent unity.'

viii. *Right Rapture*.—In the *Dhammapāda* (verses 197-200) this Right Rapture is thus described:

'It is in very bliss we dwell, we who hate not those who hate us;
Among men full of hate, we continue void of hate.
It is in very bliss we dwell, we in health among the ailing;
Among men weary and sick, we continue well.
It is in very bliss we dwell, free from care among the care worn;

Among men full of worries, we continue calm.
It is in very bliss we dwell, we who have no hindrances;
We will become feeders on joy, like the gods in their shining splendour!

In conformity with the Pāli text, all the divisions of the Eight-fold Path are described by a single word—'right.' This is, perhaps, the best translation of the original *sammā*. The word signifies 'going with'; used as an adjective, it is rendered 'general,' 'common,' or 'corresponding,' 'mutual'; as an adverb, 'commonly,' 'usually,' 'normally,' or 'fittingly,' 'properly,' 'correctly.' It is used, in a secondary sense, to mean round, fit and perfect, normal and complete. 'Right,' therefore, in the sense of 'correct' has to be understood, i.e. in agreement with the teaching of Gautama. The word is not used with a moral significance. The eight-fold description of the perfect life is of such vital importance for the correct understanding of the Buddhist creed that it may be convenient to summarize the meaning of each division of the path:

1. Right views; free from superstition or delusion.
2. Right aspirations; high and worthy of the intelligent man.
3. Right speech; kindly, open, truthful.
4. Right conduct; peaceful, honest, pure.
5. Right livelihood; bringing hurt or danger to no living thing.
6. Right effort; in self-training and self-control.
7. Right mindfulness; the active, watchful mind.
8. Right rapture; earnest thought on the deep mysteries of life.

Gogerly (*Journ. Ceylon As. Soc.*, 1865) gives a slightly different rendering:

- | | |
|--|---------------------------------------|
| 1. Correct views of truth). | Correct doctrines. |
| 2. Correct thoughts. | A clear perception (of their nature). |
| 3. Correct words. | Inflexible veracity. |
| 4. Correct conduct. | Purity of conduct. |
| 5. Correct (mode of obtaining a) livelihood. | A sinless occupation. |
| 6. Correct efforts. | Perseverance in duty. |
| 7. Correct meditation. | Holy meditation. |
| 8. Correct tranquillity. | Mental tranquillity. |

3. The hindrances in the way.—The hindrances in the way of treading the Eight-fold Path, and thus securing deliverance, are very clearly detailed. They are described under different headings—'the Five Hindrances,' 'the Ten Fetters,' and 'the Four Intoxications.'

(a) The Five Hindrances (*nivaranā*) are sensuality, ill-will, torpor of mind or body, worry, and wavering. These affect a man like debt, disease, imprisonment, slavery, and anxiety.—(b) The Ten Fetters (*sangyojanas*) are: (1) delusions about the soul (*sakkāya-ditthi*), (2) doubt (*vicikicchā*), (3) reliance on ceremonies (*silabbata-parāmāsa*), (4) sensuality (*kāma*), (5) ill-will (*paṭigha*), (6) desire for re-birth on earth (*rūpa-rāga*), (7) desire for re-birth in heaven (*arūpa-rāga*), (8) pride (*māno*), (9) self-righteousness (*uddhacca*), (10) ignorance (*avijjā*).—(c) The Four Intoxications consist in the mental infatuation arising from sensual pleasures, from the pride of life, from ignorance, and from speculation.

4. The ultimate aim—Nirvāṇa.—When the traveller has resolutely trodden the Eight-fold Path, overcome the Hindrances, broken the Fetters, and resisted the Intoxications, he has reached the goal of all Buddhist ambition and effort—Nirvāṇa.

To him who has finished the Path, and passed beyond sorrow, who has freed himself on all sides, and thrown away every fetter, there is no more fever of grief. 'Him whose senses have become tranquil, like a horse well broken-in by the driver; who

is free from pride and the lust of the flesh, and the lust of existence, and the delilement of ignorance—him even the gods envy. Such a one whose conduct is right, remains like the broad earth, unweaved; like the pillar of the city gate, unmoved; like a pellucid lake, unruffled. For such there are no more births. Tranquil is the mind, tranquil the words and deeds of him who is thus tranquilized, and made free by wisdom' (*Dhammapāda*, verses 80, 94-96).

'They who, by steadfast mind, have become exempt from evil desire, and well-trained in the teachings of Gautama; they, having obtained the fruit of the Fourth Path, and immersed themselves in that ambrosia, have received without price, and are in the enjoyment of, Nirvāṇa... Their old *karma* is exhausted, no new *karma* is being produced; their hearts are free from the longing after future life; the cause of their existence being destroyed, and no new yearnings springing up within them, they, the wise, are extinguished like this lamp' (*Ratana Sutta*, 7, 14). 'That mendicant conducts himself well who has conquered (sin) by means of holiness, from whose eyes the veil of error has been removed, who is well-trained in religion, and who, free from yearning, and skilled in the knowledge, has attained unto Nirvāṇa' (*Sammāparibbāṇiya Sutta*, 14).

The word *Nibbāna* (Pāli for *Nirvāṇa*) occurs only infrequently in the Piṭakas. A few illustrations of its use in the *Dhammapāda* are given:

'These wise people [speaking of Arahats], meditative, persevering, ever full of strength, attain to Nirvāṇa, the highest bliss' (verse 23). 'The mendicant who delights in diligence, and looks with terror on sloth, cannot fall away,—he is in the very presence of Nirvāṇa' (verse 32). 'If thou keepest thyself as silent as a broken gong, thou hast attained Nirvāṇa; no angry clamour is found in thee' (verse 134). [The preceding verse condemns harsh speaking.] 'The Buddhas declare the best self-mortification to be patience, long-suffering; the best (thing of all) to be Nirvāṇa; for he is no (true) monk who strikes, no (true) mendicant who insults others' (verse 134). 'There is no fire like lust, there is no sin like hate, there is no misery like the *saṅkhas*, there is no happiness like peace. Hunger is the worst disease, the *saṅkhas* the worst suffering; knowing this as it really is, is Nirvāṇa, the highest bliss' (verse 202 f.). 'Those who are ever on the watch, who study day and night, whose heart is set on Nirvāṇa, their sinfulness dies away' [lit. 'their *Asavas* go to an end'] (verse 226).

In the light of these passages, what is Nirvāṇa? In the original it means 'going out,' 'extinction.' It cannot mean the extinction of the soul.

'It is the extinction of that sinful, grasping condition of mind and heart, which would otherwise, according to the great mystery of Karma, be the cause of renewed individual existence. That extinction is to be brought about by, and runs parallel with, the growth of the opposite condition of mind and heart; and it is complete when that opposite condition is reached. Nirvāṇa is therefore the same thing as a sinless, calm state of mind; and, if translated at all, may best, perhaps, be rendered "holiness"—holiness, that is, in the Buddhist sense, perfect peace, goodness, and wisdom' (Rhys Davids, *Buddhism*, p. 111 f.). See, further, art. NIRVANA.

Describing Nirvāṇa, Rhys Davids says (*Early Buddhism*, p. 72 f.):

'One might fill columns with the praises, many of them among the most beautiful passages in Pāli poetry and prose, lavished on this condition of mind, the state of the man made perfect according to the Buddhist faith. Many are the pet names, the poetic epithets, bestowed upon it, each of them—for they are not synonyms—emphasizing one or other phase of this many-sided conception—the harbour of refuge, the cool cave, the island amidst the floods, the place of bliss, emancipation, liberation, safety, the supreme, the transcendental, the uncreated, the tranquil, the home of ease, the calm, the end of suffering, the medicine for all evil, the unshaken, the ambrosia, the immaterial, the imperishable, the abiding, the further shore, the unending, the bliss of effort, the supreme joy, the ineffable, the detachment, the holy city, and many others. Perhaps the most frequent in the Buddhist texts is *Arahatsip*, "the state of him who is worthy"; and the one exclusively used in Europe is *Nirvana*, the "dying out," that is, the dying out in the heart of the fell fire of the three cardinal sins—sensuality, ill-will, and stupidity' (*Samyutta*, iv. 251, 261).

Such, then, according to the authoritative Buddhist scriptures, is the creed of Buddhism. But is it the whole of the creed which Gautama preached to the world? Was this the faith by which Buddha won the 'deepest heart of the East'? The new religion was *materialistic*, i.e. Buddha denied the soul, or ego; *atheistic*, i.e. there was no place for God in his system of thought; *pessimistic*, i.e. he regarded all existence as intrinsically evil; *egoistic*, i.e. in his scheme of life he taught men to think of themselves and their personal welfare; *nihilistic*, i.e. he regarded Nothing as the supreme reality. Oldenberg says of the philosophy of Buddha: 'We have a fragment of a circle, to complete which, and to find the centre of which, is forbidden, for

It would involve an inquiry after things which do not contribute to deliverance and happiness' (*op. cit.* p. 208). Some writers have accepted this view, and have sought to complete the circle from its segment, and to find its centre, arguing that a creed involving materialism, atheism, pessimism, egoism, and nihilism could never have achieved the triumph which attended the propaganda of Buddhism; and therefore only a part, and not the whole, of Buddha's teaching has been handed down. It is claimed, for instance, that the central truth of Buddhism was 'the conception that the Universal Self is the true self of each one of us, and that to realize the true self is the destiny and the duty of man.' The early triumph of the faith may be difficult to understand, but there is no ground for assuming that the Buddhist scriptures contain an incomplete statement of the great, central, and essential truths preached by Gautama. Details of the teaching may be lacking, but we are in possession of its essence.

There can be no doubt that Gautama's scheme of life and religious teaching lost its charm over the minds of men in the course of a few centuries—among other reasons, on account of its negations, and the absence of an effective dynamic. Hence the rise of the Mahāyāna school of Buddhism, and its new doctrine, namely, (1) help from God to save oneself and others from suffering; (2) communion with God, which gave the highest ecstatic rest to the soul; and (3) the possibility of participation in the nature of God, so that mortals might become Divine and immortal.¹ One result quickly followed. The old Buddhists of the Hinayāna school were unwilling that their teacher, Śākyamuni, should occupy a second place in the new creed, and so they deified him, and worshipped him exactly as the Mahāyāna school worshipped God. From the time of the deification of Buddha, Buddhism took a new lease of life, and became one of the world's greatest religions. Modern Buddhism presents to the world to-day a curious combination of the earliest teaching and its later developments.

Monier-Williams thus summarizes the achievements of the Buddhist faith in its earliest years in the land of its birth:

'What the Buddha then did was this: first he stretched out the hand of brotherhood to all mankind by inviting all, without exception, to join his fraternity of celibate monks, which he wished to be co-extensive with the world itself. Then he abolished the Brahminical "ways of salvation," i.e. *Yajna* "sacrifices," and *Bhakti* "devotion to personal gods," and substituted for these meditation and moral conduct as the only road to true knowledge and emancipation. And then, lastly, he threw open this highest way of true knowledge to all who wished to enter it, of whatever rank, or caste, or mental calibre they might be, not excepting the most degraded. Without doubt, the distinguishing feature in the Buddha's gospel was, that so living being, not even the lowest, was to be shut out from true enlightenment' (*Buddhism*, p. 96 f.).

J. H. BATESON.

CREEDS (Ecumenical).—I. The Apostles' Creed.—Within two generations from the Apostles a catechist at Rome produced the famous form which lies at the root probably of all similar forms, certainly in the West, and reflects without question the recent teaching of the great Apostles Peter

¹ Hence, also, the evolution of the thought of a Divine Saviour in the person of Avalokiteśvara (q.v.), which was a purely metaphysical invention, and of Maṭreya, the future Buddha.

and Paul. Kattenbusch traces the Old Roman Creed back to the year ± 100 A.D., and finds in it the archetype of all other forms in both East and West. Other writers, notably Zahn and Sanday, conjecture an Eastern type, a sister form, which they trace back to Antioch, regarding the later legend of Apostolic authorship, taught, e.g., by Rufinus (c. A.D. 400), as enshrining this modicum of truth—that the Apostles had agreed on such a form, which in the East and West passed through many modifications. It will be convenient to quote this Old Roman Creed:

OLD ROMAN CREED.

- I. 1. I believe in God, (the)¹ Father Almighty;
- II. 2. And in Christ Jesus, His only Son, our Lord,
3. Who was born of the Holy Ghost and the Virgin Mary,
4. crucified under Pontius Pilate and buried,
5. the third day He rose from the dead,
6. He ascended into heaven,
7. sitteth at the right hand of the Father,
8. thence He shall come to judge living and dead.
- III. 9. And in the Holy Ghost,
10. (the) Holy Church,
11. (the) remission of sins,
12. (the) resurrection of the flesh.

At first we can trace only bare allusions, as in a passage of Marcion's revised New Testament where he speaks of the 'covenant which begets us in the Holy Church,' and implies that the words 'Holy Church' were contained in the Baptismal Creed which had been taught him in Rome before his breach with the Church in A.D. 145. So, again, in two passages of Tertullian:

de Virg. Vel. l.: 'The rule of faith, indeed, is one altogether . . . of believing in one God Almighty, Maker of the world, and in His Son Jesus Christ, born of Mary the Virgin, crucified under Pontius Pilate; the third day raised from the dead, received in the heavens, sitting now at the right hand of the Father, about to come to judge quick and dead, through the resurrection also of the flesh.'

de Præser. xiii.: 'What the (Roman) Church has made a common token with the African Churches: has recognized one God, Creator of the universe, and Christ Jesus, of the Virgin Mary, Son of God, the Creator, and the resurrection of the flesh.'

With scanty references in Dionysius and Novatian, we pass on to the 4th cent., when Creeds come out to the light of day, and, greatly to our advantage, Marcellus, Bishop of Ancyra, who had been kindly received as an exile by Bishop Julius of Rome (c. A.D. 337), left on record his acceptance of the faith of the Roman Church. The accuracy of his quotation, recorded by Epiphanius, is confirmed by the testimony of Rufinus, priest of Aquileia, who (c. A.D. 400) wrote a commentary on this form, and compared with it the slightly different form of Aquileia. It is quite possible that Kattenbusch has minimized the evidence for the existence of similar Eastern forms of the 3rd century. He thinks that the Creeds of Cæsarea and Jerusalem, recovered from the pages of Athanasius and Cyril, were derived from the Roman Creed after the date when Paul of Samosata was deposed (c. A.D. 272); and that the Roman Creed was altered to meet the needs of the East, and became the parent of Creeds in Asia Minor and Egypt as well as in Palestine.

At present the theory of Kattenbusch still holds the field, and is supported by Harnack; but his critics are closing him in on every side. Kunze, working on the same lines as Zahn, reconstructs an Antiochene Creed of the 3rd cent., which he claims as an independent sister form:

CREED OF ANTIOCH.

- I. 1. I believe in one and an only true God, Father Almighty, Maker of all things, visible and invisible.
- II. 2. And in one Lord Jesus Christ, His Son, the only-begotten and firstborn of all creation, begotten of Him before all the ages, through whom also the ages were established, and all things came into existence.
3. Who, for our sakes, came down and was born of Mary the Virgin,
4. and crucified under Pontius Pilate, and buried,
5. And the third day rose according to the Scriptures.

¹ The definite article is enclosed in brackets when it is not found in the Greek text of Marcellus.

6. And ascended into heaven.
7.
8. And is coming again to judge quick and dead.
III. 9. [The beginning of the third article has not been recorded.]

10.
11. Remission of sins.
12. Resurrection of the dead, life everlasting.¹
The Creed which Zahn has reconstructed from the *Didascalia*, a book written in the 3rd cent. not far from Antioch, affords an instructive contrast.

CREED OF THE DIDASCALIA.

- I. 1. I believe in God Almighty.
II. 2. And in our Lord Jesus Christ (His Son?), who for us came and
3. was born of (Mary the?) a virgin,
4. and was crucified under Pontius Pilate and died,
5. and the third day rose from (the?) dead,
6. and ascended into the heavens,
7. and sitteth on the right hand of God the Almighty,
8. and is coming with power and glory to judge dead and living.
III. 9. And in the Holy Ghost . . .
10. (a Holy Church?) . . .
12. resurrection of the dead.²

The uncertainties attending such reconstructions stand in marked contrast with the comparative certainty with which we can trace back the Cid Roman Creed, the only really doubtful point about which is the question whether originally it did not read: 'I believe in one God, the Father Almighty,' which is suggested by the testimony of Tertullian. Tertullian, in his criticism of Praxeas, the first modalist Monarchian (that is to say, a theologian who confused the distinctions between the Divine Persons), says (*adv. Praxeas*, i.): 'He routed the Paraclete, and crucified the Father.' Under these circumstances we can commend the prudence of the leaders of the Roman Church if they dropped the word 'one' as liable to misunderstanding. Zahn quotes a passage from Eusebius in which heretics are said to have accused the Roman Church of re-coining the truth like forgers, and makes the acute suggestion that the reference was to some change in the Baptismal Creed. We cannot suppose that the immutability of the Roman Creed praised by Rufinus would necessarily extend through all the past centuries.

Again, Loofs,³ comparing 4th cent. Eastern Creeds, endeavours to prove the existence of an Eastern type which would include the word 'one' in Article I. with a reference to the Creator: 'crucified under Pontius Pilate'; and in the third division the words 'catholic' and 'eternal life.' But the resultant form would be on the same plane of development as the Roman, as compared with the theological Creeds of the 4th century. There is always the possibility that such a Creed may have been brought to the East from Rome in the 2nd century. Justin Martyr has close coincidences of language, which, in Kattenbusch's⁴ opinion, prove his acquaintance with the Roman Creed, though Zahn⁵ thinks that he is quoting his own Creed of Ephesus. The same may be said of Irenæus, whose writings must be searched in the light of these opposing theories before we can decide whether he brought his creed from Rome:

c. *Her.* i. x. 1: 'The Church, though dispersed throughout the whole world, even to the ends of the earth, has received from the apostles and their disciples this faith: [She believes] in one God, the Father Almighty, Maker of heaven and earth, and the sea and all things that are in them; and in one Christ Jesus the Son of God, who became incarnate for our salvation; and in the Holy Spirit, who proclaimed through the prophets the dispensations of God and the advents, and the birth from a virgin, and the passion, and the resurrection from the dead, and the ascension into heaven in the flesh of the beloved Christ Jesus, our Lord, and His [future] manifestation from heaven in the glory of the Father "to gather all things in one," and to raise up anew all flesh of the whole human race, in order that to Christ Jesus our Lord and God and Saviour and King, according to the

will of the invisible Father, "every knee should bow, of things in heaven, and things in earth, and things under the earth, and that every tongue should confess to Him," and that He should execute just judgment towards all.'

While Irenæus has some phrases which remind us of the Roman Creed, the lack of any mention of the Holy Ghost at the end of this rule of faith makes it doubtful whether his personal creed was any more than a short Christological confession, the longer form quoted above representing a summary of his ordinary teaching on the lines laid down by tradition. Here is a problem which demands further investigation, and we must say the same of the very interesting researches of Connolly in the writings of Aphraates, from which he deduces the existence of an early Syriac Creed.⁶ This includes mention of the Creation in Art. I.; confession of our Lord Jesus Christ as God, Son of God, Light from Light, who came and put on a body from Mary the Virgin of the seed of the house of David, from the Holy Spirit, and suffered (or was crucified), went down to the place of the dead, rose, ascended, sat on the right hand of the Father, is judge of the dead and of the living; confession of the Holy Spirit, followed by '[And I believe] in the coming to life of the dead; [and] in the mystery of Baptism (of the remission of sins).'

After all, it does not matter which way the question as to the form is answered ultimately, since the facts taught were the same in the East as in Rome.

The later history of the Creed is still at some points obscure. We know that it was used by the Abbot Pirminius, who founded monasteries at Reichenau and Hornbach. It is quoted in the *Codex Einsidensis* 199 of the 8th cent., and the *Dicta Abbatis Pirminii*, which was written about A.D. 730. Probably it was brought into its present shape at Luxeuil or Bobbio. All the later additions, such as 'descended into hell' and 'communion of saints,' were in use in the Gallican Creeds of the 5th cent., with the exception of 'maker of heaven and earth.' This latest addition may have come in some way through the travels of Columban, who in Burgundy and Rhætia came across relics of the Old Latin Church of the Danube, and the stream of influence which had flowed from the East in earlier times.⁷ Nicetas of Remesiana had both 'maker of heaven and earth' and 'communion of saints' in his Creed; and the *Faith of St. Jerome*, recently discovered by Morin, which is another connecting link between East and West, probably includes phrases which St. Jerome had learned in his native Pannonian Creed. Any way, we can make sure that it was from Rome that the Received Text was finally spread, since there are indications that Pirminius was quoting from a Roman source, and there would be every reason for the decision in favour of a revision of the Old Roman Creed in the light of experience which had found each of the added phrases useful. The desire of Charles the Great for uniformity, and his careful inquiries about the different uses in Gaul and in Rome, led to the triumph of this Revision throughout the Western Church, as the Creed of daily use, although the Baptismal Creed of the Church of England still retains certain Gallican peculiarities, 'only-begotten' (= *unigenitus*, not *unicus*), 'shall come again at the end of the world,' and 'everlasting life after death.'⁸

2. The Nicene Creed.—The history of the Nicene Creed begins with the Council of Nicæa, when the Creed presented by Eusebius of Cæsarea was deliberately revised to guard against the doctrines of Arianism. Whether he had composed it for the occasion, or had simply quoted verbatim

the Creed of his Church, is uncertain. So far as it goes, it no doubt follows the lines of the Creed of Cæsarea, as his opening words imply; but he adds a free warning against Sabellianism, and a Baptismal Creed is not likely to have ended abruptly with mention of the Holy Ghost. But the Council was not satisfied. Prompted by Hosius, Bishop of Cordova, the Emperor Constantine himself proposed the insertion of the term *homoousios*, which guarded against all evasions of Scripture teaching. Other changes may be noted by comparing the two forms.

CREED OF EUSEBIUS.

We believe
I. 1. In one God, the Father Almighty, the maker of all things visible and invisible.
II. 2. And in one Lord Jesus Christ, the Word of God, God of God, Light of Light, Life of Life, Son Only-begotten, first born of every creature, before all the ages, begotten from the Father, by whom also all things were made;

2. Who for our salvation was made flesh, and lived as a citizen among men,

4. And suffered
5. And rose again the third day,
6. And ascended to the Father.

7.
8. And will come again in glory to judge the quick and the dead.

III. 9. And we believe also in one Holy Ghost;

Believing each of these to be and to exist, the Father truly Father, and the Son truly Son, and the Holy Ghost truly Holy Ghost, as also our Lord, sending forth His disciples for the preaching, said, 'Go teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost.' Concerning whom we confidently affirm that so we hold, and so we think, and so we have held aforesaid, and we maintain this faith unto the death, anathematizing every godless heresy.

As Gwatkin has shown so clearly, the victory of Nicæa was a surprise rather than a solid conquest—a revolution which a minority had forced through by sheer strength of clearer Christian thought.¹ Therefore a reaction was inevitable and a long controversy followed. It was not till A.D. 362 that all the scheming and creed-making on Arian lines came to an end, when the most influential of the semi-Arian leaders, who had consistently opposed the introduction of un-Scriptural words, such as *homoousios*, into Creeds, were won over to the orthodox side because they found that only thus could they guard the sense of Scripture.

About this time many local Creeds were revised by the insertion of Nicene terms. By far the most important was the revised Jerusalem Creed, which is found in a treatise of Epiphanius, Bishop of Salamis, called *The Anchored One*, written about A.D. 374. A French scholar of the 17th cent., Denys Petau, pointed out that this was the Creed afterwards ascribed to the Council of Constantinople. But it was Hort² who first pointed

out the importance of the argument which may be built up on the fact, and his theory connecting it with Cyril of Jerusalem has been accepted by most critics. He compared it with the form which Cyril taught his catechumens in his Catechetical Lectures (c. 347).³

CREED OF JERUSALEM.

I. 1. We believe in one God, the Father Almighty, maker of heaven and earth, and of all things visible and invisible.
II. 2. And in one Lord Jesus Christ, the only-begotten Son of God, begotten of His Father, very God, before all worlds, by whom all things were made,

3. and was incarnate and was made man,

4. was crucified and was buried,

5. and rose again the third day,

6. and ascended into heaven,

7. and sat at the right hand of the Father,

8. and is coming in glory to judge the quick and the dead, whose kingdom shall have no end.

III. 9. And in one Holy Ghost, the Paraclete, who spake in the prophets,

11. and in one baptism of repentance for the remission of sins,

10. and in one Holy Catholic Church,

12. and in the resurrection of the flesh, and in the life eternal.

CREED OF EPIPHANIUS.

I. 1. We believe in one God, the Father Almighty, maker of heaven and earth, and of all things both visible and invisible.

II. 2. And in one Lord Jesus Christ, the only-begotten Son of God, begotten of His Father before all worlds—that is of the substance of the Father,—Light of Light, very God of very God, begotten, not made, being of one substance with the Father, by whom all things were made, both that are in heaven and that are in earth; who for us men and for our salvation came down from heaven,

3. and was incarnate of the Holy Ghost and the Virgin Mary, and was made man,

4. and was crucified for us under Pontius Pilate, and suffered and was buried,

5. and rose again the third day, according to the Scriptures.

6. and ascended into heaven,

7. and sitteth at the right hand of the Father,

8. and is coming again with glory to judge the quick and the dead; whose kingdom shall have no end.

III. 9. And in the Holy Ghost, the Lord and Giver of life, who proceedeth from the Father, who with the Father and the Son together is worshipped and glorified, who spake by the prophets:

10. In one Holy Catholic and Apostolic Church.

11. We acknowledge one baptism for the remission of sins.

12. We look for the resurrection of the dead, and the life of the world to come.

Three important changes must be noted, which tend to prove that Cyril was the author of this revision, since they agree with the teaching in his lectures; (i.) Art. 7 from *sat* to *sitteth*;⁴ (ii.) Art. 8 from *in glory to with glory*;⁵ (iii.) Art. 12 from *resurrection of the flesh* to *resurrection of the dead*.⁶ To these we add the skilful insertion of some of the Conciliar language, including the term *homoousios*, which marked the return to full communion with Athanasius and his allies. What could be more natural than that Cyril, after his return from exile in A.D. 362-364, should so revise his Creed? Epiphanius had connexions with Jerusalem and had lived in Palestine, so his acquaintance with the Creed is easily explained. The theory has been questioned by Lebedeff, who maintains that Epiphanius wrote down the original Nicene Creed, and that the revised Creed has been interpolated

⁶ Two Dissertations, Cambridge, 1876.

by a copyist. He also maintains that the Jerusalem Creed reconstructed from the pages of Cyril is the invention of scholars.¹ Gibson also calls attention to the new material in the second division of the Creed 'new both to the Creed of Nicaea and to the Creed of Jerusalem, so that even if the Creed of Jerusalem lies at the basis of the Enlarged Creed, it has been revised by the help of other Creeds, as those of the *Apostolic Constitutions* and the Church of Antioch.'² This dependence had not escaped the notice of Hort, and the sources may be regarded as one, since the Seventh Book of the *Apostolic Constitutions* comes from Antioch, and was put together c. A.D. 375. Cyril's friendship with Meletius, Bishop of Antioch, is quite enough to explain why he should also make use of the Creed of Antioch.

We may regard the case for the opposition as 'not proven,' but it is clear that Hort's theory must be tested again in the light of all new evidence. He supposed that the subsequent connexion of the revised Creed with the Council of Constantinople in A.D. 381 could be explained by the suggestion that Cyril brought it to prove his orthodoxy. But, since Cyril's leader, Meletius, became first President of that Council, there could be no question about Cyril. A more probable theory has been suggested by Kunze. After the death of Meletius, and the resignation of Gregory of Nazianzus who succeeded him, the new Bishop of Constantinople was Nectarius, Prætor of the city, who at the time of his election was unbaptized. His name seems to have been suggested to the Emperor by Diodore of Tarsus. At the end of the Council of Chalcedon (A.D. 451) all the Bishops signed the decrees with little notes. One of them, Callinicus, Bishop of Apamea (= Myrlea) in Bithynia, referred to the Council of Constantinople as having been held at the ordination of the most pious Nectarius the Bishop, and Kunze suggests that there was some connexion in his mind between the Creed and the consecration of Nectarius. Probably the revised Creed was professed at his baptism, and became from that date the Baptismal Creed of the city. It would naturally be quoted in the Acts of the Council, now lost, from which it was cited at the Council of Chalcedon as the Creed of the 150 Fathers, the original Nicene Creed being accurately distinguished from it as the Creed of the 318 Fathers.

It is not easy to decide on the true form of the text cited at Constantinople, since the form quoted at the second Session varied from the form quoted at the sixth Session, and both from the form in Epiphanius. Copyists were continually at work assimilating the forms, and to them may be attributed the slight variations found in the pages of Epiphanius which are printed in italics. It is possible that the variations in the texts used at Chalcedon represent the already divergent texts used at Constantinople and Rome.³

The later history of the Creed is coming out into clear light. It is probable that the words 'and the Son' in the clause about the Procession of the Spirit were added not by the Council of Toledo in A.D. 589, when King Recaredo accepted the Nicene Creed and abjured Arianism, but by later copyists. The Creed thus interpolated spread into Gaul. In A.D. 802, Charles the Great sent a deputation to consult Pope Leo on the text, controversy having already arisen in Palestine between representatives of the Eastern and Western Churches on the point. Leo freely admitted that it was quite orthodox to teach that the Spirit proceeded from the Father and the Son, but depre-

cated the insertion of the words in the Creed, the Roman Church agreeing with the Eastern theologians as to its form. He even advised the Emperor to give up singing it in his chapel, thus emphasizing the interpolation. But the use continued, and in A.D. 1014 the Emperor Henry II. prevailed on Benedict VIII. 'to chant the Symbol at the Holy Mysteries'; and thus came in the use of the interpolated Creed.

The Western theologians start from the point of view of the immanent Trinity, from meditation on the *coinherence* of the Divine Persons, while their Eastern brethren are willing to accept the phrase 'from the Father *through* the Son,' as guarding the truth that there is only one Fount of Deity. It is one of the saddest facts of history that a merely verbal difference should keep Churches apart, since frank explanation on both sides could clear up the theological as well as the historical question.⁴

3. The 'Athanasian' Creed.—The history of the so-called Athanasian Creed—more correctly designated, after the analogy of the *Te Deum*, by its first words, *Quicumque vult*—is still at some points obscure. But we are no longer in doubt as to the dates of the important MSS. With the help of photographs, palæographers are enabled to decide that some MSS belong to the 8th cent.; one, in the famous Ambrosian Library at Milan, may even be of the end of the 7th (*Cod. Ambrosianus*, O. 212 *sup.*).

The famous two-portion theory, put forward by Swainson and Lumby, has been shown to rest on precarious foundations, and may be dismissed without further notice. We have not yet reached ultimate certainty about small details in the text, the order of certain words, the use of the conjunction *et*, or the claim of the form *surrexit* against the reading *resurrexit*, but any polishing which the Creed had received in the course of its long history is of small account, now that we can say that it reaches us substantially as it was written. It belongs to the class of individual, private confessions of faith, and is, properly speaking, an instruction rather than a Creed, which may be offered as a substitute for the Apostles' Creed, or a canticle parallel to the *Te Deum*, with which it found its way into an appendix to the Psalter from the end of the 8th century.

There is little doubt that it can be identified with 'the Faith of the holy prelate Athanasius' commended by a Synod of Autun, which was presided over by Bishop Leodgar (c. A.D. 670), to be learnt by heart by all clergy.

Some forty years earlier, in A.D. 633, it had been quoted by the Fourth Council of Toledo together with the so-called Creed of Damasus. The clauses quoted were 4, 20, 21, 22, 28, 29, 31, 33, 35, 36, 37, (39), 40, so that it is evident that the Spanish theologians had the whole text before them.

We can also trace quotations with great probability in the sermons of Caesarius of Arles, the great preacher of the 6th cent. (+543), as has been proved beyond question by Morin.⁵

Any doubts which may be felt about the authorship of the pseudo-Augustinian sermon 244 do not affect the general argument. Morin pointed out that the Creed reproduces both the qualities and the literary defects of Caesarius. In his recent lectures at Oxford he was disposed to put the date later.⁶

The proof is not yet forthcoming that the *Quicumque* belongs to the time of Caesarius, if it is not from his pen. The argument of Waterland,

¹ Cf. A. E. Burn, *The Nicene Creed*, London, 1909, p. 40 ff.

² Cf. Le Symbole de S. Athanasie et son premier témoin: Saint Césaire d'Arles, in *Revue bénédictine*, xviii. (1900) 337 ff.

³ *JThSt*, Jan. 1911, p. 161. His criticism of all current theories, including his own, is too sweeping, but deserves most careful study.

⁴ *Theological Messenger*, 1902 (a summary of his argument was published in *JThSt*, Jan. 1903, p. 285 ff.).

⁵ *The Three Creeds*, p. 171.

⁶ Cf. A. E. Burn, *Facsimiles of Creed Texts*, Camb. 1906, p. 18.

that it belongs to Apollinarian times, still carries much weight. The fact remains that the illustration from the constitution of man's nature in clause 35, though it had been used freely by St. Augustine, as before him by St. Ambrose, was misused by the Eutychians, who pleaded for one nature in Christ, as soul and body make one nature in man. After the rise of their heresy, Catholic writers shrank from using it, but there is no hint that the author of the *Quicumque* feared such doctrine, since he could easily have inserted teaching that Christ is consubstantial with us in the one nature as He is consubstantial with the Father in the other. Such phrases had been used in Gaul by Cassian before the rise of Eutychianism, and so were ready to hand.

Waterland points out that the Unity of Christ's Person is taught, but not as if it were endangered by Nestorian error. 'There is not a word of the Mother of God, or of one Son only, in opposition to two Sons, or of God's being born, suffering, dying—the kind of expressions of which the Creeds are full after Nestorius's times, and after the Council of Ephesus.'¹ Indeed, the parallels to clauses 32-36 in Vincentius and Faustus are, as it were, sharpened by subtle turns of phrase, just as we find Alcuin and Paulinus of Aquileia sharpening by slight changes their quotations from the *Quicumque*, against the revived Nestorianism of the Adoptionists of the 8th century.

Moreover, there is a new line of argument which was not open to Waterland. In the recently discovered writings of Priscillian we have trustworthy evidence of a heresy which spread from Spain to Gaul in the beginning of the 5th cent., and which called for close vigilance and reasoned arguments from Church teachers to counteract it. The *de Fide* of Bacchiarus is the apology of a monk who came from Spain into Gaul at that time, and was closely examined by the Gallican bishops as to his faith, and it is a significant fact that it has been preserved only in the Ambrosian MS of the *Quicumque*. The heresy of Priscillian was both Sabellian and Apollinarian. He confused the Persons of the Trinity, and denied that the Lord had a human soul, as the following passages may suffice to prove. In his *Blessing over the Faithful* he writes:

'For thou art God who . . . art believed as one God, invisible in the Father, visible in the Son, and art found as Holy Spirit united in the work of both';² and 'Finally our God assuming flesh, assigning to Himself the form of God and Man, that is, of Divine soul and human flesh' . . .³

When language so inaccurate was vehemently put forward as Catholic teaching, there was need of a summary of Catholic belief on the Trinity and the Incarnation, which should lay due stress on the responsibility of the intellect in matters of faith, and at the same time do justice to the moral aspect of these problems, and prove that faith worketh by love, that only they that have done good shall go into life eternal. The *Quicumque* exactly meets these requirements. May it not have been written for the purpose?⁴

This suggestion of the present writer has been warmly accepted by Küntzle,⁵ who has made a special study of Spanish canons and treatises against Priscillianism, though he vitiates the argument by assuming that all such writings against Priscillian must have a Spanish origin—for which there is no proof.

From the time of Antelmi the parallels in the *Communitorium* of Vincentius of Lérins have been held to prove his acquaintance with the *Quicumque*, if not his authorship, which seemed probable to

Ommanney (1897) as to Antelmi (1693). Perhaps it is rash to attempt to discover the author. Certainly Waterland's quotation from the funeral sermon which Hilary of Arles preached after the death of Honoratus, his predecessor both in the See of Arles and in the Abbey of Lérins, if it suggests acquaintance with the *Quicumque*, suggests also that Honoratus, rather than Hilary, was the author:

'A daily witness wast thou, moreover, in thy most sincere discourses of the confession of Father, Son, and Holy Spirit: nor surely has any one treated so emphatically, so clearly, of the Trinity of the Godhead, since thou didst distinguish the Persons therein and yet didst associate them in eternity and majesty of glory' (*Vita Honorati*, 38).

With this we may compare a quotation from a sermon on the same lines by Faustus, who, like Hilary, had been a loyal disciple of Honoratus:

'Therefore, beloved, that we may gain that which he has obtained, let us first follow that which he taught: and, first of all, let us hold the right faith: let us believe Father and Son and Holy Ghost (to be) one God. For, where there is unity, there cannot be inequality: and, since the Son, because He is God, is perfect, complete, and full, that fullness certainly cannot be described as "less"' (*in Depositione S. Honorati*).

Whatever may be thought about the praise here given to Honoratus as a teacher on the very lines of the *Quicumque*, there can be no question as to the ability and earnestness of the community which he had gathered round him during the years A.D. 420-430. In their happy island-home was focused all that the Gallican Church could show of learning and piety. Their age contrasts favourably with the following century, when Caesarius represents the last hope of the ancient culture, and when the rising tide of barbarism was about to sweep away all its landmarks—a century in which the composition of the *Quicumque* would seem to be incredible.

The arguments of Brewer, that the *Quicumque* is a work of St. Ambrose, have not received any measure of support, and do not seem to be based on any fresh evidence; but they certainly strengthen the argument for a 5th cent. date, by proving, far more conclusively than any one has hitherto discovered, that St. Ambrose, no less than St. Augustine, came close to the very language of the Creed.

The early history of the Creed is, however, of less importance than the history of its use. The revived interest in Church music, which was fostered in the schools of Charles the Great, led to its use as a Canticle. Abbot Angilbert of St. Riquier (c. 814) records that it was sung in procession on Rogation Days, and before long it was so sung in the Office of Prime. But such was not the only use made of it, or, indeed, the most primitive, since the extremely interesting preface to the (so-called) Oratorian Commentary, possibly from the pen of Theodulf of Orleans, speaks of its use by clergy as a manual of Christian teaching, which reminds us of the Canon of Autun as well as of the use made of it by Caesarius. Addressing a Synod, the writer says that he has carried out their instructions 'to provide an exposition of this work on the Faith, which is up and down recited in our churches and continually made the subject of meditation by our priests.' Similar use is directed in the 9th cent. by many prominent teachers—Hayto of Basel, Anskar of Bremen, and Hincmar of Rheims.

In the Middle Ages the use at Prime spread everywhere, and recent researches have proved that the whole service of Matins, including Lauds, Prime, and Terce, was most popular in England as a preparation for the Mass. William Langland, in 'Piers the Plowman,' at the end of the 14th cent., writes of the duty of all classes to cease from work on Sundays, 'God's service to hear, Both Matins and Mass.' But the fact remains that comparatively few of the people understood Latin, although the devout layman of the upper classes who could afford to possess a breviary would, of course, be able to read and follow it in

the Office. There are several early translations into the vernacular, at one time Norman French, at another Old English; but there is no evidence of any wide-spread acquaintance with it in such translations. In the First Prayer Book of Edward VI. the English Reformers directed that the Athanasian Creed should be 'sung or said' after the Benedictus, at the greater Feasts. In the Second Prayer Book the number of Feasts was increased at which the use of it was obligatory, and only in 1662 was it substituted for the Apostles' Creed, which had hitherto followed it.

In the controversy of the present day no amended translation is likely to bring peace, such as the translation put forward by the Archbishop of Canterbury's Committee. The real crux lies in the difficulty which is felt about using the warning clauses in a mixed congregation on days when it is impossible to preach an explanatory sermon. A relaxation of the rule, such as permission to use it at the first evensong of the Festivals of Christmas, Easter, and Whitsunday (when the clergy, and presumably the instructed faithful, could well make it, as the author of the Oratorian Commentary suggests, 'a subject of meditation'), would meet the difficulties of wounded consciences on both sides. The Roman Catholic Church uses it still in Prime, chiefly in Advent and Lent. The Eastern Church has only put it in an Appendix to the Hour Offices, without any directions for use.

Conclusion.—Looking back over the history of the three great Creeds, one is amazed at the comparative simplicity of the great truths thus singled out by the common sense of the Church, through the centuries, as of primary importance. We are not concerned with the credibility of miracles as such, only with the evidence that the first witnesses believed that Christ rose from the dead and sent down His Spirit. The earliest forms of Creed present an Historic Faith which summed up their gratitude for the mystery at last revealed through the Spirit to the Church, with the assurance of forgiveness of sins and resurrection to a better life. The theological terms of the Nicene and Athanasian Creeds do not bring in metaphysics of set purpose, or condemn the Church to wander in a barren wilderness of controversy. Athanasius himself did not invent or suggest the use of the phrase 'of one substance.' He was moulded by it. He found in it a bulwark of the ancient belief that the Son was one with the Father (Jn 10³⁰) and to be worshipped with Him. He had no word for 'Person.' It was reserved for the genius of Augustine to make that term current coin, even though he shrank from the boldness of his thought. Let us note that it was on psychological rather than metaphysical lines that he approached the problem, led on by deep musing on the mystery of his own personality to speculation on the deeper mystery of Divine Personality. And in the first part of the *Quicumque*, whether the author owed little or much to Augustine, it is by the measure of such musings that it must be valued. The very bravery of the antitheses ranging through the great series of Divine attributes—uncreated, infinite, eternal, almighty—shadows forth the truth of the equal glory and co-eternal majesty, and excludes every rationalistic explanation—Sabellian, Arian, or Priscillianist. But this is definitely the Creed of the Church teacher, face to face with errors which are common to the human mind in every age and everywhere. In the hour of death the words of the ancient Baptismal Creed suffice as 'an anchor of the soul . . . entering into that which is within the veil' (He 6¹⁹).

CREED (Egyptian).—In seeking to arrive at a conception of the Egyptian creed, we are met by the fact that, generally speaking, the Egyptian never attempted to formulate or define a body of doctrine with regard to the multitude of gods worshipped in his land. This absence of any systematic theology is due mainly to the prevalence of the idea of the local god. The Egyptian State rose out of a number of small independent tribes, and, even after the unification of the kingdom at the beginning of the Dynastic period, the original subdivisions still existed in the shape of the 'nemes' or provinces, roughly 42 in number, into which the land was divided. Each original tribe possessed its own local god, supreme in his own district; and these gods continued to be worshipped as separate divinities, though they were, in many cases, mere duplicates of those existing in other localities. The Egyptian never attempted to bring any unity out of this confused mass of deities, to reduce to order the conceptions held with regard to them, or to discard their inconsistencies and contradictions. If, as frequently happened, one local god came to be acknowledged in another locality, his new worshippers simply took over his old titles and myths, regardless of the fact that thus they sometimes duplicated the legends of their own local god, and sometimes introduced contradictions to them. The extraordinary confusion of ideas thus produced is apparent everywhere, and can perhaps be seen most clearly in the different strata of beliefs with regard to the life after death which lay side by side in the Egyptian mind, apparently without its ever being perceived that they were inconsistent with one another, or at least without any attempt being made to remove their contradictions and to arrive at a coherent system of belief.

This statement has to be qualified to some extent by the fact that, at certain periods of Egyptian history, particular gods did rise to much more than merely local supremacy, and attained a more or less general acknowledgment. Thus from the time of the Vth dynasty the solar god Ra, who was looked upon as the founder of the reigning house, rose into prominence, and from that time onwards secured fairly general acknowledgment, the local gods being frequently identified with him. In the XVIIIth dynasty, again, Amen, the local god of Thebes, rose, with the rise of the Theban princes, to a position of supremacy which was not lost till far on in the decline of the Empire. And the worship of Osiris, the god of the dead and of the resurrection—probably one of the very oldest of Egyptian cults—was always more or less general, though he, too, had his local supremacy. In spite, however, of these exceptions, the local gods still continued to be worshipped side by side with the deity whose cult was for the time prevalent, and their myths were still accepted, regardless of the fact that they might be either identical with, or contradictory to, those of their brother god. It is evident, therefore, that we cannot expect to find any single and definite summary of doctrine which can be called the Egyptian 'creed.' All that can be done is to summarize the beliefs most generally accepted on certain aspects of religion.

1. Beliefs with regard to the Creation and the cosmic gods.—Various attempts were made to arrive at something like a systematic idea of the

cosmic gods and their relationship to the Creation. The most complete and popular of these was due to the priestly college of An, or Heliopolis (the Biblical On). The priests of the sun-god at this town—from the most ancient times the most noted theological centre of Egypt—elaborated at a very early period a scheme of the relationship of the various members of the cycle of cosmic gods to one another and to the universe, and their doctrine of the great Heliopolitan *ennead* gives us what was perhaps the prevailing belief in the land, though it was held with various modifications in different localities. In their scheme there existed in the beginning a primordial liquid element, the *Nun* or *Nu*, from which there emerged the sun-god Ra-Tum. Ra-Tum begat of himself, and produced the male and female divinities Shu and Tefnut, who may be regarded as representing air (or the firmament) and moisture. From Shu and Tefnut, or perhaps by a fresh procession from Ra, came Seb and Nut, the earth and the starry heaven, and from Seb and Nut came the two further pairs of gods, Osiris and Isis (the Nile and the fruitful ground[?]), and Set and Nephthys (the barren desert land and its animal life[?]). The Creation reached its present form by the interposition of Shu, the air-god, who came between Seb and Nut, the earth and the heavens, as they were locked in embrace, and lifted up Nut, who since his interposition stands arched over Seb, her hands and feet touching the earth at the cardinal points, and her body adorned with the stars.

The Heliopolitan *ennead* must have been formulated at a very early period of Egyptian history, for in the Pyramid texts the list of the nine gods is given as above. The popularity of this scheme gave rise to various imitations of it, and other towns and districts formed *enneads* of their own, sometimes displacing one of the nine gods of Heliopolis to make room for their own local god, sometimes adding him to the nine, careless of the fact that thus their *ennead* contained ten divinities. Even as thus modified to suit local preferences, however, the Heliopolitan scheme did not meet with universal acceptance, and side by side with its doctrine of creation there existed other beliefs quite inconsistent with it. At Memphis the fabrication of the world was attributed to Ptah, who carved the earth like a statue; at Elephantine to Khnum, who fashioned the world-egg like a potter working with his wheel; and at Sais to Neith, who wove the universe as a weaver weaves a piece of cloth. In the Creation-story preserved in the famous legend of the destruction of mankind, the heavens are represented, not by the woman-goddess Nut, but by the celestial cow, across whose body the sun-god journeys in his barque. It is probable that this attempt at a scientific grouping of the gods and explanation of the Creation was not so much a popular doctrine as a cherished possession of the various priestly colleges, who elaborated it and modified it to suit their local tastes and rivalries. See COSMOGONY AND COSMOLOGY (Egyp.).

2. Beliefs with regard to immortality and the life after death.—In dealing with these, we come into touch with what probably makes the nearest approach to a universally accepted body of doctrine to which the Egyptians ever attained. The idea of immortality has been nowhere more tenaciously held than in ancient Egypt, and the documents relating to it have an overwhelming preponderance in the religious literature of the nation. The most accepted form of belief is that associated with the cycle of Osiris legends. Osiris appears in the Heliopolitan *ennead*, though in a comparatively subordinate position; but as early as the period of the Pyramid texts he figures in a much more important rôle as the god of the dead and the

source of immortal life to the blessed dead. The details of his myth do not concern us; but, briefly, the doctrine of the Egyptian religion taught that Osiris, a beneficent god and king, after being slain by the treachery of Set his malevolent antithesis, was restored to life again, justified before the gods against the accusations of Set, and made god and judge in the under world. Already by the time of the Vth dynasty the idea had been conceived that the story of Osiris was repeated in the case of each Pharaoh, and the conception gradually filtered down, until it was held that every man who was possessed of the necessary knowledge might after death become an Osiris, be restored to life, be justified before the gods, and enter into everlasting blessedness. Practically the Egyptian believed, from the earliest historical period, that, because Osiris died and rose again, and after being justified entered into everlasting life, therefore those who believed in him would share the same destiny. Ch. cliv. of the Book of the Dead makes the definite assertion of parallelism between the god and his worshipper:

'Homage to thee, O my divine father Osiris! Thou hast thy body with thy members. Thou didst not decay . . . thou didst not become corruption. I shall not decay . . . and I shall not see corruption . . . I shall have my being, I shall live, I shall germinate, I shall wake up in peace.'

It is impossible to say whether or not the Egyptian believed that Osiris suffered death on his behalf; certainly he believed that there was an essential connexion between the death and resurrection of Osiris and his own immortality. This belief is held, with no essential variations, throughout the whole historic period.

Definiteness ceases at once, however, when we pass from the fact of immortal life to the manner in which it is to be spent. Nowhere is the jumble of inconsistencies, which seemingly never worried the Egyptian mind, more hopeless than here. The prominent beliefs regarding the state and the abode of the blessed dead are at least four in number, each quite distinct from, and quite inconsistent with, all the others. The oldest and most wide-spread belief was that after death the deceased leads a second life under much the same conditions as those which ruled the first, dependent upon constant supplies of food and drink, and partaking in his new existence of joys similar to those of his former state. In this state the centre of the life after death is the tomb. Another very ancient idea places the abode of the dead in heaven, where they shine as stars in the firmament, and are privileged to take a place in the barque of the sun-god and to accompany him on his voyage through the heavens. A third conception assigns to the blessed dead a life of blissful labour and pleasure in the Egyptian Elysian Fields. The dead man flies up to heaven like a bird, or ascends a gigantic ladder, and, after passing through many difficulties, arrives at the *Sekhet Aaru*, or 'Field of Bulrushes,' where he spends his time in the same agricultural pursuits and field-sports which had occupied him on earth.

Finally, another belief was that the souls of the departed dwell in the under world through which the sun passes during the hours of the night—a land that in the daytime is one of darkness and desolation. Only at night, as the sun in his barque passes through the twelve domains of the darkness, do the deceased experience something of joy and activity in the hour when he traverses the particular domain in which their lot is cast. Later the belief arose that the illuminated soul, if instructed in the proper formulae, might share the voyage of the god through the *Duat*, or under world, instead of merely being gladdened by a passing glimpse of him. These various views co-existed with the Osirian doctrine, though they are essentially quite

independent of it, and, indeed, can be accommodated to it only with difficulty. The popularity of the last of them—the belief in the abode in the *Duat*, and the voyage of the sun-god there—was mainly confined to the period of the XIXth and XXth dynasties.

3. Beliefs with regard to the nature and attributes of the gods.—Discarding all that is of merely local significance in regard to the various divinities, it is possible to arrive at a fairly clear idea of what the Egyptian believed concerning the nature of the gods. The material is mainly to be found in the various hymns extant, and especially in those addressed to Ra, to Amen-Ra, to Osiris, and to the Aten, the god whom Amenhotep IV. (Akhenaten) attempted to make sole god of Egypt. In most of these hymns we are met by a great and almost meaningless accumulation of epithets which are applied indifferently to various gods in the most bewildering fashion. Setting these aside as mere formalities, we generally find a residuum of evidence as to the nature of the god who is being addressed. Thus, from a fine hymn to Amen at Cairo, we have the following:

'Sole form, producing all things, the one, the sole one, who creates all beings. All human beings have come from his eye, and the gods from the word of his mouth. He it is who makes pastures for the herds and fruit-trees for men; who creates that whereby fish live in the river and the birds under the heavens. . . . Amen is thus the creator and sustainer of being. Further, he is a god of mercy and justice, 'listening to the poor who is in distress, gentle of heart when one cries unto him; deliverer of the timid man from the violent, judging the poor and the oppressed. . . . Lord of mercy most loving, at whose coming men live. . . . Maker of beings, Creator of existences, Sovereign of life, health, and strength, chief of the gods. We worship thy spirit, who alone hast made us, . . . we give thee praise on account of thy mercy to us.'

Again, from a hymn to Ra in the papyrus of Hu-nefer, we have a remarkably clear statement of the unity, the eternity, and the inscrutable nature of the god:

'Thou art unknown, and no tongue is worthy to declare thy likeness; only thou thyself. Thou art One. . . . Millions of years have gone over the world; I cannot tell the number of those through which thou hast passed. Thou dost travel through unknown spaces requiring millions and hundreds of thousands of years. . . . This thou doest in one little moment of time.'

Strangely enough, it is in the hymns to Osiris, otherwise 'the most human of all the gods,' that we find, on the whole, the most endless multiplication of ceremonial epithets, and the greatest dearth of statement as to his nature and attributes. There are, of course, in the hymns and other portions of the Book of the Dead frequent references to his functions as the bestower of immortality, and prayers that the deceased might share in everlasting life; beyond that there is little that distinguishes him from such gods as Amen and Ra. One of the best known of his hymns has the following:

'The circle of the solar disk is under his orders; winds, rivers, inundation, fruit-trees, as well as all the annual plants. . . . Every being invokes him, every man adores his beauties. Delightful for us is his love; his grace environs the heart.'

There is nothing here which might not be said of Ra, Amen, or any other of the great gods.

By far the most remarkable statement of belief in Egyptian religious literature is to be found in the hymns addressed to the Aten, or vital power of the solar disk, the god of the heretic king Akhenaten (XVIIIth dynasty). These hymns, the composition of which has been ascribed to the king himself, express the elements of that belief in a sole god, invisible, spiritual, and universal, which Akhenaten endeavoured to make the national religion. The longer of the hymns has been frequently translated, and its teaching may be summarized as follows:

To Aten is ascribed rule over the times of the day and the activities of men and animals. The strength in which men go forth to their labours comes from him, and all the blessings with which the creatures, even to the fishes in the river and the depths of the sea, are endowed are his gifts. He is confessed as the source of life, alike in man and in the smallest of created existences. 'Thou createst conception in women, making the

issue of mankind. . . . the small bird in the egg, chirping within the shell, thou givest it its breath within the egg.' Aten is omnipresent, and is the universal god of all mankind, appointing to men their different abodes, and their diversity of appearance and speech. 'In the hills from Syria to Kush, and in the plain of Egypt, thou givest to every one his place, thou framest their lives, to every one his belongings, reckoning his length of days. . . . As a divider thou dividest the strange peoples' (cf. Ac 17:24-28). Further, Aten is the source of all fertility in the world, the maker of that Nile in heaven which brings rain for the outlandish folk, and of the Nile from the nether world which fertilizes Egypt. 'Thou placest a Nile in heaven, that it may rain upon them. . . . O, Lord of Eternity, the Nile in heaven is for the strange people. . . . the Nile that cometh from below the earth is for the land of Egypt, that it may nourish every field.' Finally, he is the creator of the seasons and the maker of the far-off heaven for his own abode. The hymn closes with a notable declaration of personal relationship to God: 'Thou art in my heart, there is none other that knoweth thee, save thy son Akhenaten. Thou hast made him wise in thy designs and thy might. . . . Thou hast raised them up for thy son, who came forth from thy limbs, the king living in Truth, the Lord of the Two Lands, Nefer-kheperu-ra-ua-en-ra.'

On the whole, while the hymn to Aten is immeasurably finer as a poetical composition than the hymns to the other gods, it can scarcely be said to present any very original thoughts, two points being excepted. All the statements about the creative and sustaining power of the Aten could be fairly matched in substance by phrases from hymns to Ra and Amen. The real distinctions of the poem are its acknowledgment of a god who is universal, whose providence and rule are not for Egypt alone, but for all lands; and its profession of a personal relationship of faith and inspiration between the royal psalmist and his divinity.

Summing up, we find that, in his best presentations of his faith, the Egyptian professed belief in a self-existent God who was the Creator and Preserver of all things, merciful and gentle, specially careful of the most helpless of His children, invisible and inscrutable, one alone, eternal, omniscient, and omnipresent; while the development of thought under Akhenaten gives the further conceptions of His spirituality, His universality, and His personal relationship to His adorer. All this was overlaid and confused by the chaos of merely local aspects of divinity which forms the surface of Egyptian religion; but still this was the nature of the God behind the gods of Egypt.

CREED (Jewish).—Articles of creed in the modern sense were unknown in the earlier period of the post-Biblical Judaism. No necessity had been felt to express man's relation to God in other forms than those found in Dt 6:4-10¹² and similar passages of the OT. The belief in God being based on the Biblical report of revelation to the patriarchs, and assuming the character of a postulate, obedience to His law was considered a mere logical consequence. The simplicity of this system contrasts strangely with the elaborate array of articles of faith adopted in later centuries. It is therefore desirable to examine the factors that bridged the gulf.

It was inevitable that Judaism should absorb a certain amount of the metaphysical speculations of the various Greek schools. The first outcome of this was Philo's theology. In the concluding chapter of his treatise on the 'Creation of the

World' (*de Opificio Mundi*, ch. lxi.) he gives the result of his investigations in the form of the following five 'lessons' taught by Moses:

(1) God has real existence; (2) God is one; (3) the world is created; (4) the world is one; (5) God's providence embraces the world.

The early Jewish Rabbis, however, being concerned with the practice of the Law rather than with speculations, sought to check their propagation among the people.

'The work of creation,' the Mishnā teaches, 'should not be studied by a company of two, and the Chariot not even in solitude, unless the student be sagacious and capable of drawing the right conclusions' (*Hagigā*, ii. 1).

The terms 'work of creation' and 'Chariot' stand for metaphysics in general. In an additional note the Mishnā says explicitly that for him who inquires into

'what is above and below, what was heretofore and will be hereafter, or deals lightly with the glory of his Maker, it would be better for him never to have been born.'

Moreover, Ben Sira (Sir 32¹¹) utters a solemn warning against the study of metaphysics, and several authorities of the Talmud (of the 4th cent. A.D.), commenting on the words both of the Mishnā and of Ben Sira, make no other concession than that of allowing the communication of the 'headings of the chapters' to scholars of ripened wisdom (*Hagigā*, fol. 13). We find, however, in the Mishnā an attempt to formulate, in a negative way, something like a creed.

'The following,' we read (*Sanh.* x. 1), 'have no part in the future happiness: he who asserts that the resurrection of the dead is not intimated in the Tōrah; that the Tōrah is not of Divine origin; and the heretic.'

The passage thus enjoins, by way of climax, the belief in retribution after death, revelation, and the existence of God; and we shall see, later on, that the same passage was made the basis of real articles of creed. The authorities of the Talmud, however, proceeded in a different way. Instead of formally demanding theoretical belief, they selected from the moral code three of the most important prohibitions, viz. idolatry, incest, and murder, and laid down that death was to be chosen rather than transgression even under compulsion (*Sanh.* fol. 74). An enlarged list of laws was imposed upon mankind in general under the name of the 'Seven Noachian Laws,' forming the nucleus of a religious system. They comprised the command of jurisdiction, and the prohibitions of blasphemy, idolatry, murder, incest, robbery, and the eating of flesh from a living animal (*Sanh.* fol. 56). A kind of creed in epigrammatic form is Hillel's famous recommendation to the heathen who desired to learn the essence of Judaism in a moment: 'What is hateful to thee, do not do to thy neighbour' (*Shabb.* fol. 31).

The first steps in the changing of this attitude were indirectly prompted by Muslim theologians, who created a speculative theology known by the name of *Kalām*. The Muhammadan criticism of the anthropomorphisms of the OT interfered with the Jewish antipathies to metaphysical research, and the struggle was carried right into the Jewish camp by the sect of the Karaites who, rejecting all Rabbinic tradition and attaching no value to the authority of Mishnā and Talmud, took up the method of the Mu'tazilite (dissenting) *Kalām* for their own needs. The consequence was that Rabbanite Jews were compelled to follow suit and to employ philosophic arguments for the defence of revealed religion. This marks the beginning of the religious philosophy of the Jews, and its oldest expounder was Sa'adya of Fayyūm, who died in 942 at Sura, in Babylonia. In his work on 'Creeds and Beliefs' he set aside the warning of the Mishnā against metaphysical speculation, on the plea that the Sages did not forbid honest reflexion (*Amānūt*, ed. Landauer, p. 21). He was also the first to venture a defini-

tion of the idea of creed. 'Faith,' he says, 'is a notion arising in the soul with regard to a subject, the true nature of which has been recognized' (*ib.* 11). What he really means is conviction gained by one of the various processes of recognition, such as personal perception, truthful evidence, and logical conclusion. As none of these applies to the tenets of the Jewish religion, he adds, as a fourth source, 'reliable tradition based on revelation'—a phrase which marks the difference between the creed of Rabbanite Judaism on the one side, and Muhammadan as well as Karaite *Kalām* on the other. Beyond this first attempt, however, Sa'adya has specified no real articles of faith, employing for the remainder of his theories the usual methods of the Mu'tazilite *Kalām*, which held sway among Jewish philosophers for two centuries afterwards.

The heterodox colouring of the *Kalām* in the writings of the famous Arab philosopher Avicenna (Ibn Sīnā), in connexion with the criticism of Muslim theologians and the growing pretensions of the Karaites, gradually brought about a reaction in favour of a more decided accentuation of the tenets of Rabbanite Jewish religion. As its doctors, however, had little practice in formulating articles of creed, they again turned to the Arabs, who employed the term *aqida* (plur. *aqā'id*) for this purpose. The first Muslim who formulated articles of creed was the famous Abul-Laith Naṣr of Samarkand (†993), who laid down the tenets of his faith in a work entitled *Aqida* (Cod. Brit. Mus. Add. 19413), written in the form of a catechism. Of greater popularity, in fact the standard work on the subject, is the *Aqā'id* of al-Nasafi (†1142), which, it is probable, served Jewish writers as a model for the formation of their articles of creeds. For it should be noted that the first Jewish work which contained something approaching axioms of faith did not see the light till that period. About 1140 the poet and philosopher Judah Hallēvi of Castile composed his famous work *al-Khazari* in defence of 'the despised faith.' The book (which is written in Arabic) is based on a narrative dealing with the search of the king of the Khazars for the right belief. Being dissatisfied with the doctrines offered to him by a philosopher of the Avicenna type, a Christian scholastic, and a Muslim doctor of the Mu'tazilite school, he finally asks a Jewish Rabbi for his creed. The last named, in contradistinction to his predecessors with their more or less speculative theories, answers:

'I believe in the God of Abraham, Isaac, and Israel, who led the children of Israel out of Egypt with signs and miracles . . . our belief is comprised in the Tōrah' (*al-Khazari*, p. 44). This formal confession is subsequently supplemented by the following sentence:

'To this [prayer] the believer attaches the following articles of creed [*aqā'id*] which complete the Jewish belief, viz. (1) the recognition of God's sovereignty, (2) His eternity, (3) the providential care which He bestowed upon our forefathers, (4) that the Tōrah emanated from Him, and (5) that the proof of all this is found in the delivery from Egypt' (*ib.* 154).

From these words we conclude that the notion of articles of creed was familiar to Judah Hallēvi, though he saw no necessity to formulate them for the benefit of his Jewish brethren. Sweeping away speculation of all kinds, he substitutes for it *a priori* belief, from which everything else follows as a necessary consequence (*ib.* 270). In order to show the contrast between his attitude and that of religious speculators, he reproduces in ten axioms the system of the Karaite *Kalām* (*ib.* 275-278). Judah Hallēvi's omission to condense the results of his investigations into a similar system is thus far quite consistent with his views. A more definite attempt to formulate axioms of belief on Arab-Aristotelian lines was made by Abraham b. David of Toledo (1161)—the author of a work (like

wise written in Arabic) which bears the name *al-'Aqida al-rafi'a* ('The Lofty Creed'). The first part is purely speculative, but the second consists of *six* somewhat crudely formed dogmas, viz.

(1) God's existence and incorporeality; (2) His unity or oneness; (3) His attributes; (4) His rule of the universe; (5) belief based on tradition and belief in prophecy; (6) metaphorical names of God, Divine Providence, and human free will.

This attempt was subsequently eclipsed by Abraham's contemporary Moses Maimonides, who supplied what he considered to be a want, being, no doubt, urged to take this step by the continued attacks of Muslim theologians, as well as by his inborn love of systematizing. It is to him that Judaism owes the famous 'Thirteen Articles of Creed,' which both in abridged Hebrew prose and in verse were introduced into the Jewish prayer-book, and which enjoy an unbounded popularity among Jews all over the world. It is doubtful, however, whether this was his aim. The Articles were originally composed in Arabic, and form part of his commentary on the *Mishnā Sanh. x.* I quoted above. A perusal of these Articles makes it clear that they were meant, in the first instance, as a protest against various Christian and Muhammadan statements: (1) that Biblical anthropomorphism was a departure from pure monotheism; (2) that Moses' prophethood was eclipsed by that of Muhammad; (3) that the Rabbis had altered the *Tōrah*; (4) that the law of Moses had been abrogated by that of Muhammad; and (5) that the Messiah was still expected. The Hebrew version of these Articles by Samuel b. Tibbōn (c. 1200) is attached to the ordinary editions of the Talmud. For the purposes of this sketch the following short abstract of the Articles must suffice:

- I. God exists, and is the cause of all existing beings.
- II. God's unity is absolute, and is not to be compared with other units which are subject to division.
- III. God is incorporeal and, therefore, exempt from any accidental attribute. The anthropomorphic passages in the Bible must be taken metaphorically.
- IV. God's unity is without beginning.
- V. No other being besides God must be worshipped. This also holds good for angels, spheres, and elements.
- VI. Prophecy is a distinction granted to human beings of superior degree, whose souls enter into intimate connexion with the Creative Intellect.
- VII. Moses is the father of all prophets both before and after him. He is distinguished from other prophets by four characteristics. (1) With no prophet did God hold direct intercourse as with Moses (*Nu 12⁸*). (2) God did not appear to Moses in dreams, as to other prophets (*v. 9*). (3) Other prophets experienced in the hour of vision a weakening of their vital power, and a great fear (*De 10⁸⁻¹⁹*), which was not the case with Moses. (4) Other prophets were obliged to wait for revelations (*2 K 19⁹*), whilst Moses was empowered to solicit them (*Nu 9⁸, Lv 16²*).
- VIII. The *Tōrah* is of Divine origin: 'It is incumbent to believe that the whole of this law, as it is in our hands this day, is the *Tōrah* which was revealed to Moses. It is all Divine, which means that it reached him by what is metaphorically termed speech.'
- IX. This law will not be abrogated, nor will there be any other law of Divine origin. Nothing will be added to, or taken away from, it.
- X. God knows the actions of all mankind.
- XI. God rewards those who obey the Law, and punishes its transgressors.
- XII. The Messiah will arrive without fail, no matter how long he tarry.
- XIII. Resurrection of the dead.

It can easily be seen that these thirteen Articles consist of three groups, viz. I.-V., VI.-IX., X.-XIII., reducing the whole system to the three fundamental principles of belief in God, Revelation, and Retribution after death. This reduction was, indeed, carried out and proved by Joseph Albo (first half of 15th cent.) in his work on 'Fundamental Principles' (Introduct. and pt. i. ch. 4). It is impossible that Maimonides should not have been aware of this, but the anti-Muhammadan as well as anti-Christian tendencies of several of the paragraphs cannot be mistaken. The anonymous redactor of the most popular recension of these

Articles for liturgical purposes prefaced each paragraph with the words 'I believe with perfect faith'—words which are absent from Maimonides' original. It was Samuel b. Tibbōn who placed the word אֲמַנָּה ('to believe') at the head of several articles. Of the diverse attempts to reproduce these articles in poetic form the most popular is the Yigdal hymn by an unknown (but probably Spanish) author.¹ Those who followed Maimonides, writing on the same subject, as Hisdai Crescas († 1410) and Isaac Abravanel (1437-1508), have added nothing new, and need not, therefore, be further considered.

There now remains a word to be said on the tenets of the creed of the Karaites. By rejecting the Rabbinic method of interpreting the Bible, they avoided the Muhammadan charge of having altered the *Tōrah*, and, being disciples of the Mu'tazilite school, they were under no suspicion regarding their conception of Biblical anthropomorphisms. They had, however, to defend their belief in (1) the prophethood of Moses and the other prophets; (2) the validity of the *Tōrah*, and their own interpretation of it; and (3) the arrival of the Messiah. Now the ten axioms reproduced by Judah Hallēvi (see above) touch only the metaphysical side of the question, and it was left to others to supply the religious element. Judah b. Elijah Hadassi (1149) was the first to attempt this by grouping the Karaite laws round the Decalogue. Kaleb Afendopulo, who (in 1497) wrote an introduction to Hadassi's work, extracted from it the following ten Articles:

- I. God is the creator of all creatures.
- II. He is one and eternal.
- III. Every [other] existing being is created.
- IV. God sent Moses and all other prophets mentioned in the Bible.
- V. The law of Moses is true.
- VI. Believers must have knowledge of the *Tōrah* and its interpretation.
- VII. The Sanctuary [at Jerusalem] is the place of the Most High King.
- VIII. The resurrection of the dead [will take place] at the time of the arrival of the Messiah.
- IX. There will be a final judgment.
- X. Just retribution.

In view of the close relationship between the paragraphs I.-III., IV.-VIII., IX.-X., the artificiality of the number ten is conspicuous. Israel Haddāyyān of Alexandria, who (in 1257) composed a digest of the Karaite laws, condensed the Articles into the following six: (1) God; (2) the messengership of Moses; (3) the other prophets; (4) the *Tōrah* revealed through Moses; (5) Jerusalem; and (6) the day of judgment.

HARTWIG HIRSCHFELD.

CREED (Muhammadan).—The Muhammadan creed or profession of faith (*kalimat al-shahāda*, or, shortly, *kalima*) is the well-known formula, 'I testify that there is no god but God, and I testify that Muhammad is the apostle of God.' It is one of the articles ('*aqā'id*') of faith ('*imān*'), and also one of the 'five pillars' of practical religion (*dīn*):

¹ According to Luzzatto (*Mebo*, Leghorn, 1856, p. 18) and Zunz (*Literaturgesch. der synagog. Poesie*, Berlin, 1886, p. 607), this hymn was completed in 1404 by Daniel ben Judah Dayyan of Rome.

see ISLĀM). The creed as a whole is not formulated in the Qur'an; but the first article is enunciated in *Sūra* cxii.: 'Say, "He is One God; God the Eternal; He begetteth not, nor is begotten, nor is there one like unto Him."' The creed, however, occurs in a tradition of 'Omar, the second khalif, who related that the Prophet, on being asked to define Islām, said: 'Islām is that thou bear witness that there is no god but God and that Muhammad is His messenger; and be steadfast in prayer, and charitable; and fast during the month of Ramadān; and make the pilgrimage to the Ka'ba if it is in thy power' (*Mishkāt al-Masābih*, tr. Matthews, Calcutta, 1810, l. i. 1). According to the *Sharh al-Wiqāya* (ap. Hughes, *DI*, s.v. 'Creed'), the *kalima* is to be recited by every Muslim aloud and correctly, with full comprehension of its meaning and belief in his heart, at least once in his lifetime, and to be always professed without hesitation until his death.

STANLEY LANE-POOLE.

CREED (Parsi).—1. According to *Yas. xxi. 2*, man must make a choice between the two 'creeds' or 'confessions' (*āvarēnō*). In the beginning the Holy Spirit said of himself and of his spiritual antagonist that their 'confessions' (*varanā*) did not agree (*Yas. xiv. 2*). The word translated 'confessions' implies a choice, and the corresponding verb is used in the middle voice with *fra-* as a technical term to express the profession of a religion, especially of the Mazdayasnian faith: *fravaretar*, 'confessor,' *frāvarānē*, 'I make my profession of faith,' etc. Although from the very beginning Zarathushtrian Mazdaism thus meant a sharp contrast with surrounding worship and practice (cf. *Vend. xix. 6*; Zarathushtra's mother had invoked the *Aiura Mainyu*), neither proselytizing aims nor doctrinal discussions produced a creed in the same sense as in Christianity. The Zarathushtrian reform was of a moral, economic, and ritual kind, rather than intellectual. But the Avesta contains several formulae, used on different occasions, e.g. in putting on the sacred cord, on rising in the morning, in the *nyāyishes* and other prayers, etc. These formulae sum up the most peculiar tenets and practices of the Parsi religion. It may be that some of them originated during the Sasanian restoration, owing to the need of briefly distinguishing their own faith from Christianity and other rivals. We shall mention only the most important formulae. In the post-Avestan time the Parsis who settled in India were required to present a summary of their beliefs and sacred customs to Indian rulers.

2. In its shortest form the *Fravarānē* (*Yas. xi. 16*, *xii. 1*, *xxvii. 12*; *Yt. xiii. 89*, etc.) contains four points: *Fravarānē Mazdayasnō, Zarathushtrish, Vīdāēvō, Ahuraθkaēshō*; 'I profess myself a Mazda-worshipper, a Zarathushtrian, an anti-devil (enemy of the demons), a servant (or proclaimer) of the Lord.' That is, the believer declares himself (1) a monotheist; (2) a member of a historically founded religion; (3) a dualist. Or, to put it differently, (1) the revealed God is Ahura Mazda; (2) the revealer is Zarathushtra; (3) the peculiar higher form of life instituted by the revealer as the due service of God consists in the fight against the demons. Those points are co-ordinated in a way characteristic of revealed or founded religion (cf. *Transactions of the 3rd Int. Congr. for the Hist. of Rel.*, Oxford, 1908, ii. 403 ff.). (4) The last word seems to sum up comprehensively the whole faith, *yasnō* designating more particularly the Divine worship, and *θkaēshō* designating the doctrines and tenets of religion in general. Additions are sometimes made to the *Fravarānē*: homage to the genii of the *gāhs* (hours, watches), of the days, of the months, of the seasons, of the

years (Introd. to the *Yasna*; *Yas. xi. 16*, *xxiii. 5*; esp. in the five *gāhs* recited at the five hours of prayer of the day and contained in the *Khordah Avesta* [the book of prayer], etc.); or—a more authentic addition—homage to the Amesha-Spentas (*Yas. xii. 1*), or other amplifications. A still shorter form (*Yas. xii. 8*) runs thus: 'I profess myself a Mazda-worshipper, a Zarathushtrian, having made both my avowal and my profession (of faith).' Another short formula in Pahlavi runs: 'I declare my adherence to the Mazda-worshipping religion, and renouncement of all evil beings and things' (E. S. Dadabhai Bharucha, *Khorda-avestā-arthah*, Bombay, 1906, p. 2).

3. A more explicit creed is formed by the *Hās xii.* and *xiii.* of the *Yasna*, designated, according to Anquetil Duperron, by the Parsis as *Fraoretī*, 'confession,' 'creed,' and called after the opening words *Frastuyē*, 'I praise' (*Yas. xi. 17*–*xii. 7*), and *Astuyē*, 'I avow' (*Yas. xii. 8*–*xiii.*, as divided by Darmesteter). *Astuyē*, with the shortest *Fravarānē*, belongs, e.g., to the prayer of the investiture with the *kosti*. *Frastuyē* is placed at the head of each *Yasht* and of each *Patēt*, and it occurs in a shorter and in a longer—evidently more original—form, which contains elements of really ancient aspect. It begins with the usual Avestan triad: 'I avow good thoughts, good words, good actions.' In the course of the confession, cattle-stealing and destruction of the villages of the Mazdayasnians are abjured; folk and cattle ought to live in peace. All communion with demons and their crew, with sorcerers and their crew, and with all kinds of adversaries and devilish, treacherous persons, is abjured. As Zarathushtra abjured the devils in his colloquies with Ahura Mazda, so the Mazdayasnian and Zarathushtrian gives up communion with them. In addition to the predominating fight against the devils, and in particular against savage disturbance of the regular cattle-breeding village-life ('the Mazda-worshipping religion suppresses battles and lays down arms'), two other features of this creed deserve attention: (a) the importance of tradition; this creed has been professed by the waters, by the plants, by the cattle, by the Creator, by the first man, by Zarathushtra, by Vishtāspa, by Frashaostra and Jamāspa, by all the Saoshyants; (b) the excellence of intermarriage between the nearest relations, repudiated and interpreted in a different sense by later Parsism. The *zvaēvadatha*, or next-of-kin-marriage, is also exalted by the *Astuyē*.

4. Anquetil Duperron describes the ceremonies to be undertaken by an unbeliever desiring to join the Parsi faith. The Parsi creed belonging to that ritual and included by Spiegel in the *Khordah Avesta* is evidently much later than the Avestan formulae. It runs: 'The good, pious, right religion, which the Lord of the created beings has sent, is the one brought by Zartūst. The religion is the religion of Zartūst, the religion of Ormazd, given to Zartūst.' The reception of an outsider into the Parsi communion is, in fact, nowadays almost an unheard-of thing; such requests have been rejected lately.

5. The Mazdayasnian who confesses his sins and seeks absolution is, of course, in quite a different position from a proselyte not belonging to the sacred blood. The explicit formulae of penance, *Patēts*, give a good idea of what was considered by later Mazdaism to be essential to the Parsi practice and faith. In the so-called Iranian *Patēt*,¹ after having enumerated at length the sins and wickednesses repented of, and having referred to the fact

¹ Translated by Spiegel, *Av. überliefert*, Leipzig, 1852–68, iii. 219 ff., and Darmesteter, *Zend-Avesta*, Paris, 1892–98, iii. 167 ff.; ed. de Harlez, *Manuel de Pehlvi*, Paris, 1880, p. 144 ff. The Pāzand *Patēt* (cf. West, *GrP* ii. 1091) are now accessible in Andia's *Pāzand Texts*, Bombay, 1909, pp. 118–122.

that the same faith had been professed by the men of the holy tradition, mentioned in the *Frastuyê*, and by Adarbâd Mahraspand (4th cent. A.D.), the believer proclaims that neither happiness nor a longer life, power nor wealth, nor even the penalty of death, can separate him from the right religion, because he dreads hell and hopes for paradise.

6. On the arrival of the emigrating Parsis at Sanjan in A.D. 716, they presented to the Indian prince of Gujarât a list of sixteen *ślokas*, composed by the most learned of their dasturs, and containing the principal rules and tenets of their religion, selected and stated in a way fitted to conciliate the ruler, without denying or concealing the real content of Mazdaism. The points were as follows: (1) the adoration of Ahura Mazda, of the Sun, and of the five elements; (2) silence during the bath, in reciting prayers, in presenting offerings to the fire, and in eating; (3) the use of incense, perfumes, and flowers in religious ceremonies; (4) the honour accorded to the cow; (5) the use of the sacred shirt, string, and cap; (6) singing and music at weddings; (7) the adornments and perfumes of ladies; (8) the precepts of generosity in

giving alms, and of digging tanks and wells; (9) the precept to extend one's sympathies to all male and female beings; (10) the ablutions with *gomūtra* (euphemistically called 'one of the products of the cow'); (11) the wearing of the sacred cord in praying and in eating; (12) the sacred fire fed with incense; (13) the five devotions every day; (14) conjugal fidelity and purity; (15) the annual ceremonies in honour of the forefathers; (16) the precautions to be observed by women after child-birth and during menstruation. There exist different versions in Gujarati and Sanskrit.

CRIMES AND PUNISHMENTS (Primitive and Savage).—I. Introduction.—While *revenge* is the action of an individual against one who has done him wrong, *punishment* is the action taken by society against one who has transgressed its laws. Revenge may, however, be followed up by a group of persons in sympathy with the injured person, in this case passing over to the blood-feud (*q.v.*); and individual or collective revenge may be recognized by the society as the specific form of punishment to which it lends its sanction or its aid. Men seek revenge because they feel that their rights or interests have been encroached upon. The act of revenge is one strictly of self-defence, and is primarily a reflex action. It seeks to destroy or render powerless what constitutes a menace, but it contains a rough notion of justice, of the idea that no one can intrude upon the rights of another without suffering the consequences. The exercise of justice by a community or its representatives against an individual who is obnoxious to it, or to any of its members, is based primarily on the feeling which underlies revenge. Punishment is to some extent vengeance—the vengeance of society for its own preservation. The criminal must suffer, must expiate his crime, whatever other notions may in time enter into the idea of punishment. Private vengeance and public justice are thus so far similar in their point of view and in their action, save that the latter tends to be more discriminating and impartial. Not the individual sufferer himself, but others judge and condemn the guilty person. Public justice at lower stages is extremely limited, and side by side with it exists private or collective vengeance (*e.g.* the blood-feud). This is to some extent justice, since society recognizes the right to its execution. It has become a specific form of punishment because society has sanctioned it. Or public justice may, again, recognize private revenge by handing over the evil-doer to the injured person or his relatives, or by making him or them the

executors of justice. Public justice, save in the case of a few crimes which more particularly menace the existence of society as a whole, has to content itself with regulating private revenge, or with suggesting a system of compensations. Finally, as it advances, often through the growing supremacy of chiefs, it eliminates private revenge more or less completely, though this can hardly be said to be true of any savage society.

The simplest form of regulated revenge is the duel—the right of the injured party to challenge the aggressor to single combat, or the case where the aggressor must stand up to the throwing of spears (as in some Australian instances), or must submit to the plundering of his house. Or, again, revenge is regulated by being limited to a certain period or to certain offences. The blood-feud is the best example of regulated revenge (see Post, *Grundriss der ethnol. Jurisprudenz*, II. 236 ff.; Westermarck, *Moral Ideas*, I. 498 ff.; see § 6, II. (1) below).

In the earliest times, if men, like some of the higher apes, lived in separate families, the family would, when necessary, assist any individual member of it in following up an act of revenge, because they were bound to be in sympathy with him for the wrong done. Thus individual revenge easily passed over into collective revenge. It is out of this feeling of sympathy that justice, strictly so called, arises. Actions by which any individual feels aggrieved are generally those by which all individuals feel aggrieved when they are done to themselves; and the condemnation of such actions tends to formulate itself as a custom or law which cannot be transgressed without risk of incurring the hostility of the society or of individuals composing it. Custom is, in fact, a strong expression of savage man's sense of right and wrong, and it is the test by which actions are judged, although, indeed, some of the actions, from a strictly ethical point of view, may be indifferent. Hence, both collective revenge and public justice are the expression of moral indignation, though the latter expresses it more strongly. For, the more men realize their solidarity, the more is any ill done to one regarded with indignation by all, as a result of

the working of sympathetic emotion. And, as the ill done has transgressed that customary law,—the expression of what is right and what is wrong,—the punishment inflicted is an expression of moral indignation at the wrongdoer. It may be out of all proportion to the offence committed, and in such a case is on a level with mere unthinking revenge, but, generally speaking, at lower levels of savage society, punishment has some proportion to the offence. It is at higher levels, in barbaric and despotic societies, that punishment is most cruel and disproportionate to the offence.

The tendency of punishment to supplant mere revenge (which is occasionally regarded as wrong) is aided by the fact that the latter often causes great inconvenience to the society, and tends to multiply the revengeful actions. The society, by itself or by its heads, steps in, therefore, between the avenger and the wrongdoer, and decides upon the punishment, or restrains the amount of revengeful action. Thus the judgments of a central tribunal are gradually preferred to revengeful acts. Casalis says of the Basutos that the chief has been given powers over all the community because of the fear of anarchy arising out of private revenge (*The Basutos*, 1861, p. 225). The injurious results of the blood-feud are well recognized by savages, among whom the head-men or the chief will often interfere to stop its excesses; or it sometimes gives place to an appeal to them, or to the payment of a compensation by the offender, as a matter of private arrangement, or one suggested by them. This compensation generally tends to pass into a regular practice, with a graduated scale of payments according to the magnitude of the offence (§ 5). With the growth of the power of the chief, he not only advises or suggests, but determines and orders the carrying out of justice over a wider field. Moreover, where the injured person or his representatives are too weak to take revenge against a powerful tribesman, or, on the other hand, where revenge is out of proportion to the offence, the sympathetic emotions of the society, being aroused in the one case for the victim and in the other for the aggressor, gradually contribute to the formation of a tribunal in some shape or form, and to the cessation of private revenge.

Yet private revenge often exists side by side with punishment by a tribunal or a chief. This is natural when we consider what savage character is. But, on the whole, there is a tendency to make such revenge the expression of judicial action. Thus it may be recognized as the right way of punishing certain wrongdoers, provided that it does not exceed certain limits. This is particularly true where the husband is allowed to avenge himself on the adulterer. Or it may be permitted that the criminal caught red-handed in certain crimes, e.g. theft, should be slain at once. Or, again, the blood-feud may be the approved method of punishing the murderer. Or the aggrieved person or his relatives may be chosen as executioners of the sentence passed by the tribunal. Thus, among many of the Bantu tribes, a murderer proved guilty is given over to the relatives of his victim to deal with him as they choose (Macdonald, *JAI* xxii. 108). Many other instances might be cited. Private revenge sometimes continues alongside or in spite of established judicial tribunals in the case of large societies scattered over wide areas, and in which there is little feeling of homogeneity, and hence little prospect of general sympathetic action in favour of an aggrieved person. Revenge may also be pursued in all societies in matters not usually taken cognizance of by the laws.

2. Crime, morality, and religion.—Even in the earliest stages of human history man may have dimly felt it ethically wrong to murder, commit

adultery, or steal, apart from the fact that the instinctive act of revenge brought it home to him that in committing such actions he was trespassing against the rights of another. These crimes are so universally condemned that there can have been no time when they were not regarded as deeds which it was wrong to commit. The sense of wrongness with regard to these and other acts was largely increased with the growth of society, of the group in which men lived, because such actions tended to destroy the unity of the group. Custom laid down that there were certain things which must not be done, and it was, therefore, highly immoral to do them. Nor is it improbable that, even at the very earliest stages of the growth of the ideas of right and wrong, man may have thought vaguely that in doing wrong to another he was incurring the anger of whatever worshipping being or beings he was aware of. This thought also would become more definite with the growth of society. Where a group of men living together worship a being whom they believe to be interested in the group, any transgression of custom will be regarded as transgression against him, because the customs would certainly be regarded as having been instituted by him. Whatever constituted a menace to the group or any of the individuals composing it was also an offence against the divinity, who naturally favoured the community and not him who menaced its existence. The god is apt to punish the group for the breach of custom, and hence the offender is made to suffer speedily for his evil-doing, in order to avert this. Some crimes are punished by the group as a whole. Others are not so punished, but the group approves of the act of revenge by which the offence is required. Revenge or punishment is thus supposed to satisfy the anger of the god. Some support for the view here taken is found in the fact that the divinities of very primitive tribes are also to some extent moral governors, who are thought to dislike particular crimes and to punish them. Among savages at a higher level there is a certain amount of evidence proving that their gods take account of crime and are guardians of morality. Whether or not it be true that all morality from the first is connected with religion, it is at least certain that religion soon strengthened and assisted morality by its insistence on the fact that the god or gods of the group desired its welfare, and that all offences against that welfare were thus more than offences against laws imposed by men.

3. The administration of justice.—A regular organization for enforcing justice or maintaining custom hardly exists at the lowest levels of society, though its beginnings may be seen. Justice is a matter of individual action; and yet, as among the Yahgans of Tierra del Fuego, where the feeling of the community gives support to the existing customs, some help in avenging wrongs may always be looked for from relatives or neighbours (Hobhouse, *Morals in Evolution*, i. 46, citing Hyades and Deniker, *Miss. scient. du Cap Horn*, Paris, 1891). This is an approach to collective revenge, and, as a rule, the greater the wrong, the more likelihood is there of the avenger being supported. But, wherever crime is regarded as a serious breach of tribal custom, the breaker of a custom is the breaker of a law, and his action arouses strong disapproval. Hence, society approves the action of the avenger, e.g., in cases of murder or adultery; or it takes joint action against the wrongdoer. The latter course is most frequent in the case of crimes which are regarded as bringing the whole community into danger or subjecting it to Divine anger, e.g. sorcery and incest (breaches of exogamous custom). Or, again, a whole clan or tribe will put to death or banish a man who makes him-

self a nuisance to every one, as among the Eskimos, where a whole village has occasionally risen against and slain an atrocious murderer (Nansen, *Eskimo Life*, 1893, p. 163). Conjoint action by the community is found amongst the Mpongwe, who drown or burn the murderer (Burton, *Two Trips to Gorilla Land*, 1876, i. 106), and is common among Australian tribes, where the whole camp joins in punishing the ill-doer (Westermarck, *op. cit.* i. 171). But, even when such joint action occurs, individual revenge or blood-feud is commonly found, nor is it condemned by society. Indeed, it is usually the case that any one disregarding the duty of revenge is held in contempt, and this tends to show the general disapproval of crime by the whole group or tribe.

Where public justice is administered by certain individuals, it seldom ousts the practice of private revenge, and in general takes cognizance only of public offences (sorcery, incest), or of various petty crimes. But this 'court' may be effective in enforcing or in regulating private revenge, or in arranging compensation. A council of elder men is frequently found among Australian tribes, who try various offences and decide upon the punishment (Fraser, *Abor. of N.S. Wales*, Sydney, 1892, p. 39 ff.; Woods, *Native Tribes of S. Aust.*, Adelaide, 1879, p. 34 ff.). But it is probable that, as among the Central Australian tribes, these offences are breaches of the strict marriage laws (incest), and murder by sorcery. In such cases the elders arrange for an avenging party to go out and punish the offenders (Spencer-Gillen*, pp. 15, 477; *25, 556 ff.). In some instances the council has nothing to do with cases of murder, adultery, etc.; and only those relating to property or to litigation are brought before it (Nagas [Stewart, *JRASB* xxiv., 1855, p. 609], Kandhs [Dalton, *Eth. of Bengal*, Calc., 1872, p. 294], and Formosans [Letourneau, *L'Evol. juridique*, p. 94]). Or, as among some N. American tribes (Ojibwas, Wyandots, etc.), the avenger appears before a council, and, having obtained judgment in his favour, demands compensation. If this is not given, he falls back on revenge (Kohler, *ZVRW* xii. [1897] 407). In many cases, too, the council (as in the case of the chief) delegates the execution of justice to the person who would otherwise be the avenger. Sometimes the leading men of a group will intervene to prevent disputes or to arrange composition. Less usual are the instances where the decision of a council is taken as final in all private cases (Todas and other aboriginal Indian tribes [Shortt, *TES*, new ser. vii., 1868, p. 241; Forsyth, *Highlands of Cent. India*, 1871, p. 361], Tagbuana [Worcester, *Philippine Islands*, New York, 1898, p. 107], and a few others). Thus, generally speaking, the savage council seldom constitutes a court in the strict sense of the word.

With the advancing power of the chief, the administration of public justice passes largely into his hands; yet even here private revenge—the blood-feud, or the right of the husband to punish in cases of adultery—is still used and permitted, and often the chief's prerogative is exercised only when appeal has been made to him. But there now comes into great prominence, especially among higher savage tribes, a regular system of compensation or fines for various crimes, payable to the aggrieved person or his representatives, or, in some cases, to the chief. We find also in many places regular codes of laws, with punishments appointed for different offences. Sometimes the chief merely intervenes to prevent excessive revenge and to suggest compensation, as among many American Indian and African tribes; sometimes his power of intervention is limited to certain crimes, generally those of a public kind; or, again, he merely acts as arbiter or adviser rather than as judge. But,

the more his power is established, and the more autocratic he is, so much the more do his functions as judge increase. This is especially true of many of the chiefs and petty monarchs of Africa, and in general of all tribes whose social organization is high. Frequently the chief may associate with himself a council of elders; or, again, as among the Kafirs, village chiefs judge lesser matters, while chiefs of clans hear appeals against their judgments and try all more serious crimes, aided by the advice of a council (Letourneau, p. 87). With few exceptions, where justice is administered by a chief he is careful to act in strict accordance with the established customs. There is, however, a tendency among chiefs to regard every real or imaginary offence against themselves as a serious crime, while, where their power is autocratic and fines are paid to themselves, or where they are naturally cruel, there is great danger of injustice and of atrocious punishments being meted out. But, with the decay of private revenge, the administration of justice becomes more definite and strict, especially as we advance from savage to barbarous societies. The court or chief maintains order, upholds the rights of every member of society, and punishes all crime. Generally speaking, wherever a tribunal exists, it is seen to be a guarantee, not found in the exercise of mere revenge, that all offenders shall suffer, and suffer proportionately to their offence.

Where cases are brought before a council or a chief, a palaver usually takes place, at which both parties are fully heard. Sometimes the method of the oath or ordeal is resorted to in order to discover the truth and to point out the guilty person. The oath is frequently in the form of a curse, and accompanies the drinking of a poison or of some liquid, which is supposed to act fatally upon the perjurer or the guilty. The oath is thus a species of ordeal. But the ordeal may occur by itself in various forms: the ordeal by fire, by red-hot metal, or by boiling oil or water, in which cases the innocent person is not burned, or his wound heals within a certain time; the ordeal by water—remaining under water for a certain time without drowning, or passing safely through water in which crocodiles lurk; the ordeal by poison (see OATH; ORDEAL; Post, ii. 459 ff.). The person who is proved to be guilty, if he has not already succumbed to the ordeal, is then punished according to the nature of his crime. Among savages, secret societies, such as the Duk-Duk of New Britain, supplement the action of private revenge or public justice where these are imperfect, and punish any one who commits crime.

4. Variety of crimes.—The idea of what constitutes crime in savage society is largely akin to that entertained in civilized societies. But there are important exceptions to this, bound up with the nature of savage society and belief, e.g. breach of tabu or religious custom, sorcery, and the like. Again—perhaps as a natural outcome of uncontrolled revenge operating in later times—there is the idea that accidental woundings or homicides are equally punishable with those committed intentionally, though in many cases there is an approach to the modern view of accident, and a distinction is made in the punishment inflicted, or no punishment follows (cf. Westermarck, i. 217; Post, ii. 214). Sometimes killing in self-defence is punishable, though not to the same extent as murder; and, frequently, there is a distinction between meditated crime and that committed in the heat of the moment. More serious is the view entertained by most savage tribes that, while to kill or to steal from a fellow-tribesman is wrong, these actions when committed against strangers or members of another tribe are not crimes, and are

even praiseworthy. They are apt to be considered wrong, however, if they are likely to bring the vengeance of the other tribe upon the tribe of the offender. With the dawn of a higher morality and a wider sense of responsibility this view tends to disappear. Again, we generally meet with the idea that the weight of the crime varies both according to the rank (and often the age and sex) of the offender and according to that of the victim. Chiefs or men of rank may commit crimes with impunity or with slight punishment, but crime committed against them is generally punished more severely than that against lesser men. This is especially seen where the system of composition for crime prevails, the blood-price or the fine varying strictly according to the rank of the victim, and often also according to the rank of the offender. These views continue to prevail in higher societies. Approximating to the custom of more advanced civilization, there is frequently a distinction made between a first crime and its repetition. A first offence may be punished comparatively lightly; a second or third will receive the utmost penalty—death or banishment.

Thus among the Bambara, for a first theft a hand is amputated; for a second the penalty is death (Letourneau, p. 78). The Aleuts punish a first theft with corporal punishment, a second with amputation of some fingers, a third with amputation of a hand and lips, a fourth with death (Petroff, 'Report on . . . Alaska, Tenth Census of the United States, Washington, 1884, p. 152). Among the Wakamba, a first murder is punished by a fine, but on a second conviction the murderer is killed at once (Decle, *Three Years in Savage Africa*, 1898, p. 487).

In general, those crimes which may be considered public, inasmuch as they are committed against the customs, or to the danger, of the whole community, are sorcery (involving, according to current belief, all natural death), breaches of the customary marriage laws (incest), sacrilege (breaking of tabu), and treason. Private crimes—those committed against private persons—include murder, adultery, unchastity, theft, perjury, and the like. Some of the latter may be regarded as public crimes if they are committed against the chief, because of the relation in which he stands to the community. There are, of course, many lesser crimes, while, especially where chiefs have the power of making laws, there is a tendency to multiply offences. With the greater development of savage society, and with the gradual formation of a central administrative body taking the place of mere public opinion and custom, these private crimes are regarded less and less as offences against an individual, and more and more as breaches of law and transgressions against social order. But it is rather at the next higher stage, in barbaric and semi-civilized societies, that a real approximation to this view is found.

5. Punishments.—Punishment administered by public justice in savage society has generally the intention of making the offender suffer pain, and is thus analogous to punishment inflicted as an act of private revenge. The *lex talionis*, or principle of equivalence in punishment, is perhaps originally connected with the reflex and instinctive movements of the person who is hurt, and who attempts to make the aggressor suffer a similar hurt by a natural process of imitation. There must be blow for blow. At the same time this movement is one of self-preservation, and this also is an element of all punishment. Such instinctive resentment is, however, indiscriminate in the amount of vengeance which it employs, and this primitive instinct of blow for blow, whilst suggesting the *lex talionis*, is not sufficient as an explanation of it. We may, therefore, with Westermarck (l. 179), look for a further explanation of it in the feeling of self-regarding pride which desires to bring the aggressor to the same level as the sufferer, and in the social

feeling that members of the same society have equal rights, and hence, if one makes another suffer, he must suffer in a similar way and to the same extent.

The simplest form of the *lex talionis* is found in the idea of life for life, wound for wound, eye for eye, tooth for tooth. But it also assumes some curious forms; for example, especially in the case of the blood-feud, there is often the desire that the vengeance should fall on one of the same rank, or the same sex, or the same age, as the victim—the real aggressor thus escaping. Again, the vengeance is exacted with the same kind of weapon, and in the same manner. Or, where a system of compensations and fines exists, these are in due proportion to the amount of pain caused. Or it is seen working in still another way: the thief is deprived of sight, of an arm or hand; the perjurer loses his tongue; the adulterer or ravisher is castrated; or, again, the thief must not only restore the goods stolen, but must submit to be pillaged to the same extent (see Post, ii. 238 ff.; Hobhouse, i. 84, 91).

But, while the *lex talionis* is found as an underlying principle both in savage and in more advanced systems (cf. e.g. the OT and the Bab. Code of Hammurabi), there is often a disposition to exceed it, so that methods of private revenge as well as public punishments are often out of all proportion to the crime committed, especially in places where the people are naturally cruel, where a despotic chief rules, or where it is held that a Divine as well as a human law is transgressed. In the last case, as well as in cases where the chief is regarded as Divine or as having Divine authority, any transgression of law is apt to involve the whole society in Divine vengeance. Hence the punishment is swift and proportionately severe (cf. Durkheim, 'Deux lois de l'évolution pénale,' *ASoc* iv. 64 ff.). Savage acts of revenge, unregulated or regulated, as well as methods of punishment, are also often excessive, since they involve the punishment of an innocent person in place of the real offender (in many instances of the blood-feud or of the *lex talionis*), or that of innocent persons in addition to the real offender (his wife and children, especially in cases of sorcery, and these as well as fellow-clansmen in some instances of the blood-feud), as a result of the idea of solidarity and collective responsibility—a principle lingering on in more advanced societies.

In a few cases capital punishment seldom or never occurs. But, as a rule, it is meted out in most tribes for one or other of such crimes as sorcery, murder, incest, treason, sacrilege, adultery, and theft. Some tribes punish capitally only for sorcery and murder, or for sorcery and adultery (especially with the wives of chiefs); but not uncommonly all these offences are liable to the punishment of death. Further, in such despotic kingdoms as Ashanti or other regions of Africa, as well as sporadically elsewhere, even small offences are punishable with death, at the capricious will of the chief (Ellis, *Tshi-speaking Peoples*, 1887, p. 166; Kollmann, *Victoria Nyanza*, Berlin, 1899, p. 170 f.).

The methods of death vary; they include decapitation, strangulation, hanging, stabbing or spearing, cudgelling or flagellation, empalement, crucifixion, drowning, burning, flaying alive, burying alive, throwing from a height, stoning, sending the criminal to sea in a leaky canoe, cutting in two, lopping off the limbs. In some cases, where the crime is believed to be particularly offensive to the gods, the criminal is offered in sacrifice, while this is not an unusual way of obtaining victims where human sacrifice prevails (Melanesia (Codrington, *Melanesians*, 1891, p. 136), Sandwich Islands (von Kotschube, *Voy. of Decoe*, into the *S. Sea*, 1891, iii. 248), Tahiti (Ellis, *Polynes. Res.*, 1829, l. 346); cf. Ouseley, vi. 16 (Gauls); Grimm, *Teut. Myth.*, 1882, l. 45 [Teutons]). In certain regions where cannibalism prevails, criminals are killed and eaten, probably as an extreme form of gratifying revenge and showing contempt

(cf. CANNIBALISM, § II. 15; Codrington, p. 344; von Martius, *Travels in Brazil*, 1824, I. 88).

Of all these methods the most cruel are found in Africa, where also mutilation before death, as well as other tortures, is practised (cf. Letourneau, pp. 71, 81, 82, 88; Post, II. 274; Westermarck, I. 195).

Other punishments consist of various bodily mutilations—cutting off legs or arms, hands or feet (or parts of these), nose, ears, lips; castration; and plucking out the eyes. All these are found commonly in Africa, among Amer. Indian tribes, in the South Sea Islands, and occasionally elsewhere. Flogging or beating with various instruments on various parts of the body—back, hips, shoulders, legs, stomach—is also used (in S. America, among the Mongols, in Africa). Enslavement is found as an occasional punishment for crime or for debt (commonly in Africa and in the Malay Archipelago, and sporadically elsewhere); or, where the criminal has failed to pay the due compensation, he is often enslaved, or the usual punishment is inflicted upon him. He becomes the slave of his victim or of the latter's family, or of the chief, or he may be sold. Confiscation of goods, in whole or in part, is a frequent punishment in cases of theft. Banishment occurs here and there (New Zealand, Mongols, some African tribes) as a punishment for certain crimes, but it is often the result of general bad or unruly behaviour threatening the peace of the tribe (see Westermarck, I. 172; Steinmetz, *Ethnol. Stud. zur ersten Entwick. der Strafe*, vol. II. ch. 5). Lack of filial duty among the Kafirs, and lying among the Bannavs of Cambodia, are punished with banishment (Lichtenstein, *Travels in S. Africa*, 1812-15, I. 285; Mouhot, *Trav. in Central Parts of Indo-China*, 1864, II. 27). Other punishments are various forms of dishonour—cutting off the hair, insulting exhibition or parade of the culprit, dressing in women's clothes. Imprisonment as a punishment is rarely found among savages, but instances are noted in various parts of Africa (Krapf, *Travels . . . in E. Africa*, 1860, p. 58; Letourneau, pp. 80, 84; Post, *Afr. Jur.* II. 51).

There is also a wide-spread system of compensation or fine for certain offences. This method of indemnifying the victim or his relatives is itself a species of punishment, though, where the aggressor is wealthy, it is easy for him to pay for his crimes. The system probably originated in the custom of paying blood-money to the relatives of a murdered man. The aggressor, to avoid a blood-feud, would offer presents to the relatives to appease their anger, while at the same time appealing to their love of gain. This, defective as it may be from the point of view of justice, was soon seen to have the good effect of staying the excesses of the blood-feud, and would be encouraged by the community or the chief. Similarly, compensation for theft may also have been suggested by the custom of subjecting the thief to pillage of his goods. The system of compensation was largely adopted, and passed over into the administration of public justice as a method of assessing criminal actions. But it was far from being universally accepted either in systems of private revenge or in public punishment, and, even where it prevails, certain crimes cannot be compensated for, e.g. sorcery and deliberate murder. It has a wide-spread vogue, however, as a regular custom, or as an alternative to punishment in cases of murder, adultery, seduction, theft, etc. (cf. Post, II. 256 ff., for a list of peoples among whom it is found). Where it prevails, a regular system of payments is fixed according to the injury done, according to the rank or sex of the victim, and sometimes according to the rank of the aggressor.

In many instances—in such serious crimes as sorcery, murder, or crimes committed against a chief

or his household—the wife and children of the aggressor suffer with him, or are sold as slaves. Or, where compensation has not been paid, wife and children may be taken with the defaulting criminal and enslaved; or he himself may sell them in order to obtain the wherewithal to pay the compensation. In the first two instances the savage doctrine of human solidarity is seen at work—a principle emphasized in the blood-feud, where the murderer's family or clan is often held responsible for his act and the members are liable to be slain for it.

As a further form of indignity and punishment, the body of a criminal is often left unburied, or is thrown into the forest to be devoured by wild beasts (African tribes [Post, *Afr. Jur.* I. 46]; Eskimos [Rink, *Tales and Trad. of the Eskimo*, 1875, p. 54]; Cent. America [Preuss, *Die Begräb. der Amer.*, Königsberg, 1894, p. 301]).

6. As has already been said, a distinction is drawn even by the most backward peoples between public and private crimes. Some examples of both will now be discussed, showing the attitude of the savage with regard to them and the punishments meted out to the aggressors.

i. **PUBLIC CRIMES.**—As examples of public crimes may be taken sorcery, incest, and sacrilege.

(1) **Sorcery.**—As distinct from *magic*, which is authorized for the public good, sorcery, though its methods may often be similar, is almost universally punished by the common action of a tribe or by the central authority acting in its name. The sorcerer is employing unlawful means for anti-social ends, especially to bring about the sickness or death of his neighbours, or to cause sterility in field or fold. Further, inasmuch as the crime is an anti-social one, it is for that very reason a crime against the divinity of the social group, its guardian or tutelary spirit. As among the Eskimos, it is adverse to the interests of the community and to the supreme rule of things in which the people believe (Rink, *op. cit.* p. 41). Further, where spirits invoked in magic are evil and maleficent, they are such as are opposed to the rule of the benevolent spirit or divinity, according to the usual dualism which prevails in savage religion. Thus, sorcery is condemned on religious as well as on social or moral grounds, and those who are most active in pursuing it are generally the approved fetish-men or priests. Moreover, the divinities are sometimes said to abhor witchcraft and to punish it in the future life (Rink, p. 41; Parker, *Euahlayi Tribe*, 1905, p. 79; Codrington, p. 274). As it is a wide-spread belief that all sickness or death is due to unnatural causes, one of which is sorcery, there is a wide field for the exercise of public justice against the sorcerer, who is generally regarded as a murderer of a particularly offensive type. Hence, not only in the lower culture, but at higher levels, law, and custom condemn him. He is a danger to society; he offends against its gods; and, because of the solidarity of the society, it may be visited by them for his offence. Therefore he is almost invariably punished with death. Sorcery is sometimes the only crime which is so punished, while the method of death is often very cruel. In most cases the authorized magician, medicine-man, fetish-man, priest, or witch-doctor, takes steps to discover the sorcerer. When he is found, he is often subjected to an ordeal, e.g. by poison. If this does not kill him but proves him guilty, he is then publicly put to death. The ordeal is thus equivalent to the trial of the suspected person.

Among Australian tribes, with whom all natural death is attributed to sorcery, death is the invariable punishment. The medicine-man identifies the guilty person, an avenging party

is arranged by the council of old men, and the culprit is followed up and slain (Spencer-Gillens, pp. 461, 477; b 25, 556). With the Eskimos, the *angekuts* are hostile to sorcerers and cause them to be put to death (Rink, pp. 34, 41; Petroff, op. cit. p. 152). The punishment of death was generally meted out to sorcerers, who were much feared among the American Indian tribes of all degrees of culture, from the lowest tribes up to the Aztecs, the method of death being often cruel—e.g. burning (Wyandots, Guatemalans) and cudgelling (Vera Paz). With the Aztecs the victim was sacrificed to the gods (NR ii. 462; cf. Post, ii. 395; Kohler, ZVRW xii. [1897] 412-416; Waitz, *Anthropologie*, Leipzig, 1859-1872, iii. 128). Among the Nufors of New Guinea sorcerers are stabbed and thrown into the sea (ZE viii. [1888] 193), and the punishment of death is usual in N. Guinea and among the peoples of the Malay peninsula (Wilken, 'Het straf. bij de volken van het mal. ras,' in *Bydragen tot de taal-, land- en volkenkunde van Ned.-Indië*, The Hague, 1883, p. 21). In Fiji, where witchcraft exerted the strongest influence on the minds of the people, the person detected in using it was slain (Williams, *Fiji*, 1870, i. 248). In New Caledonia, old women are often put to death as sorceresses, and men who are suspected of causing death by sorcery are formally condemned and forced to jump over the rocks into the sea (Turner, *Samoa*, 1884, p. 342). In W. Africa, any one may kill the sorcerer; but generally after detection by the witch-doctor an ordeal is necessary, and the spirit of the ordeal sometimes kills the sorcerer. Otherwise he is put to death, and his private property is often confiscated (cf. Nassau, *Fetichism in W. Afr.*, 1904, p. 123; Kingsley, *W. Afr. Studies*, 1901, p. 159 ff.; Letourneau, p. 63; Post, *Afr. Jur.* ii. 66-67). Among the Lendu, a forest tribe of Uganda, the sorcerer is executed, and his body is thrown into the bush (Johnston, *Uganda Protectorate*, 1902, ii. 554 f.). In E. Cent. Africa, when the suspected sorcerer has been discovered before the assembled community by the witch-finder, he must drink a poisoned cup. If his stomach rejects it, he is acquitted; if it causes his death, this proves him guilty. In some cases he is burned alive (Macdonald, *Africana*, 1882, i. 43, 206 ff.; Letourneau, p. 69). In S. Africa, witch-doctors discover sorcerers, who are thought to be very numerous and powerful. When discovered, they are put to death (Casalis, *The Basutos*, p. 229; Decle, op. cit. p. 75; Maclean, *Kafir Laws and Customs*, 1838, p. 35 ff.).

Where the punishment of death is not inflicted, the sorcerer may be sold as a slave (some African tribes (Post, *Afr. Jur.* ii. 66-67); and occasionally a fine is all that is demanded, but this is very rare (Bondel natives [JAI xxv. 227]). Not infrequently the punishment is visited on the relatives of the sorcerer and upon his goods. Sometimes all these are destroyed (Decle, p. 153 [Matabele]; Post, *Afr. Jur.* ii. 66-67, 149 [Zulus and other African tribes]). In Bali, the parents, children, and grandchildren are put to death, and the property is confiscated (Crawford, *Ind. Archip.*, Edinb. 1820, iii. 138). In the Babar Archipelago, the sorcerer and all his adult blood-relations are slain, and the children given to the relatives of his victim to sell as slaves (Riedel, *De sluik-en kroeshar. Rasen*, The Hague, 1886, p. 346). Among many W. African tribes, while the sorcerer is executed, his family are sold as slaves (Post, ii. 67, 154).

(2) *Incest*.—While the civilized man's horror of incest is usually confined to cases of marriage or sexual relations between parents and children or brothers and sisters, among primitive and savage peoples the bars to marriage, while generally including these, usually extend much further. Where the classificatory system prevails, the society is divided into classes, from certain of which a man must not choose a wife. Or, again, he may not marry within his totem, his clan, his village, or even his tribe. Again, marriage may be prohibited within the kindred absolutely, or within the kindred on the mother's side, where mother-right prevails (generally a totemic prohibition). In the last case a man might marry his wife's daughter, or his brother's daughter; or a brother might marry a sister by a different mother, since they would be of different totems. But, as a rule, these unions are also looked upon with abhorrence. Thus, while in savage life consanguineous unions are, with certain exceptions, regarded as incestuous, the prohibitions have usually a much wider range, and all breaches of exogamous law are equally regarded as incestuous. While adultery is mainly punished as a private offence, incest is an offence against the whole group, and is often considered to bring ill-luck and Divine punishment upon the group, who are collectively responsible. It is, therefore, punished as a public offence. Usually it is looked upon with so much horror that it is unheard of; but, where it does occur, death to both offenders is the usual punishment, though lighter punishments are occasionally

found. With rare exceptions, the prohibition extends also to all sexual relations outside marriage between persons belonging to exogamous groups. (For various theories of the prohibition of marriage, of exogamy, and of the horror of incest, see Westermarck, *Marriage*, 1894, p. 310 ff.; Lang, *Social Origins*, 1903; Durkheim, 'La Prohib. de l'inceste et ses origines,' *A Soc. i.* [1898] 64.)

Some examples of the belief that incest brings ill-luck or is obnoxious to the gods may be cited. Ruin to the crops, continuous drought, continuous rains, are the result of incest, according to the Dayaks, the Battas, the Galelarese (who also attribute earthquakes and eruptions to the same crime), and other tribes (Frazer, *GB*, 1900, ii. 212-213; Post, ii. 388). They must be atoned for usually by a sacrifice, and the criminals are punished. Or, as in Kafir and Aleut belief, the offspring of incestuous unions are monsters, the Kafirs believing this to be brought about by an ancestral spirit (Shooter, *Kafirs of Natal*, 1867, p. 45; Petroff, op. cit. p. 155). The Samoans regard it as a crime abhorred by the gods (Turner, p. 92), and the Pasemah believe that those committing it are annihilated by the gods (Post, i. 41). As in many cases both adultery and unchastity are supposed to bring general misfortune, or to be abhorrent to the gods, it is possible that with such peoples the marriage-laws are believed to have been ordained by the deities.

Among the Australian tribes, the usual punishment for breaches of the exogamous customs was death, occasionally cutting and burning. As among the Central Australian tribes, the punishment is determined by the head-men, who organize a party to carry out the sentence (Westermarck, *Marr.* p. 296 f.; Spencer-Gillens, pp. 16, 100, 495; b 136, 140). The Veddas, often wrongfully accused of practising brother-sister unions, abhor incest, and punish it with death (Nevill, in *The Tabrobanian*, Bombay, n.d., i. 178). The same punishment is usually inflicted throughout Melanesia (JAI xvii. 232; Macdonald, *Oceania*, 1889, p. 181). The Kandhs, Gonds, and other aboriginal tribes in India also punish incest (marriage within the same tribe, *gens*, etc.) with death (Percival, *Land of the Veda*, 1854, p. 345; Kohler, ZVRW viii. [1888] 145). Among the Bhils it is punished with banishment (Kohler, *ib. x.* [1892] 69). Throughout the Malay Archipelago the death punishment was often of a very cruel kind—committing to sea in a leaky vessel, drowning, or throwing into a volcano, burying alive, killing and eating (Wilken, *Globus*, lix. [1891] 22; Frazer, *GB*, ii. 213-214; Riedel, op. cit. pp. 195, 232, 400). Similarly, among the American Indians, death was the usual punishment (Kohler, ZVRW xii. [1897] 412-416; NR ii. 466, 659; Frazer, *Totemism*, 1887, p. 59).

Possibly in some of these cases the victims were regarded as expiatory sacrifices offered to the gods or spirits. In some instances of supposed incest, animal sacrifices are offered, or the blood is sprinkled on the ground to avert drought and sterility (Frazer, *GB*, ii. 212-213; Post, ii. 389). The death of the criminals or of the animal victims averts danger and a curse from the community.

As opposed to exogamy, most peoples have endogamous rules forbidding marriage outside a certain circle, narrower or wider as the case may be—the family, clan, caste, tribe, etc. Such a marriage is regarded as disgraceful, and in some cases as a crime which may be punished in various ways. But these rules have a different origin from those of exogamy, and result mainly from pride, antipathy, or prejudice (see Westermarck, *Marr.* p. 363 ff.; Post, i. 32 ff.).

(3) *Sacrilege*.—Of all forms of sacrilege in savage life, that which concerns breach of tabu is the most general. Tabu is an interdiction upon doing or saying some particular thing, an embargo placed on some thing or some person or persons, the infraction of which is frequently supposed to carry its own punishment automatically, preconceptions about tabu bringing about the fatal result through auto-suggestion. But, as the person who breaks the tabu is supposed to spread the danger by a species of contagion, and as breach of tabu frequently brings disaster to the tribe or its land, even where the automatic punishment may be looked for, he is often punished by society as a

whole, because he has sinned against the gods, or has committed a breach of social order involving supernatural results. He is put to death, for such a dangerous person is safer out of the way. Tabu need be considered here only in so far as it illustrates the savage view of public crime. Many irrational tabus have probably been imposed at one time by public opinion for some definite reason arising out of experience, real or imaginary. If something is conceived to be dangerous for any reason, e.g. on account of its connexion with spirits or gods, then it is wise to avoid it. The avoidance constitutes a tabu, and it becomes sacrilege to break it. Other tabus, those on food-stuffs or animals at certain seasons, have been imposed as a wise precaution, or in the interests of a class or sex. Many others are wilfully imposed by chiefs or priests. Generally all tabus have a supernatural sanction, and the automatic punishment is regarded as the working of the Divine anger. Tabus are sometimes of a private sort (tabus on property), but more often they have a public character—protective (as in the cases of food-supply, interdiction of places, etc.), political, sexual (as in the case of incest), or more purely religious. Tabu has to some extent subserved the growth of the idea that crime is wrong. Thus, where a tabu is placed on private property and the thief is believed to suffer automatically for his theft (cf. Turner, p. 185 f.), it is obvious that this belief would foster the idea that theft is wrong. On the other hand, many breaches of tabu, though crime in the eyes of the savage, have nothing inherently immoral in them.

Where society imposes a punishment for breach of tabu, that punishment is generally death. In Polynesia, where the institution was most fully developed, every infraction of tabu, or even the merest suspicion of it, was visited with death, the victim being usually sacrificed to appease the gods, since all diseases and calamities were public manifestations of their wrath at breach of tabu (Letourneau, p. 61). But in some other cases it is the violation of conspicuous tabus which is regarded as sacrilege meriting death.

Thus, with most savage tribes the fruits of the harvest cannot be partaken of until the firstfruits have been offered to a god or eaten sacramentally by selected individuals—chief or priest—or by all the people. In many cases to eat them before this solemn ceremony would be visited with Divine anger—madness (Fiji [JAI xiv. 27]), or death (Tahiti [Ellis, op. cit. i. 350]). But, even where death is thus held to follow automatically the act of sacrilege, detection carries with it a public punishment, as among the Zulus (death or confiscation of all the man's cattle [Frazer, *GP* ii. 326]) and Polynesians (Moerenhout, *Voy. aux Îles du Grand Océan*, Paris, 1837, i. 581). An analogous crime is that of boiling milk among the pastoral Masai. This is believed to cause cows to go dry, and is punished as an insult to the sacred cattle, with death or a very heavy fine (Johnston, *Kilima-njaro Expedition*, 1896, p. 425).

A more obvious form of sacrilege is the viewing of various *sacra* by those to whom they are interdicted, e.g. women and children; or the communication of initiated secrets to the uninitiated; or intrusion upon sacred mysteries—those of men by women, those of women by men. Among the Australians, no woman may look upon the sacred mysteries of the man on pain of death, and the *tundun*, or bull-roarer, must never be shown to a woman or child. If it is, the woman and the man who shows it (and sometimes his mother and sisters) are put to death. Death is also the punishment to women who look upon the sacred totemic drawings, or (among the Arunta) intrude upon the place where the sacred objects are kept. Generally the danger of revealing these things is told to boys at initiation (see JAI ii. 271, xiii. 448, xxv. 311; Howitt and Fison, *Kamilaroi and Kurnai*, 1880, p. 268; Spencer-Gillen*, pp. 11, 132, b 500; also above, vol. ii. p. 889). The same is true of the natives of the Papuan Gulf [JAI xxxii. 425]. Among the Indians of Brazil, women are warned off the mysteries by the playing of the *jurupari* pipes, the mere chance sight of which is punished with death (Wallace, *Amazon*, 1895, p. 549). Death is also the penalty for infringing the initiation rules among the Torres Straits tribes (Haddon, JAI ix. 336). The initiation rites of girls are also tabu to men in most districts, generally under pain of death, inflicted by the women (Reade, *Savage Africa*, 1863, p. 248; Crawley, *Mystic Rose*, 1902, p. 297). Intruders on the mysteries of the Porro fraternity in the Timu

district of W. Africa are put to death or sold as slaves, and this is generally true of all savage 'mysteries' practised by men; while, as in some African mysteries, any infraction of oaths and covenants by their members is believed to be punished by the god (Réville, *Rel. des peuples non civilisés*, Paris, 1883, i. 110; *OF*, p. 317). Similarly, as in the case of the female Njembe society in W. Africa, the mysteries of women must not be looked on by men under pain of death (Naassau, op. cit. p. 261; *OF*, p. 318). In some cases, religious rites as well as sacred places are tabu to women, as in the Marquesas Islands, where a woman is put to death if she touches the sacred ground where festivals are held (Melville, *Marquesas Islands*, 1846, p. 100).

Examples of the dangerous results of tabu-breaking by the automatic working of suggestion, even in cases where the breach has been unconscious, and has been made known to the breaker sometimes only after a long lapse of time, will be found in Dennett, *Folk-Lore of the Fjort*, 1893, pp. xxvi, xxix; *Old New Zealand*, by a Pakeha Maori, London, 1863, p. 96; JAI ix. 468. Suggestion also produces similar automatic results where magic, ghostly warnings, etc., are believed in, and where a man thinks that he is a victim of these (see Erskine, *W. Pacific*, 1883, p. 169; Howitt and Fison, op. cit. *passim*; Thomson, *Savage Island*, 1902, p. 98).

It should be observed that, where there are definite laws against the marriage of certain persons, the breach of which would be incest, these persons are generally tabu and must not speak to each other. Similarly, as a precaution against adultery, men's wives are tabu to other men, who must not even speak to or touch them (cf. Bastian, *Loango-Küste*, Jena 1874-76, i. 163, 244).

ii. **PRIVATE CRIMES.**—Among private crimes, those of murder, adultery, unchastity, and theft may be examined here in detail. Some of these, e.g. adultery and unchastity, tend to become public crimes, since they are sometimes believed to produce evil results upon the whole tribe or upon its land—a visitation by the offended spirits.

(1) **Murder.**—Tylor has pointed out that 'no known tribe, however low and ferocious, has ever admitted that men may kill one another indiscriminately' (*CR* xxi. 714). This statement is supported by the express ideas of the horror of murder entertained by many even of the lowest savages. In many tribes, murders are extremely rare, and are felt to be wrong. But generally the feeling of abhorrence is restricted, and it is considered a harmless or even praiseworthy action to kill outside the limits of the clan or tribe. But the limits of the restriction vary considerably among different peoples. Blood-revenge for murder is a duty or a custom insisted upon by public opinion in most savage societies, and often legally permitted, while it is probably a survival of the time when no supreme authority existed for the execution of justice. Though in many cases the relatives of the murderer or any members of his clan or tribe are slain in revenge, because of savage man's idea of human solidarity and of the collective guilt of the murderer's family, clan, tribe, or more specifically because of the working of the *lex talionis* (son for son, daughter for daughter, etc.), and, though the custom often gives rise to tribal wars, yet the evidence shows that the revenge is directed in the first place most frequently upon the murderer himself. Often his death satisfies the desire for vengeance, and it is only where it has been found impossible to lay hands on him that the vengeance falls on another. In the insistence upon blood-revenge as a sacred and moral duty, which it is disgraceful and irreligious to avoid (sometimes because the dead man's ghost finds no rest till the vengeance falls), and in its falling first upon the murderer, we see exemplified the general savage view of justice.¹ Where a local tribunal exists, it may arrange the blood-feud and set the machinery in motion, or it may go further and, after hearing the respective sides, give judgment in favour of the avenger, and appoint execution to be done, sometimes by him; or it may try to arrange a compensation. But only where it is strong enough will its decisions be enforced or its suggestions be heeded. This action of the local tribunal may be regarded in the light of a compromise, where the custom of

¹ Other occasional causes of a blood-feud are wounding, adultery, seduction, rape, and kidnapping (cf. Post, i. 239).

blood-feud continues after the rise of such tribunals. It is thus a step towards justice being done in the case of private wrongs. The progress to true justice is further seen where the central authority steps in to forbid revenge, to decide guilt, and to award punishment. Frequently the practice of compensation, the *wergeld*, takes the place of the blood-feud or is even obligatory, the relatives being satisfied with the payment of a heavy fine, fixed according to rank, sex, age, etc. (cf. Post, i. 249 ff.). Where the acceptance of compensation was seen to lessen the protracted hostilities in the case of the blood-feud, it would be fostered by custom and authority; and in many cases, though not all, its existence may be traced to the intervention of the central authority, the elders of the tribe, or the chief (see BLOOD-FEUD).

It should be noted that, though there are marked exceptions to the rule, infanticide is very widespread and meets with little or no disapproval, while the killing of the sick and aged, not out of wantonness but for certain definite reasons, is not uncommon in many parts of the world. Similarly, though by no means generally, it is often the case that a master has the right to kill his slave (Post, i. 373). In a few cases infanticide is punished with death or in some other way, or is regarded as wrong and liable to bring misfortune; and, where the killing of aged parents for the specific reasons referred to is not customary, parricide, when it does occur, is regarded with abhorrence, and is at once punished (cf. Westermarck, i. 402 ff., 386; Steinmetz, *op. cit.* ii. 153 ff.).

Where blood-revenge does not exist, as well as in many cases where it does, the murderer is punished by the community, or by some special authority, though it is not always easy to distinguish, from the statements made, between true blood-revenge and the administration of justice. In most cases the punishment is death.

Among the Fuegians, the murderer is placed under a ban, and perishes of hunger, or death is inflicted by his fellows (Hyades-Deniker, *Mission scient. du Cap Horn*, viii. 374, 243). Among some Australian tribes, as has been seen, the council of elders arranges the avenging party in cases of murder by sorcery. But, as among the tribes of N.W. Central Queensland, the camp or a council of the camp punishes the murderer (Both, *Abn. Studies among the N.W.C. Queensland Abor.*, 1897, pp. 180, 141). With some tribes a ceremony of spear-throwing at an offender appears to take the place of the blood-feud proper (Westermarck, i. 171). The Eskimos and Aleuts occasionally make common cause against a murderer and put him to death (Nansen, *op. cit.* p. 162; cf. Petroff, *op. cit.* p. 162). With many N. American Indian tribes the murderer had to appear before the chiefs for trial, but he was often handed over to the relatives of his victim for punishment (Cooper, *Mishmas Hills*, 1873, p. 238; Morgan, *League of the Iroquois*, Rochester, 1881, p. 880; Schoolcraft, *Ind. Tribes*, Philadelphia, 1851-60, I. 277; Adair, *Hist. of Amer. Ind.*, 1776, p. 160). Many African tribes also inflict capital punishment on the murderer, the chief frequently deciding his guilt and enforcing the sentence (Westermarck, i. 189; Letourneau, pp. 80, 82-84; Johnston, *op. cit.* ii. 832 [murderer executed by warriors among the Mufell], or, as among the Mpongwe, the community burn or drown him (Burton, *Two Trips to Gorilla Land*, i. 106). Capital punishment for murder is also found in Polynesia and New Guinea (Turner, *Samoa*, pp. 178, 295, 334; Thomson, *JAI* xxxi. 143; Chalmers, *Pioneering in N.G.*, 1887, p. 170). In other cases, banishment, usually followed by death, is found, or, as among the Omahas, a species of boycotting and penitential expiation in the case of a murderer whose life has been spared (Dorsey, in *SBBW*, 1884, p. 369). Or, in some instances, as in the commutation of blood-revenge, a fine is all that is insisted on for murder (Shooter, *Kafirs of Natal*, p. 108; Camilla, *op. cit.* p. 223; Griffith, *JRASB* vi. [1897] 355 [Mishmis, offender out to pieces if fine is not paid]; Johnston, *op. cit.* ii. 832 [Kamasias, confiscation of goods of murderer and his relatives]). This fine is not seldom a real commutation of blood-revenge, and the composition is often recommended or expressly insisted on by the central authority. If it is not paid, the murderer is generally put to death (cf. Letourneau, pp. 73, 80, 89, 95; Elphinstone, *Kingdom of Ceylon*, 1839, ii. 106; Von Martius, *Beit. zur Ethnogr. Amer.*, Leipzig, 1867, i. 180).

The vengeance of the society upon the murderer is in part due to the belief that he is a source of danger to the group. He is infected with the uncleanness of death, or is surrounded by spirits,

especially that of his victim, who will afflict not only him but others. Hence he is tabu, and, if he is not put to death, he must undergo ceremonies of purification, or be isolated from his fellows, as in the case of the Omahas (see above, and cf. Kohler, *ZVRW* xii. [1897] 408; Frazer, *GB* i. 331 ff.). These ceremonies, or the period of isolation, are then a species of punishment.

In some cases it is expressly said that murder is punished because it is hated by a Divine being, or is a breach of his law. This is the case among the Omahas (Dorsey, *loc. cit.*), while in other instances murderers are believed to be punished after death (Australians by Baiame [Parker, *op. cit.* p. 79], Andaman Islanders [Man, *JAI* xii. 161-2], Melanesians [Codrington, p. 273 ff.], New Hebrides [Turner, *Samoa*, p. 326], Awemba [Sheane, *JAI*, xxxvi. 150 ff.], American Ind. [above, vol. ii. p. 685]).

(2) *Adultery*.—Since in all savage societies the wife is regarded as the property of her husband, adultery is generally a serious crime. Before betrothal or marriage the woman may dispose of herself as she chooses, though here the father or guardian has sometimes the right of controlling her action, but after marriage her husband has entire right over her. Adultery is therefore regarded as an infringement of the husband's proprietary right, and is frequently a serious form of theft. Add to this the working of jealousy, and it is easy to understand why to the savage mind adultery is so serious an offence and often a capital crime. In many instances, even where there is a regular tribunal, the husband and those whose duty it is to help him have the right of dealing as he pleases with the culprits, especially if he catches them *in flagrante delicto*. The local tribunal and, in any case, custom and opinion justify his action, and often, indeed, expect him to avenge himself. He may, however, in such a case be liable to hostilities from the relatives of the wife or her paramour; and in a few cases, where the established tribunal is jealous of all such personal action, he may be punished by it, especially when he has put the woman to death instead of inflicting a lighter punishment. Or he may appeal to the tribunal, with confidence that due punishment will be visited upon the offenders, the execution of this punishment being occasionally allotted to him.

The punishment of death not only for adultery but, in some cases, for slight indiscretions or even for touching a wife, especially the wife of a chief (Bastian, *op. cit.* i. 244; Post, ii. 368; MacLennan, *Studies in Anc. Hist.*, 2nd ser., 1896, p. 412), is visited upon the offending wife or the paramour or both, either by the husband or by a legal tribunal, among a large number of peoples (see ADULTERY [Primitive and Savage]; Westermarck, I. 290; Post, ii. 362, 371); and in some cases adultery is the only crime which is capitally punished (Mishmis [*JRASB* vi. [1897] 352]). Occasionally the punishment is meted out to the wife only after repeated offences (Macdonald, *Africana*, i. 140). In other cases the seducer has to suffer slavery, mutilation, emasculation, beating, or some other bodily indignity; he must submit to his wife's being outraged; or he must pay compensation, usually equal to the value of the woman, to the injured husband (Post, ii. 366-9, 373; Letourneau, pp. 20, 43, 65-66, 78, 83, 95). Similarly, where the unfaithful wife is not put to death, she is mutilated, disfigured, beaten and ill-treated, enslaved, repudiated, divorced, or prostituted (Post, ii. 364-5; Letourneau, pp. 87, 65, 66). In a few exceptional cases the wife is not punished (Westermarck, *Marr.* p. 122; Post, ii. 370). These various punishments are usually inflicted by the husband, but occasionally by a tribunal or by the chief. Adultery is occasionally the cause of a blood-feud or of a species of blood-revenge (du Chailu, *Equat. Africa*, 1861, p. 61; Letourneau, p. 96).

The punishment of adultery is sometimes in proportion to the rank of the offenders or of the husband; or, where a system of fines is in use, the fine is similarly proportioned (Post, *Afr. Jur.* ii. 82-83; Letourneau, pp. 65-68; Johnston, *op. cit.* ii. 590, 680; Ellis, *Europe-speaking Peoples*, 1890, p. 202). Generally, too, adultery with a chief wife is more severely punished than with a lesser wife or concubine (see CONCUBINAGE).

As a general rule, in savage societies the wife can obtain no redress for the husband's adultery; but there are occasionally exceptions to this even at low levels (e.g. with some Australian tribes), and the husband is punished more or less severely, or

his adultery (or even bringing a second wife or concubine to the house) is a ground for the wife's divorcing him (see **ADULTERY** [Primitive and Savage], § 6; Westermarck, ii. 432; Post, *Afr. Jur.* i. 465, ii. 72).

There is a certain amount of evidence that among savage tribes adultery is regarded as a grave moral offence, which may bring general calamity, or must be expiated, or which is offensive to the gods, or will be punished in the next world (see art. **ADULTERY**, § 8; Crawley, *op. cit.* p. 143 f.; Mason, *JRASBe* xxxvii. [1868] pt. 2, 147 ff. [Karens]; Westermarck, ii. 675; Perham, *JRAS* Straits branch, no. 8, p. 150 [Sea Dayaks]; Man, *JAI* xii. 157 [Andaman Islanders]; Sheane, *JAI* xxxvi. 150 ff. [Awemba]; Codrington, *Melanesians*, p. 273 ff.; Jones, *Ojebway Ind.*, 1861, p. 104).

(3) *Unchastity*.—Unchastity before marriage is variously regarded among savage peoples. In some instances a girl is allowed the utmost licence, but in many quarters unchastity is reprobated more or less severely. The difference in attitude doubtless involves differing moral conceptions, but there can be little doubt that much is due to the question of the girl's position. If she has been betrothed in early years to a prospective husband, she is expected to remain chaste, or she may be repudiated. Or, again, unchastity is held to lower her value in her father's or guardian's opinion, because a smaller bride-price will be obtainable for her. But, as the severity of the punishments shows, unchastity is frequently regarded as a moral offence even among some very low tribes (see Westermarck, *Marr.* p. 61 ff.), and it is sometimes thought to be offensive to the higher powers, or to bring misfortune on the tribe or the crops. Hence it must be expiated in one way or another, as well as punished (St. John, *Forests of Far East*, 1863, i. 63, 69 [Dayaks]; Mason, *JASB* xxxvii. 2 [1868], 147 [Karens]; Frazier, *GB* ii. 212 [Battas]; Bastian, *Indonesien*, Berlin, 1884-90, i. 144 [Ceram]; Reclus, *Prim. Folk*, London, 1891, p. 52; Post, *Afr. Jur.* i. 460; Westermarck, *Marr.* p. 61 [Loango]; Casalis, *Basutos*, p. 267).

The punishments are various, and may be inflicted by the house-father, the tribunal, or the chief. Sometimes both seducer and seduced are put to death (Post, *Afr. Jur.* ii. 70 [Marea, Beni-Amer]; Cunningham, *Uganda*, 1906, p. 290 [Baziba]; Johnston, *op. cit.* ii. 747 [Kavirondo]; Dawson, *Aust. Abor.*, Melbourne, 1881, p. 23 [W. Victoria]; Post, ii. 375 [Nias]). In other cases the girl is put to death (Post, ii. 375 [some Igorrote tribes]), or she is banished or enslaved (Westermarck, *op. cit.* p. 66 ff.; Post, *Afr. Jur.* ii. 72; Cunningham, *op. cit.* p. 102 [Bakoli]; Chaulier, *Through Jungle and Desert*, 1896, p. 317 [Rendile of E. Africa]; Post, ii. 380 [some Malay tribes]), or she is scourged (Post, *Afr. Jur.* ii. 71-72), or has to pay a fine to the chief (Post, ii. 390). In some of these cases the seducer shares the punishment, but generally he has to pay compensation or a fine, usually equivalent to the value of the girl (her bride-price or blood-price), and sometimes much heavier (Post, ii. 375-6; Westermarck, ii. 425-6, 436). In some instances he must also marry the girl, and often, if the fine is not forthcoming, he is enslaved. Seduction may at one time have been a common cause of a blood-feud, later compensated for by fine, but occasionally it still leads to a feud (Post, *Afr. Jur.* i. 81).

(4) *Theft*.—Proprietary rights are recognized by all savage tribes, most of whom condemn or abhor theft, while all of them punish it in one way or another. The thief is frequently punished by the owner of the stolen property (more especially when he is taken red-handed); and in such cases the latter may even have the right to kill him or enslave him. Or he may force him to restore the stolen goods or their value, and sometimes two, three, or more times their value, or may subject his belongings to pillage. Here, generally, custom has arranged a system of regulated composition. In other cases the thief is punished by the tribunal, or the chief, with death, enslavement, banishment, mutilation, or beating; or he is forced to pay a fine, or to restore the goods or their value. In general, the higher the value of the goods stolen,

the heavier the punishment. Stealing such things as any tribe sets much store by—cattle, products of the field, weapons, and the like—is usually severely punished. Sometimes the punishment depends upon the place from which the theft is made (field, garden, or house), the time at which it occurs (night or day), or whether the thief is taken in the act, and also upon the social position of the person robbed or of the thief. Usually, too, the punishment increases when acts of theft are repeated, a notorious thief being usually put to death. Where a system of fines exists, there is generally found a regular scale of values for different things. And, when a fine or composition is not paid, the thief is often killed, enslaved, or punished in some other way. But, before undergoing punishment, the prisoner's guilt or innocence may be attested by oath or ordeal. In many cases property is protected by tabus involving the thief in an automatic punishment or in the results of a curse. Or, again, when a thief cannot be found, resort is often had to cursing him, a god being invoked to punish him (see Westermarck, ii. 63 ff.). In some instances the gods are said to abhor and punish theft either in this world or the next (Andaman Islanders [Man, *JAI* xii. 161]; some Polynesian and Melanesian tribes [Turner, *Samoa*, pp. 301, 326; Codrington, *op. cit.* p. 274; Macdonald, *Oceania*, p. 208]; some American Indian tribes [above, vol. ii. p. 635*; Bossu, *Trav. through Louisiana*, 1771, i. 256]; Dayaks [Brooke, *Ten Years in Sarawak*, 1866, i. 55; Perham, *op. cit.* p. 149]).

The thief is killed when taken in the act, by the Fuegians (King and Fitzroy, *Voyages*, 1839, ii. 180), peoples of the Malay Archipelago (Westermarck, ii. 8; Maoris [Moerenhout, *op. cit.* ii. 181], some African tribes [Westermarck, i. 289, ii. 13; Johnston, ii. 591; Post, *Afr. Jur.* ii. 92-93]; or he is enslaved (Post, *ib.* ii. 93). Among peoples with whom capital punishment for various kinds of theft exists are some Australian tribes (Letourneau, p. 28); tribes of the Malay Archipelago (Javanese, Alfura, Batak, Achinese, etc. [Post, ii. 434; Westermarck, ii. 81]); the Shans (*JAI* xxvi. 21); American Indian tribes (Post, ii. 434; *NR* ii. 658; Petroff, *op. cit.* p. 152; Harmon, *Voyages*, Andover, 1820, p. 348; Von Martius, *op. cit.* i. 88); Polynesian and Melanesian tribes (Westermarck, ii. 9; Post, *Anfänge des Staats- und Rechtslebens*, Oldenburg, 1878, p. 224; Letourneau, p. 541); African tribes (Letourneau, p. 64, 67; Westermarck, ii. 12; Post, ii. 83 f.). Enslaving or banishment (especially in cases of repeated theft) is the punishment among the Fantis, Yolofs, Diagars, and other African tribes (Post, ii. 87; Letourneau, p. 64), the Karens (habitual thieves [Mason, *JASB* xxxvii. 2, 146]), tribes of the Malay Archipelago (Westermarck, ii. 8; Maoris [Post, *Anfänge*, p. 224], some Amer. Ind. tribes [NR ii. 658; Dodge, *Our Wild Indians*, Hartford, 1882, pp. 64, 79; Dall, *Alaska*, 1870, p. 382], Mongols [Post, *op. cit.* p. 224]. Mutilations of various kinds as an application of the *lex talionis* (cutting off fingers, hands, arms, feet, or legs, plucking out the eyes, or even cutting off nose or ears, and castration) are found among several African tribes (Post, *Afr. Jur.* ii. 81, 88, 90-92; Westermarck, ii. 12), peoples of the Malay Archipelago (Westermarck, ii. 8; Post, *Anfänge*, p. 223; Riedel, *op. cit.* p. 232), Ainus [Batchelor, *Ainu and their Folklore*, 1901, p. 235], various Mongol tribes (Post, *op. cit.* 223), Kamchadales, some Amer. Ind. tribes (Letourneau, p. 19; Post, *op. cit.* p. 223), and in Fiji (Williams, *Fiji*, p. 23). Beating or flogging occurs among the Brazilian Indians (Post, *op. cit.* p. 222), Kalmuks (*ib.* p. 223), and some African tribes (Post, *Afr. Jur.* ii. 88, 91 f.).

Probably the earliest form of revenge for theft, apart from death, was retaliation in kind. The victim of the theft would either pillage the thief or seek to recover his property. Acts of pillage are found sporadically sanctioned by public opinion (Maoris [Ellis, ii. 126]; in Malaysia [Letourneau, p. 75]); but, where these occur, they may be in default of restitution. Sometimes simple restitution of goods suffices, but more frequently this accompanies another punishment or the enforcing of a twofold or manifold restitution (Indians of Brazil [Von Martius, i. 88]; Amer. Ind. tribes—Wyandots twofold [1 *REBW*, 1881, p. 66]; Mayas [NR ii. 658]; Kirghiz ninefold [Georgi, *Russia*, 1780-83, iii. 337]; Malay Archipelago twofold or more, sometimes a fine [Westermarck, ii. 8; Post, *Anfänge*, p. 218]; African tribes, twice to ten times the value [Westermarck, ii. 12; Post, *Afr. Jur.* ii. 84, 86]). Sometimes confiscation of a thief's whole property occurs (Cunningham, *Uganda*, p. 304; Johnston, ii. 882; Post, ii. 439). Such forms of compensation may be regarded in the light of a fine, greater or less, according to the magnitude of the theft, or the general feeling with regard to its wickedness. Sometimes also severe punishments—death, mutilation, etc.—may be expiated by a fine. Among Australian tribes a not uncommon method is that the thief is challenged to single combat by his victim.

An especially vile form of theft, always severely punished when it occurred, and perhaps to be regarded as a form of sacrilege, is that of stealing offerings, etc., from a grave (Westermarck, ii. 518-9).

7. At those festivals which mark the beginning of a new year or the offering of firstfruits among savages, and which are usually accompanied by ceremonial confession of wrongdoing and by ritual purifications and riddance of the contagion of wrong, very frequently there is considerable licence, and such crimes as may be then committed are not afterwards punished. At such festivals there is great excitement, with much drinking, dancing, etc. Crimes would then be readily committed, but had not to be accounted for, because they occurred during a sacred season, while their contagion had already prospectively been got rid of, or would shortly be got rid of, by the ceremonial purifications usual at such periods.

Among most savage tribes the right of asylum or sanctuary for the criminal is clearly recognized, the sanctuary being generally a place sacred to gods or spirits, or the abode of sacred persons (priest or chief), in which it would be dangerous for the avenger or the executioner of justice to shed the blood even of a criminal (see art. ASYLUM; Post, ii. 252 ff.).

SUMMARY.—The execution of justice among savage tribes is, on the whole, an extremely rough and ready process. Where the practice of private revenge is common, it militates against the independent and impartial weighing of the evidence by a disinterested tribunal. And, even where there exists a recognized tribunal, it generally lacks the most elementary requirements for the discovery of truth as found in a civilized court of justice. Impartiality is seldom found, the weighing of evidence and the reliance upon it alone being practically unknown; the common resort to ordeals is an extremely defective method of arriving at the truth; in many cases not only does the guilty escape, but, where he is punished, the innocent often share his punishment. Punishments, too, are often extremely severe. On the other hand, the evidence seems to show that there is a general hatred of crime among savages, and that it is probably of comparatively rare occurrence among many tribes.

CRIMES AND PUNISHMENTS (Assyro-Babylonian).—These are revealed to us mainly by the Bab. codes of laws, of which three have been found—the first and the last, fragments only; the second—that of Hammurabi—nearly complete.

1. The first (the earliest known) are the Sumerian laws, of which examples occur in the 7th tablet of the *Ulutinābi-su* ('punctually') series. This work contains specimen-phrases for students of Sumero-Akkadian, the laws being among the legal and other phrases which the student had to learn. Though the tablet dates from the time of Ashurbanipal (c. 650 B.C.), there is no doubt as to the period during which these laws and their penalties were in force; their reproduction in the contract-tablets of the time of the dynasty to which Hammurabi belonged indicates that the code of which they formed part originated previous to c. 2000 B.C.

The language in which they are written (Sumerian) shows that they were drawn up during the Sumerian period, and they may, therefore, date from 3500 B.C., or even earlier. The crimes or misdemeanours referred to therein are not serious, and belong rather to the class of offences against morals than to really criminal acts. Nevertheless, they are exceedingly interesting, and are of considerable importance in that they contain the earliest ordinances in existence concerning punishment for wrongdoing:

'If a son say to his father, "Thou art not my father," they may shave him, put him in fetters, and sell him for silver.'

'If a son say to his mother, "Thou art not my mother," they may shave his forehead, lead him round the city, and drive him forth from the house.'

'If a wife hate her husband, and say to him, "Thou art not my husband," they may throw her into the river.'

'If a husband say to his wife, "Thou art not my wife," he shall pay her half a mana of silver.'

'If a man hire a slave, and he dies, is lost, runs away, gets locked up, falls ill, he shall pay as his hire every day half a measure of grain.'

Though the above laws refer only to adopted sons, the respect for foster-parents which the punishments for denial of them imply shows how strong the feeling of the Sumerians was in this matter. The adopted son might be sold as a slave, and it may be supposed that a real son would have been treated with even greater severity. The denial of a foster-mother brought upon the culprit all the disadvantages of slavery, as is implied by the shaving of his forehead. His being taken round in the city was probably for the purpose of making his misdemeanour known; and driving him forth from the house implied his being either left in utter destitution, or relegated to the position of a slave.

Inequality in the status of the husband and the wife is implied by the differing punishments for the same or similar offences. Divorcing a husband was punishable with death, but the divorcing of a wife only incurred the fine of half a mana of silver. There is no doubt that women had fewer rights than men in ancient Babylonia, but it must be admitted that they are not altogether their equals even now.

The last law of the five shows the respect paid to property. The penalties inflicted are rather hard upon the hirer, who is responsible for a slave whom he has hired, even if a misfortune befalling him is not due in any way to the fault of the hirer. Perhaps it was necessary—the Sumerians may have been (criminally) careless of other people's property delivered into their hands; in any case, if the hirer thought the conditions too severe, he could easily stipulate, on hiring, that he should not be visited with the full rigours of the law in the case of an accident happening.

2. The next laws in chronological order with which we come into contact are those drawn up by the great Babylonian legislator, Hammurabi, whose code is now preserved in the Louvre at Paris. Here we have a list of crimes and punishments far more complete than any which the ancient nations of the East preceding the Jews have ever handed down.

How far these laws were regarded as binding is doubtful—the conditions of life probably changed from time to time; and it is unlikely that the same ideas regarding penalties and punishments for breaches of the law prevailed in Assyria as in Babylonia, notwithstanding that the Assyrians studied those old Bab. laws. Perhaps the tablets of the *Ulutinābi-su* series, like many another ancient composition, and the laws of Hammurabi himself, were kept in the libraries at Nineveh, simply because they were ancient and venerable works, useful to the law-student. Upon this point, however, we shall be better able to judge later on.

In considering such a matter as that of crimes and punishments, it will probably be admitted that the Babylonian mind was not trained in so severe a school as that of the Roman or the modern legist. Moreover, the difference in the manners and customs of the East and the West, to say nothing of the question of period, must be taken into consideration. Thus, many offences against morality and decency were probably not thought worthy of punishment by the Babylonians, notwithstanding that they may have been regarded as most reprehensible. Bigamy was not a punishable offence, and the game-laws were probably merely rudimentary. Bribery was not punishable, except when it was intended thereby to pervert the ends of justice.

Nothing is said, moreover, concerning bestiality, blasphemy, breach of ritual, drunkenness (except, perhaps, in the case of priestesses and devotees), lying (though we know, from certain texts—see CONSCIENCE [Bab.], above, p. 33—that this was a thing displeasing to the deity), malice, prophesying falsely, the desecration of holy days, speaking evil of rulers (*lèse majesté*), uncleanness, usury, and many other things which are not only regarded as crimes or misdemeanours among the European nations, but also appear as such with the ancient Hebrews. Idolatry, magic, sorcery, intercourse with demons and spirits, and prostitution were naturally not counted as crimes; though blasphemy, sacrilege, and similar offences against the gods were probably severely punished—certainly the latter (sacrilege). Whether blasphemy was a crime or not probably depended upon the place and the deity, for none would speak slightly of a deity in the place where he was worshipped, except a fanatic.¹ It is to be noted, however, that nothing certain can be stated with regard to many acts which modern Europeans would consider as crimes in law, for the simple reason that we have only one code in any sense complete, namely, that of Hammurabi (c. 2000 B.C.), and even that has gaps.

The death penalty.—In the Code of Hammurabi, as is fitting, respect for what is just holds the first place, and the penalty for false accusation of killing is death (§ 1). In the case of a (false) accusation of sorcery, the accused person had to dive into the river, and, if the river refused to drown him, the accuser suffered the penalty of death, and the accused took the house of his dead defamer. Death, in fact, was the penalty of any false accusation in which a life was involved. In all other cases, a false witness bore the cost of the action (§§ 2-4).

Next to the safety and integrity of the person, that of the property of a man was held to be the most sacred. Theft was not generally punished with death, unless the property stolen belonged to a temple or to the palace (of the king), in which case the receiver suffered the same punishment (§ 6). In later times, the penalty for sacrilegious theft (with the damage inflicted upon the images of deities by stripping them) seems to have been death by fire (Pinches, *The OT in the Light*, etc.², p. 561).

Strange, however, is the severity of the law (§ 7) ordaining death for buying the property of a man, either from his own hands or from those of his slave, without witnesses or contracts; or for receiving such property on deposit. Probably possession of a man's property without justifying documents suggested receiving it on false pre-

¹ In all probability the word *sillatu*, when applied to something spoken against a deity, corresponded with 'blasphemy', as we understand it. The followers of Šamaš-šum-ukīn (Sassuchines), Ashurbanipal's brother, who uttered *sillatu* against the god Aššur, were put to death after their lips (*over* tongues) had been torn away (Aššur-bani-āpi, cyl. A, col. iv, 66 ff.). In another passage, referring to chiefs of Gambulu, the culprits were flayed after the tearing out of their tongues (G. Smith, *Ashurbanipal*, London, 1871, pp. 187, 74 f.).

tences, which the laws of the Babylonians evidently wished to discourage, the more especially as it presupposed the neglect of those legal forms to which the people seem to have paid special attention.

Though theft did not entail the death-penalty, the neglect or failure to pay fines and make restitution transformed it into a capital offence (§ 8). There were probably two reasons for this—the sacredness of property-rights, and respect for the law. Theft, with the sale of the stolen object, was even more severely punished, as the penalty was not only death, but the restitution of the property, in addition, to both parties (the owner, and the person to whom the property had been sold), the purchase-money being returned in full (§ 9). It seems not improbable that a purchaser of property sometimes found himself in serious difficulty, for, if he could not produce the seller or witnesses, he was regarded as a thief, and was executed accordingly (§ 10). This law naturally presupposes that he had no documentary evidence of the purchase. A claimant of lost property had likewise to be careful, as absence of witnesses was regarded as proving him to be a rogue; and the penalty in that case, again, was death, because he had falsely accused the person claimed from (§ 11).

Housebreaking, too, entailed the death-penalty, probably because theft was regarded as being in contemplation, though the damage to the house was naturally taken into consideration. The house-breaker was killed and buried in front of the breach (§ 21)—an undesirable position in any country where the dead were regarded as returning to visit the living. Brigandage was also punished with death (§ 22). Theft at a house where a fire had broken out, under the pretence of entering to extinguish it, entailed being thrown into the flames (§ 25). One is left to surmise that the thief got out if he could.

Offences against the person were likewise punished severely. Kidnapping a freeborn child was a capital offence (§ 14). Negligence which proved fatal to any person was punished with death; and such would be the penalty if a badly built house fell on the occupier and killed him; the builder had constructed a defective dwelling, possibly from motives of cupidity. In the case of the dependants of the owner, the *lex talionis* seems to have been applied, for the death of the owner's son was punished by the death of the builder's son (§§ 229, 230).

The position of slaves as a man's property probably had greater importance than any respect that may have been regarded as due to their persons, and the death-penalty was therefore applied in the following cases: allowing a palace slave or serf to escape, or sheltering him (§§ 15, 16); or detaining an escaped slave (§ 19). Evidently it was regarded as the duty of a citizen to restore a slave to his owner, especially if that slave belonged to the palace. Getting a barber to mark a slave wrongfully was, it seems, equivalent to stealing him (§ 227), and was punished with death and burial in his (the wrongdoer's) own gate. It was likewise a serious offence if a soldier (*redû*) hired a substitute; and, besides the death-penalty being enforced, the substitute might take the soldier's house (§ 26)—apparently the dwelling allotted to him by the State. In the same manner, a highly-placed official could neither himself hire a substitute, nor accept a mercenary as substitute (for another), and incorporate him, the penalty being death in both cases.

The duties of a 'wine-woman' (meaning, evidently, a woman keeping a public-house) included assisting the government by capturing criminals; and, if she failed in this, she also met with the penalty of death (§ 109).

The real nature of these wine-houses, which were kept by the wine-women, has yet to be discovered. That they were places of evil repute seems certain, and a devotee not dwelling in a cloister who opened a wine-house, or who entered a wine-house for drink, was burned to death¹ (§ 110). It seems to have been the duty of wine-women to accept payment for their drink in kind; and any such woman refusing to do this, or accepting a low tariff, might be thrown into the river (§ 108), she having thereby contravened the law.

Infidelity and incest were also under the pain of capital punishment. An adulterous woman and her paramour were to be tied together and thrown into the water, unless pardoned (apparently), the former by her husband, and the latter by the king (§ 129). Violation of a virgin-wife dwelling with her father entailed death to the man, but exile (?) to the woman (§ 130). A thriftless woman making her poverty an excuse for marrying again during her husband's absence, was condemned to be thrown into the water (§ 133)—the punishment meted out to a disreputable woman who repudiated her husband (§ 143). In the law reports (see Ungnad, *Hammurabi's Gesetz*, iii. nos. 1, 8; iv. 776), a rebellious or faithless wife was thrown down from the tower, or sold into slavery (no. 7); and slavery (as a milk-maid ?) in the palace was the punishment meted out in such a case, in a text from the Khabur (Johns, in *PSBA* xxix. 177; Ungnad, *op. cit.* no. 5). For incest with a son's bride the penalty was drowning (§ 156); and for incest with a mother,² death by fire for both (§ 157).

Mutilation.—This penalty was not uncommon, and in some cases roughly indicated the crime by destroying that which was regarded as the offending member. Thus, if the son of a chamberlain (palace-favourite) or of a public woman denied his foster-parents, his tongue, the organ with which the denial was made, was cut out (§ 192). In the case of an adopted son learning who his real father was, despising in consequence his foster-parents, who had brought him up, and returning to his father's house, the punishment was loss of an eye (§ 193).³ A nurse substituting, without the knowledge of the father and mother, another child for one who had died whilst in her care, was punished by the cutting off of her breasts, thus ensuring, as in most punishments of this nature, that the offence should not occur again (§ 194). A son striking his father was punished by the loss of a hand—the limb with which the offence had been committed (§ 195). A slave striking a freeman's son received the same punishment as a slave denying his master,⁴ namely, the loss of an ear—probably as a mark that he was a criminal, and a warning that he was untrustworthy (§§ 205, 282). As we have seen above (p. 258*), defamation, when it was a question of a life, was a capital offence, but in other cases a less severe punishment was decreed—thus, if a man 'raised the finger' against (accused of unchastity) a priestess or a married woman, the punishment was the shaving of the forehead—a proclamation to the world that a misdemeanour had been committed. Priests alone, in all probability, shaved the whole of the head, so that there was no danger of the obliteration of the distinguishing mark, whilst it lasted.

¹ The severity of the penalty would seem to imply that unchastity was presumed in such a case.

² 'After the father,' apparently = 'after the father's death.' But perhaps 'step-mother' is meant, in which case 'after the consummation of the marriage' may be intended.

³ According to the tablets (Ungnad, *op. cit.* iv. nos. 14, 19), an adopted child who was rebellious was sent away, or, as in the Sumerian laws (see p. 257*), sold into slavery. Ill-treatment of an adopted child entailed loss of property to his benefit (*ib.* nos. 14, 16).

⁴ A slave-wife denying her husband's mother was marked (by a tonsure) and sold.

Exceedingly interesting, and among the laws which have attracted the most attention, are those ordaining retaliation. Injury involving the loss of an eye entailed the loss of an eye to the person who had inflicted the injury, and it was the same for the other members of the body—bone for bone (i.e. broken limb for broken limb), teeth for teeth (§§ 196, 197, 200).

Fines, with alternatives (mutilations, etc.).—Whether these punishments could be compensated for by a money-payment, or in any other way, is not stated. In each case, however, they refer to a freeman injuring a person of his own rank; but a freeman committing the same offence against a man of inferior rank got off by paying a fine (1 mana for the limb or the eye of a serf; and $\frac{1}{2}$ mana for the teeth, with lesser indemnities in the case of a slave). For striking a man of equal rank on the head, also, the *lex talionis* did not apply, but a fine of 1 mana of silver was inflicted. If the man struck was of superior rank, the striker received 60 lashes 'in the assembly' with an ox-hide whip (§ 202). A serf striking a serf paid 10 shekels of silver (§ 204), but a slave striking the head of a freeman lost his ear (§ 205). Thus were intentional injuries atoned for.

For unintentional injury, even in a quarrel, things were different. In such a case, a freeman hurting another had only to swear that he had not struck him knowingly, and was then responsible only for the physician's fees (§ 206); and, if death ensued, he made amends by paying $\frac{1}{2}$ mana of silver, and for the son of a serf $\frac{1}{4}$ only (§§ 207, 208). Striking a freeman's daughter, so that she lost her expected offspring, entailed a fine of only 10 shekels of silver (§ 209), and, if the woman died, they killed the amiter's daughter. The punishment of the culprit was in such a case a sore affliction, calculated to sadden him for the rest of his days, but here, as in other cases, the innocent suffered for the guilty simply because the Babylonians would not admit that a woman was the equal of a man, and said that, whatever the sex, the penalty must be 'a life for a life.' Striking a slave-woman with the same serious result entailed a fine of 2 shekels of silver, and, if she died, $\frac{1}{2}$ mana (§§ 213, 214). In this case it was not 'slave for slave,' probably because the expected offspring had to be allowed for, the fine, it appears, being more than the value of a slave.

Among the worst examples of the mutilation-penalty, however, are those quoted by Ungnad (*op. cit.* iv. 63, no. 1049), where, if certain people bring action against each other, their noses are to be pierced and their hands dislocated, and in this condition they are to go to the market-place at Sippar. In another case (*ib.* no. 1051) the hair of the forehead was to be shaved on account of bringing an action, the alternative being a fine (no. 1050). An attempt to rescind, by legal action, the gift of the king, entailed a fine of 10 shekels of silver, and covering the claimant's head with hot (?) bitumen (*ib.* vol. iii. no. 458). This last text comes from the independent State of Hana (Thureau-Dangin, *RA* iv. 17). The punishment for false witness was a fine of 2 shekels of silver (Ungnad, iii. no. 699), and shaving of the forehead (*ib.* 707).

The *lex talionis* also existed for injuries inflicted unintentionally in the course of professional (surgical) attendance. For death or loss of sight after an operation for a grave injury or for a cataract (?), the penalty was loss of the hands—the same as for a son striking his father, the object in both cases being the same, namely, to prevent a repetition of the misfortune (§ 218). A serf's slave having been treated for a grave injury, and dying under the operation, the penalty was restitution ('slave like slave') (§ 219). If the slave lost an eye

after an operation, the physician had to pay the owner half his value in silver. A veterinary surgeon who had operated upon an ox or an ass, which had died thereafter, paid to the owner a quarter of its value (§ 225). The 'crime,' in these cases, was want of skill or judgment, and the penalties were probably as near as the framers of the Code could get to the 'just mean' in each case, for the slave or the animal might have been of greater or less value, taking the injury into consideration, but the penalty was the same.¹ In the case of a man hiring an ox, and causing its death by negligence or by blows, the penalty was ox for ox (§ 245), and the same penalty was imposed if he had broken its foot or cut its nape, thus rendering the animal useless (§ 246). Destroying the eye of a hired ox entailed an indemnity of half its value in silver (§ 247); and breaking off its horn, cutting off its tail, or piercing its nostril was made good only by paying a quarter of the animal's value (§ 248). 'Act of God' left the hirer free from obligation (§ 249).

Though not a crime, an accident which brought an owner within the purview of the law arose from injury by a mad bull. On the first occasion, in which the bull's viciousness could not be known, there was no penalty (§ 250); but the death of a man by a known vicious bull, horned and at large, entailed a penalty of $\frac{1}{2}$ mana of silver (§ 251), and $\frac{1}{2}$ mana if the person killed was a slave (§ 152).

In certain cases (see above, p. 258²) the punishment for theft or dishonest dealing was death, but the case of an employé differed. Thus, if a man hired to do the work of a farm stole the wheat and the vegetables, and these things were found in his hands, his hands were cut off (§ 253). Here again, we seem to have an instance of vengeance against the offending members; for he who, instead of working for the benefit of his employer, used his hands to rob him, was accounted worthy of this mutilation. In one case not very clear in the Code, the person who took away necessary things and weakened the oxen had to make up the damage he had caused (§ 254); and in another, if he lent out the oxen or stole the grain, so that he was unable to cultivate it, he had to pay 60 gur for every gan of ground left uncultivated (§ 255). It seems strange that a thief, in such a case as this, should be let off so easily, but it was the same for other things—a man stealing a watering-machine paid 5 shekels of silver, and the theft of a shadouf or a plough entailed an indemnity of 3 shekels (§§ 259, 260). The question naturally arises whether, in this inscription, the verb *sarāqu* has always the meaning of 'to steal.' A herdsman was under the same liability as the farmer—if a man, duly in receipt of a salary, reduced the oxen or the sheep, or their natural increase, he had to make up the amount (§ 264); and, if he changed their natural increase, or sold it, the penalty was that he made up the amount to the owner tenfold (§ 265).

Deprivation of office.—Apparently only one kind of misdeed entailing this is referred to in Hammurabi's Code, and, as is fitting, it bears upon the administration of justice. If a judge changed a sentence, thus making it to be of no effect, he was punished with twelvefold restitution of the sum involved in the lawsuit.³ In addition to this, he was dismissed from the justice-seat, never to return; nor was he to sit with other judges when trying a case (§ 5).

Imprisonment.—It is noteworthy that, in all the enactments of the Code of Hammurabi, there is no mention of imprisonment. The Babylonians, how-

ever, certainly had prisons, as the expressions *bit šibitti* and *bit kili*, and the fact that arrests were ordered by the king, show.¹ In all probability, however, they were not houses of detention as a punishment, but simply places where an accused person or a criminal could be confined until tried or punished. An interesting text referring to this is printed in *Cun. Texts*, vi. pl. 8 (Ungnad, *op cit.* iii. no. 743), in which a man speaks of being placed in *bit ārari* by his judges, whose names he gives. He states that he was not to be released until he had fulfilled a certain order—probably the delivery of a document, but the details are not clear.

Possibly imprisonment was more common in later times than at the early period of Hammurabi's dynasty. A letter published in *Recueil des Travaux*, xix. 107-108 (82-3-23, 845), asks: 'Why takest thou my child and placest him in the prison-house (*bit kili*)? None shall take him, and thou must bring him forth (again). Send my son quickly.' Confinement was also effected in a man's own house: 'Shut up Arad-Bau (who sits in the city-gate of Hadad) in his own house with the men' (Pinches, *Outline of Assyrian Gram.*, 1910, p. ii). The reason of this order is not stated, but something of the nature of a revolt or conspiracy may be suggested.

Resistance to Assyrian dominion entailed all kinds of horrors, and, though the Assyrian king may have regarded such resistance as among the worst of misdeeds, and worthy of all the pains and tortures which he inflicted, it hardly comes within the scope of the present article. Nevertheless, there is one noteworthy instance of punishment for what might be described as a crime, though those who suffered for it were only obeying their king's orders. Certain Elamite magnates had been sent by Te-umman, the king, to Ashurbanipal, king of Assyria, asking for the delivery of certain fugitives. The message was an insolent² one (*šipir merihti*), and the Assyrian king had the ambassadors detained. It seems not improbable that Te-umman made preparations to invade Assyria before the return of his ambassadors on the occasion of their final visit to Assyria; so, after the defeat and decapitation of Te-umman, they were shown his cut-off head, the sight of which is said to have driven them mad. The success of the Assyrian arms had such an effect on Rusa, king of Ararat, that he sent ambassadors to Arbela to greet Ashurbanipal, who showed them the bodies of the Elamite ambassadors with the 'insolent message' which they had brought.

Harper, *The Code of Hammurabi*, Chicago, 1904; Pinches, *The OT in the Light*, etc. 8, London, 1908, pp. 174, 176-177, 185, 488-525, 561; and, esp. Peiser, Kohler, and Ungnad, *Hammurabi's Gesetz*, Leipzig, 1904-1910.

T. G. PINCHES.

CRIMES AND PUNISHMENTS (Buddhist).—Crimes are for the most part committed by irreligious people; and the punishments are determined upon and carried out (even under hierarchies like Rome and Tibet) from political

¹ The British Museum tablet D.T. 1, generally called 'Warnings to kings against injustice' (*W 1* iv. 2 pl. 43), which refers to certain penalties, is rather a tablet of rewards and punishments, mostly referring to the rulers of the land; but it is unfortunately not clear in every part. Among other maxims given it is stated that a king's ill-favour towards his princes or his burghers was likely to entail in the one case an untimely end, and in the other rebellion. It is interesting, however, on account of its references to imprisonment: 'The son of Nippur, Sippar, Babylon, committing wrong, is caused to enter the prison-house—where the wrong has been done, the town shall pour out (?) supply provisions) to the fortress (?). The sons of Sippar, Nippur, and Babylon, giving their provisions to the stallions, ate the stallions for their provisions—they were delivered into the custody of the foe,' etc.

² 'Tre cherous' seems also to be a possible rendering.

¹ Such are the disadvantages of the cut-and-dried legislation of a code.

² Twelvefold restitution is frequently referred to in contracts of late date, but this is for changing the record, and is not confined to the judges.

or legal, rather than from religious, motives. It is, therefore, a complicated problem to decide how far a religion, dominant at any time in a country, is or is not an important factor either in deciding what acts shall be called crimes, or in determining the punishments for them. This is so even when the facts are known and classified; and no attempt has yet been made to write the history either of crime or of its punishment in any Buddhist country. The following remarks must, therefore, be tentative and imperfect. It will be convenient to discuss the subject (1) as regards the Order, and (2) as regards the laity.

1. **The Order.**—The standard text-book of Canon Law consists of the ancient Rules of the Order, as current in the time of the Buddha (see 'Pātimokkha,' in art. LITERATURE [Buddh.]), edited, about fifty years after his death, with notes and a commentary, and accompanied by twenty supplementary chapters. These additions by the editors show the development that had taken place, during that interval, in the interpretation of the Rules themselves as well as in the method of enforcing them. Of the 227 Rules, more than 200 relate to matters of deportment, to the common property of the Order and the proportion allowed to each member, to the time and manner of taking food, and so on. The penalty for any infraction of these minor regulations was repentance; that is, the offender had to confess his fault to a brother *bhikkhu*, and promise not to repeat it. This penalty involved forfeiture of any property held contrary to the regulations.

The major offences were divided into two classes—*pārājika* and *sanghādisesa*. The former class comprised four crimes—the sexual act, theft, murder, and putting forward a false claim to religious insight. The penalty was expulsion from the Order, or, to use the words of the Rules, 'he has fallen into defeat, he is no longer in communion.'¹ The notes and supplements discuss cases raising the point whether some act does or does not amount to an infringement of one or other of these four Rules. The cases put are ingenious, and the decisions harmonize in a remarkable way with the equitable views of modern writers on criminal law.

The second of the above two classes comprises five offences depending on or inciting to sensual impurity; two connected with building a residence without obtaining the approval of the Order; two with slander; two with stirring up discord in the Order; one with intractability; and one with general evil life (being a disorderly person). The penalty for these offences was suspension for as many days as had elapsed between the offence and its confession. A suspended member of the Order is under disability in regard to 94 privileges of an ordinary member—he is to take the worst seat or sleeping-place, cannot sit on a Chapter, cannot travel without restriction, and so on.² When the fixed number of days has passed, the suspended *bhikkhu* may be rehabilitated. Both suspension and rehabilitation can be carried out only at a formal Chapter, where not fewer than twenty regular *bhikkhus* must be present. There are somewhat complicated rules to ensure the regularity of the proceedings, the equity of the decision, and opportunity for the putting forward of the defence. These are too long even to summarize. We must be content to note that, for instance, the rules as to the constitution of the court are given in *Vinaya Texts*, ii. 263 ff., iii. 46; those as to the accusation being invalid, unless brought forward under the right heading, in ii. 276 ff.; those as to both parties being present, in iii. 47.

¹ *Vinaya Texts*, i. 4 f.

² The whole of the 94 are given in *Vinaya Texts*, ii. 286 ff.

Every member of the Order resident in the locality had the right to attend such a Chapter; and, if the matter were too complicated to be adequately considered in so large a meeting, it could be referred to a committee of arbitrators chosen by the Chapter (*ib. iii. 49 ff.*).

The above are rules and practices evolved by the early Buddhists, for use among themselves only; they do not give, or pretend to give, any adequate treatment of the question of crimes, or of that of punishments, but they show that the early Buddhists had a very fair grasp of the general principles underlying the equitable administration of criminal law, and that in the matter of punishment they took, as might be expected, a lenient view. They show also that, at the time when Buddhism arose, such crimes as murder and theft were no longer looked upon as offences against individuals only, but had already come to be considered as offences against the community, as moral offences in themselves—in other words, that this step forward in the treatment of crime was not in any way due to Buddhism, but was the outcome of Indian civilization.

2. **Laity.**—The Buddhist scriptures frequently refer to their ideal of a perfect king, a righteous king who rules in righteousness, without punishment, and without a sword (*adandaṇa asaṭṭhena*). In the *Kūṭadanta*,¹ King Wide-realm's country is harassed by dacoits, who pillage the villages and townships and make the roads unsafe. He thinks to suppress the evil by degradation, banishment, fines, bonds, and death, but his Buddhist adviser tells him that there is only one method of putting an end to the disorder, that is, by providing farmers with food and seed-corn, traders with capital, and government officials with good wages. If this method be adopted, 'the king's revenue will go up; the country will be quiet and at peace; and the people, pleased with one another and happy, dancing their children in their arms, will dwell with open doors.' In the legend the plan succeeds; and it represents, no doubt, fairly accurately, the Buddhist vague ideal of the right theory of crime and punishment. In the Buddhist historical chronicles we have no instance of its having been realized. Crime and its punishment have been dealt with according to the views current at each time and place, and it would be impossible, with our present evidences, to attempt any statement as to whether, and in what degree, those views have been modified by the Buddhist ideal.

LITERATURE.—*Vinaya*, ed. H. Oldenberg, London, 1879-83; Rhys Davids and H. Oldenberg, *Vinaya Texts* (SBE, vols. xii., xvii., xx.), Oxford, 1881-85; Rhys Davids, *Dialogues of the Buddha*, Oxford, 1899. T. W. RHYS DAVIDS.

CRIMES AND PUNISHMENTS (Celtic).—

1. The treatment of crime and of criminals among the ancient Celts is wrapped in great obscurity. Cæsar (*de Bell. Gall.* vi. 13) informs us that the Druids of Gaul were judges in both public and private disputes, and that they awarded damages and penalties; and we are told (*ib. vi. 16*) that, when human sacrifices were offered, criminals were sacrificed in the first instance, before recourse was had to innocent victims. It is not improbable, therefore, that among the Celts, as among the Greeks, Romans, and other races, the idea prevailed that certain forms of conduct were displeasing to the gods, and that, in consequence, communion with deity could not be re-established without the purification of society by the death or expulsion of the persons who were guilty of such conduct (see COMMUNION WITH DEITY [Celtic], vol. iii. p. 749). In this treatment of its un

¹ *Digha*, i. 135; tr. in the present writer's *Dialogues of the Buddha*, i. 175 f.

desirable members by the community it is probable that attention was paid to the general type of character no less than to specific acts of wrong conduct, just as, in the process of compurgation by oath in Welsh law (see below), the witnesses who were called to testify on oath gave evidence quite as much to the general character of the accused as to his non-performance of a particular act. The types of character which are always abhorred by communities where custom rules, as it did among the Celts, are those which are indifferent to the observance of customary prohibitions (in Homeric language those of men lacking in *αἰδώς*), such being conspicuous by their want of scruple and by the quality of *ῥῆσις*. One of the Celtic roots for 'good' (Ir. *dech*, Welsh *de* [now obsolete], cognate with Gr. *δέχομαι*), meant 'acceptable'; and the other Celtic terms relating to character show the prevalence among the Celts of the same moral conceptions as among other men of Indo-European speech. The idea of a defilement attaching to crime is found in a statement made in the *Ancient Laws of Ireland* (iii. 97), that body and soul are both defiled by committing crimes.

2. Side by side with the penalty of sacrifice, and probably connected with it, was that of exclusion from participation in religious rites. Cæsar (vi. 13) tells us that any contumacy with respect to the judgments of the Druids was punished by exclusion from the ritual of sacrifice; and this sentence, he says, was the severest among the Gauls, since the men so punished were treated as outlaws, and were cut off from all the rights and privileges of human society. In Gaul there appears to have been a measure of centralization in the administration of justice, since the assembly of the Druids, meeting, according to Cæsar, in the territory of the Carnutes, held a court for the trial of cases brought from every district around. In the case of the Druids it is clear that the decision was in the hands of the religious leaders of the community; and this suggests that among the Celts, as in other early communities, the ethical and the religious aspects of crimes and their punishments were not very clearly distinguished. The conception of outlawry, or the loss of civil status, was a marked feature of the Celtic treatment of wrongdoers in the historical period, but this form of punishment was resorted to only in extreme cases. In Irish law, and to a somewhat less extent in Welsh law, recourse appears to have been had with extreme reluctance to the punishments of death and outlawry.

3. In Irish law, also, it is remarkable that imprisonment and all forms of corporal punishment, whether by mutilation, beating, or torture, are conspicuous by their absence, and mutilation and imprisonment are rarely alluded to in the Welsh laws. It is not impossible that ordinary crime was almost as rare in Ireland and Wales in ancient times as it is to-day, and that the communities in question seldom found it necessary to have recourse to very extreme punishments.

4. Another feature of Celtic law, which links it to certain ancient forms of social organization, is the emphasis laid by it upon the responsibility of the family group for the conduct of its members, as is seen especially in the case of the crime of homicide (see, further, art. BLOOD-FEUD [Celtic]).¹ Both in Ireland and in Wales the family group of the slayer had to pay compensation to the family group of the slain for the loss of one of their number. This collective aspect of criminal jurisprudence is one of the chief differences between the older Celtic point of view and that of the more

individualistic jurisprudence of the present day; but even in Ireland (*Anc. Laws of Ireland*, iii. 245) the penalties for all crimes except killing fell on the offender, provided he had the means of paying.

5. Sources of information.—In the case of Ireland there is a large body of knowledge relating to crimes and punishments, as well as to other branches of law, contained in the *Ancient Laws of Ireland* (Rolls Series, 1869-73). This work comprises various legal treatises, such as the *Senchus Mór*, the *Corus Bescna*, the *Book of Aicill*, etc. These treatises are the work of the Brehons (the hereditary lawyers of Ireland), who decided the cases that were brought to them. The body of law in question retained its authority among the Irish until the beginning of the 17th century. The law of England, which was introduced into Ireland by Henry II., was for a long time hardly followed except within the English pale, which consisted of Louth, Meath, Westmeath, Kildare, Dublin, and Wicklow. A statute of Henry VIII. (Stat. 13, c. 3), promulgated in 1522, mentions that English law was not observed beyond the counties named. The main body of Irish law is called the *Cáin*; local modifications of general laws were called *urradhús*, and inter-territorial regulations *cairde*.

6. In the case of Wales there is abundant information concerning criminal procedure in the *Ancient Laws of Wales*, published under the editorship of Aneurin Owen in the Rolls Series (London, 1841). There is also a very convenient edition of the so-called *Gwentian Code*, published by A. W. Wade-Evans, under the title *Welsh Medieval Law*, from a Harleian MS (Brit. Mus. 4353) of the 13th cent. (Oxford, Clarendon Press, 1909), to which references will be made in this article. The Welsh laws consist partly of a Code, issued under the royal sanction and authority of Hywel Dda, and partly of a collection of legal maxims arranged in groups of three, or triads. The Welsh laws are based on a recension of existing customs by the prince Hywel Dda ('Howel the Good') (c. 930), and vary somewhat for the different regions of the Principality. The oldest MS is the *Black Book of Chirk*, now in the National Library of Wales, Aberystwyth (12th cent.), which appears to have been a form of the code of Gwynedd (N.W. Wales); hence its usual name, the *Venedotian Code*. Another form of the Code is known as the *Dimetian*, or the Code of Dyfed (S.W. Wales), perhaps better regarded as that of the larger area known as Deheubarth (the Southern region), while another form is usually known as the *Gwentian*, from its supposed association with the district of Gwent (S.E. Wales). It is probable, however, that this Code, as Wade-Evans has shown, was that of Powys (Mid-Wales). The Code of Hywel is found in a Latin as well as a Welsh form, but the precise relation of these two forms is uncertain.

7. Attitude of the community to crime.—Among the Celts the community recognized the right of vengeance (Ir. *digal*, Welsh *dial*), whereby the individual or his family might themselves obtain satisfaction or compensation for a wrong done to them. This right, however, was one that was greatly restricted in practice, and was not to be put into operation except when other remedies failed. Ancient Irish law, and probably at one time Welsh law, made no distinction between crimes and torts (though originally some offences may have been viewed as offences against religion), and dealt with them alike as cases for compensation through payment. Whereas in modern communities crime is regarded mainly as an offence against the State, though individuals may be

¹ In Ireland the family groups in question were known as the *geilfine*, *derbfine*, *iartfine*, and *indfine*.

wronged thereby, Irish legal practice, which was in the hands of a hereditary caste of arbitrators called Brehons, developed to an unusual degree the remedial aspect of compensation for wrong to the sufferers—an aspect which in the English law of crime has sunk largely into the background. In Welsh law there are abundant traces of an earlier state of things resembling that of Ireland, but there are also signs of the growth of a point of view resembling that of modern States.

3. In Ireland, if the guilty party did not pay the amount which the Brehons awarded, the party that was aggrieved was allowed to exercise his right of vengeance by means of reprisals or private war. In Wales, the latter process was called *myned ar herw* ('to go on a plundering expedition'), and the regular term in Welsh for plunder was *anrhaith* ('absence of law'). The aggressor, if his family cared to support him, might offer resistance, or might become an outlaw, and, in that case, the avengers, if they chose, might put him to death. There are indications, however, that this power was restricted in Irish law by making the right purely personal, to be exercised only by the person who had been specially wronged. The Welsh legal triads state (Wade-Evans, *Welsh Medieval Law*, p. 264) that there are three legal periods for avenging a dead body:

'Between two kindreds who do not originate from the same *galwad* ("a district under one rule") commencing a claim on the first day of the week following that wherein the dead was murdered; if there comes no answer by the end of a fortnight, the law makes vengeance free. The second is, if the two kindreds are in the same *cantref* ("hundred"), commencing a claim on the third day after the dead is slain; if there comes no answer by the end of the ninth day, the law makes vengeance free. The third is, if the two kindreds are in the same *cymmot* ("commot"), commencing a claim on the third day after the dead is murdered; if there comes no answer by the end of the sixth day, the law makes vengeance free.'

In three MSS of the Welsh laws (X211b, W99b, and U55a; see *Anc. Laws of Wales*, i. 778, and Wade-Evans, *op. cit.* p. 306) there is found the following statement:

'There are three incitements to revenge; one of them, the shrieking of female relations. The second is, seeing the bier of the relative going to the graveyard. The third is, seeing the grave of their relative without enjoying satisfaction.'

The Welsh laws make the following exceptions as to the persons who could take part in a blood-fine (Wade-Evans, *op. cit.* p. 187):

'And if there be any one of the kindred of the murderer or the murdered who is an ecclesiastic in holy orders or a religious or leprous or dumb or an idiot, he neither pays nor receives any of the *galanas* ("blood-fine"). They are not to take vengeance for a person murdered, nor is vengeance to be taken on them; and it is impossible to compel such by any law to pay anything, nor are they to receive.'

9. Family champion.—In Ireland (see *Anc. Laws of Ireland*, iii. 83, note) there existed the institution of family champion, whose place it was to avenge family quarrels. The championship in question formed one of the seven grades of a territory. The Welsh laws contain no reference to this institution.

10. Outlawry.—In the *Book of Aicill*—the most important treatise on Irish criminal law (*Anc. Laws of Ireland*, iii. 381)—the question is asked, 'What is it that makes a stranger of a native freeman and a native freeman of a stranger? The answer is as follows:

'That is, an outlawed stranger: he is defined to be a person who frequently commits crimes, and his family cannot exonerate themselves from his crimes by suing him for them, until they pay a price for exonerating themselves from his crimes, i.e. seven *cunhals* (a *cunhal* = 3 cows) to the chief; and seven *cunhals* for his seven years of penance are paid to the Church, and his two *cunhals* for *cairde*-relations are paid to each of the four parties with whom he had mutual *cairde*-relations; and when they (the family) shall have given in this way, they shall be exempt from his crimes until one of them gives him the use of a knife, or a handful of grain; or until he unyokes his horses in the land of a kinsman out of family-friendship. And, if they give him these, they shall not be exempt from his crimes, until they pay the same amount again for exonerating themselves from his crimes' (*ib. p.* 386).

'The son whom he had begotten before he had been made an outlaw is to be like every other lawful man of the family. As to the son whom he may have begotten after he had been made an outlaw, his liabilities shall be on the family of his mother, i.e. they pay the full debt of a stranger out of their own rightful *seids* ("legal units of value") for his liabilities, and they obtain his body-fine. . . . The case in which a man may be killed with impunity—i.e. every man is exempt from liability for killing him—is when these things before mentioned were given for him, and the king has not neglected to restrain him, and he is not on the land of any particular person, and there is no particular person who feeds him. But, if the king has neglected to restrain him, and if he is not in the employment or hire of any particular person in the territory, he (the king) shall pay for his crime; and, if he be killed, the body-fine of a stranger who has a *besona* ("modus vivendi") compact shall be paid for him. Neglect of restraint on the part of the king means that he did not restrain him to the employment of a particular person, or did not have him living on a particular land, or fed by a particular person.'

This passage is of interest as being one of the few passages in the *Ancient Laws of Ireland* which refer to the royal power or responsibility. The reference is important, inasmuch as it shows that, even in Ireland, the king had a clear place in the legal system of the community, though the Brehons had little mention of it. In Wales the term *dreit*, though not used in the *Laws*, meant originally a person who was outside the social order.

11. In the *Anc. Laws of Ireland* (iii. 463) the text of the *Book of Aicill* says, 'The life of every law-breaker is fully forfeited,' but this is explained in the commentary as follows:

'That is, it is lawful to kill the thief without name, who is not known, when there is no power at the time of committing the trespass; and he (the slayer) is exempt on account of every person killed in his (the thief's) guise.'

The various cases that might arise under this head are then considered, and it is said (*op. cit.* p. 469):

'The person who is exempt from liability for killing the thief is he from whom he came to thief, or who is entitled to *erio*-fine for the theft. If he (the slayer) be the person to whom *erio*-fine is not due for the theft, full body-fine is due from him for killing him, whether there was or was not power to arrest him. Or, according to others, it may be lawful for any person to kill him, whether the person to whom he came to thief, or the person to whom he did not come to thief. 'It is then there is no exemption for killing a person in the guise of the thief, when he is seen stealing the *seid* ("chattel"), or when the track of any particular thing stolen was found after him. If he was not seen stealing the *seid*, or if the track of the particular thing stolen was not found after him, there shall be paid full body-fine for killing him, whether there was or was not power to arrest him. The person who came to inflict a wound upon the body may be safely killed when unknown and without a name, and when there was not power to arrest him at the time of committing the trespass, and there is exemption for every one killed in his guise.'

12. Administration of justice.—In Ireland the picture presented by the Brehon legal treatises is that of a community without an official magistracy or police, where the remedy in the case of any wrong done (whether a crime or a tort) was in the form of damages assessed by an arbitrator possessing hereditary expert knowledge of Irish custom, the main problem for the arbitrator being in each case the accurate assessment of damages, which varied with the status of the person wronged, with the act committed, and with other circumstances. Allusions to the king's power or laws are very rare in these legal treatises. In *Anc. Laws of Ireland* (iii. 409) we are told that the crimes of the man who violated the king's laws were adjudged on the seven houses in which he got beds, that the penalty for violating the king's laws varied according to the nature of the tenancy and local laws, and that there was a penalty for supplying lodging to the violators of the king's laws, and similarly for the violation of a king's inter-territorial law; but it is clear that the idea of a crime in its relation to the community as a whole was in Ireland more implicit than explicit. In Wales the Laws refer to *braddwyr* ('judges'), who had a recognized status in the community, but whose payment appears to have come mainly from the parties to the action.

13. Effect of intention.—The distinction between criminal and non-criminal injuries was recognized in Irish law, though without altering the type of compensation required. Whenever a wrong action was shown to be due to malice aforethought, the fines on account of it had to be doubled. Intention had always (see *Anc. Laws of Ireland*, iii. 469, 471) to be taken into account in the case of theft, wounding, and homicide. In *op. cit.* iii. 139 there is a minute discussion of the fine due for the intention to wound, when the attempt to wound was not successful. The Welsh process of *galanas* ('recovery of compensation for murder') was always combined with the recovery of the fine for *sarhad* ('insult')—a combination which shows that, in historic times at any rate, intention was clearly recognized. It is said, for example (Wade-Evans, *op. cit.* p. 255), that an unintentional blow is not *sarhad*.

14. Responsibility.—In Irish law (*Anc. Laws of Ireland*, ii. 45) it is recognized that certain persons could not be considered responsible for their actions, and the rule is laid down that

'a fool, a madman, a male idiot, a female idiot, and a dumb person shall not be distrained: their adult guardians who bear their crimes and get their wages shall be distrained.'

In *op. cit.* iii. 157, it is said:

'The man who incites a fool is he who pays for his crime, in which case the man who commits the crime, i.e. the fool, is exempt; for this is the instance in which fines of design are paid, another man who paid had no designs.'

In some cases (see *op. cit.* iii. 159) there was a difference of opinion, and we read:

'When a fool has committed a furious assault alone, of his own accord, without cause, without enmity, it is then lawful to give every fool up for his crime; or, according to others, compensation must be paid on his account by his family or the person with whom he is. If there be enmity, each of them pays compensation.'

In *op. cit.* iii. 501 it is stated that neglect on the part of the sane in not looking after the insane would have to be compensated for; and, according to *op. cit.* iii. 507, damages would have to be paid for leaving an epileptic lunatic unguarded. The same conception underlies *op. cit.* i. 157, 161, where it is stated that a person is liable to distress for the crimes of his messenger and of his hired woman, and a man is also liable to a fine for the crime of his jester.

In Welsh law (Wade-Evans, *op. cit.* p. 255) it is stated that

'a free man is to answer for his *alltud* ("foreign servant") in every claim for which he is not to lose the tongue, and life, and limbs; for no one is to lose tongue and life and limbs by the tongue of another person.' It is further stated (*ib.* p. 259), that no one is to make answer or satisfaction for an act of his bondman, except for theft.

The extent to which children could be held responsible was carefully considered in Irish law, and the *Anc. Laws of Ireland* (ii. 66) discuss minutely the question of their responsibility at various ages, as well as that of their parents and foster-parents. In *op. cit.* v. 151, it is stated:

'Little boys are safe in all the rights of lawful sports, until they have come to the age of having to pay damage of *dre* ("restitution-fine") for violence.'

Women, in respect of their first and second crimes, were placed on the same footing as boys.

15. Advocacy.—The Irish treatises make no mention of advocacy, but the Welsh legal triads contain the following statement:

'Three persons who are entitled to an advocate for them in court: a woman, and one with a natural impediment in speech, and an alien of foreign speech.'

16. Crimes in Irish law.—The forms of what would now be called crimes, or serious wrongs, with which Irish law deals, are homicide, wounding and mutilation, criminal assault, theft, assault, perjury, insult, libel, slander, using charms, trespass, damage to property (both living and dead), gross negligence, absconding and harbouring a fugitive, abduction, stripping of the dead, and disturbance of the peace.

17. Crimes in Welsh law.—The above were crimes or serious wrongs also in Welsh law, with the omission of the using of charms, and the addition of arson, waylaying, indecent assault, and treason.

18. Penalties in Irish law.—The normal penalties of Irish law consisted in the payment of certain fines, which were assessed by the Brehons (see above). The principle underlying these fines was that they were viewed as the equivalents of the amount of vengeance which the person or persons aggrieved would be justified in exacting in a particular case. Hence an important consideration which entered into the assessment of every fine was the value and status of the person injured. Irish law (as well as that of Wales) was based upon the principle that each person and thing in the community had a definite legal worth. In the case of persons, various considerations entered into the calculation both of a person's *dire-fine* ('honour-price') and of his *eric-fine* ('body-price'). In the *Anc. Laws of Ireland* (v. 97) it is asked what it is that gives *dire* ('honour-price') to a person, and the reply is 'desert and worth and purity.' Of desert it is further explained that it refers to property, of worth that it refers to the person's word, and of purity that it refers to his deed. In the matter of rank as conferring status, there were in Ireland two chief grades: (1) the *saer-nemed*, and (2) the *daer-nemed*. In *op. cit.* v. 15, the former are said to consist of 'churches, chiefs, poets, and *féine*' (free tenants), while the latter consist of the practicers of every art in general. A passage from one of these grades into the other (with a consequent change in honour-price) was possible. A *saer* ('free')-man might become a *daer* ('unfree')-man by selling his land or his property or his body into servitude, while a *daer*-man might become a *saer*-man by purchasing land or law or freedom by his act or by his husbandry, or 'by his talent which God bestowed upon him.' A loss of 'honour-price' might result from a defect of character. In *op. cit.* i. 55 it is said:

'There are four dignitaries of a territory who may be degraded: a false-judging king, a stumbling bishop, a fraudulent poet, an unworthy chieftain who does not fulfil his duties.'

Again, in *op. cit.* p. 57:

'False judgment and false witness and false testimony and fraudulent security and fraudulent pledging and false proof and false information and false character-giving and bad word and bad story, and lying in general, whether in the case of the Church or the laity,—every one of these deprives the man who is guilty of such of half his honour-price up to the third time, but it does not deprive him with regard to every one of them until the third time.'

The Irish law-treatise referred to enters minutely into the question of the loss of full and half honour-price in the case of kings, bishops, chieftains, poets, and others; and it is of interest to note the importance attached in Irish law to character and right conduct.

It was not character alone, however, that determined honour-price, and Irish law reflects differences of opinion as to the extent to which it depended upon a man's profession, his separable property, or the rank of the chief under whom he served.

Apart from the cases already mentioned, where it is stated that under certain circumstances a wrongdoer might be put to death (see above), there is no reference to the death-penalty in Irish law, nor is there any reference to imprisonment. The king appears to have had power to assign a wrongdoer to the service of a particular person, but no mention is made of imprisonment as a form of punishment. The only reference to castigation as a form of punishment is in the case of a child under seven, who could be chastised only by its parent. In certain cases other fines called *aire* ('redemption') and *smacht* ('discipline') were ex-

acted, and there are occasional references to penance.

19. Penalties in Welsh law.—Welsh, like Irish, law was based upon a consideration of the status of the individual, and upon the determination of the legal worth of every person and object (living or dead). These ideas enter prominently into the questions of *sarhad* and *galanas*, the former being compensation for insult, and the latter compensation for homicide. Thus the same dominant conceptions govern Welsh and Irish law, and they clearly go back to a similar stratum of ideas. In Welsh law, however, the central power of the king in each territory had attained greater prominence than in Ireland, with the result that the fines called *dirwy* and *camlwro* for various offences were not paid to the individuals wronged, but usually to the king; and the same rule governed a third of each *galanas* ('body-fine'), while *sarhad* was paid to the person or persons wronged. In certain cases a part of the *camlwro* was payable to persons other than the king, and in the case of a religious community the whole of the *camlwro* appears to have been paid over to the abbot and the lay impropiators. The *dirwy* was a larger fine, paid directly to the king (according to a Latin text of the Laws written about 1250), for fighting, theft, and criminal assault. The penalty of emasculation was imposed upon a ravisher who could not pay the fine, and a bondman striking a freeman was liable to have his right hand cut off.

Though there is no allusion in the Welsh laws to imprisonment as a penalty for any specific offence, yet the fact of imprisonment is implied in more than one passage. For example, in Wade-Evans (*op. cit.* p. 177) we read that the smith of the court was to receive four pence from every prisoner of whom he should remove irons. Again, of the court-porter it is said that he is to get four pence from every prisoner who shall be lawfully imprisoned in the court. One MS (U45a) gives imprisonment as one of the lawful excuses for neglecting a summons. The Welsh word *carchar* ('prison') is derived from the Latin *carcer*, and is a term used in Welsh for the fetter placed on an animal to prevent it from straying. It is therefore probable that liberty was impeded, whenever necessary, more by the use of chains and fetters than by confinement in a building.

Though Irish law contains no reference to a death penalty, Welsh law has a few allusions to the penalty of hanging. This was in Wales the recognized punishment for theft (as is stated in the *Mabinogi* of Manawyddan fab Llŷr). In Wade-Evans (*op. cit.* p. 213) we read:

'One person escapes from an admitted theft with flesh and skin on his back [viz.] a necessitous *alltud* ("alien") who shall have been three nights and three days without alms, without relief, and who shall have traversed three *treos* ("townships") daily, with nine houses in every *treo*; and then, owing to hunger, shall commit theft, and then shall be caught with flesh and skin on his back. He is to be let free without gallows and without payment.'

Similarly, if a thief was found burning a house stealthily, and was caught, his life would be forfeited. In the case of a thief the Welsh laws recognize the penalty of sale.

Among the fines mentioned in the Welsh laws is that of *dilyddod* ('acquittance'), which was enforced as a payment to a woman by her ravisher. This was probably meant as a payment to guarantee her status as a virgin in the eyes of the law. There was also a similar payment called *gwaddol*, payable by a man who failed to rebut a charge of criminal assault upon a woman walking alone.

20. Medium of payment of fines.—In Irish law the terms used in estimating fines are *cumhal* and *sed*. By a *cumhal* was originally meant 'a female bond-slave,' but, in course of time, the word came

to mean the equivalent in value of three cows. The method of payment of fines was in a fixed proportion of certain goods. When half a *cumhal* had to be paid, it had to be in one species of goods when one *cumhal* was required, it had to be in two species; and, when three or upwards of three *cumhals* were required, they had to be in three species. In that case one-third would have to be in cows, one-third in horses, and one-third in silver. Of the cattle one-third had to be male, one-third of the horses had to be mares, and one-third of the silver by weight might be copper alloy. A *sed* was defined as follows (*Anc. Laws of Ireland*, iii. 463):

'A common easily divisible *sed* means two live chattels or dead chattels, or one dead chattel the value of which is not lessened by its being divided.'

Of *sed*s the most prized was a milch cow. In Welsh law the fine called *camlwro* consisted of three kine, paid as a rule directly to the king, and sometimes doubled. The fine called *dirwy* consisted of twelve kine, paid directly to the king, and was also sometimes doubled. *Sarhad* and *galanas* were paid in various ways, as directed in the Laws. The coins mentioned in the Welsh laws are: (1) *keinhawc kyfreith*, 'a legal penny' (see Wade-Evans, *op. cit.* p. 330); (2) *keinhawc cota*, 'a curt penny' (*ib.*); (3) *dime*, 'a half-penny'; and (4) *punt*, 'a pound.'

21. Initiation of legal process.—In Ireland the aggrieved party compelled the aggressor to submit the case to arbitrators, by levying distress (Ir. *athgabhair*) upon the latter. In its most solemn form the levying of distress required that the person aggrieved should 'fast against' the aggressor (see ASCETICISM [Celtic], vol. ii. p. 72), that is, call Heaven to witness that he would starve to death if his opponent did not submit the case to a Brehon. The consideration of questions connected with distress is one of the most elaborate sections of Irish law. In Wales, in keeping with the greater development of the central power, a man could be called to appear in answer to a *gwys* ('summons'). The legal method of accusing for theft is described in Wade-Evans (*op. cit.* p. 245). Even in Ireland certain people (*Anc. Laws of Ireland*, i. 105, 107) might be arrested for their liabilities, instead of being distrained upon, and the circumstances under which this process might take place are fully considered.

In Irish law a pledge had to be given (*op. cit.* i. 277) to stop the process of fasting, especially in judgments of theft, robbery, and violation; and the contingencies arising from the giving of the pledge and its possible loss form an important section of the *Law of Distress*. In Wales, the term *mach* ('pledge') was used in the Laws only in connexion with civil matters. In criminal procedure the accused person had to obtain a *gorvodog*, i.e. a personal surety, for one who was charged with crime (see Wade-Evans, *op. cit.* pp. 253 f., 312). In the Irish legal treatises the question of evidence is not discussed to the same extent as it is in the Welsh laws, and it is noticeable that the latter assign considerable prominence to the oath, both of the accused and of his compurgators, as a means of clearing his character. The Welsh term for this process was to put a person upon his *rhaith* (a word cognate in formation with Lat. *rectus*), and, in this process, he had to bring forward a certain number of persons to swear on his behalf to the justice of his claim or defence as a whole.

22. Penalties for particular crimes.—(1) *Homicide*.—(a) In Ireland homicide was divided into intentional and unintentional. The fine for the former was double that of the latter. The account given in the *Senchus Mór* suggests that there was some difference of opinion as to whether homicide

should in all cases be treated as a matter for compensation through payment, but the customary law with its *éric* ('body-fine') appears to have prevailed. In the case of secret homicide the concealment was regarded as a separate act, and compensation had to be paid for it accordingly. When a freeman was slain by a freeman, the slayer had to pay the amount of his own honour-price, together with a fine of seven *cumhals*, as compensation for the death. For concealment the slayer paid honour-price, together with seven *cumhals*. If the body was found, the fine for concealment was remitted. Looking on at a murder was a wrong which was liable to a fine. Whenever a person found a dead body, he had to give information at once; otherwise, he was liable to the fine of a looker-on, or, according to others, of an accomplice. The *Anc. Laws of Ireland* (iii. 101, etc.) consider with great fullness the various cases that might arise in connexion with homicide.

As illustrating the growth of a different mental attitude from the preceding, it may be stated that the commentator to the *Corpus Beccanæ* treats homicide, and all other wrongs done with malice aforethought, as being in the nature of exceptions to the ordinary law, and holds that the slayer should be given up, with all his property, to the family of the slain man.

(b) In Wales the term for a 'murder-fine' was *galanas*, and, along with the murder-fine, in every case of homicide *sarhad* ('compensation for insult') had to be paid. The amount of the murder-fine varied with the status of the person murdered. The murderer was helped to pay by his kinsmen, to the fifth cousin, and the liabilities of these were fixed by law. According to the Welsh law (Wade-Evans, *op. cit.* p. 193), a third of every *galanas* was paid to the king, and also whatever of the murderer's chattels was from time to time obtainable. The reason given is that it is for the king to enforce where it is not possible for a kindred to do so. The murder-fine of a king was three times the amount of his *sarhad* with three augmentations; the amount of his *sarhad* being as follows:

'a hundred kine for every *cantrev* ("hundred") in his kingdom, and a silver rod which shall reach from the ground to the king's pate, when he shall sit in his chair, as thick as his ring finger, with three knobs at the top and three at the bottom as thick as the rod; and a golden cup which shall hold the king's full draught, as thick as the nail of a ploughman who shall have ploughed for seven years, and a golden cover thereon as thick as the cup, as broad as the king's face.'

There was a similar murder-fine for the heir-apparent. The *galanas* of a chief of the household was a third of the king's, 'without privileged gold and silver.' A steward, a judge of a court, a falconer, a chief huntsman, a chief groom, and a page of the chamber all had the same *galanas*, consisting of 'nine kine and nine score kine with three augmentations.' For the *galanas* of the other officers, except the chief of the household and the priest of the household, six kine and six score kine 'with three augmentations' had to be paid. In the case of the priest of the household the murderer had to submit 'to the law of the Synod.' The laws fix the *galanas* of various other persons, but it is sufficient to mention that the *galanas* of a free Welshman of pure descent consisted of 'three kine and three score kine with three augmentations.' This was also the amount of the *galanas* of a king's serf, while the *galanas* of a nobleman's serf was half of this amount. For a thief there was no *galanas*. (For various questions connected with homicide, see Wade-Evans, *op. cit.* pp. 236, 248, 252 f., 264, 294, 299 f., 320.) In the case of a fratricide the kindred were not to pay *galanas* with the murderer.

(2) *Wounding and mutilating*.—(a) In the *Anc. Laws of Ireland* (iii. 349, etc.) there is a very full discussion of the penalties due for wounding and mutilating, and the various wounds and losses that might be inflicted are considered in great

detail. For a foot, a hand, an eye, or a tongue, half the *éric*-fine of every person was to be paid, and in the opinion of some the full *éric*-fine should be paid for the mouth, the nose, and the tongue. According to *op. cit.* iii. 472, the sick maintenance of a wounded person had to be compensated for, and a substitute had also to be provided. Among the wrongs requiring compensation was that of shaving bare the beard or the whiskers.

(b) In Welsh law there is an assessment of the worth of each part of a person's body (see Wade-Evans, *op. cit.* p. 190 f.). The following quotation will suffice to illustrate the list of values:

'All a person's members when reckoned together are eight and four score pounds in value. A person's finger is a cow and a score of silver in value. The worth of the thumb is two kine and two score of silver. A person's nail is thirty pence in value.'

With reference to a serf's limbs there is a passage in MS U27a which reads as follows:

'The worth of the serf's limbs by law is as much as the worth of the king's limbs according to worth. The *galanas* and the *sarhad*, however, of every one are paid according to his status when a limb shall be broken.'

(3) *Arson*.—The Welsh laws alone deal with this offence, and refer to the necessity of compurgation to meet it:

'If an accusation of the crime of burning stealthily be brought against a person, the oaths of fifty men will be necessary for him. If he obtain his *rhaith* ("acquittance"), it will be sufficient for him; if he obtain it not, he becomes a saleable thief. A saleable thief is worth seven pounds.'

The case of attempted arson by a thief has been mentioned above.

(4) *Waylaying*.—This crime is also specifically mentioned only in Welsh law, as follows:

'Whoever shall waylay pays twofold, because it is a violence against a person to kill him, and a theft to conceal; and that is the one place in law where violence and theft become connected. And it is to be thus denied; the oaths of fifty men to deny wood and field, and three of them under vow to abstain from flesh and woman and horse-riding.'

This offence was punished by hanging and confiscation.

(5) *Criminal assault*.—(a) Irish law required the payment of a heavy fine for attempting to violate a person's wife, and a still heavier fine for actual violation (see *Anc. Laws of Ireland*, i. 163, 167, 177, 181). In *op. cit.* ii. 405, we read as follows:

'If the girl has been defiled within the age of seven years, full body-fine shall be paid for her, and honour-price in right of God; full body-fine also till she reaches the age of ten, and half the honour-price of her father; two-thirds of body-fine for her from the age of ten forth till she reaches fourteen, and half the honour-price of her father; and there is no division of the body-fine from that forth.'

(b) Welsh law punished criminal assault, according to one account, as follows:

'Whoever shall commit a rape on a woman, let him pay her *gobr* ("maiden fee") to her lord; and her *dirwy* ("fine") and her *disdydd* ("acquittance") and her *agueddi* ("dowry") and her *sarhad* ("fine for insult") he pays to the woman; and, if she be a maid, let him pay her *covvyl* (a gift payable by the husband to the wife on the morning after the marriage).'

Some texts add: 'and a silver rod to the king in the manner he is entitled; and, if the man cannot pay, his testicles shall be taken.' (For the oath of the woman and the oaths of fifty men required for compurgation, see Wade-Evans, *op. cit.* p. 237 f.)

In Wade-Evans, *op. cit.* p. 240, the case of assault by two men upon two women is considered as follows:

'If two women shall be journeying through any place and there be no one with them, and two men meet them and violate them, they are not to be compensated. If, however, there be one person with them, although ever so little, unless he be a carried child, they lose none of their right.'

In MS U42a the following is added:

'A woman who shall be violated, if she know not who has violated her, is not to pay *amobr* ("maiden fee"); since the king preserved her not from violation, he loses her *amobr*; and, if the woman be doubted in that respect, let her give her oath that she knows not who violated her, and that she was violated as aforesaid.'

One legal triad speaks of the violation of a woman as 'one of the three disgraces of a kindred.'

(6) *Indecent assault*.—In the Welsh laws (Wade-

Evans, *op. cit.* p. 270) the following statement occurs:

'Three *sarhads* of a woman there are, one of which is augmented, and one diminished, and one is a complete *sarhad*. When a kiss is given her against her will, a third of her *sarhad* is wanting to her then. The second is feeling her with the hand, and that is a full *sarhad* to her. The third is being connected with her against her will, and that is augmented by the third.'

(7) *Theft*.—(a) Irish law deals very fully with the various fines which have to be paid in the case of theft, the amount of compensation varying chiefly with the nature of the object stolen. Among such objects are land, cattle, grass, rushes, turf, fruit, fish, boards, firewood, wattles, etc.; and among the special cases considered are that of stealing from a house and from a hunter's cooking-tent, and that of stealing a smith's tools. According to the *Anc. Laws of Ireland* (iii. 463), it was lawful to kill the unknown or nameless thief, but this right was personal only (*op. cit.* iii. 469). There was a further rule that no one was to trade with a thief.

(b) Welsh law dealt severely with thieving, and punished it (probably when habitual) with execution by hanging. In Wade-Evans (*op. cit.* p. 188) there is a list of *naw affeith lledrat* ('the nine accessories of theft'), which are given as follows:

'The first of the nine accessories of theft is devising deceit and seeking an accomplice. The second is agreeing concerning the theft. The third is giving provision. The fourth is carrying the food while accompanying him (the thief). The fifth is tearing down the cattle-yard, or breaking the house. The sixth is moving what is stolen from its place, and walking day or night with it. The seventh is knowing and informing as to the theft. The eighth is sharing with the thieves. The ninth is seeing the theft and concealing it for reward, or buying it for worth. Whoever shall deny one of these accessories, let him give the oaths of fifty men without bondman and without alien.'

There is a reference to the death-penalty for stealing in the following statement, where it is said (*ib.* p. 189) that one of the nine persons who are to be believed in giving their testimony, each one of them separately on his oath, is

'a thief without hope of mercy concerning his fellow-thief, when brought to the gallows; because credible is his word concerning his companions and the chattels they thieved, without a relic; and his companion is not to be destroyed on his word, but is to be a thief for sale.'

In the case of the stealing of goods entrusted to a guardian, if the keys are safely in his custody and a breach has been made into the house, 'the *Book of Cynog* (a text of the Laws) says it is easier to believe him if there be chattels of his own taken together with the other chattels which were taken by stealth from him. He is, however, to swear conjointly with all the persons in the house as to his being clear as to those chattels. If the soil, however, be excavated under the house, after he has carried out the law that he is clear, the king owns the soil, and there is to be no guardian answerable for it. Every chattel which a guardian asserts to have been brought to him to be kept, let him make good, except the chattels conveyed through the soil.'

The case of theft by a necessitous alien has been already mentioned. The theft of a king's cat had to be made good as follows:

'Whoever shall kill a cat which guards a barn of a king, or shall take it stealthily, its head is to be held downwards on a clean level floor, and its tail is to be held upwards; and after that wheat is to be poured about it until the tip of the tail be hidden, and that is its worth. Another cat is four legal pence in value.'

A dog, on the other hand, might, according to some MSS, be stolen with impunity:

'There is no *dirwy* for a dog, although it be taken stealthily, nor *camburro*. The oath of one man is sufficient to disown a dog, for it is a back-burden of an unclean animal.'

The triads in the *Dimetian Code*, however, say that a dog-stealer should pay a *camburro*. Regulations as to the manner of bringing a charge of theft legally and of purgation in the face of a charge are given in Wade-Evans, *op. cit.* p. 244 f.

A thief might be punished by being sold, and the value assigned to 'a saleable thief' is seven pounds. In Wade-Evans (*op. cit.* p. 259) are found the following further provisions as to theft:

'A thief who shall be placed upon sureties is not to be destroyed. No one is to make satisfaction or answer for an act of his bondman saving for theft.'

(8) *Assault*.—(a) Irish law dealt with assault under the same section as wounding and mutilating, and drew a distinction between a 'red wound' (with bloodshed) and a 'white wound' (without bloodshed). In the *Anc. Laws of Ireland* (iii. 352 n.) a 'lump-blow' is defined. For a clean lump-blow two cows were an adequate compensation, while for the foul lump-blow *airer-fine* (one of the lesser fines of Irish law) was exacted.

(b) Welsh law (Wade-Evans, *op. cit.* p. 193) punishes assault as follows:

'Whoever shall strike a person, let him pay his *sarhad*, first because attack and onset constitute a *sarhad* to every person; and a penny for every hair pulled out from his head by the root; and a penny for every finger which shall touch the head; and twenty-four pence for the front hair.'

Again,

'If a person strike a bondman, let him pay him twelve pence; . . . if a bondman strike a free man, it is just to cut off his right hand, or let the bondman's lord pay the person's *sarhad*' (*ib.* p. 194).

It is clearly stated (*ib.* p. 259) that a blow received unintentionally is not *sarhad*, and the following three buffets did not need expiation:

'one by the lord on his man in ordering him in the day of battle and fighting; and one by a father on his son to punish him; and one by a chief of kindred on his relative in order to counsel him.'

(9) *Treason*.—Irish law, though severe upon lying, treachery, and all forms of deceit, does not deal specifically with treason, but in Welsh law the following passage occurs (*ib.* p. 202):

'Whoever shall commit treason against a lord or waylay, is to forfeit his father's *treu*; and, if he be caught, he is liable to be executed. If he be not caught and he will to be reconciled to his lord and kindred, a twofold payment of *dirwy* and *galanas* is to be levied on him; and, if he repair to the court of the Pope and return with the Pope's letter with him, and show that he is absolved by the Pope, he has his father's *treu* ("homestead").'

In Ireland, treachery deprived a person of his full honour-price.

(10) *Perjury*.—(a) Irish law dealt with false swearing, more especially in the case of contracts, and visited it with a fine (*Anc. Laws of Ireland*, iii. 397). False witness also lowered a man's honour-price.

(b) Welsh law deals chiefly with perjury (*anudon*) in relation to suspected testimony (see Wade-Evans, *op. cit.* p. 260 f.), but denial of suretyship and contract is also discussed (*ib.* p. 230).

(11) *Insult*.—(a) In Irish law the maintenance of a man's honour was a primary consideration, and certain fines in addition to the *dire-fine* ('honour-price') appear to have been specially instituted for the defence of personal honour. Among these are the *enech-gris* ('blush-fine'), the *enech-ruice* ('defamation'), and the *enech-lann* ('reparation of honour'). To ask a question with a view to exposing a blemish (*Anc. Laws of Ireland*, iii. 347), and to give a person a nickname, rendered the offender liable to a fine (*op. cit.* iii. 93), while one form of insult specifically mentioned (*op. cit.* iii. 409) was that of opposing a bishop on a 'hill of meeting.'

(b) Welsh law attached the utmost importance to the maintenance of a person's dignity, and compensation for *sarhad* ('insult') plays a prominent part therein. The violation of a person's protection constituted one specified form of insult.

(12) *Libel*.—(a) In Ireland the fort of a man who tolerated satire or satires (*Anc. Laws of Ireland*, v. 169) lost its *dire*, or honour-price, but in another passage (*op. cit.* i. 59) it is stated that satirizing, though done intentionally, did not cause loss of the full honour-price until a person evaded the law with respect to it. Satirizing a dead person was also liable to fine (*op. cit.* i. 185, 189).

(b) There is no specific mention of libel or satire

in Welsh law, and, in view of the practice of the Welsh poets, at any rate after 1300, it would appear that satirizing on their part was tolerated. At an earlier date, libel was probably counted under *sarhad*.

(13) *Slander*.—(a) In Ireland the *Ancient Laws* (i. 175, 177) specifically mention a fine for slander. A fine was also obtainable for circulating a calumnious story (*op. cit.* i. 195, 199), or for wrongfully questioning a person's legitimacy (i. 185, 193).

(b) The Welsh laws make no specific mention of slander (*enllib*) other than slander against women (Wade-Evans, *op. cit.* p. 238), or against an innocent man for murder, and probably included other slander, along with libel, under *sarhad*.

(14) *Using charms*.—There is no reference to this offence in the Welsh laws, but in Ireland the person committing it was liable to a fine, whether it was committed against a human being or against a dog (see *Anc. Laws of Ireland*, i. 177, 181).

(15) *Trespass*.—(a) Irish law in several passages defines the compensation required for various forms of trespass, such as 'dirtying a road' (*op. cit.* iii. 76 n.), bringing a horse into the narrow part of a road (*ib.*), the digging of a churchyard, and the removal of bones from a churchyard. The type of fine called the *smacht*-fine was levied chiefly in the case of trespass by men or animals (see *Anc. Laws of Ireland*, iv. 83, 87, 89, 93, 95, 107, 109, 111, 115, 117, 119, 121, 123, 141, 145, 153).

(b) The forms of trespass which are specifically mentioned in the Welsh laws are: excavating the land of another to hide anything therein, making a snare, digging a kiln-pit, or building a house on another person's land. The fine inflicted was four legal pence, with certain additions in particular cases.

(16) *Damage to property*.—(a) Irish law had much to say regarding offences arising under this head (*Anc. Laws of Ireland*, i. 167, 169, 171, 175, 185, 189, 233, 235, 237). The *Book of Aicill* (*op. cit.* iii. 357, 358) deals very fully and humanely with the maiming, mutilation, and over-working of animals.

(b) In Wales all damage to property, whether living or dead, had to be compensated for in accordance with a scale of legal worth laid down in the laws.

(17) *Gross negligence*.—(a) In Irish law cases of the kind are, for the most part, dealt with under other heads, such as trespass and damage to property; but the expression 'trespass of viciousness with neglect' is used for the offence of bringing a horse into the narrow part of a street. A fine was also inflicted for neglect of fencing. Attendants, too, were punishable for not guarding the houses of persons of dignity (*op. cit.* iii. 511), and a similar penalty was inflicted for neglect in not guarding a captive (iii. 499 f.). A judge who was negligent was liable to a fine (iii. 305), and so were sane adults for not guarding the insane. The Irish believed that blotches arose on the cheeks of judges who pronounced false judgment.

(b) The two instances of punishable neglect mentioned in Welsh law are the following (Wade-Evans, *op. cit.* 258, 268):

(1) If two persons shall be walking through a wood, and the one in front let a bough strike the one in the rear so that he loses an eye, he is to pay the worth of an eye to the other.

(2) If a spear were not so placed as to prevent its point from accidentally killing a person, its owner, in case of such a death, had to pay a third of the slain person's *galanas*.

(18) *Abandoning and harbouring a fugitive*.—(a) It was an offence in Irish law to entertain a fugitive who was known, and there was also a penalty for supporting and advising the women and children of foreigners, as well as for feeding

or sheltering a stranger generally (*Anc. Laws of Ireland*, iii. 385, 387, 389). In the same manner a person feeding a houseless person was liable to a fine, the intention in all these cases doubtless being to make it difficult for persons to escape from justice.

(b) In Wales the law (see above, p. 265*) appears to have been a little more sympathetic towards necessitous aliens, and Welsh law also provided that an alien of foreign speech should have an advocate.

(19) *Abduction*.—(a) Irish law (*op. cit.* iii. 403, 541, 543, 545) deals very fully with the question of abduction in its effects upon family life. The children of the abducted woman belonged to her mother's family, and might be sold by them, but the father was bound to buy them if they were sold, and if he got them gratis he was bound to educate them.

(b) Abduction was a punishable offence in Welsh law, and the various contingencies which arose in connexion therewith are fully dealt with in the Laws (see *Anc. Laws of Wales*, pp. 86, 88, 92, 204; and Wade-Evans, *op. cit.* pp. 237, 238, 239).

(20) *Stripping of the dead*.—In Ireland there was a fine for stripping the dead in general, and the slain in battle in particular (see *Anc. Laws of Ireland*, i. 175, 177); and a Welsh legal triad speaks of the 'three disgraces of a dead body'—when it is slain, when it is stripped, and when it is left lying.

(21) *Breach of the peace*.—The Welsh laws contain no explicit references to offences under this head; but Irish law (*op. cit.* i. 231, 235) required a fine for quarrelling in an ale-house, and also for disturbing a fair.

(22) *Adultery*.—It is probable that in Irish law adultery should be counted with the above offences, but the absence of a clear distinction in Irish law between crimes and torts makes it difficult to class adultery with crimes, as was done in some countries. In its effect upon the honour-price of a person, adultery, according to the *Anc. Laws of Ireland* (i. 57–61), was more disastrous for ecclesiastics than for laymen; but, in the case of all alike, adultery and cohabiting with a kinswoman had the same effect upon the honour-price as unfaithfulness in word (*op. cit.* i. 59). In the case of adultery by a married man the Welsh laws require (Wade-Evans, *op. cit.* p. 239) that he should pay six score pence to his lawful wife as her *wynebwerth* ('compensation for insult'). When a wife committed adultery, her husband was entitled to thrice the sum of his *sarhad* (*ib.* p. 242), and it is further stated (*ib.* p. 244) that she loses her *agweddi* ('dowry'), while her chattels are brought by her kindred to her husband. One of the three disgraces of a kindred, according to a Welsh legal triad, is to bring another woman to the house, supplanting the wife and driving her forth.

In the present article Celtic crimes and punishments have been considered chiefly with reference to Ireland and Wales, owing to the fact that it is only for these countries that legal treatises of the type here considered are obtainable. In Celtic Scotland the law was based upon a development of the same ideas as those which are embodied in the law of Ireland. The legal practice of Brittany and Cornwall, too, doubtless closely resembled that of Wales; but it would be highly interesting, if it were possible, to know what modifications of the Irish system were developed in Scotland, and, similarly, what local variations of the British system arose in Cornwall and Brittany. In the absence of legal treatises such an inquiry would have to be based mainly on historical and linguistic evidence.

LITERATURE.—*Ancient Laws and Institutes of Wales*, ed. Aneurin Owen (Rolls Series, London, 1841); Wade-Evans, *Welsh Medieval Law* (Oxford, 1909); *The Ancient Laws of Ireland* (Rolls Series, London, 1889-1873); W. F. Skene, *Celtic Scotland*² (Edinburgh, 1890). E. ANWYL.

CRIMES AND PUNISHMENTS (Chinese).

—The Chinese character for 'crime' is significant of the attitude of the nation towards the infraction of law, being composed of the radical for 'failure,' under that for 'net,' representing the net of the law descending upon the offender; in other words, 'crime' or 'sin' (for the terms are used interchangeably) is regarded as consisting not so much in the commission of a condemnable act as in the discovery of the fact and the infliction of penal consequences. For this reason the term is an unfortunate one when applied by Christian missionaries to a Chinese audience, for the majority of those thus addressed would strongly object to be denominated 'criminals,' although the intention in the mind of the speaker is merely to bring home to them a sense of sin.

1. **Early enactments.**—The Chinese penal code is based upon enactments for which a remote antiquity is claimed, and the earliest system of punishments is ascribed to the 'Emperor' Shun (2255 B.C.), who is said to have established the 'Five Punishments' which were in vogue to the end of the Chow dynasty (255 B.C.), viz. (1) branding on the forehead, (2) cutting off the nose, (3) maiming, (4) castration, and (5) death.

The founder of the Han dynasty (202 B.C.) enacted the 'Three Penal Sentences,' viz. (1) life shall be given for life, (2) compensation for wounds, and (3) imprisonment for robbery.

The first regular code of penal laws is represented as being brought into operation in the Ts'in dynasty (249 B.C.), comprehended under six heads, the 5th of which, represented by 11 vols., is occupied with criminal laws concerning treason, robbery, theft, homicide, criminal intercourse, disturbing graves, quarrelling and fighting, and incendiarism; and, though each succeeding dynasty has contributed some modification or addition to the original enactments, the ultimate source of inspiration may still be traced even in the existing legislation.

The laws of the present Manchu dynasty, which in China bears the name of the *Ta Ts'ing*, or 'Great Pure Dynasty,' may be grouped as follows:—(1) The *Ta Ts'ing Lu Li*, or 'Penal Code of the Ta Ts'ing dynasty,' which is subject to revision every 5 years. The sections included under the first term, *Lu*, may be described as the original laws or statutes; and those under the second head, *Li*, as the supplementary clauses, or common law, established by precedent or usage. (2) The *Ta Ts'ing Hui Tien*, or 'Regulations of the Ta Ts'ing dynasty.' (3) The edicts and decrees issued by Emperors and high provincial officials. (4) Customary law.

The first of these, the *Lu Li*, is comprehended in 2906 octavo pages, the criminal laws being enumerated in the 6th division, arranged under the following heads: (1) robbery and theft, (2) homicide, (3) quarrelling and fighting, (4) abusive language, (5) indictments and informations, (6) bribery and corruption, (7) forgeries and frauds, (8) incest and adultery, (9) miscellaneous offences, (10) arrests and escapes, and (11) imprisonment, judgment, and execution.

2. **Punishments.**—The modes of punishment which are recognized by the code are five:

(1) Flogging on the thighs with a light bamboo cane, about 3 ft. 6 in. long by $\frac{3}{4}$ in. wide, and $\frac{1}{4}$ in. thick at the end. The punishment admits of 5 degrees of severity, nominally from 10 to 50 blows; but in actual practice only 4, 5, 10, 15, and 20 blows respectively are administered.

(2) Flogging with a heavier cane of bamboo, about 3 ft. 6 in. by $1\frac{1}{2}$ in. by $\frac{1}{2}$ in., in cases of greater gravity, the number of blows ranging from 60 to 100 nominally, but reduced in universal practice to 20, 25, 30, 35, and 40 respectively. Manchu subjects, or 'Bannermen,' are punished with a whip instead of the bamboo.

In administering the punishment the lictors are so expert that they can apply 1000 sounding blows to the bare flesh without raising a blister, or draw blood if required with three strokes, and actually make the flesh fly if they set themselves seriously to work. (This is done by the 'dragging' stroke, which is different from the usual up-and-down method; the cane when it reaches the flesh is drawn back along the surface, and in a short time the skin is literally torn off in strips.) This skill in applying the bamboo is said to be attained by long practice on a block of bean-curd, a substance resembling a stiff custard, the beaters kneeling face to face, and striking alternately on the bean-curd which is placed on the ground between them. When they have learned to strike the substance a great many times, producing an appreciable 'note' each time, without breaking the delicate surface of the 'custard,' they are supposed to be proficient, and are allowed to exercise their art on the unfortunate human beings who may be surrendered to them. Another power which they must cultivate is that of counting alternate numbers at a great rate whilst administering the strokes; the man kneeling on one knee at one side of the victim calls out the odd numbers, whilst the other counts the even numbers, and this requires long and frequent rehearsal; it also presents an opportunity for 'sharp practice,' for the number called does not necessarily correspond with the blows struck; and it is very easy for skilful performers to run up a very large total of figures without applying an equal number of strokes. Thus a man condemned to receive 1000 strokes may be let off with 700 or so if he has a proper understanding with the lictors, though the full number is reported by them *viva voce* at the time of imposition. The rod is steeped for some months in a saline bath before it is considered fit for use, as this is said to ensure that mortification will not set in when the flesh is lacerated; it no doubt also increases the sufferings of the victim.

(3) Banishment, for a limited period, to a distance not exceeding 500 *li* (= 170 miles). Here again 5 degrees are admitted, viz. 1 year and 60 blows, $1\frac{1}{2}$ years and 70 blows, 2 years and 80 blows, $2\frac{1}{2}$ years and 90 blows, 3 years and 100 blows.

(4) Transportation, for life, to any distance varying from 2000 to 3000 *li* (= 1000 miles), with 100 blows; in extraordinary cases the distance is increased to 4000 *li*, or the criminals are condemned to reside in malarious or savage districts. The exiles are nominally required to render military service, but are usually permitted to engage in humble occupations, such as the managing of inferior pawn-shops, etc. The wives of criminals are expected to accompany their husbands into exile, and their children and other relatives may do so if willing. Bannermen are subjected to the 'cangue' (see below) in lieu of banishment.

(5) Death by strangulation, decapitation, or the so-called 'lingering-process.' The death sentence is usually confirmed by the Emperor; but in cases of murder, piracy or highway robbery, rebellion, uttering false coin, forging official seals, arson, robbery with violence, criminal assault on girls under 12 years of age, fraudulent methods at public examinations, or smuggling salt, the local authority is empowered to put the sentence into execution at once, unless extenuating circumstances can be urged for delay. In cases of piracy,

highway robbery, etc., the criminals are decapitated, and their heads exposed over the city gates as a warning to all.

(a) *Strangulation*.—The penalty of strangulation is inflicted in the cases of murder of a stepson by a stepmother, abuse of parents or paternal grandparents, abuse of husbands' parents or grandparents; also in certain cases of homicide where premeditation is not alleged, or where death is brought about by indirect means; also in cases of opening coffins and rifling the dead, refusing to pay tribute, or inciting to riot. In extreme cases the process is aggravated by the method known as 'three strangulations and three recoveries,' which means that the victim is throttled into unconsciousness three times, and restored to animation before the final garrotting takes place. In some instances high officials who have offended are presented by the Emperor with a silken scarf, with which they are expected to strangle themselves in lieu of the heavier and more disgraceful punishment of decollation.

(b) *Decapitation*.—Decapitation is the penalty inflicted in the case of a large number of offences, especially those of a treasonable nature—a classification which includes: (1) rebellion, (2) disloyalty (as, e.g., destroying or attacking the Imperial tombs, palaces, etc.), (3) desertion, (4) parricide, (5) massacre (i.e. where three or more persons are killed), (6) sacrilege, (7) impiety, (8) discord, and (9) insubordination. The treasonable character of these offences consists in their being hurtful to the Sovereign either in his person, his property, or his honour, or the persons and property of his subjects. The principal offenders are sometimes sentenced to the *ling chi*.

(c) *The ling chi*.—The third form of capital punishment, i.e. the *ling chi*, or 'lingering process,' which is popularly supposed to consist in an indefinite number of cuts inflicted on the victim's body, before the administration of the *coup de grâce*, does not amount, in ordinary cases, to more than a few slashes on the face and body before the final blow is struck. It is intended to make the death process more lingering and shameful, as the words *ling chi* mean; but the degree of aggravation of the penalty is left very much in the hands of the executioner. The lingering process is ordered in the case of treason against the Imperial person, palaces, or tombs, no distinction being made between principal and accessories; also in the case of parricide, murder of a husband, etc.

(d) *The death cage*.—Another form of capital punishment is the 'standing cage,' which consists of a tall frame or coop, in which the victim is placed, the floor being a foot or so from the ground. His neck is enclosed by the bars which form the top or lid of the cage. In this position he is unable to touch the floor with his feet, but a number of bricks are inserted upon which he is permitted to stand, and these are gradually removed until at last he is practically suspended by the neck, unless death intervenes, as generally happens, the process being hastened by the administration of an opiate supplied by a relative or friend. Victims of this form of punishment have been known to survive four days of torture, even when exposed to the burning rays of the summer sun.

(6) *The cangue*. A minor form of punishment which is recognized by the *Li*, or 'supplementary laws,' is that of the 'great collar,' or 'wooden neck-tie,' as it is nicknamed, generally known amongst Europeans as the 'cangue' (from the Portuguese *canga* = yoke). It consists of a heavy wooden framework in two parts, through which the head of the victim is introduced by means of a scallop on the inner edges of each; the two parts

are then brought together and fastened in position upon the wearer's shoulders, and an inscription is added stating the nature of the crime committed, etc. The weight of the cangue is generally from 20 to 30 lbs., but larger frames are sometimes used, in which as many as five men can be secured. In some cases the hands of the sufferer are also inserted in smaller holes as in a pillory. In either instance it is impossible to reach the mouth with the hands, and the prisoner has to be fed by others. The cangue is generally exhibited in the daytime at the spot where the offence was committed, and at night the bearer of it is removed to the prison, where, in the majority of cases, he is relieved of his burden until the next day. The imposition of the cangue may cover a period of a few days or may continue for three months, and is ordered in cases of stealing, gambling, damage, extortion, etc.

(7) *Branding* is also in vogue in cases of stealing, and the designation of the crime is indelibly stamped upon the forearm, e.g. 'Stealer of grain,' 'stores,' or 'silver,' as the case may be.

3. *Methods of Chinese thieves*.—Chinese thieves are divided into various classes, whose methods differ very considerably; for instance, in order to obtain entrance to a building, some elect to prise open the window or doors, or lift them off the hooks which do duty for hinges, while others prefer to throw a rope, with grapplers attached, to the balcony or roof, and climb up hand over hand; others drill holes in doors with the usual carpenters' instruments, or burn out a piece of the woodwork by means of a blow-pipe and a brazier of lighted charcoal, so as to insert the hand and withdraw bolts and fastenings; others, again, employ a bamboo pole for vaulting or scaling walls; anaesthetics are used by some thieves for rendering the occupants of a house unconscious; holes are also bored in walls, or subterranean tunnels are made by experts in these departments.

The 'swift-horse,' or constable (see below), being himself an ex-thief, is familiar with the methods of the several classes, and the individuals composing them; and can always diagnose with accuracy the cases which are submitted to him.

4. *Punishment of women*.—Special punishments are reserved for women, such as piercing the breast with a hot iron, in the case of attempts on the life of a husband, assaulting a mother-in-law, etc. When the bamboo is ordered, the blows are usually inflicted on the mouth or hands, in order to avoid exposure of the body.

5. *Martial law*.—Martial law is particularly severe, and summary punishment is meted out to offending soldiers by their officers. In ancient days the penalty of tearing asunder by five horses was exacted in certain cases; even now the death penalty is prescribed for such offences as circulating false rumours, attempted rape, etc.

6. *Character of enactments*.—The punishments above enumerated may seem to be exceedingly severe, but it must be remembered that, until quite recent years, there was no police force of any kind in China, the only substitute being the local beadle, or *tipao*, in each district or division, with his subordinates, including the 'swift-horse,' or thief-catcher; and the result of long experience was the conviction that severity, at all events in the promulgation of the law, was necessary, though its application might be tempered with mercy; and the Chinese penal code, though it may not satisfy the high ideals of 20th century Christianity on the score of justice and equity, 'for the repression of disorder, and the gentle coercion of a vast population, appears to be equally mild and efficacious' (G. T. Staunton, *The Ta Tsing Leu Lee*).

7. *The conduct of law*.—The almost total absence

of legal machinery is another feature which is worthy of notice. There is no such thing as the empanelling of a jury; no assistance of counsel for the prosecution or the defence; no association of judges on the bench; no demand for asseveration upon oath. The magistrate sits alone to try the case, unless he decides upon inviting another magistrate to assist him. The cases for and against are prepared by self-constituted lawyers, a somewhat degraded class of literary men, who do not appear in person before the court. The magistrate is furnished by his secretaries with whatever information he may require as to law or precedent, and decision is given, ordinarily, without long delay. The accused cannot be punished until he confesses his crime; and, should he hesitate to do so, the means are available by which such confession may be elicited. Some of these methods have the sanction of law, whilst others are enforced without such authority. The legal instruments of torture consist of wooden presses for squeezing the ankles or fingers, and the bastinado; in addition to these, however, there are many others which have been in force until quite recently, but which have now been nominally abolished—such as forcing the victim to kneel upon hot bricks, iron chains, powdered glass, sand, or salt; twisting the ears; suspending the body by the thumbs or fingers; tying the hands to a bar placed under the knees, so as to bend the body forward in a kneeling posture, etc.

8. Popular courts.—So great is the terror inspired by the law-courts and the 'pens' which do duty for prisons (the Chinese word for prison means originally a 'corral,' or stable for cattle), that many people prefer to settle their cases out of court, by resorting to the 'tea-houses,' which are the equivalents of our public-houses, and submitting the question to the arbitration of those present—the nearest approach to trial by jury; and the practice has become so well established that these tea-houses are often called 'Little Halls of Justice.'

9. Standard of guilt.—An interesting feature of the Chinese enactments is that the standard of punishment, in many cases, is not measured by the character of the offence, but by the amount of profit secured by the offender; the penalty, for instance, of stealing 120 oz. or more of silver is out of all proportion to that which is incurred by stealing 1 oz.; it is assessed on a scale indeed which would seem to place the act in an entirely different category of crime, for the latter is punished by 60 blows, the former by strangulation.

10. Treason.—The punishment of treason is particularly severe, and the list of crimes which are classified as treasonable is very comprehensive. The penalty of making even an attempt against the persons, palaces, or tombs of the Imperial house is execution by the lingering process, and no distinction is made between principals and accessories (though in ordinary cases of crime a careful discrimination is made, and accessories before the fact are punished one degree less severely than the principals). All male relatives of the condemned, in the first degree, i.e. father, grandfather, sons, grandsons, paternal uncles and their sons of the age of 15 or older, are sentenced to decapitation, together with all other male relatives, within the same limit of age, who may be living with the offender at the time. Male relatives of the first degree under the age of 15, and all females similarly related, are distributed as slaves amongst the great officials. The property of the condemned is confiscated by the State. All who renounce country and allegiance are liable to decapitation.

11. Homicide.—The definition of homicide is also very comprehensive, no fewer than 10 possible

cases being included under the term, viz. (1) killing with deliberate intent, the penalty of which is decapitation; (2) killing in an affray, where perhaps no special individual is singled out for slaughter (the punishment in these cases is strangulation); (3) killing by depriving of food or clothing, by the removal of the ladder by which the victim has reached an inaccessible position and is unable to return, by taking the bridle from a rider's horse so that he cannot continue his journey and is stranded in the wilds, by the administration of noxious substances to the mouth, eyes, ears, etc. (in such cases strangulation is decreed); (4) killing by means of dangerous weapons, such as fire-arms, etc., though used only in play; by luring a person into danger by false representations, e.g. leading a man to walk into deep water, assuring him that it is shallow and fordable (strangulation is the penalty in these cases also); (5) killing a person by mistake when intending to kill some one else (the penalty for this offence is beheading); (6) killing accidentally when using legitimate instruments or weapons (compensation is deemed sufficient in such cases); (7) killing through carelessness (punished by beheading); (8) killing by the administration of improper medicines (punishable by beheading, but, if inadvertence can be urged in defence, compensation and retirement from medical practice are ordered); (9) killing by means of traps and snares (punishable by blows and banishment); (10) killing by the utterance of threats which lead to suicide on the part of the threatened person (punished by strangulation).

The removal of a body from the spot where the murder has been committed is treated as a capital offence. In cases of injury produced in fighting and quarrelling, a careful assessment is made of the amount of damage done; e.g., the tearing away of one inch of the opponent's hair is punishable by 50 blows, the breaking of one tooth by 100 blows, of two teeth by 60 blows and a year's imprisonment. Causing a person to be incapable of becoming a parent is punished by 100 blows and banishment to a distance of 3000 li, and, in the case of male offenders, with forfeiture of estates.

12. Privileged classes.—There are no fewer than ten instances where privilege is claimed, as in the case of those enjoying hereditary rank, or high office, or relationship to the reigning dynasty. These classes are excepted from the ordinary processes of law, and the Imperial sanction must be obtained before the law can be put into operation against them. No privilege, however, of whatever kind can avail in a case of treason. The circumstances of the accused, in ordinary cases, are taken into account: as, e.g., extreme youth, i.e. under the age of 15 years; or extreme age, i.e. 70 years and upwards; infirmity, too, is recognized as an occasion for the exercise of lenity and the relaxation of the heavier penalties, with exemption from torture. The condition of the parents of the accused is also taken into account, and an erring son is mercifully dealt with if it be shown that his parents depend upon him for support; even the death penalty may be remitted in the case of an only son, lest his parents should be deprived of the worship which is expected from him after their decease.

13. Favourable treatment of women.—Women are seldom imprisoned, except on capital charges, or for adultery, but are placed in the custody of their nearest relatives; and, if they are arrested when in a pregnant condition, the full penalty of the law is not exacted until 100 days have passed after parturition. Injured husbands are permitted to kill, out of hand, the guilty wife and her paramour, if discovered *in flagrante delicto*; but, if the parties have already left the apartment where the

act was committed, or surrender themselves to the husband, or some little time has elapsed since the event, the husband is not justified by law in exacting the extreme penalty. A master who is accused of killing a slave is not regarded as guilty of a capital offence, but a slave who murders his master is sentenced to *ling ch'i* as guilty of petty treason.

14. *Patria potestas*.—The *patria potestas* is still in force in China, and the slaughter of one's offspring is dealt with as a minor offence, or indeed as no offence at all, if, for instance, a parent has been struck by a son or daughter. The law decrees that the penalty for striking or cursing a parent is death, as was the case with the Hebrews.

15. Professional bullies.—The killing of a professional pugilist, or 'strong man,' is not regarded as murder, on the ground that such persons voluntarily subject themselves to danger and death, and must be prepared to take the consequences of their rashness.

16. The law of debt.—In cases of debt a stated period is allowed by law for repayment, viz. three months after the expiry of the time stipulated in the original arrangement between the parties. In the event of this period of grace being allowed to elapse, the debtor is liable to the bastinado. In some cases the creditor will take up his quarters at the house of the debtor, and continue to live at his expense until the debt is discharged. The fear of being unable to meet one's obligations before the Chinese New Year causes many suicides to take place at that season.

17. Bad company.—Amongst miscellaneous enactments it is worthy of notice that the sons of families enjoying hereditary rank, and officers of government, are prohibited from associating with prostitutes and actors, under penalty of 60 blows.

18. Treatment of domestic animals.—Special laws are enacted with a view to the proper treatment of domestic animals; e.g., when draught animals are improperly harnessed, and sores are thus produced on the back or withers, the penalty of such carelessness is 20 to 50 blows. Similar penalties are imposed in cases of insufficient feeding, etc.

19. Care of the young.—Amongst the laws relating to the care of the young, it may be noted that the 'age of consent' in China is 12 years in the case of both boys and girls, and that a recent edict decreed that smoking on the part of boys under 18 was a punishable offence.

20. Improper conduct.—The comprehensiveness of the Chinese penal code is remarkable; there is hardly a circumstance connected with law and its infraction for which provision is not made; and a large liberty is extended to judges in the treatment of what is described as 'improper conduct'—an expression which is interpreted to mean offences against the spirit of the laws, though not necessarily involving an actual breach of the letter thereof.

21. Lynch law.—In addition to the ordinary legislation there are many unorthodox methods in practice amongst the people in country districts. Lynch law is very common, and the treatment of crime by the people themselves often induces cruelties which fully deserve the designation of 'savage.' Theft is severely punished, as are also fraudulent practices in connexion with marriage negotiations. A favourite method is the suspension of the culprit by his thumbs and great toes to a horizontal branch, so that the body is arched like a bow; sometimes a large stone is placed in the middle of his back to increase his sufferings. In extreme cases, where death is decreed by the village tribunal, a fiendish ingenuity is exhibited in the invention of new methods of torture. In the case of village feuds 'a life for a life' is the

universal standard of justice; annual outbreaks of a kind of vendetta are common in some districts, and continue until the blood-feud is settled by the slaughter of an equal number of persons on both sides.

22. Reform.—The revision of the penal code, so as to bring it into conformity with Western models, is at present under consideration; and a number of Chinese commissioners visited Europe last year [1910] for the purpose of studying Western prison methods, with a view to a reform of the Chinese houses of detention.

LITERATURE.—G. T. Staunton, *The Ta Tsing Leu Lee*, London, 1810; A. Lind, *A Chapter of the Chinese Penal Code*, Leyden, 1887; J. Dyer Ball, *Things Chinese*, Shanghai, 1903; Herbert A. Giles, *A Glossary of Reference*, Shanghai, 1900; W. Gilbert Walshe, *Ways that are Dark*, Shanghai, 1906.

W. GILBERT WALSH.

CRIMES AND PUNISHMENTS (Egyptian).—There is no reliable record of the principles which guided the Egyptian judge in the punishment of crime. There may have been much that was arbitrary in the administration of justice, even in the best bureaucratic period of the New Empire, but that rules dating from a remote age, and attributed to the god Thoth, were appealed to is certain. A charge given by the king to his newly appointed vizier is preserved, but scarcely touches this question.

The Negative Confession in the Book of the Dead (see CONFESSION [Egyptian]) contains a long list of moral and religious obliquities, including adultery, falsification of measures and weights, and cursing the king. More to our purpose is a list of charges brought against a shipmaster at Elephantine, preserved in a papyrus at Turin; amongst his offences are breaking into stores and stealing the grain, embezzling corn put in his charge, extorting corn from the people, burning a boat and concealing the fact, also adultery, and apparently the misuse of cattle bred by the sacred Mnevis sire. There is no record whether the charges were proved, or of the punishment. A decree of King Horemheb to repress military exactions and oppression in Egypt imposes a severe penalty on the unauthorized commandeering of boats; the offender loses his nose and ears, and is transported to the frontier city of Zaru (agreeing with Diodorus' account of the city of Rhinocolura); and soldiers who stole hides were to be beaten with 100 lashes so as to open five wounds, and to restore the property to its owners. Other documents indicate Ethiopia as the place of banishment, where perhaps convicts were forced to toil in the gold mines. The condition of suspected persons after examination 'by beating on their hands and feet' must have been miserable in the extreme, but probably the law contrived to make it still worse for the convicted criminal in the end. Accounts of several criminal trials are preserved—of robbers of the royal tombs (in Breasted, *Anc. Records*, London, 1906–1907, iv. 499–556), and of a conspiracy in the harem against the life of the king (*ib. pp.* 416–456). The punishment of the men and women condemned for participation in, or guilty knowledge of, the conspiracy is not specified, but it was evidently death in some form, and many seem to have been permitted to commit suicide. Two of the judges and two custodians who had misconducted themselves with female criminals during the time of the trial were condemned to lose their noses and ears; one of these committed suicide, while a fifth was perhaps let off with a severe reprimand.

From the end of the Middle Kingdom there is a decree of a King Antef deposing a nomarch (?) and high official of the temple of Coptos, apparently for harbouring the king's enemies. He and all his descendants were deprived for ever of the power

to hold the office. The consequences of desertion to another country are hinted at in the story of the fugitive Sinuhe, who was plainly in peril of death (Maspero, *Contes populaires*³, Paris, 1906, p. 62). In the treaty between the Hittite king and Ramses II. restoration of deserters and free pardon for them are stipulated for on both sides.

F. LL. GRIFFITH.

CRIMES AND PUNISHMENTS (Greek).—

1. A crime may be considered as an act of disobedience to a Divine command, and, as such, punishable, if at all, by Divine retribution; or else, in its stricter sense, as an offence against the ethical sense of the community, for which a definite punishment is prescribed by law. But it is only gradually that the latter notion has been evolved. In the Greek States, none of which succeeded in working out a scientific system of jurisprudence comparable with that of Rome, many crimes continued to be treated, as in primitive communities, as wrongful acts done to an individual, for which he was entitled to claim compensation in a court of law (see Maine, *Ancient Law*¹⁰, ed. Pollock, London, 1907, p. 379). Although the familiar distinction between a crime and a tort was increasingly recognized with the progress of time, acts definitely criminal in character (as being injurious to the community, such as homicide and theft under certain conditions) were technically made the subject of a civil action (*δίκη*) rather than of an indictment (*γραφή*). Even in the latter the State was only indirectly concerned; for a further distinction was made between a private and a public prosecution, and in private prosecutions, which formed by far the more numerous class, the prosecutor was regarded as acting for his own satisfaction rather than as fulfilling a public duty (see Demosthenes, xxi. 25).

It would be impossible, within the limits of an article like the present, even if the material existed, to describe in detail, or even satisfactorily to summarize, the progressive development in the establishment of legal penalties for crime by the various divisions of the Hellenic race, from the dawn of history down to the time when their independence was finally lost. All that we shall attempt is a short survey of the general ideas relating to the subject of crimes and punishments which prevailed from time to time according to the most important literary records, together with some account of the particular remedies provided by the Athenian law-courts, in the period for which our information is most abundant, namely, the 5th and 4th cents. B.C. For States other than Athens the necessary evidence is almost entirely wanting, and there is not much advantage in recording such scraps as have come down to us, when it is impossible to present them in their proper setting, or to make a trustworthy estimate of their value. There is the less inconvenience in taking this course, inasmuch as the pre-eminence of the Athenian judicial system is reflected in the remark that the Athenians invented the regular administration of justice (*Ælian, Var. Hist.* iii. 38). Still, it would be a mistake to suppose that the Athenian courts were a unique product of Hellenic civilization. Of the better-known Greek States it seems probable that Sparta was the most backward; and the existence of an elaborate judicial organization in remote and semi-barbarous communities such as Gortyn and Western Lycris leads to the conclusion that great commercial cities like Egina, Megara, and Corinth had a legal system as highly developed, if not so famous, as that of Athens herself (L. Whibley, *Greek Oligarchies*, London, 1896, p. 177).

2. With crime in the wider sense, as a breach of religious obligation, and the Divine punishment which it thereby merits, we do not propose here to deal, since they will be sufficiently discussed elsewhere (e.g. ERINYES, ESCHATOLOGY [Greek]). Nevertheless, the gradual growth of a system of jurisprudence was so largely conditioned by religious belief that we cannot entirely put out of view the religious as distinct from the legal aspect (see, generally, Maine, p. 381). Their connexion is most strongly marked in the case of the most important of all crimes, that of homicide. In the primitive age, for which our authority is to be found not only in the Homeric poems, but also in the writings of the Tragedians, so far as they reproduce the old legends, beliefs, and customs

prevalent in the Epics now lost, it was universally believed that the shedder of blood was pursued and punished by the avengers ('Erinyes) of the slain man (*Æsch. Cho.* 401; *Soph. El.* 113). These supernatural visitants may be regarded as the embodiment of the curse pronounced by the injured victim against the wrongdoer (*Æsch. Theb.* 70), or even as the punishment itself (*Ποινή*). In Homer, however, they never appear as punishing murder, but rather as protectors of parents against wrongs done to them by their children, and as guardians of the sanctities of family life. The mother of Meleager cursed her son for slaying her brother, and prayed for his death; her prayer was heard by the Erinyes that walk in darkness (*Il.* ix. 571). Similarly, we find Œdipus visited by the curse of Iocasta (*Od.* xi. 280); the Erinyes were summoned to avenge the dishonour done by Phœnix to his father Amyntor (*Il.* ix. 454); and, so far as can be seen, they were ready to visit every crime committed against the ties of family or society (Ameis-Hentze on *Od.* ii. 135). There is nothing in Homer to show that the Erinyes did not punish homicide in a proper case; and, inasmuch as they avenged wrongs done to kindred, they might well have been found harassing Orestes for the murder of his mother, if Homer had narrated this version of the story (T. D. Seymour, *Life in the Homeric Age*, New York and London, 1907, p. 89). The subjects handled by the Tragic poets, being more nearly concerned with the ideas of crime and punishment, regularly present the Erinyes as the avengers of bloodshed, and more particularly of the murder of kinsfolk. Their victim, driven from place to place, in his vain effort to escape (*Æsch. Eum.* 210), was attacked by madness (*Eur. Iph. Taur.* 1481) or wasting sickness (*Or.* 398 ff.), until he either was released by death or effected a reconciliation with those whom he had wronged; such was the fate of the matrieides Orestes and Alcmæon.

3. Again, in primitive times punishment was believed to be exacted in this life (*Il.* iii. 278 is exceptional), and the vigilance of the retributory power to be as unvarying as it was relentless. And, when experience seemed to show that the offender often escaped with impunity, it was easy to reply that vengeance was certain, even if it was slow to come (*Æsch. Ag.* 58, *ὑστερόποινον ἔργον*; *Soph. Ant.* 1074; Jebb on *Æd. Col.* 1536); and that retribution would visit his descendants, even if the original offender was allowed to escape (*Il.* iv. 160; *Solon, frag.* 4. 27 ff.; Rohde, *Psyche*⁴, ii. 228). Until a comparatively late date this was one of the excuses alleged by the Stoics, who were hard put to it to reconcile the existence of moral evil with their doctrine of Providence (*Cic. Nat. Deor.* iii. 90). But these crude notions failed to satisfy the curious inquirer or the ardent champion of Divine justice. Æschylus, a profound religious thinker, attempted to justify the gods by the assertion that the sin of the ancestor begets a tendency to sin in his descendants (*Ag.* 755-766), so that the actual sufferer is punished, not directly for his ancestor's guilt, but because he himself has yielded to temptation. But popular superstition required a less subtle solution. Even if the innocent must suffer for the guilty, it could not be supposed that the guilty themselves escape altogether. Hence came the belief in punishment after death, which may properly be called post-Homeric, though it appears in an isolated passage of the *Nekyia* (*Od.* xi. 576-600; see Seymour, p. 468). It was a leading tenet in the creed of the devotees of Orphism (*Plat. Rep.* 364 E; Rohde, *Psyche*⁴, ii. 128). The same doctrine took firm root in the convictions of the initiated, who had availed themselves of the reward offered to the partici-

pators in the Eleusinian mysteries, that they, and they alone, could look forward to a blessed existence after death (Soph. frag. 753); though how far it is correct to speak of the 'symbolism' of the mysteries themselves is a difficult and doubtful question (Rohde, i. 294 ff.). From such sources the doctrine spread even to philosophic circles, where it provided the material for several of the myths in the writings of Plato (*Phædo*, 110 B, *Rep.* 614 B, *Gorg.* 523 A), as well as for those of his imitator Plutarch (*Sera Num. Vind.* p. 563 ff.; *Gen. Socr.* p. 590), and was countenanced by the Stoics in their efforts to make common cause with the upholders of the popular religion (A. C. Pearson, *Fragments of Zeno and Cleanthes*, Cambridge, 1891, p. 146).

4. The belief in the power of the spirit of the murdered man to exact vengeance persisted throughout the historical age, but the practical consequences to the murderer in the attitude of his fellows were widely different in Homeric society from those which prevailed at a later time. The homicide in Homer was under no disability, so long as he kept outside the range of the influence exercised by the clan among whom the murder was committed; but within those limits his life was forfeit to the kinsmen of the murdered man (*Od.* xv. 271 ff.). So long as the murderer remained at home, the kinsmen were bound to exact the blood-penalty, if they themselves wished to avoid the wrath of the dead man's ghost; only by permanent exile, by renouncing for ever the ties of home and country, could even one who had accidentally caused the death of another escape from the vengeance of the blood-feud. Such is the inference to be drawn from the fate of Patroclus (*Il.* xi. 769 ff., xxiii. 85 ff.). But once he reached a new country, no moral disgrace and no religious tabu attached to the person of the fugitive murderer, although his act was deliberate. Even assassination seems to excite no moral disapprobation (*Od.* xiii. 267). Exile, however, was not always inevitable. If the relatives were willing to accept a fine, the murderer might by a payment acceptable to them compound for his life, and remain at home (*Il.* ix. 628-632). There is nothing here of ceremonial uncleanness, or of the propitiation of an offended deity (Rohde, i. 271); a murder is a wrong done to the family which has lost a member, and it is for them to exact a suitable expiation. The only reference to judicial proceedings in connexion with homicide is in the description of the shield of Achilles (*Il.* xviii. 497-508). Unfortunately, however, critics are not agreed on the nature of the trial scene; and the question is still open whether the issue to be tried before the elders was one of fact—had the blood-price been paid or not?—or whether the community had undertaken to decide the question of right, when a blood-price had been offered and refused. (See, on the one hand, Seymour, p. 89, and Lipsius, *Das attische Recht*, p. 4; and, on the other, Leaf, *in loc.*, and Maine, p. 406.)

5. When we pass to historical times, we find an entirely different state of affairs. The only adequate explanation of the change seems to be that in the interval a new religious influence had grown up, strong enough to modify completely the Greek conception of murder. This was the Delphic cult of Apollo, which at one and the same time emphasized the moral guilt of the shedder of blood, and by its ceremonies of purification opened the means of escape from the need for a blood-requital. But it is not easy to understand why the possibility of compounding by a money fine, which the Homeric poems attest, should have given way to a stricter estimate of guilt (Rohde, i. 267; Demosthenes, xxiii. 28, 33), which appears to be a reversion to the primitive rule that every

murder must be expiated by blood (*Æsch. Cho.* 311). It has usually been inferred that the practice of Homeric society was a temporary deviation due to special conditions, which suspended the normal development of Greek ethics (T. Gomperz, *Greek Thinkers*, Eng. tr., 1901, ii. 4).

6. The Athenian criminal code.—However this may be, when we at length reach the system administered by the Athenian courts, we find that the punishment no longer depends upon the choice of the individual avenger, but is prescribed by the State (Demosth. xxiii. 69), although the kinsman is still required to appear as the instrument which sets the law in motion, unless the murderer has been forgiven by his victim before his death (*ib.* xxxvii. 59). The circumstances and motive of the homicide are no longer regarded as indifferent, but the various grades of guilt are distinguished with precision. Thus (1) the supreme court of the Areopagus, instituted, according to the legend, on the occasion of the trial of Orestes, had jurisdiction in cases of wilful homicide (*φόνος ἐκούσιος*). The judges were the Council of the Areopagus, a body recruited from those who had served the office of *archon* and had passed a subsequent scrutiny, under the presidency of the 'king' *archon*, who, as exercising the priestly functions of the old kings, testified by his presence to the religious character of a trial for blood-guiltiness. The penalties of death and confiscation of goods followed a conviction (Demosth. xxi. 43). The Areopagus also had jurisdiction over cases of wounding with malicious intent (*πράγμα ἐκ προνοίας*), of arson (*πυρκαϊά*), and of poisoning (*φαρμάκων ἐάν τις ἀποκρίνητοίς*). The penalty for wounding and for poisoning, if death did not result, was banishment and confiscation of property; if the poisoning was followed by death, it was punished in the same manner as murder committed by violent methods.

(2) The second of the courts dealing with homicide sat at the Palladion, a sanctuary of Pallas, outside the walls, on the east side of Athens. Here were tried cases of involuntary homicide, and of conspiracy against the life of another (*βούλευσις*; Arist. *Resp. Ath.* 57. 3), as well as those relating to the killing of a slave, a resident alien, or a foreigner. The sentence on a person found guilty of involuntary homicide required him to remain in exile until he had appeased the relatives of the deceased, or, if he failed to do so, for a definite (but not ascertained) period. The death of a non-citizen seems also to have been punishable with banishment.

(3) Not far from the Palladion was the Delphinion, or Temple of Apollo Delphinios, where all were tried who alleged that the homicide committed was justifiable or excusable. The examples given are the slaying of an adulterer taken in the act, death on the battle-field in consequence of mistaken identity, and the fatal result of an athletic contest.

(4) Of minor importance was the court in the precinct of the hero Phreatus (Lipsius, p. 130), on the Piræus peninsula, where any person was tried who, while in exile for involuntary homicide, was accused of murder or malicious wounding committed before he went into exile. In such circumstances the accused pleaded his case from a boat moored off the coast.

The judges in the three courts last-mentioned were a body known as the *ἐφέται*, 51 in number, about whose qualifications and mode of appointment there is no information except the vague statement that they were chosen from among the well-born citizens. Their number may be explained by the 'king' *archon* being counted as one of them, or may be due to the same principle as prevailed in the jury-courts—the necessity of an odd number in

order to secure the decision of a majority (Lipsius, n. 18; otherwise Gilbert, *Handbuch d. gr. Staatsalterthümer*², p. 136). This system seems to have lasted from the time of Draco until about the year 400 B.C., when, in place of the *ephetai*, a panel of ordinary jurymen (*ἡλιασταί*) was substituted (Lipsius, p. 41). The president in these courts was always the 'king' *archon*.

(5) Lastly, there is the court of the Prytaneum, composed of the four tribal 'kings' (*φύλοβασιλεις*) together with the 'king' *archon*, who, when the actual criminal could not be discovered, conducted a ceremonial trial of the weapon or of any other inanimate object, such as a stone or a piece of timber, by means of which a death had been caused. At the conclusion of the trial the inanimate instrument of death was cast beyond the boundaries of the State. A similar proceeding took place if the death was due to an animal (Arist. *Resp. Ath.* 57. 4). Here we have obviously the survival of a custom which went back to a remote antiquity.

In regard to trials for homicide, the following points of interest may be noted. (a) The connexion of the trial with the primitive blood-feud is preserved in the requirement that the prosecution must be undertaken by the nearest relatives of the deceased. (b) The trial always took place in the open air, in order to avoid any possible pollution to those present from being under the same roof with the accused. (c) The fact that the place of trial was always a temple is derived from the time when the slayer was protected by the right of asylum, until he had agreed with his adversaries on the amount of the blood-price. (d) The accused could withdraw himself from the trial not later than the conclusion of his opening speech (Demosth. xxiii. 69), and, so long as he remained abroad, his life was protected; but, if he returned to Athens, he could be put to death with impunity. (e) Ceremonial purification was required before even an involuntary homicide could be restored to his full rights. (f) The court of the Areopagus was closely associated with the cult of the Erinyes, who appear as the accusers of Orestes not only in Æschylus, but in the account preserved in Demosth. xxiii. 66 (Rohde, p. 269).

At Sparta, cases of homicide were tried before the council of elders (*γερονσία*), where other public proceedings also took place (Arist. *Pol.* iii. 1, 1275b, 10). From a case in which permanent exile was the penalty for an act of involuntary homicide committed in childhood (Xen. *Anab.* iv. viii. 25), it has been inferred that the rule of primitive society had received hardly any modification. For offences punishable with death the Spartans adopted the curious rule that, if a man was once acquitted, he remained still liable to stand a second trial (Gilbert, p. 89). The death penalty was carried out by night; and the condemned man was either strangled in prison or thrown from a height into a hollow called *καάδας* (Plut. *Ages.* 19; Thuc. i. 134). We hear also of banishment, disfranchisement, and money fines being inflicted as punishments; but our information is so meagre that we can seldom distinguish the various crimes to which they were assigned; it appears, however, that cowardice in battle was punishable with exile (Thuc. v. 72), and *παίδεραστία* with permanent disfranchisement (Plut. *Mor.* p. 237 C). In Boeotia murder trials took place before the council (Xen. *Hell.* vii. iii. 5).

To return to Athens: it is desirable, before proceeding further, to mention certain salient characteristics of the administration of the Athenian criminal law which distinguish it from the system established in Great Britain. Every criminal proceeding was assigned to the office of a magistrate or board, who took charge of the necessary docu-

ments, heard all the preliminary applications, and presided at the actual trial. But these officials were very far from exercising the functions of a modern judge. They had no legal training or experience, but were simply laymen holding office for a year, a few being chosen by election, but the majority owing their position to the chance of the lot. Their duties were for the most part ministerial, and at the trial they exercised no control over the jury, who were supreme as representing the sovereign people. These latter—in criminal trials a panel, generally 501 in number and often far larger, chosen by an elaborate system from a body of 6000 dicasts annually enrolled—were little apt to stop an irrelevant argument, if it appealed to their fancy, or to require every statement of an advocate to be proved by strict evidence (Mahaffy, *Social Life in Greece*³, London, 1877, p. 387 ff.). Their freedom from responsibility tempted them to decide according to the caprice of the moment, and their ignorance enabled advocates to misrepresent the law without any check but the speech of the other side. Moreover, they were often swayed by political prejudice and passion, and even, as we are credibly informed, were prepared to swell the State revenues by confiscation of the goods of the accused in order to improve the security for the jurymen's pay (Aristoph. *Eg.* 1359 f.; Lysias, xxvii. 1). They voted by ballot, and a simple majority prevailed. In many cases the sentence was fixed by law (*ἀγών ἀρμητος*); but, where it was left to the discretion of the court (*ἀγών τυμητος*), the jurors had only a choice between two alternatives, as presented to them by the contending parties. It is obvious that any wider liberty would have been attended with serious practical difficulties.

If the crime of treason (*προδοσία*) was not precisely defined in their code, it was not because the Athenians cared little about the security of their constitutional liberty. On the contrary, the names of Harmodius and Aristogiton were always cherished, and special privileges granted to their descendants, in order that the Athenians might never forget the dangers from which their ancestors had been liberated. Charges against the oligarchical party of conspiring against the democracy (Aristoph. *Eg.* 236), or against some popular leader as aiming at a tyranny, were freely bandied to and fro during the troublous times of the Peloponnesian War: 'Aye "conspiracy" and "tyrant," these with you are all in all, | Whatso'er is brought before you, be the matter great or small' (Aristoph. *Vesp.* 488 f., tr. Rogers). The importance attached to the safety of the democracy is attested by the provision of a special process (*εισαγγελία*) for the impeachment of traitors. Historically, indeed, it may be regarded as a survival of the only form of criminal procedure known to the primitive State, in which there is no distinction between a criminal trial and an act of legislation (Maine, pp. 383, 393). But in practice this solemn proceeding was reserved for the trial and punishment of serious public offences which do not admit of delay (Harpoer, s.v. *εισαγγελία*). A law of Solon entrusted the Areopagus with the trial of those who conspired to overthrow the democracy (Arist. *Resp. Ath.* 8. 4); but it was at a later date—which has been fixed as either about the middle of the 4th century (Lipsius, p. 192), or soon after the fall of the Four Hundred (Thalheim, in *Hermes*, xxxvii. [1902] 342 ff.)—that a comprehensive enactment enumerating and defining various treasonable acts (*νόμος εισαγγελτικῆς*) was passed into law. The offences comprised in it may be divided roughly into four classes: (1) attempts to overthrow the constitution, either actual or constructive; (2) the treacherous surrender of a fortified place or of a military or naval force; (3) desertion to the enemy, or assistance given to,

or bribes received from, them;¹ (4) corrupt advice given by a speech in the assembly (Hyperid. iii. 22). Either as included in the scope of this enactment or as authorized by earlier or separate legislation, we find provision made for proceeding by impeachment against those who made deceitful promises to the people, and against ambassadors who were false to their duty (Demosth. xix. 277, xx. 135). The procedure, as might have been expected, was entirely different from that of an ordinary criminal indictment. An impeachment might be either instituted before the Council of the Five Hundred or brought direct to the Assembly. In the former event, if the Council approved the prosecution, the accused was forthwith arrested (or held to bail in a case of lesser importance), and the *θεσμοθέται* were authorized to bring the matter before the Assembly. If the matter came in the first instance before the people, it was customary to direct a preliminary investigation by the Council; and from that point the procedure was the same as if it had been initiated before the Council. The trial was either held in the Assembly, or, according to the more usual practice, remitted to one of the ordinary law-courts. If the trial took place in a law-court, the number of dicasts was at least 1000, and we read of as many as 2500 being empanelled (Dinarch. i. 52). The penalty was usually death and confiscation of goods, and invariably so after about the middle of the 4th cent.; but there are grounds for thinking that before this time it was subject to assessment, or was sometimes fixed beforehand by the people, conditionally upon conviction. As an additional penalty, in order to mark the enormity of the crime, the body of a traitor was refused burial in Attica (Hyperid. ii. 20).² In early times, in order to encourage prosecutors to undertake proceedings, it was provided that any one who failed to obtain a fifth part of the votes should not be liable to the usual fine of 1000 drachmæ; but in the year 330, when the facilities thus given were abused, the privilege had been withdrawn (Demosth. xviii. 250).

The remedy of *ελασγηνία* was also prescribed for certain offences of a less serious character, such as official maladministration, particularly in the office of an arbitrator or in the dockyards; and also to rectify wrongs committed against those who were in a dependent position, or had special claims to protection, such as orphans or heiresses. In the latter case the process, though called by the same name, was altogether different, but was distinguished from the ordinary indictment in various respects, to the advantage of the prosecution. Thus the prosecutor (1) was not restricted in point of time, but was allowed to speak as long as he wished; (2) was subject to no penalty, if he failed to secure a fifth part of the votes; and (3) was not required to make use of a writ of summons (*πρόδικησις*) when laying his plaint (Wyse on Isæus, iii. 46). But, instead of going to the Council or to the Assembly, the prosecutor made his 'denunciation' to the chief *archon* (*ἐπὶ δύνως*), who exercised a criminal jurisdiction in this matter corresponding to his official superintendence of inheritance cases. The chief *archon* was, in fact, in a position similar to that of an English Lord Chancellor, who, as represented nowadays by the judges of the Chancery Division, has full jurisdiction over the persons and properties of his wards, and can punish for contempt of Court those who offend against his decrees (cf. Demosth. xliii. 75). But, whereas the

English judge exercises plenary powers, the Athenian *archon*, apart from a limited power of imposing a fine, only conducted the interlocutory proceedings and prepared the case for the decision of the dicasts. In this connexion we are informed that the analogous offence of injuring parents included, besides corporal injury, refusal of food and lodging, and neglect in performing the customary rites at the tomb. A son convicted of maltreatment of parents was punished with complete disfranchisement (*ἀτιμία*), but the procedure in his case was by way of an ordinary indictment before the *archon* (Lipsius, p. 351). Whether there was any other penalty is unknown; but, even apart from a prosecution, candidates for office were liable to be rejected on the scrutiny (*δοκιμασία*), and speakers in the Assembly ran a similar risk, if it could be shown that they were guilty of undutiful conduct. Proceedings for injury done to orphans and heiresses (*ἐπὶ κληροῖ*) might be taken against their guardians, and in the latter case also against their husbands, or their nearest male relatives, if these attempted to avoid the obligation imposed upon them either to marry the heiress or to furnish her with a suitable dowry. The penalty was assessable by the court; but, though Isæus (iii. 47) speaks of the extreme punishment as applicable to such cases, it is unlikely that the offence usually entailed more than a heavy fine together with disfranchisement. There was also the offence of injuring an orphan's estate (*ὀκνοῦ ἔρφανικοῦ κακώσεως*), which appears to include misappropriation or unlawful retention, as well as fraudulent or negligent mismanagement. As another parallel to the Lord Chancellor's powers, it may be mentioned that the chief *archon* had jurisdiction in lunacy; for to him was preferred an indictment by the relatives, when it was alleged that any one had become incapable of managing his private affairs (Arist. *Resp. Ath.* 56. 6).¹ The chief *archon* had also jurisdiction in the indictment for idleness (*ἀργίας γραφή*), generally supposed to have been capable of enforcement against a man who had no property and refused to exert himself in order to obtain an honest living. Unfortunately, the information respecting it is scanty, but it has recently been suggested (Lipsius, p. 340) that its real purpose was not so much educational as to vindicate the concern of the State for the due preservation of family property, and to punish the dissipation or improper alienation of an inheritance. Draco is said to have made death the penalty (Plut. *Sol.* 17), but Solon (or Pisistratus) substituted a fine of 100 drachmæ on the first and second conviction, and complete disfranchisement on the third (Poll. viii. 89).

The 'king' *archon*, whom we have already met in connexion with murder trials, was the presiding magistrate in prosecutions for impiety (*ἀσέβεια*). This offence had a wide ambit, ranging from acts of sacrilege to the expression of speculative opinions on the origin and government of the universe. It corresponds, therefore, in part to blasphemy, which is still an indictable offence in England, although prosecutions are nowadays practically unknown. A prosecution for impiety was a convenient weapon in the hands of the obscurantists, if they desired to check the growth of revolutionary opinion, or to interfere with the teaching of a successful opponent. Thus it was used against Diagoras of Melos and Theodorus the Cyrenaic, for publishing atheistic doctrine (schol. on Aristoph. *Ran.* 323; Diog. Laert. ii. 101); against Anaxagoras for calling the sun a fiery mass (Diels, *Fragmente der Vorsokratiker*, i.² [Berlin, 1906] 294); against Pro-

¹ A famous instance of a trial of this kind was the prosecution instituted by Lycourgos against Leocrates, who was alleged to have abandoned his country after the fatal battle of Chæronea.

² It is interesting to find that the last-named provision was a traditional usage of immemorial antiquity, since it is implied in the story of the burial of Polynece by his sister Antigone (see Eur. *Phæn.* 1630).

¹ The best-known instance is that of Sophocles, against whom proceedings of this kind are said to have been taken by his son Iophon (*Vit. Soph.*; Plut. *Mor.* p. 785 A)—although the story may well have arisen from the malicious gibe of a comic poet (Lipsius, p. 356).

tagoras for opening his treatise on the gods with a profession of inability to say whether they existed or not, or what they were (Diels, ii.² [1907] 525); and against Socrates, whose indictment charged him with corrupting the young men by introducing the worship of deities other than those recognized by the State (Plato, *Apol.* 24 B). On the other hand, Alcibiades was impeached (*εισαγγελέσθαι*) on the delation (*μίσθναι*) of an informer for holding a mock celebration of the Eleusinian mysteries in his own house (Plut. *Alcib.* 22); and an information (*ἐνδείξις*) was laid against Andocides for taking part in a sacrificial act, while under a disability previously imposed (*Andoc.* i. 71). The sacrilegious robbery of sacred property from a temple was treated as a distinct crime, and was punishable with death, deprivation of the right of burial, and confiscation of goods, on an indictment preferred before the *thesmothetæ* (*γραφὴ ἱεροσυλίας*). Thus various forms of procedure may have been open to the accuser, as Demosthenes (xxii. 27) takes occasion to remark; but, so far as our information goes, the trial always took place before a heliastic court. A single exception, known to us from the 7th speech of Lysias, relates to the charge of uprooting the stump (*σηκός*) of a sacred olive-tree. Here the cause was pleaded before the Council of the Areopagus, under whose supervision these olive-trees had been placed. In this case the punishment was fixed by law—death for destroying a tree, and banishment for removing a stump. For impiety in general, however, the penalty—death, banishment, confiscation of goods, or money fine—was left to the assessment of the jury, as is known from the celebrated trial of Socrates.

Adultery (*μοιχεία*) was treated at Athens as a criminal offence, and was punished with severity, as was natural in a society which tolerated concubinage. The adulterer might be prosecuted on an indictment laid before the *thesmothetæ* (Arist. *Resp. Ath.* 59. 3), and the sentence was probably left to the decision of the court (Lipsius, p. 432). But the injured husband could also take the law into his own hands. He might either kill the adulterer, and plead justifiable homicide in answer to any proceedings taken against him; or he might detain or exact sureties from him, until he was satisfied by a money payment. In the latter case, however, the alleged adulterer could maintain an action for false imprisonment (*ἀδικος ἐλπίσθαι ὡς μοιχόν*) against the husband, and, if successful, was released from any undertaking he had given under duress. If the husband continued to live with a declared adulteress, he suffered disfranchisement; and the adulteress herself was forbidden to enter the temples or to wear the customary ornaments of free women. If she infringed these restrictions, she might be subjected with impunity to any injury short of death ([*Dem.*]lix. 87). Stringent penalties were in force against those who procured youths or girls for immoral purposes (*προαγωγίας*), and a total disability was imposed automatically upon those who had prostituted themselves, so that, if they exercised any civil right, they became liable to an indictment (*γραφὴ ἑταιρώσεως*), and, if convicted, to be sentenced to death. Cf. also art. ADULTERY (Greek).

In dealing with other crimes of violence against persons or property, we have to take into account a large variety of procedure. Thus Demosthenes (xxii. 25 ff.), having occasion to point out that Solon, in providing different remedies for single crimes, intended to ensure that no law-breaker should go free by reason of the poverty or incapacity of his accuser, illustrated his remarks by the example of theft, in which the injured party might proceed either by way of arrest (*ἀπαγωγὴ*), by leading the magistrates themselves to the spot

where the culprit was to be found and requiring them to seize him (*ἐφ' ἡγήναι*), by an ordinary indictment (*γραφὴ*), or, lastly, by a civil action (*δίκη*). Similarly, he thinks it difficult to imagine that any one who was proved to have committed assault and battery could escape punishment at Athens (liv. 17). For, in the first place, an action for slander (*κακηγορίας δίκη*) had been devised to prevent the commission of the offence at all, or at least to minimize its occurrence; and, if it was committed, in addition to the ordinary indictment for assault (*γραφὴ ὕβρεως*), there was an action for battery (*δίκη αἰκίας*), or, if the offence was so grave as to require it, a prosecution for unlawful wounding (*τραύματος*) before the Areopagus (see above). In certain circumstances there was still another remedy. When Demosthenes, acting as *choregos* at the Dionysia, was grossly assaulted by Midias, instead of contenting himself with a personal suit, he made a public complaint (*προβολή*) before the Assembly in order to obtain the authorization of the people for the institution of proceedings. The object, of course, was to make full use of the prejudice which would be excited against the defendant by a decree of the people; and perhaps, in the case of an aspiring politician, it might be more advantageous to obtain the advertisement of a public debate on his wrongs than to rest content with the satisfaction to be gained from a heliastic court alone. But the *προβολή* had only a limited range, being confined, according to our authorities, as now interpreted (Lipsius, p. 214 f.), to charges against sycophants, i.e. false accusers, or those who had made use of legal proceedings in order to extort money, or for some fraudulent purpose, but only when their false professions had misled the people; and against those who committed an outrage during the progress of certain religious festivals, such as the Dionysia or Eleusinia. If a vote was given against the accused (*καταχειροτονία*), the prosecutor proceeded to lay his complaint before the *thesmothetæ* (Arist. *Resp. Ath.* 59. 2), and the trial proceeded in the ordinary way. There was, however, one peculiarity which, according to a recent view, attached to the trial of a *προβολή* as distinguished from all other prosecutions in which the punishment was assessable by the court. In ordinary cases, as we have already seen, the judges were compelled to select one of two alternatives; but, in the speech against Midias, Demosthenes invites the jury to assess any penalty which they think adequate, and implies that this may range from death or confiscation of goods to a paltry fine (§§ 21, 151, 152). (See Goodwin's *Demosthenes against Midias*, Cambridge, 1906, p. 161; otherwise, Lipsius, p. 218.)

Of the other processes mentioned above, the most important was the *arrest*, which was applicable to certain classes of offenders, when openly detected in crime. These were known comprehensively as malefactors (*κακοῦργοι*), and specifically as thieves (*κλέπται*, a term not including every offender of this kind, but only such as stole by night or in a gymnasium, or, if the theft took place by day and under other conditions, stole property of the value of more than fifty drachmæ, or, if the crime was committed in the harbours, of more than ten drachmæ [Demosth. xxiv. 113]), kidnappers (*ἀνδραποδιστὰι*), highwaymen (*λωποδύται*), burglars (*τοικωροίχοι*), and pickpockets (*βαλλαντιοῖχοι*). Such cases came under the jurisdiction of the police magistrates known as the Eleven, and the punishment was death. If the crime was admitted, punishment followed at once; but, if it was denied, the culprit was kept in durance until trial (Arist. *Resp. Ath.* 52. 1), unless he was bailed out by three citizens (Antiph. v. 17). The process of arrest

seems gradually to have been extended, so that it was sometimes employed against murderers, as in the speech of Antiphon, *de cæde Herodis*, and in that of Lysias against Agoratus. An entirely distinct application of the process must be recognized when it was directed against those who, while under disability (*ἀρμότοι*), had usurped the privileges which they had forfeited, and against exiles who had returned home. In the last-mentioned cases the penalty was assessable, except for those who were already under ban of death. If the intending prosecutor had not sufficient strength or courage to arrest the felon himself, he could fetch a magistrate to the spot and get him to act (*ἐφήγηται*). It is probable that this proceeding was the complement of arrest, and applicable to the same crimes; but the evidence is scanty, and touches only the cases of theft (Demosth. xxii. 26), the harbouring of fugitives, and the secret retention of State property (Suid. s.v.).

There is often mentioned, in conjunction with arrest, the process of information (*ἐνδεύς*). This answers to the second kind of arrest mentioned above, and was employed against State-debtors, returned exiles, murderers, and generally all who, being under disability, frequented places or performed acts from which they were excluded by law. In the case of State-debtors the presiding officers were the *thesmothetæ* (Demosth. xxiv. 22); in other cases the Eleven (Arist. *Resp. Ath.* 52. 1). The penalty naturally varied according to the gravity of the offence, and was often assessable, as in the case of a disqualified dicast assuming to act as such (Arist. *Resp. Ath.* 63. 3); but, if a State-debtor usurped the functions of a public official, he was liable to the death-penalty (Demosth. xx. 156).

If a man whose goods had been stolen was either unable or unwilling to use the process of arrest, he might proceed by way of indictment for theft (*γραφὴ κλοπῆς*) before the *thesmothetæ*, as an alternative to the civil action for the same delict. Draco's code had made death the sole penalty for theft (Plut. *Sol.* 17), but later legislation allowed the court to fix the penalty. Imprisonment might be inflicted in addition to the main penalty, and disfranchisement followed a conviction.

For personal injury resulting from an assault, or for acts of shameful and indecent insult to the person of child, woman, freeborn man, or slave, the appropriate remedy was an indictment for wanton assault (*ὕβρεως γραφή*), before the *thesmothetæ*. The essence of the offence, as distinguished from the battery which might be made the foundation of a civil action (*αἰτίας δίκη*), lay in the motive which prompted the outward act. A mere blow, according to Aristotle (*Rhet.* i. 13. 1374a, 13), is not necessarily a sign of wantonness, but only when the object to be attained is the disgrace of the sufferer or the pleasure of the striker. The penalty was assessable, and might amount to death in serious cases; but it was subject to the peculiar provision that the vote was taken immediately after the verdict on the main issue, without the usual opportunity being given to the parties to recommend their respective assessments (Lipsius, p. 428 f.).

We must next consider offences connected with the unlawful assumption or fraudulent exercise of civil privileges. Pericles had carried a law that an Athenian citizen must be the offspring of a father and mother who were both Athenians (Arist. *Resp. Ath.* 26. 4); and it was re-enacted in the archonship of Euclides, with a saving clause to guard existing rights. Any one who exercised the rights of a citizen without being entitled to them was liable to indictment by a common informer as an alien (*ἐνέλις γραφή*), and, if convicted, was sentenced to be sold as a slave. Further, if such a

person procured his acquittal by bribery or collusion, he was amenable to the same penalty (*δωροφειρίας γραφή*). Similarly, a resident alien (*μέτοικος*), who neglected to enroll himself under a patron, could be indicted (*ἀπροστασίον γραφή*) before the third *archon*, known as the 'polemarch,' who exercised over *μέτοικοι* the same jurisdiction which belonged to the chief *archon* in regard to full citizens.

It is obvious that the existence of such proceedings opened a favourable field for the crime of malicious prosecution, and helped to swell the class of persons who made their living by preying on the fears of their fellow-citizens. The plays of Aristophanes are full of references to the contemptible class of sycophants which flourished during the latter part of the 5th cent., and, in order to protect society against their depredations, the fullest opportunity was given to proceed against them by indictment or otherwise (Isocr. xv. 813 ff.), and the assessment of the penalty was in the discretion of the court.

It is remarkable that the offence of perjury—the only crime which Homer (*II.* iii. 278) mentions as visited with punishment after death—was considered, if committed by a witness in the course of a trial, to demand nothing more than a civil remedy (*ψευδομαρτυρίον δίκη*); although disfranchisement was one of the consequences which might result if the defendant lost such an action (Isæus, v. 17); and it followed automatically if he was convicted three times. On the other hand, falsely to swear to the service of a summons rendered the perjurer liable to criminal proceedings (*ψευδοκλητείας γραφή*), in which he might even be punished with death (Demosth. liii. 18). A triple conviction led to the same result as the similar conviction of a perjured witness.

An indictment for bribery (*δάρων*) might be laid not only against officials, but against all others who received, or gave, or promised a bribe, with the object of conferring or procuring an advantage to the detriment of the State or of any individual citizen. Moreover, a magistrate who, at the expiration of his term of office, was convicted, at the scrutiny conducted by the *λογισταί*, of having embezzled or taken bribes, was fined ten times the amount in question (Arist. *Resp. Ath.* 54. 2). The penalty of tenfold compensation also attached to a conviction on the general indictment, and was exacted from any official convicted of the embezzlement of public funds, on an indictment before the *thesmothetæ* (*κλοπὴ δημοσίων, or λεῶν, χρημάτων*). A separate indictment (*δεκαασμοῦ*) existed to meet the case of bribes given to, or received by, a member of the Assembly, the Council, or the jury-panel, or an advocate (*συνήγορος*), for the purpose of influencing a decision by any of the bodies concerned. The only penalty mentioned is that of death (Isocr. viii. 50).

The earliest recorded instance of the bribery of a jury is that of Anytus, afterwards notorious as the accuser of Socrates, who succeeded by this means in escaping an adverse verdict after the failure of the expedition to Eryas in 409 (Arist. *Resp. Ath.* 27). Demosthenes is said to have been ordered to pay a fine of fifty talents in connexion with the affair of Harpalus (Plut. *Dem.* 26); but neither from this not entirely credible statement, nor from the mention by Dinarchus of the death-penalty (i. 60), can any inference be drawn as to the penalties incident to an ordinary prosecution for bribery.

Debasement of the coinage was a crime punishable with death (Demosth. xx. 167, xxiv. 212).

Military offences were tried before the generals, with a jury composed of the comrades of the offender. Our authorities distinguish refusal to join when summoned (*ἀσπαρείας*), cowardice in the ranks (*λιποταξίον*), loss of the shield in flight, and corresponding delinquencies in the naval service (*ἀναμυαχίον, λιποναυτίον*). Conviction was followed by loss of civic rights, but not by confiscation of property.

If a State-debtor procured the erasure of his name from the register without liquidating the debt, both he and the official by whose neglect or fraud the State had been prejudiced were liable to

indictment before the *thesmothes* (ἀρχαίου); and any one whose name was wrongly inserted could take similar proceedings against the wrongdoer (ψευδογράφης), or if the proper officer did not erase his name after he had paid (βουλευσεως).

The general formula defining grades of punishment distinguishes *bodily suffering* and *money payment* (δῖτι χρητὸν παθεῖν ἢ ἀποδοῦναι). Death, as we have seen, was not infrequently imposed by law; but, on the whole, the temper of the administration was lenient, and a death sentence was less frequent in practice than might have been expected from the place which it occupies in the code. A striking testimony to the humanity of the Athenians is the abhorrence excited by any punishment involving torture or mutilation; and penal acts of this kind are hardly ever mentioned in literature except as characterizing the excesses of tyrants or the savagery of barbarians (see esp. *Æsch. Eum.* 186 ff.). Imprisonment is rarely mentioned as a penalty (*Lys.* vi. 22; *Plat. Apol.* 37 C); and it might be said that, where we impute the criminal for the benefit of society, the Athenian code secured the same end by disfranchisement (ἀτιμία). This requires a few words of explanation. For the members of a modern State, who are more conscious of the burdens attaching to citizenship than of its privileges, an effort of imagination is needed in order to realize what complete disfranchisement meant to an Athenian. Athens was a comparatively small city, as measured by the standards of to-day, with a proletarian slave-class, and a considerable number of resident aliens; and yet at the same time an imperial city, proud of its past and with a world-wide reputation. An Athenian citizen valued his civic privileges as highly as his life. To be excluded from holding any office or exercising any public function in a community where all citizens aspired to share in the government, and to be forbidden to appear in the market-place or to take part in any public festival where every one lived in the open air, and where the frequently recurring festivals were the chief enjoyments of life, placed a ban upon the convicted man which made him an outcast from all his fellows. Thus we find disfranchisement, with or without confiscation of goods, as a normal punishment for all kinds of serious offences, such as sacrilege, treason, bribery, embezzlement, and injury to parents (*Andoc.* i. 74). In these cases the disability was permanent; but it was also adopted against State-debtors as a means of enforcing payment, and was removed as soon as the liability was discharged. There were also cases of partial disability, as when a man was forbidden to speak in the Assembly, or to become a member of the Council (*Andoc.* i. 75). So, if the prosecutor in a public indictment threw up his case, or failed to obtain a fifth part of the votes, he lost the right of again instituting another proceeding of the same kind (*Demosth.* xxi. 103). Cf. also art. *ATIMIA*.

Lastly, it remains to notice the *formalities attending the execution of the sentence*. If the sentence was one of death, or if imprisonment was involved in it, the convicted person passed under the charge of the Eleven, who had control over the State prisons. Common criminals, known as malefactors (κακοῦργοι), were fastened in a frame and cudgelled to death (ἀποτυμωγανεύς) by the executioner (θύμιος). The same official undertook the duty of 'throwing into the pit' (εἰς τὸ βάραθρον ἐμβαλεῖν)—a form of execution which was at one time employed for traitors (*Plut. Aristid.* 3; *Xen. Hell.* i. vii. 20). The more familiar penalty, however, which is mentioned for the first time during the domination of the Thirty (*Lipsius*, p. 77), was to give to the condemned criminal a cup

of hemlock-juice (κώμειον), which was administered by an official acting under the orders of the Eleven.¹ If the accused was condemned to be sold as a slave, he was handed over to the πωληταί, who sold him to the highest bidder. Confiscated goods were sold by the same board, and, in order to prevent concealment, a common informer was permitted to make a schedule (ἀπογραφή) of any property which he alleged to be liable to confiscation, and, if he succeeded on the trial of the issue, he was entitled to retain for himself three-quarters of the value (*Demosth.* liii. 2). Sometimes, in important cases, a special body of commissioners (ἐπηηταί) was appointed to make an investigation of the property liable to seizure. Fines imposed by the court were collected by the πράκτορες, who handed the money over to the treasury officials (ἀποδέκται). The enforcement of the negative penalty of disfranchisement was secured by the severe punishment provided for those who ventured to infringe the limitations imposed upon them by their sentence.

7. Such, in rough outline, was the criminal code which was administered in the Athenian law-courts at the height of their power. That a legal system so searching and comprehensive should have come into existence within so comparatively short a time is remarkable enough; but the spirit of humanity and enlightenment which it displays, the variety of procedure, the minuteness of subdivision designed to meet every possible manifestation of crime, and the securities taken against every form of personal violence, alike show that, in the province of law, Greek civilization did not fall far short of the eminence which it attained in art and literature. The defects of the system, as has already been indicated, were due to its faulty administration by the juries, to the absence of a trained legal profession, and to the non-existence of records to secure continuity of decision.

8. *Views of Plato and Aristotle.*—The laws of Athens were the expression of the best opinion of an unusually intelligent community, and even the most advanced thinkers, who were ready enough to criticize defects in the constitution, found but little to improve upon in the criminal code. When Plato set out, in the 9th book of the *Laws*, to provide the citizens of his pattern State with a revised series of statutes, the amendments which he advocated were made, not so much from dissatisfaction with the Athenian code, as from a desire to preserve intact the essential features of his reformed community. Thus, he objected to the punishment of disfranchisement, and to that of perpetual banishment, because they would interfere with the permanent occupation of the lots which were assigned to the citizens (855 B, C). For similar reasons, fines were to be inflicted more sparingly than was usual at Athens; and a more frequent resort to flogging and the pillory—forms of punishment odious to the Athenian mind, however familiar at Sparta (*Grote, Plato*, London, 1865, iii. 433)—was recommended. The motive which prompted these changes, and which informs the whole body of his legislation, is derived from his conception of the real nature of crime and the object which punishment should seek. It should, however, be remembered that, as his citizens were a carefully selected and highly educated body, he anticipated that crime would be a rare occurrence, and that legislation was needed only by way of precaution against the perversity of human nature (853 C-E). Now, Socrates had taught that virtue is fundamentally a matter of knowledge, and that

¹ There are occasional references in Greek literature to stoning as a traditional mode of execution for heinous offences; but it was rather a survival of the custom of human sacrifice than the enactment of a legal code. See J. G. Frazer, *Pausanias*, London, 1898, iii. 417; Verrall on *Æsch. Ag.* 1107.

wrongful action necessarily proceeds from ignorance. Hence the paradox that no one is willingly unjust; for, if a man knows the good, he will follow it. To this doctrine Plato consistently adhered in his latest work (860 D, E), and it is obvious that it cuts at the root of the common distinction of jurisprudence between voluntary and involuntary wrongs. But Plato did not deny the existence of injustice or of voluntary wrong (*ἐκούσια ἀδικήματα*); only he gave a new connotation to these terms, based upon the principles of his own psychology. Thus, injustice is due to the dominance in the soul of unreasoning emotion—either anger or desire, the stimulus of pain or of pleasure; but if, on the other hand, the emotions are controlled by the reason, it is no longer possible for a man to commit an unjust act, although his actions may be misguided and harmful to others. For, though the reason may be strong to master the lower impulses, yet its successful operation may be impeded by ignorance or prejudice; and in this manner voluntary error is possible (Grote, iii. 399). It follows that the chief aims of the law-giver will be at once by education to subdue the passions, by compensation to make amends to the sufferer, by prescribed penalties to deter, and by enforced penalties to chasten and reform.¹ Above all, the spirit of his laws must be such as to strengthen and guide the rational faculty by prescribing such beliefs as are agreeable to absolute reason. It is only when the evil is recognized as incurable that death is a suitable penalty, best for the criminal himself, and useful as an example to others.

Plato recognized two aspects of punishment, the corrective (Adam on *Rep.* 380 B) and the preventive, both of which are to be distinguished from a purely vindictive exercise of authority (*Gorg.* 525 A; *Prot.* 324 A; *Legg.* 854 B, 934 A). In the same way Aristotle distinguished vengeance, the object of which is the satisfaction of the inflicter, from chastisement directed to the good of the criminal (*Rhet.* i. 10, 1369b, 13; *Eth. Nic.* ii. 3, 1104b, 16); and, in entire agreement with Plato, he held that, whereas good men may be admonished, others, whose vice is incurable, must be cast out (*ib.* x. 9, 1180a, 9). Elsewhere he speaks of corrective justice (*διορθωτικὴ δικαιοσύνη*) as proceeding by arithmetical proportion, indemnifying the injured party by subtracting from the gain of the wrongdoer an amount equivalent to the loss of his victim (*ib.* v. 4, 1132a, 10), as distinguished from distributive justice, which seeks to establish a geometrical proportion according to the respective merits of the individuals concerned; but in the *Politics*, where we might have looked for a reasoned treatment of punishments, nothing of the kind is to be found.

It is unnecessary to detail the provisions which Plato recommended for the punishment of sacrilege, homicide, and wounding; but it deserves to be remarked, as showing that he was alive to the defects of the Athenian jury-courts, that he refrained from drawing up precise enactments to fit every possible contingency, because he trusted largely to the discretion of his select and well-trained court, which was established to take the place of the Council of the Areopagus (876 B-E). It should further be noticed that, while generally adopting, with slight alterations, the provisions of the Athenian code, in dealing with the offence of battery he left the beaten person to defend himself as best he might, unless he happened to be twenty years older than his assailant (879 C). In thus

training the young to endure blows, and in inculcating reverence for old age, Plato was showing his preference for the methods of Spartan discipline. But the most extraordinary of all Plato's legislative experiments was the intolerant enactment against religious heresy. He distinguished three classes of heretics: (1) those who do not believe in gods at all; (2) those who believe that gods exist, but do not concern themselves with human affairs; (3) those who believe that the gods may be propitiated by prayers or sacrifice (885 B). Of these classes the third is the most pernicious; but any one who was found guilty of impiety as falling under any of the three classes, even if his conduct was otherwise free from blame, was to be imprisoned for five years; and, if at the end of that time he was still unrepentant, he must be put to death (909 A). Further, if the offence of heresy was found aggravated by bad conduct, the offender must be kept in solitary confinement until he died, and, after death, refused the rites of burial.

LITERATURE.—The chief authority on Athenian jurisprudence is J. H. Lipsius, *Das attische Recht und Rechtsverfahren*, pt. I, Leipzig, 1905, pt. II, 1908; but, as the work is not yet complete, it is still necessary to refer to the same writer's revised edition of Meier-Schömann, *Der attische Process*, Berlin, 1883-1887. See also C. F. Hermann, *Lehrbuch der griech. Rechtsalterthümer*, ed. Thalheim, Freiburg, 1884; G. F. Schömann, *Lehrbuch der griech. Alterthümer*, ed. Lipsius, Berlin, 1897, esp. vol. I, pp. 506-537; G. Gilbert, *Handbuch der griech. Staatsalterthümer*, Leipzig, 1893, esp. vol. I, pp. 431-467. There are also numerous articles bearing on the subject by T. Thalheim, in Pauly-Wissowa. For the primitive beliefs connected with the blood-feud, see E. Rohde, *Psyche*, Tübingen, 1907, I. 259-277. A. C. PEARSON.

CRIMES AND PUNISHMENTS (Hebrew).

—Crime, strictly speaking, is an offence against the law of a State, which the State punishes, as distinguished from sin against God, and other wrongdoing of which the State takes no cognizance. This idea had not been formulated by the Israelites, and there is no Heb. word exactly equivalent to our 'crime.' A crime was a form of 'evil' (*עוֹנֵה*, *ra'*). In the same way there was no one general term for 'punishment'; it might be denoted by *מִסָּדָה* (*gm'dl*) and other words for 'recompense'; or by *עוֹנֵה* (*aw'n*) and other words for 'sin' or 'iniquity' (punishment being regarded as an effect of sin), or by forms of the root *פָּקַד* (*pqd*), 'visit.' The crimes and punishments recognized by the Israelites may be classified thus (only the more common Heb. words are given):

I. CRIMES: 1. Religious offences: *blasphemy* (derivatives of *בָּרַךְ* *brk*, *בָּרַךְ* *gdp*, *נִשְׁבַּח* *n's*, Lv 24¹⁰⁻¹⁶); *breaches of ritual*, as to food (Lv 7²⁰), uncleanness (7²⁰), sacrifice and offerings (19⁸ etc.); *idolatry*, or the worship of false gods (Dt 13); *illegitimate assumption of the priestly or prophetic office* (Nu 16, 17, Dt 18²⁰); *magic, divination, sorcery, and witchcraft* (Dt 18¹⁴); *Sabbath-breaking* (Nu 15^{32a}); *perjury* (Ex 20¹⁶); *war against Israel on the part of idolatrous nations*, which was regarded as an offence against Jahweh (cf. II. 1).—2. Offences against the State: *treason* (1 K 21¹⁸, 2 K 14⁴); *bribery and oppression* (Ex 23¹⁻⁶).—3. Sexual offences: *bestiality* (Ex 22¹⁹, Lv 18²³); *prostitution* (Lv 19²⁹); *incest* (Lv 18^{6a}); *sodomy* (Lv 18²²).—4. Offences against property: *adultery* (derivatives of *נָחַץ*, *n'p*, Ex 20¹⁴); *kidnapping* (Ex 21¹⁶); *leaving pit uncovered, or otherwise causing damage through carelessness* (Ex 21²⁸⁻³⁶ 22⁶⁻¹⁵); *theft* (Ex 22¹⁻⁹); *usury* (Ex 22²⁵); *seduction or rape of daughter* (Ex 22^{16a}, Dt 22²⁸⁻²⁹).—5. Offences against the person: *murder* (Ex 20¹³); *injuries* (Ex 21¹⁸⁻²⁷).—6. Offences against the family: *cursing parents* (Ex 21¹⁷).

II. PUNISHMENTS: 1. Religious penalties.—

Many ritual offences might be atoned for by sacrifices, seclusion, washings, and other rites: e.g. touching an unclean thing was atoned for by

¹ Similarly the Stoics, as reported by Seneca, *de Clem.* i. 22. 1. As practical reformers they were very far from carrying to its logical conclusion the doctrine that all crimes are equal, notwithstanding the banter of Horace (*Sat.* i. 3. 121) and Cicero (*pro Mur.* 61).

sacrifice (Lv 5¹⁻¹²); eating flesh of an animal not properly killed was atoned for by washing one's clothes and person, and remaining unclean until the evening (Lv 17¹⁶). Sacrifices seem to be required in connexion with all sins which could be forgiven. A person in a state of uncleanness could not be present at the Temple services, or partake of the Passover.

Excommunication was practised in later Judaism, but it is doubtful how far it had any equivalent in ancient Israel. The Priestly Code prescribes the penalty of 'cutting off from the people' for numerous offences, mostly against the ritual laws, but sometimes for gross forms of immorality. A comparison of parallel passages shows that in some cases offences punished in one chapter by 'cutting off' are punished in another by 'death' (cf. Lv 18, 20). On the other hand, some offences punished by 'cutting off' seem to us trivial, e.g. omitting, without valid excuse, to observe the Passover (Nu 9¹³), but such matters might not seem trivial to the Israelites. It is practically certain that death was never regularly inflicted for the various offences which were to be punished by 'cutting off'. The difficulty is explained by the history of the Priestly Code; it was compiled by Babylonian Jews; its authors had no experience in inflicting death penalties, and no immediate prospect of such experience. They indulged in a theoretical severity, untempered by practical necessities; they used the term 'cutting off,' because it would also serve to describe excommunication from social fellowship and religious privilege—a penalty within the power of the exiles to inflict.

Heathen nations stubbornly fighting against Israel were to be subjected to the *ban* (בַּן, *hērem*), i.e. to be massacred in honour of Jahweh, according to certain texts (e.g. Dt 7²). The leading instance is Jericho (Jos 6²¹). In later Judaism, excommunication of varying degrees of severity was inflicted for ecclesiastical and other offences; and the ancient name *hērem* was used for the severest form.

Some laws and historical precedents show that God Himself was held to inflict punishment on certain occasions by direct intervention—*Divine visitation*. Thus (Lv 10¹⁴) Nadab and Abihu are struck dead by Jahweh for offering the wrong sort of incense; and the adulteress who has denied her guilt and submitted herself to the *trial by ordeal* by drinking 'the bitter water which causeth a curse' is smitten by God with disease—'her belly shall swell, and her thigh shall rot' (Nu 5²⁷). No instance is recorded.

2. *Secular penalties.*—(a) *Death.*—This penalty is often prescribed without specifying how it is to be inflicted. In many instances the culprit was slain with sword, spear, or dagger, according to the convenience or choice of the executioner (e.g. Elijah and the prophets of Baal, 1 K 19¹). There is no clear case of beheading in the OT, though the head was often severed from a dead body (e.g. Goliath, 1 S 17²¹). In the NT, John the Baptist (Mk 6²⁷) was beheaded, and James (Ac 12²) 'slain with the sword.' 'Hanging' is referred to in Dt 21²², but what is in view is probably exposure after execution (cf. Gn 40²², Pharaoh's chief baker; Jos 8²⁹, the king of Ai). Stoning seems to have been the most usual mode of capital punishment, and burning to death was inflicted for some offences (see below).

The Bible and the Apocrypha refer to other forms of execution practised by heathen nations. Thus 2 Mac, in describing the Syrian persecution, mentions throwing down from the wall of a city (6³⁴), beating to death on a wheel or drum (*truncheon*, 6³⁵, 28), and torturing to death with fire (7⁶). Crucifixion, a common Roman punishment, was used in the case of our Lord; and He 11³⁷ speaks of martyrs being sawn asunder. Daniel and his accusers were thrown to the lions (Dn 6). The severity of the death penalty was sometimes enhanced by refusing to allow the relatives of the culprit to bury the corpse (2 S 21¹⁰).

The following is a list of the crimes for which death was inflicted; the mode of execution is given in square brackets; where nothing is stated on this point, we have no information:

Various forms of homicide: murder (Ex 21¹², Lv 24¹⁷); child-sacrifice (Lv 20² [stoning]); manslaughter, if the avenger of blood caught the slayer outside the city of refuge (Nu 35²⁷);

keeping an ox known to be dangerous, if the ox killed a human being (Ex 21²⁸).

Bearing false witness on a capital charge (Dt 19¹⁸⁻²¹).

Kidnapping (Ex 21¹⁶).

Insult or injury to parents (Lv 20⁹, Ex 21¹⁵, 17, Dt 21²⁴ [stoning]).

Various forms of sexual immorality: Incest (Lv 20¹⁴ [burning]); unchastity (Dt 22²¹, 24 [stoning]); adultery or unnatural vices (Lv 20¹⁰⁻¹⁶); fornication on the part of a priest's daughter (Lv 21⁹ [burning]); fornication on the part of a betrothed woman (Dt 22²² [stoning], Gn 38²⁴ [burning]).

Various religious and ritual offences: witchcraft, magic, etc. (Ex 22¹⁸, Lv 20²⁷ [stoning]); idolatry (Ex 22²⁰, Dt 13¹⁰ [stoning]); blasphemy (Lv 24¹⁰⁻²³ [stoning]); false claim to be a prophet (Dt 13⁵⁻¹⁰ [stoning]); intrusion of alien into sacred place or office (Nu 15¹ 310.38 187; Sabbath-breaking (Ex 31¹⁴).

According to Lv 27²⁸, human beings may be made *hērem* ('devoted') to Jahweh; and, if so devoted, must be put to death. Probably only criminals or heathen enemies (cf. above) were subject to such treatment.

(b) *Mutilation* is involved in the principle 'an eye for an eye,' etc. (Ex 21²⁴). No instance is mentioned of the application of this law, but we may compare the cutting off of the thumbs and great toes of Adonibezek (Jg 1⁶⁻⁷). Mutilation is mentioned in 2 Mac 7⁴, and blinding in the cases of Samson (Jg 16²¹) and Zedekiah (2 K 25⁷).

(c) *Flogging*, limited to a maximum of forty stripes (Dt 25³), was inflicted on a betrothed slave-girl guilty of fornication, and on her partner in the offence (Lv 19²⁰),¹ and for other minor offences. The references in Proverbs imply a large use of this punishment, especially for children; and in the NT it is spoken of as used in the synagogues for religious offences (2 Co 11²⁴). The actual practice in ancient Israel was much more severe than the prescription of the Deuteronomic and Priestly laws. Ex 21²⁰ deals with cases in which a master flogs a male or female slave to death, and decides that he is not to be punished unless the victim actually dies under his hand (cf. Jg 8⁷, 1 K 12¹⁴). The Roman scourging, the Egyptian bastinado, and the various forms of flogging amongst heathen peoples, were much more severe than the Jewish 'forty stripes save one.'

(d) *Exposure of the person.*—The figurative description of the punishment of Jerusalem in Ezk 16³⁹ may imply that this punishment was inflicted on adulteresses in Israel; but, as these chapters were written in Babylonia, the imagery may have been suggested by heathen practices.

(e) *Stocks* (e.g. Jer 20² מַחְפֶּקֶת, *mahpeketh*; Ac 16²⁴ τὸ ξύλον).

(f) *Slavery*, for theft (Ex 22³), or as a result of debt (2 K 4¹, Neh 5⁵).

(g) *Imprisonment* is not appointed in the Law as a punishment. It was used for the detention of offenders before trial, or pending execution, as well as in cases where it was desired to keep a dangerous or obnoxious person under restraint, or to secure the persons of slaves and captives. There is no evidence that terms of imprisonment were appointed expressly as a punishment, except in Ezr 7²⁶.

(h) *Exile* is not appointed in the Law; the fugitive from justice might exile himself (Absalom, 2 S 13³⁷). Exile is mentioned as a penalty inflicted by the Persians (Ezr 7²⁶).²

(i) *Childlessness* for immorality is probably a Divine visitation (Lv 20²⁰).

(j) *Penalties in money and goods.*—Compensation is required for theft, and in cases where person or property has been injured through carelessness or malice. In cases of mere carelessness an equivalent

¹ The Hebrew (מִקְדָּשׁ תִּיֵּהָ, *bigdoreth tiyeh*) means literally 'there shall be an examination' (RV 'they shall be punished'). The interpretation given in the text is commonly adopted, and is probably correct. Cf. the use of the term 'examine' for 'torture.'

² The Aram. שְׂמָרָה, *sherdehā* (Kethib), or שְׂמָרָה, *sherdehā* (Qrē; AVm and RVm 'rooting out'), is interpreted in this sense by RV, etc.

compensation was required (Ex 22⁵); but, where there was moral guilt, the compensation was heavier, e.g. for theft the thief must restore fourfold, fivefold (Ex 22¹), or sevenfold (Pr 6³¹). Compensation for the killing of a slave by an ox known to be dangerous is fixed at thirty shekels (Ex 21³²); for the seduction of a daughter at fifty shekels, the seducer to marry her (Dt 22²⁹); for a false accusation of unchastity against a newly married wife, one hundred shekels, to be paid to her father (Dt 22¹⁹). In some cases fines might be accepted in place of capital punishment (cf. below, III. 5). See also Ezr 7²⁶.

(k) *Unspecified penalties.*—Numerous acts are enjoined or forbidden without any penalty being attached to the breach of the law; e.g. hybrids must not be bred (Lv 19¹⁹).

III. MORAL AND RELIGIOUS SIGNIFICANCE.—

1. *Progress.*—We may distinguish, on the one hand, the practice of the Israelite monarchy, and, on the other, the system of law embodied in the Deuteronomic and Priestly Codes. The practice of the monarchy is shown in the Book of the Covenant (Ex 21¹–23¹⁹ [E]) and in the references in the narratives. This practice was a development from earlier times; changes must have come about as the Israelites passed from the nomad¹ period to that of the Judges, and again to the monarchy; but our information is not sufficiently full to enable us to trace this development. Even for the monarchy our data are meagre; our extant narratives were intended to edify later generations, and references to objectionable features in early practice have probably been largely omitted, especially when they were connected with David and others who were regarded as representatives of true piety. Moreover, the Deuteronomic and Priestly Codes never had a fair trial as the working laws of an independent State; they always remained more or less religious ideals. Such theoretical codes may be both higher in some respects and lower in others than the actual practice of their own time. For instance, provisions that call for large sacrifices on the part of the powerful and wealthy in the interests of the poor are easy to prescribe on parchment, but difficult to enforce in real life. On the other hand, the cruel penalties by which enthusiasts seek to promote and safeguard religion are mitigated in their practical application by considerations of humanity. A Deuteronomic scribe in the quiet seclusion of his study, or whatever corresponded to a study in those days, might enjoin wholesale massacres without compunction; but he might have shrunk from putting into force his own laws on real living men, women, and children.

At the same time, the available evidence makes it probable that, if Judah had continued an independent State, the development of its legal system would have been in the direction of humanity and righteousness, under the influence of the prophets of the school of Isaiah, Jeremiah, and Ezekiel, and of the priests who shared their views. For instance, according to ancient law, if a man were guilty of a heinous offence, his family might share his punishment (e.g. Achan, Jos 7^{24f.}, and the kinsfolk of Saul, 2 S 21^{1–9}). But Dt 24¹⁶ forbids the practice. Again, marriage with a half-sister was regarded as lawful for Abraham (Gn 20¹² [E]) and for Amnon (2 S 13¹³), but is forbidden by Lv 18⁸.

On the other hand, the later legislation shows a tendency to religious fanaticism, and towards the subordination of public welfare to the material interests of the priesthood; and probably this tendency would not have been altogether defeated if Judah had remained an independent State.

The final redactors of the Torah combined the various earlier and later codes, without attempting to reconcile or co-ordinate them; equal sanction

was given to inconsistent laws; crude, primitive customs were placed on the same level as the more humane enactments of later times. Obviously this happened because these Babylonian Jews were compiling a record, and not providing for practical needs.

2. *Classification.*—There is no formal classification, but certain principles are implied. The inclusion of secular laws in the Torah indicates that all crime was regarded as sin against God, and that the administration of justice rested on Divine authority. This is an axiom of all religions as to the ideal State; but it was more emphasized in ancient times than it is now, because religion and the State were more intimately associated. Hammurabi, for instance, receives his laws from the sun-god, Shamash. Ezk 20²³ is a striking illustration of the way in which the actual legal system of Israel was regarded as a Divine institution; even iniquitous laws are imposed by God as a punishment: 'Moreover also I gave them their statutes that were not good, and judgments wherein they should not live.' On the other hand, the protests of the pre-exilic prophets against the corruptions of their times involve a distinction between secular and Divine law; the two might clash.

The modern recognition of purely religious offences, with which the State does not deal, is not found in the OT. As in mediæval Christendom, such offences might incur secular as well as religious penalties; the idolater was to be put to death. Again, the Law does not clearly distinguish between human punishment and Divine visitation; the penalties of similar offences may include both; e.g. in Lv 20 some forms of sexual immorality are to be punished with death; in other cases it is said that the culprits will die childless. The prominence given to Divine visitation suggests a distinction between crimes which can be detected and punished by men and those hidden from men, but known to God, and dealt with directly by Him. The imposition of a fine for such offences as homicide and seduction (II. 2. (j)) shows that these were regarded partly as offences against property.

There is a distinction drawn between wrongs done to a free Israelite, to a slave, and to foreigners respectively; e.g. the slaying of a free man is severely punished, but a slave may be beaten to death provided he does not actually die under the rod (Ex 21^{20f.}); if an ox known to be dangerous kills a free man, the owner may be put to death (Ex 21³²); but, if the victim is a slave, thirty shekels are paid to his master (v. ³²). 'The stranger within thy gates' (the *gēr*, or 'resident alien') enjoyed the protection of the law, and alliances were maintained with some neighbouring States; otherwise history suggests that might was mostly right along the borders; cf. David's doings in the Negeb (1 S 27^{8f.}), the Danite conquest of Laish (Jg 18), and the exploits of Samson (Jg 14f.).

3. *Range of offences.*—The list of omissions and commissions recognized as crimes indicates a high moral standard. The wrongfulness of ritual irregularities is, indeed, exaggerated by treating them as sins and crimes. On the other hand, the Pentateuch strives to promote social righteousness in many matters which modern law does not venture to deal with; e.g. Dt 24¹⁵ enjoins the prompt payment of wages, and Lv 19¹¹ forbids lying. But the difference is only apparent; the Pentateuch combines moral admonition with legislation, and draws no hard and fast line between the two. Again, the comparatively low stage of social development reached by the Israelites excuses such blots as the toleration of polygamy and slavery, and the absence of any full recognition of international morality.

4. *Subjects of punishment.*—In some cases

animals were put to death; e.g. an ox that had gored a man or woman was to be stoned, and its flesh might not be eaten (Ex 21^{28, 29, 32}, cf. Lv 20^{15f.}). Animals and even goods which could be burnt might be destroyed in the *hêrem*, or ban (Jos 7²⁴). In earlier times the family might be put to death for a crime committed by its head (cf. III. 1), but the practice is forbidden, as already noted, in Dt 24¹⁶.

There is nothing to show at what age young persons became legally responsible for their actions. The census in Nu 1³ included all males from twenty years old; and the age at which Levites began their service is variously given as twenty-five (Nu 8²⁴), or thirty (4³⁵), although responsibility must have begun earlier. Nothing is said as to exemption from punishment on account of mental weakness.

Naturally the legal codes did not recognize the principle that the powerful and wealthy might commit crimes with impunity; but they often enjoyed much licence in practice, as is shown by the narratives of Micah and the Danites; of David and Uriah; Amnon, Tamar, and Absalom; and the frequent protests of the prophets.

5. *Humanity; adjustment of severity of punishment to heinousness of crime.*—The legal codes were evidently anxious that the punishment should be justly proportioned to the offence, hence the obvious principle of equal retaliation, found in the codes of many peoples, of an 'eye for an eye, and a tooth for a tooth,' and the laws providing for compensation for injury to property or person.

The list of capital offences (II. 2. (a)) is a little long, and includes some which, according to modern ideas, do not permit so severe a punishment, e.g. insult to parents, Sabbath-breaking, etc. But, as we have said, it is doubtful whether death was ever regularly inflicted for ritual offences; and, at any rate, the laws are due to an exaggerated sense of the wickedness of such acts rather than to reckless severity. The use of barbarous punishments—burning alive, mutilation, and flogging—is strictly limited; and there is no trace, either in the Law or in the history, of the torturing of witnesses or accused persons in order to obtain evidence.

The principle of blood-money is recognized only to a very limited extent: Ex 21²⁸⁻³² provides that, if an ox known to be dangerous kill any one, the owner shall be put to death, but that 'if there be laid upon him a ransom, then he shall give for the redemption of his life whatsoever is laid upon him'—in the case of a slave thirty shekels to the slave's owner. Similarly, any one flogging his slave to death, without the slave actually dying under the rod, is sufficiently punished by the loss of his slave (Ex 21^{20f.}); and in the case of injury to slaves the *lex talionis* is not to be enforced, any mutilation of slaves being atoned for by emancipation (Ex 21^{20f.}). So, too, Ex 21^{18, 19} permits compensation for bodily injury to a free man. On the other hand, Nu 35^{31, 32} (P) prohibits the acceptance of blood-money for intentional murder, or even the release of a man who has committed unintentional homicide from the obligation of remaining in a city of refuge till the death of the high priest.

6. *Connexion with methods of administration of justice in other nations.*—Israel was always part of the international system which comprised Western Asia and Egypt; and there was a constant action and reaction between the various members of this system. At the outset, Israel was a group of nomad tribes, and the original basis of its Law was the tribal custom of the Bedawin. The position of the *gô'el*, the next-of-kin, the avenger of blood, goes back to this source. The settlement in Canaan must have led to the adoption of many Canaanite laws. Now, Canaan and all Western Asia were, from very early period, dominated by Babylonia;

the conquests of Sargon I. of Akkad (c. 2700 B.C.) extended to the Mediterranean, so that the institutions of Canaan were partly shaped by Babylonian influence. But, again, both the Canaanites and the Babylonians probably sprang originally from Arabia; so that Israel, Canaan, and Babylon all drew from an original common stock of tribal customs; and it is very difficult to determine whether a law is a purely Israelite survival from this common stock, or has been derived through Canaan or Babylon. Moreover, during long periods the Egyptian kings exercised a suzerainty over Syria; and Egypt had its share in moulding the life of Canaan (cf. the Amarna tablets, c. 1400 B.C.). Something, too, may perhaps be due to the 'bondage' in Egypt; but not much, for the Israelite tribes for the most part lived a nomad life in the border provinces.

The recently discovered Code of Hammurabi (king of Babylon, c. 2100 B.C.) shows how much the Israelite institutions had in common with those of Babylon. There are numerous parallels between this Code and the Pentateuch, especially the ancient Book of the Covenant, Ex 20²²⁻²³. Both, for instance, lay down the principle of an 'eye for an eye,' etc.; both prescribe the punishment of death for kidnapping; and both direct that if a man is in charge of some one else's cattle he may clear himself by an oath and need not make compensation. As the Code of Hammurabi was certainly known in Babylonia and Assyria as late as the Exile, Israelite legislation may have been influenced by it at any time; but the parallels may be largely due to common dependence on the primitive tradition of Arabia.

In comparing the ethical and religious value of Israelite justice with that of other nations, we have to distinguish the practice of the monarchy and earlier times, as depicted in the history and Ex 20²²⁻²³, from the ideal set forth in Deuteronomy and the Priestly laws. It will have been seen that our knowledge of the early practice is fragmentary. It is possible, too, that the redactors of the literature suppressed evidence that was discreditable to Israel, though it is not likely that this has been done to any great extent. But, as far as our information goes, it does not appear that the administration of justice in ancient Israel differed conspicuously from that of neighbouring Semitic nations in the same period, as illustrated, for instance, by the Code of Hammurabi. And in such matters Israel would compare favourably with Greece, or Rome, or China, or with most Christian nations before the close of the 18th cent. A.D.

The Deuteronomic and Priestly ideal aims at a level of social righteousness which has never been attained in practice, and ranks with the Utopias of modern social reformers. The Priestly legislation is, indeed, disfigured by an undue care for the material interests of the sacerdotal caste; but neither the practice nor the theory of the religious law of Israel includes anything like the Inquisition and similar systems instituted by the Christian Church.

'Law and Justice,' in *EBI*, and 'Gericht und Recht bei den Hebräern,' in *PRE³* (by Benzinger); the relevant sections of the *OT Archaeologies* of Ewald, Benzinger, and Nowack; and the standard commentaries on the Pentateuch and other Biblical passages. For the Code of Hammurabi, see the art. on that subject by C. H. W. Johns in *HDB*, vol. v. p. 584, and S. A. Cook, *The Laws of Moses and the Code of Hammurabi*, London, 1908.

W. H. BENNETT.

CRIMES AND PUNISHMENTS (Hindu).

—1. Most of the terms designating 'crime' or 'offence' in Sanskrit are essentially religious in their nature, and no strict line between sins and punishable offences has ever been drawn. The *Dharmaśāstras* (law-books) contain long lists of the

various degrees of crime or guilt—from mortal sins, such as sexual intercourse with one's mother, daughter, or daughter-in-law, down to crimes merely rendering the perpetrator unworthy to receive alms, such as receiving gifts from a despicable person, subsisting by money-lending, telling lies, serving a Śūdra, or to crimes causing defilement, such as killing birds, amphibious and aquatic animals, worms or insects, and eating nutmegs and the like. Analogous lists of sins may be found in the ancient religious literature of the Buddhists of India. Many of these sins recur among the offences mentioned in the secular laws of the Brahmins. Thus the killing of a cow, the sacred animal of the Hindus, is a punishable offence as well as a crime. The commission of a heavy sexual offence is to be visited with punishment by the king, and at the same time the stain caused by such sin is to be removed by religious atonement. Killing a Brahman, or depriving him of his gold, is a crime deserving capital punishment of an aggravated form, no doubt because the religious law affords special protection to the sacred person of a Brahman. Many eccentricities of the criminal law are due to the religious element entering largely into it. Thus the sacredness ascribed to the Vedas comes out in the following rules: a Śūdra listening intentionally to a recitation of the Veda shall have his ears filled with molten tin or lac; if he recites Vedic texts, his tongue shall be cut out; if he remembers them, his body shall be split in twain. The sanctity with which Brahmins are invested has led to establishing the principle that no corporal punishment shall ever be resorted to in the case of a criminal of the Brahman caste. Nor could the banishment of a Brahman be connected with the confiscation of his property, the ordinary consequence of banishment. The Śūdras, on the other hand, were treated very badly, because they were considered to have no share in the re-birth caused for the higher castes by their initiation with a sacred prayer from the Vedas. Thus, e.g., a Brahman who abuses a Śūdra is condemned to pay no fine. A Śūdra, on the contrary, undergoes corporal punishment, if he only assumes a position equal to a member of a high caste, in sitting, in lying down, in conversation, or on a road. Money-lending is viewed as an unholy act; Brahmins are, therefore, forbidden to practise usury. Certain kinds of interest on loans are entirely prohibited. Among sexual crimes, intercourse with the wife of a spiritual teacher is looked upon as a very heavy offence, equal to incest, and so is intercourse with a Buddhist nun. Gambling is stigmatized as a sinful practice, though some legislators do not object to gambling in a public gaming-house, where the king may raise a certain percentage on the stakes. False witnesses are designated as thieves of words. Heaven is the reward of a witness who speaks truth; in the contrary case, hell will be his portion. Other crimes of the Brahmanical law savour of Oriental despotism, as, e.g., when the forgery of a royal document is visited with capital punishment. The caste system becomes visible in the gradation of crimes and punishments according to the caste of the offender, as will be shown below.

2. 'Punishment' (*danda*) in the Code of Manu (vii. 14 ff.) is personified as a god with a black hue and red eyes, created by the Lord of the World as his son, and as an incarnation of Law, formed of Brahman's glory. Punishment is declared to keep the whole world in order, since without it the stronger would oppress the weaker and roast them, like fish on a spit; the crow would eat the consecrated rice; the dog would lick the burnt oblation; ownership would not remain with any one; and all barriers would be broken through. Punishment

is declared to be in truth the king and ruler, although it has to be inflicted by the king on those who deserve it. The king in person should every day decide causes in the court when brought before him, or else he should send a Brahman acting as his deputy. A king when punishing the wicked is comparable to the god Varuṇa, who binds a sinner with ropes. If a king does not strike a thief who approaches him, holding a club in his hand and proclaiming his deed, the guilt falls on the king; the thief, whether he be slain or pardoned, is purified of his guilt. The king should first punish by admonition, afterwards by reproof, thirdly by a fine, after that by corporal chastisement (Manu, viii. 129). As a matter of fact, fines are by far the most common kind of punishment in the criminal code of the Sanskrit law-books, and they were equally common, shortly before the times of British rule, in the Hindu kingdoms of Rājputāna (Tod), Mysore (Dubois), and others. The fines might extend to confiscation of the entire property of a criminal; but in such cases, according to Nārada (xviii. 10 f.), the tools of workmen, the weapons of soldiers, and other necessary implements are to be exempt from confiscation. Capital punishment, in various aggravated forms, such as impaling on a stake, trampling to death by an elephant, burning, roasting, cutting to pieces, devouring by dogs, and mutilations, are also frequently inflicted, even for comparatively light offences. The *jus talionis*, which is so universally represented in archaic legislations, becomes especially conspicuous in these punishments. Thus a criminal is condemned to lose whatever limb he has used in insulting or attacking another. The thievish fingers of a cut-purse, and the evil tongue of a calumniator, are to be cut off. A Śūdra using insulting language is to have a red-hot iron thrust into his mouth, or boiling oil dropped into his mouth and ears. The breaker of a dike shall be drowned. The killer of a Brahman shall be branded with the figure of a headless corpse, a drunkard with the flag of a distillery shop. Banishment, public disgrace, imprisonment, fetters, forced labour, beating, and other forms of chastisement are also mentioned. Brahmins, however, are not to be subject to corporal punishment. Nor is this the only privilege enjoyed by Brahmins, who are allowed special indulgences in almost every case, the reduction of punishment in consideration of the rank of the person being one of the most salient features of the ancient legislation of India. Thus a Kṣatriya insulting a Brahman must be fined 100 paṇas; a Vaiśya doing the same, 150 or 200 paṇas; a Śūdra doing the same must receive corporal punishment. On the other hand, a Brahman shall pay only 50 paṇas for insulting a Kṣatriya, 25 paṇas for insulting a Vaiśya, and nothing at all for insulting a Śūdra. A similar gradation of fines may be observed in the punishment of adultery and many other crimes. If a man insults a Brahman by offering him forbidden food, he shall be amerced in a heavy fine; and, if he gives him spirituous liquor to drink, he shall be put to death. Another characteristic feature of the Indian criminal code is the infliction of worldly punishments for violations of the religious law, as, e.g., when an apostate from religious mendicacy is doomed to become the king's slave. King Aśoka, as early as the 3rd cent. B.C., appointed censors who were charged to enforce the regulations concerning the sanctity of animal life, and the observance of filial piety. King Harṣa, in the 7th cent. A.D., inflicted capital punishment on all who ventured to slay any living creature. King Kumārapāla of Gujaraṭ, in the 12th cent., is said to have confiscated the entire property of a merchant who had committed the atrocious crime of cracking a louse. A Hindu Rājā of Kolhapur, in

A.D. 1716, issued a rescript ordaining due punishment for all those who should be discovered to entertain heretical opinions in his kingdom. This union of Church and State was specially marked under the rule of the Marāthā kings; but even in 1875, when Dr. Bühler visited Kashmir, he found the Mahārājā eagerly intent on looking after the due performance of the *prāyāścittas*, or penances prescribed for breaches of the commandments of the *Smṛti*. The enforcement of these religious punishments otherwise rests with the caste, which levies fines for every breach of the caste rules, and, in serious cases, excludes the offender. (See EXPIATION AND ATONEMENT [Hindu].)

J. JOLLY.

CRIMES AND PUNISHMENTS (Japanese).—Long before the dawn of Japanese history, Chinese travellers to Japan brought back accounts of that country which contain our earliest information on this subject, dating from the later Han dynasty (A.D. 25-220). One of these notices says: 'There is no theft, and litigation is unfrequent. The wives and children of those who break the laws are confiscated [sold as slaves], and for grave crimes the offender's family is extirpated.' Another account says: 'The laws and customs are strict.' There is not much to be learned about crimes and punishments from the mixture of myth, legend, and chronicle which takes the place of history in Japan for a thousand years previous to the 7th cent. A.D., though we hear of a staff or gild of executioners, and of capital punishment by decapitation; and a punishment by fine had its origin at this time, but it was only for such offences—comparatively few in number—as involved ritual uncleanness according to Shinto. An ordinance, enacted in 801, regularized what was, no doubt, an old practice, by which neglect in connexion with the *ohonihe*, or coronation ceremony, the eating of flesh, visiting the sick, being concerned in any way with capital sentences, or touching anything impure during the month of special avoidance of impurity, subjected the culprit to an *ohoharahi* ('greater purification'), i.e. he was obliged to provide the materials for the ceremony of his own purgation. This eventually became simply a fine. Other ritual offences which required purgation were incest, wounds given or received, bestiality, and leprosy. Homicide had to be atoned for in the same way, but the ritual character of the offence appears from the circumstance that even justifiable homicide caused uncleanness.

Weipert thinks that in these fines for ceremonial purification we have 'the first source of Japanese criminal law' (quoted by Florenz in *TASS* xxvii. [1899] 57); but, in the opinion of the present writer, the evidence hardly bears out this conclusion. Weipert's theory does not account for the gravest of all punishments, that of death, nor does it apply to robbery, rebellion, adultery, arson, and other grave offences. Moreover, the absolution ceremony was seldom performed for individual offences. The Mikado twice a year celebrated a 'great purification' of the offences of the nation, and similar minor celebrations were usual before all the great ceremonies of Shinto. In such cases, of course, the idea of a fine was out of the question. There is abundant evidence that a criminal law existed from very ancient times which had nothing to do with the purgation of ritual offences.

Eventually the fines for ceremonial offences fell into abeyance, owing to a strong current of Chinese influence which set in during the 6th and 7th cents., and which led in 702 to the enactment of the code of civil and criminal law known as the *Taihōriō*.

It was based on the laws of the Tang dynasty of China, though modified somewhat in accordance with Japanese usages. The penalties prescribed were five, viz. capital punishment, exile, penal servitude, beating (with a stick), and scourging (with a whip). These are simply copied from the Chinese code. Of the older five punishments of China—branding on the forehead, cutting off the nose, maiming, castration, and death—only the first and last were ever practised in Japan. A *History of Japan*, published by order of the Japanese Government (1893), mentions 'treason, contumely (slander [?]), unfilial conduct, immorality, and so forth' [*etc.*], as the eight great crimes of the *Taihōriō*. Perhaps the excuse for this very unsatisfactory enumeration is the circumstance that a very substantial part of this code has not come down to us. It is the basis of all subsequent legislation. When the Taikō Hideyoshi came into power, in the latter part of the 16th cent., he contemplated its re-enactment for the whole country, but he died before giving any practical effect to his intention.

At first the Tokugawa Shoguns (1600-1868) followed the old method of making the laws known to those only who were required to enforce them. But this rule was subsequently modified. New laws were read to the people, and inscribed on notice-boards set up in conspicuous places. Towards the end of the Tokugawa period, a reaction to the former policy took place. The authorities considered it expedient to keep the people in ignorance of all but the most general principles of criminal law, thinking that the unknown would inspire greater terror. Such meagre information as they vouchsafed to the people was contained in a few brief edicts inscribed on notice-boards at the *Nihon-bashi* in Yedo and other conspicuous places throughout the Empire, prohibiting the evil sect called Christian, conspiracy, insurrection, plotting to leave the village to which one belonged, murder, arson, and robbery. That was all. This system left room for much that was arbitrary in the administration of the law, which varied considerably in different parts of the Empire. The judicial officials did very much as they pleased.

A Japanese servant of a member of H.M.'s Legation stole a few dollars, and was handed over to justice. Three months later, a visit was received from an official, who gave his master the option of having him released—there was no room for him, it was explained, in the prison—or decapitated. Needless to say, the former alternative was accepted.

One of the worst features of the early Tokugawa legislation was the implication of the offender's family in the crimes of his head.

'If a man or woman, sentenced to be crucified or burned, had male children above 15 years of age, they were similarly executed, and younger children were placed in charge of a relative until they reached that age, when they were banished. Even when a parent suffered the ordinary capital punishment of beheading or hanging, it was within the discretion of the judge to execute or exile the male children. Wives and daughters were exempted from the rule of implication, though they might be reduced to the ranks of slaves' (Brinkley, *Japan*, iv. 56).

Thunberg (*Travels in Europe, Africa, Asia*, Eng. tr. 1795-96) says that, in the towns, a whole street was often made to suffer for the malpractices of a single individual, the master of a house for the faults of his domestics, and parents for those of their children. These cruel provisions were greatly modified in 1721, but the more lenient rules were not applicable to the *samurai* class. Theft was severely punished, usually with death, which was the penalty also for swindling or attempted extortion by force. Pickpockets, however, were let off with branding, or rather tatuing, though a repetition of the offence involved death. Not before the close of the 18th cent. was the execution of a pregnant woman deferred until after her delivery.

The law up to the close of the Tokugawa period required that an accused person must be induced to confess before his guilt was finally determined.

The result was that, in many cases, torture was freely applied. The commonest device was to bind a man with ropes in some constrained position, or to make him kneel upon a grating of wooden bars placed edge upwards, and then to pile weights on his knees. On the whole, the tortures employed judiciously in Japan were not so cruel as those used in mediæval Europe. A *samurai* was not sent to prison. If his offence was not grave enough to call for immediate suicide, exile, or decapitation, he was ordered to go into confinement in his own house. There were different degrees of this kind of imprisonment, the most severe of which involved a complete cessation of egress and ingress for himself and his family.

Siebold, writing early in the 19th cent., gives a description of the penal code of Japan at that time, which was similar in all essential respects to the *Taihôri*, introduced from China 1100 years before. He draws a broad distinction between the punishments of the *samurai* and those of the common people. In the latter case, the culprit might be simply cut down by the man of higher rank whom he might have insulted or injured, or if he had been caught in the act of committing a grave offence. Decapitation was more usual. Crucifixion, burning, and sawing off the head with a bamboo saw were also practised. There were two kinds of crucifixion. In one the criminal was lashed—not nailed—upside down to a cross which had two bars, one at the head and one at the feet, between the two being a small seat upon which the weight of the victim rested. At a given command an expert spearsman stood on each side, and the two drove their spears simultaneously so that they passed crosswise through the vital organs. Death was instantaneous. Burning was a matter of form. The culprit was tied to a stake and strangled before the fire was lit. Sawing off the head was of rare occurrence, and was limited to such heinous crimes as chief- or parent-murder. The name and offence of the criminal were usually inscribed on a board which was set up close to the place of execution. Sometimes the offender was mounted on a sorry nag and led round the city, with a similar placard fastened to his breast. The head might be set on a post, and allowed to remain from five to ten days. Sometimes the body was hacked to pieces, or made a subject on which the *samurai* might test their skill and the temper of their swords. In later times it might be handed over for dissection. Among minor punishments at this period were branding, the pillory, and degradation to the *hinin*, or pariah caste. For political offences by men of the *samurai* class, banishment to an island was the usual form of punishment; and there is an ancient instance of a Mikado being so punished. The term was commonly for life, though there was a minimum limit of five years. A milder form was an injunction to live under supervision at a distance from the capital. Whilst his case was under trial, the accused was confined to his own house, with the same forms as if he were in mourning. When the offence was committed unintentionally, a partial or complete confiscation of his property might be the consequence. Deprivation of office or incapacity for holding office was not unusual. Occasionally the offender was allowed to become a monk of a certain order, known as *komusô*, who wore a basket-hat with a small grating in front, completely concealing his face. This was never removed, and practically he was a beggar who roamed the highways, playing on a flute in order to attract the attention of the charitably disposed.

Harakiri.—This well-known institution is of considerable antiquity. It is of purely Japanese origin, and consists in making a cruciform incision on the belly, whence its name, which means 'belly-

cut.' The 'happy dispatch' of some writers is only a joke. Sometimes a determined man succeeded in ending his life in this way, or he might complete the act of suicide by stabbing himself in the throat with the same instrument—a short sword or dagger with a blade nine inches in length. *Harakiri* might be simply a form of suicide, or it might be the duty of a man of the *samurai* class under various circumstances, such as hopeless family troubles or loyalty to a dead superior, or as a protest against the wrongful conduct of a superior. For example, when the Japanese Government yielded to the demands of France, Russia, and Germany for the retrocession of Liaotung, forty military men emphasized their protest by committing suicide in the time-honoured fashion. A common motive was to free from punishment the family and relatives of the person involved, who would otherwise, under the old law, have shared his guilt. Very frequently, however, *harakiri* was no more than an honourable form of execution. It was carried out with great ceremony, the incision being only for form's sake, and the real execution consisting in decapitation by a friend. In 1869, a motion was brought forward in the Japanese Parliament in favour of the abolition of *harakiri*, and 200 members out of a house of 209 voted against this proposal. *Harakiri* is no longer recognized by law, though it cannot be said to be extinct.

Vendetta.—A Japanese *samurai* was permitted by law to avenge the murder of a parent or chief; but, before exercising this right, he was bound to give notice to the authorities, and, when cutting down his enemy, to repeat some such formula as this: 'I am A. B. You are X. Y., who murdered my father at such a time in such a place. Therefore do I now slay you.' In justification of this law, an ancient Chinese saying is often quoted to the effect that 'a man must not allow the same heaven to cover himself and his father's enemy.' It is now abrogated, but was in vogue up to the Restoration of 1868. A teacher of the present writer was a victim. It is to be observed that fines have no place in the pre-Restoration legislation—a circumstance which is adverse to Weipert's view that Japanese criminal law had its origin in the imposition of fines on offenders against the ritual law of the older Shinto. Kaempfer (*History of Japan*, Glasgow, 1906, ii. 114) notices this feature of the former Japanese law.

Extra-territoriality.—When the treaties were negotiated which opened Japan to foreign trade in 1859, the criminal code was in a very unsatisfactory condition. It was scarcely known to the people, and was administered in a most irregular, arbitrary, and often cruel fashion. It was quite out of the question to ask foreign Powers to make their subjects amenable to it, and, indeed, the Japanese were probably not sorry to be relieved of such responsibilities. Hence arose the so-called 'extra-territorial jurisdiction,' by which the Japanese Government transferred to foreign Powers the jurisdiction over their subjects when the latter were defendants in a civil case, or the accused under a criminal charge. When in 1868 the Mikado resumed the reins of authority, it was felt that such an arrangement was contrary to the dignity of the Japanese nation, and in any case a radical reform was a palpable necessity of the situation in the interests of humanity and good government. A code was, therefore, drawn up and promulgated in 1871. It was simply a selection from the codes of the two Chinese dynasties—Ming and Ts'ing—modifications being introduced into the amount and nature of the punishments prescribed for different offences. Barbarous modes of execution were eliminated, the death-penalty was greatly circumscribed, merciless and excessive

whippings were abolished, and the punishment of imprisonment with corrective labour was introduced for the first time. A second code was notified in 1873, by which many new and more humane provisions were added. By these codes, an offender who has been sentenced to a term of penal servitude is placed in the penitentiary of the district in which he has been tried and sentenced, and work suited to his age, physical condition, and acquirements is allotted to him, so that 'by toil and labour he may be gradually brought to repent of his past misdeeds and be restored to virtue.' The punishment of death was by hanging or decapitation, the latter form being considered more severe owing to the prejudice entertained by most Japanese against any mutilation of the body. In certain cases, the pillory in iron stocks within the prison yard was substituted for imprisonment, and fines might be permitted in the case of offences by officials, persons inadvertently implicated, aged people, infants, maimed or deformed persons, or females.

But these codes still preserved an essentially Chinese character, and they contained many provisions which unduly favoured officials and the *samurai* class. A husband was permitted to kill the lover of his wife or concubine along with the woman herself, if caught in the act; but, if a certain time had elapsed, the punishment was penal servitude for one year, while under the older law the husband could, in this case, only recover a penalty of no great amount. If a woman who had been guilty of adultery or incest was, on the discovery of her guilt, driven by shame to commit suicide, the punishment of the male offender was increased one degree, even though he might have had no knowledge of the woman's intention to do so. Masters and parents were punished with much less severity for offences against their servants and children than in the contrary case. Abusive language to an official entailed penal servitude for one year if the person insulted was of the highest rank; for ninety or sixty days if of lower grades. In Jan. 1879, the practice of using torture to compel confession—rendered necessary by the old principle that confession must precede condemnation—was abolished, and it was enacted that the evidence of witnesses, documents, or circumstances, or the admissions of accused persons, should alone be taken as bases for determining guilt.

It will be seen that, although these codes marked a considerable advance on the Tokugawa system, they still left much to be desired, when viewed from the more enlightened standpoint of Europe. New legislation was therefore initiated, after a thorough study of the various systems of European law, with the assistance mainly of French jurists. Distinguished service was rendered by G. Boissonade in framing the new codes, which, after arduous labour and repeated revision, came into operation from 1st Jan. 1882. They have an essentially French character. A further revision of the Code of Criminal Procedure was effected in 1890. B. H. Chamberlain, in his *Things Japanese*², gives the following account of the present system:

'Crimes are of three kinds: (1) against the State or the Imperial Family, and in violation of the public credit, peace, and health, etc.; (2) crimes against person and property; and (3) police offences. There is a sub-division of (1) and (2) into major and minor crimes. The punishments for major crimes are: (1) death by hanging; (2) deportation, with or without hard labour, for life or for a term of years; (3) imprisonment, with or without hard labour, for life or for a term of years. The punishments for minor crimes include confinement, with or without hard labour, and fines. The punishments for police offences are detention for from one to ten days without hard labour, and fines varying from 5 *sen* to 100 *yen*. The court which tries persons accused of major crimes consists of three judges; that for minor crimes, of one judge or three, according to the gravity of the charge; and that for police offences, of one *juge de paix*. Contrary to Western usage, an appeal is allowed, in the case of major crimes, for a trial of facts. Criminals condemned to deportation are generally sent to the island of Yezo, where

they sometimes work in the mines. A person who has suffered injury by crime lodges his complaint at the police office, or with the procurator of any court having jurisdiction over the crime in question. Policemen can arrest an offender whose crime was committed in their presence, or which the complainant avers to have been actually committed. In all other cases they can arrest by warrant only. Bail is allowed at the discretion of the judge. Accused persons are often kept in prison for a considerable time before trial, and no lawyer is allowed to be present at the preliminary examination. The conducting of criminal cases, from the very beginning down to the execution of the criminal, if he be condemned to suffer death, rests with the procurator, who unites in his own person the functions of public prosecutor and grand jury.'

The reforms of 1882 extended to the judiciary, which was now separated from the executive. Judges, procurators, barristers, notaries, and a new system of police, as well as law-schools, were established. Under the new régime there are far fewer capital punishments. In Tokugawa times the number of persons consigned to jail in Yedo was about 7000 annually, and of these over 3000 were executed. At present the yearly number of capital punishments for the whole Empire averages above eighty.

It is claimed that, on the whole, the new legislation has resulted in a body of law in unison with the most advanced principles and the most approved procedure of Western jurisprudence—all punishments not recognized as consonant with modern civilization being abolished, due provision being made for adapting penalties to degrees of crime (the previous legislation left the judge too little discretion), the rights of suspects and criminals being guarded, and the privilege of appeal guaranteed. This contention is substantially correct, though traces of old usage remain. All men are not equal before the law, the military retaining some special privileges. Robbery with violence is still punishable with death, and a man does not render himself liable to any penalty for beating his servant, unless death ensues. The preliminary examination of prisoners is secret, the assistance of counsel not being allowed. This last feature will soon be modified. Trial by jury is unknown.

In 1899, after protracted negotiations, treaties were concluded with foreign Powers, by which the extra-territorial jurisdiction was abolished, and all foreigners became subject to Japanese law.

Prisons.—Under the old régime, imprisonment was not one of the recognized forms of punishment, though it was necessary to provide some places of detention for prisoners who were awaiting their trial, sometimes for long periods. The inmates suffered very great hardship. The cells were wooden cages open to the four winds, and the arrangements for sanitation, food, and clothing were of the most wretched kind. The internal discipline was entrusted to the elder prisoners—generally hardened criminals—with results which may be imagined. Soon after the restoration of the Mikado's authority in 1868, a commission was sent to visit a number of foreign prisons and make a report, and ultimately a complete change was effected. Sir Henry Norman, who recently visited the convict prison of Tokio, says (*Real Japan*, 1892):

'The dormitories are enormous cages formed of bars as thick as one's arm. There is not a particle of furniture. Thick quilts, or *futon* (the Japanese bed), are provided. Each dormitory holds 86 prisoners. The sanitary arrangements could not well be improved. No vermin could harbour anywhere. It was almost an ideal prison structure. The punishment cells were hardly ever occupied. There was no flogging. Two hundred prisoners were employed making machinery and steam boilers, working nine hours a day. Wood-carving, weaving, pottery-making, and paper- and cloisonné-making are also among their occupations. Only a few are so clumsy or stupid as to be employed in pounding rice or breaking stones.'

W. G. ASTON.

CRIMES AND PUNISHMENTS (Jewish).

—The transition from the Biblical to the Mishnic period is marked by external and internal limitations in the functions of the Jewish tribunals. Externally, the Jewish courts of justice lost the power of inflicting capital and other punishments, —a power exercised by the Roman procurators and officials, —and in the course of time the limits to the jurisdiction of the *Bêth Din* were still further narrowed. Internally, we note a growing tendency towards the restriction of certain forms of punishment, by making it a matter of difficulty to secure a conviction. In practice, capital punishment was obsolete long before the fall of the Jewish State, and, in all probability, long before the courts were deprived of the legal power of inflicting it. This is clearly shown by such NT passages as Jn 18³¹, and the Talmud. Thus, in Jerus. *Sanh.* 18a (p. 223 of M. Schwab's tr., Paris, 1888) it is stated that this right was suspended some forty years before the fall of the Temple, and that the right of giving decisions in questions involving financial matters had been already abolished in the time of R. Simon b. Shetah, that is to say, during the reign of Alexander Jannæus (d. 76 B.C.). Bab. *Sanh.* 41a brings out this fact even more emphatically. Nor may the trial and crucifixion of Jesus be cited as an instance to the contrary. It is now the generally accepted opinion, among both Jewish and Christian scholars, that the trial of Jesus was not carried out in accordance with Jewish law, and that His execution was an act in which Pharisaic Judaism had neither initiative nor share.

Thus Robertson Smith (*EB*⁹ xxi. 812, at end of art. 'Synhedrium') writes: 'The meeting in the palace of the high priest which condemned our Lord was exceptional. The proceedings also on this occasion were highly irregular, if measured by the rules of procedure which, according to Jewish tradition, were laid down to secure order and a fair trial for the accused.' So also Montefiore (*Synoptic Gospels*, i. (London, 1909) 345 f.): 'The trial of Jesus—if trial it can be called—... violates that [Rabbinic] law in almost every particular. . . . It does not follow because the trial of Jesus . . . violates Jewish law in many important points, that therefore the account given of it cannot be true. There have been illegal trials at all times, and even the flimsiest legal forms have sufficed to get rid of an enemy. . . . That there was any meeting of the full Sanhedrin is most doubtful; doubtful also is the part played by the "Scribes" and Pharisees; but that the Sadducean priesthood was at the bottom of the arrest and of the "trial" . . . cannot reasonably be doubted.'

In the passage from the Jerus. Talmud mentioned above, R. Simon b. Yohai, a *tanna* of the 2nd cent., expresses his gratitude for escaping the responsibility of condemning a human being to death. Other passages, of a similar character, in the Talmud and Rabbinic writings point to the same conclusion—that the Romans took away from the *Bêth Din* the right to inflict capital punishment.

In addition to these restrictions imposed from without, the sentences of Jewish tribunals were mitigated by various internal and voluntary limitations. It may perhaps be that, in proportion to the severity with which Rome exercised the power removed from the local courts, these felt themselves drawn to the side of leniency in other directions. But this tendency to leniency was originally spontaneous, however much it may have developed afterwards in consequence of external harshness; it began while the Sanhedrin still held the power of life and death. An exact date cannot be given; it is difficult to tell whether and when punishments enacted in the Pentateuchal legislation were

carried out in all literalness, and to what extent and with what frequency. Does that legislation represent primitive practice, or did the mitigating force of the Mishnic recensions of these laws at all times modify their execution? The orthodox Jewish belief, which regards the Oral Law as a contemporary concomitant of the Written Law and of equal force, would take the latter view, namely, that the traditions embodied in the Mishna accompanied the practice of all Mosaic enactments. It is, however, held by many that the Tannaitic law was new and original; that in early Mishnic times it was felt that the Pentateuch demanded the death sentence too readily, and that the Rabbis took steps to prevent such sentences from being carried out. This subject need not be discussed here; it is sufficient to show that the death penalty was almost abandoned, without entering into the question of whether this was brought about by new prescriptions or not.

The infliction of death was surrounded by many preliminaries and obstacles. The law demanded not only the presence of two satisfactory eye-witnesses, whose testimony must support vigorous scrutiny (see Mishn. *Sanh.* iv. v., ed. Strack, from which all quotations are taken), but also, before committing the crime, the accused must have received formal warning from the bystanders as to the consequences of his act (מִנְחָה, *ib.* v. 1; Bab. *Sanh.* 8b, 80b; Tos. *Sanh.* xi. 1, ed. Zuckerman; Pasewalk, 1880, p. 431). No circumstantial evidence whatever was admissible, nor could the accused be convicted on his own confession. The stringency in examining and in challenging witnesses, the necessity of proving *hathrā'ah*, the elaborate aids given to the accused—all tend to show that the infliction of capital punishment must have been practically impossible; and this seems to have been the precise aim which the Rabbis had in view. *Makkoth* 7a records the dictum that a Sanhedrin which condemned a prisoner to death once in seven years earned the reputation of 'destructive' (מְהַרְהֵר); according to R. Eliezer b. 'Azarya, once in seventy years sufficed; while R. Tryphon and R. 'Aqiba state that, had they been present, they would always have succeeded in advancing some plea to invalidate the proceedings in favour of the prisoner. Nor was this tendency limited to cases of capital punishment alone; it was extended to other branches of criminal law, e.g. to the *lex talionis*. The eighth chapter of *Baba Qamma* shows quite clearly that even in early days this command could not have been intended to receive literal interpretation, for a man who had lost his eye could receive no compensation through a similar injury being done to his assailant. Compensation could consist only in the worth of the eye being restored to the loser, and this was estimated by assessing the value of the injured party, if sold as a slave, before and after the accident, the difference representing the amount of the damages (incidentally, cf. Rashi on Ex 21²⁴).

Even when a capital sentence had been pronounced and was about to be carried into execution, every chance of proving his innocence at the eleventh hour was accorded to the accused. The court remained sitting all day in order to receive appeals, and an elaborate system of signals was devised to stay the execution in the event of any unexpected piece of evidence becoming known (Mishn. *Sanh.* vi.). Punishment was to be so arranged as to prevent the repetition of the offence by other parties, in other words, to act as a deterrent, and to secure the extinction of the crime itself and of its consequences: 'Thou shalt put away the wrong from thy midst'; 'and all Israel shall hear and shall sin no more.' Care had to be taken that no additional suffering or humiliation was incurred

by the guilty party. Any dishonour to the body resulting from the punishment was to be avoided, in so far as it was not expressly provided by the sentence. In executions and in flagellations, particular caution had to be exercised in this respect.

Capital punishment as ordered by the *Bêth Din* could be effected by lapidation (אֶבֶן), burning (אֵשׁ), decapitation (רֶגֶל), or strangling (חָנָה) (see Mishn. *Sanh.* vii. 1: אֶבֶן מֵתָה וְחָנָה מֵתָה וְרֶגֶל מֵתָה; and Singer's *Prayer Book*, London, 1900, p. 262). Crucifixion, as a means of death, was a Roman form. The last two methods are not mentioned in the Pentateuch, where, in fact, stoning is most usual. There seems no reason to doubt that *sqûla* and *srêphâ* in the Pentateuch mean what is commonly known as stoning and burning; but the provisions of the Mishna show a great alteration in the manner of the execution. In the case of burning (Mishn. *Sanh.* vii. 2), the criminal was firmly fixed in pitch, up to his knees. A strong cloth, covered with a soft wrapping, was twisted round his neck, and its two ends were pulled by officials. The soft cloth was added to avoid unnecessary pain and in order to prevent death by strangulation. The criminal was thus forced to open his mouth, into which there was poured a stream of molten lead which instantly consumed his vitals, death being speedy and merciful. The Parthians treated the body of the Roman general Crassus in a similar manner after Carrhæ (53 B.C.). R. Eliezer b. Šadoq, a *tanna* of the 1st cent., relates that once he saw the daughter of a priest who had committed unchastity (Lv 21⁹) bound in vine tendrils and burnt (*Sanh.* vii. 2; *Tos.* ix. 11, etc. Contrast the burning of R. 'Aqiba, in A.D. 135, after the Bar Cochba revolt, when 'sponges of wet wool' [אֶבֶן מֵתָה] were placed round his heart to prolong the agony). In Bab. *Sanh.* 52b, R. Hama b. Tobia ordered Imarta, a priest's daughter who had lived unchastely, to be wrapped in vine tendrils and burnt. Both these cases are distinctly reprobated. In the former, the Sanhedrin which could have permitted such a method is said not to have been competent (*bâgî*). In the latter instance it is suggested that the *Bêth Din* may have been Sadducean, or that the narrator was too young to remember details. Any departure from the procedure described above is stated to be illegal.

In the case of stoning also, modifications were adopted with a view to hastening death. Mishn. *Sanh.* vi. 4 states:

'The height of the place of stoning was twice a man's length. One of the witnesses pushed (אֶבֶן) the criminal on the loins so that he fell down (forward) on to his breast, and the witness immediately turned the body over on to its back. If the criminal was already dead, then the duty was accomplished, but, if he still lived, then the second witness took a stone and cast it on to his head.'

If necessary, all the bystanders followed suit until death intervened. According to the Pentateuch, the witnesses had to cast the first stone, since it was through their testimony that the execution took place (Dt 17⁷). With the hurling down of the criminal may be compared the procedure with the scape-goat in Mishn. *Yoma*, vi. 5. The official pushed (אֶבֶן) the goat backwards, so that it rolled down and immediately became dismembered. In some cases the body was hanged, or rather crucified, after execution, for a limited period (Mishn. *Sanh.* vi. 4).

Decapitation (Mishn. *Sanh.* vii. 3; Bab. *Sanh.* 52b) was practised with a sword, in the same way as with the Romans; but R. Judah b. Elai, a *tanna* of the 2nd cent., objected on the ground that it involved degradation. To strike off the head of a man who was standing caused the body to fall down, and for this additional humiliation there was no authorization, consequently R. Judah

describes a different method, viz. beheading with an axe (אֶבֶן, *ax*) on a block. The other Rabbis considered this method even more humiliating, and rejected it. It seems that the criminal was tied to a post, in order that the body should remain upright. Finally, strangulation (*ib.*) was carried out as in the preliminary process of burning, only that the two ends of the cloth were pulled so hard that they caused death.

The object of these modifications was, in the first place, to mitigate the horrors of death. On this account a cup of drugged wine and incense (אֶבֶן מֵתָה) was given to the criminal in order to produce insensibility (e.g. Bab. *Sanh.* 43a, Mk 15²³, and other references). The second motive was to avoid desecrating the body beyond the necessities of the death penalty. The pursuit of both these aims caused a great internal restriction of the functions of the Jewish tribunal.

The various crimes for which the penalty was death are enumerated in Mishn. *Sanh.* vii.-xi. Lapidation is the punishment for eighteen offences—including incest, sodomy, bestiality, blasphemy, idolatry, the giving of one's children to Molech, necromancy, sorcery, Sabbath-breaking, the cursing of parents, criminal intercourse with a betrothed virgin, the inviting of others to idolatry, the perverting of a whole city, the practice of magic, and for the stubborn and rebellious son. Burning was reserved for a priest's daughter who violated her chastity, and for nine forms of incest—only, however, when committed during the life of the legal wife. Murderers and the inhabitants of an apostate city (Dt 13⁹) were beheaded, and the following were strangled: one who beat a parent (cf. Vergil, *Æn.* vi. 609), one who kidnapped a Jew for slavery, a sage who opposed his superior authorities, a false prophet, one who prophesied in the name of false gods, the adulterer, and one who bore false witness against a priest's daughter.

The number of crimes for which stripes could be inflicted was very large (*Makkoth*, iii. etc.). This penalty could, with certain restrictions, be imposed by the judges at their discretion, unless the Scripture demanded a specified punishment for some particular sin. In no case could the stripes exceed thirty-nine, and, whenever possible, fewer were given. The presence of the judges was obligatory. (For full details, see Mishn. *Sanh.* xiv. = *Makkoth*, iii.; also Abrahams, *Jewish Life*.) The Mishna (*Makkoth*) enumerates fifty transgressions punishable by flagellation. Maimonides, in the *Yad ha-Hazaka*, gives a far longer and more comprehensive catalogue. A culprit who received stripes was *ipso facto* freed from excision (אֶבֶן), and recovered all those rights from which his crime might have debarred him (Mishn. *Sanh.* xiv. 16).

The principle of making the punishment as lenient as possible, *suaviter in re*, operated also in respect of those sins the punishment of which was reserved for the future life. The famous tenth chapter of *Sanhedrin* gives a list of those who have no share in the world to come, but every endeavour is made to make the list short. The principle is that all Israel are entitled to a share (אֶבֶן מֵתָה) unless they forfeit it.

'He who says that the doctrine of the resurrection is not contained in the Pentateuch (according to other readings, 'he who denies the doctrine of resurrection'); he who denies the inspiration of Scripture; the Epicurean; according to R. 'Aqiba, he who reads external (i.e. uncanonical) books; he who utters enchantment over a wound . . . ; Abba Saul says, whose pronounces the Tetragrammaton.' In all these cases reference should be made to the commentary of Maimonides (ed. Hölzer). Seven persons—three kings (Jeroboam, Ahab, and Manasseh) and four private individuals (Balaam, Doeg, Abithophel, and Gehazi)—are deprived of their future life, but in each case the Rabbis sought for extenuating circumstances in order to find a

loophole from perpetual doom. Similarly, excuses are made for the generation of the Flood, and for the generation of the Wilderness.

Excommunication could, according to Bab. *Berakh. 19a*, be imposed for a variety of offences, all of a less heinous nature than those punishable by stripes. It consisted of three grades of separation: (1) *nēzfā*, (2) *niddui*, and (3) *hērem*. The period of *nēzfā* was one day, of *niddui* seven days, while *hērem* could be indefinite. One who died impenitent under *niddui* was not buried with the usual ceremonies, and the force of *hērem* was very severe. In the Middle Ages the power of *hērem* was great owing to the institution of the Ghetto, but it was always felt to be a terrible weapon, e.g. in the cases of Uriel Acosta and Spinoza. The very gravity of *hērem* caused great reluctance to inflict it, and it was very sparingly employed (see Abrahams, *Jewish Life*, pp. 52, 292). Cf. art. BLASPHEMY (Jewish).

The penalty of excision (כַּרְע) prescribed by the Pentateuch was not carried out by human agency, except in so far as guilty parties were scourged; hence this mode of punishment scarcely calls for consideration in this article. But, just as in the case of exclusion from a share in the future life,—a fate which also could not be determined by human agency,—so, too, in the case of excision, the Rabbis attempted to find pleas for the wicked. In Mishn. *Sanh. xiv. 15* it is stated that all those condemned to excision find immediate pardon after receiving their scourging, if they are penitent. This conclusion is illustrated by a play on the words of the text (Dt 25¹²), 'Lest thy brother be brought to dishonour in thy sight' (לְפָנֶיךָ). R. Hananya b. Gamaliel says: 'as soon as he is scourged (לְפָנֶיךָ) he becomes thy brother in thy sight.' Fines were imposed by the Bible for breaches of moral conduct in sexual matters (Dt 22, Ex 22), and for allowing a dangerous ox so much freedom that it killed a slave. In other cases the Mishna knows nothing of this means of punishment. In the Middle Ages fines were sometimes paid to the general funds of the community by persons liable to be scourged for a breach of Pentateuchal legislation.

Imprisonment, though known in the Bible (e.g. Joseph and Jeremiah), was not frequently practised in Mishnic times. As a means of punishment, it was employed in what may be described as indirect crimes, that is to say, for the contumacious and for the suborner. It could be imposed if conclusive evidence was not forthcoming though there was a strong presumption of guilt, or if a person punished twice by flagellation had committed the offence a third time. These cases are dealt with in Mishn. *Sanh. ix. 5*, and Bab. *Sanh. 81b*.

'He who has been scourged, and has repeated the offence, is sent by the *Beth Din* to a dungeon, and fed with barley bread until his belly bursts. One who slays another without witnesses is sent to a dungeon and fed on scanty prison fare (לֶחֶם עֵצִים) *ṣ. 1*.'

The Gemara explains that the scourging refers to the stripes which always accompanied the penalty of excision; the difference in the two expressions for food is also explained. According to R. Shesheth, the method is the same, only in each instance different stages are quoted: the prisoner was in each case first given very scanty fare until his belly contracted, then barley was given to him so that it caused him to burst. The impractical nature of the treatment is clear proof that no Rabbi had ever heard of a case of its application. Such a rare situation as the Mishna presupposes makes it plain that the penalty of imprisonment could scarcely ever have been inflicted.

It must be remembered that, in the time of which the Mishna speaks, most of the decisions

were theoretical (see Strack's introduction to his edition of Mishn. *Sanhedrin-Makkoth*, p. 5¹); consequently we have there recorded the practice of an earlier period. In the Middle Ages there was a great revival of Jewish jurisdiction (see Abrahams, *Jewish Life*, p. 49, etc.). In Spain (*ib.*), up to 1379, Jewish courts could impose punishments and even pronounce a death sentence, which was carried out by the civil courts. Imprisonment was a form of punishment adopted by Jews, though it seems probable that they made use of the ordinary prison—or some separate portion of it—for their own offenders. The institution of the Jewish Quarter gave the *Beth Din* greater powers and fostered the growth of two principles: (1) that it was unpatriotic for a Jew to cite another Jew before the civil courts; and (2) that no mercy was to be shown to the informer. The activity of the Jewish tribunal in secular matters can scarcely be said to have survived the breakdown of the Ghetto, though in religious questions its authority remained unshaken. In many instances, plaintiff and defendant have, of their own accord, agreed voluntarily to submit their differences to the arbitration of the *Beth Din* rather than to the civil judge—a system at present in great vogue in the East End of London. By this means many disputes are settled without taking up the time of the magistrate. But this does not belong to the domain of criminal cases. Here the jurisdiction of Jewish courts has long ceased.

LITERATURE.—The Mishna, Gemara (Pal. and Bab.), and Tosephta of *Sanhedrin-Makkoth* should be carefully studied. For the Mishna there are critical editions: (1) with vocab., notes, and trans., by H. L. Strack, Leipzig, 1910; (2) by Samuel Krauss, Leyden, 1909, with introduction, notes, and glossary; (3) for those who are ignorant of Hebrew, a tr., with notes, etc., has been prepared by Holscher (Fiebig's Series), Tübingen, 1910, with special reference to NT questions; Maimonides' comm. is edited by J. Holzer, Berlin, 1901. The *Jerus. Talm.* is translated by M. Schwab, Paris, 1888. The best edition of the Tosephta is that of Zuckerman, Posen, 1880. See articles in *EB* on 'Synhedrium,' in *JE* on 'Capital Punishment,' 'Stripes,' 'Excommunication,' 'Crime,' 'Punishment,' 'Hatra'ah,' 'Admission in Evidence,' etc.; in the present work, see ADULTERY (Jewish), BLASPHEMY (Jewish); cf. I. Abrahams, *Jewish Life in Middle Ages*, London, 1896; A. Büchler, 'Das Synhedrion in Jerusalem und die Todesstrafen der Bibel und der jüd.-nachbiblischen Zeit,' in *MGWJ*, 1906; see also bibliographies in *JE* iii. 558, iv. 359.

HERBERT LOEWE.

CRIMES AND PUNISHMENTS (Muhammadan).—I. Introduction.—In Ancient Arabia, crime was often regarded as impurity, and punishment as purification. In Muslim tradition also it is mentioned that a certain adulterer who desired to do penance for his sin said to the Prophet, *tahhirmi* ('purify me'), whereupon he was stoned to death.¹

In the heathen period, manslaughter and other crimes often gave rise to bloody feuds among the Arab tribes. The revenge of the injured party or of the members of his family or tribe extended not only to the guilty person who had killed or injured any one, but also to all who belonged to the same family or tribe. It is true that by this solidarity of family and tribe the public safety was in some respects benefited; but, on the other hand, there was the disadvantage that many innocent persons had to suffer for the sins of their relatives, and that long-continued blood-feuds often arose from insignificant beginnings. Usually on both sides an attempt was made to put to death as great a number as possible of enemies of high rank in return for each fallen tribesman; for many regarded as insufficient mere retaliation (*qisās*), by which no greater injury was done to the other party than had actually been suffered. Blood-guiltiness was sometimes bought off by means of a great number of camels, but the acceptance of such a price of

¹ See I. Goldziher, 'Das Strafrecht im Islam' (*loc. cit. infra*, pp. 101, 104 n. 2), and *Muhamm. Studien*, 1889–90, i. 27 n.

blood ('*aql* or '*diyya*') was often regarded as a humiliation. See, further, BLOOD-FEUD (Muslim).

The blood-feud was so deeply rooted in the customs of the Ancient Arabians that it was impossible for the Prophet completely to forbid it. In Islām, therefore, retaliation remained permissible, though with important restrictions. Not long after the Hijra, circumstances at Medina compelled the Prophet to issue regulations as to this matter, in order to prevent the old blood-feud from continuing even among the Muslims; he therefore strictly forbade a Muslim to revenge himself on a fellow-believer for blood-guiltiness dating from the heathen period. If, however, a Muslim were attacked unjustly by a fellow-believer, he retained the right of retaliation; and, if he were killed, his heirs had also this right, but the question must henceforth be properly investigated, and only the guilty person himself might be punished after his guilt had been proved. It was, moreover, established that for Muslims only the *qisās*, i.e. the *taliq* in the most restricted sense of the word, was permissible; the attacked party must not do any greater injury to the attacking than he had himself suffered. Redemption of the blood-feud was permitted for Muslims, but the acceptance of the price of blood instead of retaliation was not expressly made a religious duty.

See Qur'ān, ii. 173-174: 'If any one gains forgiveness from his neighbour, [the one party] must conduct his case [concerning the price of blood] with moderation, and [the other party] must pay the price of blood willingly. That is a mitigation from your Lord.'

If the guilty person had acted deliberately, he must in future pay the price of blood himself, as a personal punishment; only if he had killed or wounded some one accidentally did his relatives remain obliged to support him in the payment of the price of blood.

For other crimes not consisting of killing or wounding, the Prophet did not in general issue express regulations. Only in consequence of special circumstances he prescribed a *ḥadd* ('fixed penalty') for some misdemeanours. The best-known instance is described in art. ADULTERY (Muslim). When Muhammad's wife 'Ā'isha was accused of adultery, it was prescribed in Qur'ān, xxiv. 1-5, that a person who was guilty of fornication (*zinā*) should be henceforth punished with 100 stripes of the whip, but that they who accused an honourable woman of that crime unjustly must be punished with 80 stripes (see, further, art. ADULTERY (Muslim)). Other instances of fixed penalties are the *ḥadd* for theft, which is prescribed in Qur'ān, v. 42-43, and the *ḥadd* for highway-robbery (*ib. v. 37-38*). In other cases, when no special punishment is prescribed, the judge is entitled to inflict such punishment on the culprit as seems to be the most suitable in view of the circumstances. This form of punishment is called *ta'zīr* ('correction').

Muslim canon law thus distinguishes three categories of crimes and punishments: (1) the so-called *jinzāyat*, i.e. misdemeanours consisting of killing or wounding, which must be punished either with retaliation (*qisās*) or with payment of the *diyya* ('price of blood') or other damages; (2) adultery, robbery, and other crimes, which must be punished with a fixed penalty (*ḥadd*); and (3) all other kinds of transgressions, which must be punished with *ta'zīr* ('correction').

According to Muslim canon law, the punishment must be regarded in some cases as a *ḥaqq Allāh* ('right of Allāh'), in other cases as a *ḥaqq ādamī* ('human right'). When, for instance, a Muslim has the right to exact retaliation or the payment of the price of blood, such a case concerns *ḥaqq ādamī*, just as when he reclaims stolen or loaned property, or demands the payment of a sale price.

In these cases the injured person (or his heir) may also give up his right and forgive the injurer.

In cases in which the judge has to decide as to a 'right of Allāh,' certain special principles apply. In many traditions it is expressly put in the foreground that God will base His relation to man, above everything else, on compassion and forgiveness; that He is, therefore, always ready so far as is possible to cover the sins of His servants with the cloak of love, but only on condition that they also act in this way and cover both their own sins and those of their fellow-men.

On the ground of these traditions, the judge, the witnesses, and the culprit must all do their best to prevent the infliction of punishment, if it is a *ḥaqq Allāh*. The culprit is then not bound to acknowledge his guilt if he is accused; he may even revoke his confession before the judge; for the witnesses it is not regarded as meritorious to give evidence against the culprit; the judge must expressly point out to the accused the means by which he may escape punishment; and he may not condemn him before his guilt has been proved, according to the demands of the canon law, even though he personally knows with complete certainty that the crime has actually been committed.

In practice, the crimes which must be punished with *ḥadd* can hardly ever be proved except by the voluntary confession of the culprit, because the legal proof is too difficult. To prove fornication, for instance, it must be possible to call four witnesses who have all observed the act (see ADULTERY (Muslim)). If the guilty person does not desire to do penance for his crime, and in this way to purify himself from his sin, it is therefore usually impossible to punish him. If, however, his guilt is formally certain, the judge is obliged to inflict the *ḥadd* precisely according to the regulations of the canon law.

2. Retaliation (*qisās*).—According to the Muslim law-books, retaliation is still permitted in only two cases: (1) when any one has deliberately¹ and unjustly² killed another, the heirs of the latter have the right to kill the murderer; (2) if any one is deliberately and unjustly wounded or mutilated, he has the right to revenge himself on his injurer, if it is possible to make him suffer precisely the same wounding or mutilation. According to Muslim lawyers, this is in general possible only when a hand, foot, arm, leg, ear, finger, nose, toe, tongue, eye, or tooth, or other part of the body, has been cut off or destroyed. Moreover, retaliation is in both these cases permissible only (1) if the guilty person was of full age when his crime was committed, and in the full possession of his intellectual powers; (2) if the injured party is at the same time an equal of the guilty person. According to the majority of Muslim lawyers, a slave is not the equal of a free man; only the Hanafites hold that the rules of retaliation are applicable also to a free man who has killed or wounded the slave of another. If an unbeliever is killed by a Muslim, it is not, as a rule, permissible to take vengeance for blood on the latter unless the deceased unbeliever had been expressly promised protection of his life by a Muslim. Also the father may not be put to death when he has killed his son.

Those who have the right to demand revenge for blood are the heirs belonging to the first and second classes, the '*aqābāt*' and the '*dhaw'l farā'id*'

¹ According to Muslim canon law, the question whether the culprit acted deliberately or not depends on the sort of weapon with which his act was accomplished. The opinions of the various *fiqh*-schools differ as to the details.

² The *qisās* is not applicable to one who has killed or wounded another if he had a right to do so. He, for instance, who finds a thief in his house, or any one outraging his wife, may immediately kill him without incurring penalty—not only in self-defence, but also in vengeance on the offender.

(see art. LAW [Muhammadan]); according to the Mālikites, however, wives cannot exercise any *qisās*. If the heirs give up their right to *qisās*, the guilty person is obliged to pay the price of blood (*diya*); according to the Ḥanafites, however, the *diya* cannot be demanded in this case, if the guilty person does not himself agree to it. If the deceased has left various heirs, and some of them are willing to spare the guilty, no vengeance for blood may be exacted, but only the *diya*.

Vengeance for blood is carried out personally, under the supervision of the judge, by those who have instituted the proceedings against the guilty person. If there are several who demand it, one of them is appointed to carry out the punishment.

3. The price of blood for manslaughter (*diya*).—The price of blood for manslaughter may be demanded: (1) when any one has been killed deliberately and unjustly, and his heirs give up their right to exact the *qisās*; (2) when any one has been killed unintentionally.¹ In both cases the *diya* consists of 100 camels, or 1000 *dīnār* of gold, or 12,000 *dirhams* of silver (according to the Ḥanafites, however, 10,000 *dirhams* of silver). But in the first case the so-called 'heavy,' and in the second case the 'light,' price of blood is incurred. In the *fiqh* it is accurately decided what sorts of camels must be given in each of these cases. If gold or silver is paid in place of camels, according to some Muslim lawyers a greater sum may be demanded for the 'heavy' *diya* than for the 'light'; but according to others it is not so; and, according to the later opinion of Shāfi'ī, no fixed payment of gold or silver is due, but the worth of the 100 camels. The 'light' price of blood must be paid within a period of three years by the so-called '*āqila*, i.e. by those who pay the '*aqī* ('price of blood'). To these '*āqila* belong, according to the Ḥanafites and Mālikites, all '*asabāt* (i.e. the male relations on the paternal side) of the culprit, and according to them he must also himself pay part of the sum incurred; according to the Shāfi'ites, on the other hand, neither the culprit himself nor his blood-relations in the direct line belong to the '*āqila*.

When the Muslims after the great conquests established themselves in Egypt, Syria, Persia, and other lands, the Old Arabian family-organization partially lost its importance, and there arose a new grouping of persons who had the same interests to defend. According to the Ḥanafites, the same rules concerning the payment of the price of blood are applicable to these new groups as to the blood-relations of the guilty person; according to them, therefore, all persons belong to the '*āqila* who are bound to give their mutual support to each other (among others, neighbours, those who practise the same profession, those who belong to the same army-corps). The 'heavy' price of blood, on the other hand, may be demanded only from the culprit himself; and, according to most *faqīhs*, he has no right to postpone payment. According to the Ḥanafites, however, he also is only obliged to pay the sum within a period of three years.

(3) Besides the cases in which any one is killed either intentionally or accidentally, Muslim lawyers distinguish yet a third case in which the culprit did, indeed, attack the deceased intentionally, but without meaning to kill him. In that case the '*āqila* must pay the so-called 'heavy' *diya*. They are also obliged to do this, according to some Muslim lawyers, if he has killed another accidentally, either in the sacred territory of Mecca or during one of the four sacred months (Muharram, Rajab,

¹ It must be noticed that, according to Muslim lawyers, any one who has accidentally killed another is punishable even if no fault attached to him in so doing. The price of blood may even be demanded if, for instance, any one has fallen from the roof and in his fall has killed another.

Dhu'l-q'ada, Dhu'l-hijja); further, if the deceased was a *maḥram* (i.e. a relation whom it is forbidden to marry) of the culprit; according to others, however, they are in this case liable only to the 'light' *diya*.

For the death of a woman only half the price of blood can be demanded; for the death of a Christian or a Jew, according to the Mālikites, also only half the *diya*, according to the Shāfi'ites only one third, but, according to the Ḥanafites, the full price of blood. If any one kills the slave of another, according to most Muslim lawyers he must himself make good to the owner the full value, even though this cost more than the *diya* for a free man; according to the Ḥanafites, however, the owner has never a claim to more than the value of 100 camels decreased by one *dīnār*. If the culprit was under age or mad, the price of blood must be paid out of his property by the guardian or curator; if the culprit was a slave, his master is responsible, but he can free himself from all further obligation by giving up the slave.

In addition to the *qisās* or the *diya*, manslaughter demands a *kaffāra* ('atoning sacrifice'); and, according to Qur'ān, iv. 94, this must consist in the setting free of a Muslim slave, or, if this cannot be done, in fasting for two months. The feeding of 60 poor persons, which in some other cases of *kaffāra* may take the place of fasting, is in this case, according to most *faqīhs*, insufficient. According to the Ḥanafites and Mālikites, this *kaffāra* is incurred only when any one has been put to death accidentally (on the ground of the words of Qur'ān, iv. 94); but, according to the Shāfi'ites, also if the culprit has acted intentionally.

4. The *diya* and other damages for wounding.—The wounded person, as has already been noted, if he gives up his right to *qisās*, claims the *diya* in place of it (according to the Ḥanafites, only if the guilty person agrees). The full *diya* is incurred when, because of the wound, a part of the body is lost (e.g. the nose) of which a man has only one; he who loses a part of the body of which men have two (e.g. an eye, ear, hand, or foot) may claim the half of the *diya* as damages; in the same way $\frac{1}{2}$ of the full price of blood is incurred for an eyelid, $\frac{1}{4}$ for a finger, and for a joint of a finger $\frac{1}{8}$ of the *diya*. The rules and distinctions concerning the *diya* for manslaughter apply also to the *diya* for lost parts of the body.

Damages are incurred also for wounds for which no *qisās* can be demanded, as, for instance, those which are caused by stabbing or cutting the body. In the Muslim law-books, regulations concerning the various sorts of these wounds are worked out in detail. Ten of them (all wounds caused by cutting on the head or the face) are known as the *shijās*; the *mudīḥa* is a wound which has cut to the bone, etc. The damages which the culprit must pay depend in some cases on an express regulation of the law-books, and are then called *arṣh*; in other cases they must be fixed by a legal sentence (*ḥukūma*), according to the loss suffered by the injured. An expert has then to estimate what value the body of the wounded person would have had before and after the wound, if he was a slave. If it appears that the value of his body was diminished by, for instance, $\frac{1}{4}$, the judge sentences the culprit to pay $\frac{1}{4}$ of the full *diya*. If any one has been wounded simultaneously in several places, he may claim damages for each wound separately, and therefore in some cases may receive even more than the *diya* for manslaughter.

5. Misdeeds which must be punished with a *ḥadd*.—For the *ḥadd* in consequence of *zinā*, see art. ADULTERY (Muslim). The punishment for apostasy from Islām, which is regarded by some Muslim jurists as a *ḥadd*, is treated in art.

APOSTASY (Muhammadan). We have therefore here to treat only of the other fixed penalties, viz. those for *qadhif*, wine-drinking, theft, and highway robbery.

(1) *Qadhif*.—By this the Muslim canon law understands only such slander as is meant in Qur'an, xxiv. 4. Since only slander of 'honourable' women is mentioned there, the crime of *qadhif* consists, according to Muslim lawyers, of the accusation of fornication brought against a *muhṣan* (i.e. an 'honourable' person, who is, moreover, a free Muslim of full age, in the full possession of intellectual power) without its being possible to adduce proof by four male witnesses. He who is guilty of this crime must be punished with 80 stripes if he is a free man, and with 40 if he is a slave. This *ḥadd* is not enforced if he is under age, or insane, or if he is the husband of the slandered woman and swears that she is guilty, invoking Allāh by means of the so-called *li'ān* (see art. LAW [Muhammadan]). According to some Muslim lawyers, the slandered person has the right of excusing the punishment of the guilty, but not according to others; there is also a difference of opinion as to whether the heirs of the slandered person have the right of exacting this *ḥadd*.

(2) The *ḥadd* for the drinking of wine and other strong drinks consists of a certain number of stripes, on the ground of the tradition as to the way in which the Prophet punished drunkards in Medina. As to the number of stripes, there is a difference of opinion: according to the Shāfi'ites, the punishment consists of 40, according to the other *fiqh*-schools, of 80 stripes for a free man, and the half of that number for slaves. The guilt of him who is accused of this crime can, according to canon law, be proved only by two male witnesses, or by the confession of the guilty. Moreover, the punishment is not applicable to minors, insane persons, and unbelievers.

(3) The *ḥadd* for theft depends on the command given in Qur'an, v. 42, 43, 'From the man thief and woman thief cut off the hands, as a warning example from God.' According to the Shāfi'ite and the Mālikite doctrine, a thief after his first theft must lose the right hand, after the second the left foot, after the third the left hand, after the fourth the right foot, and after the fifth and following thefts he must be punished by *ta'zīr*. According to the Ḥanafites, however, the thief must never lose more than the right hand and the left foot; if he continues to steal after his second offence, he must be kept in prison until he is reformed.

Theft is, however, punished with this *ḥadd* only when the stolen article had been put away in a proper manner, and, moreover, had a certain value (the so-called *niṣāb*). According to the Shāfi'ites, the *ḥadd* is applicable only if the value of that which is stolen is at least $\frac{1}{4}$ of a *ḍīnār* (about 3 shillings); according to the Ḥanafites, only if the worth was at least one *ḍīnār*, or 10 *dirhams*; according to the Mālikites, $\frac{1}{4}$ of a *ḍīnār*, or 3 *dirhams*.

The *ḥadd* for theft is also not applied if the thief was under age or insane, or if he could make good a certain claim to the stolen property. The last is the case if one of those who have taken part in a battle steals something from the booty before it has been divided among the troops, or if a Muslim steals from that which was intended for the general use of Muslims. If one of a married couple steals something to the injury of the other, according to some Muslim lawyers the culprit must be punished with *ḥadd*, but not according to the opinion of others.

The person whose property was stolen has the right to reclaim the stolen article; and, if this has

been lost, the thief must pay damages in its place. According to the Ḥanafite doctrine, however, the thief is not obliged to make such payment of damages if the *ḥadd* for theft has been applied to him.

(4) The *ḥadd* for highway-robbery is deduced from Qur'an, v. 37, 38:

'The punishment for those who fight against Allāh and his apostle, and pass through the land spreading disaster, shall be that they shall be slain or crucified, or have their hands and feet cut off cross-ways, or that they be banished from the land . . . unless they reform before they fall into your hands. God is forgiving and compassionate.'

Since, therefore, this *ḥadd* was not accurately defined, there arose much difference of opinion among Muslim lawyers as to the punishment of highway-robbers. The various opinions cannot all be mentioned here in detail. According to the Shāfi'ite doctrine, four cases must be distinguished: (1) if the culprit has only made the road unsafe, he must be banished; (2) if he has also practised robbery (namely, in the sense that he would incur the *ḥadd* for theft if he were not a highwayman), his right hand and left foot are cut off (in the case of a repetition of the offence, the left hand and right foot as well); (3) if he has deliberately murdered any one, he must be put to death, even though the heirs of the murdered person were willing to content themselves with the *diya*; (4) if he has as a highway-robber robbed and killed, not only is he punished with death, but his corpse is exhibited for a time on a cross. According to the other *madhabs*, regulations obtain which are partially different.

When the robber repents before he has been captured, the special *ḥadd* for highway-robbery is no longer applicable to him, but he remains, for instance, obliged to restore that which has been stolen; and, if he has killed any one, the heirs of the latter have, just as in other cases, the right of exacting the *qisās* or *diya*.

6. *Ta'zīr* ('correction').—When no special punishment is prescribed, the judge, as has already been noted, must condemn the culprit to the punishment which seems to him to be the most suitable in view of the circumstances. He may, for instance, send him to prison, exile him, or sentence him to be publicly put to shame or scourged, etc. According to the Mālikite doctrine, he is even entitled in this case to condemn him to as many stripes as are prescribed in the case of *ḥadd*, or even more; according to the other *fiqh*-schools, however, this is not permissible. According to them, the *ta'zīr* must always be less severe than a *ḥadd*. The *ta'zīr* is, among other things, applicable to a thief when the stolen property has not so much value that the culprit must be condemned to the *ḥadd*; furthermore, in general, to all kinds of transgressions for which no other kind of punishment or any special atoning sacrifice (*kaffāra*) is prescribed.

The judge is not always obliged to apply the *ta'zīr*; according to the Shāfi'ites, only when the injured person expressly requires him to punish the culprit; and, according to the Ḥanafites and Mālikites, also when he is convinced that the latter will not reform without punishment. A *ḥadd*, on the other hand, must always be inflicted when the guilt of the culprit has been proved, because this punishment is expressly prescribed in the canon law.

CRIMES AND PUNISHMENTS (Parsi).—

From the list of the contents of the original twenty-one *nasks* of the Zoroastrian canon, the bulk of which is irretrievably lost, we find that seven of them consisted of the *dātik*, or 'legal' literature (*Dinkart*, viii. 1, 11). Of these the *Vendidad*, 'the Leviticus of the Iranians,' is preserved in its entirety, and this work, with some other portions of the extant Avesta and Pahlavi books, forms the chief source of our information on the criminal law of the ancient Persians.

Offenders against law are punished, first, in this world, according to the penalties laid down for various crimes; and, secondly, in the next world. The usual form of corporal punishment is the prescription of a certain number of stripes (*upāzana*) with the two implements *aspa-astrā* ('horse-goad') and *sraoṣō-caranā* ('scourge'). The number of such stripes prescribed for different crimes ranges between five and ten thousand. The extravagant number of strokes and the physical impossibility of a human being enduring this torture have led scholars to think, with Spiegel, Geiger, and Darmesteter, that the stripes were not actually meant to be laid on the culprits, but that the number of strokes either meant that the sinner should kill so many noxious creatures, or that they were so many strokes inflicted upon the realm of darkness, or that they were only meant to impress on men the gravity of the crimes. For instance, it is prescribed that a woman who has been delivered of a still-born child shall refrain from drinking water for the good of her own health for some time (*Vend.* vii. 60-72). The violation of this precept is punishable with two hundred stripes. Now this would be brutal, and the later writer of the *Rivāyat* states that in such a case, if she should thus drink water to avert serious illness, it would be sufficient for her husband to atone for her fault before a Dastur by *patet*, or 'penitence' (*Old Rivāyat*, p. 98b, quoted by Darmesteter in *SBE* iv. 92, n. 5, *Le Zend-Avesta*, ii. 112, n. 88). In the later Pahlavi period, these stripes are converted into money value, and certain fines are laid down for the various number of stripes. Very often the word *margarzān*, 'worthy of death,' is loosely employed to denote the hideousness of a crime. Some offences are termed *anāperethā*, 'unatonable.' The chief among them are the burying, burning, and eating of dead matter, and sodomy.

The characteristic feature of the Mazdayasnian law is that it prescribes very rigorous punishment for the violation of the rules of sanitation and hygiene; for it is said that the man who violates these rules imports or furthers epidemic, and endangers human life. The punishment for the ill-treatment of the various classes of dogs is exorbitant, and is calculated to ensure good treatment of this faithful animal, who as a sentinel guards the flocks of the faithful, and protects them from the attacks of wolves and other wild beasts, as also from the depredations of thieves and bandits. Any wilful harm done to so useful an animal is believed to deprive the community of his services, and to expose life and property to danger.

Capital punishment is prescribed for the man who carries a dead body alone, and for the man who falsely undertakes to cleanse one defiled with

dead matter. Strange as it may seem, only ninety stripes are prescribed for one who commits murder. Instances are found in Persian history in which capital punishment is meted out to manslayers. When the Sasanian king Ardashir discovers the plot of his queen to poison him, he consults the Dastur as to what should be done in the matter. The high priest thereupon replies that one who attempts to take the life of another deserves death (*Kārnāmāk-i Artakshshir-Pāpakān*, ix. 16-17). The cruel punishment of cutting off the hands, ears, and other parts of the body, is not unknown. Darius orders the nose, ears, and tongue of his rebel victim to be cut off, and his eyes to be put out (*Old Pers. Inscriptions on Mount Behistan*, ii. 74, 89; see F. H. Weissbach and W. Bang, *Die altpersischen Keilinschriften*, Leipzig, 1893, i. 21).

1. Assaults.—There are seven kinds of outrages, which are called in Pahlavi *pāyak vinān*, and in Sanskrit *padāni pāpāni*, meaning 'chief crimes' (*Shāyast lā-Shāyast*, i. 1; *Patet Pashimāni*, iii.). These are (1) *āgerepta*, 'stroke': when a man lifts his hand and wields a weapon with the intention to strike a blow, he becomes guilty of this crime (*Vendidad*, iv. 17). The punishment for the first offence is five stripes with the *aspa-astrā* and five with the *sraoṣō-caranā*. The penalty increases proportionately with the repetition of the crime, until, on the eighth committal of the same, the man is termed a *peṣotanru*, 'of sinful body,' and is to be punished with two hundred stripes (*ib.* 18-21). (2) *avaoiriṣta*, 'blow.' This is the name of the assault wherein a man brandishes a weapon (*Vend.* iv. 17). He receives ten stripes for the first crime, and the maximum penalty of two hundred stripes is prescribed in his case if, without atoning for his previous crimes, he repeats it seven times (*ib.* 22-25). (3) *aredus*, 'wound.' The penalty for this crime begins with fifteen stripes, and makes the culprit liable to two hundred stripes on the repetition of the same for the sixth time (*ib.* 26-29). (4) *avara*, 'sore wound.' This is punishable with thirty stripes for the first crime, and two hundred for the fifth repetition (*ib.* 30-33). (5) *tacaṭ-vohunī*, 'bloody wound.' The penalty is fifty stripes for the first offence, and the fourth committal of the same raises the punishment to two hundred stripes (*ib.* 34-36). (6) *astō-bīd*, 'bone-breaking,' begins with the punishment of seventy stripes for the first offence, and closes with that of two hundred stripes for its third repetition (*ib.* 37-39). (7) *frazā-baodhak*, 'rendering unconscious or causing death.' The punishment for this crime is ninety stripes for the first offence, and two hundred for the second (*ib.* 40-42).

The Pahlavi *Shāyast lā-Shāyast* variously speaks of eight or nine classes of crimes (i. 1, xi. 1). The *farman* and *sraoṣō-caranā* are the additional sins mentioned here. Certain degrees are assigned to the various crimes, and the bodily punishment is converted into fines. Thus the degree of the smallest crime, *farman*, is estimated at four *stars* (a *star* being equivalent to four *dirhams*). The degrees of the crimes rise in proportion to the gravity of the offences, until the *tanāfur* sin is estimated at three hundred *stars* (i. 2, xi. 2, xvi. 2-5).

2. Theft.—The *tāyu*, 'thief,' and *hazanha*, 'robber,' 'bandit,' who rob the faithful of their cattle and property, are severely punished. According to the Mazdayasnian declaration of faith, a true Zoroastrian undertakes to put down these crimes (*Yasna*, xii. 2). Haoma is invoked to warn the faithful of the cunning movements of the thieves (*ib.* ix. 21), and Rashnu, the angel presiding over truth, is spoken of as the best killer, smiter, and destroyer of the thieves and bandits (*Yasht*, xii. 7 f.). The sacrifices offered to Khurshēd, asking him to help the pious to withstand these evil

forces, is said to be equivalent to offering the same to Ormazd (*Yt.* vi. 4; *Nyāish*, i. 14), and Ardvīšūra is invoked to pour down her waters as a source of torment to the brigands (*Ys.* lxxv. 8). The routing of the thieves and robbers is eagerly prayed for (*Ys.* lxi. 3). The man who takes a loan from another, with the evil intention of not returning it, is a thief; and the commentator explains that, if he bluntly refuses to restore it, he becomes a robber (*Vend.* iv. 1).

The culprits had either to pay fines, or their ears and hands were cut off, or they were imprisoned. If a man stole a *dirham* (about 7d.), he had to pay two *dirhams*, one of his ears was cut off, ten blows with a stick were inflicted upon him, and he was imprisoned for some time (*Šad Dar*, lxiv. 2-3). If he stole another *dirham*, four *dirhams* formed his fine, he had to forfeit his other ear, to receive twenty blows, and to be imprisoned for a period twice the length of that inflicted at the time of his first crime (*ib.* lxiv. 4). The third repetition of the crime was punishable by cutting off his right hand (*ib.* 5), and if, persisting in his evil work, he finally stole five hundred *dirhams*, he was to be hanged (*ib.* 6). The bandit who had robbed a person of something by violence, had to restore to the owner four times as much as he had taken, or he was to be killed if public safety required it (*ib.* 11; cf., further, on theft, *Dinkart*, viii. 20, 123, 21. 1-14).

3. Breach of contract.—The man who lies to Mithra is guilty of *Mithrō-drug*, and brings death to the whole country (*Yt.* x. 2). The faithful are exhorted not to violate contracts entered into with any one. The six important forms of contract are: (1) word-contract, (2) hand-contract, (3) the contract to the value of a sheep, (4) the contract to the value of an ox, (5) the contract to the value of a man, and (6) the contract amounting to the value of a field (*Vend.* iv. 2). The penalty for breaking these contracts begins with three hundred stripes with *aspa-aštrā* and an equal number with *sraošō-caranā*, for the violation of the first class of contract, and rises to the maximum punishment of a thousand stripes each in case of the breach of the final contract, namely, the field-contract (*ib.* 11-16).

4. Crimes connected with the defilement caused by corpses and dead matter.—The earth, being one of the sacred elements of nature, is to be kept pure from defilement. Ahriman created the sin of interring corpses in the earth, for which there is no atonement (*Vend.* i. 13, iii. 39), and it is therefore the sacred duty of the faithful to disinter the dead bodies, wherever possible. If a man lets a corpse remain buried, and neglects his duty to dig it out within six months, his punishment is five hundred stripes with each of the two punishing rods. The penalty is doubled in the case of a corpse remaining buried for a period of one year, and if it is not disinterred within a period of two years, it makes the man guilty of *anāperetha*, for which there is no atonement (*ib.* iii. 36-39).

Under no circumstances is a corpse to be carried by a single person, lest he should be defiled. Capital punishment is meted out to him who violates this precept. The culprit is to be removed to a barren place, and to be kept there until he grows old, after which his head is to be cut off (*ib.* 15-21). The man who does not properly observe the rules of removing the corpse to the top of a mountain, and fastening the body with brass or stones by the feet or hair, to prevent the dogs and birds from carrying the dead matter to water and trees, is to be punished with two hundred stripes (*ib.* vi. 47f.). If a man, happening to touch a corpse in the wilderness, approaches water and trees without cleansing himself, he receives four hundred stripes with each of the two instruments (*ib.*

viii. 104-106). Wilful carrying of the dead matter to water or fire makes one worthy of death (*Šad Dar*, lxxii. 1). Unnecessary waste of anything is deprecated, and a man who throws more cloth on the corpse than is essential has to suffer the punishment of four hundred stripes, rising to one thousand stripes with both the whips, in proportion to the quantity thus wasted (*Vend.* viii. 23-25).

Among the worst crimes created by Ahriman is that of cooking corpses, for which there is no atonement, and of which the penalty is death (*Vend.* i. 17, viii. 73f.; Strabo, p. 732). The eating of the carcass of a dog or the corpse of a man makes one unclean for ever, and it is prescribed that the heart of the man guilty of this crime shall be torn out, and his eyes put out (*Vend.* vii. 23; *Šad Dar*, lxxi. 2; *Grand Rivāyat*, p. 123).

The ground on which a dog or man has died is not to be tilled for a period of one year. The man who does not observe this rule is punishable with two hundred stripes. The man who tills the ground without cleansing it of the bones, hair, urine, and blood lying on it becomes a *pešōtannu*, and receives two hundred stripes with the two instruments of punishment as a penalty (*Vend.* vi. 8f.). It is sinful to throw bones of a dead dog or a dead man on the ground, as the marrow flowing from them pollutes the ground. The penalty of throwing a bone of the size of the top-joint of the little finger is thirty stripes, and rises proportionately, to the maximum penalty of one thousand stripes when the body of a dead dog or a dead man is thrown on the ground (*ib.* vi. 10-25). Bringing back fire into a house in which a man has died, within nine nights in winter and a month in summer, is punishable with two hundred stripes with the *aspa-aštrā*, and two hundred with the *sraošō-caranā* (*ib.* v. 43f.).

5. The crime of ill-treating the dog.—The Iranians held the dog as the sacred animal created by Ormazd, and rigorous punishments are prescribed for his ill-treatment. The giving of bad food to various classes of dogs is punishable with fifty to two hundred stripes, in accordance with the importance of the class of dogs (*Vend.* xiii. 24-27). Seven hundred stripes with each of the two implements are prescribed for him who smites a bitch that is with young (*ib.* xv. 50). Five hundred to one thousand stripes are the lot of those who kill various kinds of dogs (*ib.* xiii. 4, 12-15). The murder of a water-dog is to be atoned for by ten thousand stripes, or by carrying ten thousand loads of sweet-scented wood to the fire, or an equal number of *barsom* twigs, or by carrying the same number of *zaōthra* libations to the waters, or by killing as many snakes and other noxious creatures, or by helping to contract marriage between the faithful, and by doing various similar redeeming works (*ib.* xiv. 1-18).

6. Crimes relating to women in menses.—Elaborate rules are laid down for the period of menstruation, during which a woman remains in seclusion, the violation of which is generally punishable in the next world. Intercourse with a woman during this period amounts to wilful murder, burning of the life-giving seed, and is punished with thirty stripes for the first offence, and rises to a penalty of ninety stripes in case of its repetition (*Vend.* xvi. 14-16). The penalty rises to one thousand stripes when the offending parties wilfully and knowingly indulge in the crime, and the man has to atone for his sin by an additional performance of meritorious deeds, as those of killing about nine thousand noxious creatures such as snakes, frogs, and ants (*ib.* xviii. 67-74). If the woman who has brought forth a still-born child drinks water for the good of her own health, she

becomes a *pešōtanu*—her offence is punishable with two hundred stripes (*ib.* vii. 70-72).

7. Crimes regarding the purificatory rites.—Capital punishment is meted out to him who officiates as a cleanser without himself being well versed in the rites of cleansing. His hands are to be bound, his head is to be cut off, and his body is to be thrown to the vultures (*Vend.* ix. 47-49). A later work prescribes that he shall be nailed with four nails, his skin taken off, and his head cut off (*Fraser Rivāyat*, p. 398, as quoted by Darmesteter in *SBE* iv. 135, n. 1, *Le Zend-Avesta*, ii. 170, n. 55).

8. Unnatural crime.—Zoroaster denounces this deed as the worst crime against morality (*Ys.* ii. 12). Ahriman is its creator (*Vend.* i. 12). There is no sin greater than this, and the man practising it becomes worthy of death (*Sad Dar*, ix. 2). This is the only crime which entitles any one to take the law into his own hands, and to cut off the heads of the sodomites and to rip up their bellies (*ib.* ix. 3 f.). The *Dāistān-i Dēnik* (lxxvi. 3) modifies this, and states that, before taking the law into one's own hands, one should try to impress the heinousness of the crime on the minds of the wicked sinners, but, if that is of no avail, one may kill them on the spot. The sodomite is called a demon, a worshipper of demons, a male paramour of demons, a female paramour of demons, a wife of demons, as wicked as a demon; he is a demon in his whole being while he lives, and remains so after death (*Vend.* viii. 32). The faithful should not have any intercourse with such a man, except by way of attempting to reclaim him from this inexcusable crime (*Dāistān-i Dēnik*, lxxii. 10). The crime puts one on a par with Ahriman, Afrāsiyāb, Zohak, and other wicked ones (*Sad Dar*, ix. 5), and greatly increases the joy of the Evil Spirit (*ib.* 6). Eight hundred stripes with each of the two rods is the penalty for him who has been forced by violence to this crime, but there is no atonement for him who voluntarily submits to it (*Vend.* viii. 26 f.). The same crime committed with a woman is equally heinous (*Sad Dar*, ix. 7).

9. Adultery and abortion.—See ADULTERY (Parsi) in vol. I. p. 133 f., and FETICIDE.

MANECKJI NUSSERVANJI DHALLA.

CRIMES AND PUNISHMENTS (Roman).—Roman law never acquired on its criminal side the clearness and precision which characterized its civil applications, in an ever increasing degree, until the collapse of the Empire came. Among the many causes for the imperfect development of criminal law, the most important is the comparatively large influence which political conditions exercised upon the definition and punishment of crime. Under the democratic system, when the assembled citizens were in theory sovereign, evolution was slow; with the advent of autocratic rulers—Sulla, Julius Cæsar, and the Emperors—change proceeded apace, and criminal administration was made more systematic. For the purposes of our brief exposition, three sections of the subject may be distinguished. The first comprises the notions attached to crime, the gradual abridgment of the gulf between criminal law and morality,

and the widening jurisdiction of the State over offences. The second branch concerns the procedure leading up to punishment; the third, the nature of the punishments inflicted. Needless to say, the boundaries between these three divisions cannot be precisely drawn.

In the earliest days of the Roman community, most functions of the State were rudimentary, and there was little scope for the public punishment of actions committed by citizens, even when they shocked the moral sense. Much was left to the vengeance of heaven, and in some cases any citizen could make himself the champion of the offended gods. The close-knit organization of the family (*familia*) and the clan (*gens*) also greatly restricted the scope of criminal law; and, though the framework of the *gens* early fell to pieces, that of the *familia* retained many of its primitive elements until Roman civilization succumbed. Survivals in the historical period clearly show that the head of the family (*paterfamilias*) once possessed uncontrolled authority (*imperium*) over the lives of all who were in his power. The wife, the child (born in the family or brought into it by adoption from without), and the slave were in this respect all on the same level. Of course ancestral custom (*mos maiorum*), powerful in every age of Rome, restricted in practice the exercise of this authority, though in principle it was absolute, and required it to be used with a certain formality and reasonableness. The law stepped in later and protected to an increasing extent the freeborn members of the family. New forms of marriage enabled the wife to escape from the absolute *imperium* of her husband. Examples of the execution of women by family decree are found in the 2nd cent. B.C., and of men in the 1st; but the bare right of the head of the family to put to death those subjected to him was only removed by Constantine, and the cruel exposure of newly-born children was permitted long after his time. Even the slave was protected by the Imperial legislation. See art. CONSTANTINE, above, p. 80.

In so far as the State corrected crime, the supreme magistrate, whether known as *rex*, *dictator*, *consul*, or *prætor*, was, in the remoter age, in the same position as the *paterfamilias*, that is to say, his *imperium* was, within its own sphere, in principle unlimited, though he would often have to submit, in the case of citizens, to the *force majeure* of custom, and in the case of aliens to that of treaty obligations. The Republic introduced, as one of its few fundamental innovations, the right of appeal (*provocatio*), which entitled every citizen to a trial by his fellow-burgesses in all weightier matters. Only in special circumstances, which will be described later, was he subjected to arbitrary treatment during the Republican age. The protection afforded by the *provocatio* was at first valid only against magistrates who acted within the city and a thousand paces outside, but it was gradually extended to Italy and even to the provinces. The changes which were brought about by the Empire were profound. As in other departments of government, so in criminal administration, the Emperor became supreme. From the first his autocracy was practical, and in the end it was undisguised.

Apart from the traces of primitive practice preserved in later institutions, the first glimpse afforded to us of the criminal side of Roman law is given by the fragments of the Twelve Tables. Punishment of individuals by special enactment (*privilegium*), i.e. by an act of attainder, is forbidden. The State recognizes as offences against itself only a few acts—treason (*perduellio*), aggravated murder (*parricidium*), arson, theft of grain from the soil, lamprooning, and possibly false witness.

The definition of crimes was vague, especially (as was natural) in the case of treason, but later legislation gave more precision to the legal view of crime, and extended the range of criminal inquiry. Sulla carried out a great codification of criminal law, and grouped crimes under eight or nine heads. To each group a separate court (*questio*) was assigned, each with a fundamental law, dealing carefully with the substance and the forms of its jurisdiction, and Sulla's regulations were further elaborated by Julius Cæsar and Augustus. The courts set up by Sulla dealt with the following crimes: (1) extortion by officials in the provinces (*repetundæ*); (2) theft to the detriment of the gods (*sacrilegium*), or of the State (*peculatus*); (3) murder and offences akin to it—brigandage, misuse of criminal procedure in capital cases, poison, magic, arson, and wrecking; (4) public bribery (*ambitus*); (5) treason (now termed *maiestas*); (6) forgery (*falsum*); (7) the infliction of bodily damage (*iniuria*); (8) public violence (*vis*); and (9) kidnapping (*plagium*). The crimes mentioned are only the principal ones which came before these courts, for they also dealt with many other outrages (such as sexual offences) by direction of particular statutes, under conditions which are difficult to determine. Augustus established separate courts to deal with (1) adultery, which had not been previously treated as a public crime; and (2) usury, against which many Republican statutes had been directed (mostly in vain), and the offence of artificially raising the price of corn. Later on, many forms of wrongdoing, e.g. *delatio* (the trade of the informer), received special attention from the government. Thus, by the time of the early Empire, a multitude of deeds, not formerly punishable, or punishable only by fine, came to be included in the category of crimes, while others that had been vaguely classed together as criminal were separated and precisely defined. As will be explained later, many acts which did not come before criminal courts properly so called were subject to punishment in other ways. The repression and prevention of crime were much more rigorously carried out by the Empire than by the Republic. For instance, Augustus first effectively suppressed brigandage in Italy and piracy on the high seas. The range of private vengeance, which was wide in the early age, was now narrowed almost to vanishing point, and only violent attacks against which there was no defence but violence excused homicide. The Twelve Tables permitted the nocturnal thief to be killed unconditionally, but later the killer had to prove urgent need for his action.

One department of crime needs special comment—that of treason, the treatment of which is vital in Roman history at every period. The old name *perduellio* indicates by its derivation that treachery in connexion with war was solely or chiefly viewed as treason in the early days; but soon the name was made to cover any act which the assembly of citizens could be induced to regard as a deadly injury done to the community at large. In the later age of the Republic, the offence was called *maiestas*, which is an abbreviation for *crimen maiestatis imminute*, a charge of impairing the greatness of the country. The range of acts which might come under this description was wide, so that many breaches of a citizen's or a magistrate's duty, besides those closely connected with war, belonged to this category. With the establishment of the Empire, treasonable actions came to be viewed as directed against the Emperor alone. This was the natural ultimate development of the Republican idea that insults to the higher magistrates were treasonable. One of the most interesting Roman applications of the doctrine of treason, and one somewhat remote from modern

ideas, made it cover disrespect for, or attacks on, the recognized religion of the State. REGARD for religion was a matter of civic duty, though the State did not force religious observances on the citizen as such until the conflict between Christianity and the Empire became acute in the 3rd century. Till then, a Christian's religion would rarely bring him into antagonism with the government, unless some public function, such as that of magistrate or soldier, required him to join in heathen ceremonies. The deification of the Emperors provided for the first time a cult which was common to the whole Empire, and rendered the position of the Christians more difficult. But the persecutions which they suffered were due mainly to local fanaticism, and were seldom enjoined or favoured by the central administration. When Christianity became the Imperial religion, both heathenism and heresy were treated as public offences.

As has been stated, the absolute control of the chief magistrate over punishment was abolished on the foundation of the Republic. The right of appeal (*provocatio*) entitled the citizen to a trial by his fellow-burgesses, and the magistrate who set the right at naught was himself subject to penalty. But limits were imposed on the *provocatio*, sometimes by law, sometimes by custom. At first the dictator was not bound to grant an appeal, but he was placed in the same position as other magistrates by a *lex Valeria*, enacted in 301 B.C. Military rule naturally excluded the *provocatio*. The idea that a *lex Porcia*, passed before 108 B.C., withdrew from the commander in the field the right to impose the death penalty, rests on a wrong inference from a passage in Sallust (*Jug. 59*). The statutes which conferred power on Sulla, and on the Triumvirs in 43 B.C., established naked autocracies, and legalized the proscriptions. The Senate from time to time claimed the right to authorize the magistrates to inquire into offences and to punish them without regard to the assembly. The earliest recorded example of this usurpation is afforded by the suppression of the so-called Bacchanalian conspiracy in 186 B.C., when, in a time of panic, many citizens, as well as members of allied communities, were arbitrarily executed. This was done in the interest of religion, over which the Senate exercised an unquestioned supervision, but later the special criminal commission was used as a political engine. After the deaths of the Gracchi many of their supporters suffered in this way, though the younger brother was the author of laws which were designed to put an end to such proceedings. The decree of the Senate, commonly known as *senatus consultum ultimum*, which empowered magistrates to attack by force and slay men whom the senators chose to regard as rebels, was a device which belonged to the decadence of the Republic. It was first put into force against the younger Gracchus and his followers; the slaughter of the elder with his partisans was not even covered by this form. The decree was repeatedly passed and acted on afterwards, though its legality was fiercely contested by the democrats. Apart from the special criminal commissions issued by the Senate, and the *senatus consultum ultimum*, some cases existed in which custom sanctioned the summary punishment of a wrongdoer. Thus erring Vestals were sentenced to death by the Pontifex Maximus, though in the later Republican age they were sometimes arraigned before the assembly. A citizen who transgressed against the rights of a foreign people could be surrendered to that people. One who did not appear when summoned to military service could be sold into slavery, and so might the burgess who disregarded the call of the censors at the periodical registration of

citizens and their property. In these instances the citizens were deemed to have passed judgment on themselves by their absence (Cic. *pro Cœc.* § 99). It may be added that, in the last century of the Republic, the tribunes of the plebs sometimes asserted, though they were not allowed to exercise, the privilege of putting to death summarily any one who insulted them. This was assumed to be in accordance with the provisions of the ancient *leges sacratæ*, which rendered the persons of the tribunes inviolable. These laws, like others of an early date, merely decreed against the offender the vague condemnation contained in the words *sacer esto* ('let him be accursed'). The scholars of the later Republic, and the tribunes along with them, held that the clause deprived the guilty man of all legal protection, gave every citizen the right to decide upon his criminality, and allowed his blood to be shed without blame, though, from the earliest days of Roman civilization, some public control must have existed over such executions.

The establishment of the plebeian tribunate (494 B.C.), the enactment of the code of the Decemvirs known as the 'Twelve Tables' (450 B.C.), and the laws which were adopted when the Decemvirs were overthrown (449 B.C.) had a profound effect upon the course of criminal justice. The right of appeal was strongly confirmed. Arbitrary punishments of individuals by the assemblies, apart from the provisions of general statutes, were forbidden. Such resolutions of the assemblies were called *privilegia*. Cicero rightly contended that his banishment in 58 B.C., by an act of the *comitia centuriata*, was unconstitutional. The Twelve Tables also prescribed that no citizen's *caput*, that is to say, his life or his status as a burgess, should be placed in peril except before the 'greatest assembly' (*comitatu maximo*), by which we must understand the *comitia centuriata*. As the principal State crime in the earliest days was *perduellio*, or treason connected with war, it was natural that the assembly which comprised the warriors, past and present, of the nation should constitute the highest criminal court. On the other hand, a man's property could be assailed in either of the two other assemblies, the *comitia tributa*, which met under the presidency of a magistrate invested with the *imperium*, or the *concilium plebis*, which was summoned by the plebeian tribunes, and was organized, like the *comitia tributa*, on the basis of the local tribes. An old statute permitted all magistrates to impose fines without appeal, up to a definite amount; beyond the limit, one of the two assemblies had to decide. No motion in a criminal trial was constitutional which invited the citizens to combine a personal punishment (*pœna*) with a fine (*multa*).

The inconvenience of using as courts of justice the legislative assemblies, at which hundreds of thousands of citizens had the right to be present, was very great. The criminal trial, for the more important offences, required four meetings at stated intervals before the final verdict could be given; but it may be inferred from a line in Plautus, which describes the burgesses as making a pastime of their duties as judges (*Captivi*, 475), that there was little ceremony about cases of less consequence. All acts of assemblies were in theory subject to the elaborate rules of veto on which the whole Republican government was based; but custom seems to have restricted within narrow bounds their application to criminal affairs. The tribunes of the plebs acquired a prominent position as prosecutors for high crimes and misdemeanours, though at Rome no burgess was ever in theory debarred from entering on a criminal prosecution, unless he had forfeited the right by some misconduct of his own. The difficulties

attendant on the comitial system led to a new arrangement, and in 149 B.C. the epoch-making *lex Calpurnia repetundarum* established a special court (*quæstio*), with delegated authority to try governors who were charged with robbing the provincial subjects of Rome. As has been stated above, Sulla placed all recognized crimes under the sway of such standing courts, and, though recourse to the more cumbrous process before the *comitia* was still possible, it was rarely attempted. The *quæstiones* were exempted by law from the operation of the magistrates' veto (*intercessio*). Occasionally temporary courts were established to deal with particular offences. In this way the men who had trafficked with Jugurtha were punished, and Clodius was tried and acquitted by special judges. The jurors were originally drawn from the Senate, for which Gaius Gracchus substituted the equestrian order. Sulla reinstated the Senators, but after 70 B.C. the two bodies shared the privilege with men of a somewhat lower station. Both qualifications and procedure were varied from time to time by legislation. The *quæstiones* continued to exist till the 3rd cent. A.D., but the parallel jurisdictions which the Empire introduced continually impaired their authority until they were extinguished.

There were modes of punishment which did not depend on an arraignment before a criminal tribunal, properly so called. The censors in the time of the Republic could penalize the citizens in many ways, degrading their status, and even inflicting on them pecuniary loss. They were not bound by the criminal statutes, and took cognizance of moral and social offences which were outside the purview of the laws. But succeeding censors were not tied to the decisions of their predecessors. The forms of civil law were employed to vindicate some breaches of public order, and also to provide redress for certain forms of fraud which could not be adequately punished by exactions in money. Not only in Rome, but in every municipal community, there were fines which were recoverable by civil process, on the public behalf. In some private suits, the defendant, if condemned, incurred additional penalties which were not pecuniary. The judgment inflicted on him a stigma (*ignominia* or *infamia*) which impaired the value of his citizenship and left him under many disqualifications for public life. The circumstances were such that the losing litigant was held to have been specially bound to honourable action, as when one partner in business had cheated another, or a guardian defrauded his ward. Theft, when practised by one citizen against another, without violence, was technically not a crime, but condemnation in a suit for damages in pursuance of theft carried ignominy with it. The same stigma rested *ipso facto* upon men engaged in occupations regarded as degrading, that of an actor, for instance, or a public auctioneer (*præco*), or a gladiator.

Roman jurisdiction over offences was exercised at first only as far as the *Romanus ager* extended, that is to say, in the regions of Italy possessed of burgess rights. Outside this pale foreign law prevailed. After the Social War (90-89 B.C.), Italy was parcelled out among Roman municipalities, and there had to be a division between the local jurisdiction and the central courts in Rome. Little is known of the principles on which the discrimination was based, but we read with some surprise that the statute of Sulla relating to murder restricted the court at the capital to cases arising in Rome. Before the end of the Republican period, the rule was established that a Roman citizen outside Italy could claim to be tried in Italy for any serious offence, and in the provinces the authority of the provincial governor in matters

of jurisdiction tended perpetually to encroach upon the autonomy of the municipalities and peoples. As is well known, the Roman government granted special privileges to the Jewish communities.

The advent of the Empire brought about a great transformation in the criminal law of Rome, as in all other parts of Roman polity. The paramount authority of the Emperor, and, in particular, his power of pardoning, led ultimately to a complete recasting of criminal procedure both in Rome and outside it. At Rome new officials, especially the *praefectus urbi* and the *praefectus praetorio*, gradually acquired a large jurisdiction; and, in the end, practically all important charges came to be tried by officers who were Imperial nominees. As the world became Romanized, local diversities in privilege disappeared, until the celebrated decree of Caracalla was passed (A.D. 212), which conferred the franchise on the whole Empire, and led to uniform, or nearly uniform, legal practice all over the Roman dominions. In the early days of the Empire every citizen had a right of appeal to the Emperor, as is exemplified by the case of St. Paul (Ac 25¹²), but by the 3rd cent. each provincial governor received from the Emperor the 'right of the sword' (*ius gladii*), which enabled him to dispose of the lives of provincial citizens, except in the case of Roman senators and members of the municipal senates (*decuriones*). After the accession of Augustus to power, the Roman Senate became a high court of justice, trying for the most part senators who were charged with the more serious crimes. But, just as the *questiones* were ultimately destroyed by the dominance of the Emperor, so the jurisdiction of the Senate was reduced to municipal proportions under the monarchy established by Diocletian and Constantine.

As in Italy, so in the provinces, the extent of local autonomy possessed by the different cities and peoples who were subject to Rome varied greatly while the great process of assimilation was being carried out. The tendency, however, to increase the authority of the Roman governors was strong from the first, and in the end nothing but a limited control in matters of police, and in other minor affairs, was left to the municipal courts, Italy being placed in this respect on the same footing as the provinces. The history of police jurisdiction, at all periods of Roman history, is obscure. During the Republican period, citizens of the criminal class at Rome seem to have been dealt with severely, little regard being paid to their right of appeal. Indeed, the value of the *provocatio* greatly depended on the willingness of the magistrates—in the last resort, of the tribunes—to secure it to the burgess, while to the red-handed assassin or the thief taken in the act the *leges Valeriae* and *Porciae* were of little avail.

The nature of the punishments inflicted by the Roman State varied greatly in the course of its history. We can clearly discern a time when the community, if it interfered at all, inflicted the penalty of death and no other. Under the system of trial before the *comitia*, this was the only punishment which the chief assembly, the *comitia centuriata*, could assign. But the custom was early established whereby the culprit, before the final verdict was given, could shake the dust of his country from off his feet and go into exile. In this case, at the final hearing the plea was put in that 'he had changed his soil with a view to exile' (*solum vertisse exilii causa*), whereupon the assembly passed a resolution known as *interdictio aqua et igni* (in the full form *tecto* was added), refusing the offender (now no longer a Roman) the right to receive the chief necessities of life—shelter, water, and fire—within Roman territory, as technically defined by the phrase *Romanus ager*, which for

this purpose was never deemed to extend beyond Italy. The *questiones*, in the case of the more serious offences, followed the earlier practice of the centuries. Exile was such a common incident in the early civic community that many treaties made between Rome and other States included a clause binding the contracting parties to give harbourage to outlaws. Until the time of the Social War, which led to the enfranchisement of Italy, a Roman could find a refuge no further away than Tibur (Tivoli); but Milo, condemned for the murder of Clodius in 52 B.C., had to place himself beyond the bounds of the peninsula, at Massilia. Aliens within the *Romanus ager* could be warned to quit it by the magistrates, unless international agreement stood in the way. This form of removal was called *relegatio*. But after the Hannibalic War the government readily disregarded treaty obligation, and the repeated indiscriminate expulsion from Rome of Latins and other Italian allies did much to bring on the great Social War. This form of banishment was extended to Roman citizens in the Imperial period. The *relegatus* was merely ordered to live in a particular place during the Emperor's pleasure. This was the only restriction on the person's privileges as a citizen, and Ovid, banished to Tomi, was careful to insist that he was only *relegatus*, not *exul*.

Cicero laid it down in the year 66 B.C. (*pro Cæc.* § 101) that *exilium* was not a punishment known to Roman law, but a means of escape from punishment; yet he himself broke through this technical principle three years later, when, as consul, he passed a law to check public bribery. Thereafter *exilium* was freely used as a penalty, and new forms of it were devised in the Imperial age. The old *interdictio aqua et igni* tended to fall out of use, and for it was substituted the *deportatio in insulam*, rendered familiar to us by Tacitus and Juvenal, who describe the islets of the Aegean as crammed with exiles.

The death penalty, except in the military sphere, was, as we have seen, hardly ever exacted in the Republican age, but in the more important cases it could not be so escaped under the Empire. Probably nothing else so fostered the bitterness entertained by the nobles against the Imperial system on its first institution. Yet the infliction of death was exceptional in the first two centuries, and was confined chiefly to the more important crimes which came before the Senate and the Emperor. Both these authorities were, practically, law-making powers, and were not bound by statute, as were the regular courts. From the accession of the Severi (A.D. 193), capital punishment became more and more common, and the number of offences to which it was allotted was continually increased. In the end not only treason and murder, but arson, magic, coining, kidnapping, aggravated violence, and a number of other wrongful acts might be treated capitally. The forms of execution were also changed and extended. Originally, as a rule, the offender was tied to a stake and flogged, then released and beheaded. This was symbolized by the bundles of rods (*fascēs*), each containing an axe (*securis*), which were carried by lictors in front of a magistrate invested with the unimpaired *imperium*. In the city the axe was laid aside. Beheading by the axe was common in the earlier Imperial age (cf. Rev 20⁴), but was forbidden later, when the sword was substituted. The old formulae connected with the passing of a death sentence by the *comitia centuriata* show that, before the time when escape into exile was permitted, the condemned criminal was sometimes flogged and crucified. The practice was revived by the Empire, 'according to the custom of our ancestors' (*more maiorum*), as the saying

went. During the main part of the Republican period, crucifixion was restricted to slaves, except in rare instances, such as the case of men convicted of misconduct with Vestals. A quaint early method of disposing of one who had slain a near kinsman (*parricida*) was to sew him up in a sack with a cock, an ape, and a serpent, and then to drown him. The Vestal was walled up, and died of starvation. In both these cases the sentence had originally a domestic character, and we have in them strong evidence of the primitive objection to the shedding of blood within the domestic circle. The Vestals were the daughters of the great State family, and were condemned by the Pontifex Maximus, who stood to them in the relation of *paterfamilias*. Something of a religious character attached to the spilling of the criminal's blood by the community. But the gods of the family could receive no such offering. Later, when the *paterfamilias* executed a member of his family, he was regarded as the deputy of the magistrate. The cross was used against free men without scruple by the Imperial administrators, until its employment was abolished by Constantine on religious grounds. The equally cruel death by burning was also familiar to the Empire. It was applied, by a crude sort of homœopathic retaliation, in the age of the Twelve Tables, to the citizen guilty of arson, and, later, it was occasionally a form of vengeance for military crime. The killing by fire of the Christian martyrs was technically a consequence of treason. Before the establishment of the Empire, the exposure of offenders to death in the arena, by wild beasts, was rare, though we hear of it as inflicted on slaves, deserters, or prisoners of war. But later it became one of the commonest forms of execution, and it lasted into the Christian period, being still in use in the time of Justinian. Malefactors who were executed in prison, like the Catilinarian conspirators, were usually strangled by the *carnefex*, or public executioner, under orders from the city commissioners of police, the *tresviri capitales*. We hear also, in Republican Rome, of wrongdoers being hurled from the Tarpeian rock on the Capitoline hill; and the same thing happened occasionally later, by order of the Senate; while the Twelve Tables prescribed this form of punishment for bearing false witness. The application of it in the age of the Empire seems to have been restricted to no particular offences, and to have been irregular. Penal servitude was a novelty introduced by the Empire. Criminals were often condemned to work in the mines, which were mostly the property of the government, or to do other menial services, sometimes in chains, slaves and the lowest class of freemen chiefly being exposed to this kind of suffering. Another kind of penal slavery was enforced enlistment among the gladiators. While the Republic lasted, citizen rights were completely lost only as a secondary consequence of condemnation for serious wrongdoing, but such loss was later on bound up directly with *deportatio* and the more severe forms of penal servitude. In all ages, some particular privileges of the citizen might be taken away while others were left. Imprisonment was not regularly inflicted on criminals either by the early or by the later Roman law. Incarceration was temporary, for purposes of inquiry, or for safe custody, till a sentence was carried out, although, on the other hand, the condemned debtor could be held in bondage by his creditor. Bodily chastisements were seldom imposed in the Republican epoch, excepting in the camp, where mutilation and scourging occurred, until the latter was forbidden by a *lex Porcia*. In the 2nd cent. B.C. earlier *leges Porcie* had protected citizens in their civil capacity against stripes. Yet we know

that St. Paul suffered the punishment (2 Co 11²⁸) though he was 'born free' (Ac 22²⁸). The so-called *lex talionis*—'an eye for an eye, and a tooth for a tooth'—seems to have been sanctioned, probably by an order of a court, by the Twelve Tables. Under the absolute monarchy, after Diocletian came to the throne, mutilation of various kinds was permitted for a number of offences, and we often hear that Christian martyrs were subjected to it, and so, a little later, were heretics and worshippers of the old gods. The subjection of free men to torture during judicial inquiry crept in soon after the foundation of the Empire, and in the end became regular in certain cases.

As has been mentioned above, public fines were in early days partly inflicted by the magistrates without appeal, partly ordered by the *comitia* or *questio* after appeal, and partly recoverable by civil process. Although the legislation which ensued on the fall of the Decemvirs rendered it illegal for a prosecutor to propose a personal penalty along with a pecuniary fine, yet in cases of *perduellio* the condemned man's property was forfeited to the exchequer. When the *questio* was substituted for the comitial trial, this penalty ceased. The confiscation of Cicero's property was by special legislative act, and was irregular, but Cæsar introduced forfeiture for aggravated murder (*parricidium*), and Augustus for treason (*maiestas*); and, later, it usually followed upon *relegatio* and *deportatio*. In the case of other offences there was, under the Empire, as a rule, partial confiscation. The oppressive regulations connected with the Imperial *fiscus*, and the *lex Papia Poppæa*, which penalized celibacy, led to frequent and extensive deprivations of property.

It only remains to note that, while the Republic, in theory at least, treated all citizens as equal before the criminal law, the later Empire frankly respected persons. Subjects were divided into two classes, the 'more honourable' (*honestiores*), and the 'more humble' (*humiliores*) or plebeians (*plebei*). The higher class consisted of national and provincial senators, knights (*equites*), veteran soldiers, and certain grades of Imperial officials. These were exempt from crucifixion, from death in the arena, from penal servitude, and from scourging and torture; and it was a privilege even of a local senator (*decurio*), after the 2nd cent., that the governor of the province could not put him to death without a confirmation of the sentence by the Emperor. The regular Imperial courts took a more extensive cognizance of crimes committed by slaves than was the case earlier.

LITERATURE.—The whole criminal law of Rome has been exhaustively treated by T. Mommsen in his *Röm. Strafrecht* (Leipzig, 1899), by which earlier works on the subject are, in the main, superseded. For the judicial system of the later Empire, with its complicated arrangements, the work of O. Karlowa, *Röm. Rechtsgesch.* (Leipzig, 1885) is most valuable. A brief summary will be found in the art. 'Judicium,' in Smith's *Dict. of Antiquities*³, 1890-1891; more information in the art. 'Judicium' and 'Præfectus,' in Daremberg-Saglio, *Dict. des antiquités*³, 1890 ff. J. S. REID.

CRIMES AND PUNISHMENTS (Teutonic and Slavic).—I. General conceptions of crime and punishment.—(1) *Teutonic*.—We learn from Tacitus that the practice of blood-revenge was an important element in the legislation of the Teutonic peoples of his time.¹ The word used to express the execution of such revenge appears in nearly all the Teutonic languages: thus, Goth. *wrikan*, *gawrikan*, A.S. *wrekan* (Eng. 'wreak'), O.H.G. *rehhan* (Germ. *rächen*), 'avenge,' 'persecute,' 'punish.' The possibility of commuting blood-revenge to wergeld and fine is also mentioned by

¹ Germ. 21: 'Suscipere tam inimicitias seu patris seu propinqui quam amicitias necesse est.'

Tacitus,¹ and, as may be inferred from the affinity of A.S. *were*, M.H.G. *were*, 'wergeld,' with Skr. *vaira* (cf. BLOOD-FEUD [Aryan], vol. ii. p. 724), it goes back to the primitive history of the Teutonic race. From that remote age come also the terms O.H.G. *buoza*, O.Sax. *bōta*, O.Norse *bót*, 'fine,' which are cognate with Goth. *batiza*, *batists*, 'better,' 'best,' and originally signified 'repair of damage'; likewise Goth. *skuldō*, *skula*, 'debt,' 'debtor,' O.H.G. *sculd*, *sculda*, A.S. *scylð*, which are all derived from Goth. *skal*, *skulum*, 'to be owing,' and mean literally 'the obligation to pay' (wergeld or fine), and then, figuratively, guilt in general, whether before God or man (cf. art. ARYAN RELIGION, vol. ii. p. 49^b). For the Goth. *dulgs*, 'guilt,' etc., see below.

Even by the time of Tacitus, however, blood-revenge and its remission by wergeld and fine were treated as something more than the private affairs of the families concerned. The injured group, instead of exacting blood-revenge, might, as is implied in Tacitus,² refer its 'cause' (*Sache*; Goth. *sakjō*, O.H.G. *sahha*, A.S. *sacu* [Eng. 'sake'], O.Norse, *sök*) to the public assembly. The compensation fixed by this tribunal was regarded as in some sense a penalty, and the amount was shared between the injured party (or his relations) on the one hand, and the chief (or in republican States) the community on the other.³

If we regard the intervention of the public assembly as involving no more than an attempt on the part of the tribe to bring about a peaceful settlement of such feuds as were especially dangerous to the common weal,⁴ then the germs of the procedure among the Teutons may be referred to a very remote age. In the main, however, the offences dealt with by the assembly (Goth. *majl*, A.S. *mæðel*, O.H.G. *mahal*, O.Norse, *mál*) in its judicial capacity would be, alike in antiquity and in the time of Tacitus, those which are included under a term common to Greek and Sanskrit, viz. *δῶς*=*āgas*, expressing an idea that must go back to the dawn of Aryan history (cf. art. ARYAN RELIGION, vol. ii. p. 50^a).

Of the primitive Teutonic terms applied to crimes against the community or its tutelary deities, and punishable by the community, special account must be taken of the following three: (1) O.Sax. *sundea*, 'misdeed,' O.Fris. *sinne*, 'crime,' A.S. *synn*, 'transgression,' 'wrong,' 'enmity' (Eng. 'sin'), O.H.G. *suntea*, 'sin'; (2) Goth. *fravairhts*, A.S. *forwyrt*, O.Sax. *farwurt*, 'sin,' O.H.G. *farworaht*, 'sinful'; (3) Goth. *fastrina*, 'ground of accusation,' O.Norse *firn*, A.S. *firen*, O.H.G. *firina*, 'crime,' 'sin.' Of these the nearest equivalent to Gr. *δῶς*=Skr. *āgas* are the first series (O.Sax. *sundea*, etc., probably related to Lat. *sons*, 'guilty'), and the second (Goth. *fravairhts* originally signifying 'being liable'; cf. Germ. *eine Strafe verurteilen*, 'to incur a punishment'). In seeking to render the primitive connotation of these words, we must, of course, guard against introducing Christian ideas; yet the fact that the Church selected precisely these terms to express the conception of sin, i.e. transgression against God, shows that even in heathen antiquity they must have implied some notion of trespass against the gods. The third series (Goth. *fastrina*, etc.) has not as yet been satisfactorily explained. Some connect it with Lat. *per* in *periuro*, *perperam*, Gr. *πέπαι*, and

interpret it as 'a deed that goes beyond,' i.e. beyond the crimes usually entailing blood-revenge; others connect it with Goth. *fērja*, 'snarer,' O.H.G. *fāra*, A.S. *fær*, 'snaring,' and regard it as signifying an offence involving the element of secrecy. It is in any case certain, as appears also from the language of Tacitus,¹ that the Teutons had at an early period drawn relatively fine distinctions within the general idea of wrongdoing. Among the various groups of words thus employed are the forms with the prefixes *mein-* (esp. O.Norse *mein-eiðr*, A.S. *mān-āp* [cf. O.Eng. 'manswear'], O.H.G. *mein-eit* [Germ. *Meineid*, 'perjury']) and *missa-* (Goth. *missaðs*, O.H.G. *missitāt*, 'misdeed'), implying respectively the attributes of *deceitfulness* and *perversity* in conduct. This deepened conception of wrongdoing is also indicated by the words Goth. *skanda*=O.H.G. *scanta*, 'disgrace'; O.H.G. *scama*, 'sense of shame,' and O.H.G. *lastar*, O.Norse *lastr*, 'error,' 'vice,' 'disgrace,' from *lahan*, 'to blame' (cf. also O.Irish *locht*, 'error').

The primitive Teutonic word for 'punishment' is found in the series: O.Norse *viti*, A.S. *vite* (M. Eng. and Scots *vite*), O.H.G. *missitāt*, 'misdeed,' it is related to Goth. *fravairtan*, 'avenge,' O.H.G. *wizan*, 'punish,' and *far-wizan*, 'punish,' 'banish,' and, as connected with the root *vid* (Lat. *video*), seems to be equivalent to the Lat. *animadvertere in aliquem*, 'to proceed against one.' A form peculiar to the Western Teutonic dialects is O.H.G. *haramscara*, A.S. *hearmseccare*, i.e. something imposed as a disgrace (O.H.G. *haram*, A.S. *hearm*=O.Slav. *sramŭ*, Russ. *soromŭ*, 'disgrace'). The O.H.G. *antōn*, *anadōn*, 'punish,' 'blame' (cf. O.H.G. *anto*, *anado*, 'indictable offence') is exclusively German, as are also the much later and still etymologically obscure words M.H.G. *strafe*, 'punishment,' and *veime*, 'vehme.'

(2) *Slavic*.—Turning next to the Slavs, we note that, apart from the treaties of Prince Oleg (A.D. 912; Jirecek, no. 1) and Prince Igor (A.D. 945; Jirecek, no. 2) with the Greeks, the earliest Russian document of a legal character is the collection of ancient prescriptive laws, decrees of princes, and Christian-Byzantine enactments, known as the *Russkaja Pravda*. This has been handed down in two forms, a shorter and a longer, and its original draft is attributed to Jaroslav (1019-54), by whose sons it was brought to completion (Jirecek, nos. 3 and 4). We have, accordingly, no direct information regarding the legislation of the earlier centuries, and must fall back upon *a posteriori* arguments and philological data. From the records of the ancient annalists we infer that in the period before the migration, i.e. in the early centuries of the Christian era, the social fabric of the Slavs was of a character which may be outlined as follows. The Slavic people were a congeries of clans and tribes, each group resting upon a basis of kinship.² At the head of each group stood the 'elders' (*starešina*), who are called *zupani* (from *župa*, 'domicile') by some foreign writers,³ and *phyes* by others.⁴ In the early centuries of our era the Slavs had borrowed their word *kŭnezh*, 'prince,' from the Teutons (O.H.G. *kuning*, 'king,' etc.). The form of government was purely democratic, and the decision of all questions rested with the public assembly.⁵

¹ Germ. 12: 'Distinctio poenarum ex delicto . . . Diversitas supplicii illuc respicit, tamquam scelera ostendi oportet, dum puniuntur, flagitia abscondi.'

² Nestor, *Chronicle*, xii.: 'They lived each with his kindred (*rodŭ*), and upon his own territory, every one ruling over his own kindred.'

³ Constantinus Porphyrogenitus, cap. 29: 'Principes hi populi habent nullos praeter zupanos, senes, seniores, maiores natu.'

⁴ Maurikios, *Ars militaris*, xii. (ed. Scheffer, Upsala, 1664, p. 281): πολλοὶ φῆγες καὶ ἀσμφάβως ἔχοντες πρὸς ἀλλήλους.

⁵ Procopius, de *Bello Gothico*, lii. 14: τὰ γὰρ ἔθνη ταῦτα, Σκλαβηνοὶ τε καὶ Ἀντα, οὐκ ἀρχοῦνται πρὸς ἀνδρὸς ἐνὸς, ἀλλ' ἐν

¹ Germ. 21: 'nec implacabiles durant [inimicitiae]; huius enim etiam homicidium certo armentorum ac pecorum numero.'

² Germ. 12: 'Licet apud concilium accusare quoque et dis-crimen capitis intendere.'

³ *Ib.*: 'aequorum pecorumque numero convicti multantur: pars mulctae regi vel civitati, pars ipsi qui vindicatur, vel propinquis eius, exsolvitur.'

⁴ Germ. 21: 'periculosiores sunt inimicitiae juxta libertatem'

As among the Germans, the legal relation of the various clans to one another was based upon the laws of blood-revenge, of which the primitive Slavic designations are found in O.Slav. *mstīti*, Russ. *mestī*, 'revenge,' and O.Russ. *vražda*, Pol. *wroźda*, etc., lit. 'enmity.' That the practice of blood-revenge persisted among the Slavic peoples until the dawn of historical tradition, and among the Southern Slavs, indeed, until recent times, has been shown in BLOOD-FEUD (Slavonic), vol. ii. p. 733 ff. There is no doubt, moreover, that in very ancient times the blood-revenge could be adjusted by means of the wergeld, and this holds good whether the Russ. term for wergeld, viz. *vira*, is of cognate origin with the above-mentioned Skr. *vaira* and A.S. *wēre*, or was borrowed from one of the Teutonic dialects. If the latter alternative is the right one, the original Slavic term must be looked for in such words as Czech *hlava* (Russ. *golova*, 'head'), Pol. *wroźda*, or Serv. *krv* (Russ. *krvī*, 'blood'), all of which mean both 'homicide' and the 'compensation' paid therefor.

In process of time blood-revenge was gradually abolished, and superseded by ransom (Russ. *vykupū*). The *Russkaja Pravda*, which in its older form sanctions blood-revenge only in cases of murder or serious bodily injury, and confines it within certain degrees of kinship, brings us to this stage, as in other cases it substitutes for blood-revenge the *prodaza*, 'compensation,' 'money-payment for an offence,' lit. 'sale' (of vengeance?). The *prodaza* either fell to the chief alone, or was shared between him and the injured party. That for which compensation was paid was usually called *za obidu*, but it should be noted that *obida* is the common term for *ādika*, and is not limited to its modern sense of 'insult.' The classical tongues were then drawn upon for words to express the idea of compensation; thus we find Gr. *epitimia*, originally 'penance imposed by the Church,' then 'compensation for any offence,' while from the sphere of Latin culture comes *penja* (Lat. *pena*).

The question arises, however, whether in the case of the Slavs, as in that of the Teutons, the conceptions of crime and punishment in general did not spring from the narrower ground of transgression against the community and its tutelary deities. Of Slavic terms for 'crime' there is only one which is represented in all the various dialects, viz. O.Slav. *grěchū*, 'sin,' a word etymologically obscure (cf. Berneker, *Slav. etym. Wörterb.*, Heidelberg, 1908 ff., p. 350 f.). It is certainly the case that this word, as used in a literary tradition under Christian influence from the first, is, in general, practically equivalent to 'sin against God,' precisely like the O.H.G. *suntea* and Goth. *fravaūhts* (see above); it always signifies a transgression in the ecclesiastical sense, while a civil offence is called *prestuplenie*. It should be borne in mind, however, that, as *grěchū* is found in all the Slavic dialects, it must go back to heathen times; and it is natural, therefore, to see in this word the Slavic (as in *suntea* or *fravaūhts* the Teutonic) equivalent of the Gr. *āgos*=Skr. *āgas*. And since, as we saw above, all matters were referred for decision to the public assembly, and as there is also evidence for a primitive Slavic word signifying 'tribunal' (O.Slav. *sadū*), it will hardly be counted rash, the present writer thinks, to assume that here too, as among the Teutons (for the *concilium*, see above), and also the Macedonians,¹ the tribal assembly was a

δημοκρατία ἐκ παλαιῶν βιοτεύονσι· καὶ διὰ τοῦτο αὐτοῖς τῶν πραγμάτων ἀεὶ τὰ τε εὐφύρορα καὶ τὰ δύσκολα ἐς κοινὴν (public assembly) ἄγονται.

¹ Curtius, vi. viii. 25: 'De capitalibus rebus vetusto Macedonum modo inquirebat exercitus, in pace erat vulgi.' Cf., further, O. Hoffmann, *Die Macedonen* (Göttingen, 1906), p. 21.

court which might deal *inter alia* with offences (*grěchū*) against the community and its gods. That such infringements of the public interest are not mentioned in the *Russkaja Pravda* is explained by the fact that the latter is not, and does not purport to be, a complete legislative code.

In the Slavic languages there are two distinct groups of words signifying 'punish,' 'punishment': (1) the derivatives of a root *kar-* (O.Slav. and O.Russ. *karati*, Czech *káratī*, Pol. *karac*, 'punish'); and (2) those of a root *kaz-* (cf. Russ. *nakazáti*, 'punish,' *kaznī*, 'heavy civil penalty,' *kázniti*, 'punish,' Czech *kázati*, *kázniti*, etc.). The fundamental meaning of the latter seems to be something like 'banish,' perhaps in the sense of Gr. *deknuai*, 'law,' 'punish' (cf. Russ. *pokazáti*). The first-named group goes back to a primitive form **kara*, which is found, with or without derivatives, in many Aryan languages, and means 'army' and 'war' (O.Pers. *kāra*, 'army,' Lith. *kāras*, *karė*, 'war' and 'army,' Goth. *harjis*, O.Pruss. *karjis*, Irish *cuire*, 'army'). If this series be correctly interpreted as originally denoting 'the national army drawn up for war' (O. Schrader, *Reallexicon*, Strassburg, 1901, p. 349 f.), one is tempted to take the further step of connecting *karati*, 'punish,' with the judicial functions which we have conjecturally ascribed to the Slavic 'assembly' (cf. also *καρνη=ἡνδα* in Hesychius).

2. Particular crimes and punishments.—As it cannot be expected that the present article should deal with the entire criminal law of the ancient Teutons and Slavs, the writer proposes simply to emphasize such aspects of the subject as may be judged of special importance for the readers of this work.

A. CRIMES.—Here it will be the writer's special object to determine which of these first developed a definite terminology. There is, unfortunately, a great lack of preparatory works in this field, particularly on the Slavic side,¹ so that only a few of the more important points can be referred to.

We saw above that the Teutonic and Slavic races from the very first drew a distinction between those offences which, as directed against the community, had to be punished by the community (i.e. the public assembly, and subsequently the State), and those which, bearing merely on the individual, were subject to the laws of blood-revenge or the private feud. Even at a very early period, however, we find that penal offences coming under the latter category, such as murder or flagrant theft, were really assigned to the former, so that it is impossible to make the distinction in question the principle of an exact classification of crimes. But we can hardly doubt that the species of crime referred to by Tacitus (*Germ.* 12), viz. cowardice in war and treason,² was always clearly discriminated from that which embraced personal assault, ordinary homicide, robbery, etc. The original Teutonic word for 'cowardice' would seem to be found in the O.Norse *argr*, A.S. *earh*, Lombard *arga* (a term of abuse), O.H.G. *arag*, 'cowardly'; while an old term for 'treason' appears in O.H.G. *herisiz*, 'desertion from the army.' An O.Russ. term for a related crime was *perevėti* (cf. Russ. *otvėti*, 'answer,' O.Russ. *vėce*, 'public assembly,' O.Eruss. *vasitiā*, 'speak'), 'secret treasonable communication of intelligence,' for which, of course, as for the crimes mentioned by Tacitus, the penalty was death (*Pskovskaja Gramota*, Jirecek, ix. 14).

We shall, therefore, treat of the various offences, apart from those against honour, under the follow-

¹ For the Teutons, Grimm, *Deutsche Rechtsaltertümer*, p. 623 ff., is still the best work available.

² Ignavi et imbelles, proditores et transfugas.

ing heads: (1) crimes against the person, (2) crimes against property, and (3) crimes against morality.

(1) *Crimes against the person.*—It is creditable to the Teutons that they discriminated between killing in general and murder, i.e. (according to the ancient point of view) the wilful and secret (or, at least, stealthy) taking of human life—a crime denoted by the following series of words: Goth. *mairþr*, O.Norse *morð*, O.H.G. *mord*, cognate with the Lat. *mors*, *mortis*, 'death,' though it should be observed that Ulfilas (Mk 15⁷) uses the term in connexion with Barabbas, who is said to have committed a *mairþr* (φόνος) in the insurrection (ἐν τῇ ἐράσει), and, therefore, not in secret. The idea of secrecy receives its first distinct expression in the exclusively German forms compounded with *mühh*, viz. *mühhilswert*, *mühhilari*, *meuchelmord*; cf. O.Irish *formúigthe*, 'absconditus.' A somewhat different shade of meaning appears in the Slav. *razboj*, which is the usual word for 'murder' in several of the Slavic languages, and which in Old Russian means both 'highway robbery' and 'ambuscade.' According to the *Russkaja Pravda* (Jirecek, iv. 4 and 5), one who kills another openly in a quarrel or at a feast may be absolved by money, but, 'if one sets out to commit *razboj* without any quarrel, the people shall not pay a fine for the *razbojnikú*, but shall surrender him absolutely, with wife and child, to the *potokú* and the *razgrablenie*' (for these punishments, see below). Of the numerous Teutonic terms for the infliction of bodily injury only the Frisian *dolch* need be referred to here. In the *Lex Frisionum* it is the most comprehensive term for wounding of all kinds. A familiar phrase is *dath und dolch*, 'killing and wounding'; cf. also the O.H.G. *noch tolk noch tót*. *Dolch* comes from Goth. *duþs*, 'debt,' related to O.Slav. *dŭgŭ*, 'debt,' and O.Irish *dliged*, 'duty,' 'law,' 'right.' There was thus a term signifying 'debt,' 'obligation,' common to all the languages of Northern Europe, and this acquired the special meaning of 'obligation to pay compensation for bodily injury,' and eventually that of the 'injury' itself. Beyond this, however, no rigid distinction was made between homicide and wounding, and O.Norse words like *víg*, *sár*, and *drep* may signify either. In the *Russkaja Pravda* the only difference is that the fine for homicide is termed *vira*, while that for wounding is termed *prodatz* (see above): 'Should any one strike with the sword, but not cause death, he shall pay [to the prince] three *grivennicks*, and to the person injured one *grivennick*, and money for the doctor; but, if he does cause death, the *vira* must be paid' (Jirecek, iv. 24).

(2) *Crimes against property.*—Of all crimes the first to acquire a precise terminology was theft; this takes us back to primitive Aryan times—cf. Skr. *stend-* and *táyú-*, 'thief,' O.Iran. *tāya-*, 'theft,' O.Slav. *tati*, O.Irish *táid*, 'thief,' and also Gr. *κλέπτω*, Lat. *clepere*, Goth. *hlifan*, and Gr. *φύβ*, Lat. *fur*. A form common to all the Teutonic dialects is represented by Goth. *stilan*, while all the Slavic languages have terms corresponding to O.Slav. *krada*, *krásti*, 'steal.' The fact that in all these languages the words connoting secrecy are related to the terms for 'thief,' 'theft,' 'steal' (e.g. Skr. *stáyát-*, 'secret,' to *stend-*; O.Slav. *taj* to *tati*; O.Pruss. *aukliptas*, 'concealed,' to Goth. *hlifan*, etc.) clearly shows that it was the element of concealment which distinguished theft from open robbery (Goth. *biraubôn*, A.S. *reafian*, O.H.G. *roubôn*; and O.Slav. *grabla*, Russ. *gráblju*, Pol. *grabić*, etc.). As robbery, however, was not in primitive times counted dishonourable (cf. Schrader, *Reallex. s.v.* 'Raub'), and as, even in historic times, theft was often punished more

severely than robbery, it is obvious that the ethical ideas of later ages must have undergone a complete transformation. The horse-thief was punished with signal severity by Teutons and Slavs alike. It is recorded, e.g., in the *Vita Ludgeri*, i. 26 (ed. Broner), that by order of Duke Wittekind of Saxony a horse-thief was put to death by stoning, while the above-cited passage of the *Pskovskaja Gramota* puts the horse-thief (*konevoy tati*) and the incendiary (*zazigalnikú*, cf. O.Fris. *monthbrond*) on a level with the *perevětnikú* (see above); they are all liable to the penalty of death. In the ancient Teutonic codes the general term 'theft' comprises a large number of subordinate species with distinct names, for which, so far as the present writer is aware, the Slavic codes furnish no equivalents. Thus we have O.H.G. *walaroupa*, A.S. *wælfred*, 'stripping of corpses,' and O.H.G. *herirreita*, etc., 'ravaging,' i.e. 'the perpetration of crime—especially robbery—in bands.' Closely allied to this is *Heimsuchung* (O.Fris. *hemseke*; in Scots Law, *hamesucken*), 'domus invasio in aliquam familiam,' which, however, may be committed by a single person, and in that case resembles the modern *Hausfriedensbruch* (Lombard 'curtis ruptura, quod est oeros facere').

(3) *Crimes against morality.*—In marked contrast to the class of crimes against property, the class embracing what would now be reckoned crimes against morality has a singularly meagre vocabulary. This is, of course, explained by the great change that has taken place in men's ideas regarding sexual morality (see also art. CHASTITY [Teut. and Balto-Slav.])—a change for which, alike in Teutonic and in Slavic countries, the way was prepared by the Christian Church. With reference, first of all, to *incest*, the Teutonic family of languages, so far as the present writer knows, has but one specific term applicable to this crime, viz. A.S. *sib-leger*, 'lying (i.e. cohabitation) within the family,' which points unmistakably to family exogamy. In Anglo-Saxon glosses the Lat. *incestum* is rendered *hemed*, which, however, means *coitus* simply—lawful or unlawful, or even adulterous. No O.Russ. term for 'incest' (modern Russ. *krovomešenie*, 'blood-mixing') is known to the writer. Any such term would, of course, bear the stamp of the Church. We find, for instance, that the metropolitan Johannes II. imposed penance upon marriages between persons as far apart as the fourth degree. In northern Europe, however, even in pre-Christian times, marriage within the family-group would doubtless be prohibited on economic grounds, although a moral repugnance to consanguineous unions would not then exist.

The crime of *adultery*, as was shown in art. CHASTITY (Teut. and Balto-Slav.), vol. iii. pp. 499-503, could be committed only by a wife, a married man being held culpable only in case of intercourse with the wife of another. The terms applied to this offence are of very general connotation; e.g. O.H.G. *huor*, O.Norse and A.S. *hór*, signify any kind of illicit intercourse; similarly O.H.G. *ubarligida*, 'adulterium.' A higher degree of precision belongs to A.S. *forliges*, 'adulteress,' lit. 'she who lies aniss.' The oldest Russian designations are *smilinoje*, *zastavanie*, *liobodžanie*, etc.—all, of course, of ecclesiastical origin. The vernacular name is *izmena*, 'treason,' 'unfaithfulness.' The punishment of this offence among the Russian peasantry—the primitive *vyvodŭ*—is described in art. CHASTITY (Teut. and Balto-Slav.), vol. iii. p. 501; it is identical with that inflicted by peasant criminal law upon the female thief.

Finally, *rape* was in all probability regarded originally as a species of robbery—of the abduction of women. In the glosses to the *Lex Saliica* the phrase *per virtutem moerari*, 'to violate by force,'

is rendered by *thiuwerōfen*, *theorōfa*, 'women-stealing'; cf. also O.H.G. *nōtzogōn*, 'to abduct forcibly', *nōtnumft*, *nōtnēman*, A.S. *nydnēme*, O.Norse *nothtekt* (*nōt* is lit. 'force'). In Old Russian the term *nasilie*, 'violence,' is also used for the crime of rape.

It would be interesting to know the Teutonic name for the *corpore infames*, who, according to Tac. (*Germ.* 12), were punished by being submerged in a marsh. It seems probable that the reference is to sodomy (O.Norse *soðinn*, *stroðinn*, 'muliebria passus'). There seems to be no recorded evidence regarding the Slavic practice in this respect.

B. PARTICULAR PUNISHMENTS.—Here we distinguish (1) capital punishment and outlawry, (2) corporal punishment, and (3) abridgment of personal freedom.

(1) *Capital punishment and outlawry* (banishment).—That the penalty of death, as decreed by the public assembly, was known to the Teutons is shown by Tac. (*Germ.* 12).¹ The commonest form of execution was hanging, and the root-word denoting this penalty is common to all the Teutonic languages: Goth. *galga*, O.Norse *galge*, A.S. *gealga* (Eng. 'gallows'), O.H.G. *galgo*. In ancient Russia likewise, according to the passage already cited from the *Pskovskaja Gramota*, the perpetrators of more atrocious crimes were executed by order of the public assembly (*věce*) or of the chief, and in this case also resort was usually had to the gallows (Sreznevskij, *s.v.* 'Povešeniye, Povesati se').

Among the Teutons, 'outlawry' (banishment, exile), i.e. expulsion from the tribe, was in its effects practically equivalent to capital punishment. The most ancient word applied to a person so proscribed is retained in the *Lex Salica* as *wargus*, 'hoc est expulsus de eodem pago' (cf. Goth. *gavargjan dāwari*, 'to condemn to death,' O.Norse *vargr*, 'wolf' and 'outlaw,' A.S. *wearg*, 'the malefactor sentenced to the gallows or to outlawry,' etc.). He was altogether outside the law (O.Norse *útlagr*, A.S. *útlagh*), and any one who met him might kill him, and was, indeed, bound to do so. This penalty was often combined with 'laying waste' (O.H.G. *wuostan*); i.e. the members of the judicial community assembled together in order to burn or demolish the criminal's house and property. The term 'outlawry,' supplemented thus by the idea of ravage, corresponds with the *potoku* or *potokū* and *razgrablenie* of the oldest Russian legal documents. The latter word means 'plundering'; the former should possibly be translated 'expulsion,' 'banishment' (Russ. *točiti*, lit. 'to cause to flow,' *tekū*, 'flow'). The penalty affected not only the criminal, but his wife and children also, and was inflicted for murder with robbery, horse-stealing, arson (see above, p. 303^b, and Sreznevskij, *s.v.* 'Potokū'), and similar grave crimes.

For the special objects of this article it is a question of great importance whether the execution of criminals among the Teutons was—as the foregoing observations regarding their conceptions of crime suggest—a religious ceremony, i.e. whether at bottom it was designed to operate like a sacrifice in appeasing the wrath of the gods. The affirmative has the support of such distinguished writers on the history of law as H. Brunner (*Deutsche Rechtsgeschichte*, i.²) and R. Schröder (*Lehrb. d. deutschen Rechtsgeschichte*⁶), though E. Mogk (*ASG* xxvii. [Leipzig, 1909] 17) has recently called in question the practice of human sacrifice among the Teutons. In any case there is the

evidence of a passage in the *Vita Wulframi*¹ to show that among the Frisians executions were performed at the festivals of the gods (cf. Müllenhoff, *Deutsche Altertumskunde*, Berlin, 1870–1900, iv. 244). As regards the Slavic practice the present writer has no evidence to offer.

(2) *Corporal punishment.*—Punishments involving mutilation of the body—cutting off the nose or ears, severing the hands or feet, blinding the eyes, or even severe flogging—in so far as they were not simply preliminary to the death penalty, were in all likelihood introduced at a relatively late period. In primitive times, among Slavs and Teutons alike, even the infliction of bodily injuries was dealt with by private revenge, and the practice survived till the time of the *Russkaja Pravda* (cf. Jirecek, iii. 2: 'or if he has been beaten till blood comes or till he is blue, it is not necessary for him—this man—to seek an eye-witness. . . . If he cannot avenge himself [*mistiti*], he shall receive for the crime [*za obidu*; see above] three *grivennicks*, but the doctor [receives] the wages'). Such vengeance would, of course, be carried out according to the principles of the *lex talionis*, and cannot, therefore, be regarded as punishment in the technical sense. In course of time private revenge for wounding was superseded, both among the Teutons and among the Slavs, and partly in consequence of their mutual relations, by a regular system of fines.

A more difficult question to decide is when and how corporal punishment found its way into the ancient codes. On the one hand, such penalties were probably first of all inflicted upon slaves and serfs, who, of course, could not pay the regular fine. The *Lex Frisionum*,² for instance, recognizes corporal punishment only in two cases, viz. (a) as merely antecedent to the penalty of death, for those who had been taken in the act of robbing a temple (cutting off the ears and castration), and (b) as meted out to a delinquent serf whose master refused to pay the fine. Similarly the *Russkaja Pravda* (Jirecek, iii. 16): 'if a serf (*cholopū*) strikes a free man, but takes refuge in the house, and his master refuses to give him up, then let [another] serf be taken, and the master shall pay twelve *grivennicks* for him. But if afterwards the man who was struck finds him, he shall beat him' (*da bijuti ego*). So far as the present writer knows, this is the earliest record of beating as a legal penalty in Russia. On the other hand, the credit of introducing corporal punishment must be assigned to the clergy, as is proved with special clearness in regard to Russia. In point of fact, the clergy suffused the conception of punishment with new ideas, such as, e.g., that it amends the evil will, deters others, and the like. For the attainment of these ends they believed—after the example of the Byzantine legislation, which had elaborated this system with great fullness—that such bodily penalties as blinding, severance of hands, etc. (many of them on the Mosaic principle of 'an eye for an eye'), and flogging formed the appropriate means. According to Jaroslav's *Ustavū*,—the ecclesiastical counterpart to the *Russkaja Pravda*,—a sorceress, e.g., must be punished (*kazniti*) after conviction, and she must further pay a fine (*penja*) of six *grivennicks* to the metropolitan. The nature of the *kazniti* appears from a warrant of the Russian metropolitan Johannes II. (1080–89), according to which the officers shall 'smartly chastise' (*jaro kazniti*), i.e. flog her, 'but

¹ 'Proditores et transfugas arboribus suspendunt, ignavos et imbelles et corpore infames oeno ac palude, iniecta insuper erant, mergunt.'

¹ 'Mos erat . . . ut corpora hominum damnatorum in suorum solennium deorum . . . sacpissime diversis litaret modis: quosdam videlicet gladiatorum animadversionibus intermina, alios patibulis appendens, aliis laqueis acerbissime vitam extorrens, praeter et alios marinorum sive aquarum flagitios submergebat.'

² Cf. R. His, *Das Strafrecht d. Friesen im Mittelalter*, Leipzig, 1901, p. 192.

not to death, nor cut off her limbs.' It is a well-known fact that under the power of the clergy, the Czars, and the serf-holders, flogging became the recognized mode of punishment in Russia, and it is curious to note how a punishment so degrading, and, originally, quite unknown, should in time come to be practically a public requirement.

Less than a generation ago a Russian village would furnish a scene like this: a sedate and well-to-do peasant, the head of a house and the father of a grown-up family, unshrinkingly lays himself on the ground in order to receive his tale of lashes, and when the business is over, he trudges homewards, conversing upon trifles with his companions in punishment (of whom there might be thirty on a court day) and smoking cigarettes (cf. Glebū Uspenskij, *Vlasti zemli*, 1882, p. 50 ff.). It is also recorded that a Russian peasant actually asked for twenty-five strokes of the rod, and that, when he had got them, he said: 'Thank you, that did me good. I was drunk yesterday, fooled away fourteen roubles—all I had—in the *kabak*, and ill-used my wife. I have now got my deserts' (V. Hehn, *De moribus Ruthenorum*, 1892, p. 214). Another, who had just been beaten and was asked why, answered: 'For a good reason, *būdruska*. A man is not punished for trifles in our place. No such thing occurs here—no, Heaven forbid! We have not a master of that kind. We have a *master*. Such another master is not to be found in all the district.' 'Old Russia' comments Turgeniev, who relates the incident (*Zapiski*, 1898, xiii.).

(3) *Punishment by abridgment of personal freedom*.—The law-breaker might have his liberty restricted either by enslavement or by confinement. The former method was resorted to at an early date, but for the most part only as the concomitant or sequel of other penalties, and need not, therefore, be further considered here. Imprisonment, on the other hand, alike in the Teutonic and in the Slavic area, is of relatively late origin, as is evident from the fact that Goth. *karkara*, O.H.G. *charchāri*, A.S. *carcern*, are derived from Lat. *carcer*, and the Russ. *tjurima*, 'prison,' from Germ. *Turm*. In Russia the introduction of penalties involving the abridgment of personal freedom was likewise due to the influence of the Church. The most ancient mode of restraint was 'putting in the stocks'; cf. the Russ. *kolodka*, denoting two boards with a hole for the foot; *kolodnikū*, 'convict,' and Pol., Russ., and Little Russ. *duby*, 'shackles for the feet,' from *dubū*, 'oak,' 'oak-log.'

O. SCHRADER.

CRIMINOLOGY.—I. Penal codes.—The actual extent to which any penal code may be made to contribute to the repression of crime depends much more on the justice and equity of the principles on which it is founded, and the firmness with which it is administered, than on the severity of its provisions. Those who are familiar with the history of crime in Great Britain will remember that in the 18th cent., when capital punishment could be inflicted for a hundred offences other than murder, crime flourished exceedingly. Similarly, in the early part of the 19th cent. crime was rampant, and a further impetus was given to its growth by the uncertainty of the death penalty. Thousands of death sentences were passed, but only a small proportion of them were carried out, so that offenders came to regard the sentence with contemptuous indifference. Again, in the latter

half of the century the long and severe sentences of penal servitude, which seemed to prisoners themselves, as well as to many others, vindictive in aim and effect, had no repressive influence on crime, the numbers of those in penal servitude at that time being more than three times as great as in 1910. No real and steady fall in crime took place till in 1879 the Summary Jurisdiction Act put an end to these long sentences. Almost simultaneously a uniform system of prison administration and treatment was inaugurated, and all local prisons were handed over to the State. The coincident fall in crime which began then, and has steadily gone on since, may fairly be ascribed, to a large extent, to these two reforms, which may be said to combine mitigation of penalties with uniformity and certainty of application. From time to time the penal treatment of offenders oscillated between extreme severity and extreme laxity; but, when both these principles were in force at the same time—denoting instability of administration—the very worst results ensued. About the year 1830, when capital sentences were freely passed and not inflicted, the convict population of Great Britain, with its population of 15 millions, consisted of no fewer than 50,000 persons, some in hulks and prisons at home, others in penal settlements and Colonies. The cost of maintenance, which was enormous, was surpassed only by the futility of the system of punishment. Subsequently the Penal Servitude Act of 1853, and the refusal on the part of our Colonies to receive convicts, put an end in Great Britain to transportation. The number of convicts meanwhile declined, till in 1852 it was 17,000; and in 1878, when the local prisons were handed over to the State, it amounted only to 10,000. At present (1910) the number is about 3000.

Recrudescence of severity in punishment occurred now and then, as, for instance, when flogging was freely resorted to in order to put down garrotting; but on the whole the tendency of our criminal law, since the Prison Act of 1865 at all events, has been in the direction of leniency in prison treatment; and the results have been satisfactory. To a large extent this spirit of leniency may be regarded as in itself a reflexion of the improvement in the character and conduct of our people, which, again, depends largely on the general advance in civilization, together with the spread of education, intelligence, temperance, and other influences designed to elevate the people. Such influences have a much larger share in preventing crime than any punitive measures can have in repressing it; nevertheless, a penal code of some kind is an unhappy necessity for every civilized State. Imprisonment in some form, therefore, appears to be the only means at our disposal, short of capital punishment, for the punishment or restraint of those persons whose conduct renders them a danger to society.

2. Foreign penal systems.—A glance at the penal systems in other countries—that of our own being reserved for consideration later on—is of interest in connexion with the subject. England, to her shame, too long neglected the warnings of the far-seeing John Howard. The overcrowding of her gaols, the indiscriminate herding together of criminals of both sexes, and of all ages and varieties, and the total neglect of the authorities to bring any religious or moral influences to bear on the unhappy inmates, produced an inevitable crop of profligacy, moral and physical corruption, wide-spread disease, and death. When at last she woke up, and found that proper sanitary buildings and separation of prisoners were essential to reform, and when Pentonville Prison was built in 1842, an impetus was at once given to sane administration. Since then England has been amongst the foremost of

the nations in the search for some equitable, moral, and scientific scheme of prison treatment calculated to reconcile the rights of society with the rehabilitation of the criminal so as to enable him to return to a law-abiding life. It is, however, to the United States that the palm must be given for progressive experiments in this direction. No methods of reform and no social experiments appear too costly or troublesome to the indefatigable philanthropists of America who take up this subject, if only they are reasonably likely to reclaim criminals. Starting with the root-idea, which may be over-sanguine, that no one is absolutely irreclaimable, they have established at Elmira, and other prisons, or 'State Reformatories,' a system based on the *indeterminate sentence*, combined with conditional liberation on parole when the prisoner gives satisfactory evidence of reform. A somewhat strict discipline, with drill of a military character; instruction in skilled industries; moral, religious, and secular education, united with various kinds of amusement, are expected to alter character, and turn the subjects into good citizens. Further, every one is enabled to profit pecuniarily by his own work, and is expected to demonstrate his fitness for discharge; but he must first find employment. Probation officers supervise and help those on parole, and misconduct leads to forfeiture of licence.

From this sketch of the system, which is a type of others, it will be seen that Elmira is practically a reformatory for adults, who are received up to the age of thirty. All are known as 'inmates,' not prisoners, though they are under sentences of from one to a possible twenty years. Considerable success is claimed for the Elmira system, but statistics are not convincing as to the number of reclaimed cases, originally alleged to be 80 per cent. According to a report of the New York Prison Association, which recently analyzed the cases on parole from Elmira, 'probably not over 70 per cent of men paroled can be classed as reformed,' while some other authorities put the percentage at 50. 'Society is best protected,' they say, 'by the reform of the criminal.' One point emerges, however—the actuality of the *incorrigible*, of whose too frequent appearance at Elmira they make complaint. The tracing and following up of the reclaimed is difficult in so vast a country, with unlimited facility for travel.

But, if the United States has some of the best and most progressive prisons, it has also many of the worst in Christendom. Race prejudice against the negro, who is held to be either irreclaimable or not worth reclaiming; Labour Laws which, in many of the States, either prohibit altogether or restrict the sale of prison-made goods, and so keep prisoners idle, or employed in unproductive work; constant changes of the wardens or governors as political parties come and go; public apathy and parsimony in regard to prisoners; and a general desire to make prisons pay their way—these are the conditions which make the state of most of the county and city gaols fall very far short of modern ideals. The late Secretary of the Howard Association, Mr. Edward Grubb, made a tour of some of these prisons in 1904, and found them very unsatisfactory, and in startling contrast to the State Prisons and Reformatories. He says:

'These institutions (county and city gaols), designed for the most part for prisoners awaiting trial, and for the serving of short sentences by misdemeanants, are, with little exception, far from satisfactory, even in the Northern States. The best I saw was at Boston. At Indianapolis, and at Cleveland and Mansfield (Ohio), to say nothing of the South, the gaols were, for the most part, far from clean, and the prisoners were shut up together, with full opportunity to corrupt each other. Either they had no occupation (at Mansfield they were engaged in playing at cards), or, if employed (as at the House of Correction at Cleveland), they were working in a very half-hearted

manner.' He describes the state of the convict camps as teeming with abuses—indiscriminate association, negro women 'constantly having babies,' 'terrible cruelties and even murders,' and bad sanitary conditions (see the pamphlet published by the Howard Association).

Even in the better class prisons, many of the privileges extended to prisoners seem to breathe a freedom which would probably be unsuitable for our class of habitual. Buying and selling, the free use of tobacco for smoking and chewing, card-playing, cinematograph exhibitions of prize-fights, and so on, are too advanced expedients for moral improvement to appeal to British sentiment.

Like everything else in the United States, crime is on an immense scale. A country so huge in itself, containing such a varied population, black and white, and receiving every year hosts of immigrants from everywhere, is, in the nature of things, a hunting-ground for criminals. Further, it has almost as many penal systems as it has States, so that it is difficult to estimate the general effect on crime of any special penal measures. The Americans themselves, however, are drawing public attention to the appalling list of murders committed—not only to the large proportion that go unpunished, but also to the small percentage of cases in which the death penalty is inflicted after a conviction has been obtained. They are also holding an inquiry into their methods of administering the criminal law, which hitherto have been so slow and uncertain as to lead to the belief that crime is getting out of hand. They seem to be already on the way to find out that a firm administration of criminal law is essential to the repression of crime.

The penal systems in force in Continental countries differ very widely from one another. Several, like Russia, France, and Portugal, adhere to transportation as a punishment for the more serious kinds of crime, although Great Britain discarded this penalty as costly and ineffective more than half a century ago. The principle of cellular confinement on the separate system, which was established by law in England in 1865, finds favour with all European nations, as it does with all British Colonies, and with progressive Japan; but in practice it is by no means universally adopted. The magnificent modern prison built by France at Fresnes has been designed for *separation*, but there is considerable scope for association also, in order to prevent overcrowding. It may be said generally that all the European nations which have built prisons in recent years have designed them with a view to carrying out separation. In Belgium, where much public attention has been given to prison treatment and the repression of crime, cellular confinement has been carried to its utmost limits. Prisoners have been kept in solitude compulsorily for ten years, after which they have been offered a modified form of association, which many are said to have refused, so that instances are on record of over twenty years of this kind of seclusion. Of late there has been a revulsion of feeling on this question, and the new school of penologists are now working for drastic reform. Russia, too, carries out the Belgian system in several of her prisons. Austria-Hungary was said to have had only 15 per cent of her prisoners under the separate system a few years ago, although approving of that system in theory. Many of the new prisons are of a palatial character, but none of them surpasses our own in sanitation, and we possess an undoubted advantage in having the whole prison system of the country under the single control of the State—an advantage which has been found very difficult of attainment in the other countries of Europe, and practically impossible in America.

The results of the various systems are very difficult to disentangle from the official statistics

supplied by each country. For purposes of comparison with our own results it has been found impossible to arrive at any definite or valuable conclusions. If murders only were reckoned as a test of the amount of crime, Great Britain would certainly rank high; but this would give a false idea of the extent to which other serious crime prevails. Offences against the person are much more common in some countries than in others, while offences against property form the bulk (as in our own country) of the crime in others. There is, however, one conclusion which can be drawn from the general survey. Recidivism is rampant everywhere. In France it has been specially prevalent, and the recrudescence of crime, particularly amongst the Apaches, or hooligan class of youths, who commit murderous assaults on police and others, is of sinister omen, and has already led to a revival of capital punishment. Whether or not these phenomena are to be regarded as only temporary manifestations of a prevailing state of general social unrest, of which we have had recent examples in the strike-riots in France, Germany, and Wales, it is certain that a heavy responsibility rests on those who preach anarchy. It is well they should remember that crime is a much worse social evil than discontent, and that they are probably stimulating the one by encouraging the other.

3. No universal system of punishment practicable.—Although the study of crime has already attained to the doubtful dignity of an 'ology,' and learned experts of most of the civilized nations have been laying their heads together in congress for several years with a view to investigating its causes and devising remedies for an evil from which they all suffer alike, it cannot be said that criminology is yet by any means to be reckoned amongst the exact sciences. Human nature with its faults and foibles may be the same all the world over, but the different phases of criminality, the different moral standards, and the different national temperaments which characterize various races, all tend to modify our pre-conceived ideas as to the possibility of repressing crime, as a general evil affecting the world at large, by any remedy, or by any set of remedies, whether preventive, reformatory, or punitive in intention, which can be held to be of universal application. It is well to understand that there is no royal road to the solution of complicated problems of this kind. We are in the habit, from time to time, of instituting more or less disparaging comparisons between our own methods and those of our neighbours in matters of social reform. Introspection of this kind is undoubtedly a national characteristic that is highly advantageous, tending, as it does, to check complacency and stimulate progress; but we must not lose sight of the fact that many features of the judicial procedure and the penal systems in force amongst Continental nations are utterly foreign to our ideals, and ill-adapted to our use. The well-known practice, for instance, of 'interrogating' accused persons which, in our eyes, amounts to heckling of a particularly cruel and vindictive type, is so foreign to the basic principle of our criminal law, which holds every man innocent until his guilt is proved, that we could not, if we would, fit so incongruous a practice into our scheme of things. In the same way, the life-long periods of solitude and seclusion in vogue with some Continental nations, by the side of which our brief terms of mitigated separate confinement seem unheroic and contemptible, are so repugnant to our national sentiments of justice and humanity that we decline even to look at them.

It has been said that every country has the government it deserves. The dictum applies with equal

cogency to its laws, to its administrative machinery, and to the penal and disciplinary measures which it deems necessary for the guidance and control of its citizens. We may assume, in fact, that every country knows best the main lines on which its subjects can be kept in order; and it will be found that national habits and customs, national sentiment, and national temperament are factors which have much more to do with the shaping of penal systems and codes of moral discipline for peoples than the degree of civilization to which these peoples have attained. We find, accordingly, that the civilized countries generally differ very widely from one another in the matter of criminal law administration, that the range of variation is almost as great as that which distinguishes civilized from uncivilized methods, and that each country seemingly adopts the practice which to a large extent may be said to reflect the genius and character of its people, just as it selects the guillotine, the electrocution chair, or the rope for the infliction of the death penalty. It is probably for these reasons that International Prison Congresses do not waste their time and energies in the fruitless search for an ideal and universal penal system; but seek rather to improve existing systems, or to discover some general principles, or some details in working, that may be adapted to those which are already in force, and which are presumably suited, in their main outlines at all events, to the countries in which they have had their origin and development—all due weight being given, on the other hand, to the consideration that indigenous plants do not always thrive in foreign soil.

It would appear, then, that very little is to be gained by comparing or contrasting one penal system with another when they are not really parallel, and much less by trying to glorify one at the expense of another. We may feel convinced that our own system, which has been evolved from our experience by steps so deliberate that they never can be said to approach rashness, is fairly adapted to our present-day requirements; but it is very doubtful whether it would meet the wants of different states of society in other countries, or even in our own under the social conditions that prevailed half a century ago. The criminals of that period would undoubtedly have been attracted, rather than repelled, by the comparative amenities of life in a modern prison. Hosts of them would have taken a long-wished-for rest in so comfortable a retreat, seeking compensation, in a restoration of their health and energies, for any inconvenience or boredom they might have had to put up with while undergoing moral repairs. It must seem strange to those who are unfamiliar with our British moods of self-depreciation and pessimism that the very confident theorists who are never tired of reminding us that we are on an entirely wrong track, and that our system is a fiasco, should practically all be found in our own camp. Outsiders take by no means so disparaging a view. Recognizing, as they do, the enormous reduction that has taken place in recent years in our number of criminals, they look somewhat askance at the rhetorical explanation, which is frequently resorted to in similar cases, that improvement has come 'in spite of the system'; they regard the system, as a matter of fact, with a much more favouring eye. Further, it is a matter of some significance that, after due allowance has been made for the effects of family tradition, our progressive and up-to-date younger brothers in Australia, who are neither visionaries nor dreamers of dreams, follow very closely our procedure and practice. The fashionable outcry against modern penal treatment is really traceable to the fluent pens and forensic accomplishments of ex-criminals, who by their

ex parte allegations seem to have captured the greater part of the press and a considerable portion of the general public.

In *Crime and Criminals* (1910) the present writer made an effort to stem the tide of delusion and misrepresentation on the subject, but it still advances. The basis of this pessimistic outcry is a complete fallacy. Prison treatment, we are told, is a failure because 'it neither deters nor reforms the habitual criminal.' But all the authorities are agreed that the distinguishing characteristic of the habitual criminal is that he actually prefers his vocation to the humdrum alternative of a steady and active working life. The writer's own intimate and first-hand acquaintance with the living type enables him emphatically to confirm this discouraging conclusion. Whether the habitual criminal's vicious propensities are innate or acquired, it is certain that his habits, when he reaches maturity as we find him in prison, are practically ineradicable. The spirit of the road seems to be in him, and his predatory instincts have already developed into fixed habits, so that he is, to all intents and purposes, a hopeless incorrigible. Here lies the difficulty. No system yet invented can fairly be expected to alter a person of this type. To correct the incorrigible appears to be a feat analogous, both in sound and sense, to squaring the circle. We are not, however, without some means for dealing with him. If methods of cure are not feasible, prevention and restraint are still open to us. The *Borstal* system of treatment for the incipient habitual, and *preventive detention* for the veteran, typify these two modern prison expedients respectively. For the present, however, the writer is more concerned to point out the fallacious reasoning on which the theory of failure is based. No notice whatever is taken of the important fact that the number of habitual criminals at present *in business* has been brought within such manageable proportions that it may quite reasonably be said that we have them in a ring fence. The same set pass in and out of prison with apparently unvarying regularity, and, for the most part, for the same kinds of offences. Specialization in crime, indeed, has become so marked in our time that the police authorities of Scotland Yard claim that they can, in most instances, tell, from the manner in which a clever burglary or robbery has been planned, the name of the expert who committed it. One might fairly expect that the reduction of a standing convict population of 10,000 persons in 1880 to 3000 persons in 1910 would be considered a respectable achievement under any system, and would give rise to some doubt, if not disbelief, in the minds of thinking people, as to the truth of the failure theory. The current of general opinion, however, if we are to judge from the press, sets in quite the opposite direction; and we are led to believe that we are going from bad to worse because habituels and incorrigibles, although they decrease steadily enough in numbers, decline to amend their ways, or to vanish *en masse* into the obscurity of some honest calling. It is well we should cherish no illusions on this subject. Our repressive measures stand in constant need of tightening up for this intractable class of criminal, and our reformatory methods in like manner need constant widening in scope, if we are to arrive at *better* results; but no conceivable combination of them will ever succeed in totally eliminating those obnoxious persons from the community. In regard to the system itself, it is not claimed that the mere absence of failure denotes the presence of perfection. It is quite conceivable, and perhaps even probable, that more good might be accomplished in other countries by a different set of principles and machinery; but it

is claimed that our own system has produced fair practical results, and that it is better suited to our national requirements than any exotic system with which we are acquainted.

4. Theories of punishment.—But, if public opinion is unsound in regard to the treatment of the criminal, public sentiment is maudlin and unhealthy on the theory of punishment. A general tendency to minimize almost to vanishing point individual and personal responsibility, and to set up in its stead the fantastic substitute of a collective and huge unlimited liability company, comprising the whole body politic, is a pernicious feature of our time. Surely a more demoralizing doctrine, destitute alike of the sanction of religion, morality, law, and common sense, has never been promulgated for the edification and guidance of a free and self-respecting people. Those who aspire to regenerate society by this egregious piece of social philosophy are hugging a very vain delusion. It abolishes at a stroke the exercise of free will, without which society could not hold together, and it is quite outside the realm of logic. If any sane individual in the community be permitted, even in the name of philosophy, to divest himself of his social and moral responsibility by the simple process of becoming a criminal, it is obviously open to any, or all, of the other individuals of whom society is composed to claim a similar privilege. A premium is thereby placed on evil-doing, and every man is tempted to become a law unto himself. The practical result of such a relaxation of our moral code would undoubtedly be that the maintenance of social order would be rendered difficult, if not impossible; we should find ourselves retracing our steps in the direction of barbarism; and, incidentally, we should find the world a distinctly unpleasant place to live in.

It is not to be supposed, however, that the theory of personal responsibility is to be applied ruthlessly to those who are, from mental deficiency, actually incapable of fully appreciating the significance of their offences, and who are, to this extent, not answerable for unsocial conduct. It should be the aim of any humane system to apply disciplinary methods very sparingly, if at all, to this unhappy class, who at present amount to 3 or 4 per cent of our prison population. Hitherto these hapless offenders—'weak-minded, but not insane,' in the language of the Courts—have been a source of much anxiety to the magistrates who have had to deal with them, as well as to prison authorities who are constantly receiving them on short and useless sentences. In prison they have been treated under a very modified form of discipline, and efforts have been made to improve their conduct and condition. Medical protection has shielded them from actual physical detriment, but the atmosphere of a penal institution is by no means conducive to their moral improvement, nor is it one in which they should be compelled to live even for short periods. The Royal Commission on the Care and Control of the Feeble-Minded has fully recognized this weak spot, and legislation is now urgently needed to carry out their recommendations.

It will be seen from the foregoing that the principle of vicarious responsibility, if applied in practice, would not tend to the repression of crime. Nevertheless, it is vehemently insisted on at street corners, in the pulpit, and in the press, while the dramatic possibilities of impulsive criminality and temporary irresponsibility are exploited in sensational drama. Many good and benevolently-minded people seem to get periodically conscience-stricken on behalf of the criminal as a victim of circumstances. Not only are they willing to bear the burden of their own small vices, but also, in their emotional fervour, to take up his larger ones,

and condone his crimes, however heinous. They almost apologize to him for his existence as being a victim of heredity, and palliate his misdeeds on the grounds of his bringing up, so that every vulgar felon comes to think he is in reality a very ill-used person. Criminals are consequently quite ready to adopt the extenuations and excuses which are urged in their behalf, not only by their legal advocates, but also by theorists in criminology. In the writer's recollection, twenty or thirty years ago, 'poverty' and 'drink' were the two main causes given by prisoners for their downfall; but now these pleas have gone out of fashion, in favour of unemployment, parental neglect, slum-life, and financial embarrassment. That such social evils exist to a deplorable extent at present—although twenty years ago they were much worse and much more common—no candid inquirer can deny; but that they have had any material influence on the manufacture of the *professional* criminal who selects his own calling, or, as he himself might put it, 'chooses his own pitch,' is a very doubtful proposition. A prolonged study of the actual living specimen has led the writer to the conclusion that the professional criminal is possessed of qualities which would enable him to emerge with ease and credit from any, or all, of these alleged social disadvantages, if only he had the will to make the attempt. The inexperienced, occasional offender is much more handicapped by those conditions, and he is not generally gifted with the staying or enterprising characteristics of the old hand. It is much more probable that the genesis and development of the latter type are traceable to a gambling spirit which characterizes his class. In his spells of freedom the race-course is the special scene of his recreation. Familiarity with risks breeds contempt, and he gambles with liberty much more light-heartedly than others do with stocks and shares. But the cure of social evils which are so wide-spread is of necessity a very slow process. Their total extinction, if such a thing were possible, would unquestionably tend to the *prevention* of much crime and human suffering; but there would still be left a substantial residue of crime unconnected with these social evils, and society would be compelled to protect itself from this by the infliction of some kind of punishment. Even in the ideal Socialist community of the future, when it gets into working order, this problem is not unlikely to crop up, and compel attention; but *meantime* what are we to do with the persistent offender?

Another strange theory which is promulgated by the apologists of the criminal, and which bears on the ethics of punishment, has a somewhat captivating effect on short-sighted reformers. There is, we are told, something immoral, or unfair, or at least pusillanimous, in inflicting punishment on a guilty person in order to deter others from crime. Except on the grounds that the guilty person is punished with excessive severity, or beyond his deserts, this specious theory cannot be sustained. If we beg this part of the question, as is generally done for the purposes of the argument, the immoral and unjustifiable nature of the proceeding is clear enough. Otherwise the practice is both rational and equitable. The actual criminal suffers no *wrong*, the strictly non-criminal person is totally unaffected, while the person with dormant criminal proclivities, who is tottering on the verge of criminality, is provided with a strong and valuable incentive to virtue. 'Encouraging the others' cannot be considered an immoral expedient in dealing with crime. The deterrent principle, which has always been recognized by law, is in reality a double-edged weapon of the highest value. Its effect on the actual offender may be, and often is,

absolutely negative; but on others its force is incalculable, and invariably many times greater and more far-reaching than on the individual. This fact is too often ignored by those who criticize and under-rate the deterrent effects of penal measures and systems which do not absolutely disclose superficially the indirect effects which they really produce. Statistics show clearly enough that our penal system deters occasional and first offenders, though it has very little deterrent effect on habituals. Present-day conditions of imprisonment are not *real punishment* to this latter class at all, but merely a form of restraint which removes them from temptation for the time being. The most recent device, therefore, which has been adopted for dealing with them in the Prevention of Crime Act of 1908—that is to say, preventive detention for long periods—is really a measure of inhibition and restraint, adopted primarily in the interests of society, although the extension of time that will be at the disposal of the authorities for effecting moral improvement in the prisoners themselves is also expected to yield more encouraging results. In regard to the principle of determent, the only profitable use to which the habitual can be put, until he renders himself more amenable to reformatory influence, would appear to be to make him a warning to other people for whom prison has more terrors. This, after all, is a trifling reparation for him to make to a community on which he persistently preys for a living, whether he be in or out of prison.

But these various doctrines which tend to the extenuation, or, it might be said not unfairly, to the encouragement, of crime are quite overshadowed by the much wider and more comprehensive one that we have no right to punish, and no moral justification for punishing, our fellow-creatures at all. Count Tolstoi was the leading exponent in recent years of this impossible creed, and he gained many disciples, who have been attracted, apparently, by the magnetism of his genius. In his novel *Resurrection* he makes his hero Nehludof, who is really a replica of himself and his own theories, ask the question, 'By what right do some people punish others? Why, and by what right, do some people lock up, torment, exile, flog, and kill others, while they are themselves just like those whom they torment, flog, and kill?' It is obvious to plain people that the latter part of this question embodies the underlying fallacy of the whole theory. The greater part of society is law-abiding, or at all events non-criminal in conduct. If an individual member is permitted to torment, flog, or kill another individual member with impunity, why should society collectively be denied the same right? Every State or community has an inherent moral right to make laws and regulations for the maintenance of social order. If social laws are merely optional in character, and no penalties are attached to their violation, they cease to have any force outside Utopia, so that every man's hand is against his neighbour. The mind of this gifted philosopher in his latter years seems to reflect the state of chaos and anarchy to which his teaching led him, so that at the last he was utterly weary of the world and its problems. Theories denying the right of society to punish, which have no foundation whatever in the Moral Law (on which the regulations of all civilized States ultimately rest), have no more than an academic interest for practical rulers. However suitable they may be for the land of dreams in which Tolstoi's spirit seemed to dwell, they are quite unfit for a practical world, in which a mere touch of the actual suffices to shatter them to pieces.

It may be regarded, then, as axiomatic that punishment in some form is essential for the cor-

rection of persons who inflict wrong on society; that the right to punish is in no sense immoral; and that every system of correction should have in it a penal element. It is true that these principles are strenuously denied by theorists who hold that prison treatment should be purely reformatory; but no one pretends to have devised a working scheme for carrying out this beneficent intention with full-grown criminals. All prison treatment must be, in the nature of things, to some extent penal, since it deprives persons of their liberty. Even Elmira imposes this restraint. To a large number of criminals, moreover, deprivation of drink is penal, while others find regular work a kind of punishment. It cannot be contemplated that the ideal prison is to abolish these restrictions on liberty under any coming régime. It is already on record that a prison without work existed some years ago under a local authority, and the results were found to be neither reformatory nor deterrent. It came to be known as a 'Reading-Reading-Gaol,' and one prisoner explained his return to it by saying he had come back to finish his book. Many sanguine persons are too ready to assume in this connexion that a kind of 'Free-Library' treatment, combined with musical entertainments, will alter the nature and habits of even hardened criminals; but those who live outside doctrinaire circles know that much deeper moral and spiritual influences are needed for those who persistently covet and desire other men's goods. At the present time it is the fashion to decry, or to ignore, much of the silent work of prison chaplains. This work is very often carried on under the most disheartening of conditions, especially amongst the habitués. The writer knows, however, that prisoners themselves, who show any wish to do better, get an enormous amount of encouragement, guidance, and help from the chaplain; and that they appreciate the unadvertised work of his department much more highly than do the general public, or those who write on prison reform.

5. *Penalties a necessity.*—Although reformatory treatment is an essential element of every good prison system, it is nevertheless lacking in two important respects. It is inapplicable in practice to the prisoners with very short sentences, who constitute the bulk of the whole prison population; and it embodies none of that deterrent principle which is necessary not only for the repression, but also for the *prevention*, of crime. It is obvious, therefore, that pains and penalties of some kind must be resorted to in order to check or restrain habits of crime; and it is very important that these penalties should bear some proper and adequate relation to the nature of the offence, the character of the offender, and the general sense of public justice as between injurer and injured. No longer is it necessary to brand, or mutilate, or inflict permanent injury on those whom it is our interest to cure. Society has, however, the right to seek *redress* (not revenge) at the hands of wrongdoers, and it is compelled to take this course if it would prevent the substitution of private vengeance for public justice. Now, the only medium through which this redress can be exacted at present is the purse or the person of the offender, so that in the last resort we are driven either to the infliction of capital punishment or to some form of imprisonment. The offender, in fact, is confronted with the footpad's usual alternative, 'Your money or your life,' or at least a part of it. If any one could invent a less objectionable form of punishment which would restrain the criminal, and at the same time reform him, and deter him and others from the committing of crime, he would merit public gratitude, and lay our penal code less

open to even a suspicion of inhumanity. But, as this is merely a visionary possibility, we can only look meantime for such a mitigation of the conditions under which these two measures are ordered, or carried out, as will meet with the approval of a humane and just public. Much has already been done in this direction. Capital punishment is now practically reserved for the worst cases of wilful murder, though it is still on the code for a few other offences, such as treason, setting fire to public arsenals, etc.

6. *Capital punishment.*—Without entering into the merits or demerits of capital punishment, we shall note some facts in connexion with the subject which tend to justify us in the use of it. A return laid before the House of Commons in 1907 shows that most of the chief European States, and most of the States in America, retain the death penalty in their codes, though many of them use it sparingly. Baron Garofalo, the President of the Appeal Court at Naples, in his book on Criminology (see Lit. at end of art.) tells us that in Italy, where, since 1876, there have been no executions except under military law, homicides average 3814 a year, compared with about 300 in England. He notes similar results in Belgium and Prussia, where few executions take place. In Switzerland, when the death penalty was abolished, murders increased 75 per cent in five years, so that several Cantons re-introduced the penalty. In France, in 1824, juries were allowed by law to add 'extenuating circumstances' to their verdicts, with the result that the annual average of executions fell to 1·8 in 1901-1905. Homicide was meantime increasing, but in 1906 Government brought in a Bill for abolition. Soon after a brutal murder occurred—'l'affaire Soleiland'—and public feeling was so stirred that the Bill was dropped; so that, instead of the death penalty being abolished, it became much more common. In America, Mr. Hugh C. Weir tells us (in *The World To-Day*, in regard to a recent census of American crime) that 'in only 1·3 per cent of our homicides do we secure a conviction.' Further, he states that Chicago averages 118 murders a year. London, which has four times the population of Chicago, has only 20. It is notorious that the death penalty is seldom carried out in the United States by law, though lynching is often practised mercilessly. Since 1868, abolition has been discussed eight times in the House of Commons, and negatived on each occasion by large majorities. Several committees and commissions have decided in the same sense. The opinion of the Scottish Judges at one of the Inquiries was:

'It would not be for the interests of humanity that the well-conducted and useful members of the community should be more exposed to deprivation of life by murder in order that the lives of the murderers may be saved.'

A French Professor of Law put the same idea pithily, when he said that if abolition were sanctioned it should be announced that—'henceforth the law in France will guarantee the lives of none but murderers.'

An incidental justification of the death penalty would seem to be that, under it, the newspaper hero of a sensational crime passes quickly into oblivion; whereas, if he is left in prison, his career furnishes endless opportunities for the dissemination of unauthentic, unwholesome, and demoralizing gossip in the press, which makes a direct appeal to the perverse imitative faculty of other criminals. Lastly, it is the opinion of Lacassagne, and many other observers, that the English statistics of crime are probably the most satisfactory in Europe.

With a view to securing a fair trial, and to preventing mistakes in capital cases, both law and custom in England provide elaborate safeguards. An accused person, after having the charge against

him investigated successively by coroner, magistrate, and Grand Jury, is tried by Judge and Jury, when he has the option of giving evidence in his own behalf. After conviction he can take his case to the Court of Criminal Appeal. If unsuccessful there, he can lay before the Home Secretary, either in petition or through his legal advisers, any additional evidence that may not have been forthcoming at his trial. Every scrap of evidence in his favour is most carefully examined, and, if there is the slightest suspicion of any mental deficiency, medical experts in criminal lunacy examine him, and report to the Secretary of State before a final decision is made to carry out the sentence of the law.

7. Penal servitude.—Criminal offenders, other than those who pay the penalty of death, are sentenced in this country either to 'penal servitude,' which is mainly served in convict prisons, the sentences ranging from three years to life; or to 'imprisonment,' which is carried out in local prisons only, the sentences ranging from three days to two years. Death sentences are carried out at local prisons. Convicts—that is to say, those sentenced to penal servitude—generally undergo the first part of their sentences in local prisons in *separate* confinement; the remainder is served in a convict prison, where they work in *association*, for the most part out of doors, though some work in shops. The length of the period of separation varies at present from three months to one, according to the antecedents of the convict. This part of the sentence is most criticized by reformers, as being inhumane and likely to lead to mental troubles, morbid introspection, irritation, and misconduct. As a matter of fact, results do not bear out this *a priori* reasoning, nor is the treatment as severe as is commonly supposed. The State is responsible for a good deal of misconception on the subject. Although 'separate' confinement is, for controversial purposes, called 'solitary,' the two are quite different. Solitary, or, as it is called legally, 'close confinement,' is never resorted to except as a punishment for offences committed in prison, and it is ordered solely by the Governor or superior authority. Under separate confinement a man works in his cell for the greater part of the day, but he gets many reliefs. He is allowed at least one hour's exercise daily, attendance at one chapel service on week days, and generally two on Sundays; he is also unlocked for various sanitary services, and sometimes for school; and he is frequently visited during the day by officials—governor, chief warden, officers serving him with work, meals, etc. Further, he is under careful medical supervision with a view to preventing mental or physical injury. The period of separate confinement, nevertheless, is one of the vexed questions of prison treatment at present. Its effect is penal, in so far as the average convict dislikes it; on the other hand, it does not seem to be without advantages in the direction of reformation of character for those who wish to profit by them. Introspection is not necessarily all morbid, and a period of seclusion gives time for reflexion and for a kind of moral readjustment, while it affords many opportunities to the chaplain for influencing the mind of the prisoner, away from the distractions of association with fellow-prisoners who too often urge him in wrong directions.

When this part of his sentence is over, a convict is drafted to a convict prison, where he works on the land—at reclaiming, tilling, gardening, quarrying, etc.; or at building, with allied industries; or in shops—at tailoring, shoemaking, carpentering, printing, book-binding, moulding, fitting, or other useful employments. He sleeps and takes his meals in a separate cell, which is well warmed,

lighted, and ventilated. He is warmly clad, and has a very good and ample plain diet, without any canteen privileges. His working hours are much shorter than those of outside labourers, and the work, which is not laborious, is very carefully graduated to his physical capacity, while at the same time it is chosen, as far as possible, with a view to utilize any skill he may have, so as to fit him for honest employment on discharge. His education, both religious and secular, is carried on by the chaplains and schoolmasters, and he has an excellent supply of instructive and interesting books to read. By way of stimulating self-help, he is made to pass through successive grades or classes, by earning marks for industry and good conduct. Each step gained entitles him to additional prison privileges, as well as to a considerable money gratuity on discharge, and to a remission of sentence up to one fourth for men and one third for women. On release, he can avail himself of the help of a Discharged Prisoners' Aid Society to get work. He is, of course, kept under close supervision and strict discipline; but no bullying is allowed. Conversation is prohibited except as a special privilege at stated times for exemplary conduct; but under the conditions of associated out-door labour a good deal of talking is carried on, which, though not recognized, is inevitable. Misconduct of any kind renders him liable to forfeiture of the privileges which he may have already gained.

From this necessarily brief sketch it will be seen that the scheme is undoubtedly punitive in effect, but it is also reformatory in intention. Strict discipline conduces to self-control, steady and regular employment to the work-habit, the system of progressive privileges to industry, good conduct, and self-help; while the moral and educational training tends to strengthen character; and the whole scheme is designed to fit the prisoner for earning an honest living on his release.

The latest device of our penal system for dealing with the habitual criminal is *preventive detention*. The Prevention of Crime Act (1908) gives power to declare a man who has been leading a persistently criminal life to be an 'habitual criminal.' Such a person is to be sent in the first instance to penal servitude for not less than three years, and he may be kept for a further period of not less than five, or more than ten, years in a state of preventive detention by order of the Court. A special place of detention is to be provided, in which more indulgences and privileges can be granted than in a convict prison, so as to make the general conditions of life less onerous, and to foster habits of industry and self-control in the inmates, and fit them for *conditional licence*. This new plan for dealing with recidivism is, in fact, a modification of the indeterminate sentence. So much attention has been given in vain to the reclamation of the professional criminal that the step is taken mainly for the protection of society, though hopes are entertained that he, too, may benefit under the new conditions, with more time available for effecting cures. Preventive detention does not come actually into force till 1911, but responsible authorities expect good results from it, since they have advocated for years some means of imposing a more permanent kind of restraint on this intractable class of offender. In the United States the indeterminate sentence and the release on parole are worked on such liberal lines that many thoughtful Americans say serious crime is trifled with, under the guise of reclamation; while our Legislature hesitates to entrust the liberty of the subject, even though he be a confirmed criminal, to the discretion of prison authorities, who might keep him for life. Mr. Grubb tells us that the average term of actual detention at Elmira is about one and a half years.

It certainly seems strange to us that a dangerous burglar, or a coiner, or even a murderer of 30 years of age should be set free, cured in so short a time, when we require a year, or two years, to cure Borstal youths of 16 to 21 years of age under a system very similar to that of Elmira. If such things can be done in America, we must either have much to learn from them, or their reputed success must be doubtful, or the subject must be a very different one from the British specimen. Unfortunately, the statistics on the question are not capable of verification, although undoubtedly good results are obtained in many cases. Meantime we adopt such parts of the American system as seem suited to our national requirements.

8. Imprisonment.—In regard to punishment by 'imprisonment,' as distinguished from penal servitude, local prisoners now enjoy many more advantages in the matter of associated labour than they did when the 'separate' system was established by law in 1865. Associated work in shops or working parties, under strict supervision, is now carried out at all local prisons, but out-door employment, except in the grounds, or at officers' quarters, is limited, as the situation of the prisons in or near large towns does not give much scope for actual labour on the land. The term of separate confinement for local prisoners, which had been fixed at three months by the Prison Act of 1865, was limited by the Act of 1877 to one month, and is now commonly reduced to a still shorter period. Very large numbers of local prisoners are unskilled workers, and are under such short sentences that cell employment of some kind is necessary, unless they are to be kept in idleness, which is utterly demoralizing. The last Report of the Prison Commissioners shows that 61 per cent of males and 62 per cent of females were sentenced to two weeks or less; 93 per cent of males and 97 per cent of females to three months or less; and only 5.62 per cent of males and 1.91 per cent of females to six months and over. For prisoners with short sentences the effect of imprisonment is probably penal and deterrent rather than reformatory, since little in the way of training can be accomplished in short periods. The low diet of the short sentence has a like effect, the object being to make the lesson for a petty or occasional offender short and sharp, so that he may not come back. A spell of brief seclusion for this class is surely a salutary provision. Local prisoners are housed in comfortable and sanitary cells of 700 to 900 cubic feet, kept at a proper temperature, and well lighted and ventilated. Daily exercise and chapel service relieve the monotony of the cells. Diet, which is not on so liberal a scale as that of convicts, is graduated according to length of sentence, and is carefully adjusted to the physical requirements of the prisoners, while medical officers have a free hand in ordering extra food in special cases. Like the convict, the local prisoner works his way through the stages of a progressive system, earning privileges for industry and good conduct, and forfeiting any he may have already obtained if he is idle or breaks the rules. He can also earn remission of a part of his sentence if it is more than a month; but this, too, is liable to forfeiture. Secular instruction is given him under the direction of the chaplains; and religious ministrations are provided for by them and by the clergy of the different denominations to which the prisoners belong. All these regulations are subject, in their working, to medical safeguards and restrictions; and they are carried out generally on liberal lines, so as not to cause individual hardship. There is a gradual relaxation of conditions for the well-conducted as their sentences proceed. Those convicts who reach the Long Sentence Division at the

end of ten years are allowed to purchase out of their gratuity some approved articles of extra diet, but not alcohol or tobacco.

9. Borstal treatment.—The tendency of recent legislation has been towards a lenient treatment, especially of the young and of first offenders. The Probation of Offenders Act gives power to the Courts to release the latter, and order them to come up for judgment if called upon. The Children Act prohibits *all* children under 14, and practically all young persons under 16, from being sent to prison at all; and the Prevention of Crime Act establishes a new form of sentence and a new type of Institution for offenders between the ages of 16 and 21. The sentence is detention under penal discipline in a Borstal Institution for not less than one and not more than three years. This is intended for those whom, by reason of criminal habit or tendency, it is expedient to detain for long periods under such instruction and discipline as appear most conducive to reformation and the repression of crime. The treatment adopted in these Borstal Institutions closely resembles that of Elmira, already described. It is based on a well-devised scheme of moral, mental, and physical training, combined with specific instruction in some trade or skilled industry designed to fit the inmates for honest living. Rewards are given for industry and good conduct; penalties are inflicted chiefly by forfeiture of privileges; conditional licence is extended to those who are deserving; and work is also found for them on discharge; while an After-Care Association of benevolent workers supervises them, and gives not only encouragement, but moral and material help, so as to enable them to lead useful lives. Over 500 youths are now under training; and the land, buildings, and training-ship of Feltham Industrial School have been purchased from the London County Council for their accommodation. A scheme on similar lines has also been established for girls; also a modified Borstal treatment for youths in prison whose sentences are too short to let them have a full course. Splendid results have already been obtained, and still better are expected when the Institutions become firmly established.

10. Habituals and vagrants.—From the outline given of our penal system, as bearing on the general subject of crime and its punishment, candid readers will see that it is not unjust or unmerciful, and that it does not sacrifice the interests of the criminal to those of the community. The general principles on which it is based would seem to be that it should be penal without being vindictive, reformatory without being demoralizing, and deterrent without being inhumane. Administrators who keep a watchful eye on statistics are quite alive to its weak points, in so far as it fails to reform or deter certain classes of prisoners. It is notorious that it does not reform *individual* professional criminals, who come back time after time to prison, though it reduces the numbers of this *class* very considerably by cutting off the recruits. It is idle to expect that they will ever be totally eliminated; but it is highly probable that the new remedy of preventive detention will considerably limit their depredations, and deter many from entering their ranks. The system, again, seems to be ineffective with vagrants, who have been increasing lately at the rate of 4000 a year. Prison life sits lightly on an idle class, and measures of indulgence in the nature of physical comfort, dictated by an exaggerated sentimentality, are not likely to check idle habits. Unfortunately, much of our social teaching at present tends to encourage this evil. 'To labour truly to get one's own living' has become for many persons a very disagreeable obligation; and State Aid, which is a popular panacea for social evils, is

too often invoked where energy and self-reliance would be the more manly remedy; while Society is too often called upon to saddle itself with the vices and follies of individuals. To a large extent these doctrines would seem to be responsible for an idle spirit in our lower ranks. According to the last official returns, no fewer than 33,766 persons found their way to prison in 1910 for offences against the Vagrancy Acts. When it is borne in mind that several more thousands of this idle class are in workhouses and at large, it will be obvious that the question of dealing with them is becoming very urgent. No economic remedy for mere unemployment will meet their case, since the work-habit in practically all of them has been lost. A Committee appointed in 1905 to investigate the subject made recommendations that such persons should be dealt with otherwise than under the Vagrancy Acts—that they should be treated, not as criminals, but as persons requiring detention on account of their mode of life. The object aimed at is to train and compel them to do some kind of work, so as to aid the solution of the problem which they themselves present. Legislation is now urgently wanted to carry these recommendations into effect.

11. General results of our penal system.—Recent enactments in reference to inebriates, first offenders, habituals, and youthful delinquents, together with the recommendations of committees for further legislation for weak-minded prisoners and vagrants, suffice to show that our penal system has by no means reached perfection or finality. But how far has it served its purpose in the repression of crime? Some general considerations have to be taken into account in deciding this question. We have no trustworthy data for estimating with any approach to accuracy the sum total of crime committed in the country. Undetected and unproved crime still flourishes, and we can judge the proportion it bears to detected crime only by general indications. We know, however, that our methods of detection and identification of criminals have improved, so that it is at least probable that less crime goes undetected now than in former years. Further, we know that life and property are as secure with us as elsewhere, and that respect for human life is certainly greater in this country than in most civilized countries. But, although we can base no conclusions on figures representing the total criminality of our population, we have, in the daily average population of our prisons, a statistical basis for estimating comparative progress or retrogression. The figures are simple; they have been arranged on the same lines since the local prisons were handed over to the State in 1878; and they include all the *proved* crime of the country, both minor and grave. If, then, we compare the daily average population of the prisons of England and Wales in 1880 with that in 1910, we get the following results:

[ENGLAND AND WALES.]

Year.	Daily Average Population.		Population of Country.
	Convicts.	Local Prisoners.	
1880 . .	10,299	19,835	25,708,666
1910 . .	8,189	18,521	25,756,615

The outstanding feature of these statistics is the very conspicuous decrease in *serious* crime indicated by the fall in the convict population, in the proportion of ten to three, during the last thirty years. The general shortening of sentences, which

followed on the passing of the Summary Jurisdiction Act in 1879, accounts for a certain proportion of this decrease, but cannot altogether explain it away, since the missing convicts are not found in the local prison population, which has also declined considerably, despite the addition of many minor offences to the statute book since 1880. If we take the two sets of figures—those of convicts and local prisoners—together, and place beside them the increase of ten millions in the general population, it will be seen that the criminality of the country must have declined very substantially to show these results; and, although we look for still better things in the future, it must be admitted that our penal system has, on the whole, served us well. It would, however, be very erroneous to infer that the decrease of crime is due solely to our methods of punishment, although it is also very doubtful whether such marked decrease could take place under an inefficient penal system. Social progress, of course, accounts for much of it. The training and discipline of the schools are conducive to moral improvement, self-control, and law-abiding habits; while the steady progress of temperance is probably one of the most important factors of all. Bank holidays have long ceased to be carnivals of drunkenness, and the statistics of crime show a steady decline in this offence.

12. Drink.—The latest returns show that in 1910 the total number of prisoners, male and female, received in the prisons for drunkenness had been less than the total of 1909 by 5852 cases. These figures are satisfactory as showing progress, but there is still room for much improvement in a list which reaches the enormous total of 57,418. Without any desire to minimize these figures, which represent an appalling amount of human misery and degradation, we would point out that much misconception prevails as to the actual connexion between drink and crime. Exaggerated statements that 80 or 90 per cent of crime is caused by drink depend to a large extent on the statistics of minor crime, which do not justify such sweeping conclusions. Many thousands of offences tried summarily have no connexion with drink. It should be remembered that the relation of cause and effect existing between drink and the major kind of crime, which entails a long sentence, is by no means so direct or clear as it is in the case of minor crime, since drunkenness is in itself one of the minor crimes, and one which figures most prominently in the statistics, and is also the exciting cause of several such offences. The commission of serious crime, on the other hand, is very often inconsistent with drunken habits, which are by no means so constantly found amongst professional criminals as amongst minor offenders. None the less, drink is, without doubt, both a direct and an indirect cause of all kinds of crime, and the spread of temperance is the most hopeful means we can employ for limiting its perils. Although the drink evil is pre-eminently one which is best dealt with at its source, and before it attains large dimensions, supplementary measures, both curative and penal, are also necessary at the later stages. Here our system has been somewhat weak and ineffective. Abuse of alcohol is certainly the most potent factor known to us in the production of crime, and yet the steps we have hitherto taken to suppress this predominant cause of criminality have been slow, unscientific, and uncertain. Up till 1898, when the Inebriates Act was passed, our measures for dealing with drunkenness were for the most part penal, and the penalties were much the same as they had been for fifty years previously. Fines and short imprisonments were the stock remedies, although they had long been known to be practically useless. Occasional drunkards were regarded too

much in the light of social 'sports,' instead of anti-social offenders and public nuisances. An attempt was made by the Inebriates Act to stem the evil by applying curative treatment to cases of inebriety, and placing them under control and medical care for prolonged periods. The intention of the Act was good, and it was based on scientific teaching, but, unfortunately, it did not work well in practice. No legal obligation had been placed on the local authorities, who were expected to co-operate in the scheme, to provide accommodation and maintenance for patients, and the Courts were reluctant to deprive of liberty, for the long periods necessary for cure, any persons except the most confirmed inebriates. These, as might have been expected, quickly relapsed into their former habits on discharge, and the Act was thereby discredited. For those who were less confirmed in drinking habits, and who might have gained benefit from the Act, it became a dead letter. The liberty of the subject in their case amounted to liberty to ruin themselves, and to inflict trouble, anxiety, and expense on their friends. Further, disputes arose between the local authorities and the Treasury as to the cost of maintaining the Homes, which led to further deadlock. A Committee of Inquiry has already recommended that, in order to meet these difficulties, the State should take over the control of the Homes. Whether or not this proposal be carried out, the Act requires stiffening in some way, if it is to fulfil its object. The occasional drunkard also needs more attention. If he is to be restrained from drifting into the habitual class before his will-power disappears under continued indulgence, cumulative penalties must be dealt out to him more freely, and the risk of becoming an inebriate under the Act must be constantly kept before his eyes.

CRIOBOLIUM.—Like the *taurobolium* (wh. see) the *criobolium* was a sacrifice performed in connexion with the worship of the Great Mother of the Gods and Attis, with the difference that the victim was a ram instead of a bull, and was slain in honour of Attis. When the *criobolium* was given in conjunction with the *taurobolium*, the altar was, with rare exceptions, inscribed to both deities; whereas, when the *taurobolium* alone was given, the inscription was usually to the Mother only, though symbolic decorations on the altar even then often indicated the participation of Attis.

Unlike the *taurobolium*, which, if not an original feature of the worship of the Great Mother in Asia, was borrowed by her priesthood at Rome from the Cappadocian religions which were brought there in the early 2nd cent. A.D., the *criobolium* seems to have been a special sacrifice instituted after the rise, and on the analogy, of the *taurobolium*, for the purpose of giving fuller recognition to the duality of the Great Mother and Attis, which had recently become more prominent through the rise of Attis to greater importance. There is nothing to indicate its existence either in Asia or in

Italy before its first celebration in honour of the Mother and Attis.

In the absence of direct evidence, we may suppose the *criobolium* to have been similar to the *taurobolium* both in details of ceremony and in spiritual effect. Its celebration was wide-spread, and its importance such that it could be an alternative to the *taurobolium* (CIL vi. 505, 506), though the latter was held in greater esteem. It was inevitable that the ancients should draw a comparison between the pagan doctrine of purification and regeneration through the *taurobolium* and *criobolium* and the Christian doctrine of redemption through the blood of the Lamb (Firmicus Maternus, *de Error.* 27-28).

GRANT SHOWERMAN.

CRITICISM (Old Test.).—Criticism is the art of estimating the qualities of literary or artistic work. M. Arnold defined it as 'a disinterested endeavour to learn and propagate the best that is known and thought in the world' (*Ess. Crit.* i. 38). It is not to be mistaken for censure or dispraise—the expression of hostile or unfavourable opinions. Realizing that the word verges on this adverse significance, Pater and others have preferred to speak of literary 'appreciations'; and certainly the true Bible critic desires chiefly to share his admiration with his reader. But 'criticism' and the allied terms should be used without prejudice, to signify the effort of the mind to see things as they are, to appraise literature at its true worth, to judge the records of men's thoughts and deeds impartially, without obtrusion of personal likes or dislikes. In distinction from 'lower' (a term seldom used), or textual, criticism, which aims at ascertaining the genuine text and meaning of an author, 'higher' (a term apparently first used by Eichhorn), or historical, criticism seeks to answer a series of questions affecting the composition, editing, and collection of the Sacred Books. The higher critic's task is to show how the ideas of any particular writing are related to the environment in which they grew, to the spirit of the age, to the life of the people, to the march of events, and to the kindred literary productions of other times or, it may be, of other lands. It is a scientific method of 'searching the Scriptures.' It substitutes the inductive for the *a priori* mode of inquiry, observation and experiment for tradition and dogma. It is a new application of the Socratic principle that an unexamined life—of man or book—is not worth living.

The critical movement, which has shed a flood of light on the OT, and given the Church a new and more human conception of the mode of revelation, did not begin till the middle of the 18th century. The traditional view of the composition of the Sacred Scriptures was a bequest from the Jewish to the Christian Church, which no one ever thought of closely examining. There were, indeed, a few sporadic attempts at literary criticism, which ran counter to the received opinion. Theodore of Mopsuestia relegated some of the 'Psalms of David'—such as the 51st, 65th, and 127th—to the period of the Exile. Ibn Ezra, the acutest Jewish scholar of the Middle Ages (1070-1138), detected a number of anachronisms in the Pentateuch, but advised the reader who understood these things to be discreet and hold his tongue. Luther was a fearless critic of both the OT and the NT. He asked what it would matter if Moses was not the author of the Pentateuch; he saw that the Book of Kings was more credible than that of Chronicles; he surmised that some of the Prophetic books received their final form from redactors; and he would have preferred if the First Book of Maccabees instead of Esther had been included in the Canon. Spinoza's

philosophical acumen anticipated not a few of the modern critical results. 'Ex his omnibus,' he says, 'luce meridiana clarius apparet, Pentateuchum non a Mose, sed ab alio et qui a Mose multis post saeculis vixit, scriptum fuisse' (*Tract. theol.-polit.* vii.). Richard Simon, the French Oratorian, observed some double accounts of events in the Pentateuch, and suggested a diversity of authorship. But the critical opinions of these and other individual writers were mere *obiter dicta*, which made little impression upon the mind of the Church, and never disturbed her dogmatic slumber. They inaugurated no critical movement.

It was reserved for one who was neither a scholar nor a theologian, but a man of science, the Frenchman and court-physician Jean Astruc, to discover the critical secret, and to forge the *novum organum* which was 'to destroy and to overthrow, to build and to plant.' His study of the Pentateuch was the *parergon* of a busy life chiefly devoted to the writing of books in his own special department, and his supreme merit was that he brought to the search of the Scriptures a mind thoroughly trained in the methods of science. In this pioneer work he left a perfect example for the imitation of all his followers. As a devout Catholic believer—he takes his readers into his confidence in a beautiful preface—he refrained for a while from publishing his book, fearing that he might, much against his will, put a weapon into the hands of the free-thinkers—*les esprits forts*—of his time. He could not doubt, however, that his discovery would serve to remove some serious difficulties from the pages of Scripture, and in his seventieth year he was constrained to give his book to the world (1753). The very title of the work at once gave expression to the characteristic modesty of a true seeker after truth. He merely offered *Conjectures sur les mémoires originaux dont il paroît que Moïse s'est servi pour composer le livre de la Genèse*. He did not know whether they would be accepted or rejected, but in either case nothing could ever alter his 'love of Truth and of Religion.' It is worth while to state his argument in his own words—here slightly abridged.

'In the Hebrew text of Genesis, God is designated by two different names. The first is Elohim, for, while this name has other meanings in Hebrew, it is especially applied to the Supreme Being. The other is Jehovah, *יהוה*, the great name of God, expressing his essence. Now one might suppose that the two names were used indiscriminately as synonymous terms, merely to lend variety to the style. This, however, would be an error. The names are never intermixed; there are whole chapters, or large parts of chapters, in which God is always called Elohim, and others, at least as numerous, in which he is always named Jehovah. If Moses were the author of Genesis, we should have to ascribe this strange and harsh variation to himself. But can we conceive such negligence in the composition of so short a book as Genesis? Shall we impute to Moses a fault such as no other writer has committed? Is it not more natural to explain this variation by supposing that Genesis was composed of two or three memoirs, the authors of which gave different names to God, one using that of Elohim, another that of Jehovah or Jehovah Elohim?

That Astruc was conscious of leading the students of Scripture into untrodden paths is proved by the motto from Lucretius (i. 926 f.), which he put on his title-page:

'Aria Pierdum peragro loca, nullius ante
Trita solo.'

In the 500 pages of his book he carried his critical analysis through the whole of Genesis and the beginning of Exodus, as far as the point where the distinction of Divine names appears to cease (Ex 6). He discovered some passages which he could not attribute either to the Elohist or the Jahvist. He displayed his results by arranging the whole text in four parallel columns. His attempt had the inevitable defects of all pioneer work, and he was far from dogmatizing as to the details of his criticism. But, with a true scientist's confidence at once in the precision of his methods and in the

general accuracy of his conclusions, he wrote at the end of his prefatory exposition:

'So we must either renounce all pretence of ever proving anything in any critical question, or else agree that the proof which the combination of these facts affords amounts to a complete demonstration of the theory of the composition of Genesis which I have propounded.'

Astruc's *Conjectures* received but a cold welcome in his own Catholic communion. No single compatriot of his inherited the critical mantle, and it was destined to be the work of a long succession of patient German scientific theologians to continue and complete the process of literary analysis which the brilliant Frenchman had begun. The great Hebraist Eichhorn came to know Astruc's theory at second-hand, and deliberately refrained from reading the book till he had independently, and still more thoroughly, gone over the same ground, with the same general results. He had no difficulty in finding a good many criteria besides the Divine names to differentiate the original documents, and, instead of pausing at the beginning of Exodus, he carried his investigations to the end of the Pentateuch, expressing the opinion—long since antiquated—that the last four books were compiled from separate writings of Moses and some of his contemporaries. Eichhorn's results were published in an *Einleit. in das AT* (1783), and, as he had some of his friend Herder's gift of style and love of the Bible as literature, his book made almost as profound an impression on his age as Wellhausen's *Prolegomena* has made on ours.

The only contribution which Britain offered to the solution of the critical problem in its earliest phase was the work of Alexander Geddes, a Scottish priest, educated in Paris, where he had had the privilege of studying Hebrew at the Sorbonne. His *Holy Bible faithfully translated from corrected Texts of the Originals, with Various Readings, Explanatory Notes, and Critical Remarks* (1792), followed by a separate work entitled *Critical Remarks on the Hebrew Scriptures* (1800), gives vigorous expression to his views. He was a remarkable man and no mean scholar, who certainly deserves to be remembered among the pioneers of criticism; but by excess of zeal—the *perfidium ingenium Scotorum*—he led criticism astray, and tended on the whole to discredit the movement. Scorning the timid theory of Astruc and Eichhorn,—that Moses used only two fundamental documents in the composition of Genesis,—he launched the hypothesis that the whole Pentateuch was nothing but a collection of loose scraps, of various age and worth, probably compiled in the time of Solomon. He had no difficulty in pointing out an immense number of these originally independent fragments, in the conjunction of which he saw no orderly plan or leading motive. He thus became the author of the 'Fragment Hypothesis,' which was introduced into Germany by Vater, who translated or paraphrased a large part of Geddes's *Critical Remarks*. Vater thought the Book of Genesis was composed of thirty-nine fragments. The theory made much noise for a time, but received its death-blow at the hands of the greatest OT scholar of last century, Heinrich Ewald of Göttingen, in his *Die Composition der Genesis kritisch untersucht*, which he wrote when he was a youth of nineteen (1823). Geddes's opinions cost him his priestly office. Aberdeen consoled him with a doctorate of laws.

Meanwhile a real and important advance, from which there have been *nulla vestigia retrorsum*, was made by Ilgen, Eichhorn's successor at Jena. This fine scholar—who afterwards acquired a scholastic fame similar to that of Arnold of Rugby—detected the presence of two writers in Genesis, each with an unmistakable style of his own, who habitually use the Divine name *Elohim*. This discovery did not receive much attention at the

time of its publication (1798), and it was not till it was independently made again by Hupfeld, more than half a century afterwards, that its significance was recognized by the foremost scholars of Germany. It is now accepted as one of the assured results of criticism. As the second Elohist is devoted to the ideas and institutions of the Levitical system, he is usually known as the 'Priestly Writer,' while the name 'Elohist' is reserved for the earlier author, who, like the Jahwist, is more akin to the prophets.

Still another step in advance was taken at Jena, this time by one of Ilgen's most brilliant pupils. As a candidate for the doctor's degree (in 1805), de Wette presented a *Dissertatio Critica* on the Book of Deuteronomy, which proved to be epoch-making. He argued, from the individual qualities of style and the definite circle of ideas which he observed in this book, that it stands by itself, distinct in origin and purpose from the rest of the Pentateuch; and he identified it with the law-book which was at once the manifesto and the programme of the reforming party in the reign of Josiah (621 B.C.). This brilliant theory brought the critical movement for the first time into direct contact with Israel's national history. It shed an intense light upon the record of a great spiritual crisis. Criticism thus ceased to be merely literary, and became the handmaid of the history of religion. De Wette's hypothesis has now been tested by the scholarship of a century, and Deuteronomy is universally regarded as the key to the interpretation of the spiritual evolution of Israel.

Attention was next directed to the Book of Joshua, which the Jewish canon sharply separates from the Pentateuch and places at the head of the 'Former Prophets.' Already, in 1792, Geddes had joined it to the Pentateuch, regarding it as 'compiled by the same author.' Careful and minute investigation convinced de Wette and Bleek that this procedure was correct. The real affinities of Joshua are with the writings which precede, not with those which follow, it. Of the 'Five Books of Moses' it forms the necessary continuation and completion, taking up the various threads of the narrative and recording how the promises were fulfilled and the laws enforced. Subsequent criticism has confirmed this view, by proving that each of the Pentateuchal documents, with its favourite phrases and formulæ, reappears in the Book of Joshua. Hence it is now the established practice to speak and write of the *Hexateuch*, or 'Six Books' (*ἑξῆς*, 'a weapon,' being post-Alexandrian Greek for a book), instead of the Pentateuch.

For the next half century there was one inspiring name which dominated the study of the OT. Wellhausen, who dedicated his *Prolegomena* 'to my unforgotten teacher, Heinrich Ewald, with gratitude and honour,' was one out of many who felt the spell of this scholar's genius. It must be admitted, however, that Ewald lent his authority to a hypothesis which for a considerable time retarded rather than furthered the progress of criticism. He began where Astruc and Eichhorn left off, and neglected Ilgen's discovery of the two Elohist. Regarding an undivided Elohist document, which he called the 'Book of Origins,' as the 'groundwork' of the Hexateuch, and finding its unmistakable ideals and formulæ giving order and unity to the whole structure, he maintained that the Jahwist sections were merely added to supplement the work of the Elohist. This was the famous 'Supplement Hypothesis.' Defended by Bleek, Schrader, and many other scholars, it was viewed for long as the citadel of criticism; but it could not permanently stand the cross-fire to which it was subjected, and it has now no more than a historical interest.

In 1834, Eduard Reuss was lecturing on OT theology at Strassburg, and applying his strong, keen intelligence to the critical problem, which he approached from the historical rather than from the literary side. He found it psychologically inconceivable that a nation should begin its history with a fully developed code of laws. He thought it inexplicable that a whole succession of prophets should ignore their country's laws, which they of all men ought to have revered. How was he to solve the enigma? The critical movement, at the point which it had then reached, did not help him much, for Deuteronomy was the only book of the OT, apart from the Prophets, which had yet been replaced in the historical environment out of which it grew. Reuss's problem was to determine the age and origin of the 'Law of Moses' and the 'Psalms of David.' The answer came to him, as he told long afterwards, rather as an intuition than as the result of a careful and exhaustive investigation. It was this—that in the true historical sequence the Prophets are earlier than the Law, and the Psalms later than both. In the following year (1835) practically the same theory was independently propounded by Vatke in his *Bibl. Theol. wissenschaftlich dargestellt*, and by George in his *Die älteren jüd. Feste*. If neither of these books commanded any great attention, the reason was that they were too theoretical. They did not present a thorough analysis of the language and ideas of the Books of Scripture. Vatke's work was, indeed, a very remarkable instance of the successful application of Hegelian principles to the study of a national and literary development. But it was intended only for the initiated, who were sealed of the tribe of Hegel. The author warned off the very threshold of his book all who did not understand the master's terminology. Reuss, who tried to read it and failed, deferred the publication of his own conclusions for nearly half a century. His *L'Histoire sainte et la loi* appeared only in 1879, and his *Geschichte der Schriften des AT* in 1881. One of his most brilliant pupils, K. H. Graf, professor at Leipzig, had forestalled him by a dozen years in his *Geschichtl. Bücher des AT* (1866), and consequently the theory is known to all the world as the 'Grafian Hypothesis.'

Hupfeld, one of the eminent Hebraists of Halle, where he was the successor of Gesenius, brought a fresh mind to the problem of the literary composition of Genesis, and was rewarded with more success than almost any previous scholar. Indeed, it was he who most nearly read the riddle of the sphinx, and it is a remarkable fact that his book, *Die Quellen der Genesis* (1853), was published exactly a century after the famous *Conjectures* of Astruc. Having shaken off the obsession of Ewald's 'Supplement Hypothesis,' he had the good fortune to repeat Ilgen's almost forgotten discovery of the two distinct Elohist writers in the Pentateuch. He laid bare the work of the Priestly Writer (the second Elohist). He demonstrated the close affinity of the first Elohist to the Jahwist, and the wide difference between both and the writer of the *Grundschrift*. Under his spell each of these ancient writers seemed to come forth a living personality, with a style which revealed the man. He showed that the additions by which J was alleged to have supplemented P were often entirely out of harmony with the latter's circle of ideas. His own theory was that the productions of three originally independent writers (now known as J, E, and P) were at length combined by an editor, who—fortunately for us—left his sources much as he found them, being content to establish a merely superficial unity.

The literary problem of the authorship of the Hexateuch was thus solved. But the vitally im-

portant *historical* question of the date of the several writers, and of their relations to the other authors of the OT, still left much work to do. Graf, as we have seen, was inspired by the teaching of Reuss, and developed his master's theory (*op. cit. supra*). Taking the date of the publication of Deuteronomy (621 B.C.) as his first starting-point, he worked backwards and forwards from it. By careful comparisons he proved that D is, on the one hand, much more fully developed than the law-book—small in size but great in value—known as the 'Book of the Covenant' (Ex 20²²⁻²³), and, on the other hand, much less fully developed than the Priestly Code. The inference was inevitable that these three strata of legislation belong to three widely separated ages. The Priestly Code, however, is partly historical, partly legal, and Graf felt constrained to divorce these two elements, ascribing the historical to a pre-exilic, and the legal to a post-exilic date, with some centuries between them. But this part of his theory commended itself neither to the right nor to the left wing. As the Priestly Code is a compact and indivisible whole, and as the style of its narrative portions differs in no way from the style of its legal sections, it must as a whole be either pre-exilic or post-exilic. Now, this was one important question as to which the most eminent critics remained for a while divided among themselves. Nöldeke, Riehm, and Dillmann were on the one side; Reuss, Kayser, and ultimately Graf himself, on the other. Then came a new generation of scholars, with Duhm, Kuenen, and Wellhausen at their head, who vigorously attacked the problem once more, and almost unanimously declared in favour of the post-exilic theory, thereupon proceeding to adjust their conceptions of the whole OT literature and history to this revolutionary conclusion.

Duhm in his *Theol. der Propheten* (1875) chose a new point of view. The work of the prophets gave him the sure historical vantage-ground from which he could look both before and after, and a keen scrutiny of all the conditions of the problem convinced him that the phenomenon of prophecy is independent of every Mosaic law but the moral law written in the heart. To him the great prophets are not the children of the Law, but the inspired creators of the religion of Israel. Prophecy is the supreme initial fact which transcends explanation. The Levitical system, which gave the death-blow to prophecy in the post-exilic age, could never have been its nursing-mother in earlier times. The inner expansion of the prophetic spirit nowhere requires the Law for its explanation or illustration. The traditional succession—Mosaism, Prophecy, Judaism—cannot, therefore, be maintained. Judaism is not a mere revival of antiquity; it is a new fact. The post-exilic poems sung in fervent praise of the Law have a freshness of feeling which betokens something other than an artificial restoration. On the assumption that Ezra, working on the basis of Ezekiel, was the real creator of Judaism, everything becomes clear. While the whole previous history of Israel, internal and external, can be traced out independently of the Priestly legislation, the whole subsequent history is just the history of the Law. The study of the Prophets thus proves that the Grafian hypothesis is both psychologically and historically superior to the traditional one. For it is less likely, as Kuenen says, 'that the so-called "Grundschrift" dropped from the sky some few centuries before any one wanted it . . . than that it grew up in its own historical environment when its hour had come' (*Histor.-Crit. Inquiry*, etc., Eng. tr. 1886, p. xxxvii f.).

Wellhausen's *Gesch. Israels* appeared in 1878, and of its reception in Germany Pfeiderer says:

'The arguments for the new hypothesis, derived from the parallel development of law, ritual, and literature, were exhibited with such cogency that the impression produced on German theologians (especially of the younger generation) was almost irresistible. . . . It was a special merit in Wellhausen's book to have excited interest in these questions outside the narrow circle of specialists by its skilful handling of the materials and its almost perfect combination of wide historical considerations with the careful investigation of details, and to have thus removed OT criticism from the rank of a subordinate question to the centre of theological discussion' (*Development of Theology*, Eng. tr. 1890, p. 269).

Kuenen was perhaps justified in regarding the publication of Wellhausen's book 'as the "crowning fight" in the long campaign' (*op. cit.* p. xxxix). The work of criticism was not yet ended. But, at any rate, its methods were vindicated, and its main results assured. The subsequent history of the critical movement is, therefore, outward rather than inward, supplying matter for an interesting chapter of general Church History, a record of the spread of criticism to one country after another, of the opening of the doors of colleges and schools to critical teaching, and of the gradual leavening of the modern mind with a new conception of the Bible and of revelation. Of the direction of the current of educated opinion there cannot be any doubt.

'For, while the tired waves, vainly breaking,
Seem here no painful inch to gain,
Far back, through creeks and inlets making,
Comes silent, flooding in, the main' (A. H. Clough).

It would be strange if traditionalism did not make a brave fight for life, and the battle has often waxed hot. Critical freedom has sometimes been purchased at a great price. Those who are born free have a sacred heritage. The cause of the scientific study of the OT has been championed and won for England by Colenso and Stanley, Cheyne and Driver; for Scotland by Davidson, Robertson Smith, and G. A. Smith; for America by Briggs and Harper, Toy and Brown—to name in each instance but a few scholars out of many. Criticism is represented in modern Judaism by Montefiore, and the writers of the *JE*; in the Rom. Cath. Church by the Abbé Loisy, Baron von Hügel, Père Lagrange, and Salvatore Minocchi. It has become, as Sanday says, international and inter-confessional. And, since all light and truth are of God, Biblical science can bring to Churches and nations nothing but good. It is inevitable that the art of criticism should sometimes be practised by men of little faith, or of no faith, and that in their case the critical spirit should be capacious rather than sympathetic, the critical weapon destructive rather than constructive. The fault is not in the instrument but in the user. Of two scientists who study the open book of Nature, one sees only a strange adjustment of the atoms of dead matter, while the other has a vision of the living garment of God. And of two critics of the Bible, which is 'literature and not dogma,' the one is merely conscious of the pathetic upward strivings of the human spirit, while the other bows in reverence before a revelation of the immanent God of truth and love.

Appeal is often made from criticism to archaeology. Exploration is called to be the handmaid of revelation. The spade is taken to confirm the pen. Many confident statements have been circulated in the name of this romantic young science, which is bringing so many old things to light. 'Wherever archaeology has been able to test the negative conclusions of criticism, they have dissolved like a bubble into the air' (Sayce, *Monument Facts and Higher Critical Fancies*, p. 26). Assyriology 'has for ever shattered the "critical" theory which would put the Prophets before the Law' (p. 87). From buried palaces, from monuments, from long-lost libraries, 'a voice has gone up rebuking the scooner' (J. Orr, *The Bible under Trial*, p. 121). But is criticism really opposed by the facts of the monuments, or only by illegitimate inferences deduced from these facts? On many points archaeology is certainly quite neutral, and on many others it is in perfect accord with the views of the critics. While it has to some extent confirmed the Bible statements regarding Shishak, Omri, Ahab, Jehu, Sargon, and Sennacherib; while it has proved that the art of writing was wide-spread in the East long before the Hebrew invasion of

Canaan; while it has found in Hammurabi a law-giver far older than Moses: it has not hitherto appreciably affected a single critical conclusion as to Israel's historical and literary development. 'Archæology has refuted only the argument which Prof. Sayce has imaginatively attributed to critics: the arguments which they really use, with, of course, the entire position which depends upon them, it has left absolutely untouched' (Driver, *LOT*, p. xx). Sayce, Hommel, and Winckler have rendered splendid service as archaeological specialists, and every discovery they have made has been welcomed; but science would prefer to receive their facts neat, instead of having them diluted with cheap anti-criticism. Prof. Orr is the ablest opponent of criticism in this country, but he has personally accepted a good many of its results; and, when he still contrasts the traditional with the modern position by saying that 'the one scheme is naturalistic; the other is positively Christian: there must in the long run be a more decisive choice between them' (*ExpT* xviii. [1907] 125), he is needlessly confusing the issue.

The progress of criticism has been slow. The labour has been spread over a century and a half. Every critical theory that had ever been advanced has been severely tested and strenuously contested. Criticism is bound to be self-critical, proving all things and holding fast that which is good. It is not to be imagined that finality has been reached on every minor detail of criticism. All along the line there are matters that still await adjustment. In the improvements which it is receiving at the hands of a new generation, the Grafian theory resembles the Darwinian.

Allusion can be made to only a very few points. (1) The Jahvist and Elohist have often been called 'prophetic' writers, as if they had come under the influence of Amos and Hosea; but Gunkel has made it appear very probable that the stories of J and E, which in his view represent the work of schools rather than of individuals, had taken shape in all essentials by 1200 B.C. While, on the one hand, 'we must assume their existence in order to account for the appearance of the Prophets,' they have, on the other hand, 'much that must needs have been exceedingly offensive to the Prophets' (H. Gunkel, *The Legends of Genesis*, Eng. tr. 1901, p. 140 f.). (2) While scholars like Baudissin and Kittel hold that the Law of Holiness (Lv 17-26) precedes Deut., and Driver and Ryle that it is later than Deut., but prior to Ezekiel, Addis has argued very ably for placing it after both these writings (*Heb. Rel.* p. 241 f.). (3) The division of Isaiah into two parts at ch. 40 is indisputable, but in both parts there are sections that require to be removed into different historical settings, and in nearly all the Prophets some later additions and redactions have been discovered. (4) The Psalter as a whole is probably post-exilic, but it is in the nature of things scarcely possible to determine the precise environment into which each poem should be fitted, and the theory that many of the Psalms reflect Maccabæan and Ptolemaic conditions has not met with much acceptance. (5) The Wisdom literature and the relation of its later developments to Greek thought still need much attention. While Job is recognized as post-exilic, and Ecclesiastes may be little older than Daniel (which belongs to the great field of Apocalyptic literature), it still remains probable that the kernel of the Book of Proverbs represents the oral wisdom of Israel in the time of the monarchy.

Some gains obtained by the criticism of the Old Testament may be mentioned. It has established the broad principles that 'God never spoke a word to any soul that was not exactly fitted to the occasion and the man'; and that 'separate . . . from this context, . . . it is no longer the same perfect Word' (Robertson Smith, *OTJC*, 1892, p. 10 f.). It has reconstructed the history of Israel in the light of that other modern principle—'there is no history but critical history.' For the incredible dogmas of verbal inspiration and the equal divinity of all parts of Scripture, it has substituted a credible conception of the Bible as the sublime record of the Divine education of the human race. It has traced the development of the religious conceptions and institutions of Israel in a rational order. Moving the OT's centre of gravity from the Law to the Prophets, it has proved that the history of Israel is fundamentally and essentially the history of Prophecy. It has made a sharp and clear distinction between historical and imaginative writing in the OT, and so enhanced the real value of both. It has appreciated the simple idylls of Israel's folklore, pervaded and purified as they are by the spirit of the earliest prophets, and used by them to transfuse the devotion of a higher faith into the veins of the people. It has thrown light—as Astruc saw that it would—on the many duplicate, and even

contradictory, accounts of the same events that are found in close juxtaposition. It has explained the moral and theological crudities of the Bible as the early phases of a gradual religious evolution. It has denuded the desert pilgrimage of literary glory, only in order to enrich the Exile. For the 'Psalms of David' it has substituted the 'Hymn-book of the Second Temple,' into which are garnered the fruits of the religious thought and feeling of centuries. To the legendary wisdom of one crowned head it has preferred the popular philosophy of many generations. For a religious history which looked like an inverted pyramid, it has given us one which is comparable to an ever-broadening stream—the record of a winding but unwavering progress in the moral and religious consciousness of a people. Instead of crowding the most complex institutions and ideals into the infancy of the nation, it has followed the order of nature—'first the blade, then the ear, then the full corn in the ear.'

Prof. B. D. Eerdmans, Kuenen's pupil and successor, is regarded as the leader of a reaction. He begins his *Allzeit. Studien* (Giessen, 3 parts, 1908-10) by announcing that he has quitted the Graf-Welhausen-Kuenen School. Criticism has been wrong from the outset. 'Astruc led her into false tracks' (p. iv). 'The theory which uses the Divine names as a guide through the labyrinth of the traditions is an error, and must be set aside' (p. 94). Instead of taking these names as literary criteria, let us have an historical-religious investigation of their meaning. In the 'Book of the Covenant' (Ex 20²²⁻²³), 'Elohim' cannot refer to the God of Israel. It is a real plural. The 'judges' (Ex 21⁶ 22⁸⁻⁹) are gods. This is the key with which the new critical school opens the door. Polytheism is to be found not only in the 'Book of the Covenant,' but in the narratives of Genesis. 'For the knowledge of the history of Israel it is of great importance to see clearly that the legends which have been gradually collected in Genesis have received but a faint monotheistic coloring.' Round the figures of the patriarchs have gathered (1) stories in which the polytheism is undisturbed, (2) others which recognize Jahweh as one of the gods, and (3) others in which the polytheism has been adapted to monotheistic faith. Some parts of P—which to Eerdmans is 'a fiction'—are much older than the Exile, and round all the ancient legends there have gradually accumulated many additions and redactions, dating from the earliest to the latest times.

Eerdmans has failed to take account of the fact that for the recognition of J and E in the Hexateuch there are many other important criteria—language, style, point of view, religious tendency—besides the Divine names. It will be found that the difference between him and his master is after all not very great. His vigorous and suggestive criticism is a trumpet-call to all OT scholars to re-examine their position, and they are cheerfully responding; but it does not appear that the solid walls of P have been shaken.

J. STRACHAN.

CRITICISM (New Test.).—The criticism of the NT may be treated in two divisions—that of the Gospels and Acts, and that of the remaining books. In the Gospels and Acts we are dealing with narrative material, which may, therefore, be approached from the standpoints and methods of (a) literary, (b) historical, criticism. But in the Epistles and the Apocalypse we have to do with books where the historical element is subordinate and the literary predominant. Consequently, literary methods of criticism will find further scope than historical methods, and there is likely to be less divergence of opinion on the results obtained.

I. CRITICISM OF THE GOSPELS AND ACTS.—To the dispassionate inquirer the present state of this department of investigation must be strangely bewildering. This is not due to variation of opinion in the region of literary criticism, for there it has long been seen that the possibility of obtaining sure results is very limited in scope, and agreement has been largely reached on all points where agreement is possible. But, in the region of historical inquiry, results are surprisingly contradictory, and there seems at present to be no likelihood of agreement being reached.

1. Literary criticism.—So far as the Synoptic Gospels are concerned, important results have been reached by the methods of literary criticism. These may be briefly summarized as follows. (a) It has been shown that the Second Gospel was used in the compilation of the First and Third Gospels.¹ (b) It has been further shown that behind the First and Third Gospels lies a compilation of the Lord's Sayings (= Q) which directly, or after passing through intermediate stages, was used by the editors of these later Gospels.² (c) It has also been made probable that the editor of the Third Gospel used, in addition to Mark and Q, at least a third written source; but no agreement has been reached as to its scope.³ (d) Some recent attempts to analyze the Second Gospel into two or more documents which were originally distinct rely more upon historical considerations than upon purely literary methods, and are too recent to have been fully considered.⁴

In the Fourth Gospel literary critical methods have recently found much play. Wellhausen⁵ has attempted to find traces of composite authorship, and he has been followed by Spitta,⁶ who endeavours to distinguish between a *Grundschrift*, to which he assigns a very high historical value, and a *Bearbeitung*. But it may be questioned whether the unity of the book is not too apparent to be lightly shaken.⁷

The attempt to analyze the Acts into its original sources finds ever new disciples. The latest is Harnack,⁸ who finds in Ac 2-15 a compilation of three documents. But the grounds alleged do not seem adequate to support the conclusions.⁹ On the other hand, the identity of the editor of the Acts with the writer of the 'We' sections and

with the editor of the Third Gospel has received the weighty support of Harnack himself, and on purely literary grounds is hardly deniable.¹ Those who dislike this conclusion have to fall back upon historical considerations.

So far we have been dealing with literary criticism in its efforts to determine or to detect underlying sources in the narrative literature of the NT. It will be seen that the most important and assured results have been reached in those cases where the data are the fullest. The use of Mark in Matthew and Luke has been rather observed than discovered; and, if Mark did not exist, literary analysis certainly could not reconstruct it out of the later Gospels. For that very reason, attempts to reconstruct Q can be at the best but tentative. The attempted analysis of these books into sources which are not now extant is a matter of great difficulty, arising from the fact that the writers have so re-cast any sources which they may have used that reconstruction of them is now almost impossible. It is for that reason that attempts on purely literary grounds to re-discover sources used in the Acts are little likely to succeed.

2. Historical criticism.—It is, however, in the region of historical criticism that the variety of opinion spoken of above chiefly exists. And the reason of it is not far to seek. Inquirers into the Gospels and Acts are divided, broadly speaking, into two classes, guided by different conceptions as to the right method of approaching the narratives, and consequently employing different standards or criteria in estimating their value as historical material.

(1) Investigators of the first class start from the assumption that the facts of history which lie behind the narratives are purely natural facts, similar in nature to other facts known to us. In particular, they take it for granted that Jesus was a man, whose personality underwent the normal process of gradual development, so that the growth of His intellectual conceptions can be traced on psychological lines. Inquirers who are guided by principles like these are, of course, bound to apply to the material before them such criteria as the following. (a) Does a writer state as fact an event which lies outside the range of the known laws of Nature? Then, not only did the alleged event not happen, but some account must be given of the nature of the process which enabled the writer to state as fact what is incredible. Under this head the whole of the so-called miraculous element in the Gospels and Acts is removed from the sphere of history, and translated into the realm of myth, legend, popular exaggeration, symbolism, allegory, or transference of the miraculous from other departments of tradition into the life of Jesus. In the early days of criticism this generally led to the transference of the Gospels into the 2nd cent.,¹ in order to allow time for the growth of legend round the few traditional facts of the life of Jesus. More recently it has been argued that such growth may have been very rapid, and is consistent with a 1st cent. date for the Gospels.² (b) The mental development of Jesus must be similar to our own, and it

¹ *Luke the Physician*, Eng. tr., Lond. 1907; see also J. C. Hawkins, *Horae Synopticae*, Lond. 1899.

² The Second Gospel is now most generally assigned to A.D. 60-70, the Third to A.D. 80, and the First to varying dates between the publication of Mark and the end of the century. The tendency nowadays is to push the Synoptic Gospels and the Acts backwards rather than forwards. This is illustrated by Harnack's admission that the Acts may have been written 'so early as the beginning of the seventh decade of the first century' (*Acts*, p. 297).

³ Harnack now (*Neue Untersuchung zur Apostelgeschichte*, Leipzig, 1913) places Acts before the death of St. Paul, St. Mark and St. Luke earlier, and St. Matthew shortly before or after A.D. 70. The present writer has argued for a date about A.D. 50 for St. Matthew (*Expt*, July 1910).

⁹ See Clemen, in the *Hilbert Journal*, July 1910, p. 780 ff.

is not possible that He could have taught doctrines which appear to us to be logically inconsistent. This has been applied in particular, in recent times, to the problem of the eschatological teaching in the Gospels as compared with the moral teaching of Christ. Christ, it is argued, cannot have been both the same unclouded thinker of the moral sayings and the apocalyptic fanatic of the eschatological passages. We must, therefore, give up one of the two as historical, and the teaching generally chosen as most conveniently to be got rid of is the eschatological,¹ which is then regarded as an intrusion into Christ's teaching of elements derived from Jewish Apocalyptic writings, remoulded in Christian circles. Of course, on lines like these the task of criticism is very largely one of explaining away the evidence which, at first sight, the Gospels set before us as to the facts of Christ's life.

It would be impossible to give here an exhaustive list of all the ways in which criticism attempts to do this, but the following are some of them:—

Adaptation of Christ's life to the narrative and prophecies of the OT. (This would account in part for the narrative of the Virginal conception, the stories of the Magi, and of the flight into Egypt, etc.) Adaptation to His life of heathen mythology (the Virginal birth). Adaptation to His life of the current Jewish doctrine of the Messiah. The attribution to Him of sayings prophetic of later events, e.g., the manner of His death, or the fall of Jerusalem. The hardening into narratives of fact of words spoken by Him in allegory or metaphor.

The main difficulties which many will feel with criticism of this kind are these:—

(a) It starts from presuppositions with which the evidence of the narratives immediately conflicts. (b) Its methods of explaining the origin and genesis of much of the evidence are conjectural and fanciful—not the application of scientific principle, but an appeal to any or every supposed cause that might have given rise to the creation of the evidence. (c) Its results are hopelessly precarious. The Jesus who emerges from its labours is sometimes a simple-minded lover of God, who is crushed between the political and theological wheels of His day; sometimes an ethical teacher of high value; sometimes a dreamy enthusiast, who died because He deluded Himself into the belief that He was the Messianic King. The Gospels, as manipulated by the uncertain methods of this sort of criticism, seem capable of yielding a picture of any sort of Jesus that the critic desires.

(2) Investigators of the second class approach the subject from a very much wider and more liberal historical background. They argue that a cursory reading of the Gospels gives us at once a consistent picture of One whose personality, whilst truly human, yet transcends the limits of human personality as elsewhere known to us. They, further, argue that the same kind of evidence which is given to us in the Gospels is also given, without break of continuity, in the history of the Christian Church; so that the Gospels are only a first stage in a continuous stream of evidence to a Person, dead yet living, human yet more than human. In view of this deepest and most profound fact of human experience, we cannot, they urge, apply to the Gospel evidence those rough and ready tests of the historical which critics of the first class are so eager to use. Christ is reported to have worked a miracle. The critics of the first class say at once: (a) 'The miracle did not happen'; therefore (b) 'the narrative is very late,' or (c) 'it is to be explained as due to one of the causes summarized above,' and (d) 'it is worthless as evidence of historical fact.' Christ is reported to have worked a miracle. The critic of the second class will say at once, 'Why not?' 'What does this mean save that from the inexhaustible treasure-house of the Personality of Jesus flowed some influence or power which so dazzled the minds of the witnesses that they recorded their impression in the simple words that have come down to us?' Or, again: Christ is reported as having taught moral principles which presuppose

the continuance of human society, and as having spoken about the Kingdom of heaven as something which was to leaven human society. He is also reported as having announced the near approach of the Kingdom, and His own 'Coming' to inaugurate it, as the 'Son of Man' coming 'on the clouds of heaven.' Critics of the first class say at once: 'Christ cannot have spoken these two divergent lines of teaching. We must choose between them.' Critics of the second class will rather argue that we are dealing with two types of teaching which are ultimately harmonious; that difficulties arise if we unduly press, or too literally interpret, sayings of the one or the other type; and, in particular, that underlying the apocalyptic utterances are statements of profound truth as to the future of the world, and of the relation of Christ to humanity, which are essential for a right understanding of His being.

So long as NT critics start from different assumptions, and employ different methods, it is obvious that they will arrive at different conclusions. It is clear that sooner or later some agreement must be reached, if possible, as to the truly scientific method of approaching the Gospels and Acts, and as to the principles or criteria by which we are to test their historical value. In other words, are we or are we not to look upon them as isolated records which can be examined in and for themselves, regardless of the continual corroboration in history of the more than human Personality to which they bear witness? Or, is the representation of Jesus as given in the Gospels as a whole one which the experience of the Christian Church in later history has proved to be substantially true? If the latter be the truer alternative, we shall be bound to approach the Gospel with some such canons of criticism as these:—

(a) We are dealing with a record of One whose personality and force of character transcend, as is proved by the witness of history, all human knowledge. We cannot, therefore, rule out as evidence statements which ascribe to Him power and influence which are not found in normal experience of life. (b) There is, therefore, a general probability in favour of the credibility of the Gospel narratives. The area of uncertainty arises later in the attempt to reconstruct from them the original facts as they occurred. For instance, the narrative of the raising of Jairus' daughter will leave us with the certainty that an impression was made on the minds of the witnesses of that event that a dead person had been brought back again to life. What 'death' and 'life' here involve can never be known to us. The substantial fact is that the force and power of the Personality of Jesus effected this astonishing thing that the girl, who otherwise would have been numbered with the dead, took her place, through His influence, once more in the world of living men and women.

The question of the necessity of approaching the Gospels as historical witnesses, with some sort of presuppositions in favour of, or against, their testimony, has not yet been treated in a serious scientific manner. Yet nothing is more certain than the fact that historians approach all ancient documents with certain presuppositions. These are, in large part, inferences drawn from our experience of life treated as a whole. The question concerning the Gospels takes the form whether there is in our experience any element which should influence us in the case of these books which is absent when we are dealing with other ancient literature. The historian who answers No will necessarily approach the Gospels with a presupposition against their evidence. And this presupposition seems to be due to a denial on his part of an element in life which

¹ But see A. Schweitzer (*The Quest of the Historical Jesus*, Eng. tr., Lond. 1910), who rightly refuses to eliminate the eschatological element from the life of Christ, but over-emphasizes it.

others affirm, and which causes them to say Yes. This element is the sustained witness of the Christian consciousness to a Personality now acting upon human life, of which they find the first account in the Gospel history. It has always claimed to be not merely witness to the powerful influence exerted by the life of Jesus as recorded in the Gospels, but witness to the influence of Jesus Himself, exerted on individuals, not merely through the record of His life, as the memory of a dead friend may influence one living, but immediately as living Spirit upon living spirit. This sustained witness is a psychological fact which is deserving of more serious treatment than has hitherto been accorded to it. If it is in any sense true as a phenomenon of consciousness, then it necessarily becomes a presupposition with which the inquirer must approach the Gospel evidence. If the Personality of Jesus acts upon consciousness through the whole period of history since His death in a way in which no other personality known to us has ever acted, then it will be clearly unscientific to apply to the record of His life the same axiomatic rules, as to what is or is not probable, that we are tempted to apply to the evidence as to the personality of ordinary individuals. This does not make any investigation into the life of Jesus useless, or lead us to accept as literally true anything or everything that has been recorded about Him. The ordinary rules of historical investigation will apply in large part to the Gospels as to other ancient literature. But it will cause us to exercise caution in ruling out evidence which points to the presence in Him of resources of power over psychical and natural phenomena which we should reject in other cases.

What has been said above applies mainly to the Gospels, yet it also concerns the Acts. For there, too, the same question arises. When we read anything that is of a non-natural kind, are we on that ground to relegate it to a position of late date and historical valuelessness? This is what Harnack does, e.g., with Ac 1. He speaks of the narrative of the Ascension which it contains as probably the latest tradition in the book.¹ The only reason apparently for that judgment is the nature of the event recorded. But what if behind the narrative lies a historical fact, the precise nature of which can only be dimly surmised behind the strong colours in which it has been painted? Christ had left the disciples finally: that they knew. No more would He appear to them as at the Galilean Lake. He was henceforth to be with them in another sense. And He was to come again. What if some strange experience of fact lies behind this narrative? Need it then be so late in date? What prevents it from being one of the earliest traditions of the Christian Church? St. Paul is witness to such a tradition.

Criticism of the Gospels and Acts which is based on quite unscientific presuppositions—that is the point—introduces hopeless confusion into NT criticism. It condemns offhand certain narratives as fictitious, and then invents the most improbable causes to account for their genesis and growth. This is not criticism based on principle, but arbitrary and captious rejection of evidence. We want, if possible, some sort of scientific method or principle, and this can be reached only by a preliminary investigation of all the facts. Christ as presented in the Gospels, Christ as experienced in history, Christ as experienced in modern life,—is this all of a piece, one long consecutive witness to a supernatural Christ? If so, whatever other

¹ Harnack actually makes the presence in the Acts of the narrative of the Ascension an argument against ascribing the book to a date before A.D. 78, though on other grounds he inclines to an earlier date (p. 291). But see now his more recent treatment of the date of Acts (cf. p. 319^b, note 3, above).

method may be wrong, nothing can be more fundamentally unsound than the attempt to go to the Gospels and from the first to eliminate that element to which Gospels, history, modern consciousness, all alike bear testimony.

The above considerations apply also to the Fourth Gospel. But here the further question arises, Is the Christ here presented the same as the Jesus of the Synoptic Gospels? Is there, in other words, behind the Fourth Gospel a substantial basis of historical fact, due allowance being made for the translation of this into the language and thought of the period of the writer or writers who composed the book half a century or more after Christ's life? To that question different answers will probably always be given by people who approach the Gospel with different presuppositions. Interest has recently been directed in particular to the narrative of the raising of Lazarus. On the one hand, it is contended that, in view of the importance which attaches to it in the Fourth Gospel, it could not have been omitted in the Synoptic Gospels if it was a fact of history with which the writers of those Gospels were acquainted.¹ On the other hand, it is urged that the narrative does not receive the emphasis which some modern critics assign to it,² and that the argument from the silence of St. Mark and the other Synoptic writers is hopelessly precarious.³ In the debate about the authorship of the Fourth Gospel interest has centred largely in the theory of Schwartz⁴ (based upon an alleged statement of Papias that James and John were killed by the Jews) that John died too early to admit of his being the author of the Gospel.⁵

Quite recently the whole Johannine question has been raised into a new atmosphere by a new discovery. The old axiom of critical writers who denied the Johannine authorship of the Fourth Gospel was that the book is thoroughly Alexandrian in spirit and phraseology. Some writers have always urged that, in spite of apparent parallels with Alexandrian terminology, it is thoroughly Hebraic. This has recently received striking confirmation from an unexpected quarter. In 1909, Rendel Harris published from a Syriac MS a volume to which he gave the title *Odes and Psalms of Solomon*. He argued that these Odes were not Gnostic, but Christian, and that they date from the last quarter of the 1st century. Harnack⁶ believes them to be of Jewish origin, edited by a Christian. If he is right, it follows that a large part of the supposed Alexandrian element in the Fourth Gospel is really Jewish. And Harnack draws the conclusion that 'in the Johannine theology, apart from the Prologue, there is nothing essentially Hellenic' (p. 119). If this is true, and if the date assigned to the Odes is right, a great many arguments for a 2nd cent. date for the Fourth Gospel, and a large number of objections to the Johannine authorship, cease to have any validity. It is possible that the 'Odes of Solomon' will prove as epoch-making for the Johannine question as was the publication of the Book of Enoch for the Synoptic Gospels.⁷

II. CRITICISM OF THE EPISTLES AND APOCALYPSE.—1. The Pauline Epistles.—The movement of criticism in recent years with regard to the Pauline Epistles has been in the direction of a return to tradition. With few exceptions, critical writers are disposed to admit as Pauline 1 and 2 Thess., Gal., 1 and 2 Cor., Romans, Philippians, and Philemon. Of these, 2 Thess. is the most doubted. It is argued that, viewed as literature, it reads like an imitation of the First Epistle, whilst from a theological point of view the second chapter presents us with an eschatology different from that found elsewhere in St. Paul. Harnack¹ has recently attempted to meet this second objection, and to preserve the letter for St. Paul by the novel argument that the First Epistle was written to the Gentile converts at Thessalonica, whilst the Second was written for the Jewish converts there.

The Epistle to the Galatians has been the subject of much controversy with respect to the date of writing and the people addressed. The theory revived and advocated by Ramsay, that the Churches addressed are to be found in the southern part of the Roman province of Galatia, would make it possible to date the letter at any time after St. Paul's visit to these Churches on his second journey. Thus Zahn² dates it from Corinth on the second journey. Ramsay³ himself prefers a somewhat later date, from Antioch, between the second and third journeys. Against this it may be urged that St. Paul would probably have preferred to make a personal visit from a place so near to Southern Galatia as Antioch, instead of writing a letter. Others still prefer the older chronology, which placed the letter in close connexion with 1 and 2 Cor. and Romans. A comparison of Ac 16⁹ with 18²³ favours the view that the editor of the Acts believed that St. Paul visited the old kingdom of Galatia; but that does not, of course, settle the question of the locality of the churches to which the letter was written. The strongest argument in favour of the later date is the close resemblance in tone between Galatians and Romans.

The return to a traditional position spoken of above is illustrated by the present state of critical opinion with regard to the Epistle to the Colossians. A generation ago it was assigned to the 2nd cent. by a majority of critical writers, the arguments alleged being that the Epistle contained a Christology too developed for the age of St. Paul, and that the false teaching was a 2nd cent. form of Gnosticism. But, although some of the more advanced critical writers still believe it to be post-Pauline, the view is gaining ground⁴ that the Christology is not necessarily un-Pauline, and that the teaching, if in any sense Gnostic, is an early form of Gnosticism, which there is no reason to place outside the life of St. Paul.

Denial of the authenticity of Ephesians is more wide-spread. Its theology is said to be too advanced for St. Paul, especially in respect of the Person of Christ, and the doctrine of the Church; whilst the difficulty of reconciling the address to Ephesus with the entire lack of local colour has never been quite satisfactorily explained. But, if Colossians be admitted to be Pauline, these

arguments lose their force. In view of the fact that all the elements of the Christology of these letters can be found in St. Paul's undoubted Epistles, it is quite arbitrary to argue that he would not have written them, if the circumstances necessary to the development of his thought on these lines had arisen. And to argue that they could not have arisen is mere dogmatism about the unknown.⁵

The Pastoral Epistles are regarded as post-Pauline by a number of critical writers, on the following grounds:

(1) The style and language are not those of St. Paul. This is true if stated in the form that style and language differ from those of the other Epistles. But, if genuine at all, the letters clearly date from a later period of St. Paul's life than any other of his extant writings. And it is not at all clear why changed circumstances should not have caused a corresponding change in the Apostle's expression of his thought.

(2) The nature of the false teaching combated is said to be that of a period which lies outside the probable limits of St. Paul's life. This is pure conjecture. There can be no evidence that teaching of the kind presupposed, whether it be an early form of Gnosticism or a debased Judaism, had not begun to affect the Churches at a very early date.

(3) The Church, as described in these letters, has a developed organization. The main point here is the status of the *ἐπίσκοπος*. If, as seems probable, this term is here synonymous with *πρεσβύτερος*, the Epistle must not be brought down too late—not, that is to say, into the 2nd cent.—and would suit a date at the end of St. Paul's life.

(4) There is a lack of other testimony to support the evidence of these letters that St. Paul was released from his imprisonment at Rome. There are, however, hints elsewhere in the NT that the Apostle was so released. Cf. Ph 2²⁴, Philem 22, and Ac 23³⁰, which, as Harnack⁶ has recently urged, implies that St. Luke was acquainted with the fact that St. Paul was released. If the evidence of the Pastoral Epistles on that point be admitted as historical, the other objections to their authenticity lose much of their weight. For it is not difficult to suppose that the Apostle, feeling that his departure could not be long delayed, might well see the necessity of making provision for the future organization of the Churches, which were soon to be deprived of his guidance. In any case it is difficult to believe that any one but St. Paul could have written 2 Timothy.⁷

In the case of the last Epistle ascribed by tradition to St. Paul, the Epistle to the Hebrews, modern critics are almost unanimous in their verdict that the letter cannot be Pauline. But none of the ancient or modern conjectures as to the authorship is more than a shrewd guess. Tertullian thought of Barnabas;⁸ Luther, of Apollos;⁹ Harnack,⁶ followed by Rendel Harris⁷ and Peake,⁸ favours Priscilla and Aquila; Ramsay⁹ and Canon (now Bishop) Hicks¹⁰ prefer Philip the Evangelist.

2. The Catholic Epistles.—Here, too, opinion is divided into two main classes. On the one hand are the writers who defend the traditional authorship of most of these documents, on the ground that they can find no reason for rejecting it. On the other are the critics who seem to be possessed at the outset by the feeling that it would be treasonable to admit that tradition can ever be right in its ascription of these writings to Apostolic authors. And yet, how little probable it is that none of the earliest Apostles except St. Paul should have left behind them any written record! How very probable it is that others besides St. Paul should have written letters! How improbable it

Hymns dating from the time of Justin Martyr]; Menzies, *Interpreter*, Oct. 1910 (the Odes regarded as written by Gentiles impressed with the truth of the Jewish religion); Spitta, in *ZNTW* xi. (1910) 193 ff. and 259 ff. [holds strongly to Jewish character]; Gunkel, *ib.* p. 291 ff. [maintains Gnostic origin].

¹⁴ *Interpreter*, Apr. 1909.

is that the Church should have failed to preserve some such writings, and should rather have let them slip into oblivion, and preserved instead 2nd cent. writings which went by false names! There is an *a priori* probability in favour of the traditional authorship, and something approaching to overwhelming proof of its impossibility is required before it can be set aside. From the perusal of the objections repeated, with as much certainty as though they were axioms of Euclid, by successive critics of the advanced type, the candid reader rises with the feeling that they are forced conclusions from evidence which is capable of more than one interpretation. 'If there were no tradition as to authorship,' he will say, 'I could only conclude that these writings were composed within the first 150 years of the existence of the Christian Church. But within that period I find no reason why some of these writings should not have been written by the men to whom tradition assigns them. On the other hand, I do see reason to suppose that the early Church would have preferred to preserve Apostolic rather than later documents.'

Apart from 2 Peter, where the argument from literary dependence on Jude seems fatal to the Petrine authorship, the arguments against the authenticity of the other members of this group seem insufficient to outweigh the tradition in their favour. They are of the following nature:

(a) *Against James*.¹—The writer is arguing against St. Paul's teaching about Justification by Faith, or against a corrupt form of it; the Greek of the letter is too good for St. James; the writer does not refer to early controversies such as that about the admission of Gentiles into the Church; he makes no reference to, or use of, cardinal doctrines of the primitive Church, such as the Messiahship of Jesus, His death and resurrection; the reference to healing through the 'elders' is a mark of late date; the condition of the Christians addressed is that of a late and decayed Christianity.

(b) *Against Peter*.—The chief question here has turned on the nature of the persecution implied in the letter and the bearing of that upon the date of the authorship. Ramsay² has tried to show that the references to persecution imply a date about A.D. 80. Others prefer the reign of Trajan³ (on the ground that the references to persecution in the Epistle accord well with the account given by Pliny to Trajan) or of Domitian.⁴ But there is really no ground for so pressing the language of the letter as to make it impossible to suppose that it was written during the Neronian persecution.⁵ Then, as afterwards, there may have been reason to urge Christian converts to let it be known that they were suffering as Christians, and not for moral offences which would have been inconsistent with their profession. The other main ground for rejecting the Petrine authorship of the letter is its alleged Paulinism. But we may admit a certain amount of Pauline influence upon the writer without necessarily denying that St. Peter can have been the author. Arguments against the authenticity on this and other grounds seem to be captious and arbitrary, such as 'This is unlikely,' or 'That is improbable in the case of St. Peter.' After all, how very little we know of the Apostle's life after A.D. 44! And how are we to determine what he may or may not have written, or how much or how little he may have seen of St. Paul in the later years of his life?

(c) *Against 2 Peter*.—The dependence of the writer upon Jude is really fatal to the authenticity of the letter. The case is parallel with that of the First Gospel. The composer of that book has carefully worked over the Second Gospel in such a way that it is little likely that Matthew or any other Apostle can have written it. So in the case of 2 Peter; if it is dependent on Jude, it is improbable that Peter or any Apostle can have penned it. (Attempts have been made to save the rest of the letter by supposing ch. 2 to be an interpolation dependent on Jude.) Further arguments against the authenticity of the Epistle are found in its late attestation, and in its reference to St. Paul's Epistles (3:16).

(d) *Against Jude*.—The reference to the Apostles; the reference to 'the Faith'; the supposed similarity between the teaching combated and the teaching of the 2nd cent. Carpocratians.

(e) The question of the authorship of the *Johannine Epistles*

¹ The latest commentator, Oesterley (*Expositor's Gr. Test.* iv. [1910]), thinks that the arguments for and against an early date are equally balanced. He suggests that the Epistle may have been written by St. James, but that it was originally a great deal shorter than it now is.

² *Church in the Roman Empire* 5. Lond. 1897, p. 282.

³ So Pfeiderer, Jülicher, Goss, and others.

⁴ So von Soden, Harnack, and recently Gunkel (*Die Schriften des NT*, 1909).

⁵ So the most recent commentator, Hart, in *Expositor's Gr. Test.* v. [1910].

is so closely connected with the complicated question of the authorship of the Fourth Gospel that it is best to pass them over in a cursory survey of NT criticism like the present. They are widely regarded as by the same writer as the Fourth Gospel, though some would separate the Second and Third Epistles from the First, and attribute them to a different author.

These arguments may be divided into two classes: (1) literary, and (2) those which rest upon the supposed background of ideas and of ecclesiastical development suggested by the writings in question. The arguments of the first class are the most likely to lead to positive conclusions, and in one case they do so, as is recognized by most critical writers, including some who in other respects come to conservative conclusions. It is generally admitted that the literary dependence of 2 Peter on Jude rules out the Apostolic authorship of the former. Here, then, we have one case where the Church has admitted into its Canon a writing of a later date, because it bore an Apostolic name. But how does it stand with the other writings? Here the literary argument leads to no such positive result. 1 Peter may depend on Romans and Ephesians, but St. Peter may have written it nevertheless. Jude shows acquaintance with St. Paul's Epistles, but why may not the Jude to whom the letter has generally been assigned have been so acquainted? When we turn to the arguments of the other class, they fail to carry conviction to minds which are not prepossessed with the conception that none of these writings can be Apostolic.

3. The Apocalypse.—Modern investigation has done much, and will do more, to rescue this book from the fetters of traditional lines of interpretation, and to reconstruct the atmosphere in which it was written, and in which therefore it ought to be read and interpreted. The following are the main points at issue:—

(1) *The authorship*. It is now very widely held that Apocalypse and Fourth Gospel cannot be by the same author. This is, of course, not a new, but an ancient critical inference (cf. Dionysius of Alexandria, *ap. Eus. HE* vii. 25. 15). (2) *The date*. Was the book written in the reign of Nero, or of Domitian? The majority of recent writers favour the later date.¹ (3) *Dependence upon earlier literature*. Attempts have been made to show that the book in its present form is a Jewish Apocalypse re-edited by a Christian, or a composite work into which fragments of Jewish Apocalypses have been loosely incorporated. These attempts at analysis of the structure of the book may be said to have failed. The unity of purpose and idea is too obvious. No doubt, the writer was deeply read in the OT, and very probably also in current Jewish Apocalyptic literature. But the book is no mere compilation of fragments of earlier writings.² In another form, however, attempts to prove dependence of the writer upon the past have met with success. Since the publication of Gunkel's *Schöpfung und Chaos* (1895) it has become increasingly clear that the writer has made very large use of ancient myth, and of language and symbol long current in Apocalyptic writings. Not, of course, that such borrowing is peculiar to him. The long stream of Prophetic and Apocalyptic speakers and writers from Isaiah downwards, not excluding our Lord Himself, have this in common, that they do not entirely create a new language as the vehicle of their teaching, but largely adopt and borrow the words and symbols of an earlier age. To take a simple example, the writer of the Apocalypse, like all the writers of the NT where they are dealing with the future, borrows very largely

¹ So Swete, *The Apocalypse of St. John* 2, Lond. 1907; and the latest commentator, Moffatt, in *Expositor's Gr. Test.* v. [1910].

² That the author may have employed and worked into the scheme of his book portions of earlier writings is, of course, quite probable, but difficult to prove.

from Daniel. That, of course, will be readily admitted. But modern investigation has penetrated behind this simple handing on of phrase and symbol from writer to writer, and has sought to show that much of the common symbolism so transmitted goes back to a primitive mythology, the origin of which is hidden in the speculation of peoples whose history lies on the border line where history fades into the obscurity of legend. This is, no doubt, largely true, and, if true, is of great importance for the right interpretation of the Apocalypse. If the author is making use of an ancient myth, which has passed through a long course of transmission, it is probable that much of the detail which forms part of it will be repeated by him because it is already there, and therefore it has no particular significance for him. We shall, therefore, look for the outstanding ideas behind his pictures, and not seek to press a historical allusion, or a forecast of some detail of future history, out of every phrase and symbol.

Summary.—If we turn now from this survey to a forecast of the future, there is reason to think that the NT criticism of the days to come will, if we may judge from the general tendency of the more recent writings, more and more emancipate itself from those prejudices which have made it a byword in the past. There is much that is hopeful. On the one hand, there is a readiness to admit that the larger part of the NT writings have quite correctly been assigned by tradition to the 1st century. On the other, there is not the same eagerness to maintain the correctness of tradition in all its details that once inspired writers of the conservative school. Such a popular *Introduction* as that of Peake (1909) may be taken as a good example of the newer spirit, which is anxious neither to affirm nor to deny traditional positions, but only to come to the conclusions to which the evidence points, and to keep an open mind where the evidence is inconclusive. Of course, prejudices die hard, and the determination to keep the Catholic Epistles out of the 1st cent. has still much life in it in Germany. But, speaking generally, there seems to be growing up a school of critical writers who are freeing themselves from the axiomatic dogmatism, whether theological or anti-traditional, of the past century. As this school increases, it may be hoped that, even with regard to the Gospels, something like a really scientific method of inquiry may be reached. At present it must sadly be confessed that the Prolegomena for such an inquiry have yet to be written.

LITERATURE.—This is given in the footnotes. J. Moffatt's *Introduction to the Literature of the New Testament* (Edinburgh, 1911), which appeared too late to be used in this article, should be specially referred to, as the most complete survey of the field of NT criticism. See also reviews of the book by the present writer in *Expt*, May and June, 1911.

W. C. ALLEN.

CROMLECH.—See DEATH AND DISPOSAL OF THE DEAD (European).

CROSS.—The cross (Lat. *cruz*) is the figure produced by two lines intersecting one another, usually at right angles. This figure gives rise to numerous varieties according to the direction of the limbs and the form of their extremities. W. Berry in his *Encyclopædia Heraldica* mentions no fewer than 385 different crosses, but the greater number have scarcely any interest except for decorative art and the science of heraldry. From the point of view of religious symbolism the only important types are the following: the equilateral cross, called also the Greek cross (*a* in illustration); the so-called Latin cross (*cruz immissa* or *capitata*), in which the lower limb is longer than the three others (*b*); the Tau-shaped (*potencie* or *commissa*) cross

(*c*); the *cruz ansata* or handled cross (*d*); the *cruz decussata* or St. Andrew's cross (*e*); the gammate cross (*f*); the Maltese or rayed cross (*g*); the Lorraine cross, with double or triple traverse (*h*); the cross *perronnée*, that is to say, mounted on steps (*i*).

FIG. 1.

I. Non-Christian crosses.—1. *The equilateral cross.*—The equilateral cross, like the straight line, the curve, the circle, the crescent, the triangle, etc., forms so simple and natural a geometrical figure that in many instances it could not fail to present itself spontaneously to the imagination in quest of a sign to indicate anything that extends in the principal directions of space—the sky, the earth, rays of light, the wind-rose, etc.—and, by an extension of meaning, to stand for the abstract notion of space itself. It is easy to understand how, in the symbolism of some peoples, the cross may have served as a conventional representation of certain material objects whose contour it suggests—birds on the wing, men with outstretched arms, a double-headed hammer, the bow and drill apparatus for producing fire, etc. But, everywhere, it may be said to have been used, above all, to represent *radiation* or *space*.¹

Thus we find that the equilateral cross was

FIG. 2.

adopted by the Chaldeo-Assyrians as the symbol of the sky and of its god Anu (see fig. 2, *a*). The

FIG. 3.

same peoples represented the sun and its eight regions by a circle from which eight rays pro-

FIG. 4.

ceeded (2, *b*). By coupling these rays in pairs there was produced the radiated cross which the king of

¹ At the same time it must not be forgotten that the cross, like the triangle and other geometric figures, is sometimes merely ornamental in origin, with no symbolic significance whatever.

² See Rawlinson, *WAI*, vol. ii, pl. 48.

³ See Perrot-Chippiez, i. 308; cf. Layard, *Monuments of Nineveh*, 1849-53, pl. iv.

⁴ See Schliemann, *Ilios*, Paris, 1885, No. 1969.

Assyria wore suspended round his neck, like the cross worn by a Commander in our orders of knighthood (see fig. 3).

Schliemann has noted the presence of the cross upon the pottery and the whorls of the Troad. The solar meaning of this symbol is attested by its alternating with the rayed disk. At times the two emblems appear in juxtaposition (see fig. 4, a).

Among the Greeks the sceptre of Apollo assumes at times the form of a cross (cf. coin of Gallienus reproduced in Victor Duruy's *Hist. des Romains*, Paris, 1885, vol. viii, p. 42), fig. 4, b. The cross is associated with the representation of Castor and Pollux, perhaps in order to emphasize their stellar character (so on coin of Caracalla).

In India likewise the equilateral cross alternates with the rayed disk. On an ancient coin reproduced by General Cunningham (*Bhilsa Topes*, 1854, pl. xxxi.) the branches of the cross terminate in arrow-heads (see fig. 5).

FIG. 5.

Among the Gauls, as well as among the peoples belonging to the Bronze period, the cross appears frequently on pottery, jewels, and coins (see G. de Mortillet, *Le Signe de la croix avant le christianisme*, Paris, 1866, p. 44 ff.). Here again the emblem is clearly solar (see fig. 6). On the

FIG. 6.1

statuette of a Gaulish deity, discovered in France in the department of Côte d'Or, we see the tunic covered all over with crosses. The god, who is Sucellus (on whom cf. Renel, *Religions de la Gaule avant le christianisme*, Paris, 1906, pp. 252-257), holds in one hand the mallet which symbolizes the thunderbolt, and in the other a jar or *olla* (see fig. 7).

FIG. 7.2

The cross is found in like manner in Mexico, in Peru, and above all in Central America, where its

¹ See Flouest, *Deux stèles de laraire*, Paris, 1885, pl. xvii.

² See *Revue Celtique*, 1870, p. 2.

presence upon religious monuments did not fail to astonish the companions and the successors of Columbus, who saw in it a trace of a visit paid by St. Thomas, the apostle of the Indies (see *Congrès internat. des Americanistes*, vol. i., Brussels, 1879, p. 501 ff.). We know nowadays that these crosses are designed in allusion to the four quarters from which rain comes, and consequently to the winds that blow from the four cardinal points (see G. Mallery, in *10 RBEW*, 1893). The cross of pre-Columbian America is a veritable 'wind-rose,' and we can perceive how it thus became, among the Toltecs, the symbol of the god who dispenses the celestial waters, Tlaloc (see A. Réville, *Religions du Mexique*, Paris, 1885, p. 91 [also in Eng. tr.]). According to Réville, the Mexican cross was called the 'tree of fecundity' or the 'tree of life.' There has been found in the ruins of Palenqué a bas-relief representing persons in the act of adoration before a cross, on which rests a fantastic bird, more or less resembling a parrot. Perhaps this was the symbol of the god Quetzalcoatl (the feathered serpent), who himself also, according to Réville, stands for a god of the wind (*op. cit.* p. 82; see also Thomas Wilson, *The Swastika*, 1896, p. 933 ff.). For a cross, representing the four winds, as thought of by the Dakotas, see fig. 8.

FIG. 8.1

The arrow at the top of this cross marks the piercing blast of the north wind. Once the north wind is located at the head of the cross, the east wind will be symbolized by the heart, which in the human body is placed under the left arm. The south wind is pictured by the sun, as it shines from the region of light and warmth, and the west wind by a star, as it blows from the region of the night.

But the American cross may have assumed also a solar or stellar character, if one may judge from

FIG. 9.2

the above figure (9), which has been met with on shells found in the mounds of New Mexico; and

FIG. 10.3

from those, not less significant (10), which have been found among the Dakota pictographs. See, further, following article.

¹ See *10 RBEW*, fig. 1225.

² See Holmes, in *2 RBEW*, p. 282.

³ See Garrick Mallery, in *10 RBEW*, figs. 1118-1126.

Among the Chinese, the equilateral cross inscribed within a square, , stands for the earth.

According to Samuel Beal (*Indian Antiquary*, 1880, p. 67) there is found in China even the dictum 'God fashioned the earth in the form of a cross.' It is curious to meet with an analogous symbolism in a Church Father. 'The aspect of the cross,' writes Jerome (*Com. in Marcum*), 'what is it but the form of the world in its four directions? [*Ipsa species crucis, quid est nisi forma quadrata mundi?*]. The east is represented by the top, the north by the right limb (looking from the cross), the south by the left, the west by the lower portion.'

2. *The handled cross and the cross potentée*.—The *potentée* form , produced by suppressing the upper limb of the Latin cross, is called also the Tau cross, because it reproduces the form of the Greek letter *Tau*. The magical virtue which down to our own day has been attributed to this sign owes its origin unquestionably to the veneration paid by the Egyptians from their pre-historic days to the handled cross, or *key of life*, represented by a cross *potentée* surmounted by a handle (see fig. 11). This cross, which is met with on the

Fig. 11.

most ancient monuments of the Egyptian monarchy, is frequently to be seen in the hand of a god, a priest, or a king. Archæologists have maintained by turns that it represents a Nilometer (Plucke), the key of a canal-lock (Zoega), a jar upon an altar (Ungarelli), a degenerate form of the winged globe (Layard), a phallus (Jablonski), the loin-cloth worn by the Egyptians (Sayce). In the paintings on the tombs it appears to be employed by the divinities to awaken the dead to a new life. The following inscription may be read upon a bas-relief of the 12th dynasty, where the goddess Anukit is seen holding the extremity of the handled cross to the nostrils of the king Usertesen III.: 'I give thee life, stability, purity, like Ra, eternally.' Elsewhere the ideogram formed by the handled cross in the hieroglyphic script, , (pronounced *ankh*), signifies 'life,' 'living' (E. M. Coemans, *Manuel de langue égyptienne*, Ghent, 1887, pt. 1, p. 46). Whatever may be the material object of which the handled cross is the representation, its abstract sense is not doubtful: it is a symbol of life, of the vital germ, and it is not without reason that it has been called the *key of life*.¹

Fig. 12.

From Egypt the *key of life*, now become a magical and propitiatory sign, spread to the Phœnicians and then to the whole Semitic world.

¹ See, however, Wiedemann, *Religion der alten Ägypter*, Münster, 1890, p. 157 f., who maintains that the *ankh* connotes merely a band or fillet, and is only homonymous with *ankh*, 'life,' so that 'it has nothing to do with a cross.'

² From a coin of Paphos (*CIS*, vol. i. fasc. i. p. 6).

³ From a coin of Carthage (Barclay V. Head, *Coins in the British Museum*, London, 1881, pl. xxxv., No. 38).

⁴ From intaglios of Sardinia (J. Menant, *Pierres gravées de la Haute Asie*, Paris, 1888-85, vol. ii. pp. 256, 258).

Its presence has been noted on bas-reliefs, tombs, pottery, jewels, coins, from Sardinia to Susiana, along the shore of Africa, in Phrygia, Palestine, and Mesopotamia. Upon monuments of Phœnician or Hittite origin it is held in the hands of kings or priests, as with the Egyptians, and is associated with the tree of life and the lotus flower. Its extreme symbolical importance led the peoples who borrowed it from the Egyptians to combine it with such emblems of their own as presented an analogous form or suggested a cognate idea. Thus the Phœnicians derived from it a mixed emblem, in which the handled cross is grafted upon the cone representing the goddess Astarte or Tanit, 'she who gives life' (see fig. 12).

The Greeks anthropomorphosed it so as to reproduce the features of their goddesses of life—Aphrodite, Harmonia, Artemis of Ephesus, etc. (see fig. 13).

a1

b2

Fig. 13.

With the Gauls the  comes to stand for the hammer of Thor, which was regarded not only as an engine of destruction, but also, after the manner of the storm, as an instrument of life and fecundity. Even with the Egyptians the two-headed mallet,

, became in the hieroglyphs a Latin cross, , with the meaning of 'crusher,' 'avenger' (de Harlez, 'Le Culte de la croix avant le christianisme' in *La Science catholique*, 15th Feb. 1890, p. 163).

In Egypt there have been found a whole series of signs which mark the transition from a handled cross, or cross *ansata*, to the *chi-rho*, or monogram of Christ (see fig. 14).

Fig. 14.3

The handled cross or a similar sign is met with also in India (see fig. 15), and in America, where

Fig. 15.4

it is found engraved on monuments in the ruins of Palenqué, as well as on the pieces of pottery recovered from the mounds.

¹ Lenormant, in *GA*, 1876, p. 68.

² P. Decharme, *Mythologie de la Grèce antique*, 1879, fig. 145.

³ Chi-rhos of Philæ (Letronne, 'La Croix ansée a-t-elle été employée pour exprimer le monogramme du Christ?' in *MAIBL*, vol. xvi. pl. i. figs. 47, 48, 49).

⁴ On a silver ingot (Edw. B. Thomas, in the *Numismatic Chronicle*, vol. iv., new series, pl. xi.).

In a Maya manuscript two persons appear to be in the act of adoration before a tree which affects the form **T**, and where a parrot-like bird has taken the place of the upper arm of the cross (see fig. 16).

Fig. 16.1

3. The *gammate cross*, or *gammadion*. — This cross derives its name from the fact that it can be resolved into four *gammmas* joined at right angles (see fig. 17). In spite of its apparently

Fig. 17.

Fig. 18.

complicated structure, it is, next to the equilateral cross, the form most widely diffused throughout all antiquity. It has been met with on terra-cotta articles at Hissarlik, from the time of the second or burnt city. In Greece proper and the islands of the Archipelago it makes its appearance first upon articles of pottery with geometrical ornaments, which form the second period of Greek ceramics. It is frequent upon the ancient vases of Cyprus, Rhodes, and Athens. Upon an Athenian vase, in a burial scene, it appears thrice repeated before the funeral car. Upon a vase of Thera it accompanies the image of the Persian Artemis. Elsewhere it adorns the *vulva* of an Asiatic goddess. Upon a vase now at Vienna it appears as an ornament on the breast of an Apollo standing upon a *quadriga* (cf. Goblet d'Alviella, *The Migration of Symbols*, London, 1894, pl. i.). It became a favourite symbol on coins, and passed along with the other monetary symbols of the Greeks into the numismatic art of all the Mediterranean peoples.

This cross is also found engraved upon those hut-shaped funeral urns which have been dug up in the *terramares* of N. Italy. It likewise appears on the jewels and the weapons, not only of Gallic, but also of German and Scandinavian peoples.² In company with the wheel and the thunderbolt, it adorns the votive altars of the Gallico-Roman period, from Aquitaine to Great Britain. In the Caucasus it has been noted upon weapons and jewels which go back to the Bronze period. In Lycaonia, on a Hittite monument, it is introduced as an ornament on the border of the robe of a person engaged in offering sacrifice.

In India, where it bears the name of *swastika* (from *su*, 'well,' and *asti*, 'it is') when the limbs

are bent towards the right (fig. 17, *a*), and *sauvas-tika* when they are turned to the left (fig. 17, *b*), it is already found upon the domino-shaped ingots of silver which preceded the use of coins, and then upon the coins themselves. The Buddhists employed it largely. A notable instance of its use, along with other symbols, is in the classical representation of the *Buddhapāda*, or footprint of Buddha (see fig. 19), among the bas-reliefs of the

Fig. 19.

famous *stūpa* of Amarāvati. It passed, no doubt, along with Buddhism, into the iconography of China and Japan, where it occupies a pre-eminent place on the pedestal of Buddhist statues, and even at times adorns the breast of Buddha and the Bodhisattvas.¹ In China, moreover, the *swastika* found a place among the written characters, where it conveys the notion of 'plurality,' and, by extension, of 'abundance,' 'prosperity,' 'long life' (Thomas Wilson, *The Swastika*, p. 799). The same is the case in Japan, where, according to de Milloué, it represents the number 10,000, and consequently the idea of abundance and prosperity [*BSAL*, 1881, p. 191]. The Empress Wu (684-704) of the Tang dynasty decreed that it should be used as a sign for the sun (Yang y Yu, in Wilson's *Swastika*, pl. 2).

Even at the present day the Hindus make frequent use of this figure, which they may trace in their account books and, on certain occasions, on the threshold of their houses. According to Sir George Birdwood,² they distinguish clearly between the *swastika* and the *sauvas-tika*, the first representing the male principle and the god Ganeśa, the second the female principle and the goddess Kālī. In an extended sense, the first stands for the sun in his diurnal course, or for light and life; the second for night and destruction. The sect of the Jains in India has chosen the *swastika* as the emblem of the seventh of their twenty-four saints, or Tirthaṅkaras (Colebrooke, 'On the Jainas,' in *Asiatic Researches*, Calcutta, 1788-1836, p. 308).

The gammate cross has been met with sporadically also on bronze articles among the Ashantis of Africa; and also on native implements from Paraguay, Costa Rica, and Yucatan. In the ancient Maya city of Mayapan it adorned a stone slab which bore also the image of the solar disk, exactly as in Gaul, Italy, Asia Minor, East India. In N. America it is seen among the crosses engraved on shell and copper ornaments from the mounds, and the Pueblo Indians still use it to decorate their trinkets, bead necklaces, baskets, and rugs.³

From the circumstances in which the gammate cross has been traced or employed, it follows that, in every instance in which a symbolical meaning has been attributed to it, it is a sign of good omen,

¹ See *BSAL*, 1884, p. 32.

² In the north it has received the name *fyfot* ('many-footed'), but the assimilation implied in this name is very uncertain. See, further, Renel, *op. cit.* pp. 217-220.

³ The Buddha Amitābha (Musée Guimet); also in Wilson's *Swastika*, pl. 1.

² *Old Records of the India Office*, London, 1891, p. x f.

³ See d'Alviella, *A travers le Far West*, Brussels, 1906, p. 160.

of propitiation and benediction, an emblem of prosperity, of life, of safety [the *sauvastika* where a distinction is drawn between the two forms of the gammate cross, is an exception which proves the rule]. But whence comes this general function of luck-bringer and talisman? There is scarcely a symbol which has given rise to such diverse interpretations. Men have seen in it, *e.g.*, running water (Waring), the air or the god of the air (R. P. Greg), fire or the bow and drill apparatus for producing fire (Emile Burnouf), the lightning (W. Schwartz), the female sex (George Birdwood), the union of the two sexes (J. Hoffman), a Pāli monogram (General Cunningham), the reunion of the four castes of India (Fred. Pincott), the nautilus [Gr. *ποδύρος*, cf. the *fylfot*] (Frederick Houssay), cranes flying (Karl von den Steinen), the primitive god of the Indo-Europeans (de Zmigrodzki), the sun in his course round the heavens (Ludwig Müller, Percy Gardner, Edw. B. Thomas, Max Müller, Henri Gaidoz, Goblet d'Alviella).

It might even be maintained, on the strength of the monuments, that, after having served as a symbol of the sun in motion, the gammate cross came to symbolize astronomical motion in general, and thus to be applied to the moon, the stars, the sky itself, and to everything that appears to move of itself—water, wind, lightning, fire, etc. In this way it would readily become a symbol of prosperity, fertility, blessing, or the apportionance of such deities as secured the development of man and of Nature (see figs. 20, 21).

Solar gammadiadema.¹
Fig. 20.

Lunar gammadiadema.²
Fig. 21.

The question may be asked whether the gammate cross can be assigned to a single birthplace. Its two most ancient known *habitats* are: the one in the burnt city of the ruins at Hissarlik, the other among the *terramare* of N. Italy. It is possible that both of these districts borrowed it from the valley of the Danube during the Bronze age. From these two centres it may have spread—while retaining its double significance as a solar symbol and as a sign of life or of blessing—on the one hand, towards the west, to the extremities of the Celtic and German world; on the other, towards the east, by way of the Caucasus, India, China, and Japan.

Again, has the gammate cross of the New World an independent origin? The supposition is by no means inadmissible that it arose spontaneously. But the answer to this question depends in some measure upon whether infiltrations of Asiatic iconography did not make their way across the ocean during the era of pre-Columbian civilization. And this is a problem which appears to be yet far from being solved.

II. The Christian cross.—The cross in the Christian sense is the *crucis* or *lignum infelix*, a wooden post surmounted by a cross-beam, to which the Romans, following the example of the Greeks and the Easterns, nailed or attached certain classes of condemned criminals till they died. The fact that Jesus suffered death on the cross has converted this infamous figure into a symbol of

resurrection and salvation. 'I determined to know among you nothing save Jesus Christ and him crucified,' writes St. Paul (1 Co 2⁹). The early Christians saw the cross in all the intersecting lines which presented themselves to their view in ordinary life, in art, in Nature. The 'sign of the cross' was their favourite symbol. 'At every step, at every movement, at every coming in and going out,' wrote Tertullian at the beginning of the 3rd cent. (*de Corona*, 3), 'in putting on our clothes and our shoes, in the bath, at table in the evening, lying down or sitting, whatever attitude we assume, we mark our foreheads with a little sign of the cross.' Moreover, Christians had to defend themselves against the charge of pagans that they paid adoration to the cross like an idol. '*Crucis non colimus nec optamus*,' wrote Minucius Felix.¹ But it is plain that the great mass of Christians attached a magical value to this sign. At all events they used it as a form of exorcism, a means of warding off unclean spirits. One of the most ancient portable crosses, found in a Christian tomb at Rome, bears the inscription: '*Crux est vita mihi; mors, inimice, tibi*' ('The cross is life to me; death, O enemy [the devil], to thee'). Soon the cross came to work miracles of itself. People went the length of marking cattle with it to protect them from disease.²

The cross, according to a Roman Catholic archaeologist, P. Didron, is more than a figure of Christ; it is in iconography Christ Himself or His symbol. 'Thus a legend has been created around it as if it were a living being; thus it has been made the hero of an epopee germinating in the Apocrypha; growing in the Golden Legend; unfolding and completing itself in the works of sculpture and painting from the 14th to the 16th century.'³ This is an allusion to the celebrated mystical poem of Giacomo da Varaggio (13th century), where it is related how, after the death of Adam, Seth planted upon his tomb a branch taken from the tree of life. When the slip had grown into a tree, Moses obtained from it his magic rod. Solomon took from it the wood for his temple. Finally, the executioners of Jesus cut from it the materials for fashioning the cross. This cross, buried upon Golgotha, was disinterred in the time of the empress Helena; and the Church commemorated its discovery by appointing the 3rd of May (13th Sept. in the Eastern Church) as the annual festival of the *Inventio Crucis*. Carried off by Chosroës, it was miraculously recovered by Heraclius fourteen years later, in honour of which event the Church instituted another annual festival on the 14th of Sept., the *Exaltatio Crucis*. Lost once more after the Muslim invasion, it is to reappear finally in the sky at the end of the world.

The Holy Cross had its special churches as it had its festivals; not a few cities even were named in its honour. Thus Roman Catholic writers admit that the cross has become the object of a veritable cult. 'The cross,' writes Didron (*loc. cit.*), 'has received a worship similar, if not equal, to that of Christ; this sacred wood is adored almost equally with God Himself.' Many churches possess, amongst their miraculous relics, alleged fragments of the cross. A legend, intended to explain their abundance, relates that these fragments had the miraculous prerogative not only of healing diseases, but even of reproducing and multiplying themselves indefinitely.

Strangely enough, the early Christians, in spite of the importance they attached to the cross, refrained from reproducing it in their iconography.

¹ From a Gallo-Belgic coin (E. F. F. Hucher, *L'Art gaulois*, Paris, 1865, p. 169).

² From a Oretan coin (*Numerismatice Chronica*, vol. xx. [No. 8] pl. h. fig. 7).

³ Migne, *PL* iii. 346.

² de Rossi, *Bullettino di Arch. Cristiana*, 1873, p. 126; see, further, art. CHURCHES AND ALTARS (Chr.), vol. iii. p. 426.

³ P. Didron, *Histoire de Dieu*, 1843, p. 361.

During the first three centuries (with possibly a single exception, that of the equilateral cross cut on a sepulchral inscription, which de Rossi believes may be assigned to the end of the 2nd or the beginning of the 3rd cent.) the cross of Christ is invariably dissimulated under the form of an object which recalls its image: a trident, an anchor (see figs. 22, 23), a ship with rigging; or under the forms of the cross already employed by other cults: the cross *potence* and the gammate

FIGS. 22, 23.1

cross. The cross *potence*, according to certain archaeologists, is, by the way, the form which most accurately recalls the instrument of crucifixion employed by the Romans.

At the close of the 3rd cent. the Christians designated Jesus Christ by a monogram composed of the first two letters of 'Ἰησοῦς Χριστός', ✠, or of ΧΡΙΣΤΟΣ, ☩. The addition of a transverse bar, ✠ or ☩, exhibits the cross or, better still, Christ upon the cross, especially when, by an after process of simplification, the *chi-rho* becomes ☩ or ☩. Further, the Latin cross already appears upon certain coins of Constantine, although this emperor, true to his policy of religious eclecticism, shows no scruple about introducing on the same coins representations of Mars or Apollo as gods. Julian, of course, suppressed both cross and *chi-rho*. But, after his time, the cross finally takes its place upon coins and even upon the Imperial diadem. At the same time it asserts itself under its proper form in funeral inscriptions, upon altars, reliquaries, lamps, jewels, and even upon the façades of houses and the tops of *basilicas*, where it takes the place of the monogram; and before long it may be seen furnishing the ground plan of churches. In the 5th cent. the employment of the cross *potence* becomes rare except in Celtic countries, where it continues to show itself in inscriptions. In like manner the gammate cross now appears only sporadically, in the west and the north of Europe, upon tombstones and sacerdotal vestments.

The so-called Latin cross and the equilateral cross were at first employed without discrimination. Only gradually did the equilateral come to be the specialty of the East, and the form with unequal limbs that of the West.

As to the *crucifix*, i.e. a cross with the body of Jesus nailed to it, this representation does not make its appearance till the 7th century. The art of the Middle Ages was not slow to heighten its realism still more. But at the same time a distinction was drawn between the cross of the Passion, which is accompanied by all the implements of crucifixion, and the cross of the Resurrection, with which Jesus ascends to heaven. The first is painted sometimes green, because it was cut from a tree; sometimes red, because it was stained with the blood of Christ. The second is painted sometimes blue, the colour of the sky; sometimes white, as symbolizing the invisible Divinity. It is this last which is carried at the head of processions.

The cross became a hierarchical symbol in the

Church. Thus the Pope has the privilege of having carried before him a cross with three bars, while cardinals and archbishops have to be content with two, and bishops with one.

Finally, the cross served also in the prime of the Middle Ages as a symbol of certain popular rights. Such were the market crosses in Germany, which implied the municipal jurisdiction; the *perrons*, or crosses mounted upon a column, which in certain towns of Belgium and Germany were regarded as an emblem of jurisdiction, and even as the palladium of local liberties. When Charles the Bold wished to punish the inhabitants of Liège, he carried away their *perron* and set it up for six years at Bruges.

For a number of centuries the phrase 'to take the cross' meant to devote oneself to fight the infidels. Hence the orders of knighthood and the crosses of honour, the bestowal of which has now nothing to do with religion.

After all that we have said, it is needless to stop to examine theories, ancient or modern, which seek to claim a pagan origin for the Christian cross, on the ground that earlier cults had cruciform signs among their symbolism, while others would discover in pre-Christian crosses prefigurations of the Crucifixion. We must content ourselves with referring the reader to the respective supporters of these theories (e.g. Emile Burnouf, Gabriel de Mortillet, Mourant Brock, Abbé Ansaunt, etc.).

LITERATURE.—I. GENERAL.—J. A. Martigny, *Dictionnaire des antiquités chrétiennes*, Paris, 1865, s.v. 'Croix'; Gabriel de Mortillet, *Le Signe de la croix avant le christianisme*, Paris, 1866; E. Bunsen, *Das Symbol des Kreuzes bei allen Nationen*, Berlin, 1876; E. Burnouf, *La Science des religions*, Paris, 1878; Mourant Brock, *The Cross, Heathen and Christian*, London, 1879; W. H. Holmes, 'The Cross used as a Symbol by the ancient Americans,' in *Trans. of the Anthropological Society of America*, Washington, 1883, vol. ii.; Hochart, 'Le Symbole de la croix,' in *Annales de la Faculté des Lettres de Bordeaux*, 1886, no. 1; W. Wilson Blake, *The Cross, Ancient and Modern*, New York, 1888; Ansaunt, 'Le Culte de la croix avant Jésus-Christ,' in the French review, *Le Correspondant*, 25th Oct. 1889, p. 163 f.; C. de Harlez, 'Le Culte de la croix avant le christianisme,' in the French review, *La Science catholique*, 15th Feb. 1890; F. Cabrol, art. 'Cross and Crucifix,' in *Catholic Encyclopedia*, New York, vol. iv.; J. Romilly Allen, *Early Christian Symbolism in Great Britain and Ireland*, London, 1887.

H. ON THE GAMMADION OR SWASTIKA.—L. Müller, *Det saakaldte Hagekors*, Copenhagen, 1877; E. Thomas, 'The Indian Swastika and its Western Counterpart,' in *Numismatic Chronicle*, 1880; R. P. Greg, 'The Fylfot and Swastika,' in *Archæologia*, 1885, p. 293 f.; G. Dumoutier, 'Le Swastika et la roue solaire en Chine,' in *Revue d'éthnographie*, Paris, 1886, vol. iv. p. 327 f.; Goblet d'Alviella, 'De la croix gammée ou swastika,' in *Bulletin de l'Académie royale de Belgique*, 1889; D. G. Brinton, 'The Ka-ti, the Swastika, and the Cross in America,' in *Proceedings of the Amer. Philosophical Society*, vol. xxvi., 1889, p. 177 ff. M. de Zmigrodzki has collected, in various publications, all the known instances of the gammadion (see his *Geschichte der Swastika*, Brunswick, 1890, and his *Przegląd archeologiczny*, Krakow, 1902). As for the literature on the subject, Thomas Wilson mentions in the Appendix to his work *The Swastika* (Washington, 1896), 114 books and articles, besides his own, dealing with the gammate cross.

GOBLET D'ALVIELLA.

CROSS (American).—The appearance of the cross symbol among the semi-civilized and savage peoples of America in all probability admits of a genuine two-fold interpretation. It amalgamates in all likelihood two cognate ideas: (1) that of the cross as a symbol of the four winds belonging to or emanating from the four cardinal points; (2) that of the 'world tree,' 'tree of life,' or 'tree of our flesh' (Mexican *Tonacaquahuilit*), analogous in some ways to the Scandinavian *Yggdrasil*, or cosmic tree, whose roots surrounded the universe. The first, in its pictorial and mural form, was probably evolved from the second as an art convention. There can be no question of the genuine aboriginal character of the cross symbol as found in America. Its origin appears to have been analogous to that of the symbol in use in the Old World—evolution from a symbol of the four cardinal points; but any hypothesis of its importation from Europe

¹ See T. Roller, *Les Catacombes de Rome*, Paris, 1881, vol. i. pl. xix. nos. 8 and 11.

or Asia would require much weightier proof of European or Asiatic colonization than has yet been advanced, and is easily discounted by the unquestionable signs of its wide-spread aboriginal use throughout the American continent.

On the discovery of Yucatan, where the lieutenants of Cortes found crosses at Cozumel and elsewhere, the wildest theories were propounded to account for their appearance in the New World. These crosses were about 3 ft. in height, and were usually found in an enclosure called *teopan*, or the buildings surrounding a temple. The Spanish missionaries believed that they had been introduced by the apostle St. Thomas, or that early Spanish colonists, driven out by the Moors, had sought refuge in America, and had brought with them the sacred symbol. The missionaries then proceeded to inquire after representations of the Crucifixion itself, and it was discovered that one had existed in pictorial form on a manuscript which had been buried to prevent its destruction by the invaders, but which had subsequently rotted underground. This figure undoubtedly represented a human sacrifice to the Sun, always intended in Mexico when the word 'God' (*Teotl*) was employed, as in the present instance, without any indication of the particular deity which the figure was meant to represent.

1. As a symbol of the four winds.—As a symbol of the four cardinal points from which the winds, and therefore the rains, came, the cross was well entitled to the designation of 'tree of our life' in the arid climate of Yucatan. To each quarter of the heavens a quarter of the ritual year belonged. The Aztec goddess of rains, Chalchiuhtlicue, bore a cross in her hand, as most of the principal deities of Egyptian mythology carry a cognate symbol, the *ankh*, or 'key of life'; and, in the feast celebrated in her honour in the early spring, victims were nailed to a cross and shot with arrows. Quetzalcoatl, as god of the winds, is represented as carrying a species of cross, and his robes were decorated with cruciform symbols. The form which we find, for example, in the famous bas-relief of Palenqué, and which was also discovered upon the temple walls of Cozumel, Popayan, Cundinamarca, and elsewhere, was undoubtedly a conventional form evolved from that of a tree, consisting of the lower part of the trunk and two cross-branches. The Mayan designation of the cross was indeed *Vahom che*, 'the tree erected or set up.' In the Palenqué cross, at the ends of the branches knobs appear, which are probably intended to indicate leaves or fruit. On the summit is perched a bird, probably a turkey, decked out in the brilliant plumage of more brightly-feathered fowl. The cross in question was probably regarded as in some measure the pedestal of the living turkey-fetish. The flesh of the turkey was a staple of Mexican diet, and in this way, it may be, the bird had become associated with the idea of subsistence and the 'tree of life' itself. In that case the cross of Palenqué was known as *Quetzalhuacoloquahuil*, or 'tree of the plumed turkey.' A priest stands on the proper right of the bas-relief, offering as a sacrifice a small human figure made from maize paste, and not a newly-born child, as some authorities state. On the proper left stands an acolyte, offering up a stalk of maize. At the roots of the cross a hideous head appears. It is that of *Cihuacohuatl* (female serpent), or *Tonantzin* (our Mother), to give her her Mexican designation—the earth-goddess, the most bloodthirsty of the Central American deities in her lust for human flesh, and the one from whom the 'tree of life' has its being and nourishment.

Many American peoples believe in the efficacy of the cross as a symbol whereby rain may be

obtained. The rain-makers of the Lenni Lenape draw the figure of a cross upon the ground, with its extremities towards the cardinal points, and on this they place a gourd, some tobacco, and a piece of red material, afterwards invoking the rain-spirit. The Creeks, at the ceremony of 'the Busk,' celebrated to the four winds, dispose four logs in the shape of a cross, the ends of which are set to the cardinal points, and in the centre of these they kindle the New Year's fire. The Blackfeet used to arrange large boulders in the form of a cross, on the prairies, in honour of Natose, 'the old man who sends the winds.' The Muyscas of Bogota, in order to sacrifice to the goddess of waters, extended ropes across a lake, thus forming a gigantic cross, at the point of intersection of which they cast in offerings of precious stones, gold, and odoriferous oils. In the State of Wisconsin many low cruciform mounds are found, exactly orientated. These were probably altars to the four winds. In the mythology of the Dakotas the winds were always conceived as birds; and the name of the cross in the Dakotan language signifies 'the mosquito-hawk spread out.'

2. As the 'world tree.'—In those Mexican and Mayan pictures which deal with cosmology the world tree is depicted as standing in the centre of the universe, its roots deep in the waste of waters, its branches among the clouds, as if in search of rain. The Mexicans worshipped the tree as *Tota* (our Father), whom they further described as 'god of the waters and of vegetation,' although he also appears to have some connexion with fire. Among the Kiche (or Quiché) of Guatemala, women desirous of children sought out a tree overhanging a pool, to which they prayed as the emblem of fertility; and this indicates the possible phallic origin of the tree of life. The *vax che*, or ceiba tree, is still an object of veneration in many hamlets of Central America. The sacred pole of the Omahas typifies the cosmic tree, the centre of the four winds, and the dwelling of the thunder-bird; and tree-burial among the western tribes of North America probably bore some mythical relation to placing the dead in the tree of life. The Mbocobis of Paraguay believe in a tree by which the dead once climbed to Paradise, and the Yurucares of Bolivia in one whence mankind originally emerged. The sacred tree also appears symbolically throughout America in the form of the poles and stakes which surround the prayer-houses and *kivas* of many American tribes.

II, Mexico, 1829-30; Garcia, *Origen de los Indios*, lib. III cap. VI, Madrid, 1729; Cogolludo, *Hist. de Yucathan*, lib. IV cap. IX, Madrid, 1688; de Charencey, *Le Mythe de Volan*, Alençon, 1871; W. H. Holmes, *3 RBEW*, 1883, p. 270 f.; art. 'Cross' in *Handbook of American Indians* (= 80 Bull. BE), I. 366 f., and the literature there cited.

LEWIS SPENCE.

CROSS-ROADS.—Cross-roads are very generally regarded as the dwelling-place or resort of evil spirits, ghosts, etc., and hence are considered unlucky or even dangerous, while various expedients are resorted to in order to ward off their dangers. On the other hand, they are sometimes associated with a divinity—probably, in the first instance, because images of the divinity were placed there to counteract the powers of evil, and a cult of the divinity was observed at the cross-ways. Or they may be regarded as sacred in themselves. Thus in the Avesta a formula runs: 'We sacrifice . . . to the forking of the highways and to the meeting of the roads' (*SBE* xxxi. [1887] 291). In ancient India they were not to be defiled or obstructed (*ib.* xxii. [1884] 182, xxxiii. [1889] 158). But the reverence for such a divinity of cross-roads was soon mingled with the fear of the demoniac in-

fluences, and we find the divinity often regarded as sharing in the characteristic evil and horrible traits of the very dæmonic beings which he or she was supposed to hold at bay. The association of evil beings or of a divinity with cross-roads is an extension of their association with roads in general, and is already found among some lower tribes in connexion with the rough paths leading through forest or jungle, and with their intersections.

1. Burial at cross-roads.—(a) There is evidence that the dead were sometimes buried at cross-roads, and this would be one reason for their being regarded as particularly ghost-haunted places—a belief which is certainly very remote and widespread. Among the ancient Hindus there was a practice of erecting a *dāgoba* or *stūpa* (a mound in which the bones and ashes were placed) at cross-roads. These were to be erected there in honour of a king of kings or a *Tathāgata* (*Mahāparinibbāna Sutta*, v. 26, vi. 33 = *SBE* xi. [1881] 93, 125; cf. Oldenberg's remarks, *Rel. des Veda*, Berlin, 1894, p. 562). In Slavic lands, cairns and tumuli are often found at cross-roads, and the older literature sometimes refers to a cult of the dead there (Grimm, *Kleinere Schriften*, Berlin, 1865, ii. 288). Other instances are reported among the Greeks, Germans, etc. (Lippert, *Rel. der europ. Kulturvölker*, Berlin, 1881, p. 310; Wuttke, *Deutsche Volksabergl. der Gegenwart*, Berlin, 1900, § 108; Winternitz, *Denkschr. der kais. Akad. der Wissensch.*, Vienna, xi. [1892] 68). In Hungary, persons believed to have succumbed to the malice of a witch or demon were sometimes buried at cross-roads, to deliver them from this influence, as witches had no power there—an unusual belief (*FLJ* ii. [1884] 101). This is an instance of the riddance of evil at cross-roads (see § 5). It is not impossible that one reason for honourable burial at cross-roads was the desire for re-incarnation. Among the Mongols, among many N. American tribes, and in W. Africa, children are often buried by the side of a path or road, in order that the ghost may have an opportunity of entering some woman passing that way, and so being re-born of her (Letourneau, *Sociology*, 1893, p. 239; Owen, *Folk-lore of the Musquakie Ind.*, 1902, pp. 22–23, 86; Dorman, *Prim. Superstitions*, Philadelphia, 1881, p. 35; Kingsley, *Travels in W. Africa*, 1897, p. 478). As more women are likely to pass a cross-way than on any single path, the chances of re-incarnation would be greater there.

(b) But in the case of persons whose ghosts are regarded as dangerous, another reason for burial at cross-roads must be sought. Among such persons are those who have committed suicide, and occasionally murder. Custom and law in England prescribed that the suicide should be buried at a cross-road, with a stake driven through his body. A stone was also placed over the face (Stephen, *Hist. of Crim. Law*, 1883, iii. 105; *FL* viii. [1897] 199. The custom was abolished in 1823). Criminals also were executed at cross-roads, e.g. Tyburn, the meeting-place of the London, Oxford, and Edgeware roads. Stake and stone were intended to prevent the restless ghost from wandering and troubling the neighbourhood. It has also been suggested that the constant traffic over the grave would help to keep the ghost down, or that the number of roads would confuse it, and so prevent its finding its way home, or that the cross would act as a disperser of the evil energy concentrated in the body or the ghost, or that sacrificial victims (these being frequently criminals) were formerly slain on the altars at cross-roads, which were therefore regarded as fitting places for the execution and burial of criminals, after the introduction of Christianity (*FL* viii. 264; Westermarck, *MI*, 1908, ii. 256; *EBr*¹¹ vii. 510). To this it

should be added that suicides were generally buried in out-of-the-way places; and the cross-roads, being a place of evil repute, would naturally be selected for the grave. The underlying thought is that of riddance of the contagion of evil, and in no better place could this be effected than at the cross-roads (see § 5). A parallel custom of burying at the cross-roads the bodies of children still-born or born feet-foremost (a mode considered unlucky) is found in Uganda, where also the bodies of suicides, with the tree on which they hanged themselves or the hut in which they took their lives, were burned at cross-roads. And it is noticeable that women who pass that way throw a few blades of grass, or sticks, or stones, on the grave to prevent the spirits from entering them and being re-born (Roscoe, 'Manners and Customs of the Baganda,' *JAI* xxxii. [1902] 30, and Frazer, *Totemism and Exogamy*, 1910, ii. 507, iii. 152). In Greece, persons who murdered father, mother, brother, or child were slain at a place outside the walls where three roads met, and their bodies were exposed naked (Plato, *Leg.* ix. 873).

2. Ghosts, spirits, and demons at cross-roads.—Cross-roads are universally believed to be the common resort of evil spirits. As places of burial, cross-roads would naturally be haunted by the ghosts of the dead; but also, as ghosts would be often passing along the roads from other places of burial to their former homes, they would be more numerous at cross-roads. The ghostly train is often seen on roads, but more particularly at their intersections; hence, to see them one would naturally go there, as in the Abruzzi, where, at the festival of the dead, the thronging ghosts can be seen at the cross-ways by any one standing there with his chin resting on a forked stick (Finamore, *Credenze, usi, e costumi abruzzesi*, Palermo, 1890, pp. 180–2). But, besides ghosts, all kinds of evil powers frequent the cross-ways. This is a wide-spread belief in India, one particular class of dæmonic beings—*bhuts*—being usually found at cross-roads, while other 'waylayers' lurk there also (Oldenberg, 267; Crooke, *PR* i. 290; *FL* viii. 330; *SBE* xxx. [1892] 49). Among the Muhammadan peoples, cross-roads are one of the numerous resorts of the *jinn* (Lane, *Arabian Society*, 1883, p. 37). In Russia, vampires are thought to lurk by night at cross-roads, ready to attack the belated traveller (Ralston, *Russ. Folk-Tales*, 1873, p. 311). In Europe generally, witches were associated with the cross-ways. There they gathered up money scattered by the devil; there, too, they met, and, in some cases, the Sabbat was held at the junction of roads, especially on Walpurgis night, when they might be seen by him who put on his clothes inside out and crept backwards to the place; while the ringing of consecrated bells on that night hindered their dancing with the devil at cross-roads (Grimm, *Teut. Myth.* [Eng. tr. 1880–8], 1074, 1115, 1799, 1803, 1824; Stewart, *Superstitions of Witchcraft*, 1865, p. 128). On the other hand, witches are occasionally regarded as having no power at cross-roads. In Naples it is held that they must go round them on their way to a meeting, as they cannot pass them; and in Hungary cross-roads are believed to neutralize their evil powers (*FL* vii. 3; *FLJ* ii. 101). Here, probably, the form of the cross acts as a prophylactic. Sprites, kobolds, and fairies are also sporadically associated with cross-roads (Grimm, 838, 1115; Goethe, *Faust*, III. i. 40). In mediæval superstition there was no better place than a cross-road for the purpose of evoking evil spirits, especially the devil, and making a compact with them. The magical treatises then current explicitly set this forth; thus the *Clavicula Solomonis* says: 'For magical operations a secret, remote, deserted, and uninhabited place is necessary, but best of all are the cross-ways.'

This notion is found in the 6th cent. story of Theophilus, and in the old tradition it was at a cross-road near Wittenberg that Faust sold himself to the devil. The custom was to go to the cross-way by night, and there make a magic circle in which cabalistic signs were inscribed, and then to call up the devil. Similarly, witches made their compact with Satan at cross-ways. In the case of the Swedish witches in the 17th cent., they first put on a garment over their heads and danced near a cross-road. Then, going to the cross-road, they thrice called on the devil to come and carry them to the meeting-ground. When he appeared they promised to serve him body and soul, and he then conveyed them to the Sabbat (Grimm, 1074; Baring-Gould, *Curious Myths*, 1888, p. 680; *Hist. . . . de Jean Fauste*, Amsterdam, 1874; Görres, *Die christl. Mystik*, Regensburg, 1842, bk. vi. ch. 16; Wright, *Narratives of Sorcery and Magic*, 1851, i. 184, ii. 249 f.).

For these reasons, wayfarers took precautions at the cross-ways. In India, *mantras* must be said; e.g. at a bridal procession the bridegroom had to say, 'May no waylayers meet us!' They should not be stopped at, and the traveller should pass with his right hand turned to them (*SBE* ii. 228, vii. 200, xxv. 135, 150, xxx. 49). Similarly, in Sweden, no bridegroom will stand near a cross-road on his wedding-day—a precaution against 'envy and malice' (Chambers, *Book of Days*, 1863, i. 45). See also § 5.

The origin of the belief in the presence of evil agencies at cross-roads may be found in the simple fact that, as people were more numerous at cross-roads, so naturally would all evil powers be, such at least as were so often associated with roads or paths. Men always fear demons and spirits which they believe lurk on the edge of the forest path or rude roadway, ready to pounce upon the belated traveller, and in many cases roads are believed to be infested by them (Monier-Williams, *Rel. Thought and Life in India*, 1883, p. 216; Maspero, *Dawn of Civilization*, 1894, pp. 632, 636). Hence they would be regarded as lurking at the intersections of roads, especially by night, when wayfarers were uncertain of the direction in which they ought to go (cf. Ovid, *Fasti*, v. 3). A further reason may be sought in the fact that paths and roads often form boundaries, as is shown by the fact that images and altars of boundary-gods often stood on roadways (MacPherson, *Khonds*, 1865, p. 67; cf. § 3). Rites of riddance and aversion intended to drive evil powers off the fields or tribal lands would, in common belief, have the tendency to force them on to the boundaries—a kind of neutral ground (for such rites, see Frazer, *GB*², 1900, iii. ch. 3, §§ 13, 14, 15, *passim*; Ralston, *Songs of the Russian People*, 1872, pp. 211, 396). And, as boundary so frequently signified road, or was marked by a pathway (as in Samoa [Brown, *Melanesians and Polynesians*, 1910, p. 339]; see other examples in this art.), there would here be another reason for evil spirits haunting roads. Hence the cross-ways, where boundaries or paths met, for the reason given above, would again be more open to their presence and influence. Evil powers associated with cross-roads are, in fact, often stated to be also found on roads and boundaries, or a boundary-stone is found at cross-ways (cf. Grimm, 1051, 1113, 1804, 1821; Crooke, *PR* i. 290). Hence magical rites which are effective on roads are still more effective at cross-roads, as many instances of their use in both cases show.

3. Divinities at cross-roads.—Divinities are frequently associated with cross-roads. This is sometimes with the intention of repelling those evil powers which otherwise would throng them, though, as examples show, there is a tendency for the protective divinity to take on some of the aspects of those evil powers, as in the case of Hecate. Or again, since evil powers are connected with cross-roads, divinities whose character is evil rather than good are often worshipped or propitiated there.

In India, from early times, the cross-ways were the abode of sinister gods, especially of Rudra, lord of ghosts and of evil powers generally, who

was propitiated at the yearly festival of the dead by a sacrifice of cakes—the offering to Rudra Tryambaka, for the deliverance of descendants from his power, and for the securing of his beneficent action. This was offered at cross-roads, because Rudra roves on the roads, and 'the cross-road is known to be his favourite haunt' (*Satapatha-Brāhmaṇa*, *SBE* xii. [1882] 408, 438 f.). The cross-road is also the halting-place of the Agnis (*ib.* 439, n. 1). Travellers addressed both paths and cross-roads with *mantras*: 'Adoration to Rudra, who dwells on paths; adoration to R., who dwells at cross-roads' (*ib.* xxix. 366, xxx. 180). In the yearly ritual the connexion of ghosts with the cross-ways is also apparent. Lesser evil divinities also had their cult at cross-ways, but usually for specific purposes—the repelling of disease or demoniac influence, or the contagion of evil. To get rid of disease, one should go by night, naked, to a cross-way, and there make an offering of rice with a *mantra*, returning in silence without looking back. This must be repeated until the evil spirit (Pisācha) appears and says, 'I will end your ailment' (*Kāthā-sarīt-sāgara*, Tawney's ed., 1895, i. 256). The sacred writings also ordain that a student who has broken a vow of chastity must offer an ass to Nirriti, goddess of destruction, at a cross-way, then put on the skin and proclaim his sin (*SBE* ii. [1897] 289; cf. xxix. 361). Elsewhere he is directed to light a fire at the cross-ways, and to offer an ass to the Rākṣasas and an oblation of rice to Nirriti (*ib.* xiv. [1882] 117 ff.).

In Japan, phallic symbols, *chimata-no-kami*, or 'road-fork gods,' were set up on roads, and worshipped at cross-roads and waysides, as protectors of travellers. They were said to have been produced from the articles thrown down by Izanagi in his flight from Hades, or at his purification (see vol. ii. p. 700^b). Their festivals were held at cross-roads outside the capital, or at the frontier, at the end of the 6th and 12th months, or in time of pestilence, while offerings took place at other times. Other phallic symbols, *sahi-no-kami*, or 'preventive deities,' were also worshipped at roads and cross-roads, and hence came to be regarded as guides and friends of wayfarers. Their cult was popular, they were inquired of in divination, or prayed to before a journey; or an offering was made to them by travellers on their journey. Accidents on a journey were the result of neglecting them. But the primitive function of all these deities seems to have been that for which they are still addressed in the liturgies, viz. protection against the unfriendly beings and evil spirits of pestilence from Hades.

'Whenever from the Root-country, the Bottom-country [= Hades], there may come savage and unfriendly beings, consort not and parley not with them, but, if they go below, keep watch below; if they go above, keep watch above, protecting us against pollution with a night guarding and with a day guarding.'

Three of these are mentioned in one *norito*—Yachimata-hiko, the Eight-road-fork prince, Yachimata-hime, the Eight-road-fork princess, and Kunado, whose name, 'Come-not place,' is suggestive of his functions as a repeller of evil beings. The first two are represented as male and female figures with sexual organs, the last as a simple phallus. Another phallic god, Saruta-hiko, dwells at the eight cross-ways of Heaven, and is said to have acted as guide to Ninigi on his coming to earth. He is also called Dosojin, or 'Road-ancestor deity,' and is found at cross-ways in the form of a phallic boulder, over which is stretched a rope supported by bamboos. Jizo, the Buddhist children's god, now occupies his place at cross-ways (Aston, *Shinto*, 1905, pp. 306, 187, 189, 191, 197, 340).

The phallic origin of these gods, in accordance with the well-known property ascribed to the sexual organs as warders off of evil spirits, their protective powers against demoniac and pestilential influences, and their ultimate position as gods of travellers recall the position of the Greek Hermes and the Hermæ (cf. p. 333^b).

Among the Teutonic peoples occurred a yearly procession of the image of a god or goddess (Frey,

Nerthus, Holda, Berchta, etc.) round each district, for the purpose of promoting fertility (Tac. *German.* 40; Grimm, 213, 251, 268, 275). In later tradition the remembrance of this procession was mingled with the myth of the Furious Host or the witches' jaunt, headed by one of those divinities—a myth which in pagan times told of an aerial course of the god or goddess with their subordinates, corresponding to the course of their images followed by the jubilant crowd on earth. It was connected with the latter, and perhaps in part originated from it, as an ætiological myth (cf. Grimm, 1055–56). These processions, doubtless, went round the boundaries, and the divinity would then be associated with boundaries, and so with roads and cross-ways. In some of the later traditions, cross-roads appear to be unlucky to these wandering hosts, now become demoniac and associated with sorcery, with the devil and witches. Berchta's waggon breaks down at the cross-roads, so also does that of Frau Gauden, and the help of a mortal is necessary to repair it (see the traditional tales in Grimm, 275, 926). Perhaps there is here a distorted reminiscence of a halting of the procession of the image and waggon at cross-roads, either for a sacrifice to the divinity, or for the performance of some rite by which his or her protection would be secured against the evil powers of the cross-roads. Later, when the divinity became a more or less demoniac being, the folk-memory of the halting of the waggon produced the story that the waggon broke down. The divinity no longer repelled evil influences at cross-roads, but was now subject to these influences, cross-roads being unlucky to him or her, as in the case of witches (cf. § 2). On the other hand, it is not impossible that offerings were laid at cross-roads for the divinities to partake of in their aerial wanderings, as in the case of Hecate. As her images stood there, so probably images of some of these Teutonic divinities may have been set up at cross-roads. This is suggested by traces of a cult to gods or ghosts of the dead at cross-roads (the haunt of souls), anathematized by the Church. Prayers, offerings, and the consumption of such offerings, votive offerings (*vota; pædum similitudines quas per bivia ponunt*), and the ritual lighting of candles and torches at cross-ways (*bivia, triviva*) are all forbidden, and the prohibitions probably apply to Celtic as well as to Teutonic custom (S. Eligius and Burchard, in Grimm, 1738, 1744; de la Saussaye, *Religion of the Teutons*, Boston, 1902, p. 290; Grimm, *Kleinere Schr.* ii. 288). Sitting on a bull's hide at cross-ways in order to consult the future is also forbidden. The hide was probably that of an animal sacrificed there (Grimm, 1744, and cf. his comment, 1115, and the common ritual use of the skins of sacrificial victims elsewhere). Divinities were also sometimes seen at cross-roads by their worshippers (Grimm, 1202). The cult of divinities, Teutonic and Celtic, at cross-roads is further borne witness to in the occasional references in witch-trials to ghastly offerings made to demoniac powers (their successors) at cross-roads, as in the trial of Alice Kyteler and her accomplices at Ossory in the 14th cent., in which there is reference to a sacrifice of living animals torn limb from limb and scattered at cross-roads, or of nine red cocks and nine peacocks' eyes (Wright, i. 28, 30).

Among the Greeks, Hecate, a goddess whose cult was probably introduced from the north, and who had several varying aspects, was associated with cross-roads as Hecate *τροδῖτις*. Her primitive connexion with these and also with roads and doorways was probably that of an avorter of ill. Her images or symbolic figures stood before doors and at cross-ways, to keep out ghosts and to counteract the gloomy influences prevailing at cross-ways. In both cases the chief evil influence to be averted was that

of the ghosts of the dead. These images were called *ἐκδραῖα*, and frequently represented her in triple form. Through her connexion with roads and cross-roads, she, as Hecate *ἐνοδία*, was the helper and guide of travellers who sought her aid (schol. ad Theocr. ii. 12). But she was also regarded in a more sinister light. As an infernal goddess, she was ruler of ghosts, phantoms, and demons, causing them to appear on earth to frighten travellers, associated with sorcery, and seen often on moonlight nights with her ghostly train and baying hounds, like the Teutonic Holda. In this character she was more particularly Hecate *τρίμορφος*, of a malicious and dangerous nature. Hence she had to be invoked and propitiated, lest she should send harm on men. The triple form of the goddess has been variously explained, but, in all probability, it arose from the fact that her images at cross-ways had faces looking down the converging roads, so as to watch over each. In her we see a goddess who, at first regarded as an avorter of ill, is later associated with those very ill which she averts. She can keep them at bay, or she can cause them to appear, and she herself is imaged in their sinister forms. Offerings were made to Hecate at cross-roads, and her images there were consulted for divination. Monthly offerings were made to her at cross-roads by rich people, in order to get rid of evil influences and to render her favourable. These were called *Ἐκάτης δειπνα*, or 'suppers of Hecate,' and included cakes set round with candles, fish, eggs, cheese, honey, etc. These dishes of food were often consumed by the poor. They were connected with the rites of riddance performed in her name. Houses were swept and fumigated, and the sweepings taken away in a potherd to a cross-road, and there thrown down, the bearer going away without looking back. It would be natural also to get rid of the food remaining in the house before the purification. Thus the evils, or the ghosts which had infested the house, were sent away, and the ceremony may only accidentally have been connected with the goddess of cross-roads. It resembles other rites of riddance at cross-roads, primitive in character, and usually unconnected with a divinity (see § 5). These purifications were called *δελτύματα* (see Harpocrat. and Suidas, s.v.; schol. on Æsch. *Choeph.* v. 96; Plut. *Quæst. Rom.* iii., *Quæst. Conv.* 708 F; schol. on Arist. *Plut.* 594; Lucian, *Dial. Mort.* i. 1; Athenæus, vii. 125, 127, viii. 57, xiv. 53; Porph. *de Abstin.* ii. 28). Travellers also deposited offerings at cross-roads. An ætiological myth told how Hecate, as a newly born infant, was exposed at a cross-way, but rescued and brought up by shepherds (schol. on Lycophron, 1180). This probably points to an actual custom of exposure at cross-roads (found also in Chaldaea), made use of to explain Hecate's connexion with them.

Hermes, as god of roads and boundaries, and of travellers, was also associated with the cross-ways as an avorter of ill. On roads and boundaries, but especially at cross-roads, stood a heap of stones with a pillar, later rudely shaped in human form. The passer-by added a stone to the heap, as a rite of riddance and in order to avert the evil influences associated with the place. These became the more shapely Hermæ of later times, used as boundary and mile and direction posts, and placed at cross-roads as well as on streets, roads, and at doors. The phallus was a prominent object upon them (Herod. ii. 51), in accordance with the belief in phallic emblems as averters of ill. As in the case of the Hekataia, these Hermæ had often several heads, and for the same reason. Offerings were made to them, and were sometimes eaten by hungry wayfarers. Theophrastus in his *Characters* describes the pious man pouring oil on the sacred stones (Hermæ) at cross-roads, falling on

his knees and saying a prayer before passing on his way. Cf. ARYAN RELIGION, vol. ii. p. 36 f.

Christianity replaced the divine images at cross-ways by crucifixes or images and shrines of the Madonna. At the latter, especially, flowers and candles are offered and prayers said, exactly as in the case of the Hermæ and Hekataia (Trede, *Das Heidenthum in der röm. Kirche*, Gotha, 1891, iv. 205, 208).

An example of a cult of a divinity at cross-roads from a lower level of civilization is found among the Yaos of the Shire Highlands who, when on a journey, offer a little flour to the god Mulungu at a place where two ways meet, exactly as in the case of Greek and Roman travellers, to Hecate, Hermes, or the Lares (see vol. ii. p. 358*).

4. Omens at cross-roads.—The connexion of supernatural beings, divine or demoniac, with cross-roads caused these to be regarded as places where omens might be sought. In East Central Africa a traveller who comes to a cross-way lays two roots, carried for the purpose of divination, against the blade of a knife laid horizontally. He points to one road saying, 'Shall I take this one?' If the roots remain still, he takes it. If they fall, he takes the other (Macdonald, *Africana*, 1882, i. 215). This resembles the rite used by the king of Babylon, probably to discover whether he should proceed on the way to Jerusalem to attack it. He 'stood at the parting of the way, at the head of the two ways, to use divination: he shook the arrows to and fro, he consulted the teraphim, he looked in the liver' (Ezk 21st). In Germany it was a custom to listen at a cross-way on Christmas or New-Year at midnight. In this way the seeker heard or saw what would befall him during the year. Or, if he heard horses neigh or swords rattle, there would be war (Grimm, 1113, 1812, 1819). The listening was intended to catch what the spirits were saying as to coming events. In Japan a method of cross-road divination (*tsuji-ura*), used by women and lovers, is to place a stick representing the god Kunitada at a cross-way at dusk, and to interpret the words spoken by passers-by as an answer to the question put by the inquirer. Another method is to sound a comb three times at a cross-road by drawing the finger along it, then, worshipping the *sahi-no-kami*, to say thrice, 'O thou god of the cross-roads-divination, grant me a true response.' The answer is found in the words spoken by the next or the third passer-by (Aston, 340). With this may be compared a Persian custom of sitting at cross-ways by night and applying to oneself as an omen of good or evil all that is said by passers (J. Atkinson, *Women of Persia*, 1832, p. 11). In Germany a girl went to a cross-road to discover whether she would be married during the year, or she shook out a table-cloth there. Then a man appeared and saluted her. The future husband would be of the same height and appearance (Grimm, 1115, 1797). An old Hindu custom for a man to discover whether a girl will make a good wife is to let her choose one of several clods taken from lucky and unlucky places, one of the latter being a cross-road (Oldenberg, 510). In India the balance for ordeals was erected at a temple or in a cross-road—a favourite abode of Dharmarāja, the god of justice, when he appears on earth (*SBE* xxiii. [1889] 104).

5. Magical rites at cross-roads.—The sinister character of cross-roads made them particularly efficacious as places to perform charms and magical rites, especially of aversion or riddance of demoniac influences (cf. p. 331), bottom: 'best of all are the cross-ways'.¹ Evil powers, or perhaps the divini-

ties whose images stood there, lent their influence to the success of the rite. A few examples of general magical rites may be cited first. Sitting out or working spells at cross-ways was used among the Teutons as an evil kind of magic, for raising tempests, etc. The details are not known (Vigfusson-Powell, *Corpus Poet. Boreale*, Oxford, 1883, i. 413). In the Hindu *Gṛhya Sūtra*, visiting a cross-road at twilight, lighting a fire there, offering rice and repeating charms, together with other ritual observances, is recommended to those who desire gold, or companions, or a long life, or who wish to be rulers, etc. (*SBE* xxix. 431, xxx. 119, 124, 125). A charm for recovering lost property is addressed to Pūshan, the sun, who watches over the ways, and the rite includes placing 21 pebbles at a cross-way. They are symbolic of the lost property, and counteract its lost condition (Atharva-Veda [*SBE* xlii. 159, 542]). In Kumaon, to cause rain to cease, a harrow is fixed perpendicularly at a cross-way. The god of rain, seeing it in this unusual condition at such a place, learns that injustice is being done, and makes the rain cease. Or sugar, rice, and other objects used in ritual are placed at a cross-way and defiled, till the rain is ashamed to fall on them (*PR* i. 76-77). At Naples, to detach a husband from his mistress, a wife goes barefoot and with unbound hair to a cross-way. There she takes a pebble, places it under her left armpit, and repeats an incantation. This is done at a second cross-way, with the pebble under the right arm, and at a third, having it between the chin and breast. Returning home, she throws it into a cesspool (Andrews, *FL* viii. 7). This is an example of the belief that all things at cross-ways are charged with the magic or evil energy concentrated there, or are unlucky. Plants growing on boundaries or on cross-ways are believed to possess magical power (see Reiss, 'Aberglaube,' in Pauly-Wissowa, i. 47). In Bombay a charm against the evil eye is to carry seven pebbles picked up at the meeting of three ways (Campbell, *Spirit Basis of Belief and Custom*, Bombay, 1885, p. 208).

In the case of rites of riddance and aversion the underlying idea is that the evil powers lurking at the cross-ways are compelled to take over the evil (disease, ill-luck, etc.) which is of demoniac origin, or is impure and a source of danger. In some of these cases the powers of the cross-way are propitiated by an offering. Or the rite takes place there, because the place is one where the contagion of evil is more likely to be got rid of or transferred to another, while Oldenberg suggests (p. 287) that the cross-way was used because, after the rite, the performer would go one way, the evil or unlucky influence the other. A simple example of riddance of fatigue is found among the Guatemalan Indians, who, on passing the usual pile of stones at a cross-way, gather grass, rub their legs with it, spit on it, and then lay it with a stone on the pile, thus recovering their strength (Frazer, *GB*³ iii. 4). Rites for riddance of disease at cross-ways are wide-spread. To rid themselves of any disease of demoniac origin, hill-natives of N. India plant a stake in the ground at a cross-way and bury some rice below it. The rice (prob. the vehicle of transference) is disinterred and eaten by crows (*PR* i. 290). In Bihār, during sickness, certain articles are placed in a saucer and set at a cross-road (Grierson, *Bihār Peasant Life*, Calcutta, 1885, p. 407). Similarly, in ancient India, such rites were commonly performed at cross-ways, as specific instances in the sacred books show. A patient possessed by demons was to be anointed with the

the cross-ways (*FLJ* ii. 101). It would thus be used as an act of imitative magic, producing the effect obtained by the cross-way itself.

¹ Kozma is of the opinion that the use of the sign of the cross in charms has no reference to Christianity, but to the form of

remains of a sacrifice of ghi and fragrant substances (probably because the latter are obnoxious to demons¹) and placed on a cross-road. A wicker basket with a coal-pan was set on his head, and some of the sacrifice was sprinkled on the coals (Ath.-Veda [*SBE* xlii. 32, 519]). In another charm for riddance from hereditary disease, the patient is set on a cross-road, and there washed and sprinkled. The charm includes the words, 'May the four quarters of heaven be auspicious to thee!' (*ib.* 292). In other cases not only riddance but the transference of disease to another person is effected. Thus an ancient Hindu charm to avert evil runs: 'If, O evil, thou dost not abandon us, then do we abandon thee at the fork of the road. May evil follow after another (man)!' The commentary explains this as a charm to remove all diseases, and the rite includes the throwing of three rice-puddings at the cross-road (*ib.* 163, 473). In modern India, to get rid of smallpox, some of the scales from the patient's body are placed in a pile of earth decked with flowers at a cross-way. The disease may then be transferred to some passer, the original patient recovering (*PR* i. 165). Or, at an outbreak of smallpox, a pot of wine, bangles, money, cakes, incense, and a cloth with the image of the goddess of smallpox, are offered to her, and then left outside the village at a cross-road. Any one touching these or meeting the priest who carries them out will take the disease and die at once. The goddess receiving the offering passes on to the next village. Here offering and vehicle of aversion are combined, and the articles are called *nikasi*, 'aversers.' Probably the poor, in eating 'Εκάρης δειπνῶν, — at once an offering and a vehicle of aversion, — ran the risk of transference of evil to themselves rather than starve. In Bohemia, to get rid of fever, an empty pot was carried by the patient to a cross-road, and thrown down. He then fled. The first passer who kicked it would get the fever, and the patient would be cured (*GB*² iii. 22). In Suffolk a cure for ague is to go by night to a cross-way, turn round thrice as the clock strikes twelve, drive a tenpenny nail up to the head in the ground, and then retire backwards before the clock is done striking. The next person passing over the nail will get the ague (*County Folk-lore of Suffolk*, 1895, p. 14). For other European instances, see Wuttke, *op. cit. passim*.

Lustral rites of riddance at cross-ways are also common. In India one who had committed a crime had, after other rites, to go to a cross-way and repeat the formula, *Sinhē me manyuh*. Then he was free from all crime (*SBE* xiv. 330). In E. Africa, when a child is able to speak, it is taken to a cross-way, washed and rubbed with oil, and given to the father, who may then, but not till then, cohabit with his wife, else the child will die (*FLR* [1882] v. 168). Riddance of the contagion of death is also effected at cross-roads, by carrying there the thing or things which have suffered impurity. In India, at a death, the fire became impure, and with the receptacle was carried out and placed on a cross-way with the words, 'I send far away the flesh-devouring Agni.' The bearer then walked round it three times, keeping his left side towards it, beating his left thigh with his left hand, and returning home without looking back (*SBE* xxix. 247). In the orthodox death-rites of modern Brahmans, lamps are set at cross-ways (Colebrooke, *Life and Essays*, 1873, iii. 180). All over E. Africa, at a death, the water used in washing the body, the ashes of the fire, the thatch of the hut, and the remains of the dead man's food, are buried at a cross-way (*malekano*), or deposited there with broken pots, egg-shells, etc. (Macdonald, *Africana*,

i. 109; *FLR* v. 168). Other rites of riddance or aversion also occur at cross-ways. In Nijegorod, the Siberian plague is kept off by stakes driven into the ground at a cross-way (Ralston, *Songs*, 395). In Bali, at the periodical expulsion of devils, offerings of food are placed at a cross-road for the demons, who are summoned to partake of them; and then go out of the houses to this feast (*GB*² iii. 80). In Bohemia, in order to get rid of witches youths meet on Walpurgis night at a cross-way and crack whips in unison. The witches are thus driven off (*ib.* iii. 92). With the monthly purifications in Greece (§ 3) may be compared a custom in Gujarāt of sweeping houses and laying the refuse at a cross-road as a rite of riddance of evil (Campbell, 329). For other rites at birth among the Chams, see vol. iii. 347, 350.

The custom of burying suicides at a cross-way has thus in all probability some connexion with rites of riddance at cross-roads. The danger brought about to the community was in this way got rid of. Images of diseased limbs hung at cross-ways were perhaps less votive offerings than magical means of ridding the limb of the disease by transferring it to the spirits of the cross-way or to a passer-by.

6. Cross-roads and the four quarters.—Not improbably the sacredness of cross-roads may be connected in some cases with that of the four winds, coming from the four quarters of the heavens or the four corners of the earth, which were worshipped as gods and creators, and gave a sanctity to the cross (*q.v.*) among pre-Christian races, especially in North America (see art. AIR). Hence ceremonies for scaring evil spirits were efficacious at cross-ways, because they looked approximately to the four sacred quarters. Thus, in the Gujarāt marriage-ritual of the Bhārvāda, balls of flour are flung to the four quarters as a charm to frighten off evil spirits (*BG* ix. [1901] 1. 280). In Peru a yearly rite of riddance in connexion with the four quarters took place at the square of each town, out of which ran four roads leading to the four cardinal points. Four Incas of the blood royal, with lance and girded mantle, stood in the great square, till another ran down from the temple of the Sun, carrying a message that the Sun bade them as his messengers drive all evils from the city. They separated and ran down the four roads to the four quarters of the world. Relays of runners received the lances from them, and finally set them up at a boundary, which the evils might not pass (Garc. de la Vega, *Royal Comment.*, 1869-71, ii. 228; *Rites and Laws of the Yncas*, Hakluyt Soc., 1873, p. 20ff.; cf. vol. iii. p. 308⁹). The Yorubas have a cult of the four winds, and a figure with four heads called Olori merin is usually found on a mound near the centre of the town, so that each head faces one of the four points. Thus he protects the town, and no pestilence brought by the four winds or hostile force arriving by the four roads can attack it. Formerly these roads passed out of the city by the four chief gates on each side (Dennett, *Nigerian Studies*, 1910, pp. 70, 85). This connexion of cross-ways with the four quarters does not universally hold good, more especially in the case of the meeting of three roads, and only forms one of many reasons for the superstitious connexion with cross-roads.

LITERATURE.—This is mentioned throughout the article. There is no special work on the subject.

J. A. MACCULLOCH.

CROSS-ROADS (Roman).—It was a custom of the Roman peasant, in order to ensure the prosperity of his crops, to make a procession round the marches of his land, praying the while to Mars for protection against visible and invisible disease, ravage, and storm (Cato, *de Agricult.* 141). In ancient times these various evils were regarded as

¹ Cf. D. W. Brugsch, *Hauptprobleme der Gnosis*, Göttingen, 1907, p. 301f.

demons who gloated over suffering, and this explains why Fever (*Febris*) was worshipped in Rome as a goddess (G. Wissowa, *Rel. u. Kult. der Römer*, Munich, 1902, p. 197). But, if such noxious spirits were prevented by the invocation of Mars from intruding upon the tilled land, they would tend to haunt the boundaries; and, as the latter were often formed by roads, it came to be believed that the roads were traversed by demons as well as by human beings. Now, the place where several roads converged—whether by the bifurcation of one thoroughfare (*ambivium, bivium*), or by the intersection of two (*quadrivium or trivium*, according as the way by which the traveller approaches is counted or not; see H. Usener, 'Dreiheit,' in *Rhein. Mus.* lviii. [1903] 339)—was naturally a focus of human intercourse; as every one must pass the *trivium*, *trivialis* came to mean 'common,' 'known to all.' For corresponding reasons, cross-roads were regarded as the special resorts of demons. The Romans believed that things connected with the cross-ways had magical powers, and this superstition doubtless rests upon the idea that demons haunted the spot, and infected the surroundings with their supernatural influence. Thus, for instance, frogs boiled at the cross-way were a cure for fever (Pliny, *HN* xxxii. 113); a person who by night sets his foot upon filth at the cross-way is thereby bewitched (Petronius, 134); while the perplexity and anxiety which fall upon the traveller in a strange district as he comes to the cross-roads, and hesitates as to the way he should take (Ovid, *Fasti*, v. 3; Minucius Felix, *Octavius*, xvi. 3), would be ascribed to the haunting demons, as would also the actual choice of the wrong way (Roscher, vol. i. p. 1890). Again, the cross-way was occasionally the site of the special object revered by the fetish-worshipper (Tibullus, i. i. 11 f.: 'habet . . . vetus in trivio florida sarta lapis'). The fetish was decorated with wreaths; and by such homage, as also by prayers and votive offerings, it was hoped that the demonic powers would be induced to refrain from injuring their devotees, and to act as the dispensers of grace and sure guidance.

Anthropomorphic deities of this character had likewise a place in the Roman religion, but the cult was not indigenous. Some of the deities were simply taken over from foreign religions; others, while of native origin, became the tutelary spirits of cross-roads only at a later period. To the former group belongs the goddess Trivia, who, from the time of Ennius (*Scen.* 121 [Vahlen]), is often mentioned in Latin poetry, and sometimes, though more rarely, in inscriptions (*CIL* x. 3795 [Capua]: 'Dianae Tifatinae Triviae sacrum'). She was in reality the Hecate Trioditis of Greek mythology, and, like the *trivium*, was of triple form (Usener, *loc. cit.* pp. 167 f., 338 f.). Hecate was a gloomy and malicious goddess, and, in order to propitiate her, recourse was had *Græco ritu* to every possible expedient, such as loud nocturnal invocations (Virgil, *Æn.* iv. 609: 'nocturnisque Hecate triviis ululata') and offerings of food at the cross-roads. The latter fact explains why the *trivium* was a resort of dogs (Ovid, *Fasti*, v. 140) and famished people (Tibullus, i. v. 56, with the comments of Dissen). In the Imperial period we find quite a system of goddesses of the cross-way, all of non-Roman origin, and for the most part linked together in groups as Biviæ, Triviæ, or Quadriiviæ, especially in Upper Germany. They were apparently indigenous to that region, and their cult forced its way thence into Lower Germany and the countries about the Danube (M. Ihm, in Roscher, iv. 1 ff.). In some districts we find also male deities of the cross-way (*CIL* xii. 5621 [Gaul]: '(de)is dea(bus) Bivis Trivis Quadrivis'; vii. 163 [Britain]: 'Deo Trivii Bellieus donavit aram').

Our knowledge of these deities is derived from votive offerings, principally small altars with inscriptions, which throw no light, however, upon the character of the associated cult. In many cases the dedication was made in fulfilment of a vow, and the donors were mostly soldiers. The vow would, no doubt, be made for the purpose of winning the protection of the deity during a journey or throughout a campaign, and so ensuring a safe return therefrom; for by this time such deities were regarded, not merely as local guardians of particular cross-ways, but as divine patrons of all roads.

Similar ideas were current regarding the genuinely Roman deities to whom was latterly assigned the tutelage of the cross-roads. These were known as the 'Lares compitales,' and were worshipped mainly at the place 'ubi viæ competunt' (Varro, *de Ling. Lat.* vi. 25; G. Wissowa, in Pauly-Wissowa, iv. 792 ff.), i.e. the cross-way. But the word *compitum* must have had a further meaning, for Cicero (*de Lege Agr.* i. 7) explicitly distinguishes between it and *trivium*; as is rightly observed by Wissowa (*Rel. u. Kult. d. Römer*, p. 148 f.), it also signified the point at which the boundaries of the fields converged. The worship offered to the Lares at the *compita* was an expression of the belief that they were the guardians of the soil (Tibullus, i. i. 19 f.: 'agri custodes'). Originally, therefore, the Lares were invoked as patrons of field-boundaries, while their association with cross-roads was a later development, due to the circumstance that boundary and path frequently coincided. In this acquired character they are known to us from such dedications as are found in *CIL* xi. 3079 (Falerii): 'Laribus compitalibus vialibus semitalibus,' and xiii. 6731 (Mainz): 'Laribus compitalibus sive quadri-vialibus sacrum.' The next stage was that the Lares became the gods of roads in general, as likewise of travellers, who therefore made to them the same kind of dedications as were offered *Deabus Quadriivis*. The dedicated objects were placed in shrines, and, as these shrines of the Lares were set up at the cross-roads, they too bore the name *Compita* (Persius, iv. 28).

We must not confound such erections at the cross-way with fabrics reared over the cross-way. The rectangular towers which we find surmounting two passages intersecting at right angles suggest the thought that they were originally built over cross-ways. Of such towers, nine in all are known (Baumeister, *Denkmäler d. klass. Altertums*, iii. [Munich, 1899] 1867). The most famous of them is the Janus Quadrifrons in the Forum Boarium, dating from the 4th cent. A.D. (H. Jordan, *Topographie der Stadt Rom im Altertum*, i. ii. [Berlin, 1885] 471); but its original purpose was that of a monument of honour, and it is impossible to say whether the ancient Roman ideas regarding cross-roads were present to the minds of its builders. In any case, these ideas were by no means extinct at that time, for, even as late as the Middle Ages, it was still frequently necessary for the preacher to castigate the practice of lighting candles and offering sacrifices at the cross-roads (see, e.g., C. P. Caspari, *Kirchenhist. Anecdota*, Christiania, 1883, i. 172, 175, 199)—a practice which is undoubtedly a vestige of heathen, in some cases perhaps of Roman, ritual. Even at the present day, in Italy, the cross-way is the favourite site for the chapels of patron saints (Th. Trede, *Das Heidenthum in der römischen Kirche*, Gotha, 1891, iv. 205).

LITERATURE.—This has been given throughout the article.

R. WÜNSCH.

CROWN.—As a preliminary to this article it may be advisable to cite Selden's words distinguishing between 'diadem' and 'crown':

'However those names have been from ancient times confounded, yet the diadem strictly was a very different thing from

what a crown now is or was; and it was no other than only a fillet of silk, linen, or some such thing. Nor appears it that any other kind of crown was used as a royal ensign, except only in some kingdoms of Asia, but this kind of fillet, until the beginning of Christianity in the Roman Empire' (*Tiles of Honor*, 1672, c. 8, § 2).

The Gr. *διδύμια*, Lat. *diadema*, was a fillet of linen or silk, sometimes adorned with precious stones, or occasionally a flexible band of gold. This was the true emblem of royalty, the *βασιλικά γράμματα* (Lucian, *Pisc.* 35), or *insigne regium* (Tac. *Ann.* xv. 29). On the other hand, the Gr. *στέφανος*, Lat. *corona*, a wreath or garland of real or artificial (usually gold) leaves, was not a distinctive royal emblem, and was applied to the victor's, the bridal, the festal 'crown' (see also Trench, *Synonyms of the NT*, s.v. *στέφανος*, *διδύμια*). The same distinction occurs in other languages, e.g. German *Krone*, the royal crown, *Kranz*, a garland. The English word 'crown' comprehends all kinds of coronal head-dresses, royal and other.

1. Coronal head-dresses.—A distinctive head-dress of persons of high degree, but especially of kings and princes, originated from the custom of wearing various kinds of head-dresses, coronal, etc., on festal or other occasions, or by particular classes of people—men as contrasted with women, or, *vice versa*, rich as contrasted with poor, chiefs, medicine-men, members of a mystery society, and the like—or at festival dances such as are found among savages and European peasants (cf. Abbott, *Macedonian Folklore*, Camb. 1903, p. 31), or, again, from royal personages wearing a more ornate and valuable form of the customary head-dress. The crown, as a distinctive head-dress, may thus be traced back to very early times. Following upon elaborate methods of dressing the hair, such as are found among Polynesian and African tribes, the next step is to decorate the hair with bones, teeth, shells, feathers, leaves, flowers (see § 2), or other ornaments. Or a band or fillet of fibre, skin, leather, ivory, or metal serves to prevent the hair from falling over the face. This is found among the lowest tribes (Andamanese, Australians, Bushmen, Fuegians, etc.), but, from being merely useful, it soon becomes also ornamental or has ornaments of various kinds affixed to it—tufts of feathers, fur, or wood shavings, teeth, shells, etc.; or it may be worn only on special occasions, like the coils of wire bound round the forehead and nape of the neck by Mukamba youths at dances (*JAI* xxxiv. [1904] 139). The fillet, thus widely worn, would have a distinctive character, or would be more decorative or formed of more precious material, when worn by persons of higher rank; and it is a direct forerunner of the royal fillet or diadem worn by kings as an emblem of sovereignty, either with or without some other distinctive head-dress. The gold *lunula* with the characteristic chevron decoration of the Bronze Age, found in the Celtic area, may be classed with ornaments of this kind, and was perhaps worn by chiefs (Déchelette, *Man. d'arch. pré-hist. celt.*, Paris, 1910, p. 353; Romilly Allen, *Celtic Art*, Lond. 1904, p. 39 f.). More elaborate crowns are derived from the simple fillet or diadem by the addition of decorations around its circumference, as, e.g., by fixing upright feathers in it (Fuegians, American Indians). Other elaborate head-dresses, combining the fillet and crown, or evolved from the former, are often worn by special classes or at special times.

Thus a Tibetan female head-dress (chief's wife) consists of a crown of large amber disks, in each of which is a coral bead, with similar ornaments on satin bands, holding the hair plaits together (Rockhill, *Land of the Lamas*, 1891, p. 184). Among the Kabyles rich women wear a coronal head-dress of highly ornamental open metal work, with numerous pendent ornaments and chains; and a female head-dress in Java consists of a richly adorned head-band with star-like ornaments stuck round the upper edge (Hutchinson, *Living Races of Mankind*,

n.d. I. 73, II. 393-4, 399). A circle of jewelled gold, the upper edge heightened to four or more points, surrounding a jewelled cap, was formerly worn by Arab ladies of high rank (Lane, *Arab. Socy.*, 1833, p. 218). A Samoan head-dress worn by chiefs, and by girls at certain dances, consists of a triple band of teeth or shells on the forehead surmounted by an imposing head-dress (*ib.* I. 12; Brown, *Melanesians and Polynesians*, 1910, p. 68). Among the natives of Torres Straits are found head-dresses of feathers, of fish teeth, or dog's teeth coronets, or the *dr*, a fan-shaped arrangement of white feathers of the egret (*JAI* xix. [1890] 369). Among the tribes of Brazil the men at feasts wear a coronet of bright red and yellow toucan's feathers, disposed in regular rows and attached to a circlet of plaited straw. These feathers, being specially prepared, are very rare, and the coronets are never parted with (Wallace, *Amazon*, 1896, pp. 194, 202). Chiefs in Haiti wear a gold circlet similarly decorated (Stoll, *Geschichteleben in der Völkergesch.*, Leipzig, 1908, p. 457, and, for a similar head-dress worn by chiefs among the Lacandones, *NRL* 702).

As an emblem of royalty such a crown was worn by the Incas of Peru. It consisted of a turban with a tasselled fringe, in which were set upright two feathers of a very rare bird, the peculiar emblems of the Inca, which no one else might wear. This head-dress was buried with him, and two new feathers had to be procured for each coronation. The hair-apparent wore a similar fillet or fringe of a yellow colour as his insignia (Prescott, *Peru*, 1890, p. 111; Stoll, 457). Among the Mayas the king's crown was a golden diadem wider in front, surmounted by a plume of feathers which no one else might wear under pain of death (*NRL* ii. 636). Mexican kings were crowned by the kings of Tezcuco with a diadem higher in front and running up there to a point, and adorned with beautiful feathers. The diadem was made of thin gold plates or woven of gold thread, and it hung down behind over the neck. Noble Aztec warriors wore head-dresses of feathers set in gold fillets (*ib.* II. 143, 376-6, 405, 441). All such crowns have followed the line of development which has produced the European crown from the diadem (§ 8). For savage head-dresses, see Spencer-Gillen, 637; E. Grosse, *Anfänge der Kunst*, Freiburg, 1894, ch. 5; Stoll, 119; Johnston, *Uganda Protectorate*, 1902, pp. 729, 787, 843, 863, 880; Deniker, *Races of Man*, 1900, pp. 173, 371, 502, 522; Mary Kingsley, *Travels in W. Africa*, 1897, p. 224; and for the head-dresses peculiar to the higher classes in Bab., Assyria, and Persia, see Rawlinson, *Anc. Monarchies*, 1862, I. 133, II. 199, IV. 191, 333.

The huge or elaborate masks and head-dresses worn at the performance of totemic or tribal ceremonies or in mystery-dances by Australians, Melanesians, Africans, etc., sometimes assuming a form more or less coronal, need only be referred to here as decorations reserved for certain persons, and worn only on specific occasions and at no other time. They are insignia of office, or form part of the necessary costume, sometimes symbolic or representative (see Spencer-Gillen, *ib.* *passim*; Kingsley, 433; Deniker, 179; Brown, 60 ff.; *JAI* xix. [1890-90] 364).

2. Chaplets.—From the custom of decorating the hair with flowers on festal occasions as a method of betokening joy, arose the use of chaplets or wreaths (*στέφανος*, *coronae*), though these may be also connected with the simple fillet or hair-band into which flowers are sometimes stuck. Among savages, it is with the Polynesians and occasionally the Melanesians that the general wearing of flowers or regular chaplets is found most extensively. Among the former, women at dances wore wreaths interwoven with their hair, and garlands and wreaths on forehead and breast. This custom has been largely given up since the introduction of Christianity (Ellis, *Polynes. Researches*, 1831, I. 134, 216; cf. also Brown, 317; Hutchinson, I. 6, 9, 11, 17, 18; and, for a similar practice of wearing wreaths of grass and leaves among the Sakais, *ib.* I. 90). The custom was sporadic in America; thus the Nahuas wore garlands at banquets and dances (*NRL* ii. 284, 290). Among peoples of antiquity the wearing of wreaths on festive occasions was wide-spread. From an early time in Egypt chaplets (*meh*) of lotus, myrtle, etc., were worn by the guests at banquets (Wilkinson, II. 38, 330), and the custom was also in use among the Greeks and Romans. Perhaps under the influence of Greek usage it spread to the Hebrews, and is often referred to as a common practice at times of rejoicing, especially in the Apocryphal books (Wis 2^d 'Let us crown ourselves with rosebuds'; Ezk 23rd, Ca 3rd, Jth 15th; Sir 32^d, 2 Mac 6th, 3 Mac 4th 7th; cf. Acts of Thomas, crowns of myrtle and other flowers at a banquet, in W. Wright, *Apoc. Acts*, Lond. 1871, II. 149).

Wreaths and crowns were also worn ritually at festivals of the gods and at sacrifices (see next art.; cf. Ac 14th, 2 Mac 6th). Tertullian writes that, besides the wreaths offered to the gods or their

images, 'the very doors, victims, altars, servants, and priests are crowned' (*de Cor.* 10). The sacrificer wore them (cf. the wreaths worn by Persians over their tiaras at sacrifices [Herod. i. 132]), and they were placed on the heads of the victims (Teutons [de la Saussaye, *Rel. of the Teutons*, Boston, 1902, pp. 368, 377], Hindus [Monier-Williams, *Rel. Thought and Life*, 1883, p. 247], Mexicans [NR iii. 359]; for other instances, see *Tert. de Cor.*, Pausan. ed. Frazer, v. 7, vii. 20, l. viii. 48, 2, x. 7, 8, and notes; Granger, *Worship of the Romans*, 1895, pp. 287, 306). Animals were adorned with them on festival occasions (Celts [Arrian, *Cyneg.* 34. 1], Persians [the crown royal on the horse's head, Est 6³]). Garlands and crowns are also worn at sacred dances (Mexico [NR iii. 392], Melanesia [Haddon, *Head-Hunters*, 1901, pp. 113, 187]; see also above). They were placed on city gates (Jos. *BJ* IV. iv. 4), on temples (crowns of gold on the Jewish temple, 1 Mac 4²⁷), or were worn by conquering armies (Jth 3⁷ 15¹⁵), or given as much coveted prizes at the games. In the last instance, from the myths associated with the origin of the custom and from the ritual used in the making of the wreaths, their religious aspect is evident. Crowns were also worn by the pilgrims to the temple of the Syrian goddess at Hierapolis (Lucian, *de Dea Syria*). In the Taurobolium the candidate was crowned with gold and wreathed with fillets before undergoing the baptism of blood (Frazer, *Adonis*², 1907, p. 229); and in the Mithraic initiations one of the rites was the presenting of a crown on the point of a sword to the candidate, who put it on his head and then transferred it to his shoulder with the words, 'Mithras is my crown' (*Tert. de Cor.* 15, *de Præsc. Hæc.* 40). Wreaths were also worn by those initiated into the mysteries of Isis (Apul. *Metam.* xi. 24). In the baptismal ceremonies of the Mandæans a crown was used (W. Brandt, *Die mandäische Religion*, Leipzig, 1889, pp. 108, 113).

Wreaths are also worn at the end of harvest in European folk-custom. They are made of the last ears of corn, sometimes with the addition of flowers and tinsel, and are worn often by the person who has cut them. He or she represents the corn-divinity, and is drenched with water as a fertility charm. In this case the wreath is the direct link between the corn and the human representative of the divinity of the corn (Frazer, *Adonis*², 195 f.; Ralston, *Songs of the Russ. People*, 1872, p. 250). At the Jewish feast of Tabernacles—a festival of ingathering of fruits—it was customary for the Jews to sit in booths with wreaths on their heads (Jub. 14²⁰). Booths and wreaths suggest a former cult of vegetation. Hence also divinities associated with fertility or with the crops wore wreaths of corn: e.g. Isis, who was said to have discovered corn (*Tert. de Cor.* 7; Aug. *de Civ. Dei*, viii. 27; cf. also the wreaths of corn worn by the children sacrificed to Artemis [Pausan. vii. 20. 1]). In European May-day customs, besides the hoops covered with garlands and carried in procession, girls wear chaplets, as do also the May or Whitsuntide queen, and the May king or Jack-in-the-Green, besides being dressed in or adorned with leaves. These chaplets are an important part of the symbolic dress of a former anthropomorphic representative of the vegetation spirit (*FL* xi. [1900] 210; Wilde, *Anc. Cures, Charms, etc.*, 1890, p. 101 f.; Frazer, *GB*³ i. 196 ff., 213 ff., *Early Hist. of the Kingship*, 1905, p. 166 f.).

3. Bridal chaplets and crowns.—These are already found in antiquity worn by the bride or bridegroom, or by both (*Tert. de Cor.* 13). They marked an occasion of joy, but may in some cases have had a magical purpose, in warding off evils from the head. Being used by pagans, they were

at first rejected by the Church, as it rejected generally all wearing of flowers on the head. But the custom was already found among the Jews, the bridegroom wearing a garland or crown (Is 61¹⁰, Ca 3²¹), the bride a 'beautiful crown' (Ezk 16¹²). The custom was in abeyance from the time of Vespasian, but was resumed later. Among Christians also it became usual, the bridegroom wearing a garland of myrtle, the bride of verberna (Sid. Apoll. *Carm.* 2, 'ad Anthem.'); and it was regarded as improper for the unchaste to wear them (Chrysos. *Hom. 9 in 1 Tim.*). The wearing of bridal garlands and crowns is still customary over a great part of Europe—Switzerland, Germany, Rumania, and in the north.

In the Greek Church ritual of marriage the bridegroom crowns the bride in *Nomine*, and the bride the bridegroom, while the priest blesses them and says, 'O Lord, crown them with glory and honour.' The service is hence called *ἀκοσμία τοῦ σφραγισματος*. In Macedonia the bridal wreaths are made of real or artificial flowers, or are silver garlands belonging to the church (*ἡ στέφανη*). They are exchanged in church at the crowning ceremony *στέφανωσις*—applied to the whole wedding rite (Abbott, *op. cit.* p. 168, 175). Ralston (*op. cit.* p. 279) describes a local ceremony in Russia. In church, over the heads of the bridal pair the groomsmen hold crowns, and must press them on the heads, but not hurriedly, else ill-luck and misfortune would follow. The rite is called *vyenchante*, 'crowning.' In Servia, when a youth dies, a girl representing a bride comes to the grave carrying two crowns. One is thrown to the corpse, the other she keeps for some time. This is part of the old ritual of the 'death-wedding' (Ralston, 310; see O. Schrader, *Totenhochzeit*, Jena, 1904, and ARYAN RELIGION, vol. ii. p. 22 f.). In Germany and Switzerland the bridal wreath of myrtle is made by the bridesmaids, but occasionally elsewhere more elaborate crowns are worn, formed, e.g., of a series of diminishing circlets, one above the other, to which are fixed flowers, beads, figures in metal, some of which are probably intended as amulets. They are not worn by girls known to be already *engaged* (see Stoll, 455 f., 459; Kossmann-Weiss, *Mann und Weib*, Stuttgart, 1890, ii. 184, 185). Among the Letts the bride wears a crown of gold paper and silk, on a framework of wire and pasteboard. She receives it from an honourable matron, who keeps it for the use of the brides of the district (*ib.* i. 190). The elaborate Norwegian bridal crown is handed down as an heirloom in well-to-do families, but in each village it, as well as a set of bridal ornaments, is kept for the poor bride's temporary use (Chambers, *Book of Days*, 1863, i. 720-721; Hutchinson, ii. 427).

Among the Hindus, from Vedic times, the custom of wearing garlands or crowns of precious metal or tinsel at marriage has been common, and they are believed to have a protective efficacy against evil spirits which might enter by the head. They are worn both by Hindus and Muhammadans (Crooke, *PR* i. 238; Kossmann-Weiss, ii. 184, 167; *ERE* iii. 443⁹). Among the Muhammadans of Egypt the bride wears a pasteboard cap or crown under the veil which covers the head and face, and to which ornaments of value are attached externally (Lane, *Mod. Egyptians*, 1846, i. 220, *Arab. Soc.* 234). Among the Nahus, bride and bridegroom were crowned with garlands (NR ii. 257). For Chinese bridal crowns, see Hutchinson, i. 140; and for Polynesian and Fijian bridal wreaths, *ib.* i. 19, and Letourneau, *Book of Marr.*, 1907, p. 124.

4. Funeral chaplets and crowns.—Among the Greeks and Romans the dead were crowned with chaplets, or these were placed as offerings on tombs (Lucian, *de Luctu*, 11; *Tert. de Cor.* 10; see next art. § 2). In Egypt it was customary to place chaplets of flowers or leaves on the head of the mummy at the funeral ceremony, and these sometimes remained on the head in the coffin. They were called 'the crown of the true voice,' and assured to the deceased, through the power of Thoth, the right intonation, without which the magic formulæ were useless, or perhaps signified that he would be crowned triumphant and justified in the other world. Special gardens were set apart for the flowers used in making these wreaths. The statue which represented the mummy was also crowned with flowers, and the funeral ritual concluded with a prayer in which it was said of the deceased, 'Thou wearest the crown among the gods.' Part of the ritual also consisted of brandishing the *oirhikau* over the statue, and repeating a formula, part of which ran; 'Nut has raised thy head, Horus has taken his diadem and his powers, Set has taken his diadem and his powers, then the diadem has come out of thy head and has brought

the gods to thee.' This referred to the myth of Nut raising the head of Osiris, and the gods Horus and Set placing the crowns of the north and the south upon it. This would be done to the dead, and the magic virtue in these crowns, or in the *uræus* which adorned them, would bring the gods into his power. Garlands and wreaths decked the tombs, just as the tomb of Osiris was said to have been crowned with flowers; and wreaths were also worn by guests at feasts in honour of the dead before the final burial (Maspero, *Études de myth. et d'arch. ég.*, Paris, 1893, i. 218, 306; 316, 318, 358 f.; Pleyte, 'La Couronne de Justification,' *Actes du 6^{me} Cong. intern. des égyptologues*, Leyden, 1884, pt. vi. 1-30; Wilkinson, i. 403, iii. 396, 430, 432; Plut. *de Isid.* 21; see CHARMS AND AMULETS [Egypt.], vol. iii. p. 431), on models of diadems of Osiris buried with the dead, who, assimilated to the god, would wear those crowns in the other world). Flowers and garlands are also carried to the graves in modern Egypt.

In the Brāhmanic funeral ritual the bodies of the dead are decked with wreaths and flowers. Wreaths are also offered in the funeral rites and given to Brāhmans (Colebrooke, *Life and Essays*, 1873, ii. 173, 175, 178, 193; cf. *SBE* i. [1900] 137, xi. [1900] 93, 122-3). Among the Nahuas, a statue was placed beside the body of a dead king, with a garland of heron's feathers on its head (*NR* ii. 606). Wreaths and garlands were also used in Polynesia and Melanesia to decorate the dead, or the altars in the houses used as depositories of their bodies (Brown, 387; Ellis, i. 404). The early Christians refused to make any use of funeral chaplets (Tert. *de Cor.* 10; Min. Felix, 12, 37; Clem. Alex. *Pæd.* ii. 8), but it was not long before the prejudice against them was overcome. As a symbol of the martyr's death a crown is found among the emblems on tombs, and chaplets or wreaths became a common adjunct of Christian funerals. In modern Greece dead maidens and children even are crowned with flowers (Abbott, 193).

5. Crowns and chaplets as offerings.—Crowns and garlands being so intimately associated with cult, they are a common species of sacrificial offering, besides being placed on the heads of victims (see next art.; Pausan. ii. 17. 6, v. 12. 8; Lucian, *de Dea Syria*). At the feast of Ceres women presented corn-wreaths as an offering of firstfruits to her (Ovid, *Met.* x. 431 ff.). In India, wreaths, garlands, and flowers are frequent objects in most sacrifices. The Egyptians offered chaplets and wreaths to the gods and laid them on the altars, and presented golden diadems with the *uræus* at the shrine of the statue of a king (Wilkinson, iii. 356, 417). Of great interest are the votive crowns of early mediæval times. These were offered by monarchs to shrines or churches, and dedicated by them to God on some particular occasion. There is no doubt that, besides imitation crowns, the actual crowns were often dedicated in this way and occasionally used for coronations. They were suspended by chains over the altar, and from the inner side usually hung a richly-jewelled cross. Other ornaments were suspended from the lower edge, or the dedicatory inscription was sometimes formed of separate letters depending from it, e.g. in the crowns of Svinthilla and Reccevinthus the pensive letters form the inscriptions, 'Svinthilla Rex offert' and 'Reccevinthus Rex offert.' Besides the cross a lamp often depended from these crowns, and from them the pensive *coronæ lucis* of churches have originated.

Examples of such votive crowns are numerous. The iron crown of Lombardy is a band of iron (said to have been hammered out of a nail of the cross) enshrined in a circlet made of six gold plates, richly enamelled and jewelled, and hinged together. This crown is known to have been used at the coronation of Agilulfus in 591, and it was in all probability a votive crown (Fontanini, *de Cor. ferrea*, 1717; Labarte, *Arts*

indust. au moyen âge, Paris, 1872-5, ii. 561; Chambers, *Book of Days*, i. 678). Eight magnificent votive crowns of Reccevinthus, king of the Spanish Visigoths, his queen, and family, dating from the 7th cent., were found in 1858 at La Fuente de Guarraz near Toledo (Labarte, i. 499; F. Lasteyrie, *Descr. du trésor de Guarrazar*, Paris, 1860; Chambers, ii. 559). Another beautiful specimen is that of Svinthilla, king of the Visigoths (621-631), now at Madrid. On the whole subject, see the works cited, and Way, *Arch. Journ.* xvi. 258 ff.; *DCA* i. 460, 506.

Crowns or wreaths of gold formed a species of tribute presented by subject peoples to kings, an example being found in the tribute of crowns commuted to a money payment, the crown-tax paid by the Jews to Demetrius and Antiochus (1 Mac 10²⁹ 11⁸⁵ 13³⁷⁻³⁹, 2 Mac 14⁴; Josephus, *Ant.* xii. iii. 3).

6. Priestly crowns.—The practice of special head-dresses being used to mark off certain classes led to the use of these by medicine-men or priests, and not infrequently they took a coronal form, or, as in Greek and Roman ritual, chaplets were worn by priests.

Among the Buriats the shaman formerly wore a crown consisting of an iron ring with two iron convex arches crossing it at right angles—an elaboration of the simple fillet or band (*ER* lii. 16b). In Mexico the chief priest of the great temple wore a crown of green and yellow feathers, his assistants merely having their hair plaited and bound with leathern thongs. The priest of Tlaloc at the festival of the god wore a crown of basket-work closely fitting below and spreading out above, with many plumes rising from the middle of it. The Toci priest, in offering sacrifice to the Mother-goddess, had a square crown, wide above, with banners at the corners and in the middle (*NR* ii. 307, iii. 841, 856). In Japan part of the distinctive dress of the Shinto priest is a black cap (*eboshi*) bound round the head with a broad white fillet (Aston, *Shinto*, 1905, p. 204). Among the Teutons the Gothic priests belonged to the nobility, the *priests*, those wearing a cap, as compared with the common people, the *capillati*, with flowing hair; garlands were also worn (de la Saussaye, 866; Grimm, *Teut. Myth.*, 1880-81, pp. 91, 909). Tibetan priests at their ceremonies wear a species of helmet mitre, fitting over the back and crown of the head, and of a red or yellow colour, according as the wearer belongs to the one or the other great Buddhist sect (Rockhill, *op. cit.* p. 851). Sculptures in Cappadocia show the ancient priest or priest-king of that region wearing a high round head-dress encircled with fillets and ornamented in front with a rosette or bunch of jewels; the god beside him wears a high pointed head-dress (Frazier, *Adonis*, 101 ff.). The priests of Sandan (Heracles) at Tarsus were called 'crown-wearers,' and elected to that office. One of them, Lysias, wore a golden laurel wreath (Athen. v. 64; Frazier, 111). The high-priest of the Syrian goddess at Hierapolis wore a golden tiara, the lesser priests a hat (ῥῖαοι, Lucian, *de Dea Syria*, 42). The ancient Parsi priests wore high conical head-dresses (Stoll, 463), and Assyrian priests a kind of high truncated cone or mitre of imposing appearance, or sometimes a richly ornamented fillet (Rawlinson, ii. 199, 276, 278). Babylonian priests wore an elaborate mitre, assigned also to the gods, or a second kind of mitre, or occasionally a horned cap. The head is usually represented covered in sacrifices and other rites (*ib.* iii. 484). Among the Hebrews the priests' mitre or head-dress, *קִטְנִיּוֹת* plur. (*kidapies*, AV 'bonnet', RV 'head-tire', Ex 28⁴⁰ 29⁹ 39²⁸, Lv 8¹³), was made of swathes of linen covered with a piece of fine linen hiding the seams of the swathes and reaching to the forehead. Possibly it resembled the Assyrian and Babylonian conical cap, truncated (cf. Jos. *Ant.* iii. vii. 8, 'not brought to a conical form'). Josephus says it resembled a crown. The high-priest's mitre or turban (Ex 28⁴⁰ 39⁹), *קִטְנִיּוֹת* (a word applied by Jos. *Ant.* iii. vii. 3 to the priests' mitre also), probably differed in shape from the former. In addition a plate of gold, *פָּז* (*néraor*), was fastened on blue lace and affixed to the front of the mitre or on the forehead. It bore the words 'Holy to Jahweh.' The plate is also called *קִיָּא*, 'diadem' or 'mark of separation' (Ex 29⁶, cf. 39³⁰⁻³¹ 'the plate of the holy crown of pure gold'), and is on the mitre. This suggests a fillet rather than a plate, worn round the mitre (cf. Sir 45¹² 'gold crowns', and 1 Mac 10²⁹, where Alexander sends to Jonathan 'a crown [*στέφανος*] of gold'). In Is 28¹ the *פָּז* is parallel to *קִטְנִיּוֹת*, 'diadem'. If the *פָּז* was a fillet of gold, there would then be a close correspondence to what Josephus (*BJ* v. 7) says of the golden crown or fillet (*στέφανος*) with the sacred characters, which surrounded the mitre of fine linen, encompassed by a blue ribbon. The descriptions suggest a head-dress like the royal Persian *kshatram*, a cap swelling out to the top, and surrounded by a fillet or diadem (see § 2). Josephus gives a different description of the high-priest's mitre in *Ant.* v. vii. 6, which is not reconcilable with the description in the other passage, and which is far from clear (see *HDB* and *EB*, s.v. 'Mitre').

Occasional references are made in early ecclesiastical writings to a head-dress worn by the clergy during service. The mitre of a bishop, a head-dress cloven above into two erect tongue-shaped parts,

was at first an Eastern head-dress, especially characteristic of Phrygia, and hence formerly called 'Phrygium.' It is rarely alluded to before A.D. 1000, but in 1049 Leo IX. placed a mitre on the head of Eberhard, Abp. of Trèves (*PL* cxliii. 595). From this time the references become much more common, showing that the use was spreading. The mitre is usually made of fine or rich material, embroidered, and often studded with gems. From the back depend two fringed bands hanging over the nape of the neck. It is unknown in the Eastern Church, but is worn by all Roman Catholic bishops and by abbots exempt from Episcopal jurisdiction and others privileged to wear it. Its use was discontinued after the Reformation in the Anglican Church, but it is now commonly worn by bishops, and has always been a symbol of their office (see W. H. Marriott, *Vestiarium Christianum*, Lond. 1868, p. 220 ff.; Hefele, 'Inful, Mitra, und Tiara,' *Beitr. z. Kirchengesch.*, Tüb. 1864, ii. 223 f.; *DCA*, s.v. 'Mitre'). In the earlier centuries, virgins assuming the veil wore a head-dress called a mitre (Bingham, *Ant.* vii. iv. 6; Isidore, *de Eccl. offic.* ii. xviii. 11). The Papal tiara (a word of Persian origin, signifying a high head-dress) is a swelling pointed and closed head-dress, which has varied much in shape (in the 14th cent. it was dome-shaped and oval). To this was added, at some date unknown, a single crown (symbolizing the temporal sovereignty of the Popes) encircling the lower part, and, probably in the 12th cent., a second crown was set above this. The third crown was added by Urban V. (1362-70). At the top is fixed a small ball and cross of gold, and, as in the case of a mitre, two bands hang down behind (Hefele, *op. cit.*).

7. Divine crowns and chaplets.—As various plants were sacred to the gods, chaplets of such plants were often associated with them. Tertullian (*de Cor.* 7) cites a work on crowns by Claudius Saturninus, which described how every flower, branch, or shoot was dedicated to the head of some divinity. Hence the custom of offering chaplets to the gods, of crowning their images with them, or of representing them wearing chaplets. They also wear crowns (Pausan. ii. 17. 4, 6, v. 11. 1; Granger, 251, 305; see next art.). In many cases the crowns with which images are represented are replicas of the kingly crown, or, where a king was held to be divine, he often wore the head-dress peculiar to the god with whom he was identified. The god was naturally regarded as a heavenly king who wore the royal insignia; and, contrariwise, the divine king wore the insignia of the god.

In Mexico, at the festival of Huitzilopochtli his image was crowned with a paper crown, wide at the top and set with plumes. Many other Mexican images wore crowns, or were adorned with them at festivals, and crowns were also worn by their human representatives (*NR* ii. 322, 337, iii. 344, 352, 369, 385, etc.). The images of the snake-goddess found in the Aegæan area wear a high tiara, over which a snake rears its head (see fig. in vol. I. p. 149). On the head of the god sculptured on the rocks at Thebes is a high pointed cap adorned with a fillet and several pairs of horns, and the goddess of the Hittite sculptures at Boghaz-Keui wears a flat-topped head-dress with ribbed sides; this is also worn by her female worshippers (Frazer, *Adonis*, 100, 105). The goddess Cybele wore a turreted crown, and so also did the Syrian goddess, Atargatis (Lucr. ii. 606; Lucian, *de Dea Syr.* 31). Persian divinities wear a tiara like that of the kings or that worn by court officials (Rawlinson, iv. 335), and on the monuments of the Mithraic cult the god is frequently represented wearing an Oriental tiara (Toutain, 'La Légende de M.', *Études de la myth.*, 1909, p. 231 ff.). The crown of gold and precious stones which David captured and placed on his head belonged to an image of the Ammonites (2 S. 1230). Bab. and Assy. divinities are usually represented wearing the characteristic head-dress of the monarchs—a rounded cap with parallel horns encircling it from behind, and curving upward towards the front without meeting. This head-dress sometimes symbolizes the divinity on the astrological tablets (Rawlinson, ii. 244, iv. 534; Maspero, *Dawn of Civilization*, 1894, p. 655). Bab. divinities are also said to have been crowned with golden crowns (*Ep. Jer.* 9). In the *Descent of Istar*, at the first gate of Hades the keeper

deprives Istar of 'the mighty crown of her head.' In Egypt the statues of the gods were often crowned with chaplets and wreaths, but, besides this, they are usually represented with some symbolic head-dress—the sun, and horns, or plumes, or the uræus and disk, etc. But they frequently wear the crowns characteristic of the kings—the high white crown of the south, or the red crown of the north, or both together, enclosed or side by side, just as the kings wore their emblems; e.g. the king as Ammon wore the tall hat, with long plumes, of the god. Osiris is frequently represented, e.g. in the small golden images of the god as a mummy used in the festival of the month Choiak, or in the judgment scenes, wearing the white crown flanked by two plumes, or with the uræus, worn also on the crown of the sun-god. The atef-crown is also worn by some gods (Wilkinson, iii. ch. 13; Budge, *Gods of the Egyptians*, 1905, *passim*; *Book of the Dead*, cvii.-cxvii.). Images and pictures of Hindu divinities usually show them wearing simple or elaborate crowns or tiaras, sometimes with a nimbus. Or separate crowns form part of the decoration and dress of an image. These are often of great value, and are encrusted with precious gems—diamonds, pearls, rubies, etc. The myths and sacred books occasionally refer to the crowns of the gods (Wilkins, *Hindu Myth.*, Calcutta, 1882; Monier-Williams, 219, 449). In Buddhism the figures of Buddha, of Bodhisattvas, and (in Tibet) of the divinities of the Buddhist pantheon are frequently represented with crowns or coronal head-dresses or tiara-like structures (Wilkins, 225; Rockhill, 103, 131, 293; Grünwedel, *Buddh. Kunst*, Berlin, 1900, Stoll, 692).

In later Christian art, God the Father is represented with the current regal or imperial crowns, or with the Papal tiara encircled, according to the period, with one, two, or three crowns, but also sometimes, as if to show His superiority to the Pope, with five crowns. In earlier art, Christ is sometimes represented with the brow encircled by a diadem, and later with the regal or imperial crown or the Papal tiara; to this is sometimes added the crown of thorns, which, by itself, is figured in many other representations, especially of the Crucifixion. Where the Trinity is represented as one Person with three faces, the head is often adorned with a single crown or tiara (A. N. Didron, *Chr. Iconography*, Lond. 1886, *passim*). The Virgin is also represented with a crown, or is depicted in the act of being crowned by the Father or the Son or the Trinity with the crown of a queen or empress, reference being made to the texts Ps 21st 8th, as in the case of the crowning of the Son by the Father after the Ascension. This was in accordance with the legend of the Virgin's coronation in heaven after her Assumption. Angels and Christian virtues, and even the figure of Death, are often represented with a crown (Didron, *passim*). Some of the Gnostics crowned their sacred images (the Carpocratians [ren. *adv. Hær.* i. 25. 6]), and from this or from the similar pagan practice the custom passed into the Christian Church, and images or pictures were crowned with special ceremonies when they were dedicated (Trede, *Das Heidenthum in der röm. Kirche*, Gotha, 1891, i. 104, 283, ii. 343 ff., iv. 245-48, etc.; for the modern Roman usage, see *Cath. Encyc.* vii. 670). Images of the Madonna on waysides are also crowned with chaplets (Trede, iv. 208).

8. Royal crowns.—We have seen (§ 1) that the royal crown originated from the wearing of a special head-dress by special classes, or it is a specialized form of the ordinary head-dress. Among the higher savages, some such head-dress is worn by chiefs, like the band of cloth worn round the temples as a kind of crown by some chiefs in E. Africa, or the frontlet or crown with a wig of woman's hair worn by chiefs in Samoa (Macdonald, *Africana*, i. 16; Brown, 316; cf. also the other instances in § 1). We turn now to the higher nations of antiquity.

In Assyria the royal crown consisted of a head-dress of felt or cloth, shaped as a cone rising in a gracefully curved line, and truncated at the apex. The upper part receded into the lower, so that the top alone was visible and projected above the former. It was ornamented with red and white bands with embroidery or plates of gold. Round the lower edge was a band or diadem rising in front with a large rosette, with the ends hanging down behind the ears to the shoulders. Sometimes such

a fillet, higher in front or uniform in width, is worn alone, and in the earlier sculptures the tiara is lower than in the later. The queen wore a diadem with turrets like the crown of Cybele (Rawlinson, ii, 100, 108; Stoll, 210, 459, 463). In Babylon the kings wore the horned cap, the symbol of divinity—a kind of rounded cone with a double pair of horns surrounding the sides and front, or a tower-shaped head-dress with or without these horns, terminating in a coronet of feathers. The lower space was decorated with rosettes, etc. It was made of richly coloured felt or cloth. The higher classes, both in Assyria and in Babylonia, wore a distinctive head-dress (Rawlinson, i, 133, iii, 433; Maspero, 719; Stoll, 459). The royal crown of Persia, the *khshatram*, was a high cap of bright coloured felt or cloth, swelling out slightly towards the flat top, and terminating in a projecting ring. Round the bottom ran a fillet or 'band of blue' spotted with white—the diadem strictly so called. It was adopted by Alexander and his successors. In some cases the kings are represented wearing more or less ornamental diadems or radiated crowns, or a head-dress resembling that of the Medes—a high-crowned hat, with ribbed sides, called *tiara* or *kidaris* (= *khshatram*), the latter word being applied to the royal tiara (Rawlinson, iii, 86, iv, 155). In Egypt, diadems were worn by princely personages, but that peculiarly symbolic of royal authority was the *uraeus*-serpent, of metal or gilded wood, the coiled body forming the diadem, and the head poised above the forehead of the monarch. It was also affixed to other head-dresses worn by the king in common with the gods.

Of these the most important were the white crown of Upper Egypt, a tall conical head-dress swelling out slightly in front and terminating in a rounded knob; and the red crown of Lower Egypt, cylindrical in form but widening out upwards, and with the back part carried higher than the front. The combination of the two crowns, the white worn within the red, was called *pschent*. They were put on at the coronation; and on bas-reliefs, female figures symbolic of the two Egypts, each crowned with the respective crown of her district, stand on either side of a king wearing the *pschent*. In other cases, Nubti or Set and Horus crown the king, and goddesses invest the queen with her insignia—two long feathers and the globe and horns of Hathor. These crowns were also worn in battle and on other occasions, and they, with other forms, were common to gods and kings. Thus the king is described as 'son of the Sun, decked with the solar crowns' (Wilkinson, ii, 327, iii, 361; Maspero, 265; M. Brimmer, *Egypt*, Camb. U.S.A., 1892, p. 12; A. Moret, *Du Caractère rel. de la royauté pharaonique*, Paris, 1902, p. 310).

In religious ceremonies the king wore a striped linen head-dress, descending in front over the breast, and terminating in a queue fastened by a ribbon. Fillets of gold and, occasionally, radiated crowns were worn by the Ptolemys. Among the Hebrews a common word for crown is *קִרְיָא*, which signifies 'consecration' or 'mark of separation,' and is applied both to the gold plate or fillet of the high priest's mitre (Ex 29^d 39th), and to the royal diadem or fillet, which may have been of gold or of embroidered silk decorated with jewels (2 S 11^o, 2 K 11th—the only reference to coronation; cf. Zec 9th 'the stones of a crown'). Another word, *קִרְיָא*, is also used, both for the royal crown and for the crown in a symbolic sense (2 S 12^o, Ezk 21st, Is 28th, Job 19th, Pr 4th etc.). This word may signify a diadem, since in Ca 3^d it is applied to the bridegroom's garland, but in Job 31st the *קִרְיָא* can be bound to the head. This may refer to a head-dress of a turban form. Possibly the diadem proper surrounded another head-dress of a turban shape, or like the Persian or Assyrian examples.

The crown of a conquered monarch was sometimes set on the head along with the conqueror's own diadem. In 1 Mac 11th, Ptolemy set the crowns of Egypt and Asia on his head when entering Antioch in triumph (cf. Diod. Sic. i, 47; Rev 19th).

The early Christian emperors wore fillets or diadems of gold adorned with jewels, or of rich

silk (the latter finally disappearing in the time of Justinian [Labarte, ii, 39]). The diadem is sometimes worn alone, or it surrounds a cupola or jewelled cap, the combination of cap or tiara and diadem resembling that of the Persian kings. In antiquity the fillet or diadem easily passed over into a crown by the addition of a row of ornaments or symbols to the upper edge of the circumference of a metal diadem. This is already seen in the *corona muralis*, *navalis*, *vallaris*, etc., or in the radiate crowns of the Persian kings, the Ptolemys, and Nero and later Roman emperors. The form of these radiate crowns is also connected probably with the radiate nimbus with which kings were often represented, and which was the adornment of the sun-god as well as of other divinities in art. Such crowns were thus a symbol of the monarch's divinity (Dieterich, *Nekyia*, Leipzig, 1893, p. 419; Didron, i, 34 ff.). Crowns, as distinct from diadems, appear in early mediæval Europe. In England the diadem soon gave place to the crown. William the Conqueror and other Norman kings wore diadems ornamented on the upper edge with trefoil uprights, and the crown form soon became more elaborate. The first English example of an arched crown dates from the reign of Henry iv. The coronets of English peers are circlets of gold, variously ornamented according to rank (like the crowns of Continental nobles), and enclosing a crimson velvet cap edged with ermine. The earliest is the ducal coronet, 1362; the latest that of barons, 1660 (see Legge, *English Coronation Records*, 1901).

9. Sacred and magical aspects of the crown.—We find, sporadically, medical or magical virtues ascribed to wreaths and chaplets (Athen. xv, 16, and cf. the magical efficacy attributed to bridal and to funeral wreaths in Egypt, §§ 3, 4). This would be a natural result where garlands were made of the flowers or leaves of sacred plants or trees. Wherever the king is honoured as divine, the crown, as the peculiar symbol of royalty, will have a magical character, more particularly as it is so frequently worn also by the gods.

The golden wreaths and chaplets of oak leaves worn by early Greek and Italian kings, as well as by other persons in later times, are supposed to have originally marked the wearer as vicergerent of a god of whom the oak was the sacred tree, and in which as well as in the wearer of the wreath he was supposed to be incarnate (Cook, *FL* xvii, [1906] 315; Frazer, *Kingship*, 198 ff.). While this is not impossible, and while, generally speaking, wreaths of leaves or flowers may denote a connexion with divinities, it is probable that the diadem of a monarch did not necessarily denote his divinity, though, as representing the highest sovereignty, it was natural that gods should also be represented with it. The god was represented under the highest forms known to men, and these were generally royal.

The regalia of kings tend always to be regarded as peculiarly sacred. In some quarters possession of them 'carries with it the right to the throne,' and they have wonder-working properties, as among the Malays (Frazer, *Kingship*, 121, 124; Skeat, *Malay Magic*, 1900, pp. 23, 59). Generally speaking, the word 'crown' comes to be used figuratively for all that the monarchy implies. In Egypt the *uraeus* diadem, emblem of sovereignty, had a magical power, and could execute the king's secret purposes or inflict vengeance. It is said to 'burn his enemies with its flames'; it threw itself upon those who approached it, and choked them in its coils. The supernatural virtues thus communicated to the crown gave it an irresistible force, and the royal crown was also regarded as having divine power (Erman, *Die ägyptische Rel.*, Berlin, 1905, p. 40; Maspero, 265, *Études*, i, 78-79; cf. also *Études*, ii, 134, for other magical crowns; and for the magical powers of the crowns of the dead, see § 4). Crowns may have been occasionally used as instruments of divination, e.g. in the choice of a king. In a Transylvanian folk-tale the crown is

laid before the assembly on a hillock. It rises, floats in the air, and lights on the head of the destined king (J. Haltrich, *Deutsche Volksmärchen*⁴, Vienna, 1885, p. 195). The Yorubas of W. Africa look upon the royal crown as possessing magical powers, and sheep are occasionally sacrificed to it by the king himself (MacGregor, *Jour. Afr. Soc.*, no. 12 [1904], p. 472). Crowns are sometimes mythically said to have descended from heaven upon the king's head (Bousset, *Gnosis*, Göttingen, 1907, p. 147). There may also have been current an idea that the life of a king depended on the safety of his crown. In the Mandæan myths of the conquest of the dark powers Ur and Rūhā by Mandā d'Hajjē and by Hibil Ziwa, Ur is deprived by both heroes of his crown 'of living fire,' in which his strength lies, and in this way he loses all his might (W. Brandt, *Mandäische Schriften*, Göttingen, 1893, pp. 131, 175, 178). These myths are certainly based on some current belief in the magical virtue of the crown.

10. The crown in early Christian thought.—In the NT the victor's crown at the games (στέφανος) is used symbolically of the reward of a faithful Christian course, the incorruptible στέφανος being contrasted with the corruptible (1 Co 9²⁵; cf. 2 Ti 2⁵). It is a 'crown of righteousness' (2 Ti 4⁸), the 'immortal crown of glory' (ὁ ἀμάρτανος τῆς δόξης στέφανος, 1 P 5⁴), the 'crown of life' (Ja 1¹², Rev 2¹⁰; cf. 3¹⁴). Hence in visions of heaven the crowns are prominent. The elders in Rev 4⁴ wear crowns (στέφανοι) of gold; in the *Ascension of Isaiah* the prophet sees crowns laid up in the highest heaven for the saints; in *Barlaam and Josaphat*, Josaphat sees the people of the heavenly city with crowns in their hands (J. F. Boissonade, *Anec. Græca*, Paris, 1829-31, iv. 360). Christ has on His head 'many diadems' (διαδήματα πολλά, Rev 19¹²), one fillet bound above the other, signifying different sovereignties (cf. 13², where the dragon has ten diadems). This conception is already found in later Judaism; the faithful receive crowns and palms (2 Es 24³⁴⁻⁴⁰). The wearing of garlands and crowns on earth being obnoxious to the early Christians on account of pagan associations, stress was therefore laid on the worth of the symbolic heavenly garland (στέφανος), and especially the immortal crown of martyrdom (*Mart. of S. Polycarp*, 17; Tert. *de Cor.* 15, 'Why do you condemn to a little chaplet, or a twined head-band, the brow destined for a diadem?'). Lactantius (*de Mort. Pers.* 16) describes the martyr's garland of victory as 'an unfading crown laid up in the kingdom of the Lord.' In *Hermas* (*Sim.* viii. 2) the angel commands garlands of palms to be brought out for those in whose rods he found branches with fruit (cf. also Euseb. *HE* v. 1 [Letter of the Churches of Vienne and Lyons]). Such references to the crown of immortality or joy or to the martyr's crown are copious in early Christian literature, and the symbol of the crown also appears in Christian archaeology. Hands stretched from heaven present crowns to the martyrs, or angels descend and crown them (Didron, i. 95). The crown by itself, or with a palm branch or other symbols, is also symbolic of the eternal reward in heaven offered to the victor.

LITERATURE.—L. F. Day, 'The Crown, its Growth and Development,' *Magazine of Art*, vol. xi. (1888); W. Jones, *Crowns and Coronations*, 1883; J. Labarte, *Histoire des arts industriels au moyen âge*, Paris, 1872-5; O. Stoll, *Das Geschlechtsleben in der Völkerpsychologie*, Leipzig, 1903, p. 452 ff., and other works cited throughout the article.

J. A. MACCULLOCH.

CROWN (Greek and Roman).—The words στέφανος, *corona*, and their variants are used by Greeks and Romans of circular ornaments that could be placed on the head, carried in the hand, or hung on a support as offering or decoration, either made of, or artificially representing, or by their decoration more or less remotely suggesting,

flowers, leaves, or fruits of the field. The origin of the custom of wearing such ornaments lay probably in the mere instinct of decoration rather than in any notion of a symbolical significance in the plants used. Such decorations are a natural expression of a *joyful state of mind*, and, as the primitive worshipper attributes to his deity feelings like his own, they would be considered acceptable to the gods. As expressing joyfulness, they would in time become customary or *de rigueur* on all festal occasions, whether sacred or profane.

1. The use of crowns for religious purposes is not mentioned in Homer; nevertheless the use of sprays of foliage for *dedicatory purposes* seems to have prevailed very early in the Aegean; at Cnossus was found a spray of foliage made of thin gold plate and wire in a flat bowl (*BSA* viii. [1901-02] 25), and the employment of natural sprays probably preceded that of metal imitations by long ages. Now the most convenient and decorative way of carrying such sprays, or of attaching them to cultus-figures, was to twine them into wreaths, which could be worn on the head of the worshipper or placed on the figure of the deity.

As early as the 7th cent. such garlands were essential in practically all sacrifices (Sappho, quoted by Athen. xv. 674e). In Aristophanes (*Thesm.* 446 ff.) a widow who had supported her five children by making wreaths complains that more than half her business has gone since Euripides persuaded people that there are no gods.

Being part of the furniture of cultus, the wreath imparted sacredness to the wearer for the time being; the slave in Aristophanes considers that, while wearing a wreath, he cannot be beaten by his master (*Plut.* 20 f.).
